MEDULLARY, *Medulla'ris*, from *medul'la*, 'marrow.' Relating to the marrow or analogous to marrow.

The **MEDULLARY SYSTEM**. Bichat gives this name to the marrow and its membranes. He distinguishes two species of medullary systems; the one occupies the cellular tissue at the extremities of the long bones and that of the flat and short bones; the other is found merely in the central canal of long bones.

MEDULLARY MEMBRANE, *Perios'teum Inter'num*. A vascular, areolar web of extreme tenuity, which envelopes the marrow and lines the inner surface of the medullary canal of the long bones. This membrane has been considered as a species of internal periosteum of those bones. It has numerous vessels, which bury themselves in the thickness of the marrow; and others which nourish the innermost plates of the bone.

MEDULLARY ARTERIES. The arteries, which enter bones and pass to the marrow.

MEGALANTHROPOGEN'ESIS, from *μεγας*, 'great,' *ανθρωπος*, 'man,' and *γενεσις*, 'birth.' A term, used by a French physician, named Robert, to designate the art of procreating great men; men of mind; men of genius. He considered that they may be perpetuated by always taking care to have talented men united to clever women!

MEGALOPHO'NIA, from *μεγας*, *μελαγη*, 'great,' and *φωνη*, 'voice.' A full, strong voice.

MEGALOSPLANCH'NOS, *Megalo-splanchnus*, from *μεγας*, 'great,' and *σπλανχνον*, 'a viscus.' *Megalocœlia*. Hippocrates applies the epithet to those in whom the viscera, or any viscus is tumid. Some have used the substantive, *Megalosplanchnia*, for the tumour itself.

MEIBOMIUS, *Glands of, Fol'licles of M., Pal'pebral Fol'licles, Cil'ary F., Glan'dulæ sebaceæ cilia'res vel Meibomia'næ*, (F) *Follicules palpébraux ou ciliaires, Glandes de Meibomius*. Small, sebaceous follicles, called after Henry Meibomius, although known long before his description of them. They are situate in special grooves in the tarsal carti-

lages; and are ranged by the side of each other, in the form of yellowish, parallel, and vertical lines; sometimes straight, at others, tortuous. They may be seen at the inner surface of the eyelids, through the conjunctiva, and secrete a sebaceous humour, called *Lippitudo*, *Gum*, (F) *Chassie*.

MEIO'SIS, *Imminu'tio, Minuthe'sis*. The period of a disease, in which the symptoms begin to diminish;—the decline.

MEL, *μελι*, *Meli, Niliacum, Honey*, (F) *Miel*. A substance, of a mucoso-saccharine nature, prepared by the *Apis mellifica* or common bee, which collects it from the nectaries of flowers. Honey is employed as aliment, condiment, and medicine. It is demulcent and aperient; and is employed as an adjunct to gargles in cynanche tonsillaris, &c. It is, at times, used as a detergent to foul ulcers. *Virgin Honey*, (F) *Miel vierge*, is that which flows from the wax spontaneously.

HILL'S BALSAM OF HONEY is formed of *balsam. tolu. ℥j, honey ℥j, rectified spirit*, one gallon. It was long a celebrated empirical pectoral.

MEL BORA'CIS, *Mel subbora'cis, Colluto'rium adstrin'gens, Linimen'tum de Bora'tē, L. ad aphthas, Mel Boraxa'tum, Linctus de Bora'cē, L. ad aphthas, Honey of Borax*. (*Boracis contrit. 3 j, mellis despumati 3 j. M. Ph. L.*) Detergent. Applied to the mouth in aphthous affections.

MEL DESPUMA'TUM, *Clar'ified Honey, Anaphrom'eli*, (F) *Miel clarifié*. Melt the honey in a water bath, and remove the scum. Uses the same as honey (q. v.)

MEL ROSÆ, *Mel rosa'tum, Melli'tum de Rosis, Honey of Roses, Rhodom'eli, Rhodostac'ton*, (F) *Miel rosat, Mellite de Roses*. (*Rosæ gallic. petalor. exsicc. 3 iv, aquæ ferv. ℥iij, mellis despum. ℥v.* Infuse the roses for six hours: add the strained liquor to the honey, and boil to a proper consistence in a water bath. *Ph. L.*) Astringent and detergent. Used chiefly in gargles and washes for aphthæ, &c.

HONEY WATER is a mixture of essences, coloured with saffron. A little honey is added to communicate a clamminess; the effect of which is to make it retain the scent the longer. It is used as a scent.

MELÆ'NA, *Melanorrhag'ia, Melanchlo'rus, Melanic'terus, Melas Ic'terus*, from *μελας*, 'black.' The *Black Vomit*; the *Black Jaundice, Morbus niger*, (F) *Maladie noire, Méline, Ictère noire*. A name given to vomiting of black matter, ordinarily succeeded by evacuations of the same character. It seems to be often a variety of hæmatemesis. The *Black Vomit* in yellow fever is owing to a morbid secretion from the lining membrane of the stomach and small intestine.

MELALEU'CA, **LEUCADEN'DRON**. This and the *M. Cajaputi* afford the *Cajeput Oil* (see *Cajeput*.) The leaves are es-

teemed diuretic, stomachic, and emmenagogue.

MELANAGOGUE, *Melanago'gus*, from *μελας*, 'black,' and *αγω*, 'I expel.' A medicine, which the ancients believed adapted for expelling black bile or melancholy.

MELANCHLO'ROS, from *μελας*, 'black,' and *χλωρος*, 'green.' The ancients gave this name to certain dark-coloured topical remedies.

MEL'ANCHOLY, *Melancho'lia*, from *μελας*, 'black,' and *χολη*, 'bile.' *Lypema'nia*, *Monoma'nia*, *Ecphro'nia* *Melancho'lia*, *Mania Melanchol'ica*, *Mania Melancho'lia*, *Tristema'nia*, (F) *Mélancolie*. A disease, supposed, by the ancients, to be caused by black bile. A variety of mental alienation, characterized by excessive gloom, mistrust, and depression, with insanity on one particular subject or train of ideas. *Panophobia*, *Demonomania*, *Erotomania*, *Nostalgia*, &c. may be referred to this head.

Melancholy is also used for unusual gloominess of disposition.

MELANCHOL'IC, *Melanchol'icus*. One labouring under melancholy. That which belongs or relates to melancholy. In popular language, one of a gloomy disposition.

MELANCHRUS, from *μελας*, 'black,' and *χρος*, 'a colour.' One attacked with black jaundice. It is probably an abbreviation of *Melanchloros*.

MELANO'SIS, *Melan'sis*, *nigritudo*, *carcinoma melanot'icum*, from *μελας*, 'black.' An organic affection, in which the tissue of the parts is converted into a black, hard, homogeneous substance, near which ulcers or cavities form;—owing to the softening, either of this substance itself, or of some other morbid tissue, of tubercles especially. This morbid change affects the lungs particularly. It is, also, met with in the liver and cellular texture. Its causes are very obscure. The melanosis of the lungs constitutes one of the species of phthisis of Bayle; but it is impossible to distinguish it from the other species during life.

MELAS'MA, *Ecchymoma Melasma*, *Nigror*, from *μελας*, 'black.' A black spot or ecchymosis, occurring on the lower extremities of old people.

MELAS'SES, *Molas'ses*, *Melus'tum*, *The-riaca commu'nis*, *Treacle*. The syrup, which remains after the juice of the sugar-cane has been subjected to all the operations for extracting sugar from it. In the United States, the syrup made in the process of forming common sugar is called *melasses*; that remaining after the refinement of sugar being termed *sugar-house melasses* or *treacle*.

MELATROPH'IA, from *μελος*, 'a limb,' and *ατροφια*, 'wasting.' Wasting of the limbs.

MELCA, *μελκα*. Food, made of acidulated milk.

MELEI'OS, *μελαιος*, *Mel'inus*, *Melias*. A species of alum, found in the island Melos.

MEL'IA AZED'ARACH, *Poison Berry Tree*, *Azed'arach*, *Pride of India*, *Pride of China*, *Bead Tree*. *Nat. Ord.* *Meliaceæ*; *Sex. Sys.* *Decandria Monogynia*. The bark of the root is usually given in decoction, in the proportion of 3 or 4 ounces of the bark of the fresh root to a quart of water; boiled down to a pint. The dose is one or two table-spoonfuls, every two or three hours, till free purging is induced. It is given in this manner as an anthelmintic. It is sometimes formed into an ointment, and used in *tinca capitis*.

MELICE'RI, *Melifavium*, from *μελι*, 'honey,' and *κηρος*, 'wax.' *Emphy'ma encyst'is melice'ris*. An encysted tumour, filled with a substance resembling honey.

MELIGE'I'ON, from *μελι*, 'honey.' A fetid humour, of the consistence of honey, discharged from ulcers accompanied with caries of a bone.

MELIME'LUM, from *μελι*, 'honey,' and *μηλον*, 'an apple.' A name given to two compounds:—one of honey and quince, the other of honey and apples.

MEL'INUM, *μηλινον*. The ancient name of an ointment, and of several plasters; described by Dioscorides and Galen: so called from their resembling the *μηλον*, or quince, in colour.

MELIS'SA, from *μελισσα*, 'a bee;' because bees gather honey from it. *Melissa officina'lis*, *Citra'go*, *Citra'ria*, *Melitei'a*, *Melissob'otos*, *Melitæ'na*, *Melissobot'anum*, *Melis'sa citra'ta*, *Melissophyl'lum*, *Melit'tis*, *Cedronel'la*, *Apias'trum*, *Melissa cit'rina*, *Ero'tion*, *Balm*. (F) *Mélisse*, *La Citronnelle*. *Nat. Ord.* *Labiatae*. The leaves of balm have a pleasant odour; and an austere and aromatic taste. It was formerly much used in nervous diseases, but is now only employed when made into a tea, as a diluent, in febrile affections. It is the basis of a celebrated preparation,—the *Eau des Carmes*, (q. v.)

MELISSA CALAMIN'THA, *Calamin'tha*, *C. vulga'ris*, *C. officina'rum*, *Cal'amint*. (F) *Calament*. This plant smells like wild mint, though more agreeably. It is used, popularly, as a tea in dyspepsia; flatulent colic; hysteria; uterine obstructions, &c.

MELISSA GRANDIFLORA, *Calamin'tha magno flore*, *C. monta'na*, *Mountain Cal'amint*. This plant resembles the last in virtues.

MELISSA NEP'ETA, *Calamin'tha Anglica*, *C. Pule'gii odor'e*, *Nep'eta agre'stis*, *Field Cal'amint*, *Spotted Cal'amint*. Formerly used as an aromatic.

MELIT'TIS **MELISSOPHYLL'LUM**, *La'mium monta'num*, *Melissa hu'milis*, *Melissophyl'lum*, *Bastard Balm*. (F) *Mélisse des Bois*, *Mélistot*. This plant was formerly employed, like the balm, in uterine obstructions.

MELIZO'MUM, from *μελι*, 'honey,' and *ζωμος*, 'broth.' Mead. *Melli'na*, *Metheg'lin*. A drink prepared with honey.

MELLA'GO, from *mel*, 'honey.' Any medicine having the consistence of honey.

MELLI'TA, from *mel*, 'honey.' Prepared honeys:—medicated honeys.

MELLITUM DE MERCURIA'LI COMPOS'I-TUM, (F) *Miel de mercuriale composé*, *Syrup de longue vie*. (*Succ. purif. mercurialis* ℥ ij, *boraginis*, *anchusæ officinalis*, aa ℥ ss, *iris pseudacori radicis recent.* 3 ij, *rad. sicc. gentianæ* 3 j, *mellis* ℥ iij, *vini albi* 3 xij. Macerate the bruised roots in the wine, for 24 hours; strain. Mix the juices and honey; boil slightly, and filter: then add the two liquors, and boil to the consistence of syrup. 3 iss of *senna leaves* may be added to the syrup. *Ph. P.*) Cathartic, stomachic, &c.

MELLITUM SIMPLEX, *Syrupus de Mellē*, *Syrup of Honey*. (*Mellis* ℥ vj, *aquæ* ℥ iss, *carbonat. calcis. præparat.* 3 iij. Mix the honey, water, and carbonate of lime in a silver vessel: boil the mixture, stirring, at the same time, for 2 or 3 minutes: then add *prepared animal charcoal* 3 vj, *two whites of eggs*, mixed in a pint of water. Mix all, and boil to the consistence of syrup: remove from the fire; let the syrup rest for 15 minutes, and pass through a cloth. *Ph. P.*) Demulcent.

MELOCHI'TES, *Lapis Arme'nius*, *Armeni'tes*, *Arme'nian Stone*. A variety of blue carbonate of copper. It is found in Germany, the Tyrol, and especially in Armenia. It was formerly employed as a cardiac, and as proper for purging away melancholy.

MEL'OE NIGER, *M. Pennsylvan'icus*. A blistering fly, native of the United States. It feeds upon the *Prunella vulga'ris* or *Self-heal*, and *Ambrosia trifida* or *Stick-weed*. These flies resemble the Spanish flies in properties.

The **MELOE PROSCARABÆ'US**, *Cantarel'lus*, was anciently used as a diuretic and antihydrophobic.

MELOPLA'CUS, from *μηλον*, 'an apple,' 'a quince.' A compound obtained by boiling *wine*, *honey*, *quince*, *pepper*, &c. together.—Galen.

MELON, *μηλον*. A disorder of the eye, in which it protrudes out of the socket. See *Exophthalmia*.—Castelli.

MELOS, *μελος*, *Membrum*. A member. An organized part, composed of other parts.—Castelli.

MELO'SIS, *μηλωσις*. The act of probing a wound, ulcer, &c.—Hippocrates.

MELO'TIS, *Melo'tris*, *Specil'lum Minus*. A small probe:—a probe for the ear.

MEMBRA'NA VERSIC'OLOR. A peculiar membrane—according to Mr. Fielding, of Hull—situate immediately behind the retina, and in connexion with it. It is separable into distinct layers from the choroid, and is supplied with blood-vessels.

MEMBRANE, *Membra'na*, *Hymen me-*

ninx. A name, given to different thin organs, representing species of supple, more or less elastic, webs; varying in their structure and vital properties, and intended, in general, to exhale, absorb, or secrete certain fluids; and to separate, envelope, and form other organs. Bichat has divided the membranes into simple and compound.

The **SIMPLE MEMBRANES** comprise three orders.

1. The **MUCOUS MEMBRANES**, *Membranes folliculeuses* (Ch.), so called, on account of the mucous fluid by which they are constantly lubricated. They line the canals, cavities, and hollow organs, which communicate externally, by different apertures in the skin. Bichat refers the mucous membranes to two great divisions—the *gastro-pulmonary*, and the *genito-urinary*. The mucous membranes have a striking analogy with the cutaneous tissue, in organization, functions, and diseases. They are composed of chorion, papillæ, and epidermis; and are furnished with a multitude of follicles, which secrete a viscid humour;—mucus. They receive a quantity of arterial vessels, veins, lymphatics, and nerves.

2. The **SEROUS MEMBRANES**, *M. villeuses simples* (Ch.), are transparent, thin, and composed of one lamina. One surface adheres to other textures: the other is smooth, polished, and moistened by a serous fluid. They are arranged—in the form of sacs without apertures—as great, intermediate reservoirs for the exhalant and absorbent systems, and in which the serous fluid in passing from the one system tarries some time before it enters the other. The serous membranes resemble the cellular membrane in structure and diseases. They facilitate the motion of the organs which they envelope, on each other. They may be divided into, 1. *Serous membranes*, properly so called; as the arachnoid, pleura, peritoneum, and tunica vaginalis. 2. *Synovial membranes* or *Capsules*; which belong to joints, tendons, aponeuroses, &c.

3. **FIBROUS MEMBRANES**, *Membranes albugineuses* (Ch.) These are almost all continuous, and terminate at the periosteum—their common centre. They have been divided into two sections.

1. *Enveloping aponeuroses*, *Aponeuroses of insertion*, *Fibrous capsules of the joints*, and *Fibrous sheaths of tendons*.

2. The *Periosteum*, *Dura mater*, *Sclerotica*, *Tunica albuginea testis*, *Fibrous membrane of the spleen*, &c.

The fibrous membranes are not free or moistened by any particular fluid. They always adhere by both surfaces to the neighbouring parts; are firm, resisting, but slightly elastic, and of a white colour; sometimes pearly and glistening. They are chiefly composed of the *albugineous fibre* (see *Albugineous* and *Fibrous*.) These vessels are numerous, in some, as in the dura mater and

periosteum: in others, scarcely sensible, as in the aponeuroses. The presence of nerves has never been proved, although several circumstances, regarding their sensibility, render their existence probable.

The fibrous membranes serve, in general, to augment the solidity of the organs which they envelope; to retain the muscles in their respective positions; to favour the motion of the limbs, and that of the muscles and skin; to form canals and rings for the passage of different organs, &c.

Bichat admits three species of *compound membranes*. 1. The *Sero-fibrous*, formed of a serous and fibrous lamina, intimately adherent to each other;—as the pericardium, dura mater, and tunica albuginea. 2. The *Sero-mucous*, formed of a serous and mucous lamina;—as the *gall-bladder* at its lower part. 3. The *Fibro-mucous*, constituted of the union of a fibrous and mucous membrane;—as the *mucous membrane of the nasal fossæ*, gums, &c.

Chaussier admits six kinds of membranes. 1. The *laminated*. See Cellular Tissue. 2. The *serous* or *simple villous*: 3. The *follicular* or *complicated villous*: 4. The *muscular* or *fleshy*: 5. The *albugineous*: 6. The *albuminous*.

MEMBRANE, *False, Acciden'tal, Adventitious membrane, Pseudo-Membrane, Pseudymen, Pseudomeninx*, (F) *Fausse membrane, M. accidentelle*. Membranous productions are so called, which form on all the free, natural surfaces, and on every free, accidental surface. They are, in general, produced by the exudation of a coagulable lymph, susceptible of organization, which takes place in consequence of inflammation of the various tissues. These accidental membranes occur on the skin after the application of a blister; on mucous surfaces, as in croup; on the parietes of inflamed veins and arteries, &c. The cicatrices of wounds are formed of them.

MEMBRANES OF THE FŒTUS, *Membræ næ fœtum involven'tes*. The membranes which immediately envelope the fœtus, in the cavity of the uterus, and the rupture of which gives rise to the discharge of the liquor amnii. These membranes are the *decidua, chorion*, and *amnion* (q. v.)

MEMBRANOUS, *Membrano'sus, Hymenodes*, (F) *Membraneux*. Having the nature of a membrane. Formed of membranes.

MEMBRANIFORM, *Membraniformis*:—resembling a membrane. A name given to thin and flat parts, which resemble membranes.

MEMBRANIFORM MUSCLES. Very broad and thin muscles, as the *platysma myoides*, *obliquus abdominis*, &c.

MEMBRUM, *Artus, Melos, Colon*, a limb, a member, (F) *Membre*. The limbs or extremities or members of animals are certain parts, exterior to the body, which are more or less apparent, long, and movable. It is by

means of their limbs, that animals transport themselves from one place to another: and that they defend themselves, or attack others. The limbs are arranged on each side of the trunk, with which they are articulated. In man, they are four in number;—two *upper* or *thoracic*, and two *lower*, *pelvic* or *abdominal*.

MEM'ORY, *Memoria, Mneme*, (F) *Mémoire*. The cerebral faculty, by virtue of which past impressions are recalled to the mind.

MEMPHI'TES LAPIS. A sort of stone, found in the environs of Memphis; which was formerly esteemed narcotic.

MENINGE'AL, *Meningæ'us*, (F) *Méningé*. Relating to the meninges, or merely to the dura mater.

The MIDDLE MENINGEAL ARTERY, *Arteria meningæ'a me'dia, A. Sphæno-spinosa, A. Duræ Matris media max'ima, A. Sphæno-spinalis, Spinal Ar'tery*, (F) *Artère méningée moyenne, A. Sphéno-épineuse, A. Épineuse*, is the largest of the branches, given off by the internal maxillary artery. It enters the cranium by the foramen spinale, and distributes its branches chiefly to the dura mater.

MENIN'GES, *Eilam'ides, Matres Cer'e-bri, Omen'ta*, from *μνινγξ*, 'a membrane.' The three membranes, which envelope the brain—*Dura mater, Arachnoid*, and *Pia mater*, (q. v.)

MENIN'GINE. Same etymon. A name, given by Chaussier to the pia mater, united to the cerebral layer of the arachnoid.

MENINGI'TIS. Inflammation of the meninges or membranes of the brain. See Phrenitis.

MENINGOPH'YLAX, *Custos menin'gis. Depresso'rium*, (F) *Dépressoire*, from *μνινγξ*, 'a membrane,' the dura mater; and *φυλαξ*, 'a preserver.' An instrument for depressing the dura mater, and guarding it from injury, whilst the bone is cut or rasped.

MENINGO'SIS. Same etymon. The union of bones by means of membrane; e. g. the articulation of the bones of the cranium in the fœtus. Meningosis is a variety of Syn-desmosis.

MENISPER'MUM COCCULUS. *Family Menispermæ. Sex. Syst. Diœcia Dodecandria*. The systematic name of the plant, the berries of which are well known by the name of *Coc'culus Indicus, Indian Berries, Baccæ Piscato'riæ, Coc'culus subero'sus, Indian Cockles, Coccus In'dicus, Coccule officina'rum, Cocci orienta'les, Grana Orien'tis*, (F) *Coque du Levant, Coque-levant*. These berries are remarkable for their inebriating and destructive quality to fish. The deleterious principle appears to reside in the kernel, and in the active principle called *Picrotox'ine*. The Coccus Indicus has only been used in decoction to kill vermin. It has, at times, been added to beer, by fraudulent tradesmen, to render it more inebriating.

MENISPER'MUM TUBERCULA'TUM, *M. verrucosum*, *Cocculus crispus*. A Chinese plant, an extract from the root of which is tonic to the stomach and bowels, and possesses some astringency. Dose, 5 to 10 grains.

MENORRHA'GIA, from *μην*, 'a month,' and *ῥοι*, 'I flow fiercely.' Flow of the menses. Frequently the word is used synonymously with uterine hemorrhage or *metrorrhagia* (q. v.), or for immoderate flow of the menses—*profuse menstruation*, *Paramenia superflua*, *P. profusa*, *Menorrhagia rubra*, *Catameniorum fluxus immodicus*.

MENOS'TASIS, from *μην*, 'a month,' and *στασις*, 'stasis,' 'stagnation.' This word, according to some, signifies the retention of the menses and their accumulation in the uterus. According to others, it means the acute pain which, in some females, precedes each appearance of the menses; a pain which has been presumed to proceed from the stasis of blood in the capillary vessels of the uterus.

MENOXENIA, from *μην*, 'a month,' and *ξενος*, 'foreign.' Irregular menstruation.

MENSES, *M. Muliebres*, *Fluxus menstruus*, *F. lunaris*, *Proflu'vium muliebre*, *P. genitalē muliebre*, *Consuetudo menstrua*, from *mensis*, 'a month.' *Catemenia Menstrua*, *Emmenia*, *Tributum lunare*, *Purgationes*, *P. menstrua*, *Gynæcia*; the *Courses*, *Menstrual flux*, *Monthly courses*, *Flowers*, (F) *Mois*, *Règles*, *Lunes*, *Flueurs*, *Affaires*, *Epoques*, *Ordinaires*, *Purgations*, *Fleurs*, *Menstrues*. The sanguineous evacuation from the uterus, the monthly recurrence of which constitutes *menstruation*, (q. v.)

The first appearance of the menses is usually preceded by the discharge of a fluid, whitish matter from the vagina; by nervous excitement, and by vague pains and heaviness in the loins and thighs; numbness of the limbs, tumefaction and hardness of the breasts, &c. More or less indisposition and irritability, also, precede each successive recurrence of the menstrual flux.

In temperate climates, each period ordinarily continues from three to six days; and the quantity lost varies from four to eight ounces. The menses continue to flow from the period of puberty till the age of 45 or 50. At the term of its natural cessation, *Menolipsis*, the flux becomes irregular; and this irregularity is occasionally accompanied with symptoms of dropsy, glandular tumours, &c., constituting the *Paramenia cessatio'nis* of Good, and what is called the *critical time of life*; yet it does not appear, that the mortality is increased by it.

With the immediate causes of menstruation we are unacquainted. We express only our ignorance, when we assert it to depend upon periodicity;—the discharge comes from the uterus, and vagina, and seems to be a true secretion from the lining membrane. It differs from blood, by its peculiar odour,

and by its not coagulating. It is arrested, as a general principle, during pregnancy and lactation. In warm climates, women usually begin to menstruate early, and cease sooner than in the temperate regions. The quantity lost is also greater. In the colder regions the reverse of this holds, as a general rule.

MENSTRUATION, *Menstrua'tio*, *Chromog'nea*. The flow of the menses. *Menorrhagia*, *Fluxus menstrua'lis*.

VICARIOUS MENSTRUATION is that, which occurs from other parts than the uterus. It is called *Paramenia erroris*, *Menorrhagia erronea*, *Mensium per aliena loca excretio*. At times, the secreted fluid has all the characters of the menstrual secretion: at others, it appears to be blood.

MENSTRUUM, (F) *Menstrue*. This name was formerly given to every substance, which possesses the property of dissolving others slowly and with the aid of heat. At present, it is used synonymously with *solvent*. Thus,—water, alcohol, ether, acids, oils, &c. are *menstrua*.

MENSURA'TION, *Mensuratio*, from *mensura*, 'measure.' *Measurement*. One of the means, used for exploring the state of the thoracic and other cavities. It consists in a comparative measurement of each side of the chest, by means of a ribband extended from the median line of the sternum to the spine. When effusion exists in one side the measurement is usually greater than on the other. When, on the other hand, a portion of a lung has ceased, for some time, to exert its respiratory functions, the corresponding side of the chest becomes smaller, in consequence of the contraction of the pleura, retraction of the pulmonary tissue and greater approximation of the ribs.

MENTAL, from *mens*, 'mind;' belonging or relating to the mind, as, *mental phenomena*, *mental diseases*, *Morbi mentales*, &c.

In Anatomy, *Mental*, *Mentalis*, (F) *Mentonniere*, signifies that which relates to the chin; from *mentum*, 'the chin.'

The **MENTAL FORA'MEN**, (F) *Trou mentonnier*, *Anterior maxillary F.* is the outer orifice of the inferior dental canal. It is situated on the outer surface of the lower jaw-bone, opposite the second incisor or the canine tooth, and gives passage to the following vessels and nerves.

The **MENTAL AR'TERY**, (F) *Artère mentonnière*. This is given off by the inferior dental, and issues at the mental foramen to be distributed on the lower lip.

The **MENTAL NERVE**, (F) *Nerf mentonnier*, is furnished by the inferior dental nerve. It issues by the mental foramen and is distributed, in numerous filaments, to the muscles of the lower lip.

MENTHA AQUATICA, *Menthras'trum*, *Sisymbrium menthastrium*, *Mentha rotundifolia palustris*, *Watermint*, (F) *Menthe aquatique*, *M. rouge*. *Nat. Ord. Labiatæ*. This is

less agreeable than the *Mentha viridis*, and more bitter and pungent. It is used like spearmint.

MENTHA CERVI'NA, *Hart's pennyroyal*, *Hys-sop-leaved mint*, *Pulegium cervinum*, (F) *Menthe cervine*. Possesses the properties of pennyroyal but is very unpleasant.

MENTHA CRISPA, *Colymbifera minor*, *Curl-ed mint*, (F) *Menthe frissée*, *Menthe crépue*, *Beaume d'eau à feuilles ridées*. Possesses the properties of peppermint.

MENTHA PIPERITA. *Mentha Piperitis*, *Peppermint*, (F) *Menthe poivrée*. The odour of this variety is strong and agreeable. Taste pungent, aromatic, and producing a sensation of coldness in the mouth. Virtues depend upon essential oil and camphor. It is stomachic and carminative. It is chiefly used in the form of essential oil—the *oleum menthae piperitæ*.

THE ESSENCE OF PEPPERMINT consists of the *ol. menthae pip.* 3 iij., *sp. vin. rectific.*, coloured with *Spinach leaves*. ℞ij.

MENTHA PULEGIUM, *Pulegium*, *Pulegium regale*, *Pulegium latifolium*, *Glechon*, *Pennyroyal*, *Pudding grass*, (F) *Pouliot*. The oil—*Oleum pulegii*—possesses the virtues of the plant. It resembles the mints in general in properties. Amongst the vulgar it is esteemed as an emmenagogue.

MENTHA VIRIDIS, *M. sativa*, *M. vulgaris*, *M. gentilis*, *M. spicata*, *Spearmint*, (F) *Menthe sauvage*, *Baume des jardins*, *Menthe verte*, *Menthe des jardins*. Odour strong, aromatic; taste, warm, austere, bitterish. Virtues the same as those of the peppermint. The *Oleum menthae viridis* is obtained from it.

MENTO-LABIAL, *Mento-labialis*. Under this name Chaussier has united the Levator labii inferioris and Quadratus muscles.

MENTULAGRA. A convulsive erection of the mentula or penis; such as is sometimes observed in eunuchs; a hybrid word, from *mentula*, 'the penis,' and *αγχα*, 'a seizure.'

MENTUM, *Geni'on*, *Anthe'reon*, 'the chin.' (F) *Menton*. The inferior and middle part of the face, situate below the lower lip. The chin is formed of skin, cellular tissue, muscles, vessels, nerves, and of the os maxillare inferius.

MENYANTHES TRIFOLIA'TA, *Trifolium paludosum*, *T. aquaticum*, *T. palustre*, *T. fibrinum*, *Menyanthes*, *Water trefoil*, *Buckbean*, *Bogbean*. *Nat. Ord. Gentianæ* (F) *Trèfle d'eau*. The taste is intensely bitter, and is extracted by water. It is tonic, anthelmintic, diuretic, cathartic, and, in large doses, emetic. In some countries, it is used as a substitute for hops in making beer.

MEPHITIC, *Mephitis*; from a Syriac word, signifying 'to blow, to breathe.' Any thing possessed of an unwholesome property; chiefly applied to exhalations.

MEPHITISM. Same etymon. Any per-

nicious exhalation. *Mephitis* and *Mophe'ta*, (F) *Mofette* ou *Moufette*, are old names for azote; and, in general, for all exhalations and gases that are unfit for respiration.

MERCURIAL, *Mercurialis*. That which contains mercury; one of the preparations of mercury.

MERCURIALIS. *Mercurialis annua*, *French mercury*. It has been estimated cathartic, hypnotic and cosmetic, and has been chiefly used by way of lavement.

MERCURIALIS PEREN'NIS, *Cynocram'bè*, *Canina bras'sica*, *M. montana*, *M. sylvestris*, *Dog's mercury*. This plant is possessed of acro-narcotic properties.

MERIDROSIS, from *μερος*, 'a part,' and *ιδρωσις*, 'sweating.' A partial perspiration.

MEROCE'LE, *Merorixis*, *Merorrhæxis*, from *μερος*, 'the thigh,' and *κηλη*, 'tumour.' *Femoral* or *crural hernia*. (F) *Hernie crurale* ou *fémorale*. In this hernia, the viscera issue from the abdomen through the crural canal; or through an opening immediately on the outer side of Gimbernath's ligament, which gives passage to lymphatic vessels. This affection is more frequent in the female than in the male, and especially in those who have had children. The tumour, formed by the merocele, is generally small, round, and more or less difficult of reduction. In other respects, it possesses all the characters of hernia. The neck of the sac has, close on the outside, the epigastric artery; above, the spermatic cord and spermatic artery in the male—the round ligament in the female; on the inside, Gimbernath's ligament; and, below, the pubes. When the obturator artery arises from the epigastric it generally passes on the outside of and below the orifice of the sac; sometimes, however, it takes a turn above and then to the inside of the opening. J. Cloquet asserts, that of 134 cases, in one only did he find the epigastric artery on the inside of the orifice of the sac.

The operation, required in strangulation of this variety, may be practised on the aponeurotic opening, by cutting downwards and inwards, on the side of Gimbernath's ligament.

MERRY ANDREW. An itinerant quack, who exposes his nostrums for sale at fairs and markets. See *Charlatan*. They are so called from Dr. Andrew Boorde, who lived in the reigns of Henry VIII, Edward VI, and Queen Mary, and who was in the habit of frequenting fairs and markets at which he harangued the populace.

MERUS, *Mera'cus*, *Arcatos*, 'pure, genuine;' as *Vinum merum*, unmixed wine.

MERYCOLO'GIA, from *μερυκα*, I ruminate, and *λογος*, a description. Any work on rumination may be so termed.

MESEMBRYANTHEMUM CRYSTAL'LINUM, *M. ficoï'des*, *Di'amon'd fig-marygold*, *Ice plant*. (F) *Glaciale*, *Cristalline*. It has been recommended in dysuria,

ischuria, and some other affections of the urinary organs.

MES'ENTERIC, *Mesara'ic*, *Mesenter'icus*, *Mesara'icus*, from *μεσεντεριον*, or *μεσεντεραιον*, 'the mesentery.' That which relates or belongs to the mesentery.

The **MESENTERIC ARTERIES** are two in number and distinguished into 1. The *Superior mesenteric*, which arises from the anterior part of the abdominal aorta, below the *cæliac*. It immediately descends to the left, forwards, behind the pancreas, and in front of the third portion of the duodenum,—to gain the superior extremity of the mesentery, where it makes a long curvature, the convexity of which is turned forwards and to the left. Towards the termination of the ileum, it ends by anastomosing with a branch of the *A. colica dextra inferior*. At its concavity it gives off the three *Arteriæ colicæ dextræ*, which belong to the great intestine; and, at its convexity, it sends off 15 or 20 branches, which are distributed to the small intestine; after having formed numerous arches by their anastomoses.

2. The *Inferior Mesenteric Artery* arises from the anterior part of the abdominal aorta, an inch and a half before its termination. It descends, on the left side, behind the peritoneum; engages itself in the substance of the iliac mesocolon, forming a considerable curvature, whose convexity faces the left side. When it reaches the brim of the pelvis, it passes along the posterior separation of the mesorectum and attains the neighbourhood of the anus, under the name *Superior hemorrhoidal artery*. It gives off no branch at its concave part; but, from the convex, the three *Arteriæ colicæ sinistræ* arise.

The **MESENTERIC** or **MESARAIC VEINS** are two in number and belong to the vena porta. They are distinguished into, 1. The *Superior mesenteric* or *mesaraic*, or *great mesaraic*. This trunk receives, from above to below and on the right side, the three *venæ colicæ dextræ* and the *Gastro-epiploica dextra*. Into its left side, the veins of the small intestine open. It passes in front of the transverse portion of the duodenum; and, behind the pancreas, unites with the splenic vein to concur in the formation of the vena porta.

The *inferior* or *lesser mesenteric vein* corresponds to the artery of the same name and opens into the splenic, near the union of that vein with the superior mesenteric, and behind the pancreas.

The **MESENTERIC PLEXUSES** are furnished by the solar plexus and have been distinguished into *superior* and *inferior*; like the mesenteric arteries which they accompany.

The **MESENTERIC GLANDS** are the lymphatic ganglions of the mesentery. Through them, the chyliiferous vessels pass to the thoracic duct. Their uses are unknown. When diseased, nutrition is interfered with, and atrophy produced.

MESENTERIC HERNIA. If one of the layers of the mesentery be torn by a blow, whilst the other remains in its natural state, the intestines may insinuate themselves into the aperture and form a kind of hernia. It is not known during life.

MESENTERITIS, *Empres'ma peritonitis mesenterica*, *Enteritis mesenterica*, *Inflammation of the mesentery*. The pain is here deeper seated and more immediately in the mesenteric region. The external tenderness is less than in some of the other varieties of peritonitis.

MES'ENTERY, *Mesenter'ium*, *Mesaraison*, *Mesen'teron*, *Mesera'um*, *Mesora'um*, *Medium intesti'num*, from *μεσος*, 'in the middle,' and *εντερον*, 'an intestine,' (F) *Mésentère*. A term applied to several duplicatures of the peritoneum, which maintain the different portions of the intestinal canal in their respective situations; allowing, however, more or less mobility. They are formed of two laminae, between which are contained the corresponding portion of intestine and the vessels that pass to it. One only of these duplicatures has received the name *mesentery*, properly so called. This belongs to the small intestine, which it suspends and retains *in situ*. Its posterior margin, which is the smallest, is straight and descends obliquely from the left side of the body of the second lumbar vertebra to the right iliac fossa. Its anterior margin is curved, undulating, plaited, and corresponds to the whole length of the small intestine. The mesentery contains, between the two laminae which form it, a number of lymphatic ganglions; the trunks and branches of the mesenteric vessels; the nervous plexuses, accompanying them, and many lacteals and lymphatics.

MESIRE. A disorder of the liver, mentioned by Avicenna, accompanied by a sense of heaviness, tumour, inflammation, pungent pain, and by blackness of the tongue.

MESOCÆ'CUM. A name given to a duplicature of the peritoneum (in some persons only) at the posterior part of the cæcum.

MESOCHON'DRIAC *Mesochondriacus*; from *μεσος*, 'middle,' and *χονδρος*, 'cartilage.' A name given by Boerhaave to fleshy fibres situate between the cartilaginous rings of the trachea.

MESOCOL'IC HERNIA. Hernia is so named by Sir Astley Cooper, when the bowels glide between the layers of the mesocolon.

MESOCO'LON, from *μεσος*, 'in the middle,' and *καλον*, 'the colon.' A name given to the duplicatures of the peritoneum, which fix the different parts of the colon to the abdominal parietes. It has received different names, according to its situation. The *right lumbar mesocolon* fixes the ascending colon to the corresponding lumbar region. The *transverse mesocolon* arises from the concave arch of the colon, and forms a septum between the epigastric and umbilical regions.

Its inferior portion is continuous with the mesentery. The *left lumbar mesocolon*, which contains the ascending colon, is continuous, below, with the *Iliac mesocolon*. The last includes between its layers the sigmoid flexure of the colon and ends in the mesorectum. Under the right kidney it is narrow and firm, and forms the *right ligament of the colon*; at the under end of the left kidney it forms the *left ligament of the colon*.

MESODMITIS, from *μεσοδμη*, 'the mediastinum,' and *itis*, 'inflammation.' *Mediastinitis*. Inflammation of the mediastinum.

MESOLOBAR, belonging to the *Mésolobe* or *Corpus callosum*.

The **MESOLOBAR ARTERIES** are the arteries of the corpus callosum.

MESOMERIA, from *μεσος*, 'middle,' and *μηρος*, 'the thigh.' The parts of the body situate between the thighs.

MESOPHYON, *Glabell'a*. The part of the face between the eyebrows; from *μεσος*, 'the middle,' and *οφρυα*, 'the eyebrows.'

MESORECTUM. A hybrid word; from *μεσος*, 'middle,' and *rectum*, 'the intestine rectum.' A triangular reflection, formed by the peritoneum, between the posterior surface of the rectum and the anterior surface of the sacrum. Between the two layers of which the mesorectum is composed are found much cellular tissue and the termination of the inferior mesenteric vessels.

MESOTHENAR, from *μεσος*, 'the middle,' and *ἑνθα*, 'the thenar,' 'the palm of the hand.' A muscle, which carries the thumb towards the palm. Winslow applied the term to the abductor pollicis, united to the deep-seated portion of the flexor brevis pollicis.

MESOTICA, from *μεσος*, 'middle.' Diseases, affecting the parenchyma. Pravity in the quantity or quality of the intermediate or connecting substance of organs; without inflammation, fever, or other derangement of the general health. The 1st Order, class *Eccritica* of Good.

MESPILUS, *Mespilus Germanica*. The medlar, (F) *Néflier*. (Fruit) *Nèfle*. The fruit and seeds of the medlar have both been used medicinally:—the immature fruit as an astringent, and the seeds in nephritic diseases.

MESPILUS OXYACANTHA, *Oxyacantha*, *Spina alba*, *White Hawthorn*, (F) *Aubepine*. The flowers of this common European plant are sometimes used in infusion as a pectoral.

META, *μετα*, *Meth'*, *μεθ'*, 'with,' 'together with,' 'after,' 'change of form and place.' A common prefix to words. Hence:

METABASIS, *μεταβασις*, *Transitus*, *Metabolè*, *Metal'lagè*, from *μεταβαινω*, 'I digress.' A change of remedy, practice, &c.—Hippocrates.

METACARPAL, *Metacarpia'nus*, (F) *Métacarpien*. Relating or belonging to the metacarpus.

The **METACARPAL BONES**, or bones which compose the metacarpus, are five in number;

and distinguished into *first, second, third, &c.* beginning from the outer or radial side.

They are articulated, by their superior extremity, with the bones of the second range of the carpus; and, by the lower, with the first phalanges.

The **METACARPAL RANGE** or Row of the carpal bones, (F) *Rangée métacarpienne du carpe* is the lower row of carpal bones; so called because they are articulated with the bones of the metacarpus. It is composed of the trapezium, trapezoides, magnum, and unciforme.

The **METACARPAL PHALANGES** are the first phalanges of the fingers; so called, because they are articulated with the bones of the metacarpus.

The **METACARPAL ARTICULATIONS** are those by which the four last metacarpal bones are united together, at their upper extremity.

The **METACARPAL ARTERY** or *Arteria dorsalis metacarpi* arises from the radial, at the moment it engages itself in the upper extremity of the abductor indicis. It descends obliquely upon the back of the hand. Its branches are distributed to the abductor indicis, and the integuments; some communicate with the dorsalis carpi.

The **METACARPAL LIGAMENT**, or *Inferior palmar Ligament*, is a fibrous band, stretched transversely before the inferior extremities of the four last metacarpal bones, which it keeps in their respective positions.

METACARPO-PHALANGIAN, *Metacarpo-phalangia'nus*, (F) *Métacarpo-phalangien*. That which belongs to the metacarpus and phalanges.

The **METACARPO-PHALANGIAN ARTICULATIONS** are formed by the bones of the metacarpus and the corresponding phalanges. In these articulations, the bony surfaces are incrustated with cartilage, covered by a synovial membrane and kept in connexion by means of an anterior and two lateral ligaments.

METACARPUS, from *μετα*, 'after,' and *carpus*, 'the wrist.' *Metacarpion*, *Postbrachiale*, (F) *Métacarpe*. The part of the hand, comprised between the carpus and fingers. It is composed of five parallel bones, called *metacarpal*; forming the back of the hand, externally, and the palm internally.

METAL, *Metal'lum*. A class of simple, combustible bodies; distinguished from others by considerable specific gravity; a particular splendour; almost total opacity; insolubility in water; and the property they have of ringing when struck. Metals have no effect, except of a mechanical nature, when taken into the stomach; unless they have already undergone, or undergo, in the stomach, oxidation or union with an acid; when several most deleterious compounds may be formed. Copper cents; half pence; quicksilver; lead, have frequently been swallowed in the metallic state with impunity. Tin and mercury are the only metals used to produce a mechanical

effect;—the former as an anthelmintic,—the latter, idly enough, in cases of fancied intussusception, &c.

METAMORPHOPSIA, from μεταμορφοω, 'I transform,' and ὤψ, 'the eye.' *Suffusio*, *Suffusio Oculorum*. *Imagination* (Maitre-Jean.) *Crupsia*, *Myodesopsia*, *False sight*. (F) *Berlue*. Aberration of the sense of sight, which transmits the image of imaginary objects. This affection sometimes depends on a slight opacity in the transparent parts of the eye; the cornea, crystalline, or vitreous humour, when it is symptomatic, and of no consequence. At other times, it appears to be idiopathic; and occurs particularly in those, who have been in the habit of constantly fixing their eyes on very brilliant or small bodies. The objects, fancied to be seen, are various. They are sometimes circular, perpetually moving; or shining or black spots, cobwebs, insects, or pieces of wood—when they are often termed *Muscae volitantes*, (F) *Mouches volantes*, and the condition *Visus muscarum Scotomata*, *Suffusio Myodes*, *Myiodeopsia*, *Myodesopsia*. These appearances sometimes continue for a few days; being dependent on the state of the nerves of the individual at the time; or they may exist for life, and ultimately impair the sight.

If the affection be symptomatic, it is of but little moment. If idiopathic, and connected with any excitement of the brain, which is not often the case, attention will have to be paid to that organ.

METAPOROPŒIA, *Metaporopoie'sis*, from μετα, 'after,' πορος, 'a pore,' and ποιω, 'to make.' The change produced in the minute pores,—in the capillary extremities of vessels,—when they pass from the morbid to the healthy condition.—Galen.

METAPTO'SIS, *Metaschematis'mus*. Mutation; change; from μεταπιπτω, 'I digress.' Any change in the form or seat of a disease.

METAS'TASIS, *Metachore'sis*, from μεταστημι, 'I change place.' *Displacement*, *Translation*. A change in the seat of a disease; attributed, by the Humourists, to the translation of the morbid matter to a part different from that which it had previously occupied; and, by the Solidists, to the displacement of the irritation. It has also been used in the same extensive sense as Metaptosis, (q. v.) Disputes have often been indulged, whether any case of metastasis ought not rather to be esteemed a case of extension of the disease. Gout and acute rheumatism are in favour of metastasis occasionally supervening.

METASTATIC, *Metastat'icus*. Belonging or relating to metastasis. A *metastatic crisis*, is one produced by metastasis;—a *metastatic affection*, one caused by metastasis, &c.

METASYN'CRISIS, from συγχρνω, 'I compose,' and μετα, 'which indicates a

change.' *Recomposition*. A word, employed by some disciples of Asclepiades. This physician supposed, that all animals are formed by the union or assemblage of atoms. He designated all bodies by the word συγκριματα; which signifies 'assemblage.' Συγκρνωσθαι, 'to be assembled,' was, with him, synonymous with 'to exist;' and διακρνωσθαι, 'to separate,' was, with him, synonymous with 'to dissolve,' 'to cease to exist.' The word *Metasyncrisis* was invented to express the recombination of bodies after their momentary dissolution. Some have rendered the word by the Latin *Recorporatio*.

METASYNCRITIC, *Metasyncrit'icus*, *Recorporat'ivus*. Belonging or relating to metasyncrisis. A name, formerly given to medicines to which was attributed the virtue of producing the metasyncrisis or regeneration of the body or of some of its parts.

METASYNCRITIC CYCLE meant a determinate series of remedies, employed for this purpose.

METATAR'SAL, *Metatar'seus*, (F) *Métatarsien*. Relating or belonging to the metatarsus.

The **METATARSAL BONES**, (F) *Os metatarsiens*, are five in number, and distinguished by their number; *first*, *second*, *third*, &c. reckoning from the outer side.

The **METATARSAL ROW**—(F) *Rangée métatarsienne*—of the bones of the tarsus, is the second row, or that contiguous to the metatarsus; comprehending the cuboides and three cuneiform bones; some add the scaphoides.

The **METATARSAL PHALANGES** are the first phalanges of the toes; so called, because they are united to the metatarsus.

The **METATARSAL ARTICULATIONS** are those resulting from the junction of the metatarsal bones with each other. They are strengthened, *behind*, by *dorsal* and *plantar* ligaments; and, *before*, by a *transverse metatarsal ligament*, which is plantar, and has the greatest analogy to the *inferior transverse metacarpal ligament*.

The **METATARSAL ARTERY**, *Sus-métatarsienne* of Chaussier, arises from the *A. dorsalis Tarsi*; passes transversely over the back of the foot; and furnishes, at its convexity, which is anterior, three branches, called *A. interos'seæ dorsales Pedis*. These branches are distributed in the interosseous spaces.

METATARSO-PHALANGIAN, *Metatarso-phalangia'nus*. Relating to the metatarsus and phalanges.

The **METATARSO-PHALANGIAN ARTICULATIONS** are formed by the bones of the metatarsus and the corresponding phalanges. They bear the greatest analogy to the *metacarpo-phalanganian articulations*, (q. v.)

METATAR'SUS, *Metatar'sium*, *Metapedium*, *Metapodium*, from μετα, 'after,' and ταρσος, 'the tarsus.' The instep. That part of the foot which is situate between the tar-

sus and toes, corresponding to the metacarpus. It is composed of five parallel bones; one to each toe. Like the metacarpal bones, they are developed from two points of ossification.

METATHESIS, from μετατίθημι, 'I change place.' *Transposi'tio*. An operation, by which a morbid agent is removed from one place to another, where it may produce less disturbance in the exercise of the functions:—as, for example, in the operation of depressing cataract, or when a calculus, in the urethra, is pushed back into the bladder.

METEOROL'OGY, *Meteorol'ogia*, from μετεωρος, 'a meteor,' and λογος, 'a discourse.' The science, whose object is a knowledge of the origin, formation, appearance, &c. of meteors. The state of the atmosphere has a most important bearing on the health of animals. The whole range of epidemic affections have their causes seated there. Meteorological observations have, hence, ever been attended to, by the physician, for the purpose of detecting the precise character of any particular epidemic influence.

The barometer, thermometer, and hygrometer are the instruments used with this intent—to detect, as well the varying weight or pressure, and the temperature, as the moisture. Perhaps of the three conditions, the last exerts more influence, in the production of disease, than either of the others. Our knowledge, however, of this part of Physics is extremely limited and unsatisfactory.

METER, μετρον, *Metrum*, 'a measurer,' a suffix to words denoting 'a measurer,' as in *Barometer*, *Pleximeter*, &c.

METHOD, *Meth'odus*. This word has different acceptations in the sciences. In Medicine, *curative method* is the methodical treatment of disease.

The **NUMERICAL METHOD**, *Method of Observation* of Louis, consists in observing every case and every symptom of a case numerically, so as to insure as far as practicable, accuracy of observation; and to enable us by the analysis and collation of such facts to deduce general laws and conclusions.

METH'ODISTS, *Method'ical Sect.* (F) *Méthodistes*, *Méthodiques*. A sect of physicians, whose doctrine was in vogue after that of the Empirics and Dogmatists, towards the end of the first century. According to the Methodists, of whom Themison was the chief, almost every disease is dependent on contraction or relaxation;—*strictum* or *laxum*. To these two causes, they added a third—*mixed* or *compound*—to include those affections, which partook of the two characters. The doctrine resembled, in some respects, that of Brown.

METHODOL'OGY, (MEDICAL) *Methodol'ogia Medica*. A word used, by the French more especially, to signify *method* applied to the study of any science. *Medical*

Methodology, consequently, means method applied to the study of Medicine.

METHOMA'NIA, from μεθη, 'drunkenness,' and μανια, 'mania.' An irresistible desire for intoxicating substances.

METOPANTRAL'GIA, from μετωπον, 'the forehead,' αντρειν, 'a cavity,' and αλγος, 'pain.' Pain in the frontal sinuses.

METOPANTRI'TIS, from μετωπον, 'the forehead,' and αντρειν, 'a cavity.' Inflammation of the frontal sinuses.

METOPOS'COPY, *Metoposco'pia*, from μετωπον, 'the forehead,' and σκοπειν, 'to view.' The art of knowing the temperament and character of a person, by inspecting the traits of his forehead or face. See *Physiognomy*.

METRAL'GIA, from μητρα, 'the womb,' and αλγος, 'pain.' Pain in the uterus.—*Bal-dinger*.

METRATRE'SIA, from μητρα, 'the womb,' and ατρησια, 'imperforation.' An unnatural closure of the uterus.

METRELCO'SIS, *Metrelco'sis*, from μητρα, 'the womb,' and ελκος, 'an ulcer.' Ulceration of the uterus.

METREMPHRAX'IS, from μητρα, 'the uterus,' and εμφρασσα, 'I obstruct.' Obstruction of the womb. A name, under which some authors have confounded chronic inflammation of that viscus, and the different degenerations to which it is exposed.

METREN'CHYTA, *Metren'chytes*, from μητρα, 'the uterus,' and εγχυω, 'I inject.' Injection of the uterus. Substances injected into the uterus are also called *Metren'chyta*.

METRIOPATHI'A, from μετριος, 'tempered,' and παθος, 'affection.' State of an individual, whose passions are temperate.

METRI'TIS, from μητρα, 'the womb.' *Febris uteri'na*, *Hysteri'tis*, *Empres'ma Hysteri'tis*, *Febris uteri'na Hysteri'tis*, *Inflamma'tio U'teri*, *Inflamma'tion of the Uterus or Womb*. (F) *Inflammati'on de la matrice*. The characteristic symptoms of this affection are:—pain, swelling, and tenderness in the hypogastric region; with heat, pain, and tenderness of the os uteri; vomiting, smallness, and frequency of pulse.

It occurs, most frequently, after delivery, when there is, generally, suppression of the lochial discharge.

The treatment must be vigorous. Bleeding early, so as to make a decided impression: followed by a full dose of opium, fomentations, blisters, &c.

Acute inflammation of the womb, seated in its internal membrane, has been called *Inflamma'tio catarrha'lis u'teri* or *Acute catarrh*, (F) *Catarrhe aigu*, of that viscus. It is known by the discharge of a clear, stringy fluid, *per vaginam*; preceded by pains, which, from the hypogastric region, shoot to the thighs, groins, &c. with more or less fever. It requires the antiphlogistic treatment.

Chronic metritis sometimes succeeds the acute. To it must be referred the indurations, observed in the uterus, and many of the leucorrhœal discharges, to which females are subject.

METROCARCINO'MA, *Cancer uteri*, from *μητρα*, 'the uterus,' and *καρκινωμα*, 'cancer.' Cancer of the uterus.

METROPERITONITIS, from *μητρα*, 'the uterus,' and *peritonitis*. Inflammation of the uterus and peritoneum. Puerperal Fever. See Peritonitis.

METRORRHA'GIA, *Hæmorrhæ'gia uteri'na*, *Sanguiflux'us uteri'nus*, *Hæmorrhæ'a* (of some), *Menorrhæ'gia* (of some), *Uterine Hemorrhage*, *Hemorrhage from the Womb*; (F) *Hémorrhagie de la Matrice*, *Perte*, *Perte utérine rouge*, from *μητρα*, 'the womb,' and *εργυμι*, 'I break forth.' An effusion of blood from the inner surface of the uterus, either at the menstrual or other periods: but in a greater quantity than proper.

Uterine hemorrhage may be caused by those influences, which produce hemorrhage in general. It happens, however, more frequently during pregnancy, and during or after delivery, when the vascular system of the uterus is so circumstanced as to favour its occurrence, more than at other periods.

The termination of metrorrhagia is usually favourable. Should it, however, be very copious, or frequently recur; or should it happen to a great extent after delivery, death may occur very speedily: and in some cases, without the discharge being perceptible; constituting *internal hemorrhage*.

Uterine hemorrhage may be *active* or *passive*; requiring obviously a different treatment. The general management is similar to that of Hemorrhage in general (q. v.); as the horizontal posture; acid drinks; free admission of cool air; cold applications to the loins, thighs, and abdomen; injection of cold water, even of iced water, into the vagina; plugging the vagina, so as to prevent the discharge *per vaginam*, and thus induce a coagulum in the mouths of the bleeding vessel. Such will be the *special* plan adopted, where the hemorrhage has occurred in one not recently delivered.

In uterine hemorrhage, after delivery, the same cooling plan must be followed: but as the flow of blood is owing to the uterus not contracting so as to constrict its vessels, pressure must be made on the abdomen, to aid this: and, if necessary, the hand must be introduced into the uterus, to stimulate it to contraction. Should the female be excessively reduced, so as to render the accoucheur apprehensive, that she may expire from loss of blood, brandy must be freely exhibited. The profuse exhibition of opium in such cases is, at least, a doubtful plan.

Transfusion (q. v.) has at times been practised as a last resource.

MIASM, *Miasma*, *Inquinamen'tum*, *Contagium*. The word *miasm* has, by some, been employed synonymously with contagion.

It is now used more definitely:—for any emanation, either from the bodies of the sick, or from animal and vegetable substances, or from the earth, especially in marshy districts, which may exert a morbid influence on those who are exposed to its action. To these terrestrial emanations—the *Koino-miasmata* of Dr. E. Miller of New York—the Italians give the name *aria cattiva*, but, more commonly, *malaria*; a word which has been adopted into other languages. The deleterious effluvia, originating from the decomposition of matter derived from the human body, have been called by Dr. Miller, *Idio-miasmata*: the epithets *Koino* and *Idio* being derived respectively from *κοινος*, 'common,' and *ιδιος*, 'personal.'

Of the miasms, which arise either from the animal body or from the most unhealthy situations, we know, chymically, nothing. All that we do know, is, that, under such circumstances, emanations take place, capable of causing disease in many of those who are exposed to their action.

MIASMATIC, *Miasmaticus*. Belonging or relating to miasmata. Sauvages, in his classification of diseases according to their etiology, has a class under the name, *Morbi miasmatici*. The fevers that arise from marshy miasms are styled, *mala'rious*, *paludal*, *Helop'yræ*, *Helopyretoi*, &c.

MICHELIA CHAM'PACA, *Champaca*, *Champacam*, *Michelia Tsjampaca*, *Tsjampaca*. An Oriental tree, much prized for the odour and beauty of its flowers. The oily infusion of the flowers is employed, in the Moluccas, in headache.

MI'CROCOSM, *Microcos'mus*, from *μικρος*, 'little,' and *κοσμος*, 'world.' A little world. Some philosophers have given this appellation to man, whom they consider as the epitome of all that is admirable in the world. The world they call *Macrocosm*.

MICROCOUS'TIC, *Microcus'ticus*, from *μικρος*, 'small,' and *ακουω*, 'I hear.' This word as well as *Microphonous*, from *μικρος*, 'small,' and *φωνη*, 'voice,' means any thing that contributes to increase the intensity of sound—as the speaking trumpet—by collecting the sonorous rays.

MICROGLOS'SIA, from *μικρος*, 'small,' and *γλωσσα*, 'tongue.' Original smallness of tongue.

MICROPHTHAL'MOS, from *μικρος*, 'little,' and *οφθαλμος*, 'eye.' One who has small eyes.

MICROR'CHIDES, from *μικρος*, 'small,' and *ορχις*, 'a testicle.' They who have very small testicles.

MICROSPHYC'TOS, from *μικρος*, 'small,' and *σφυγμος*, 'pulse.' One who has a small pulse.

MIDWIFE, from *μιτ*, 'with,' and *πιτ*, 'wife;' or from *μιτ*, 'meed,' 'recompense,' and *πιτ*, 'wife.' *Matro'na*, *Obstet'rix*, *Hyperet'ria*, *Mæa*, *Mæutria*, *Aces'toris*. (F) *Sage-femme*, *Accoucheuse*. A female, who practises midwifery.

MILIARY (FEVER), *Emphlysis milia'ria*, *Miliaria*, *Miliaris*, *Febris miliaris*, *Exanthe'ma miliaria*, *Syn'ochus miliaria*, *Aspre'do miliacea*, *Febris essero'sa*, *Febris puncti-cula'ris*, *F. culicula'ris*, *F. vesicula'ris*, *Pur-pura puerpera'rum*, *P. milia'ris*, *Febris pur-pura'te rubra et alba milia'ris*, *Pur'pura alba benig'na et malig'na*. (F) *Miliaire*, *Millot*, *Pourpre blanc*, *Millet*. It is so called, from the eruption resembling the seed of the *milium* or *millet*. Fever, accompanied by an eruption of small, red, isolated pimples, rarely confluent, but almost always very numerous, slightly raised above the skin, and presenting, at the end of 24 hours, a small vesicle filled with a white, transparent fluid; which quickly dries up, and separates in the form of scales. Miliary fever is now rare, in consequence of the cooling practice in fevers and other states of the system. It is, almost always, brought on by external heat, and hence the prevention is obvious. The treatment is simple. It requires merely the antiphlogistic regimen, in ordinary cases.

MILIOLUM. Diminutive of *mil'ium*, 'millet,' *Cenchrion*. A small tumour on the eyelids, resembling, in size, a millet-seed.

MILK, *Lac*, *Gala*, (F) *Lait*. A fluid, secreted by the mammary glands of the females of the mammalia.

The *skimmed milk of the cow*, (F) *Lait de Vache*, contains water, caseous matter, traces of butter, sugar of milk, muriate, phosphate, and acetate of potass, lactic acid, lactate of iron, and one atom of earthy phosphate.

The *cream* is formed of butter, caseum, and whey, in which there is sugar of milk and salts. Cow's milk is employed for the preparation of cream, butter, cheese, whey, sugar of milk, and frangipane. It is useful in a number of cases of poisoning; either by acting as a demulcent, or by decomposing certain poisons, or by combining with others so as to neutralize them. It is constantly employed as aliment, and may be regarded as an emulsion, in which butter and caseum are found in suspension. When taken into the stomach, it is coagulated by the gastric fluids, and the coagulum is digested like any other solid. The watery parts are absorbed.

MILK, ASSES', (F) *Lait d'anesse*, considerably resembles human milk, of which it has the consistence, smell, and taste: but it contains a little less cream, and more soft, caseous matter. It is often used by those labouring under pulmonary affections.

MILK, EWES'. (F) *Lait de Brebis*. It affords more cream than cows' milk; but the butter is softer. The caseum, on the contrary, is fatter, and more viscid. It contains less serum than cow's milk. The Roquefort cheeses are made from it.

MILK, GOATS', (F) *Lait de Chèvre*,—resembles cows' milk: the butyraceous matter, however, which enters into its composition, is more solid than that of the cow.

MILK, HUMAN, (F) *Lait de femme*,—contains more sugar, milk, and cream, and less caseum, than cows' milk. Its composition differs according to the distance of time from delivery.

MILK, MARES', (F) *Lait de Jument*,—contains only a small quantity of fluid, butyraceous matter; a little caseum, softer than that of cows' milk, and more serum.

From a considerable number of experiments, Messrs. Deyeux and Parmentier class the six kinds of milk, which they examined, according to the following table, as regards the relative quantity of the materials they contain.

Caseum.	Butter.	Sugar of Milk.	Serum.
Goat	Sheep	Woman	Ass
Sheep	Cow	Ass	Woman
Cow	Goat	Mare	Mare
Ass	Woman	Cow	Cow
Woman	Ass	Goat	Goat
Mare	Mare	Sheep	Sheep

MILK SICKNESS. A disease, occasionally observed in the States of Alabama, Indiana and Kentucky, and which affects both man and cattle, but chiefly the latter. It is attributed in cattle to something eaten or drunk by them; and in man to eating of the flesh of animals labouring under the disease. Owing to the tremors that characterize it in animals, it is called the *Trembles*.

The symptoms of the disease are such as are produced by the acro-narcotic class of poisons—vomiting, purging, extreme nervous agitation, &c.: and the approved indications of treatment appear to be—gentle emetics and laxatives, with quiet; and mucilaginous drinks.

MILLIGRAMME, from *mille*, 'a thousand,' and *γραμμα*, 'a gramme.' The thousandth part of a gramme;—about 0.015 Engl. grain.

MILLIMETRE, from *mille*, 'a thousand,' and *μετρον*, 'measure.' The thousandth part of the metre;—equal to 0.039 Engl. inch, or about two-fifths of a line.

MIN'IMUM. A *minim*. The 60th part of a fluid drachm. This measure has been introduced by the London College of Physicians, in consequence of the uncertainty of the size of the drop, (see *Gutta*.) The subdivision of the wine pint has, accordingly, been extended to the 60th part of the fluid drachm; and glass measures, called *minim* measures, have been adopted by the London College. The proportion between the *minims* and the drops of various fluid preparations is exhibited in the following table. The results were obtained by Mr. E. Durand, a skilful *Pharmacien*, of Philadelphia, under circumstances as regards the different articles, as nearly identical as possible.

TABLE OF THE NUMBER OF DROPS OF DIFFERENT LIQUIDS EQUIVALENT TO A FLUID DRACHM.

	Drops.
Acid Acetic Crystallizable,	120
Acid Hydrocyanic (Medicinal),	45
— Muriatic,	54
— Nitric,	84
— — diluted (1 to 7),	51
— Sulphuric,	90
— — aromatic,	120
— — diluted (1 to 7),	51
Alcohol (rectified Spirit),	138
Alcohol, diluted (proof Spirit),	120
Arsenite of Potassa, solution of,	57
Ether, Sulphuric,	150
Oil of Aniseed, Cinnamon, Cloves, Peppermint, Sweet Almonds, Olives,	120
Tincture of Assafœtida, Foxglove, Guaiac,	
— Opium,	120
— of Muriate of Iron,	132
Vinegar, distilled,	78
— of Colchicum,	78
— of Opium (black drop),	78
— of Squill,	78
Water, distilled,	45
Water of Ammonia (strong),	54
Do. do. (weak),	45
Wine (Teneriffe),	78
— Antimonial,	72
— of Colchicum,	75
— of Opium,	78

MISANTHROPIA, *Misanthropy*, *Exanthro'pia*, from *μισος*, 'hatred,' and *ανθρωπος*, 'man.' Aversion for men and society. A symptom of melancholy, and hypochondriasis.

MISMAR, *Mesemar*. A name given by Avicenna to a kind of nodus, which forms on the toes as the sequel of contusion or inflammation of those parts.

MISOPTO'CHOS, from *μισος*, 'hatred,' and *πτωχος*, 'poor.' That which has hatred for the poor. The gout has been so called by some, because it commonly affects the rich.

MISTURA. *A mixture*. A mingled compound, in which different ingredients are contained in the fluid state; suspended or not by means of mucilaginous or saccharine matter. In this sense, it is synonymous with the French *Potion*. In France, however, the word *mixture* is more frequently understood to mean a liquid medicine, which contains very active substances and can only be administered by drops. A mixture, in other words, in the French sense, may be regarded as a *potion* (q. v.) deprived of watery vehicle.

MISTURA AC'IDI HYDROCYAN'ICI, *Mixture of Prussic acid*, *Mélange pectoral* (Magen-die). (*Medicinal prussic acid*, 1 drachm, *distilled water*, 3 14, *pure sugar*, 3 iss). A dessert spoonful every morning and evening, as a pectoral, &c.

MISTURA AMMONI'ACI, *Lac ammoniaci*, *Mixture of ammoniac*. (*G. ammoniac*, 3 ij, *aquæ* ℥ ss. Rub the ammoniacum; adding the water gradually, until they are perfectly mixed. *Ph. L.*) Dose, 3 ss to 3 j.

MISTURA ASSAFŒTIDÆ, *Lac assafœtida*, *Emul'sio antihyster'ica*, *Mixture of assafœtida*, (F) *Lait d'asafœtida*. (*Assafœtida*, 3 ij,

aquæ ℥ ss. Rub together, adding the water by degrees. *Ph. L.*) Used where pills cannot be swallowed and as a glister in irritations during dentition and in ascarides. Dose, 3 ss to 3 iss.

MISTURA CAM'PHORÆ, *Camphor mixture*, *Camphor julep*, *Mistura camphora'ta*, *Julepium e camphora seu camphora'tum*, (F) *Julep camphoré*. (*Camphor* 3 ss; *rectified spirit*, 10 minims, *water* a pint. Rub the camphor and spirit; add the water and filter.) Virtues like those of camphor.

MISTURA CORNU USTI, *Decoc'tum cornu cervi'ni*, *Decoc'tum album*, *Decoction of burnt hartshorn*, *Mixture of burnt hartshorn*. (*Cornuum ust.* 3 ij, *acaciæ gum. cont.* 3 j, *aquæ* ℥ iij. Boil to ℥ ij, constantly stirring and strain. *Ph. L.*)

MISTURA CRETÆ, *Potio carbona'tis calcis*, *Mistura creta'cea*, *Mucila'go cre'tica*, *Chalk mixture*, (F) *Mixture de craie*. (*Creta pp.* 3 ss, *sacchar. purif.* 3 iij, *acaciæ gumm.* 3 ss, *aquæ* ℥ j. *Mix. Ph. L.*) Antacid and absorbent. Dose, 3 j to 3 ij.

MISTURA EMETI'NÆ VOMITO'RIA, *Emetic Mixture of emetine*. (*Emetine*, 4 gr., *orange-flower water* 3 ij, *syrup*, 3 ss. *M.*) A dessert spoonful every half hour till it acts.

MISTURA FERRI COMPOS'ITA, *Compound mixture of iron*, (F) *Mixture de fer composée*. *Griffith's mixture*. (*Myrrh. cont.* 3 j, *potassæ subcarb.* gr. xxiv, *aquæ rosæ* 3 viiss, *ferri sulph. cont.* 3 j, *sp. myristic.* 3 ss, *sacchar. pur.* 3 j. Rub together the myrrh, subcarbonate of potass, and sugar; then add, while triturating, the rose-water, spirit of nutmeg; and, lastly, the sulphate of iron. Pour the mixture directly into a glass bottle and stop it close. *Ph. L.*) It is tonic and emmenagogue and is useful wherever iron is indicated.

MISTURA GUA'IACI, *Mixture of guaiac*, *Lac guaiaci*, *Emul'sio guaiaci'na*, *Mistura guaiaci gummo'sa*, *M. gummi gua'iaci Berge'ri*, *Solu'tio guaiaci gummo'sa*, *S. resi'næ guaiaci aquo'sa*, (F) *Mixture de Gayac*. (*Guaiac. G. resin.* 3 iss, *sacch. pur.* 3 ij, *muc. acaciæ gum.* 3 ij, *aq. cinnam.* 3 viij. Rub the guaiacum with the sugar; then with the mucilage. Add, gradually, the cinnamon water. *Ph. L.*) Dose, 3 ss to 3 ij.

MISTURA MOSCHI, *Musk mixture*, *Mistura moschata*. (*Moschi*, *acaciæ gum. contus.*, *sacch. purif.*, *sing.* 3 j, *aq. rosæ* 3 vj. Rub the musk with the sugar; add the gum, and, by degrees, the rose-water. *Ph. L.*) Dose, 3 ss to 3 ij.

MISTURA STRYCHNI'NÆ, *Mixture of strychnine*. (*Distilled water*, 3 ij, *very pure strychnine*, 1 gr., *white sugar* 3 ij, *M.*) Dose, a dessert spoonful.

MITHRIDATE, *Mithridatium*, *Antid'otum mithridat'icum*, *Diascin'ci antidotus*, *Consec'tio Damoc'ratis*. A very compound electuary, into which entered—*Myrrh*, of Arabia, *Saffron*, *Agaric*, *Ginger*, *Cinnamon*, *Frankincense*, *Garlic*, *Mustard*, *Birthwort*,

Galbanum, Castor, Long pepper, Opoponax, Bdellium, Gum Arabic, Opium, Gentian, Orris, Sagapenum, Valerian, Acacia, Hypericum, Canary wine, Honey, &c. It was invented by Mithridates, king of Pontus and Bithynia, and was formerly regarded as alexipharmic. It is little used at the present day; and, from its heterogeneous nature, should be wholly abandoned.

MITRAL, *Mitra'lis*. Having the form of a mitre; resembling a bishop's mitre.

The **MITRAL VALVES**, *Val'vulæ mitra'les*, *V. episcopa'les*. Two triangular valves, at the opening of communication between the left auricle of the heart and the corresponding ventricle. These valves are formed by the inner membrane of the left cavities of the heart; and are retained on the side of the ventricle by tendinous cords, proceeding from the columnæ carneæ. They form species of valves, which permit the blood to pass from the auricle into the ventricle and oppose its return.

MITTE (F), *Efflu'vium Latrina'rium*. An emanation exhaled from privies, which strongly irritates the eyes. It consists of ammonia, united to the carbonic and hydro-sulphuric acids.

MNEME CEPHAL'ICUM BAL'SAMUM. A very compound medicine, into which entered *Balm, Lily, Rosemary, Lavender, Borage, Broom, Roses, Violet, Saffron, Thyme, Storax, Galbanum, &c.*

MNEMON'ICS, *Mnemon'ice, Mnemoneu'ticē*, from *μνησμαι*, 'I recollect.' The art of aiding the memory by signs; and of forming, in some sort, an artificial memory.

MOANING, from Sax. *mænan*, 'to grieve.' *Respira'tio luctuo'sa, Mychthis'mos*. A plaintive respiration, in which the patient utters audible groans.

MOBIL'ITY, *Mobil'itas*. The power of being moved. In *physiology*, great nervous susceptibility joined to a disposition to convulsion. Greatly developed excitability.

MOCHLIA. Reduction of a luxated bone; from *μοχλος*, a lever.

MODIOLUS. One of the hollow cones in the cochlea of the ear, forming a nucleus, axis, or central pillar, round which the gyri of the cochlea pass. The modiolus forms the inner and larger portion of the central pillar, and is the cavity seen at the bottom of the meatus auditorius internus. It lodges a branch of the auditory nerve. The central portion of the modiolus contains a number of minute canals, and is called in consequence *Tractus spiralis foraminulo'sus*. Into these the nerves of the cochlea enter, and pass out at right angles between the bony plates forming the *Zona ossea* of the lamina spiralis, to be expanded on the membranous portion of the lamina.

MODIUS. A dry measure, the third of an amphora, equal to the bushel.—Varro.

MODUS OPERAN'DI. This term is ap-

plied to the general principle upon which remedies act in morbid states of the body;—a subject of much interest, although involved in considerable obscurity.

The following classification will convey some idea of the ways in which different organs may be excited into action.

TABLE.

1. By actual or immediate contact of the remedy, and by absorption or mediate contact.
2. By an impulse conveyed by the nerves, through an impression made on the stomach or elsewhere.
3. By contiguous or continuous sympathy, or by that which is excited by mere proximity and continuity of parts.

MOFFAT, MINERAL WATERS OF. Moffat is a village situate about 56 miles S. W. of Edinburgh. The water is a cold sulphureous; containing, in a wine gallon, 36 grains of muriate of soda, 5 cubic inches of carbonic gas, 4 of azote, and 10 of sulphuretted hydrogen. It resembles Harrowgate water in its properties.

MOGILA'LIA, from *μογαι*, 'with difficulty,' and *λαλειν*, 'to speak.' Difficult articulation. This word is inaccurately written by Paul Zacchias,—*Mola'lia*, *Molilal'gia*, and *Molial'gia*. Impediment of speech.

MOISTURE, *Mador*, (F) *Moiteur*. Simple humidity of the skin. The skin is said to be moist or in a state of moisture, when there is slight perspiration.

MOLAR, *Mola'ris, My'licus*, (F) *Molaire, Meulière*. That which bruises or grinds; from *molaris*, 'a grindstone,' or *mola*, 'a millstone.'

The **MOLAR TEETH**, *Grinders, Jaw teeth, Molares permanentes dentes, Dentes molares, Gomphioi*, (F) *Dents molaires ou mâchelières*, occupy the farther part of each alveolar arch. Their coronæ are broader than they are high; unequal, tuberculated; and the roots are more or less subdivided. They are 20 in number, 10 in each jaw.

The two first pairs of molar teeth, in each jaw, have been called *lesser molares* or *bicuspid* (q. v.), *Dentes bicuspidati*. The coronæ have two tubercles; the external one being more prominent and larger than the inner. The root is commonly simple; sometimes bifurcated.

The other three pairs have been termed, *Great molares*—*Dents multicuspidées* (Ch.) Their coronæ are cubical, rounded, and have, at the upper surface, four or five tubercles, separated by deep furrows. The root is divided into two, three, four, and five *fangs*, which are more or less curved.

The third great molaris appears a long time after the others; and, hence, has been called *Dens sapientiæ* or *Wisdom tooth*.

MOLAR GLANDS. Two small bodies formed by a collection of mucous crypts; seated in the substance of the cheeks, between the masseter and buccinator muscles, and whose

excretory duct opens into the mouth opposite the last molar tooth.

MOLE, *Mola*, from *moles*, 'mass.' *Myle*, *μύλη*, *Zephyrius fœtus*, *Germen falsum*, *Pseudocyste molaris*, *Graviditas molaris*. A fleshy, insensible, at times, soft, at others, hard mass; of variable and indeterminate size, which forms in the uterus and is slightly united by vessels to that organ; from which its feeble vitality is derived. It has been conceived by some to be always owing to imperfect conception; but moles may form in the undoubted virgin. They seem to be owing to a morbid process; and certainly are generally connected with conception. At times, they contain parts of the fœtus; but commonly they do not.

At very different periods, in different women, the diseased mass is expelled from the uterus, with ordinary symptoms of abortion; and the case requires similar management. See, also, *Nævus* and *Conception (false)*.

MOLECULE, *Molecula*, *Massula*; diminutive of *Moles*, 'a mass.' A minute portion of any body. Also, the *cicatricula*, *macula*, *tread of the cock*, or embryo part of the impregnated ovum, observable by the microscope before the ovum has left the ovary of the hen. It lies under the epidermic coats of the yolk, and upon its proper coat. If the ovum, according to Valentin, be lacerated and its contents minutely examined, the cicatricula is found like a grayish white disk, which in its whole periphery, is dense, granulous, and opaque, but in the centre presents a clear nongranulous and perfectly diaphanous point. Purkinje found, that when he removed the dark granulous mass by suction with a small tube, there remained a perfectly transparent vesicle filled with a pellucid lymph, which had a decidedly spherical form, but being extremely delicate, was easily lacerable, and then its fluid escaped. As he found this, which later naturalists have named—after its discoverer—the *Purkinjean vesicle*, in the ova of the ovary, but could not see it in ova, which had already entered the oviduct, he gave it the name *germinal vesicle*. The granulous membrane—its thickened portion, the so called "cicatricula,"—and the germinal vesicle, constitute those parts of the ovum, which pass immediately into the original foundation of the embryo, the *blastodermis* or *germinal membrane*.

MOLIMEN. 'An attempt or struggle.'

MOLIMEN HÆMORRHOIDALE. The hemorrhoidal diathesis or impulsion.

MOLIMEN MENSTRUALE. The menstrual diathesis or impulsion.

MOLLITIES, *Mollescence*, (F) *Ramollissement*, from *mollescere*, 'to become soft.' Preternatural softness of an organ or part of an organ.

MOLLITIES CEREBRI, *Malacosis Cerebri*,

Encephalomalacia, *Mollescence*, or *softening*, or a kind of liquefaction of the cerebral substance; the remainder preserving its ordinary consistency, (F) *Ramollissement du cerveau*. The symptoms denoting it are equivocal.

MOLLITIES OS'SIUM, *Malacosteo'sis*, *Malacosteon*, *Parostia flexilis*, *Osteosarco'sis*, *Spina vento'sa* (of some), *Osteomalacia*, *Softening of the bones*, (F) *Ostéo-malacie*, *Ostéo-malaxie*, et *Osteo-malakie*, *Ramollissement des os*. A rare affection, in which the bones are deprived of their salts, particularly of the phosphate of lime, and consist only, or mainly, of gelatine; hence they acquire a degree of suppleness, which renders them unfit for the performance of their functions. The disease generally affects all the bones; but it is especially remarkable, during life, in the long bones which assume any curvature that may be wished. Very violent pain is often experienced in them; and the urine frequently contains an enormous proportion of calcareous phosphate. The patient is compelled to remain in the horizontal posture; the bones no longer being fixed points for the muscles to act upon. The disease has, hitherto, always terminated fatally, and dissection has exhibited the gelatinous nature of the bones; which by desiccation have become transparent, as if they had been macerated in acid.

Experience has afforded no means of relief in this dreadful affliction. The alkaline salts, earthy phosphates, &c. are of little or no use.

MOMOR'DICA BALSAMINA, *Balm apple*, *Balsam apple*. (F) *Balsamine*, *Pomme de merveille*. The fruit of this oriental tree, *Pomum hierosolymitanum*, was formerly considered vulnerary.

MOMOR'DICA ELATERIUM, *Elate'rium*, *Cucumis agrestis*, *C. asininus*, *C. sylvestris*, *Elate'rium officinarum*, *Charantia*, *Bouba'lios*, *Guarera orba*, *Wild or Squirting cucumber*, *Ecbo'lium elate'rium*. (F) *Concombre Sauvage*, *Momordique*. *Nat. Order*, *Cucurbitaceæ*. The dried sediment from the juice is the elaterium of the shops. (See *Extractum Elaterii*.) It is a most powerful cathartic, and, as such, has been used in dropsies. Its active principle is the *Elatin*, *Elatrine*, or *Elaterinum*. Dose, gr. $\frac{1}{4}$ to gr. j, until it operates.

MONAD, from *Monas*, 'unity.' A simple particle, or atom, or unit.—Leibnitz.

MONAR'DA FISTULOSA. The *Purple monarda*. The leaves have a fragrant smell; and an aromatic, somewhat bitter taste. They are reputed to be nervine, stomachic, and obstruent.

MONAR'DA PUNCTATA, *Horsemint*. *Nat. Ord.* *Labiatae*. Indigenous in the United States. Stimulant and carminative. The *Oleum Monardæ* is officinal in the United States.

MONDER (F), *Munda're*. To render clean or pure. In *Pharmacy*, it means to separate

any substance from its impure or useless portions. In *Surgery*, *monder* ou *mondifier une plaie*, is to clean or deterge a wound.

MONEM'ERON, *Monoēm'eron*, from *μo-voe*, 'one,' and *ἡμερα*, 'a day.' A name given to several collyria, which were supposed to be capable of curing diseases of the eyes in a day.

MONGO'LIAN. Anthropologists give the name *Mongolian race* to a variety of the human species, spread over a great part of the north of Asia, in China, India, Thibet, the Moluccas, &c. The individuals composing it have the skin of a brown red, forehead flat, nose broad, cheeks prominent, and lips large. See *Homo*.

MONNI'NA POLYSTA'CHIA. A beautiful South American plant. *Nat. Ord.* Polygalææ. *Sex. System*, Diadelphia Octandria. The bark of the root is a powerful astringent, and much used, in South America, in diseases of the bowels.

MONOC'ULUS, *Mon'ocle*, *Monoph'thal-mus*, from *μoνoς*, 'one,' and *oculus*, 'an eye.' A bandage, employed to maintain topical applications over one of the eyes. This bandage, called by some surgeons *Simplex oc'ulus*, (F) *Œil simple*, is made of a roller three or four ells long, rolled into a single ball.

MONOGAS'TRIC, *Monogas'tricus*, from *μoνoς*, 'one,' and *γαστηρ*, 'stomach.' That which has but one stomach. Man is *mono-gastric*. Ruminating animals, on the contrary, are *polygastric*.

MONOGRAPH, MED'ICAL. *Monogra-phia*, from *μoνoς*, 'one,' and *γραφη*, 'description.' An *ex professo* treatise on a single class of diseases, or on a single disease.

MONOR'CHIS, from *μoνoς*, 'one,' and *ορχις*, 'testicle.' One who has only one testicle.

MONOSI'TIA, from *μoνoς*, 'one,' and *σιτος*, 'food,' 'repast.' The habit of taking only one meal in the day.

MONROIA'NUM FORA'MEN. A foramen at the anterior part of the lateral ventricles of the brain, by which they communicate with each other. So called from the second *Monro*.

MONS VEN'ERIS, *Montic'ulus Ven'eris*, *Ephebe'um*, (F) *Mont de Vénus*, *Pénil*, *Motte*, *Eminence sus-pubienne*. The more or less projecting eminence, situate at the base of the hypogastrium, above the vulva and in front of the os pubis. At the period of puberty it becomes covered with hair, formerly called *Tressoria*, (q. v.)

MONSTER, *Monstrum*, *Teras*. Any organized being, having an extraordinary vice of conformation, or a preternatural conversion of every part, or of certain parts only.

Three species of monsters are usually distinguished. The *first* comprehends those, that are born with an excess of parts; as with two heads on one trunk,—two trunks with one head,—with five fingers or toes, &c. The *second* includes those with a deficiency of

parts,—such as the acephali, monopes, &c.—and the *third*, those with a deviation of parts,—as where the heart is on the right side, the liver on the left, &c.

Amongst the numerous hypotheses entertained on the origin or cause of monsters, or *monstrosities* as the state has been called, three only are worth mentioning. They have been attributed, 1. To the influence of the maternal imagination on the fœtus in utero. 2. To accidental changes, experienced by the fœtus at some period of its uterine existence: and, 3. To a primitive defect in the germs. The second seems to be the only one, that is philosophical.

As a medico-legal question, monsters, if capable of action as individuals, have the same rights as other persons.

MONTBRISON, MINERAL WATERS OF. M. is a town in France, in the department of the Loire; 15 leagues from Lyon. There are three cold springs here, which are highly acidulous, and used as refrigerants and aperients.

MONT-DE-MARSAN, MINERAL WATERS OF. M. is a small French town, 10 leagues from Dax; where there is a chalybeate spring, somewhat frequented.

MONT-D'OR, MINERAL WATERS OF. M. is a village 7 leagues from Clermont (Puy-de-Dôme), at which are several mineral springs, cold and thermal. Those of the Fountain *La Madelaine*, and of the *Great Bath*, are thermal; and contain carbonic acid, subcarbonate, sulphate, and muriate of soda, subcarbonate of lime and magnesia, alumine and oxide of iron. Those of *St. Margaret* are cold, and contain much carbonic acid.

MONTECATINI, MINERAL WATERS OF. This town is situate near Borgo-Buggiano, in Tuscany. The springs are thermal; ranging from 78° to 118° Fahrenheit.

MOON, *Luna*, *Sele'nē*, *Menē*, Sax. *Mona*, (G) *Mond*. (F) *Lune*. The moon has been supposed to exert considerable influence over the human body, in health and disease. Such influence has been grossly exaggerated. Not many years ago, it would have been heretical to doubt the exacerbation of mania, at the full of the moon; yet it is now satisfactorily shown, that if the light be excluded at this period, the *lunatic* is not excited more than ordinarily.

MOR'DICANT, *Mor'dicans*, *Calor mor'dicans*. A morbid heat, causing a disagreeable pungent sensation in the fingers of the physician.

MORE'TUS, *More'tum*. Ancient name of a cordial julep, into the composition of which the syrup of mulberries entered.—Schröder.

MORIOPLASTICE, *Chirurgia curto-rum*, *Ch. Anaplas'tica*, *Restitutio organ'ica seu partium deperdita'rum*, *Transplanta'tio*, *Anaplas'tic Surgery*, *Autoplas'ty* or *Auto-*

plastic Surgery, from *μοριον*, 'a part,' and *πλαστικος*, 'forming.' The restoration of lost parts. The operations for this purpose have various names, according to the part concerned, as *Cheiloplastice*, *Ceratoplastice*, *Rhinoplastice*, &c.

MORGA'GNI, HUMOUR OF. A peculiar, transparent, slightly viscid fluid, found between the crystalline and its capsule.

MORO, from *morum*, 'a mulberry:—*Morum*. (F) *Mure*. A small abscess, resembling a mulberry. A small tumour, of a similar appearance, particularly on the genital organs after impure coition.

MOROCH'THOS, *Morox'os*. A stone, to which the ancients attributed marvellous properties, and which entered into collyria, cebrates, &c. Galen.

MOROSITA'TES. A generic name, given by Linnæus to an order of *Vesaniæ*; in which he included *pica*, *bulimia*, *polydipsia*, *antipathia*, *nostalgia*, *panophobia*, *satyriasis*, *nymphomania*, *tarentismus*, and *hydrophobia*.

MOROTRO'PHIUM, *Morocomi'um*, *Morodochi'um*, from *μαρξες*, 'fatuous,' and *τροφη*, 'support.' An insane establishment; a lunatic asylum; a mad-house. Under proper management, a valuable institution; but liable to various abuses.

MOR'PHICA, from *μορφη*, 'shape.' Monstrosities of birth. The 3d order, class *Typhica* of Good.

MORPHI'NA, *Mor'phium*, *Mor'phia*, *Morphine*. A solid, colourless alkali; crystallizable in beautiful pyramids, truncated and transparent; soluble in alcohol, and slightly so in boiling water. It exists, combined with meconic acid, in opium. It may be obtained by decomposing, by means of ammonia or calcined magnesia, an aqueous solution of opium made in the cold.

Morphine dissolves perfectly in the acids, which it saturates; and with which it forms very crystallizable salts, with the exception of the acetate. All these salts have a bitter taste, and act upon the animal economy in the same manner as opium, but more powerfully. The acetate is the salt commonly employed in Medicine. It was, at one time, supposed that the Morphine is the purely sedative part of opium, divested of its irritating properties: but experience has not proved this. On the contrary, Morphine will generally disagree where opium does. Dose of Morphine $\frac{1}{4}$ to $\frac{3}{4}$ of a grain.

MORPHINÆ ACE'TAS, *Ac'etate of Morphine*. A salt, formed by saturating morphine with acetic acid. Dose, from $\frac{1}{4}$ of a grain to a grain.

MORPHINÆ SULPHAS, *Sulphate of Morphine*. A salt, formed by saturating morphine with sulphuric acid. Dose, the same as of the acetate.

The MURIATE and the CITRATE OF MORPHINE have likewise been used, but they possess no advantages over the other salts.

MORTAL, *Morta'lis*, *Letha'lis*, *Leta'lis*, *Thanato'des*. That which is subject to death;—that which causes death:—as, *man is mortal*; a *disease is mortal*. Of old, it was the custom to have a division of *mortal* wounds, which gave rise to many errors in medico-legal investigations, as the mortality of wounds depends upon various circumstances; and it is often a matter of extreme difficulty to pronounce whether or not a wound is necessarily mortal.

MORTAL'ITY, *Mortal'itas*, *Lethal'itas*, (F) *Mortalité*. This word, taken in an extended sense, expresses the condition of all organized beings,—of being subject to the cessation of life. In the sense, in which it is most frequently employed, it signifies,—the proportional quantity of individuals who, in a certain population, die in a given time.

If we assume the population of the earth to be 1000 millions, and a generation to last 33 years: in that space of time, the 1000 millions must all die; and, consequently, the number of deaths will be, by approximation,

Each year,	30,000,000
Each day,	82,109
Each hour,	3,421
Each minute,	57
Each second,	1 nearly.

If, on the other hand, as has been supposed, the number of deaths is to that of the births as 10 to 12: there will be born,

Each year,	36,000,000
Each day,	98,356
Each hour,	4,098
Each minute,	68
Each second,	1 & 2-15ths.

It has been estimated, that the average mortality of the Pays du Vaud, is 1 in 49; of Sweden and Holland, 1 in 48; of Russia, 1 in 41; of France, 1 in 40; of Austria, 1 in 38; of Prussia and Naples, 1 in 33 to 35; of England, 1 in 58; and of South America, 1 in 30. The same rate of mortality has been given to the United States as to France; but the statistical details on all this matter have been inadequate, and—it is not improbable—inaccurate.

The following has been given as the annual mortality of some of the chief cities of this country and of Europe. (See the Author's *Elements of Hygiène*, p. 136. Phila. 1835.) Philadelphia, 1 in 45.68; Glasgow, 1 in 44; Manchester, 1 in 44; Geneva, 1 in 43; Boston, 1 in 41.26; Baltimore, 1 in 41; London, 1 in 40; New York, 1 in 37.83; St. Petersburg, 1 in 37; Charleston, 1 in 36.50; Leghorn, 1 in 35; Berlin, 1 in 34; Paris, Lyons, Strasburg and Barcelona, 1 in 32; Nice and Palermo, 1 in 31; Madrid, 1 in 29; Naples, 1 in 28; Brussels, 1 in 26; Rome, 1 in 25; Amsterdam, 1 in 24, and Vienna, 1 in 22 $\frac{1}{2}$.

In the cities, the mortality under two years of age bears a large ratio. This is exhibited by the following table.

AGES.	London.	Philadelphia.	Baltimore.
Under 1 year, }		22.7	24.11
From 1 to 2, }	28.52	8.6	8.55
2 to 5,	9.97	7.3	11.18
5 to 10,	4.33	4.	5.
10 to 20,	4.03	5.	6.3
20 to 30,	6.64	12.	9.87
30 to 40,	8.08	12.	10.58
40 to 50,	8.89	10.	8.88
50 to 60,	8.89	7.2	5.78
60 to 70,	9.15	5.	4.5
70 to 80,	7.83	3.5	3.
80 to 90,	3.18	1.9	1.67
90 to 100,	0.40	0.5	0.26
100 to 110,	—	0.09 }	0.18
110 to 120,	—	0.013 }	

MORTALITY, BILLS OF; *Bills of Necrology*, (F) *Tables de Mortalité*. Tables, instituted for the purpose of exhibiting the number of deaths, &c. in a given time. Well kept bills of mortality are of great use to the physician and political economist. Those of London have been proverbial for their inaccuracy and insufficiency; especially as regards the complaints of which the persons have died. They are made out by the parish clerks, and the information is conveyed to them by two old women, who are appointed in each parish, and who are called *Searchers*;—their duty being to see that the deceased has died a natural death.

MORTAR, *Morta'rium*, *Moreta'rium*, *Piso*, *Ac'one*, *Pila*, *Holmos*, (F) *Mortier*. A vessel for reducing to powder different solid substances; and for making certain mixtures. Different substances are employed in the construction of mortars;—iron, marble, glass, wedgewoodware, &c.

MORTIFICATION, *Necrosis*, *Mortifica'tio*, from *mors*, 'death,' and *fio*, 'I become.' The loss of vitality in a part of the body. The incipient stage of mortification, when the case is still recoverable, is called *Gangrene* (q. v.); total destruction, *Sphacelus* (q. v.) Mortification of a bone is called *Necrosis* (q. v.)

MORUS NIGRA. The *Mulberry-Tree*, *More'a*, *Sycami'nos*. (F) *Mûrier Noir*. The fruit of the mulberry-tree, *Morum*, *Sucami'num*, (F) *Mûre*, is pleasant, sweet, sub-acid, and abounds with a deep violet-coloured juice. A syrup is directed in the London Pharmacopœia. The bark of the root has been regarded as anthelmintic.

MOSCHELÆON, *Moscolæ'a*. A compound aromatic oil, containing musk.

MOSQUITO (S). Diminutive of (S) *mosca*, 'a fly.' A very troublesome insect in warm, moist situations. Curtains, called *Mosquito curtains*, are used in India, by way of protection. The entrance of mosquitos into the bed-chamber may also be prevented, to a certain extent, by keeping the doors and windows closed until the light is extinguished. The pain and itching from the bites are alleviated by washing them with hartshorn.

Mosquita is a name given, by the Portuguese, to small, red pimples on the skin, resembling the bites of the mosquito.

MOTILITY, *Motil'itas*, from *motus*, 'movement.' (F) *Motilité*. Faculty of moving. Moving power, contractility.

MOTION, *Motus*, *Motio*, *Mota'tio*, *Mota'men*, *Commo'tio*, *Permo'tio*, *Cine'sis*. The act of changing place.

The various motions may be divided into, *first*, the *voluntary* or those that are executed under the influence of the brain. *Secondly*. The *involuntary*, which may be subdivided into 1. The *excited*, of the *reflex function* of Dr. Marshall Hall and others,—as the closure of the larynx on the contact of acrid vapours, of the pharynx on that of food,—a function of the spinal marrow; and 2. Those that are executed under the organic and other nerves of involuntary function.

It is probable, too, that every living tissue is capable of moving responsive to its appropriate irritant. See *Irritability*.

MOTORY, *Motive*, *Motor*, *Motrix*. That which moves or impresses movement.

MOTO'RES OCULO'RUM, *Motorii Oculorum*, *Ocula'res commu'nes*, *Ophthal'mici exter'ni*, *Common Oculo-muscular Nerves*, (F) *Nerfs moteurs oculaires communs*, (Ch.) The *third pair of nerves*. This nerve arises from a depression at the inner side of the peduncles of the brain, between the tuber annulare and corpora mammillaria. It enters the outer part of the cavernous sinus, and passes into the orbital cavity. Behind the sphenoidal fissure, it divides into two branches; the one, *superior*; and the other, *inferior*. The *former* is lost on the rectus superior oculi and the levator palpebræ superioris; the *latter*—the larger of the two—divides into three branches, which pass to the rectus internus, rectus inferior, and lesser oblique. The last furnishes a filament, which passes to the ophthalmic ganglion.

The **MOTOR OCULI EXTER'NUS**, *Nervus tim'idus*,—*Nerf oculo-musculaire externe* (Ch.), *Nerf moteur oculaire externe*, or *sixth pair of nerves*, arises from the furrow, which separates the pons Varolii from the medulla oblongata. It enters the cavernous sinus; anastomoses on the outside of the carotid artery with two filaments furnished by the superior cervical ganglion; enters the orbit by the sphenoidal fissure, and is lost on the rectus externus oculi. This pair is, also, called *Abducentes*.

MOUTH, Sax. *muð*, *Os*, *Cavum Oris*, *Stoma*. (F) *Bouche*. This word sometimes signifies the cavity situate between the jaws, and containing the tongue, &c.;—at others, the outer orifice of that cavity. The mouth, in the first acceptation, is the cavity; bounded, *above*, by the palatine arch; *below*, by the tongue; *before*, by the lips; and *behind*, by the velum palati and pharynx. The sides of the mouth and the organs it contains are lined by a mucous membrane.

The *anterior* aperture of the mouth is, sometimes, called *facial*;—the *posterior*,

pharyngæal. In the mouth are the teeth, gums, alveolar margins, tongue; the excretory ducts of the salivary glands, and those of a number of mucous follicles, &c. It is in this cavity, that the food is cut, torn, or bruised by the teeth; is impregnated with saliva, and formed into a mass or *bolus*, which is then subjected to the act of deglutition. The mouth contains the organs of taste: and it serves in respiration, articulation, expectoration, suction, &c.

MOUTH is, also, applied to the open extremities of vessels.

The condition of the mouth requires to be attended to in *Semeiology*. The state of the mucous membrane, like that of the tongue, indicates the condition of the membrane of the alimentary canal generally.

MOXA, *Moxibu'rium*. A word by which the Chinese and Japanese designate a cottony substance, which they prepare by beating the dried leaves of the *Artemisia Chinensis*,—a kind of mugwort. With this down, they form a kind of cone, which is placed upon the part intended to be cauterized, and is set fire to at the top. The heat and pain gradually increase, in proportion as the combustion proceeds downwards, until ultimately an eschar may be formed.

In Europe and this country, the same operation is practised with a cylinder of cotton wool, or with one formed from the pith of the greater sun-flower. This mode of cauterization is employed as a powerful counter-irritant; which it assuredly is. Sloughing may be, in some measure, prevented, according to Baron Larrey, by the application of liquid ammonia to the burnt part.

MOXIBUS'TION, *Moxibus'tio*, *Encau'sis*. Mode of cauterization by means of moxa.

MUCHA'RUM, *Muca'rum*. A barbarous term, formerly used for an aqueous infusion of roses, sweetened and evaporated to the consistence of syrup.

MUCILAGE, *Mucila'go*, *Muca'go*. A mixture of gum and a small quantity of matter analogous to mucus, which is found in abundance in linseed, quince-seed, &c. It is obtained by heating with water the parts, or products, of plants which contain it. It is much used in the preparation of emollient cataplasms and of the greater part of the demulcent *tisanes*.

MUCILAGI'NOUS, *Mucilagino'sus*, (F) *Mucilagineux*. That which possesses the character of mucilage.

MUCILAGO ACA'CIÆ *M. Acaciæ Arab'icæ*, *M. Gummi Arab'ici*, *Mucilage of aca'cia*, *M. of gum Arabic*. (*Acaciæ gum. contus.* 3 iv, *aq. ferv.* ℥ ss. Rub the gum with the water gradually added, and strain. *Ph. L.*) Demulcent. To allay cough; but, chiefly, to suspend insoluble matters in water, &c.

MUCILAGO ASTRAG'ALI TRAGACAN'THÆ, *M. tragacanthæ*, *M. gummi tragacanthæ*, *Mucilage of tragacanth*. (*Gummi astragal. tragacanth. triti* 3 ij, *aquæ bullient.* 3 xvij. Macerate for 24 hours; triturate till the gum is dissolved and press through linen. *Ph. E.*) For pharmaceutical purposes.

MUCILAGO AM'YLI, *Starch mucilage*. (*Amyli* 3 iij, *aquæ* ℥ j. Rub the starch with the water, gradually added; then boil till it forms a mucilage. *Ph. L.*) Demulcent. Generally given *per anum*.

MUCOSITY, *Mucos'itas*. A fluid, which resembles mucus or contains a certain quantity of it.

MUCOUS, *Muco'sus*, *Myxo'des*. An epithet for all bodies containing mucilage. It is, also, sometimes used synonymously with gum. In *pathology*, it is occasionally employed to express the seat of a disease, as *mucous disease*, *mucous phlegmasia*; that is, having its seat in the mucous membrane.

MUCRO. The apex or point of the heart.

MUCUS, *Mucor*, *Muco'sus humor*, *Mucos'itas*, *Myxa*, *Animal mucus*, *Blenna*, *Animal mucilage*, (F) *Muqueux animal*, *Morve*, *Mucilage animal*. A substance, analogous to vegetable mucilage; from which, however, it differs, by affording subcarbonate of ammonia on distillation. Mucus exudes through the skin, in a state of combination with a peculiar oily matter; and, drying, forms the epidermis. It constitutes, in part, the different epidermeous productions, as the hair, nails, wool, and horn of animals, feathers of birds and scales of fish. It is found at the surface of the mucous membranes, and presents some difference in its composition and properties, according to the particular mucous membrane from which it is obtained. It preserves the membranes moist; and in a state best fitted for the performance of their functions. The French give the term *glair* to the thick, stringy mucus, secreted by the mucous membranes, when in a state of disease.

MUDAR, *Madar*. The *Calotropis mudarii*. In the Hindoo practice of physic, the bark of the root, as well as the concrete juice of the plant, enters into various compound formulæ for the cure of elephantiasis and many other disorders. Experiments, instituted by Dr. Duncan, jun., exhibit its properties to be like those of ipecacuanha.

MULATTO, (F) *Mulatre*, (S) *Mulata*. An individual of the human species engendered of a white and black race; from *mulus*, 'a mule.'

The following Table exhibits the proportion of white blood in the various castes,—arising from the hybridous admixture of white and black,—according to the principles sanctioned by usage.

PARENTS.	OFFSPRING.	Degree of Mixture.	
Negro and White, White and Mulatto,	Mulatto, Terceron,	1-2 White, 3-4 —	1-2 Black. 1-4 —
Negro and Mulatto,	{ Griffo or Zambo, } { or Black Terceron, }	1-4 —	3-4 —
White and Terceron, Negro and Terceron,	Quarteron, Black Quarteron,	7-8 — 1-8 —	1-8 — 7-8 —
White and Quarteron, Negro and Quarteron,	Quinteron, Black Quinteron,	15-16 — 1-16 —	1-16 — 15-16 —

The two last are considered to be respectively white and black, in the British West India Islands; and of these the former are white by law, and consequently free.

MULES (F), *Mulæ*. Chilblains on the heels.

MULLER, (F) *Mouleur*. A moulder. A stone held in the hand, with which any powder is ground upon a flat, horizontal stone. It is, sometimes, called *mullet*. (F) *Mollette*.

MUMMY, *Mumia*. Arab. *Mou'mya*, from *mum*, 'wax.' *Rebole'a*, *Rebo'na*. (F) *Momie*. A dead body simply dried; or dried, after having been embalmed. The latter acceptance is the most common. Formerly, the Egyptian mummy was extolled as useful in contusions. It was presumed, also, to have healing, tonic, and resolvent properties. It is now only regarded as an archæological curiosity.

MUNCTIO, *Apomexis*. (F) *L'action de moucher*. The act of blowing the nose.

MURAL, *Mura'lis*, from *murus*, 'a wall.' Vesical calculi are so called, when rugous and covered with tubercles or asperities. They are composed of oxalate of lime.

MURIA, *Hal'mē*, *Salsila'go*, *Brine*. (F) *Saumure*. This was formerly used as a glyster in dysentery; in certain inveterate neuralgiæ, &c.

MURIATICUM, **AC'IDUM**, *Ac'idum salis*, *Spir'itus salis mari'ni*, *Sp. salis Glaube'ri*, *Acidum mari'num concentra'tum*, *Acidum salis culina'ris*, *Acidum salis marini*, *Spir'itus salis acidus seu fumans*, *Acidum hydrochlor'icum*, *Muriat'ic acid*, *Spirit of salt*. (F) *Acide hydrochlorique ou muriatique*. The odour of muriatic acid is suffocating; taste very acid and caustic. It is nearly colourless, when pure; but commonly of a pale yellow; volatile; the fumes visible. S. G. 1.160 to 1.200. 100 grains should saturate 124 grains of subcarbonate of soda. Muriatic acid is possessed of tonic and antiseptic properties. It is used in typhus, cutaneous eruptions; in gargles for inflammatory and putrid sore throats (gtt. xxx to 3 vj of water), &c. When added to a pediluvium, it renders it stimulating.

The **ACIDUM MURIATICUM DILU'TUM** of the *Ph. D.* contains equal portions, by measure, of muriatic acid and water.

MURMUR, RESPIRATORY. The noise heard during inspiration and expiration, especially the former. It is produced by the

passage of the air through the bronchial tubes and the air-cells. It has been also called the murmur of the expansion of the lungs; and, when distinctly vesicular, *Respiration of the cells* or *vesicular respiration*, (F) *Respiration vesiculaire*.

The vesicular respiration is of course absent when the cells of the lungs have been obliterated from any cause.

When the murmur is much developed as it is in children, the respiration is termed *puerile*. At times, also, there is a *blowing* sound, (F) *Souffle*—*Respiration soufflante*, as if some one were blowing into the auscultator's ear through a tube. This is heard in the healthy state over the larynx, trachea, and about the bifurcation of the bronchia, but when it proceeds from the lungs it denotes disease.

The Respiration, perceived over the trachea and bronchia in health, is called *tracheal* or *bronchial* according to the situation in which it is heard.

MUSA PARADISIACA, *Musa*, *Amusa*, *Palma hu'milis*, *Ficus In'dica*, *Bata*, *Plat'anus*. The *Plantain tree*. Family, Musacæ. Sex. Syst. Hexandria Monogynia. It grows in many parts of India and South America. The fruit, which is largely eaten for bread, consists of a mealy substance. It is clammy; has a sweetish taste, and will dissolve in the mouth without chewing. The whole spike of fruit often weighs 40 or 50 pounds. The leaves of the tree serve the Indians for table cloths and napkins. Being smooth and soft, they are, also, employed as dressings after blisters. The water from the soft trunk is astringent, and is sometimes used in diarrhœa.

MUSA SAPIEN'TUM. The *Bana'na tree*. *Baco'ba*. (F) *Bananier*, *Bacove*. This differs somewhat from the last. The fruit is shorter, straighter, and rounder; the pulp softer and of a more luscious taste. When ripe, it is very agreeable; is eaten like the plantain, and relished by all ranks of people in the West Indies. Both varieties are natives of Guinea.

MUSCLE, *Mus'culus*, *Lacer'tus*, *Mys*, *Myon*, from *μυς*, 'a rat;' because, say some etymologists, the ancients compared the muscles to flayed rats. According to Diemerbroeck, Douglas, Chaussier, &c., *μύων* comes rather from *μύειν*, 'to close,' 'to move,' &c. a function proper to muscles. This etymon is the more probable.

Muscles have been divided into those of *Animal life, or of the life of relation*,—*voluntary muscles*—which execute movements under the influence of the will; as the muscles of the limbs, head, trunk, &c. and into those of *organic life*,—*involuntary muscles*,—which contract under the influence of certain special stimuli; as the heart, fleshy fibres of the stomach, &c. *Mixed muscles* are those, which belong partly to each of these divisions;—as the muscles of respiration; the sphincters, &c. Muscles, that act in opposition to each other, are called *antagonists*; thus, every extensor has a flexor for an antagonist, and *vice versâ*. Muscles, that concur in the same action, are termed *congenerous*.

The muscles present numerous varieties in form, size, situation, use, &c. and have been divided, by some, into *long, broad, and short*. Each of these divisions comprises *simple and compound muscles*.

Simple or rectilinear muscles have all their fibres in a similar direction, and only one body—as the *Sartorius, Pronator quadratus*, &c.

The *compound muscles* are those, which have only one belly and several tendons,—as the flexors of the fingers and toes; or several bellies and several tendons,—as the biceps flexor cubiti, sacro-lumbalis, &c. To the compound muscles belong, also, the *radiated muscles*. Their fibres set out from a common centre, and are arranged like the radii of a circle:—such are, the diaphragm, iliaceus, temporal, &c.

Pennated or Penniform Muscles. Their fibres are arranged in two rows, which are united at a median line, at greater or less angles; nearly as the feathers are inserted into a quill. The palmaris longus is one of these.

Semi-penniform Muscles. Their fibres are oblique, as in the last case; but they are inserted only on one side of the tendon.

Hollow Muscles are;—the heart, intestines, urinary bladder, &c.

Much difference has existed in the enumeration of muscles. Some authors reckon them at upwards of 400. Chaussier admits only 368. The greater part of the muscles are in *pairs*. Very few are *azygous*.

Muscles have been variously named.

1. *According to their uses*, as diaphragm, buccinator, extensors, flexors, adductors, abductors, levators, depressors, &c.

2. *According to their position*, as interspinales, interossei, subclavius, popliteus, anconeus, cubitalis, iliaceus, temporalis, &c.

3. *According to their shape*, as trapezius, splenius, lumbricales, serrati, digastric, deltoid, scalenus, rhomboides, &c.

4. *According to their dimensions*. Pectoralis major, rectus capitis anticus major, pectoralis minor, glutæus maximus, medius, and minimus.

5. *According to their direction*, as obliquus abdominis, transversalis abdominis, rectus femoris, rectus abdominis, &c.

6. *According to their composition*, as semi-membranosus, semi-tendinosus, complexus, &c.

7. *According to their attachments*, or the different points of the skeleton to which they are attached by means of tendons or aponeuroses; as sterno-cleido-mastoideus, sterno-hyoideus, &c. On this is grounded the nomenclature of M. Dumas, and that of Chaussier.

That end of the muscle, which adheres to the most fixed part, is usually called the *origin* or *head*, (F) *Tête*; and that which adheres to the more movable part, the *insertion* or *tail*, (F) *Queue*; the intervening part or *body* of the muscle being called the *venter* or *belly*: hence, the names gastrocnemii, digastricus, biceps, and triceps; according as they have two bellies, two or three heads, &c.

Muscles are formed:—1. Essentially of the *muscular or fleshy fibre* (see Muscular Fibre.) 2. Of *Cellular tissue*, which unites together the fibres. This cellular tissue is not very visible between the fine and loose fibres; but becomes more so, when they unite in more considerable fasciculi. It forms, moreover, to each muscle an external envelope, which unites it to the neighbouring parts, and admits of its motion. This envelope was formerly called *Tunica propria musculo'rum*. 3. Of *Arteries*. These proceed from neighbouring trunks, and are, generally, very large. Their size and number are always in proportion to the bulk of the muscle. With the exception of some viscera, as the lungs and the kidneys, there are few organs that receive as much blood as the muscles. 4. Of *Veins*. They follow the same course in the muscles as the arteries. Bichat asserts, that they are generally devoid of valves. 5. Of *Lymphatics*. Of these we know little, and cannot easily follow them between the fleshy fibres. 6. Of *Nerves*. These are numerous, and of different sizes. They, almost all, proceed from the encephalon; some, however, issue from ganglions, and accompany the arteries. In general, they penetrate the fleshy tissue along with the vessels, to which they are narrowly united. After they have entered the muscles, they divide and subdivide until they are lost sight of.

MUSCULAR, Muscula'ris. That which belongs or relates to the muscles.

MUSCULAR ARTERIES. Arteries that are distributed to the muscles. The name, *Muscular Arteries of the Eye*, has been specially given to two branches sent off by the ophthalmic artery:—the one, *inferior*, which furnishes branches to the rectus inferior oculi, lachrymal sac, &c., and some of the anterior ciliary arteries: the other—the *superior*, which is sometimes wanting; but when it

exists, gives branches to the rectus superior oculi and levator palpebræ superioris.

MUSCULAR VEINS. These bring back the blood, which has been carried to the muscles by the muscular arteries.

MUSCULAR OR FLESHY FIBRES. A name given to the filaments; which, by their union, form the muscles. This fibre is flat, soft, downy, linear, little elastic, more or less red: and arranged in zigzag according to its length, which is variable. It is firmer in adults than in the young or the aged; of the same size in the great and small muscles; and runs its course without bifurcation or ramification. It is but slightly resisting in the dead body, tearing readily; but, during life, it supports very great efforts without laceration. It is, itself, composed of a considerable number of fibrils, similar to each other, and subdividing almost *ad infinitum*. The ultimate filaments into which the fibre can be decomposed by mechanical means, do not seem to be hollow, as has been asserted. Their colour is red in man, and white in several animals.

A greater or less number of muscular fibres,—united in fasciculi, approximated to each other, and forming a distinct mass, of very variable size and shape, the extremities being attached to bones by means of tendons,—constitutes a muscle. In this are included cellular membrane, vessels, and nerves. See Muscle.

MUSCULAR CONTRACTION. The exertion of the power, possessed by muscles, of shortening themselves, or of contracting to produce motion:—*Muscular motion* being the change in the situation and relation of organs, induced by muscular contraction. When a muscle contracts, its fibres assume more the zigzag direction, and the extremities approximate; but the bulk of the whole muscle is not augmented. This contraction takes place, at times, with extreme velocity: a single thrill, in the letter r, can be pronounced in the 1-30,000th part of a minute. The force of contraction depends upon the healthy physical condition of the muscle, combined with due energy of the brain. The duration, in voluntary motion, is for a certain time dependent upon the will:—contractions, excited involuntarily, cannot be so long maintained.

MUSCULAR NERVES. The nerves distributed to the muscles are so named. Winslow calls the 4th pair of nerves—*Nerf musculaire oblique supérieur*.

MUSCULAR SYSTEM. A term given to the aggregate of the muscles of the body.

MUSCULO-CUTANEOUS, *Musculo-cutaneus*, from *musculus*, 'a muscle,' and *cutis*, 'skin.' That which appertains to muscles and skin.

MUSCULO-CUTANEOUS NERVE. This name is specially given to two nerves;—the one, the *External cutaneous nerve*, furnished by the brachial plexus (see Cutaneous):—the other, given off from the popliteus externus,

(F) *Nerf Sciatique Poplitæ externe*;—*Préti-bio-digital*, (Ch.) It descends on the anterior and outer part of the leg, at first, hid amongst the muscles; becomes superficial about the middle of the leg; and divides into two branches, which pass superficially on the back of the foot.

MUSCULO-RACHIDÆUS. Belonging or relating to muscles and to the spine. A name given to branches, furnished, behind, by the intercostal, lumbar, and sacral arteries; and which are distributed to the spine and to the muscles of the neighbourhood.

MUSIC, *Mu'sica*, (F) *Musique*. The art of producing harmonious and cadenced sounds: an art, which has, at times, been beneficially used in diseases, particularly in those of the mind; or on which the mind could act in a salutary manner.

MUSICOMANIA, *Musoma'nia*. A variety of monomania, in which the passion for music is carried to such an extent, as to derange the intellectual faculties.

MUSK, *Moschus*, *Mosch* (Arab.) (F) *Musc*. An animal substance, of a very diffusible odour, bitter taste, and deep brown colour; solid and inclosed in a sac, found near the anus of the *Moschus moschiferus* or *Musk Deer*. It is possessed of stimulant and antispasmodic properties. Dose, gr. v to 3 j in bolus.

ARTIFICIAL MUSK, *Moschus ficti'tius*, *Resi'na Suc'cini*. (*Ol. suc'cini rectific.* 1 part, *acid. nitric.* 4 parts. Digest;—a black matter will be deposited, which must be well washed with water.)

MUSSÆN'DA FRONDO'SA, *Belil'la*, *Bele'son*. A decoction of this plant has been esteemed refrigerant.

MUSSITA'TIO, *Mussitation*. A condition, in which the tongue and lips move, as in the act of speaking, but without sounds being produced. This sort of murmuring is an unfavourable sign in disease, as indicating great cerebral debility.

MUTACIS'MUS, *Mutacism*. A vitious pronunciation; consisting, according to Sauvages, in the frequent repetition of the letters b, p, and m, which are substituted for others.

MUTEOSIS. Under this name is comprehended every phenomenon of expression, voluntary and involuntary, which impresses the sight or touch.

MUTILA'TION, *Mutila'tio*, *Maiming*. The removal or privation of a limb, or of some other external part of the body. In all countries, this crime has been punished with severity.

MU'TITAS, *Dumbness*, *Apho'nia*, *Ala'lia*, *Anau'dia*, *Speech'lessness*. (F) *Mutisme*, *Mutité*. Impossibility of articulating sounds; although they can be elicited. Dumbness is often congenital, and united with deafness, of which it is an effect. In some cases, it is accidental.

MUTITAS SURDORUM, *Apho'nia Surdorum*,

Deaf-dumbness. Speechlessness from deafness; congenital, or produced during infancy. The subjects of this affection are called *deaf-dumb*, (F) *Sourds-muets*.

MYASTHENIA, from *μυς*, 'a muscle,' and *ασθενεια*, 'debility.' Muscular debility.

MYCTEROPHONIA, *Vox nasa'lis*, from *μυκτηρ*, 'the nose,' and *φωνη*, 'the voice.' A nasal voice. A nasal twang or accent.

MYDE'SIS, from *μυδαω*, 'I abound with moisture.' In its most general sense, it means *corruption*. By some, it is used for a mucous discharge from inflamed eyelids.

MYDON, *μυδων*. Fungous or putrid flesh in certain fistulous ulcers.—Pollux. Also, flesh putrid from mouldiness, from *μυδος*, 'moisture.'

MYDRIASIS, *μυδριασις*,—*Platycoria*, *Amydri'asis*. A name, given by several writers to morbid dilatation of the pupil; and, by others, to weakness of sight, produced by hydrophthalmia.

MYELI'TIS, *Inflamma'tio medul'læ spi-na'lis*, *Spini'tis*, *Spinodorsi'tis*, *Notomyeli'tis*, from *μυελος*, 'the marrow,' and *itis*, denoting inflammation. Inflammation of the spinal marrow or its membranes;—indicated by deep-seated burning pain in the spine, with various nervous and vascular irregularities of function. It is not common.

MYENERGIA, from *μυς*, 'a muscle,' *εν*, and *εργον*, 'work.' Muscular strength.

MYLO-GLOSSUS, from *μυλη*, 'the jaw,' and *γλωσσα*, 'the tongue.' Winslow has given this name to muscular fibres, which pass from the posterior part of the myloid line of the lower jaw, and from the sides of the base of the tongue to the parietes of the pharynx. These fibres belong to the constrictor superior pharyngis, (q. v.)

MYLO-HYOIDE'US, from *μυλη*, 'the jaw,' and *υοειδης*, 'the os hyoides.' (F) *Mylo-hyoidien*. The *Mylo-pharyngeus* of Morgagni and Sanctorini. This muscle is situate at the upper and anterior part of the neck, behind the lower jaw. It is broad, flat, and has the form of a truncated triangle. It arises from the internal oblique line of the lower jaw bone, and is inserted at the fore part of the body of the os hyoides. Its innermost fibres unite with those of the opposite side to form a raphe on the median line. The mylo-hyoideus raises the os hyoides and carries it forward, or it depresses the lower jaw.

MYOCÆLIAL'GIA, from *μυων*, 'muscle,' *κοιλια*, 'abdomen,' and *αλγειω*, 'I suffer.' Pain in the muscles of the abdomen.

MYOCÆLI'TIS, from *μυων*, 'muscle,' *κοιλια*, lower belly, and *itis*, denoting inflammation. Inflammation of the muscles of the abdomen.

MYODYN'IA, from *μυων*, 'muscle,' and *οδυνη*, 'pain.' Pain in the muscles,—rheumatismal or other.

MYOG'RAPHY, *Myogra'phia*, from *μυων*, 'muscle,' and *γραφειν*, 'to describe.' Anatomical description of the muscles.

MYOL'OGY, *Myolo'gia*, *Sarcolo'gia*, *My-siolo'gia*, from *μυων*, 'a muscle,' and *λογος*, 'a discourse.' That part of anatomy which treats of the muscles.

MYONARCO'SIS, from *μυων*, 'a muscle,' and *ναρκη*, 'stupor.' Numbness of the muscles.

MYONOSOS, *Myonu'sos*, from *μυς*, 'a muscle,' and *νοσος*, 'disease.' A disease of the muscles.

MYO'PIA, *Myopiasis*, *Luscios'itas*, *Myo-sis*, *Parop'sis propin'qua*, *Amblyo'pia dissito-rum*, *Dyso'pia dissitorum*, *Visus ju'venum*, from *μυω*, 'I close,' or from *μυς*, 'a mouse,' and *οφθαλμος*, 'the eye.' Near-sightedness, Mouse-sight, Purblindness, (F) *Vue courte*. Persons, who can only see objects very near. The defect is owing to the too great convexity of the eye and is palliated by wearing concave glasses.

MYOPS, *μυωψ*, *Luscio'sus*, *Myopus*. Same etymon. One who is attacked with myopia or shortsightedness.

MYO'SIS, from *μυω*, 'I close.' *Phthi'sis pupilla'ris*. Permanent contraction of the pupil. It is usually caused by iritis, and is extremely difficult of cure. When it exists to such an extent as to obliterate the pupil, it is called Synizesis, (q. v.)

MYOSI'TIS, from *μυων*, 'a muscle.' A name proposed by Sagar for inflammation of the muscles. Rheumatism.

MYOT'OMY, *Myoto'mia*, from *μυων*, 'a muscle,' and *τεμνειν*, 'to cut.' The part of practical anatomy, which treats of the dissection of the muscles.

MYR'IAGRAMME, from *μυρια*, '10,000,' and *γραμμα*, 'gramme.' A weight equal to 10,000 grammes, or to nearly 20 pounds, and 5 or 6 ounces, Avoirdupois.

MYRIAM'ETER, a measure of 10,000 metres; equal to 1 furlong, 156 yards, and 6 inches.

MYR'ICA GALĒ, *Myrtus Braban'tica*, *M. Ang'lica*, *Myrtifo'lia Belgica*, *Galē*, *Gagel*, *Rhus sylves'tris*, *Ac'aron*, *Elæag'nus*, *E. cordo*, *Chamæleagnus*, *Dodonæ'a*. Dutch myrtle, Sweet gale, Sweet willow, Candleberry myrtle, (F) *Piment Royal*, *Thé de Simon Pauli*, *Gale odorant*. Family, Amentaceæ. Sex. Syst. Diœcia Tetrandria. The leaves, flowers, and seeds have a strong, fragrant smell and a bitter taste. They are used for destroying moths and cutaneous insects, and the infusion is given internally as a stomachic and vermifuge.

MYRIS'TICA MOSCHA'TA, *M. aromat'ica*, *Comacon*. Nat. Ord. Myristicæ. The tree which produces the nutmeg and mace. (F) *Muscadier*. The *Nutmeg*, *Myris'ticæ nu'cleus*, *Myris'ticæ moscha'tæ nu'cleus*, *Nux moscha'ta*, *Nucis'ta*, *Nux myris'tica*, *Chrysobal'anus Gale'ni*, *Unguenta'ria*, *As'sala*, *Nux aromat'ica*, (F) *Muscade*, is the seed or kernel. It has a fragrant, aromatic odour; an agreeable, pungent taste, and is much used for culinary purposes. Alcohol extracts its

active matter. It has the properties of aromatics in general; being stimulant and stomachic. The oil—*Oleum myristicæ*—possesses the virtues of the nutmeg. Dose of nutmeg, gr. v to ℥j;—of the oil g^{tt}. iij to g^{tt}. vj.

MACE, *Macis*, *Ma'ces*, *Flores macis*, (F) *Fleurs de muscade*, is the involucre of the fruit; it is membranous, with the odour and taste of the nutmeg, and is possessed of similar qualities. The *Oleum macis* is a fragrant, sebaceous substance, expressed in the East Indies. It is only used externally.

MYROBALANUS, from *μυρον*, 'an ointment,' and *βαλανος*, 'a nut;' so called, because formerly used in ointments, *Angelocacos*, *Myrob'alan*. A dried Indian fruit of the plum kind. Of this there are several varieties—the *M. Bellirica* or *Belliric myrobalan*, *Bellegu*, *Belleregi*, *Belnileg*;—the *M. cheb'ula* or *Chebule myrob'alan*; the *M. cit'rina* or *Yellow myrobalan*, *Ara'ra*; the *M. emb'lica* or *emblic myrobalan*, and the *M. In'dica*, *As'uar*, *Indian*, or *Black myrobalan*. All the myrobalans have an unpleasant, bitterish, very austere taste; and strike an inky blackness with a solution of steel. They are said to possess laxative as well as astringent properties.

MYROPISSOCE'RON. A topical application in alopecia, referred to by Galen; from *μυρον*, 'ointment,' *πισσα*, 'pitch,' and *κηρος*, 'wax.'

MYROX'YLON PERUIF'ERUM, *Caburei'ba*. *Nat. Ord.* Leguminosæ. The tree which affords the *Peru'vian balsam*, *Bal'samum Peru'vianum*, *Putzochill*, *Myroxyl' Peruiferi balsamum*, *Indian*, *Mexican*, or *American balsam*, *Balsamum Peruanum*, *Cabureiciba*, (F) *Baume de Pérou*. This balsam consists of Benzoic acid, resin, and essential oil. Its odour is fragrant and aromatic; taste hot and bitter; soluble in alcohol and miscible in water by the aid of mucilage. It is stimulant and tonic, and considered to be expectorant; as such, it has been employed in paralysis, chronic asthma, chronic bronchitis and rheumatism, gleet, leucorrhœa, &c. and, externally, for cleansing and stimulating foul indolent ulcers. Dose, g^{tt}. v to g^{tt}. xxx.

The **WHITE BALSAM OF PERU**, *Natural balsam*, *Balsamum album*, *Styrax alba*, *Balsamæleon*, is obtained by incision from the *Myrosper'mum peruif'erum*.

MYRRHA, *μυρρα*, Heb. *בול*, *Bola*, *Stactē*, *Ergas'ma*, *Myrrh*, *Calo'nia*, *Smyrna*, *Myr'ha rubra*, (F) *Myrrhe*. The exudation of an unknown plant of Abyssinia or Arabia Felix. This gum resin has a fragrant, peculiar odour; and bitter aromatic taste. It is in reddish-yellow, light, brittle, irregular tears; partially soluble in distilled water, when aided by friction. S. G. 1.360. It is stimulant; and has been used in cachectic affections, humoral asthma, chronic bronchitis, &c. Dose, gr. x to 3j.

MYRSINELÆ'ON, from *μυρσινη*, 'the myrtle,' and *ελαιον*, 'oil.' Oil of myrtle.—Dioscorides.

MYRSINI'TES, *μυρσινιτης*. Wine, in which branches of myrtle have been macerated.

MYRTID'ANON, *μυρτιδανον*. An excrecence, growing on the trunk of the myrtle, and used as an astringent. Also, a wine—*Vinum myrtid'anum*—made from wild myrtle berries.

MYR'TIFORM, *Myrtiform'is*; from *myrtus*, 'a myrtle,' and *forma*, 'shape.' Having the shape of a leaf of myrtle. A name given to a muscle (depressor alæ nasi, q. v.), to the fossa incisiva; to certain caruncles, &c., (q. v.)

MYRTI'TES. A name, given to a medicine prepared with honey and myrtle berries.

MYRTUS, *Myrtus commun'is*, *M. communis Ital'ica*, *Myrsinē*, *Myrrhinē*, *The myrtle*, (F) *Myrte commun*. The berries of this plant have been recommended in alvine and uterine fluxes and other disorders of relaxation and debility. They are moderately astringent and somewhat aromatic.

MYRTUS CARYOPHYLLA'TA, *Cassia caryophylla'ta*, *Canel'la caryophyllata*, (F) *Capelet*, *Cannelle giroflée*. The tree which affords the *Clove bark*;—*Cortex caryophylla'tus*. This bark is a warm aromatic; resembling clove with an admixture of cinnamon. It may be used with the same views as cloves or cinnamon.

MYRTUS PIMEN'TA. The tree which bears the *Jamaica pepper*, *Pimen'tæ baccæ*, *Pimento berries*, *Pimento*, *Piper caryophylla'tum*, *Coc'culi Indi aromat'ici*, *Piper chia'pæ*, *Amo'mum pimenta*, *Fructus pimenti*, *Carive*, *Caryophyll'us America'nus*, *Piper odora'tum Jamaicen'sē*, *Allspice*, *Piper Jamaicen'sē*, *Piper tabas'cum*, (F) *Poivre de Jamaïque*, *Toute épice*, *Assourou*. These berries have an aromatic odour; resembling a mixture of cinnamon, nutmeg, and cloves; the taste is pungent, but mixed, like the odour. Like other peppers this is stimulant and carminative. The oil—*O'leum pimen'tæ*—possesses the virtues of the berries. The powdered fruit has been called *Quatre-épices* or *Four-spices*. Dose, gr. v to ℥ij.

MYSTAX, *μυσταξ*. The hair growing on each side the upper lip in man. The *mustache* or *mustachio*.

MYSTERION, *μυστηριον*. An arcanum, nostrum, or secret preparation in general. Also, an antidote, referred to by Galen and others.

MYSTRON, *μυστρον*. A Greek measure, which held about three drachms.

MYTILUS EDU'LIS. The *common mussel*. (F) *Moule*. A bivalve, the flesh of which, when at all in a state of decomposition, is highly poisonous. When fresh, it is an agreeable article of diet.

MYU'RUS, *Meiuros*. A pulse is so called

when it sinks progressively, and becomes smaller and smaller like a rat's tail; from *μυς*, 'rat,' and *ουρα*, 'tail.' *Pulsus myurus recip'roculus*, a pulse, which, after having become gradually weaker, resumes, by degrees, its former character.

MYXOR'RHOOS, *μυξορροος*, from *μυξα*,

'mucus,' and *γω*, 'I flow.' One who is subject to mucous discharge. Applied to infants, that discharge a considerable quantity of mucus and saliva.

MYXOSARCO'MA, from *μυξα*, 'mucus,' and *σαρξ*, 'flesh.' A tumour which is *muco-carneous*; partly mucous and partly fleshy.

N

N. This letter, in prescriptions, is 'an abridgment of *Numero*, 'by number.'

NABO'THI GLAN'DULÆ, *O'vula Nabothi*, *Ova'rium Nabothi*, *Folliculi rotundi et oblongi*, *Vesiculæ seu Bullæ rotundæ cervicis u'teri*, *Vesiculæ seminales mulierum*, *Corpora globosa*, *Corpuscula globosa*, *Glandulæ seu Hydatides cervicis uteri*. Some small, mucous crypts or follicles situate in the interstices of the duplicatures of the lining membrane of the cervix uteri. Naboth, from noticing them in a morbid condition, mistook them for ova; and hence they received the name *Ovula Nabothi*.

NACRA, *Nakra*, *Nasa*. A kind of Influenza, common in the East Indies.

NÆVUS, *Nævus mater'nus*, *Nevus*, *Maculæ matricis*, *M. Mater'næ*, *Stigmata*, *Metrocel'ides*, *Mother's marks*, *Fancy marks*, *Mother's spots*, *Congenitæ notæ*, (F) *Envie*. Spots of various kinds on the skin of children when born, which have been idly attributed to the influence of the maternal imagination on the fœtus in utero. They are of various appearances, some much better supplied with blood than others. Some are merely superficial or stainlike spots. Others are prominent; and, often, have long, irregular hairs growing from them. These have usually been called *Moles*, *Spili*, *Epichro'ses spili*, &c.

When nævi are superficial, without any disposition to enlarge or spread, they need not be meddled with; but all those, that partake of the character of aneurism by anastomosis, had better be removed by the knife.

NAIL, Sax. *nægl.* (G) *N a g e l.* *Unguis*, *Onyx*, (F) *Ongle*. A whitish transparent substance, similar to horn, which covers the dorsal extremity of the fingers. Three portions are distinguished in it; the *extremity*, which is free, at the end of the finger;—the *body* or middle portion adherent by its inner surface; and the *root*. The last presents two distinct parts; the one, terminated by a thin, serrated edge, is buried in a duplicature of the skin; the other, called *lu'nula*, is whitish and of a semilunar shape, seu *Semilu'nula unguis*, and is situate above the part where

the epidermis terminates. The nails are composed of a horny tissue, of the same nature as that which forms the hoofs, horns, and scales of different animals. When the nail has been torn off, the papillæ of the skin become covered by a soft, whitish lamina; whose consistence gradually augments. New laminæ are then formed underneath, and give the nail the thickness it ought to possess. The corneous substance, being thus constantly produced at the extremity of each of these laminæ, the whole of the nail is pushed forwards, and it would grow indefinitely, were it not cut or worn by friction.

The nails protect and support the extremities of the fingers against the impression of hard bodies. They are, also, useful in laying hold of small bodies; and dividing those that have but little consistence.

NANUS, *Pu'milus*, *Pumilio*. A dwarf. (F) *Nain*. An individual, who is much below the usual stature. The term is applicable to all organized beings, from man to the vegetable. Trees have their dwarfs, as the human species have theirs.

Some curious authenticated instances of human dwarfs are on record. Bebe, the dwarf of Stanislaus, king of Poland, was 33 inches (French), and well proportioned. The Polish nobleman, Borwlaski, who was well made, clever, and a good linguist, measured 28 Paris inches. He had a brother, 34 inches high, and a sister 21. A Friesland peasant, at 26 years of age, had attained 29 Amsterdam inches. C. H. Stöberin of Nürnberg, was not 3 feet high at 20, yet he was well proportioned and possessed of talents.

NAPHTHA, *Nafda*, *O'leum petræ album*, from a Chaldaic and Syriac word signifying *bitumen*. A bituminous substance, found in Persia, Calabria, Sicily, &c. It is liquid, limpid, of a yellowish white colour, a smell slightly resembling that of oil of turpentine, and lighter than water. It resembles petroleum in its properties, and has been chiefly used as an external application; although, occasionally, as an anthelmintic.

NAPLES, MINERAL WATERS OF.

In the Quarter Santa Lucia, near the coast, is a cold spring, rich in sulphuretted hydrogen and carbonic acid. It is much used as an aperient tonic, and in cutaneous affections.

NAPLES WATER, FACTITIOUS. (F) *Eau de Naples, Aqua Neapolitana, Aqua acidula hydrosulfurata.* (Acidulous water, containing 4 times its bulk of carbonic acid, 3 xv, and 3 iij, hydrosulphuretted water, 3 ix, carbonate of soda, gr. viij, carbonate of magnesia, gr. x, &c. Ph. P.)

NARCAPH'THON, Nascaph'thon. The bark of an aromatic tree formerly brought from India. By some, supposed to be that of the tree which affords the olibanum. It was used in fumigation, in diseases of the lungs.

NARCIS'SUS PSEUDONARCIS'SUS. The *Daffodil.* (F) *Narcisse sauvage, Narcisse des prés, Faux narcisse.* The root is emetic and cathartic, in the dose of 3 ij. The flowers are antispasmodic. Dose, 24 grains.

NARCO'SIS, Nar'cotism, Narcê, Narca, Narce'ma, Torpe'do, Torpor, Stupor, Stupefactio. The aggregate effects produced by narcotic substances. At times, narcotism is confined to a state of more or less profound stupor; and constitutes, in certain cases, a useful remedial condition; at others, it is true poisoning, characterized by vertigo, nausea, a state of intoxication or apoplexy, constant delirium, convulsive motions, &c. Emetics, in strong doses, and not much diluted with water; purgatives and glysters are the first means to be used in this condition. The stupor may, afterwards, be combated by the use of exciting and stimulating drinks.

NARCOT'ICS, Narcot'ica, Caro'tica, Obstupefacien'tia, Stupefacien'tia, (F) *Stupéfactifs, Stupéfiants,* from *ναρξω*, 'stupor.' Substances, which have the property of stupefying;—as opium, stramonium, hyoseyamus, belladonna, &c. They are used in medicine as soothing agents; exerting their particular influence on the brain. In small doses, as a general principle, narcotics stimulate; in large, they act as sedatives.

The following is a list of the chief narcotics.

Aconitum,
Ætherea,
Belladonna,
Camphora,
Conium,
Digitalis,
Humulus,
Hyoscyamus,
Lactucarium,
Lupulina,
Morphina,

Opium,
Papaveris Capsulæ,
Stramonii Folia,
——— Semina,
Mental Narcotics,
(Appropriate Music,
Monotonous Sounds,
or any succession of
monotonous impres-
sions.)

NAR'COTINE, Narcoti'na. Same etymon. *Sel de Derosne, Opiane, Sel d'opium, Principe crystallizable de Derosne.* A solid, white, inodorous, and insipid substance; crystallizable in straight prisms with a rhomboidal base; fusible like the fats; soluble in boiling alcohol and ether, and scarcely solu-

ble in water. Narcotine produces all the unpleasant effects of opium; but, at the same time, throws the animal into a state of stupor. It is not used in medicine, on account of these objections.

NARDUS IN'DICA, Spica nardi, Spica In'dica, Indian nard, Spikenard, Andropogon nardus. The root of this plant is one of the ingredients in the mithridate and theriaca. It is moderately warm and pungent, and has a flavour, by no means disagreeable. It is used by the Orientals as a spice:—(F) *Nard Indien, N. Indique.* An ointment was formerly used, called *Unguen'tum nar'dinum.* It was prepared of *Nard, Malabathrum leaves, Oil of worms, Costus, Amomum, Myrrh, &c.* and was used as a detergent.

NARES, Rhines, Cav'itas Na'rium, Cavum seu Ca'vea seu Caver'na narium, Nasus inter'nus, Mycte'res, Na'rium ad'itus, Ocheteu'mata. The nostrils. (F) *Narines.* Two elliptical apertures, situate beneath the nose, and separated from each other by the cartilaginous septum nasi. These apertures are continually open, and give passage to the air we breathe; and to the mucous fluids secreted in the nasal fossæ.

The **POSTERIOR NARES, Nares postre'mæ, Extre'mæ nares, Ostia posterio'ra seu Cho'anæ na'rium, Na'rium Ex'itus,** (F) *Arrières-narines, Ouvertures posterieures des fosses nasales,* are the posterior apertures of the nasal cavities, which establish a communication between those cavities and the pharynx. They are bounded, *above*, by the body of the sphenoid bone; *below*, by the palate bone, and the base of the velum pendulum; and, on the *outside*, by the internal ala of the pterygoid process. They are separated from each other by a septum, of which the vomer is the bony part.

NARIFUSO'RIA, from *Nares*, 'the nostrils,' and *fundere*, 'to pour.' Medicines dropped into the nostrils.

NASAL, Nasa'lis. That which relates to the nose.

NASAL BONES, Ossa nasi, Ossa nasa'lia, Ossic'ula nasi, Ossa maxil'læ superioris quarta seu quinta seu secun'da, (F) *Os nasaux, Os propres du nez.* These bones are situate beneath the nasal notch of the os frontis, and occupy the space between the nasal or angular processes of the superior maxillary bone. Their shape is nearly quadrilateral. They have an *external* or *cutaneous* surface; an *internal* or *nasal*, and four margins. Each is articulated with its fellow, with the os frontis, ethmoid, and superior maxillary bone. They ossify from a single point.

NASAL PROMINENCE, (F) Bosse nasale. A prominence, situate on the median line at the anterior surface of the os frontis, between the two superciliary arches.

NASAL NOTCH, (F) Échancrure nasale. A semicircular notch, situate between the nasal prominence of the frontal bone, and articu-

lated with the nasal bones and the nasal processes of the superior maxillary bones.

NASAL SPINES. These are three in number. 1. The *Superior nasal spine* of the os frontis, occupying the middle of its nasal notch, and articulated before with the nasal bones, behind with the ethmoid. 2. The *inferior and anterior nasal spine* situate at the inferior part of the anterior opening of the nasal fossæ. It is formed by the two superior maxillary bones, and 3. The *inferior and posterior nasal spine*, *Épine gutturale* (Ch.), a process, formed on the median line by the two palate bones at the posterior part of the palatine arch.

The **NASAL FOSSÆ**, *Cavi na'rium*, *Nares inter'næ* are two large, anfractuous cavities, situate between the orbits below the cranium, and lined by the pituitary or Schneiderian membrane. These cavities have no communication with each other; but the various sinuses in the neighbouring bones;—the ethmoidal, sphenoidal, superior maxillary, &c. all communicate with them. The general cavity of each nostril is divided by the ossa spongiosa into three *meatus* or *passages*, which run from before backwards.

1. The *Meatus narium superior*, placed at the upper, inner, and back part of the superior spongy bone. 2. The *meatus medius*, situate between the superior and inferior spongy bones; and 3. The *Meatus inferior*, situate between the inferior spongy bone and the bottom of the nose.

The Schneiderian membrane receives the 1st pair of nerves, and various branches from the 5th pair. The arteries are furnished by the branches of the *internal maxillary*, known under the names sphenopalatine, infra-orbital, superior alveolar, palatine, pterygo-palatine; by the supra-orbital, and ethmoidal branches of the ophthalmic artery, by the internal carotid, superior labial, and dorsales nasi. Its veins are little known, and generally follow the course of the arteries. The lymphatics are almost unknown. The nasal fossæ are the seat of smell; they aid, also, in respiration and phonation.

NASAL ARTERY. This is the largest of the two branches in which the ophthalmic artery terminates. It issues from the orbit, above the tendon of the orbicularis palpebrarum, passes above the side of the root of the nose, and anastomoses with the last extremity of the facial. Haller gave the name *nasal* to the sphenopalatine. He also called the dorsales nasi, furnished by the external maxillary, *Nasales laterales*.

NASAL NERVE.—*Naso-palpébral* (Ch.),—*Naso-ocula'ris* (Sömmering.) One of the three branches of the ophthalmic nerve of Willis. It enters the orbit by the sphenoidal fissure, passes along the inner paries of that cavity, and divides, opposite the internal and anterior orbital foramen, into two branches. 1. The *internal and posterior*, which passes into the *Foramen orbitarium internum ante-*

rius, enters the cranium beneath the dura mater, and passes into the nasal fossæ, through an aperture at the sides of the *Crista galli*. It, afterwards, divides into several filaments: one of them—the *Naso-lobar*, of Chaussier—is very small, and descends on the posterior surface of the os nasi, and ramifies in the integuments of the ala nasi. A second terminates near the septum; others descend along the outer paries of the nasal fossæ. 2. The other is *external and anterior*, and is called the *external nasal nerve*. It is distributed to the outside of the orbit. Before dividing, the nasal nerve communicates with the ophthalmic ganglion, and gives off two or three ciliary nerves:—the *Posterior Nasal Nerves*. Sömmering has given this name to the nerves, which arise from the internal part of the sphenopalatine ganglion.

The **NASAL MUCUS**, *Mucus na'rium*, *Mucor seu Pituita*, seu *Blenna*, seu *Lympha muculen'ta narium*, vulgarly called *snot*, (F) *Morve*, is the mucus secreted by the Schneiderian membrane.

NASAL CAR'TILAGE, *Cartilago triangularis Nasi*. A cartilage, formed of three portions, which unite at the dorsum nasi, and are distinguished into the *cartilage of the septum*, and the *lateral cartilages*. This cartilage is continuous, *above*, with the ossa nasi; and, *inferiorly*, with membranous fibro-cartilages, which form the supple and movable part of the nostrils. They are two in number—the one before, the other behind.

NAS'CALE. A kind of pessary, made of wool or cotton, which was formerly introduced into the vagina, after being impregnated with oil, ointment, or some other proper medicament.

NASO-PAL'ATINE, *Naso-palati'nus*. That which belongs to the nose and velum palati.

The **NASO-PALATINE NERVE** is furnished by the sphenopalatine, which proceeds from the ganglion of Meckel. It traverses the vault of the nasal fossæ, and proceeds upon the septum between the two layers of the pituitary membrane. It enters the anterior palatine canal, and terminates at the superior angles of the naso-palatine ganglion, without attaining the mouth.

The **NASO-PALATINE GANGLION** is situate in the foramen palatinum anterius. Its greater extremity receives the two naso-palatine branches; whilst the smaller gives off two or three filaments, which reach the palatine vault, where they ramify on the membrane of the same name, anastomosing with filaments of the great palatine nerve.

NASUS. The *Nose*, *Rhin*, *Rhis*, *Or'ganon olfactus* seu *odora'tus* seu *olfactor'ium*, *Promontorium faciei*, *Myxo'ter*. (F) *Nex*. The nose is a pyramidal eminence, situate above the anterior apertures of the nasal fossæ, which it covers; and, consequently, occupying the middle and upper part of the face, between the forehead and upper lip, the or-

bits and the cheeks. Its lateral surfaces form, by uniting angularly, a more or less prominent line, called the *Dorsum Nasi*, (F) *Dos du nez*. This line terminates, anteriorly, by the lobe. The sides are called *Alæ Nasi*, *Pinnæ Naris*, (F) *Ailes du nez*. The column is the inferior part of the partition.

The chief varieties of the nose are the *aquiline*, the *flat nose*, (F) *Nez camarot ou épaté*, and the *snub nose*, (F) *Nez retroussé*. The nose is formed, besides its bones, of fibrocartilage, cartilage, muscles, vessels, and nerves; and its use seems to be, to direct odours to the upper part of the nasal fossæ.

NATA, *Natta*, *Nasa*, *Nasda*, *Napta*. A fleshy, indolent excrescence, having the shape of the nates.

NATA'TION, *Natatio*, *Swimming*. The action of swimming, or of supporting one's self or moving upon the water.

Swimming resembles the horizontal leap in its physiology—the medium being water instead of air. The difference between the specific gravity of the human body and that of water is not great; so that but little exertion is required to keep a part of the body above water.

Swimming is a healthy gymnastic exercise, combining the advantages of bathing.

NATES, *Ephed'rana*, *Nat'ulæ*, *Sca'phia*, *Clunes*, *Glutoi*, *Monæ*; the *Bottom*, *Back-side*, *Poste'riors*, *Buttocks*, &c. (F) *Fesses*. Two round projections, at the inferior and posterior part of the trunk; on which we sit. Amongst the mammalia, man, alone, has the nates prominent and round. They are formed chiefly by the skin, and a thick layer of cellular tissue, which covers the three glutæi muscles.

NATRON, *Natrum*, *Nat'aron*, *Nitrum*. A saline compound, very abundant in Egypt, which is almost wholly formed of subcarbonate of soda, (q. v.)

NAUSEA, *Nausio'sis*, *Nautia*, (F) *Nausée*, *Envie de vomir*; from *ναυς*, 'a ship;' because those, unaccustomed to sailing, are so affected. Sickness. A desire to vomit.

NAUSEA MARI'NA; *Morbus nau'ticus*, *Sea-sickness*, (F) *Mal de mer*. That sickness, vomiting, &c. experienced at sea by those unaccustomed to a sea life: and from which those who are so accustomed are not always exempt. It generally ceases, when the person becomes habituated to the motion of the vessel, and not till then.

NAU'SEANT, *Nauseans*. An agent that excites nausea, which is a state of diminished action. Nauseants are, hence, valuable remedies in diseases of excitement.

NAUSIO'SIS, *ναυσιασ'ις*. This word, besides being synonymous with nausea, has been used to express the state of venous hemorrhage, when blood is discharged by jets.

NAVICULAR, *Navicula'ris*, *Navifor'mis*, from *navic'ula*, 'a little ship.'

FOSSA NAVICULA'RIS, F. *Scaphoi'des*, *Navic'ula*, *Scaph'ula*. See Scaphoid. This name

has been given, 1. To a small depression between the entrance of the vagina and the posterior commissure of the labia majora or fourchette. 2. To a perceptible dilatation, presented by the urethra in man, near the base of the glans. 3. To the superficial depression, which separates the two roots of the helix. This is, also, called *Scapha*.

NEB'ULA, *Nubes*, *Nubec'ula*, *Nephos*, *Neph'elè*, *Neph'e'ion*, (F) *Nuage*, *Ombrage*. See Caligo. A slight speck on the cornea. A mist or cloud, suspended in the urine.

NEC'ESSARY, *Necessa'rius*. The *Necessaries of Life*, *Vitæ necessita'tes*, (F) *Besoins de la vie*, include every thing requisite for the maintenance of life; and particularly, food.

NECKLACE, AN'ODYNE. These are formed of the roots of hyoscyamus, Job's tears, allspice steeped in brandy, or the seeds of the wild liquorice vine, to suit the fancies of the prescribers. They are employed to facilitate dentition in children, and to procure sleep in fever!

NECROMAN'CY, *Necromanti'a*, *Negromanti'a*, *Nigromanti'a*, *Necyomanti'a*, *Nicro-manti'a*; from *νεκρος*, 'death,' and *μαντεια*, 'divination.' Divination by the dead.

NECROPHO'BIA, from *νεκρος*, 'death,' and *φοβος*, 'fear.' Exaggerated fear of death. This symptom occurs in patients, where the disease is not mortal; as in hypochondriasis. In fevers, it is not a good symptom.

NECRO'SIS, *νεκρωσις*, from *νεκρωω*, 'I mortify.' State of a bone or of a portion of a bone deprived of life. Necrosis may take place without the surrounding soft parts being struck with gangrene. It is to the bones what gangrene is to the soft parts. The part of the bone affected with necrosis becomes a foreign body, similar to the gangrenous eschar, and its separation must be operated by the efforts of nature or by art. When necrosis occurs in the centre of long bones, it never extends to their articular extremities. The exterior layers of bone form a canal round the dead portion or *sequestrum*: between these swollen layers and the sequestrum suppuration takes place; the matter presses against the bony canal; perforates it, and is discharged by apertures, which become fistulous.

In the treatment, the exit of the sequestrum must be facilitated by proper incisions, by the application of the trepan to the bone, &c.

NECTAR, from *νη*, 'a particle of negation,' and *κταω*, 'to kill.' A pleasant liquor, feigned by the poets to have been the drink of the gods, and to have rendered immortal those who drank of it. A name given, by the ancients, to many drinks; and particularly to one made with wine, evaporated and sweetened with honey.

NEDYS, *νδυς*. The belly; abdomen; stomach; womb.

NEEDLE. Sax. *neol*, from Teut. *neten*,

'to sew.' *Acus*, *Bel'onē*, *Raphis*, *Raphion*, *Aces'tra*. (F) *Aiguille*. A steel instrument, used in many professions. In *Surgery*, a steel, gold, silver, or platina instrument, that may be round, flat, or triangular, straight or curved, supported or not by a handle, but having *always* a point, by means of which it penetrates the textures; and *often* having, either near the point, or, more commonly, near the other extremity, an aperture for the reception of a thread or tape, which it introduces into the parts. The *Aiguille à appareils* of the French is the ordinary sewing needle, used in the making of bandages, &c.

ACUPUNCTURE NEEDLE, (F) *Aiguille à Acupuncture*. An inflexible gold or silver needle: conical, very delicate, four inches long; furnished with a handle, and, at times, with a canula shorter than it by about half an inch. An ordinary needle, waxed at the head, will answer as a substitute for this. See *Acupuncture*.

HARE-LIP NEEDLE, (F) *Aiguille à Bec de Lièvre*. A small, silver canula, to which is attached a spear point, that can be readily withdrawn. This needle, armed with the point, is introduced at one side of the fissure in the lip, and through the other. The twisted suture (q. v.) is then applied, and the pin withdrawn.

CATARACT NEEDLE, *Acus Ophthalmica*, (F) *Aiguille à cataracte*. Needles of gold, silver, and steel have been used; the latter, alone, at the present day. The cataract needle is employed to depress or tear the crystalline, when opaque. This needle is usually made about 15 or 24 lines long; and is attached to a fine handle. The extremity may be, as in Scarpa's and Langenbeck's, pointed, prismatic, triangular, and curved; in Dupuytren's and Walther's, flat, curved, and sharp-edged; in Hey's, flat, with a semicircular and sharp end; or, as in Beer's, Siebold's, Schmidt's, Himly's, Grafe's, &c., straight and spear-pointed. A mark is generally placed upon the handle to inform the operator,—when the instrument is engaged in the eye,—what side corresponds to the crystalline.

AIGUILLE A CONTRE-OUVERTURE, (F) *Aiguille engagée*, *Acus invagina'ta*, *Aiguille à gaine*, *Needle for a counter-opening*,—is a long, narrow instrument of steel; the point of which is fine and sharp on both sides;—the heel (*Talon*) having an aperture to receive a thread, tape, &c., provided with a flat, silver sheath, shorter than the blade, the point of which it covers when passing through parts, that have to be respected.

FISTULA NEEDLE, *Aiguille à Fistule*. A long, flat, flexible, silver instrument; having an aperture near one extremity; blunt at the other. This was formerly used for passing a seton into fistulous ulcers. On one of its sides was a groove for guiding a bistouri, in case of necessity.

Also, a long steel instrument, terminated

by a point like that of a trocar, which Desault employed for penetrating the rectum, when operating for fistula that had no internal aperture.

LIGATURE NEEDLE, *Aiguille à ligature*. A long, steel instrument, sharp towards one extremity, with an eye near the other, which was formerly used for suspending the circulation of blood, prior to amputation; by being passed through the limb, so as to include the principal artery and a part of the muscles and integuments.

Also, a steel instrument of various dimensions, round towards one of its extremities, which was straight, and furnished with an aperture; curved and flat towards the opposite, which was pointed, and had a slight ridge on its concave side. At the commencement of the last century, this instrument was used to pass ligatures round vessels.

Also, a steel instrument of various dimensions, flat, regularly curved in the form of a semicircle, with a sharp or lance point, and a long eye, used with advantage in place of the last.

DESCHAMP'S NEEDLE, *Aiguille de Deschamps*,—*Paupé's needle*, *Aiguille à Manche*, &c., is the last described needle, fixed to a handle, the eye of which is placed near the point. It is employed in the ligature of deep-seated arteries.

SETON NEEDLE, (F) *Aiguille à Seton*. A long, narrow, steel blade; pointed and sharp at one extremity; pierced at the other by an aperture. The *Aiguille contre-ouverture* may be used for the same purpose.

SUTURE NEEDLE, (F) *Aiguille à Suture*. For the twisted suture, the hare-lip needle is used; for the others, the straight or curved needle: the straight needle is preferable for stitching up the abdomen, &c., in dissection. In the suture of the tendons, a curved needle has been used; flat on both sides, and cutting only at the concave edge, in order that the instrument may pass between the tendinous fibres without dividing them.

NEFREN'DES, *Nodoi*, *νῆδοι*. Persons devoid of teeth. Young children, for instance, who have not cut them; or aged persons, who have lost them. This state is called *Nefrendis*, *Nodo'sia*, *Odon'tia eden'tula*.

NEGRO, *Nigrita*. One of the Æthiopian race. See *Homo*.

NEIÆ'RA, *Imus Venter*. The lower part of the belly.—*Hippocr.*

NEOG'ALA, from *νῆος*, 'new,' and *γάλα*, 'milk.' Milk secreted immediately after the colostrum. Also, the colostrum.

NEPEN'THA DISTILLATO'RIA, *Ban-du'ra*. A Ceylonese plant, the root of which is astringent.

NEPEN'THES, from *νῆ*, negative particle, and *πενθος*, 'grief.' A remedy, much extolled by the ancients against sadness and melancholy.

The women of Thebes, according to Dio-

dorus Siceliotes, alone possessed the secret of its composition; and, according to Homer, Helen introduced it from Egypt. Some suppose it to have been opium.

NEP'ETA, *N. Cata'ria*, *Herba felis*, *Nep* or *Catmint*, (F) *Herbe aux Chats*, so called, because cats are fond of it. The leaves have a smell and taste like those of an admixture of spearmint and pennyroyal. It has been recommended in uterine disorders, dyspepsia, flatulency, &c. like pennyroyal; and is much used in domestic medicine, on the American continent, in flatulencies, &c. of children.

NEPH'ELOID, *Nepheloides*, *Neb'ulous*, *Nubilo'sus*. An epithet applied to urine, when it is cloudy.

NEPHRAL'GIA, *Dolor Nephret'icus*, from νεφρος, 'a kidney,' and αλγος, 'pain.' Pain in the kidney.

NEPHRELMIN'TIC, *Nephrelmin'ticus*, from νεφρος, 'a kidney,' and ἔλμινς, 'a worm.' That which is owing to the presence of worms in the kidney.

NEPHREMPHRAX'IS, from νεφρος, 'a kidney,' and ἐμφρασσω, 'I obstruct.' A name given, by Ploucquet, to obstruction of the kidneys.

NEPHRETIC or NEPHRITIC, *Nephrit'icus*, from νεφρος, 'a kidney.' That which relates to the kidney. Applied, especially, to pain, &c. seated in the kidney.

The LAPIS NEPHRETICUS, (F) *Pierre néphrétique*, *Jade néphrite ou oriental*,—a green, fatty kind of stone,—once used as an amulet against epilepsy.

In *Materia Medica*, *Nephreticum* means—a medicine employed in the cure of diseases of the kidney.

NEPHRID'ION, *Pingue'do rena'lis*. The fat which surrounds the kidneys.—Hippocr.

NEPHRITIS, *Empres'ma Nephritis*, *Renum inflamma'tio*, *Inflamma'tion of the Kidney*;—characterized by acute pain; burning heat, and a sensation of weight in the region of one or both kidneys; suppression or diminution of urine; fever; dysuria; ischuria; constipation, more or less obstinate; retraction of the testicle, and numbness of the thigh of the same side. It may be distinguished into *simple* and *calculous nephritis*. In the latter, the urine often contains small particles of uric acid or of urate of ammonia. The most common causes of nephritis are;—excess in irritating and alcoholic drinks; abuse of diuretics; blows or falls on the region of the kidneys: the presence of renal calculi, &c. It may be distinguished from lumbago, by the pain which attends the latter on the slightest motion, &c. In the treatment, antiphlogistics, as V. S., baths, &c., are required to the full extent; with the use of diluents, opiates, &c.

NEPHROG'RAPHY, from νεφρος, 'a kidney,' and γραφω, 'a description.' An anatomical description of the kidney.

NEPHROLITH'IC, from νεφρος, 'a kidney,' and λιθος, 'a stone.' Belonging to calculi in the kidneys. This epithet has been applied to ischuria, occasioned by calculi formed in the kidneys.

NEPHROL'OGY, *Nephrolo'gia*, from νεφρος, 'kidney,' and λογος, 'a treatise.' A treatise on the kidneys. Dissertation on the kidneys and their functions.

NEPHRON'CUS, from νεφρος, 'the kidney,' and ογκος, 'a tumour.' A tumefaction of the kidney.

NEPHRO-PHLEGMAT'IC, *Nephrophlegmat'icus*, from νεφρος, 'kidney,' and φλεγμα, 'phlegm.' A name given, by some authors, to ischuria produced by mucus, contained in the urine.

NEPHRO-PLETHOR'IC, *Nephroplethor'icus*, from νεφρος, 'a kidney,' and πλεθωρα, 'plethora.' Belonging to plethora of the kidneys. An epithet given to ischuria dependent upon this cause.

NEPHRO-PYIC, *Nephro-py'icus*, from νεφρος, 'a kidney,' and πυον, 'pus.' Belonging to suppuration of the kidney.

NEPHRO-SPASTIC, *Nephro-spas'ticus*, from νεφρος, 'a kidney,' and σπασω, 'I draw.' That which depends upon spasm of the kidney. An epithet given to a variety of ischuria.

NEPHRO-THROM'BOID, *Nephro-thromboi'des*, from νεφρος, 'a kidney,' and θρομβος, 'a clot.' That which depends upon clots of blood, contained in the kidneys or their ducts. An epithet for a species of ischuria.

NEPHROTOMY, *Nephro-lithotomy*, *Sectio rena'lis*, *S. renis*, from νεφρος, 'a kidney,' and τεμνειν, 'to cut.' Dissection of the kidneys. Also, an operation proposed with the view of extracting calculi, formed in the kidney, by means of an incision into the tissue of that organ.

NE'RIMUM ANTIDYSENTER'ICUM. The tree, which affords the *Codagapala Bark*, *Cones'si cortex*, *Cortex proflu'vii*. Family, Apocynæ. *Sex. Syst.* Pentandria Monogynia. (F) *Codagapale* and *Cropale*. The bark of this Malabar tree is of a black colour, externally, and is generally covered with a white moss or scurf. It has an austere, bitter taste, and has been recommended as an astringent, in diarrhœa, dysentery, &c.

NE'RIMUM OLEAN'DER, *Ne'rium*, *Rhododaphnis*, *Rosa'go*. (F) *Laurier rose*. The leaves are reputed to be narcotic. The infusion is employed internally, in herpetic affections, and the powder, incorporated with lard, is used in the itch.

NERONIA'NA (PHLEBOTO'MIA). An epithet, given for some cause, to phlebotomy, when more than one vein was opened on the same day.

NERVE, *Nervus*, *Neuron*, (F) *Nerf*. This word originally meant the tendons and ligaments; and hence the different acceptations

of "nervous;"—a man of nerve—a strong, nervous man; and a weak, nervous woman.

The nerves are cords of the same substance which composes the encephalon and spinal marrow. They extend from one or other of the nervous centres to every part of the body, communicating, frequently, with each other; forming *plexuses*, and, occasionally, *ganglions*; and being, at length, lost in the parenchyma of organs. There are 42 pairs, and, according to their origin, they are termed *Cranial* or *Encephalic*, and *Spinal*. Each nerve is composed of several filaments or cords placed alongside each other, and is surrounded by a *Neurilema*, (q. v.)

The encephalic nerves, except the 5th pair, have only one root in the brain, whilst the spinal arise from the marrow by two roots: the one from an anterior fasciculus of filaments, the other from a posterior, separated from each other by the *Ligamentum denticulatum*; uniting outside this ligament, and presenting, near the intervertebral foramen, a ganglion formed only by the posterior root. The two roots make, afterwards, but one nerve; and, like the encephalic nerves, proceed to their destination, subdividing into rami and ramusculi, until they are finally

lost in the texture of the organs. The trunks first formed are commonly round, and proceed alone, or accompany the great vessels, being placed in the cellular spaces, which separate the organs, and thus protected from injury. Their manner of termination we are not acquainted with; whether the nervous pulp, for instance, be distributed or lost in a membrane, as seems to be the case with the nerves of sight, hearing, and smell, or form papillæ. Certain it is, that there is considerable difference in the organs, as respects the quantity of nerves that terminate in them; and the particular arrangement of the nervous extremities. Some organs have numerous nerves; others seem to have none: a circumstance, which influences considerably the sensibility of parts.

The *Encephalic Nerves* arise from the encephalon, or are inserted into it; (according as we consider the brain the origin or termination of the nerves;) and make their exit by foramina at the base of the skull. They are 12 in number. The spinal nerves are 30 in number,—8 *cervical*, 12 *dorsal*, 5 *lumbar*, and 5 or 6 *sacral*: the four inferior cervical being much larger than the superior, because they furnish the nerves of the upper extremities.

SYNOPTICAL TABLE OF THE NERVES.

I. Cranial or Encephalic Nerves.			
1. <i>Olfactory.</i> (1st Pair.)	Divided into internal, external, and middle branches, which are distributed on the Schneiderian membrane.		muscle. 3. <i>Buccal</i> , to the inner surface of the cheek.
2. <i>Optic.</i> (2d Pair.)	Terminates in the retina.		4. <i>Pterygoid</i> , to the internal pterygoid muscle. 5. <i>Lingual</i> , to the mucous membrane of the tongue.
3. <i>Motores Oculorum.</i> (3d Pair.)	<i>Superior Branch.</i> To the rectus superior oculi and levator palpebræ superioris. <i>Inferior Branch.</i> To the rectus internus, rectus inferior, and lesser oblique muscles: a filament which goes to the ophthalmic ganglion.		6. <i>Inferior dental</i> , to the teeth of the lower jaw, and to the lower lip. 7. <i>Auricular</i> branch, to the pavilion of the ear and forehead.
4. <i>Pathetici.</i> (4th Pair.)	To the greater oblique muscle of the eye. <i>Ophthalmic Branch.</i> Divided into three branches. 1. The <i>lachrymal branch</i> , to the lachrymal gland and upper eyelid. 2. <i>Frontal branch</i> , to the forehead and upper eyelid. 3. <i>Nasal branch</i> , to the eyelids, nasal fossæ, and nose. <i>Superior Maxillary Branch.</i> 1. The <i>orbital branch</i> , to the orbit. 2. The <i>posterior and superior dental</i> , to the three last molar teeth and gums. 3. The <i>anterior dental</i> , to the incisor, canine, and two lesser molares. 4. <i>Infra-orbital</i> , to the upper lip, cheek, and nose. <i>Inferior Maxillary Branch.</i> 1. <i>Temporal</i> (profound) branches, to the temporal muscle. 2. <i>Masseterine</i> branch, to the masseter	6. <i>Abducentes.</i> (6th Pair.)	To the rectus externus oculi.
5. <i>Par Trigemini.</i> (5th Pair.)		7. <i>Facial.</i> (Portio dura of the 7th Pair.)	1. At its exit from the cranium, the <i>posterior auricular</i> , <i>stylo-hyoid</i> , and <i>infra-mastoid</i> , to the pavilion of the ear, the mastoid process, the digastricus, and the muscles attached to the styloid process. 2. Near the parotid gland, the <i>temporal</i> , <i>malar</i> , <i>buccal</i> , <i>supra-maxillary</i> , and <i>infra-maxillary</i> to the whole superficies of the face.
		8. <i>Auditory.</i> (Portio mollis of the 7th Pair.)	To the vestibule, semi-circular canals, and cochlea.
		9. <i>Glosso-pharyngeal.</i> (Portion of the 8th Pair.)	To the base of the tongue and pharynx.
			1. <i>IN THE NECK</i> ,—a <i>pharyngeal</i> branch to the pharynx; <i>superior laryngeal</i> branch to the larynx, and to some muscles of the inferior hyoid region. <i>Cardiac</i> branches to the cardiac plexus.

10. <i>Par Vagum</i> . (Of the 8th Pair.)	2. <i>IN THE CHEST</i> ,—the inferior laryngeal branch, to the larynx: pulmonary branches, which form the plexus of the same name: œsophageal branches to the œsophagus.	11. <i>Spinal</i> or <i>Accessory</i> of Willis.	At its exit from the cranium—the accessory of the pneumogastric nerve anastomosing with this nerve. In the neck—filaments to the trapezius muscle.
	3. <i>IN THE ABDOMEN</i> ,—gastric branches to the parietes of the stomach: filaments which go to the neighbouring plexuses.	12. <i>Hypoglossi</i> . (9th Pair.)	<i>Cervicalis descendens</i> , to the muscles of the inferior hyoid region, and to the cervical nerves. Filaments to the muscles of the tongue.

II. Spinal or Vertebral Nerves.

1. Cervical Nerves.

1st Cervical Pair.	<i>Anterior Branch</i> . Anastomosing <i>par arcade</i> with the second pair.
2d Cervical Pair.	<i>Anterior Branch</i> . A branch anastomosing with the 1st pair: a branch which goes to the cervical plexus.
3d and 4th Cervical Pairs.	<i>Anterior Branch</i> . Concurring in the cervical plexus.

The *Posterior Branch* of these four pairs ramifies on the occiput and muscles of the superficial and deep-seated cervico-occipital regions.

Cervical Plexus.	DESCENDING BRANCHES.—1. <i>Internal descending</i> , anastomosing with a branch of the hypoglossus. 2. <i>Phrenic branch</i> , to the diaphragm. 3. <i>External descending branches</i> , dividing into supra-clavicular, supra-acromial, infra-clavicular, and cervicales profundi, to the muscles and integuments of the upper part of the chest and shoulder, to the trapezius, levator scapulæ, rhomboides, &c.
	ASCENDING BRANCHES.—1. <i>Mastoid</i> , to the posterior and lateral part of the head, and the inner surface of the pavilion of the ear. 2. <i>Auricular</i> , to the parotid gland and pavilion of the ear.

Superficial Cervical Branches (2). To the platysma myoides, digastricus, the integuments of the neck, &c.

5th, 6th, and 7th Cervical Pairs.	<i>Anterior Branches</i> . Assisting in the formation of the brachial plexus.
	<i>Posterior Branches</i> . To the muscles and integuments of the posterior part of the neck and upper part of the back.

1. *Thoracic Branches* (2), to the anterior and lateral parts of the chest. 2. *Supra-scapular branch* to the muscles of the posterior scapular region. 3. *Infra-scapular branches* (3), to the subscapularis, teres major, teres minor, and latissimus dorsi. 4. The *brachial internal cutaneous*, to the integuments of the palmar and dorsal surfaces of the forearm, near the ulnar margin. 5. The *brachial external cutaneous*, principally to the integuments of the palmar and dorsal surfaces of the fore-

Brachial Plexus.

arm, near the radial margin. 6. The *median nerve*, to the forearm, hand, and palmar surface of all the fingers. 7. The *cubital nerve*, to the two last fingers. 8. The *radial*, to the three first. 9. The *axillary*, around the shoulder-joint and to the neighbouring muscles.

2. Dorsal Nerves, (*Nervi costales*.)

1st Dorsal Pair.	<i>Anterior Branch</i> . To the brachial plexus.
2d and 3d Dorsal Pairs.	<i>Anterior Branches</i> . An intercostal and brachial branch.
4th, 5th, 6th and 7th Dorsal Pairs.	<i>Anterior Branches</i> . <i>Internal branches</i> , to the intercostals, triangularis sterni, pectoralis major, and to the skin. <i>External branches</i> , to the integuments of the chest, the obliquus externus abdominis, and the skin of the abdomen.
8th, 9th, 10th, and 11th Dorsal Pairs.	<i>Anterior Branches</i> . <i>Internal branches</i> , to the transversalis, obliquus internus, and rectus muscles, and to the skin of the abdomen. <i>External branches</i> , to the integuments of the chest, and to the muscles and skin of the abdomen.
12th Dorsal Pair.	<i>Anterior Branch</i> . To the first lumbar nerve and to the muscles and skin of the abdomen as far as the iliac crest.

The *Posterior Branches* of the dorsal nerves are distributed to the muscles and integuments of the back and loins.

3. Lumbar Nerves.

1st, 2d, 3d, and 4th Lumbar Pairs.	<i>Anterior Branches</i> . Concurring to form the lumbar plexus.
5th Pair.	<i>Anterior Branch</i> . Aiding in forming the sciatic plexus.
The posterior branches of the lumbar nerves are distributed to the loins, sacrum, and nates.	
Lumbar Plexus.	1. <i>Musculo-cutaneous branches</i> , to the number of three. One <i>superior</i> , to the muscles of the abdomen, to the fold of the groin, and the scrotum: a <i>middle</i> , to the integuments and muscles of the abdomen; and an <i>inferior</i> , to the skin of the thigh. 2. A <i>genito-crural branch</i> , to the integuments of the scrotum, the groin, and the thigh.

	3. The <i>crural</i> nerve, to the integuments and muscles of the thigh, skin of the leg, and foot. 4. The <i>obturator</i> nerve, to the muscles at the inner part of the thigh. 5. The <i>lumbosacral</i>, to the sciatic plexus. It gives off the <i>gluteal</i> nerve to the glutæi muscles.		1. <i>Hemorrhoidal</i> nerves, to the rectum. 2. <i>Vesical</i>, to the bladder. 3. <i>Uterine</i> and <i>vaginal</i>, to the vagina and uterus. 4. <i>Inferior gluteal</i>, to the gluteal muscles, perinæum, and integuments of the posterior part of the thigh. 5. <i>Pudic</i>, to the perinæum, penis, or vulva. 6. <i>Sciatic</i>, divided into the <i>external popliteal</i>, which ramifies on the integuments and muscles of the external side of the leg, on the dorsum of the foot, and the dorsal surface of the toes; and into the <i>internal popliteal</i>, distributed on the dorsal surface of the two last toes, to the muscles of the foot, and on the plantar surface of all the toes.
<i>Sacral Nerves.</i> 1st, 2d, 3d, and 4th Sacral Pairs. } <i>Anterior Branches.</i> They form by their union the sciatic plexus. 5th, and 6th Pairs. } <i>Anterior Branches.</i> To the parts in the vicinity of the coccyx. The <i>Posterior</i> branches ramify on the muscles and integuments of the nates.		<i>Sciatic Plexus.</i>	

Classifications of the nerves have been recommended according to their uses, in preference to the ordinary anatomical arrangement.

It has been remarked, that the encephalic nerves have but one root; whilst the spinal have two. Now, experiments and pathological facts have proved, that the anterior fasciculus of the marrow and the anterior roots of the spinal nerves are inservient to volition or voluntary motion: and that the posterior fasciculus and roots are destined for sensibility. Hence the spinal nerves, which have two roots, must be the conductors both of motion and feeling; whilst the encephalic, which, with the exception of the fifth pair, have but one, can possess but one of these properties:—they must be either *sensitive* or *motive*, according as they arise from the posterior or anterior fasciculus of the medulla: and, consequently, three classes of nerves may be distinguished.

- | | | |
|---------------------------------|---|---|
| 1. <i>Sensitive.</i> | { | Arising, by a single root, from the posterior fasciculus of the medulla oblongata or spinal marrow. |
| 2. <i>Motive.</i> | | Arising, by a single root from the anterior fasciculus of the same parts. |
| 3. <i>Sensitive and Motive.</i> | { | Which have two roots; one from the anterior, and one from the posterior fasciculus. |

According to Sir Charles Bell, the medulla oblongata is composed of three fasciculi on each side; an *anterior*, *middle*, and *posterior*. Now, whilst the anterior and posterior fasciculi produce the nerves of motion and sensation respectively; the middle, according to Sir Charles, gives rise to a third set of nerves—the *respiratory*. To this order belong:—

1. The accessory nerve of Willis, or *superior respiratory*.
2. The *par vagum*.
3. The *glosso-pharyngeal*.
4. The *facial*, or *respiratory of the face*.

5. The *phrenic*.
6. A nerve, which has the same origin as the phrenic;—the *external respiratory nerve*.

When a horse has been hard ridden, every one of these nerves is in action.

Sir C. Bell, again, has reduced the system of nerves to two great classes. 1. Those that are *regular, primitive, symmetrical*; and common to all animals, from the worm to man; which have double roots, and preside over sensibility and motion; and, 2. The *irregular* or *superadded*, which are added to the preceding, in proportion as the organization of animals offers new or more complicated organs.

To the first class belong all the spinal nerves and one encephalic—the 5th pair;—to the second, the rest of the nervous system.

Lepelletier thinks we are justified in dividing the nerves into five classes:—the *first* comprising the *nerves of special sensibility*—the olfactory, optic, lingual branch of the fifth pair, and the auditory:—the *second*, the *nerves of general sensibility*, the fifth pair; and the spinal nerves, through their posterior root;—the *third* comprising the *voluntary motors*, the spinal nerves, by their anterior roots, the *motores oculorum* or common oculo-muscular, the external oculo-muscular, and the hypo-glossal:—the *fourth*, *instinctive motors*, involuntary, respiratory nerves of Sir Charles Bell, the pathetic, facial, glosso-pharyngeal, pneumogastric, and spinal accessory; and the *fifth*, *nerves of vital association and nutrition*—the filaments and plexuses of the ganglionic system.

Dr. Fletcher adopts a different arrangement. He divides them into *ganglionic* and *cerebro-spinal*; the latter being subdivided into the respiratory, motiferous, sensiferous, and regular: the last including those which communicate both the faculty of sensibility and the stimulus of volition.

GANGLIONIC.	CEREBRO-SPINAL.			
	Respiratory.	Motiferous.	Sensiferous.	Regular.
Those immediately connected respectively with The Ophthalmic, The Cavernous, The Otic, The Sphenopalatine, The Submaxillary, The three Cervical, The Cardiac, The twelve Dorsal, The Cœliac, The five Lumbar, The five Sacral, and The Coccygeal Ganglions.	The Pathetic, The Facial, The Glossopharyngeal, The Pneumogastric, The Accessory, The Phrenic, and The External Respiratory.	The Motor oculi. A part of the lower maxillary branch of the Trigemini- nus. The Abductor. The Hypo-glossal.	The Olfactory. The Optic. The Ophthalmic branch of the Trigemini- nus. The upper Maxil- lary branch of the Trigemini- nus. A part of the lower Maxillary branch of the Trigemini- nus. The Auditory.	The Suboccipital. The seven Cervi- cal. The twelve Dorsal. The five Lumbar. The five Sacral.

Dr. Marshall Hall, has proposed another division of the nervous system, which is calculated to explain many of the anomalous circumstances we so frequently witness. He proposes to divide all the nerves into

1. The cerebral or the sentient and voluntary.
2. The true spinal or excito-motory.
3. The ganglionic or the nutrient and secretory.

If the sentient and voluntary functions be destroyed by a blow upon the head, the sphincter muscles will still contract when irritated, because the irritation is conveyed to the spine, and the reflex action takes place to the muscle so as to throw it into contraction. But if the spinal marrow be now destroyed, the sphincters remain entirely motionless, because the centre of the system is destroyed.

Dr. Hall thinks, that a peculiar set of nerves constitute, with the true spinal marrow as their axis, the second subdivision of the nervous system; and as those of the first subdivision are distinguished into sentient and voluntary, these may be distinguished into the *excitor* and *motory*. The *first*, or the excitor nerves, pursue their course principally from external surfaces, characterized by peculiar excitabilities, to the true medulla oblongata and spinalis; the *second*, or the motor nerves, pursue a reflex course from the medulla to the muscles, having peculiar actions, concerned principally in ingestion and egestion. The motions connected with the first or cerebral subdivision are sometimes, indeed frequently, *spontaneous*; those connected with the true spinal are, he believes, *always excited*.

Dr. Hall thinks, too, that there is good reason for viewing the fifth, and posterior spinal nerves as constituting an external ganglionic system, for the nutrition of the external organs; and he proposes to divide the *ganglionic* subdivision of the nervous system, into 1. The *internal* ganglionic, which includes that usually denominated the sympathetic, and probably filaments of the pneumogastric; and 2. The *external* ganglionic, embracing the fifth and posterior spinal nerves.

To the *cerebral* system he assigns all dis-

eases of sensation, perception, judgment, and volition—therefore all painful, mental, and comatose, and some paralytic, diseases. To the true *spinal* or *excito-motory* system, belong all spasmodic and certain paralytic diseases. He properly adds, that these two parts of the nervous system influence each other both in health and disease, as they both influence the ganglionic system.

The views of Dr. Hall on the excito-motory function, have been embraced by Müller, Grainger, and others.

The nerves are covered and united to the neighbouring parts by an abundant layer of fatty cellular texture, which sends, inwards, prolongations that separate the nervous cords and filaments from each other. The arterial trunks, which furnish them, transmit branches into their interior. The veins follow the same course as the arteries. Absorbents are not easily traced in the greatest trunks.

NERVINE, *Nervi'nus*, *Neurot'ic*, *Neurit'ic*, *Antineurotic*, *Antineuropath'ic*. A medicine, considered proper for relieving debility of the nervous system.

NERVOUS, *Nervosus*, *Neurodes*. Relating or belonging to the nerves. Strong; also, weak, irritable.

The NERVOUS DIATHESIS is termed *Atax'ia spirituum*, *Anoma'lia nervo'rum*, *Status nervo'sus*, *S. ereth'icus*, *Diath'esis nervo'sa*, *Constitu'tio nervo'sa*.

NERVOUS DISEASES, *Morbi nervo'si*. (F) *Maladies nerveuses*. Affections seated in the nervous system.

A NERVOUS ATTACK, (F) *Attaque des nerfs*, is an affection accompanied with spasm, pain, and different nervous symptoms, to which irritable individuals are liable.

NERVOUS FLUID, *Nervous principle*, *Flu'idum ner'veum*, *Liquidum nerveum*, *Succus nervus*, *Spir'itus vitalis*. The fluid, which is supposed to circulate through the nerves and which has been regarded as the agent of sensation and motion. Of this fluid we know nothing, except that it resembles, in many respects, the electric or galvanic. It was formerly called *Animal spirits*, *Spiritus animales*. (F) *Esprits animaux*.

NERVOUS SYSTEM. The nerves of the human body considered collectively.

NESTIATRIA, *Nestitherapi'a* from νησ-της, 'a faster,' and θεραπεία, 'treatment.' Treatment of a disease by causing the patient to fast.

NEURAL'GIA, from νεῦρον, 'a nerve,' and αλγος, 'pain.' *Rheumatis'mus spu'rius nervo'sus*, *Neurodyn'ia*. (F) *Névralgie*. Nervous pain. A generic name for a certain number of diseases; the chief symptom of which is a very acute pain, exacerbating or intermitting, which follows the course of a nervous branch; extends to its ramifications, and seems, therefore, to be seated in the nerve. The principal neuralgiæ have been distinguished by the names *facial* (of which the *infra-orbital*, *maxillary* and *frontal* are but divisions)—the *ilio-scrotal*, *femoro-popliteal*, *femoro-pretibial*, *plantar*, and *cubito-digital*. A division of *anomalous* neuralgiæ has likewise been admitted.

1. *FACIAL NEURALGIA*, *Neuralgia faciei*, *Trismus maxilla'ris*, *T. Dolorif'icus*, *Opsial'gia*, *Dolor cru'cians faciei*, *Hemicra'nia idio-path'ica*, *Autal'gia doloro'sa*, *Tic douloureux*, *Dolor faciei*, *Dolor faciei typ'ico caract'ère*, *D. F. Fothergilli*, *Trismus clon'icus*, *Rheumatis'mus cancro'sus*, *Rheumatis'mus larva'tus*, *Prosopal'gia*, *Dolor faciei period'icus*, *Febris top'ica*, *Ophthalmodyn'ia period'ica*, is characterized by acute, lancinating pains, returning at intervals; and by twinges in certain parts of the face, producing convulsive twitches in the corresponding muscles. It may be seated in the frontal nerve, infra-orbital, or in the maxillary branch of the 5th pair.

1. *Neural'gia fronta'lis*, *Ophthalmodyn'ia*, *Tic douloureux*, *Dolor period'icus*, &c. commences at the superciliary foramen and extends along the ramifications of the frontal nerve that are distributed on the forehead, upper eyelid, caruncula lacrymalis, and nasal angle of the eyelids. Sometimes it is felt particularly in the orbit.

The *Neuralgia infra-orbita'ria*, *Dolor faciei atrox*, *Rheumatis'mus cancro'sus*, *Trismus clon'icus*, *Prosopal'gia*, *Febris top'ica*, *Odontal'gia remit'tens et intermit'tens*, *Hemicra'nia sæva*, *Infra-or'bital neuralgia*, *Tic douloureux*, is chiefly felt in the infra-orbital foramen, whence it passes to the cheek, upper lip, ala nasi, lower eyelid, &c.

In the *Neuralgia maxilla'ris*, *Tic douloureux*, *Trismus catarrha'lis maxillaris*, the pain usually sets out from the mental foramen and passes to the chin, lips, temple, teeth, and tongue.

The *ILIO-SCROTAL NEURALGIA* has been rarely observed. It is characterized by a very acute pain in the course of the branches of the first lumbar pair; this pain follows the crista illi and accompanies the spermatic vessels to the testicle, which is often painfully retracted.

NEURALGIA FEM'ORO-POPLITE'A, *Sciat'ica*,

Schias, *Malum ischiad'icum*, *Morbus ischiad'icus*, *Passio ischiad'ica*, *Ischiagra*, *Ischial'gia*, *Ischio'sis*, *Caxal'gia*, *Neural'gia Ischiad'ica*, *Dolor Ischiad'icus nerv'osus*, *Ischias nervosa Cotugnii vel Cotunnii*, *Neurisch'ias*, *Ischias nervo'sa posti'ca*, *Ischias*, *Coxogra*, *Ischias rheumat'icum*, *Ischiat'ica*, *Goutte sci-atique*. This is characterized by pain, following the great sciatic nerve from the ischiatic notch to the ham, and along the peroneal surface of the leg to the sole of the foot.

NEURALGIA FEM'ORO-PRETIBIA'LIS, *Ischias nervo'sa anti'ca*. In this, the pain, setting out from the groin, spreads along the fore part of the thigh and passes down, chiefly, on the inner side of the leg, to the inner ankle and back of the foot.

NEURALGIA PLANTA'RI. This is rare; and the pain is confined to the course of the plantar nerves.

NEURALGIA CU'BITO-DIGITA'LIS, *Ischias nervo'sa digita'lis*. In this variety, the pain extends from the part where the nerve passes under the inner condyle to the back of the hand and to its cubital edge.

Under the name *ANOM'ALOUS NEURAL'GIÆ*, *Chaussier* has included different neuroses, some of which are characterized by acute pains circumscribed within a short compass or extending by irradiations, but not having their seat in the course of a nerve; and others which are occasioned by tumours in the course of a nerve, or which succeed contusions or incomplete divisions of nerves.

All varieties of neuralgiæ are obstinate, and the greatest diversity of means has been made use of;—bleeding, general and local, —emetics, purgatives, rubefacients, vesicants, actual cautery, narcotics, mercurial frictions; electricity; destruction of a portion of the nerve, &c. The most successful remedy, perhaps, is the *Carbonate of iron*, given in doses of some magnitude; as, for instance, ʒss or ʒij, twice or thrice a day in melasses. This plan of treatment, continued for a month or two, will generally relieve and ultimately remove this much dreaded affection. The mode, in which it acts, is by no means clear; but it is almost as certain as any other remedy used in disease, in producing its salutary effects. The bowels must be kept free; and all inflammatory symptoms be removed during its administration.

NEURASTHENI'A, *Neurostheni'a*, *Debil'itas nervo'sa*. Debility or impaired activity of the nerves; from νεῦρον, 'a nerve,' and ἀσθενεία, 'debility.'

NEURILE'MA, *Neurilem'ma*, *Neurily'ma*, *Neur'y-men*, *Perineu'rion*, *Fistula seu Tubulus seu Capsula seu Involu'crum nervo'rum*, *Membra'na seu Membran'ula seu Tu'nica seu Indumen'tum nervo'rum*, *Vagi'na nervo'rum*; from νεῦρον, 'a nerve,' and λεῖμμα, 'a coat.' The fine transparent, and apparently fibrous membrane, that surrounds the nerves; to every filament of which it forms a true canal.

NEURILEMMITIS. Same etymon. Inflammation of the neurilema.

NEURINE. The substance of which the nervous system is composed. It consists chiefly of albumen and fatty matter.

NEURITIS, (F) *Névrite*, from *νευρον*, 'a nerve.' Inflammation of a nerve.

NEUROBLACIA, from *νευρον*, 'a nerve,' and *βλακισια*, 'stupor.' Insensibility of the nerves.

NEUROCHONDRODES, from *νευρον*, 'a sinew,' *χονδρος*, 'a cartilage,' and *ειδος*, 'resemblance.' A hard substance between a sinew and a cartilage.

NEUROGRAPHY, *Neurographia*; from *νευρον*, 'a nerve,' and *γραφη*, 'a description.' The part of anatomy which describes the nerves.

NEUROL'OGY, *Neurologia*, from *νευρον*, 'a nerve,' and *λογος*, 'a discourse.' That part of anatomy which treats of the nerves.

NEURON'OSOS, *Neuronusos*, from *νευρον*, 'a nerve,' and *νοσος*, 'a disease.' A disease of the nerves.

NEUROPATH'IC, *Neuropathicus*, from *νευρον*, 'a nerve,' and *παθος*, 'a disease.' Belonging to disease of the nerves, to *Neuropathia* or *Neuronosos*.

NEURO'SES, from *νευρον*, 'a nerve.' A generic name for diseases supposed to have their seat in the nervous system, and which are indicated by disordered sensation, volition, or mental manifestation; without any evident lesion in the structure of the parts and without any material agent producing them. Such is the usual definition. Broussais attributes them to a state of irritation of the brain and spinal marrow.

NEUROTICA, from *νευρον*, 'a nerve.' Diseases of the nervous function. The 4th class of Good's Nosology.

NEUROTOME, *Neurotomos*; from *νευρον*, 'a nerve,' and *τεμνω*, 'I cut,' 'I dissect.' An instrument used, by anatomists, to dissect the nerves. It is a long and very narrow scalpel, having two edges.

NEUROTOMY, *Neurotomia*. Same etymon. Dissection of the nerves. Also, an incised wound of a nerve.

NEUTRAL, from *neuter*, 'neither.' Belonging to neither in particular.

NEUTRAL SALTS, *Sec'ondary salts*, (F) *Sels neutres*. A salt, composed of two primitive saline substances, combined together, and not possessing the characters of acid or of base.

NEW JERSEY, MINERAL WATERS OF. In the upper part of Morris county and in the county of Hunterdon, near the top of Musconetcong mountain, there are chalybeate springs which are resorted to. See Schooley's Mountain.

NEW YORK, MINERAL WATERS OF. The chief waters are those of Ballston and Saratoga, (q. v.)

NICODEMI OLEUM, *Oil of Nicodemus*. An oil made by digesting, for some time,—

in a mixture of white wine and olive oil,—old turpentine, litharge, aloes, saffron, oxyd of zinc, &c.

NICOTIANA RUS'TICA, *N. minor*, *Priapeia*, *Hyoscyamus luteus*, *English tobacco*. The leaves possess the properties of tobacco, but are milder.

NICOTIANA TAB'ACUM, *Nicotiana*, *Herba tabaci*, *Tabacum*, *Petum*, *Petun*, *Hyoscyamus Peruvia'nus*, *Tobacco*, *Virgin'ia tobacco*, (F) *Tabac*, *Nicotiane*. Tobacco is a violent acro-narcotic; its properties seeming to depend upon a peculiar principle, *Nicotin* or *Nicotianin*. It is narcotic, sedative, diuretic, emetic, cathartic, and errhine. In incarcerated hernia it is injected, in the form of smoke or infusion, but requires great caution. It is most extensively and habitually used as an errhine and sialogogue. The infusion is used to kill vermin and in some cutaneous eruptions.

NICTA'TION, *Nictatio*, *Nictitatio*, *Nystagmus*, *Clonus nictitatio*, *Twinkling of the eye*, (F) *Clignotement*, *Clignement*, *Cillement*, *Souris*. A rapid and repeated movement of the eyelids, which open and shut alternately. As occasionally performed, it is physiological; if repeatedly, a disease. It seems to be executed chiefly by the 7th pair of nerves; but it is necessary that the 5th pair should likewise be in a state of integrity.

NIDOROUS, *Nidorous*, from *Nidor*, *Cnissa*, 'the smell of any thing burnt,' &c. Having the smell of burnt corrupt animal matter.

NIGEL'LA, *N. sativa*, *Melan'thium*, *Fennel flower*, *Cuminum Nigrum*, *Devil in a bush*, (F) *Nigelle*, *Nielle*. This was formerly used medicinally as an expectorant and deobstruent, errhine, sialogogue, &c.

NIPPLE, *Sax. nypele*. The *Teat*. The *dug*, *Mamil'la*, *Papil'la*, *Thele*, *Titthè*, *Titthos*, *Titthion*, *Titthis*, (F) *Mamelon*. The conical tubercle, situate at the centre of the breast. Towards the central part of each breast the skin changes colour and assumes a rosy tint in young females, or a reddish brown in those who have suckled several children. This circle is called the *Areola* or *Aureola* (q. v.) of the nipple. The nipple is capable of erection on being excited.

NISUS, *Nixus*, *Peira*, *Straining*. A voluntary retention of the breath; so as to force down the diaphragm; the abdominal muscles being at the same time contracted forcibly. In this manner the contents of the abdomen are compressed; and the evacuation of the feces, urine, &c. is effected.

NITRATE, *Nitras*. A salt, formed of a base and nitric acid. Several nitrates are employed in medicine.

NITRIC ACID, *Acidum nitricum*, *Aqua fortis*, *Nitrous acid*, *Spir'itus nitri duplex*, *Sp. nitri fumans*, *Sp. nitri Glaube'ri*, *Azot'ic acid*, *Dephlogistica'ted nitrous acid*, *Oxy-septon'ic acid*, *Spir'itus nitri acidus*. Nitric acid is obtained from nitre—the Nitrate of

potass. Its odour is suffocating; taste very acid and caustic. It is corrosive, liquid, colourless, and transparent. S. G. 1,500. 100 grains ought to saturate 124 of subcarbonate of soda.

Strong nitric acid is rarely used except as an application to foul, indolent ulcers or to warts. When given internally, it is in the form of the *Acidum Nitricum Dilutum*, *Spiritus nitri simplex*, *Sp. nitri vulgaris*—the *Dilute nitric acid*, which, in the London Pharmacopœia, consists of *nitric acid*, 3 j, *water* 3ix, by measure. Diluted largely with water, it is used, as a drink, in fevers of the typhoid kind; in chronic affections of the liver; syphilis, &c., but, in the latter affections, it is not to be depended upon.

NITROGEN, GAZEUS OXIDE OF, *Nitrous oxide, Protoxide of azote, Paradise gas, Intoxicating gas, Laughing gas, Dephlogisticated nitrous gas, Gaz azoticum oxygenatum.* This gas, when respired, produces singular effects; great mental and corporeal excitement; and, generally, so much exhilaration as to render the appellation, "*laughing gas*," by no means inappropriate. It has not been much used in medicine, although recommended in paralysis. Its effects are too violent and transient to render it a valuable remedial agent; and, in the delicate, it has been productive of unpleasant effects, inducing palpitation, fainting, and convulsions.

NITRO-MURIATIC ACID, *Nitrohydrochloric acid, Hydrochloro-nitric acid, Aqua regia, Aqua stygia, Chrysulea, Aqua regis, Acidum muriaticum nitroso-oxygenatum, Menstruum auri, (F) Eau régale.* A mixture of the nitric and muriatic acids has been used in diseases of the liver, in the form of a bath for the feet and legs, made sharply acidulous. It has, also, been employed, and with more uniform results, in cutaneous affections. Whatever advantage it may possess in internal diseases—and these advantages are doubtful—they are probably dependent upon the chlorine formed by the mixture, or upon the properties, possessed by the mineral acids in general. See Chlorine.

NOBLE, Nobilis, Principal, Essential, Noble parts, Partes essentialles. Some anatomists have given this name to parts, without which life cannot exist; such as the heart, liver, lungs, brain, &c. The organs of generation have, likewise, been so called.

NOCTU'INI O'CULI. Gray or blue eyes.—Castelli.

NODE, Nodus, Emphy'ma exostosis perios'tea; (F) Nodosité, Nœud; from Hebr. גֶּזֶל, 'a heap.' A hard concretion or incrustation, which forms around joints attacked with rheumatism or gout. Some include, under this name, exostoses, articular calculi, ganglions, and even the chronic swellings of the joints, known under the name of white swellings.

NOD'ULI ARAN'TII, Noduli Morgagnii, Corpora Arantii. The small sesamoid bodies situate on the periphery of the semilunar valves of the aorta and pulmonary artery; for the better occlusion of the artery by the valves.

NOM'ADE, Nomas, from νομήν, 'pasturage.' An epithet, given to people who have no fixed habitation, and who travel with their flocks, from country to country, for pasturage. Such are the Tartars. By analogy, the word *Nomad'ic* has been applied to spreading ulcers.

NOMENCLATURE, Nomenclatio, Nomenclatur'a, Onomatolog'ia, Onomatoclesis, from ονομα, 'name,' and καλέω, 'I call.' A collection of terms or words peculiar to a science or art. In all sciences, nomenclature is an object of importance; and each term should convey to the student a definite meaning. The Lavoisierian nomenclature was a valuable gift to chymistry; and anatomy has derived advantages from the labours of Barclay, Dumas, and Chaussier, who have given names to parts indicative of their situation. See Muscle. The nomenclature of pathology has required the greatest attention, and although repeated attempts have been made to improve it, the barbarous terms that disgrace it, are still most frequently adopted. It consists of Hebrew and Arabic terms; Greek and Latin, French, Italian, Spanish, German, English, and even Indian, African, and Mexican; often barbarously and illegitimately compounded.

A want of principle in founding the technical terms of medicine is every where observable. They have been formed:—

1. From *colour*; as *Melana, Melas, Atrabilis, Leuce, Alphos, Chlorosis, Rubeola, Scarlatina, Purpura, &c.*

2. From *duration*, as *Ephemeral, quotidian, tertian, and quartan, continued, and intermittent, &c.*

3. From *Birds, Beasts, Fishes, Insects, and Plants*, as *Rabies canina, Cynanche, Boulimia, Pica, Hippopyon, Elephantiasis, Urticaria, Lichen, Ichthyosis, &c.*

4. From *Persons or Places*, as *Morbus Hercules, Facies Hippocratica, Lepra Arabum, Plica Polonica, Sudor Anglicus, Morbus Gallicus, &c., and Ignis Sancti Antonii, Chorea Sancti Viti, &c.*

NON-NATURALS, Non naturalia. Under this term the ancient physicians comprehended air, meat and drink, sleep and watching, motion and rest, the retentions and excretions, and the affections of the mind.

NOSOG'RAPHY, Nosogra'phia, from νοσος, 'a disease,' and γράφω, 'I describe.' A description of diseases.

NOSOL'OGY, Nosolo'gia, from νοσος, 'a disease,' and λόγος, 'a discourse.' A name given to that part of medicine, whose object is the classification of diseases. The most celebrated nosological systems have been

those of Sauvages, (1763,) Linnæus, (1763,) Vogel, (1764,) Sagar, (1776,) Macbride, (1772,) Cullen, (1772,) Darwin, (1796,) Selle, Crichton, (1804,) Parr, (1809,) Swediaur, (1812,) Pinel, (1813,) Young, (1813,) Good, (1817,) Hosack, (1818,) &c.

Besides these general nosographies, others have been published on *Surgery* exclusively, none of which are particularly worthy of enumeration amongst nosological systems.

Nosological arrangements have, also, been formed of single families or groups of diseases. Plenck, of Baden, is the author of two separate treatises of this kind: the one, a methodical arrangement of the diseases of the eyes, and the other, of cutaneous diseases. Dr. Willan, published an arrangement of cutaneous diseases, which was completed by Dr. Bateman, and adopted into the Nosology of Dr. Hosack. Mr. Abernethy, also, published a methodical classification of tumours, and many other partial nosological classifications might be enumerated.

NOSTAL'GIA, from *νοστος*, 'return,' 'a journey home,' and *αλγος*, 'pain.' *Nostoma'nia*, *Pathopatridal'gia*, *Philopatridal'gia*, *Philopatridoma'nia*. (F) *Nostalgie*, *Maladie du pays*. An affection, produced by the desire of returning to one's country. It is commonly attended by slow wasting, and sometimes by hectic, which may speedily induce death. M. Pinel properly regards it as a variety of melancholy.

NOTAL'GIA, *Notial'gia*, (*Nostal'gia* (improperly) of Köchlin and others,) from *νοστος*, 'the back,' and *αλγος*, 'pain.' Pain in the back.

NOTCH, Teut. *Nocke*, Ital. *Nocchia*, *Emarginat'io*, *Emarginatu'ra*, (F) *Échancrure*. Depressions or indentations of different shapes and sizes, observed on the circumference or edges of certain bones.

The **ISCHIAT'IC NOTCHES**, (F) *Échancrures Ischiatiques*, are two in number,—the greater and the less. The former is large, situate at the inferior part of the pelvis, and formed by the sacrum and ilium. It gives passage to the sciatic nerve, pyramidalis muscle, and to the superior gluteal vessels and nerves. The latter is much smaller than the other, from which it is separated by the sciatic spine. It gives passage to the tendon of the obturator internus, and to the internal pudic vessels and nerves.

The **ETHMOID'AL NOTCH**, (F) *Échancrure ethmoïdale*, is situate on the frontal bone, and joins the ethmoid.

The **PAROT'ID NOTCH**, (F) *Échancrure parotidienne*, is the triangular space, comprised between the parotid edge of the inferior maxillary bone and the mastoid process; so called, because it lodges the parotid gland. The notches in soft parts are generally called *Fissures*, (q. v.)

NOTENCEPH'ALUS, from *νοστος*, 'the back,' and *εγκεφαλλον*, 'the head.' A monster,

whose head, with the brain, is on the back. —G. St. Hilaire.

NOUÉ (*Bandage*) (F); 'knotted.' A bandage, which has a considerable number of knots placed above each other. It is made with a roller, 6 or 7 ells long, rolled into two balls, and is used to compress the parotid region, after the extirpation of the parotid gland. Also, an epithet applied to children in whom the disease of rickets has swollen the articulations. It is, likewise, applied to the gout, when it has caused nodes on the joints.

NOUET (F), *Nod'ulus*. A bag, filled with medicinal substances, and infused in a liquid to communicate their properties to it.

NUCHA, (F) *Nuque*. The hinder part or nape of the neck. The part where the spinal marrow begins.

The **LIGAMEN'TUM NUCHÆ**. A strong ligament from the neck, proceeding from one spinous process to another, and inserted into the occipital bone. It is very strong in quadrupeds.

NUCK, CANAL OF. A small prolongation of the peritoneum often sent into the inguinal canal of the female foetus. So called from Nuck, who first described it.

NUMMULAR, *Nummularis*. Relating to money, from *nummus*, 'money.' An epithet applied to the sputa in phthisis, when they flatten at the bottom of the vessel, like a piece of money.

NURSE, *Nutrix*, *Trephousa*. Sax. *noþice*. (F) *Nourrice*, *Garde-malade*. One, who suckles her own child or another's. One that has the care of a sick person.

A **WET NURSE**. A female, who suckles the child of another.

A **DRY NURSE**. One, who gives every care to the child, but does not suckle it.

NUTA'TION, *Nuta'tio*. Constant oscillation of the head, in which it moves involuntarily in one or more directions.

NUTRI'TION, *Nutri'tio*, *Nutricatio*, *Alitu'ra*, *Threpsis*, from *nutri're*, 'to nourish.' Nutrition is that function, by which the nutritive matter, already elaborated by the various organic actions, loses its own nature, and assumes that of the different living tissues,—to repair their losses and support their strength. Sometimes the word is used in a more extended signification, to express the whole series of actions by which the two constant movements of composition and decomposition are accomplished, in organized bodies. Nutrition, then, would comprehend digestion, absorption, respiration, circulation, and assimilation; the latter being *nutrition*, properly so called, and being operated in the intermediate system over the whole of the body,—the tissues attracting from the blood the elements necessary for their reparation.

NUTRI'TIOUS, *Nutric'ius*, *Nu'tritive*, *Alib'ilis*, *Trophimos*, *Trophodes*, (F) *Nourricier*, *Nutricier*. Having the quality of nour-

ishing : as nutritious food, nutritious lymph, &c.

NUTRITIOUS OR NUTRITIVE ARTERIES. (F) *Artères nutritières*. Arterial branches, which enter the *foramina nutritia* of long bones, and penetrate to the medullary membrane.

NYCTALOPIA, *Paropsis Lucifuga*, *Nyctalopiasis*, *Cæcitas diurna*, *Visus nocturnus*, *Oxyopia*, *Hemeralopia* (moderns), *Amblyopia meridiana*, *Photophobia*, *Photophthalmia*, *Dysopia luminis*, *Visus acrior*, (F) *Vue nocturne*, *Aveuglement de Jour*, from *νύξ*, 'night,' and *ὀπτομαι*, 'I see.' The faculty of seeing during the night, with privation of the faculty during the day. It affects both eyes at once, when idiopathic. Its duration is uncertain, and treatment very obscure. It is, however, a disease of nervous irritability, and one of excitement of the visual nerve in particular. The indications of cure will, consequently, be—to allay direct irritation in every way; to excite counter-irritation by blisters; and to gradually accustom the eye to the impression of light.

One labouring under this affection, is called a *Nyc'talope*, *Nyc'talops*, *νυκταλαψ*.

NYCTHEMERUM, from *νύξ*, 'night,' and *ἡμέρα*, 'day.' The space of 24 hours, or of a day and night. Certain complaints continue only so long.

NYMPHÆ, from *νυμφη*, 'a water nymph.' *Alæ inter'næ minores clitoridis*, *Carunculæ cuticulares*, *Alæ minores*, *Collicula vaginæ*, *Myrtocheilides*, *Labia minora seu inter'na*. (F) *Nymphes*, *Petites lèvres*. Two membranous folds, which arise from the lateral parts of the prepuce of the clitoris, and descend on the inner surface of the labia majora; terminating by becoming gradually thinner, about the middle of the circumference of the orifice of the vagina. They are formed each of two folds of the mucous membrane of the vulva; and contain, in their substance, a thin layer of spongy, erectile tissue. Their use seems to be;—not, as was once supposed, to direct the course of the urine, which notion gave rise to their name, but to favour the elongation and dilatation of the vagina in pregnancy and labour.

The word *νυμφη* has also been used synonymously with clitoris by Oribasius, Aëtius, &c.

NYMPHÆA ALBA, *Leuconymphæa*, *Nenuphar*, *Microleuconymphæa*, *White Water Lily*. (F) *Nenuphar blanc*. Nat. Ord.

Ranunculaceæ. *Sex. Syst.* Polyandria Monogynia. Formerly employed as a demulcent, antaphrodisiac, emollient, and slightly anodyne remedy.

NYMPHÆA LUTEA, *N. major lutea*, *Yellow Water Lily*. (F) *Nenuphar jaune*. Used for the same purposes.

NYMPHÆA NELUMBO, *Faba Ægyptiaca*, *Cyamus Ægyptiacus*, *Nymphæa Indica*; *Pontic* or *Ægyptian Bean*. The fruit of this is eaten raw in Egypt and some of the neighbouring countries; and is considered to be tonic and astringent.

NYMPHOMANIA, from *νυμφη*, 'a bride,' and *μανια*, 'fury.' *Furor uterinus*, *Uteromania*, *Lagne'sis furor femini'nis*, *Metromania*, *Erotomania*, *Melancholia uterina*, *Nymphocluia*, *Tania*, *Symptoma turpitudinis*, *Andromania*, *Gynæcomania*, *Machlosyne*, *Entelipathia*, *Tenti'go vene'rea*, *Hysteromania*, *Salac'itas vulvæ*, *Uteri pruritus*, *Brachuna*, *Arascon*, *Arsatum*, *Æstromania*. (F) *Nymphomanie*, *Fureur utérine*. An irresistible and insatiable desire, in females, for the venereal act. It occurs in those particularly, who possess a nervous temperament, and vivid imagination; especially if excited by improper language, masturbation, &c. Its course, as described, is as follows. In the commencement, the sufferer is a prey to perpetual contests between feelings of modesty and impetuous desire. At an after period, she abandons herself to the latter, seeking no longer to restrain them. In the last stage the obscenity is disgusting; and the mental alienation, for such it is, becomes complete. The treatment consists in the use of the same means as are required in the satyriasis of man. When the mental alienation is complete, solitude is indispensable.

NYMPHONCUS, from *νυμφη*, 'the nymph,' and *ογκος*, 'a tumour.' A morbid tumefaction of the nymphæ.

NYMPHOTOMY, *Nymphotomia*, *Nympharum Sectio*, from *νυμφη*, 'nymph,' and *τεμνειν*, 'to cut.' An operation, known and practised for a long time; and which consists in the excision of the nymphæ. The operation is had recourse to, when they are attacked with scirrhus, cancer, fungus, or gangrene; or when they are so large as to interfere with walking or coition. *Nymphotomy* is the circumcision of the female. It is practised in some countries.

Some authors have used the term *Nymphotomy* for amputation of the clitoris.

O

OARITIS, *Oöphori'tis*, from *ωαριον*, 'the ovarium,' and *itis*, the termination denoting inflammation. Inflammation of the ovarium.

OBLA'TÆ PURGAN'TES. Cathartic cakes or lozenges made of flour, sugar, and some cathartic drug.

OBLIQUE, *Obli'quus*. Any thing inclined:—which deviates from the vertical line. Anatomists have given this name to certain muscles, which have an oblique direction as regards the plane that divides the body into two equal and symmetrical halves. These are:—

I. The *Oblique Muscles of the Abdomen*. They are two in number, and distinguished into:

a. The **OBLIQUUS EXTER'NUS ABDOM'INIS**, *O. descen'dens exter'nus*, *O. descendens*, *O. major*, *Ilio-pubo-costo-abdom'inal*, *Costo-abdom'inal* (Ch.), (F) *Grand oblique*, *Oblique externe*. One of the broadest muscles of the body. It is situate at the lateral and anterior part of the abdomen; and is flat and quadrilateral. It is attached, *above*, to the outer surface and lower edge of the 7 or 8 last ribs: *below*, to the anterior third of the external lip of the crista ilii: *before*, it terminates at the linea alba by means of a broad and strong aponeurosis, which covers the rectus, and presents, towards its inferior part, two very solid fibrous fasciculi, which are inserted:—the one, at the symphysis; the other, at the spine of the pubis,—under the name of *Pillars of the Abdominal Ring*. These pillars leave between them an opening, which forms the inferior orifice of the inguinal canal.

The obliquus externus abdominis depresses the ribs, and carries them backwards, during a strong expiration. It impresses on the chest a movement of rotation; and bends the thorax upon the pelvis, or *vice versâ*. It contracts, also, the abdominal cavity.

b. The **OBLIQUUS INTER'NUS ABDOMINIS**, *M. accli'vis*, *O. ascendens*, *O. minor*, *O. internus*, *O. ascendens internus*, *Ilio-lombo-costo-abdominal*, *Ilio-abdominal* (Ch.), (F) *Muscle petit oblique ou oblique interne*, is broad, especially before; thin; and irregularly quadrilateral, like the preceding, beneath which it is situate. It is attached, *above*, to the inferior edge of the cartilages of the 5th, 4th, 3d, and 2d false ribs: *below*, to the anterior two-thirds of the interstice of the crista ilii, to the posterior part of the crural arch, and to the pubes: *behind*, to the spinous processes of the two last lumbar vertebræ, and to those of the two first portions of the sacrum; *before*, to the linea alba. Its upper fibres run obliquely upwards and forwards; the middle

are horizontal; and the lower pass obliquely downwards and forwards.

These last, in the male, are dragged down through the inguinal ring, when the testicle descends; and form the two fasciculi of the cremaster.

The obliquus internus resembles the *O. externus* in function.

II. The *Oblique Muscles of the Eye* are two in number. They are distinguished into:—

a. The **OBLIQUUS SUPERIOR OCULI**, *Amato'rius mus'culus*, *Trochlea'ris*, *Obliquus major*, *Optico-trochlei scléroticien*, *Grand trochléateur* (Ch.), *Circumductio'nis op'ifex*, *Longis'simus oculi*, (F) *Grand oblique de l'œil*, *O. supérieur de l'œil*, *Amoureux (Muscle)*, is situate at the inner and upper part of the orbit. It is small, round, fusiform, and reflected upon itself in the middle of its course. Behind, it is attached to the inside of the foramen opticum; and when it arrives opposite the internal orbital process it becomes a small, round tendon, which slides in a cartilaginous pulley, fixed to the os frontis, and is reflected, at an acute angle, to proceed downwards and outwards, and to attach itself to the outer and back part of the globe of the eye. This muscle carries the globe of the eye forwards and inwards; making it experience a movement of rotation, which directs the pupil downwards and inwards. This is conceived to be an involuntary muscle as well as the next. In sleep, according to Sir C. Bell, when the power over the straight or voluntary muscles of the organ is nearly lost, the eye is given up to the oblique muscles, which lodge the transparent cornea under the upper eyelid. At the approach of death, the same thing is observable; hence, the turning up of the eye, at such a time, is not an evidence of agony or suffering but insensibility.

b. The **OBLIQUUS INFERIOR OCULI**, *O. minor oculi*, *Maxillo-scléroticien*, *Petit Trochleateur* (Ch.), (F) *Petit oblique ou oblique inférieur de l'œil*, is situate at the anterior and inferior part of the orbit. It is flat and attached to the inner and anterior part of the orbital surface of the superior maxillary bone, on the outside of the lachrymal gutter; from thence it passes outwards and backwards, and terminates, by an aponeurosis, at the posterior and inner part of the globe of the eye. It carries the globe of the eye inwards and forwards; and directs the pupil upwards and outwards.

III. *Oblique muscles of the head*. These are two in number.

a. **OBLIQUUS SUPERIOR CAP'ITIS**, *O. minor capitis*, *Trachélo-atloïdo-occipital*, *Atloïdo-sous-mastôïdien* (Ch.), (F) *Muscle oblique supérieur ou petit oblique de la tête*. This muscle is

situate at the sides of, and behind, the articulation of the head; it is flat and attached, on the one hand, to the top of the transverse process of the atlas; and, on the other, terminates at the occipital bone, beneath the inferior curved line, and sometimes, also, at the mastoid region of the temporal bone. It extends the head,—inclining it to one side.

b. The OBLIQUUS INFERIOR CAPITIS, *Obliquus major, Spini-axoïdo-tracheli-atloïdien, Axoïdo-atloïdien* (Ch.), (F) *Oblique inférieur ou grand oblique de la tête*, is situate at the posterior part of the neck and head. It is round, fusiform; attached to the spinous process of the axis, and proceeds to terminate behind and below the summit of the transverse process of the atlas. It impresses, on the first vertebra and the head, a movement of rotation, which turns the face to one side.

OBLITERATED, *Oblitera'tus*; from *oblitera're*, 'to efface letters.' A vessel or duct is said to be obliterated, when its parietes have approximated and contracted such adhesion to each other that the cavity has completely disappeared.

OBOLUS, *οβολος*, a weight of 9 or 10 grains.—Galen.

OBSERVATION, *Observatio, Tere'sis, Symparateres'sis*. Act of examining a thing, by means of the external senses. This word is employed in several acceptations. It expresses—1. The action of observing—2. The aggregate of knowledge, afforded by observation. In French it means the case or history of the phenomena, presented by a patient in the course of a disease.

OBSTETRICALS, from *Obstetrrix*, 'a midwife,' *Tokol'ogy, Tocology, Maiei'a, Maei'a, Maeia, Ars obstetri'cia, Obstetricy*. The art of midwifery.

OBSTRUENS, from *ob'struo*, 'I shut up.' *Oppilati'vus*. A medicine, which closes the orifices of ducts or vessels.

OBTUNDENS, (F) *Obtondant*. An epithet, applied to remedies that were supposed, according to an erroneous theory, to be possessed of the power of blunting the acrimony of the humours. A demulcent is one of these.

OBTURATOR, *Obturatorius*, (F) *Obturateur*, from *obtura're* 'to close,' 'stop up the entrance.' A name given to several parts.

1. FORA'MEN OBTURATORIUM, (F) *Trou sous-pubien, F. infra-pubia'num, Fora'men ovale, F. thyroïdeum, F. Thyroïdes, F. Ampulum Pelvis*. A large opening of an oval or triangular form, in the anterior part of the os innominatum, on the outside of the symphysis pubis and beneath the horizontal ramus of the os pubis. This foramen is closed by a membranous ligament.

2. OBTURATOR MUSCLES. These are two in number. They are divided into

a. OBTURATOR EXTER'NUS, *Extra-pelvio-pubi-trochantérien, Sous-pubio-trochantérien externe* (Ch.) A muscle, situate at the anterior and inner part of the thigh. It is broad,

flat, and triangular; and is attached, on the one hand, to the anterior surface of the os pubis, to that of the ischium, and to the anterior surface of the obturator ligament. Its fleshy fibres converge to the tendon, which proceeds to be inserted at the inferior part of the cavity of the great trochanter. This muscle rotates the thigh outwards.

b. The OBTURATOR INTERNUS, *Marsupia'lis, Bursa'lis, Intra-pelvio-trochantérien, Sous-pubio-trochantérien interne* (Ch.), is seated, almost entirely, in the pelvis. It arises from the inner surface of the obturator ligament, and from the posterior part of the circumference of the obturator foramen, and is inserted, by means of a strong tendon, running between the two portions of the gemini, into the cavity at the root of the great trochanter; after having turned upon the ischium, which forms for it a kind of pulley. This muscle also rotates the thigh outwards.

3. The OBTURATOR ARTERY, *Sous-pubio-fémorale* (Ch.), *Arteria obturatoria, A. obturatrice*, (F) *Artère obturatrice*, arises, most commonly, from the hypogastric. It is, however, frequently, given off from the epigastric; a matter of importance to be determined in cases of femoral hernia. Of 500 obturator arteries examined by Mr. J. Cloquet, 348 were furnished by the hypogastric, and 152 by the epigastric or crural. When it arises from the hypogastric, it passes forwards and outwards, then turns horizontally into the cavity of the pelvis, to issue from this cavity by the opening left at the upper part of the obturator membrane. When, on the contrary, the obturator artery arises from the epigastric or the crural, it descends obliquely inwards, behind the os pubis, to the obturator foramen. At its exit from the pelvis, the artery divides into two branches, a *posterior* and an *anterior*, which are distributed to the muscles of the anterior and superior part of the thigh.

4. The OBTURATOR VEIN has, ordinarily, the same arrangement as the artery. It is common, however, to find it arising from the epigastric; whilst the corresponding artery proceeds from the hypogastric, and *vice versa*.

5. The OBTURATOR NERVE, *Sous-pubio-fémoral* (Ch.), proceeds principally from the 2d and 3d lumbar nerves. It descends into the pelvis; gains the obturator foramen; gives branches to the obturator muscles, and divides, behind the adductor primus and pectinalis, into two branches; one *anterior*, whose branches are distributed to the two first adductors, gracilis, and integuments; the other, *posterior*, distributing its ramifications to the obturator externus and third adductor.

6. The OBTURATOR LIGAMENT OR MEMBRANE is a fibrous membrane, fixed to the whole circumference of the obturator foramen, except above, where an opening remains for the passage of the vessels and nerves of the same name.

OCCIPITAL, *Occipita'lis*. That which belongs to the occiput.

1. The OCCIPITAL BONE, *Os occipitis seu occipitii seu occipit'ale*, *Os sphæno-basila're*, *Os memo'riæ*, *Os nervo'sum*, *Os basila're*, *Os proræ*, *Os pyx'idis*, seu *sextum cranii*, seu *lambdoi'des*, seu *lambdæ*, seu *laudæ*, seu *Puppis*, seu *nervo'sum*, seu *fibro'sum*, seu *pelvicephal'icum*, (F) *Os occipital*, is situate at the posterior and inferior part of the cranium, which it assists in forming. It is flat, symmetrical, and curved upon itself. It presents, 1. An *occipital* or *posterior surface*, which is convex, and has, upon the median line, the *basilary surface*, the *foramen magnum* through which passes the spinal marrow with its membranes and vessels;—the *external occipital crest*, the *external occipital protuberance*; and, at the sides, the *upper curved line*, *large rough arched ridge* or *transverse arch*, or *linea semi-circularis*, the *lower curved line*, the *posterior condyloid fossæ*, the *condyles* for the articulation of this bone with the atlas; the *anterior condyloid fossæ*, pierced by a foramen for the passage of the ninth pair of nerves. 2. A *cerebral* or *anterior surface*. On the median line are;—the *basilary fossa*, the *inner orifice* of the foramen magnum, the *internal occipital crest*, the *internal occipital protuberance*, the *cruciform spine*;—a *channel*, which lodges the termination of the straight sinus, and on each side, the *occipital fossæ* distinguished into *superior* or *cerebral*, and *inferior* or *cerebellous*, and separated by a groove which lodges the lateral sinus. 3. The surfaces of the occipital bone, separated by four edges and four angles. The two superior edges are articulated with the parietal bones; the two lower join the temporal; and the anterior angle, under the name *basilary process*, is united to the sphenoid.

The occipital bone is developed from four points of ossification; and sometimes from a greater number.

2. OCCIPITAL MUSCLE, *Occipitalis*. Many anatomists have given this name to the posterior fasciculus of the Occipito-frontalis (q. v.)

3. OCCIPITAL ARTERY. This arises from the posterior part of the external carotid, beneath the parotid. It proceeds backwards, passes between the mastoid process and the transverse process of the atlas; reaches the occipital bone and divides into two branches, which may be called ascending posterior and anterior, and are distributed to the neighbouring muscles and ligaments.

4. The OCCIPITAL VEIN. Its roots follow exactly the course of the branches of the artery, and unite into a single trunk, which opens into the internal jugular vein, and sometimes into the external.

5. OCCIPITAL NERVE, *Sub-occipital nerve*, *Première paire trachélienne* (Ch.), (F) *Nerf occipital ou sous-occipital*. It arises from the upper part of the spinal marrow by 8 or 10 filaments, united in two fasciculi. Thus formed, it passes between the foramen mag-

num and the posterior arch of the atlas; and, at this place, forms a long ganglion, afterwards dividing into two branches. Of these, the *anterior*, which is long and small, makes a turn above the transverse process of the atlas and forms an anastomotic noose with a branch of the second cervical nerve. The *posterior* branch, larger and shorter, divides into 7 or 8 branches, which are distributed to the muscles of the upper and back part of the neck.

OCCIPITO-ATLOID, *Occipito-atloide'us*, (F) *Occipito-atloïdien*. That which has reference to the occiput and atlas.

The OCCIPITO-ATLOID ARTICULATION is the articulation of the condyles of the occipital bone with the superior articular cavities of the atlas. It is strengthened by two ligaments;—the one *anterior*, the other *posterior*, called *occipito-atloid ligaments*; the one extends from the anterior, the other from the posterior, arch of the atlas, to the corresponding portion of the circumference of the foramen magnum.

OCCIPITO-AXOID, *Occipito-axoideus*, (F) *Occipito-axoidien*. That which relates to the occipital bone and the axis or second vertebra.

The OCCIPITO-AXOID ARTICULATION is the connexion of the occipital bone with the axis or second vertebra, although these bones are not really articulated but are merely retained in apposition by three strong ligaments; the posterior of which is called the *occipito-axoid*, and the two others *odontoid*.

OCCIPITO-FRONTALIS, *Digas'tricus cranii*, *Epicra'nus*, *Fronta'lis et occipitalis*. The majority of anatomists call, by this name, the whole of the fleshy plane—with the epicranial or coronal aponeurosis (see Calotte,)—which covers the head from the occiput to the forehead. It is attached, by its posterior fasciculus, to the two outer thirds of the upper curved line of the occipital bone, and to the outer surface of the mastoid portion of the temporal; and, by its anterior fasciculus, it terminates at the eyebrow, where it becomes confounded with the superciliaris, pyramidalis nasi, and orbicularis palpebrarum.

The occipito-frontalis, by the contraction of its anterior fasciculus, draws forwards a part of the integuments of the cranium. It wrinkles the skin of the forehead transversely, and may, also, contribute to open the eye by its decussation with the orbicularis palpebrarum. The posterior fasciculus of the muscle draws backwards a part of the skin of the cranium and assists in stretching the common aponeurosis.

OCCIPITO-MENINGEAL. That which belongs to the occipital bone, and to the meninge or dura mater.

The OCCIPITO-MENINGEAL ARTERY, in Chaussier's nomenclature, is a branch of the vertebral, given off to the dura mater at its entrance into the cranium.

OC'CIPUT, *Inion*, *ινιον*, *Opistho-cranium*, *Opisthoceph'alon*, *Prora*, *Occipi'tium*. The back part of the head, formed by the occipital bone.

OCCLU'SION, *Occlusio*, *Myce*, from *occlu'dere*, 'to shut up.' Sometimes this word signifies, simply, the transient approximation of the edges of a natural opening—the *occlusion of the eyelids*, for example: at others, it is synonymous with imperforation, as *occlusion of the pupil*, *vagina*, &c.

OC'IMUM BASIL'ICUM, *Basil'icum*, *Beren'daros*, *Basilicum majus*, *B. citra'tum*, *Common or Citron basil*, (F) *Basilic commun.* *Nat. Ord.* Labiatæ. *Sex. Syst.* Didynamia Gymnospermia. This herb has a fragrant odour and aromatic taste. It is used as a condiment, and has been supposed to possess nervine properties.

OCIMUM CARYOPHYLLATUM, *O. min'imum*, *Small or Bush basil*. Possesses properties similar to the former. It is, sometimes, used as snuff.

OCTA'NA, *Hebdomada'ria*, from *octo*, 'eight.' A fever, whose paroxysms recur every week. A supposititious case.

OCTA'RIUS. The eighth part of a wine gallon. It contains sixteen fluid ounces. *Ph. L.*

OC'TUNX. A weight of 8 ounces.

ODAXIS'MUS, from *odus*, 'a tooth.' The painful itching of the gums, which precedes the appearance of the teeth.

OC'ULIST, *Oculis'ta*, *Ophthalmia'ter*. One who occupies himself, chiefly, with the management of diseases of the eyes.

ODONTAGRA, from *odus*, 'a tooth,' and *αγχα*, 'a seizure.' A rheumatic or gouty pain in the teeth.

ODONTAL'GIA, from *odus*, 'a tooth,' and *αλγος*, 'pain.' *Odon'tia*, *Dent'ium dolor*, *Toothache*, *Odon'tia doloro'sa*, (F) *Douleur des dents*, *Fluxion sur les dents*, *Mal de dent*, *Mal d'amour*. A disease, dependent upon a variety of causes affecting the cavity of the tooth; but generally owing to caries, which exposes the cavity to the action of the air and to extraneous matters in general.

Hence, the treatment consists in plugging the caries, or destroying the sensibility of the nerve, by powerful stimulants; and if these means fail, in extraction of the tooth.

ODONTIA DEFOR'MIS. Deformity of the teeth, from error of shape, position, or number.—Good.

ODON'TOID, *Odontoi'des*, *Dentiform'is*, *Denta'lis*, *Dentoideus*, *Pyrenoi'des*, from *odus*, 'a tooth,' and *ειδος*, 'shape,' 'resemblance.' This epithet is given to the *Processus dentatus* of the second vertebra or axis, (q. v.)

The ODONTOID LIG'AMENTS, (F) *Ligaments odontoidiens*, are two strong and short conical fasciculi, whose truncated summits embrace the sides of the odontoid process, and whose bases are fixed in the fossæ at the in-

ner side of the condyles of the occipital bone. Their direction is obliquely outwards and slightly upwards. They enter into the composition of the occipito-axoid articulation; strengthen the junction of the head with the vertebral column, and limit the movement of rotation of the atlas on the axis.

ODONTOL'ITHOS, from *odus*, 'a tooth,' and *λιθος*, 'a stone.' A sort of incrustation, of a yellowish colour, which forms at the base of the teeth and is called *Tartar*, *Tar'tarus Dentium*. It consists of 79 parts of phosphate of lime; 12½ of mucus; one of a particular salivary matter, and 7½ of an animal substance, soluble in muriatic acid.

ODONTOL'OGY, *Odontolo'gia*, from *odus*, 'a tooth,' and *λογος*, 'a discourse.' An anatomical treatise of the teeth.

O'DOUR, *Odor*, *Odmē*, *Osmē*. A smell. Odours are subtle particles, constantly escaping from the surface of certain bodies. They act, in some manner, by actual contact on the nerves of the Schneiderian membrane, and give occasion to the sense of smell or Olfaction, (q. v.)

OD'YNE, *odynn*, 'pain,' *Dolor*, *Odyne'ma*. A very common suffix to words; as in *Pleurodyne*.

CEDE'MA, from *cedeo*, 'I am swollen.' *Hydrops cellula'ris artuum*, *Phlegma'tia*. Swelling, produced by the accumulation of a serous fluid in the interstices of the cellular texture. This swelling is soft; yields under the finger; preserves the impression for some time, and is pale and without pain. It presents the same characters as anasarca, which is general œdema. Its etiology and treatment are also the same. See Anasarca.

CEDEMA OF THE LUNGS, (F) *Œdème du poulmon*. Laennec has so called the infiltration of serum into the tissue of the lung, carried to such an extent as to diminish its permeability to air. It is not an uncommon sequela of pneumonia, and the major exanthemata.

The respiration is laborious; the respiratory murmur scarcely perceptible, although the thorax is largely expanded, and there is a slight *râle crepitant* particularly at the base and inferior part of the lungs. The sound on percussion is clear, and on both sides equally so. The cough is attended with aqueous expectoration. In some cases, the respiration becomes puerile in a small portion of the summit of the lung.

CEDEMOSAR'CA. A species of tumour, mentioned by M. A. Severinus, which holds a middle place between œdema and sarcoma.

CENAN'THE, *C. croca'ta*, *C. chærophyl'li fo'liis*, *C. cicu'tæ facie lobel'li*, *Hemlock dropwort*. *Nat. Ord.* Umbelliferae. *Sex. Syst.* Pentandria Digynia. A violent poison of the acro-narcotic class. Its juice has been recommended in certain cutaneous diseases; but it is scarcely ever used. It is employed in fomentations.

ŒNELÆON, *οινελαιον*, from *οινος*, 'wine,' and *ελαιον*, 'oil.' A mixture of oil and wine.—Galen.

ŒNOG'ALA, *οινογαλα*, from *οινος*, 'wine,' and *γαλα*, 'milk,'—a mixture of wine and milk.' According to some, wine as warm as new milk.

ŒNOG'ARON, *Garum vino mistum*. Wine mixed with garum.—Aëtius.

ŒNOTHERA BIENNIS, *Œ. Mollissima*, *Evening Primrose*, *Scabish*. An indigenous plant, common on the borders of fields, and in natural hedges. Octandria Monogynia, (*Linn.*) Its properties are mucilaginous and slightly acid. A decoction has been used in cases of infantile eruptions.

ŒSOPHAGE'AL, *Œsophagæus*, (F) *Œsophagien*. Relating or belonging to the œsophagus.

ŒSOPHAGE'AL MUSCLE, *Œsophagæus*. Some anatomists have given this name to the transverse muscular fibres, which surround the œsophagus at its upper extremity.

ŒSOPHAGEAL AP'ERTURE OF THE DIAPHRAGM, (F) *Ouverture œsophagienne du diaphragme*. An opening in the diaphragm, for the passage of the œsophagus.

ŒSOPHAGEAL APERTURE OF THE STOMACH. A name, given to the superior or cardiac orifice of the stomach, to distinguish it from the inferior or pyloric.

ŒSOPHAGIS'MUS. A name, given by Vogel, to spasm of the œsophagus. By some, used synonymously with œsophagitis, dysphagia, and contraction of the œsophagus.

ŒSOPHAGI'TIS. Inflammation of the œsophagus.—*Angina œsophagæa*.

ŒSOPHAGOT'OMY, *Œsophagotomia*; from *οισοφαγος*, 'the œsophagus,' and *τεμνειν*, 'to cut.' An incision made into the œsophagus for the purpose of extracting foreign bodies from it.

ŒSOPH'AGUS, from *οισω*, 'I carry,' and *φαγω*, 'I eat;' *Gula*, *Fistula cibalis*, *Via stom'achi et ventris*, *Fistula vel Infundibulum Ventriculi*. The Gullet. A musculo-membranous canal, cylindrical, and depressed from before to behind, which extends from the inferior extremity of the pharynx to the upper orifice of the stomach. At its origin, it is situate in the median line; but, beneath the larynx, it deviates to the left, and in the chest experiences different inflections. In its cervical portion, it corresponds, behind, with the spine; before, with the larynx and trachea; and, at the sides, it is close to the primitive carotids, internal jugular veins, par vagum, recurrent nerves, &c. In its inferior or thoracic portion, the œsophagus is entirely contained in the posterior mediastinum; and enters the abdomen through the œsophageal aperture of the diaphragm.

The œsophagus is composed of a very strong muscular layer, sometimes called *Tunica vaginalis gulæ*; formed, itself, of two sets of fibres, the external being generally

longitudinal, the internal transverse or annular. 2. Of a mucous membrane which is soft, fine, thin, and white, especially at its lower part. It is continuous, above, with the mucous membrane of the pharynx. The mucous follicles, found beneath it, are not numerous, and have been called *Œsophageal glands*.

The arteries of the œsophagus proceed, in the neck, from the thyroid; in the chest, from the bronchial arteries and directly from the aorta;—in the abdomen, from the inferior phrenic and coronaria ventriculi. Its veins empty themselves into the inferior thyroid, the vena cava superior, the internal mammary, azygos, bronchial, phrenic, and coronaria ventriculi. Its lymphatics pass into the ganglia surrounding it. Its nerves are afforded by the pharyngeal and pulmonary plexuses; by the cardiac nerves; the thoracic ganglia, and, especially, by the pneumogastric and their recurrent branches.

ŒSTRUM VEN'ERIS, *Œstrum venereum*, *Œstrus venereus*; from *οιστρος*, *œstrus*, 'a violent impulse or desire.' An immoderate desire for sexual intercourse. With some, *œstrum* signifies Clitoris.

OFFIC'INAL, *Officina'lis*, from *offici'na*, 'a shop.' An epithet for medicines found in the shop of the apothecary, ready prepared; in opposition to *magistral* or *extemporaneous*;—those prepared after the prescription of the physician.

OH'IO, MINERAL WATERS OF. *Yellow Spring* is a chalybeate, situate in Green county, 64 miles from Cincinnati. It is sometimes frequented.

OIL, *Oleum*, *Elæon*, (F) *Huile*; from *ελαια*, 'the olive.' A collective name, under which two classes of fluids are included, very different from each other: those, belonging to the one class, are viscid; mawkish or almost insipid: those of the other are nearly devoid of viscosity, and are caustic and very volatile. The former are called *fat* or *fixed oils*; the latter *volatile* or *essential oils*, or *essences*, (q. v.)

OIL, BRITISH. An empirical preparation, often used in cases of sprains.

A committee of the Philadelphia College of Pharmacy recommend the following form for its preparation: (*Ol. Terebinth. Ol. Lini usitatiss.* aa f. 3 viij, *Ol. Succini, Ol. Juniper.* aa f. 3 iv, *Petrol. Barbados.* f. 3 iij, *Petrol. American. (Seneca Oil)* f. 3 j. M.)

OLEA ANIMA'LIA, *Animal oils*, (F) *Huiles animales*. A name given to fixed oils, holding in solution the mucilaginous and gelatinous principles of certain animals, as the *Oil of frogs*, *Oil of Scorpions*, *Oil of spiders*, &c. Sometimes, also, the term *animal oils* is given to empyreumatic oils, produced during the decomposition of animal substances by heat.

OLEA EMPYREUMAT'ICA, *Empyreumatic oils*, (F) *Huiles empyreumatiques*. Oils, which have an empyreumatic or burnt smell.

They are obtained by treating vegetable or animal matters by heat, in close vessels. They do not exist in organized bodies, but are formed during their decomposition by fire. The animal oil of Dippel is an empyreumatic oil.

OLEA EUROPEA, *Oli'va*, *Olea sati'va*. The *Olive tree*, *ελαια*, *Elæ'a*, (F) *Olivier*, (Fruit) *Olive*. *Nat. Ord.* *Jasminæ*. *Sex. Syst.* *Diandria Monogynia*. The fruit of the olive tree, when pickled, is extremely grateful to some stomachs. Olives, as met with in the shops, are prepared from the green, unripe fruit, repeatedly steeped in water. To this, some quicklime or alkaline salt is added, and afterwards, they are washed and preserved in a pickle of common salt and water. From this fruit is prepared the *Olive oil* or *Salad oil* of the *Pharmacopœias*, which is obtained by grinding and pressing the olives, when thoroughly ripe. The finer and purer oil issues first by gentle pressure, and the inferior sorts on heating what is left and pressing it more strongly. See *Oleum Olivæ*. In Calabria, an odorous resin exudes from its trunk, which is employed as a perfume by the Neapolitans.

A gum flows from certain wild olives, in warm countries, which consists, according to Pelletier, of a resin, a little benzoic acid, and a peculiar substance, called *Olivile*. It is in yellow masses, of a slightly acrid taste, and of a vanilla smell. It is called *Oleæ gummi*, *O. resi'na*, and *O. bals'amum*, (F) *Gomme olivier*, and is esteemed astringent and detersive.

OLEA FIXA VEL PIN'GUIA, *Express'ed oils*, *Fixed oils*, *Fatty oils*, (F) *Huiles fixes ou grasses*. All the oils, obtained from the seeds or pericarps of vegetables, without distillation, and which are viscid, but slightly odorous and sapid; lighter than water, and insoluble in alcohol. The rancidity of oils depends on the absorption of oxygen, and, therefore, they should be kept in bulk as much as possible; and in narrow-necked bottles, so that a very small surface only can be exposed to the air. All the fixed oils are emollient, and, in a certain dose, they act as purgatives and emetics. They are prepared by expressing the fruit or seed containing them.

OLEA FUGA'CIA, *Fuga'cious oils*, (F) *Huiles fugaces*. A name given to oils, which are so volatile, that in order to obtain them, recourse must be had to a different process from that employed for other essential oils. Such are the oils of jessamine, lily, violet, &c.

OLEA MEDICINA'LIA, *Medic'inal oils*, (F) *Huiles Medicinales*. A name given to oils, prepared by macerating, infusing, or boiling medicinal substances in olive or any other fixed oil. These oils may, then, be regarded as oily solutions of certain medicinal substances; whence they can never be simple. They have, however, been divided into *simple* and *compound medicinal oils*. To the former

belong the *Oils of St. John's wort*, of the *Solanum nigrum*, &c.; to the other,—which have often been called *Oily balsams*, (F) *Baumes huileux*,—the *Balsams of Fioraventi*, Metz, &c.

Medicinal oils are, almost always, employed externally.

OLEA VOLATIL'IA, *Vol'atile oils*, *Æthero'lea*, *Ethe'real oils*, *Essential oils*, *Distil'led oils*, *Es'sences*, (F) *Huiles volatiles*, *H. essentielles*. Oils, found in aromatic vegetables and in every part of them, except in the interior of the seeds. The majority are obtained by distillation; but some by expression. They possess unctuousity, inflammability, and viscosity, like the fixed oils; but they are generally odoriferous, pungent, and acrid. The greater part are lighter than water; but some are heavier and congeal at a moderate temperature. They dissolve, in small quantity, in distilled water, by simple agitation. Almost all are soluble in alcohol.

The odour and taste are the usual tests of their goodness. To preserve them, they should be kept in a cool place, in small bottles quite full and well corked.

Volatile oils are possessed of the aromatic properties of the plant whence they are obtained. They are all, when applied externally, stimulant and rubefacient.

OLEA'MEN, *Oleamen'tum*. Any soft ointment prepared of oil.—Scribonius.

OLEC'RANON, or **OLECRA'NON**, *Olec'ranum*; from *ωλενν*, 'the elbow,' and *κερανον*, 'the head,' *Acrole'nion*, *Additamen'tum neca'tum*, *Ancon*, *Proces'sus anconeus*, *Glans seu Coro'na seu Coro'ne posterior*, seu *Additamentum uncatum Ulnæ*, *Vertex Cu'biti*, *Patella fixa*, *Top of the cubit*. Head or projection of the elbow. A large process at the upper extremity of the ulna, on which we lean. When this process is fractured, it is apt to be drawn up by the triceps; and much care is required to keep the parts in apposition.

OLETTE, **MINERAL WATERS OF**. At Olette, in the department *Pyrenées Orientales*, is a thermal spring, which raises the thermometer to 190° Fahr. It is the hottest in France.

OLEUM ÆTHE'REUM, *Æthe'real oil*, (formed in the distillation of ether), *Oleum vini*, (F) *Huile douce de vin*. It is used only as an ingredient in the compound spirit of ether.

OLEUM AMYGDALA'RUM, *Oleum amygdalæ commu'nis*, *Oil of almonds*, (F) *Huile d'amandes*. (Expressed from both sweet and bitter almonds; 3 xvj of almonds yield 3 v of oil.) It is inodorous, insipid, and of a pale straw-colour, and is employed as a demulcent and emollient.

OLEUM ANIMA'LE, *An'imal oil*, (F) *Huile animale*. An oil, obtained by the decomposition of the immediate principles of animals, subjected to the action of heat. It is fetid,

and always contains a certain quantity of subcarbonate of ammonia. See *Olea Empyreumatica*. The name, *animal oil*, is sometimes, also, given to the fat contained in the fatty vesicles. The composition of this fat does not, indeed, differ from that of the fixed oils.

The OLEUM ANIMA'LE DIPPE'LII, or *Animal oil of Dippel*, *Oleum cornu cervi*, *O. C. C. rectificatum*, *Animal oil*, *Dippel's oil*, *Oleum pyro-anima'le depuratum*, *O. anima'le æthereum*, *Pyro'leum os'sium rectificatum*, (F) *Huile animale de Dippel*, *Huile de corne de cerf*, is obtained by distilling animal matters, especially hartshorn, on the naked fire. The subcarbonate of ammonia, which it contains, renders it partly soluble in water, and communicates to it its stimulant properties for which it is used in medicine. It is employed as an antispasmodic.

OLEUM ANIMALIZA'TUM PER INFUSIO'NEM, (F) *Huile animalisée par infusion*, *Huile aromatique*, *H. de petits chiens*. A preparation, formerly esteemed tonic and cephalic. It was obtained by boiling new-born puppies in oil, first depriving them of their blood, skin, and intestines. When the decoction was cold, origanum, thyme, pennyroyal, St. John's wort, and marjoram were added.

OLEUM BENZO'INI, *Oil of Benzoin* or *Benjamin*. An oil obtained, by heating in a sand bath, the matter which remains, after benzoic acid has been separated from benzoin by the aid of heat. It has been regarded as balsamic and sudorific.

OLEUM CED'RINUM, *Essen'tia de cedro*, (F) *Huile de cédrat*. The oil of the peel of citrons, obtained in a particular manner, without distillation, in Italy.

OLEUM JECINO'RIS ASELLI, *O. Morrhua*, *O. Jecoris Aselli*, *Codliver Oil*, (F) *Huile de morue*. The animal oil, which appears under this name in commerce, is obtained from several of the species belonging to the genus *Gadus*. The clearest sorts are generally used. It appears to have no sensible effects upon the economy: but it has been given in strumous affections, rheumatism, chronic cutaneous diseases, and tumours of the mammae. The dose for an adult is from ʒij, to ʒiss.

OLEUM LAURI'NUM, *Oleum lauri*, *Oil of bays*. An oil obtained from bayberries, and sometimes used in sprains and bruises, untended with inflammation.

OLEUM LUCHI PISCIS, *Oil of Pike*. From the liver of the *Esox lucius* an oil is spontaneously separated, which is used, in some countries, to destroy specks on the cornea.

OLEUM E MUCILAGIN'IBUS, *Oil of mucilages*. (*Rad. althææ rec.* ʒss, *sem. lini, sem. fœnugræci* aa ʒiij, *aquæ* ʒij. Boil for half an hour, add *ol. oliv.* ʒiv. Continue boiling till the water is nearly consumed and pour off the oil.) Emollient.

OLEUM OLIVÆ, *O. oliva'rum*, *Olive oil*, *Salad oil*. It is an inodorous, insipid, and

transparent oil; obtained by expression from the olive, when ripe. It is demulcent and emollient,—possessing the qualities of the fixed oils in general.

An inferior kind, obtained by boiling the olives in water, and skimming the oil from the surface, is used, also, in Pharmacy. See *Olea Europæa*.

OLEUM SULPHURA'TUM, *Balsamum sulphuris simplex*, *Sulphura'ted oil*. (*Sulphur. lot.* ʒij, *olivæ olei* ʒj. Heat the oil in a large iron pot, and throw in the sulphur, by degrees; stirring the mixture after each addition till they unite.) It is stimulating, and was formerly much used in coughs, asthma, &c., and, externally, to foul ulcers.

OLEUM TEREBIN'THINÆ RECTIFICA'TUM, *Oleum pini puris'simum*, *Rectified oil of turpentine*, *Oleum terebin'thinæ æthereum*, *Sp. of turpentine*. Common oil of turpentine, is also called *Common oil of spike*, *Oleum spicæ vulgaris*. (*Olei terebinth.* ʒj, *aquæ* ʒiv. Distil over the oil.) It is stimulant, diuretic, anthelmintic, and rubefacient. Dose, ʒss to ʒj.

The *Guestonian embrocation* for Rheumatism consists of *ol. terebinth.*, *ol. oliv.* aa ʒiss, *acid sulph. dil.* ʒiij.

OLFACT'ION, *Olfactus*, *Osphre'sis*, *Odo-ra'tus*, *Sense of smell*, *Smelling*, (F) *Odorat*. The sense, by which we perceive the impressions made on the olfactory nerves by the odorous particles suspended in the atmosphere. The olfactory nerve has usually been considered the great nerve of smell; and it is probably the nerve of special sensibility, general sensibility being communicated by the branches of the 5th pair, distributed on the pituitary membrane of the nose and sinuses.

OLFACT'ORY, *Olfacti'vus*, *Olfacto'rius*, *Osphranticos*, from *olfactus*, 'the smell.' That which belongs or relates to the sense of smell.

The OLFACT'ORY NERVES, *Ethmoid'al nerves* (Ch.), *Par primum Nervorum cerebri*, *Nervi odoratorii*, *Processus mamilla' res*, *Processus mamillares cerebri ad nares*, *P. papilla' res*, *Carun'culæ mamilla' res*,—the 1st pair of *encephalic nerves*. This nerve, which probably arises from the medulla oblongata, is observed to leave the brain, opposite the inner part of the fissure of Sylvius, by three roots; which, by their union, form a triangular knot or expansion. When it reaches the ethmoid fossa it expands and forms a triangular ganglion or grayish, soft bulb, which furnishes, from its inferior surface, the branches that have to be distributed to the nasal fossæ. These filaments are very numerous; they pass through the foramina in the cribriform plate and enter the nasal fossæ. They are distinguished into the *internal*, *external*, and *middle*. The former are distributed over the mucous membrane covering the outer paries of the nasal fossæ; the second descend upon the septum, and the third are lost, almost immediately, on

the portion of the pituitary membrane, that lines the vault of the fossæ.

The OLFAC'TORY FORAM'INA, (F) *Trous olfactifs*, are the holes in the cribriform plate of the ethmoid bone; through which the olfactory nerve passes.

OLIGOCHYLUS, from *ολιγος*, 'little,' and *χυλος*, 'juice, chyle.' An epithet for food, which is but little nutritive; which furnishes little chyle.

OLIGOPO'SIA, from *ολιγος*, 'little,' and *ποσις*, 'drink.' Diminution in the quantity of drinks.

OLIGOTRO'PHIA, *Parciornutritio*; from *ολιγος*, 'little,' and *τρεφω*, 'I nourish.' Deficient nourishment.

OLIVE-SHAPED, *Oliva'ris*, *Olivifor'mis*, from *oli'va*, 'an olive.' Resembling an olive. (See Corpora Olivaria.)

The CAUTÈRE OLIVAIRE, of the French surgeons, is a cautery, whose extremity is terminated by a button, having the shape of an olive.

The PROCES'SUS OLIVA'RIS is a small ridge, running transversely between, and a little behind, the roots of the anterior clinoid processes of the sphenoid bone, which by some has been considered as a 4th clinoid process.

OLMITELLO, MINERAL WATERS OF. A thermal spring in the Isle of Ischia. Temp. 100° Fahr.

OLOPHO'NIA, from *ολλω*, *ολλυω*, 'I lose,' and *φωνη*, 'voice.' Congenital misconstruction of the vocal organs.—Good.

OM'AGRA, *Hom'agra*, *ωμαγρα*, from *ωμος*, 'the shoulder,' and *αγρα*, 'a prey.' Gout in the shoulder.

OMA'SUM, *Omasus*, *Manyplies*. The third stomach of ruminant animals.

OMNIV'OROUS, *Omnivorus*, *Omniph'agus*, *Pantoph'agus*, from *omnis*, 'all,' and *voro*, 'I eat.' An epithet for animals, which eat every kind of food;—animal or vegetable.

OMO-HYOIDEUS, *Cor'acohyoideus*, *Scapulohyoïdien*, *Omohyoïdien*, *Omoplat-hyoïdien*, *Hyoï'dis Quartus Mus'culus*. This muscle is situate, obliquely, at the sides and front of the neck. It is slender, long, and flat. It arises from the superior costa of the scapula, near the semilunar notch, and from the ligament that runs across it, and is inserted at the sides of the inferior margin of the body of the os hyoides. It consists of two fasciculi, united by a common tendon, and is a true digastric muscle. It depresses the os hyoides, carrying it a little backwards, and to one side, except when it acts with its fellow, when the bone is depressed, and drawn obliquely backwards.

OMOTARI'CHOS, from *ωμος*, 'the shoulder,' and *ταριχος*, 'pickled.' *Salsamen'tum crudum*; *Salted Tunny Fish*, in particular. Properly, the neck or shoulder piece of a salted animal. Once, much recommended

against the bites of vipers and in hydrophobia.

OMOT'RIBES, *Omphac'inum O'leum*, from *ωμος*, 'crude,' and *τριβα*, 'I bruise.' Oil, expressed from unripe olives.

OMPHA'CION, *ομφακιον*, from *ομφακος*, 'an unripe grape:—*Succus uvæ acer'bæ*, *Omphac'ium*. The juice of unripe grapes. Also, *Verjuice*.

OMPHAC'ITES (VINUM). A name, given to wine prepared from the unripe grape. *Omphac'itis*, is also the name of a small gall.—Dioscorides.

OMPHACOM'ELI, from *ομφακος*, 'an unripe grape,' and *μελι*, 'honey.' A sort of oxymel, made of the juice of unripe grapes and honey.

OMPHALELC'OSIS, from *ομφαλος*, 'the navel,' and *ελκος*, 'an ulcer.' Ulceration of the navel.

OMPHALOMANTI'A, from *ομφαλος*, 'the navel,' and *μαντεια*, 'prophecy.' A species of divination, practised by credulous matrons, who pretend to be able to know the number of children a female will have, by the number of knots in the navel string of the child.

OM'PHALO-MESENER'IC, *Omphalomesenter'icus*, *Om'phalo-mesara'icus*; from *ομφαλος*, 'the navel,' and *mesenterium*, 'the mesentery.'

OMPHALO-MESENERIC VESSELS, *Vitello-mesenteric*, *Vitelline vessels*. Haller gave this name to two very fine vessels, which spread their ramifications on the parietes of the umbilical vesicle. There is an *omphalo-mesenteric artery and vein*. The *omphalo-mesenteric artery* is a branch of the superior mesenteric;—the vein empties itself into the trunk, or into one of the branches, of the superior mesenteric. Velpeau affirms, that they inosculate with a branch of the second or third order of those great vessels, with those in particular that are distributed to the cæcum, and he regards them to be the vessels of nutrition of the umbilical vesicle.

They are occasionally met with in the fœtus, at the full period, under the form of whitish filaments, which extend from the mesenteric vessels to the umbilicus.

OMPHALOPHY'MA, *Omphalon'cus*, from *ομφαλος*, 'the navel,' and *φυμα*, 'tumour.' A tumefaction of the navel.

OMPHALORRHA'GIA, from *ομφαλος*, 'the umbilicus,' and *ρηγνυμι*, 'I break out.' Hemorrhage from the umbilicus, in the newborn, in particular.

OMPHALOT'OMY, from *ομφαλος*, 'the umbilicus,' and *τεμνω*, 'I cut.' The division of the navel string.

ONCO'SES, from *ογκος*, 'a tumour.' Tumours, as diseases.

ONCOT'OMY, from *ογκος*, 'a tumour,' and *τομνη*, 'incision.' The opening of a tumour or abscess with a cutting instrument.

ONEIROCRITICOS, from *ονειρος*, 'a

dream,' and *κρίσις*, 'judgment.' One, who judges according to dreams.

ONEIRODYN'IA, from *ονειρος*, 'a dream,' and *δυνη*, 'pain.' Painful dreams. The *Incubus* and *Somnambulism* are oneirodynia.

ONEIROG'MOS, *Oneirog'ynē*, *Oneiropol'esis*, from *ονειρος*, 'a dream.' A lascivious dream;—nocturnal pollution.

ONEIROMANTIA, from *ονειρος*, 'a dream,' and *μαντεία*, 'divination.' The art of divining by dreams; of interpreting them.

ONGLEE (F), *Digitorum stupor a gelu*. Painful numbness at the extremities of the fingers, caused by cold.

ONIS'CUS, *Asellus*, *Cutio*, *Porcel'lio*. Diminutive of *ovos*, 'a small ass.' A genus of insects, very common in cellars and dark and moist places.

The ONISCI ASELLI, *Millepedes*, *Aselli*, *Millepedæ*, *Wood-lice*, *Slaters*, *Hog-lice*, (F) *Cloportes ordinaires*, had, at one time, a place in the pharmacopœias. They were considered stimulant and diuretic, and useful in jaundice.

ONO'NIS SPINO'SA, *Resta bovis*, *Arres'ta bovis*, *Rem'ora Aratri*, *Ononis antiquorum*, *Rest-harrow*, (F) *Arrête-bœuf*, *Bugrande épineuse*, *Bugrane*. Nat. Ord. Leguminosæ. Sex. Syst. Diadelphia Decandria. The root of this plant was, once, used as a diuretic.

The ONONIS ARVEN'SIS, (F) *Bugrane des champs*, has like properties.

ONOPOR'DIUM ACANTHIUM, *Carduus tomentosus*, *Acanthium*, *Ac'anos*, *Cotton Thistle*. (F) *Chardon aux Anes*. Family, Cinarocephalæ. Sex. Syst. Syngenesia Polygamia æqualis. The expressed juice has been recommended as a cure for cancer, applied externally.

OPAC'ITY, *Opac'itas*, from *opaca're*, 'to obscure.' Quality of that which is opaque. The property, possessed by some bodies, of not allowing the light to traverse them. It is opposed to transparency. Opacity of the cornea constitutes *albugo* or *leucoma*;—opacity of the crystalline causes cataract.

ONYCHOGRYPHOSIS, *Onychogryposis*, *Onychogrypto'sis*, from *ονυξ*, 'the nail,' and *gryposis*, (q. v.) Curvature of the nails: such as occurs in hectic individuals.

ONYCHON'OSI, *Onychonu'si*, from *ονυξ*, 'a nail,' and *νσος*, 'a disease.' Diseases of the nails.

ONYCHOPH'THORA, *Onychophthoria*, *Onycoph'thora*, *Onycophtho'ria*, from *ονυξ*, 'the nail,' and *φθορα*, 'degeneration.' A degenerate condition or destruction of the nails.

ONYCHOPHY'MA, from *ονυξ*, 'the nail,' and *φυμα*, 'a tumour.' A painful degeneration of the nails, which become thick, rough, and crooked. It occurs as a symptom of syphilis and of lepra.

ONYCHOPTOSIS, from *ονυξ*, 'a nail,'

and *πτωσις*, 'falling.' The falling off of the nails.

OOLOGIA, *Ovologia*, *Ovology*, from *ovon*, 'an ovum or egg,' and *λογος*, 'a discourse,' 'a description.' A description of the ovum.

O'PALINE. That which resembles the opal. A fluid is said to be opaline, when milky, and when it presents an appearance more or less like that of the opal.

OPAQUE, *Opa'cus*. An epithet given to bodies, which do not permit the passage of rays of light. The *opaque cornea* is the sclerotic, in contradistinction to the transparent cornea or true cornea.

OPERATION, *Opera'tio*, from *opus*, 'work.' The application of instruments to the human body with the view of curing disease. The object of operations is generally to divide or reunite parts, to extract extraneous or noxious bodies, and to replace organs that are wanting, by different instruments or artificial means. The principal operator methods have been called, *Synthesis*, *Diæresis*, *Exæresis*, and *Prothesis*, (q. v.) Frequently, the most difficult subject, connected with an operation, is to decide when it is absolutely called for or advisable, and when it is improper.

A CHYMICAL or PHARMACEUTICAL OPERATION is any process, whose object is the preparation of medicines; their combinations with each other, analysis, and decomposition;—such are, *solution*, *distillation*, *sublimation*, *evaporation*, *digestion*, *maceration*, *infusion*, *decoction*, *calcination*, &c. Some of these operations are mechanical; others, really chymical.

OP'ERATOR. A surgeon, who is in the habit of practising the greater operations. One, who performs any operation. To be a good operator, the surgeon must be well acquainted with anatomy, and be possessed of strong nerve. See Surgeon.

OPHIOGLOS'SUM VULGA'TUM, *Echioglos'sum*, *Lingua serpentina*, *Adder's Tongue*, (F) *Langue de Serpent*. Family, Filicoideæ. Sex. Syst. Cryptogamia. This plant was formerly considered to be vulnerary.

OPHIOPH'AGUS, from *οφις*, 'a serpent,' and *φαγω*, 'I eat.' An epithet for animals, which feed on serpents. Pliny has called certain African tribes by this name.

OPHIORRHIZA MUNGOS, from *οφις*, 'a serpent,' and *ρίζα*, 'root.' Family, Gentianæ. Sex. Syst. Pentandria Digynia. The name of the plant, whose root has been called *Radix Serpentum*, *Mungos Radix*. The bitter root is much esteemed in Java, Sumatra, &c. for preventing the effects, that usually follow the bite of the *naja*—a venomous serpent—with which view it is eaten by the natives. It is, also, a reputed anthelmintic.

OPHIOX'YLUM, from *οφις*, 'a serpent,' and *ζυλον*, 'wood.' Serpentine-wood plant.

The OPHIOXYLUM SERPENTI'NUM, *Acawe'ria*, *Lignum serpen'tum*, has also been recommended in the bites of serpents, and in intermittents. It is said to be very bitter.

OPHI'TES, from *οφις*, 'a serpent,' *Serpen'ti'nus*, *Ser'pentine* or *Black Por'phyry*. This rock was, formerly, worn as an amulet, to cure diseases of the head.

OPHTHALMAL'GIA, from *οφθαλμος*, 'the eye,' and *αλγος*, 'pain.' Pain in the eye.

OPHTHAL'MIA, *Ophthalmi'tis*, from *οφθαλμος*, 'the eye.' *Oculo'rum inflamma'tio*, *Cauma ophthalmitis*, *Ophthalmopo'nia*, *Inflamma'tion of the Eye*, *Ophthalmy*, (F) *Ophthalmie*, *Catarrhe oculaire*. Three great varieties of ophthalmia, independently of the acute and chronic (which conditions occur in all inflammations,) may be reckoned:—the *Ophthalmia membranarum*, *O. purulenta*, and *O. tarsi*.

The first is characterized by the general symptoms of ophthalmia;—pain and redness of the eye or its appendages; with intolerance of light, and unusual flow of tears: the inflammation being seated chiefly in the coats of the eyeball. It is the *Ophthalmia tarax'is*, *Conjunctivi'tis*, *Ophthalmo-conjunctivitis*, *O. hu'mida*, *O. vera*, *Epiph'ora* (Galen,) *Conjunctival Ophthalm'ia*, *Taraxis*, (Paulus of Ægina,) *Chemo'sis* (Aëtius,) *O. Chemosis*, *Lach'rymose Ophthalmia*.

In the second—*Ophthalmia purulen'ta*, *Blennophthal'mia*, *Bleph'aroblennorrhœ'a*, *Ophthalmo-blennorrhœa*—the internal surface of the palpebræ associates in the inflammation of the eyeball; and there is a copious secretion of a purulent fluid.

An epidemic and contagious (?) variety of this is the *Ægyptian Ophthalmia*,—as it was called, from its prevalence in Egypt during the British expedition under Sir Ralph Abercromby. The inflammation, here, is rapid and destructive; granulations shoot from the tunica conjunctiva, and occasionally there is intolerable pain, often succeeded by delirium.

In new-born children, a species of purulent ophthalmia, in which the palpebræ are florid and peculiarly tumid, is by no means uncommon. It seems to be caused by acrid discharges from the mother, applied to the eye of the infant during its exit; or to the stimulus of the light, when the child first opens its eyes.

The third variety—the *Ophthalmia Tarsi*, *Blepharophthal'mia*, *Blepharotis*, *Blepharoti'tis*, *Blephari'tis*, *Psorophthalmia*, *O. glutino'sa*, *Oculi palpebra'rum scabies pruriginosa*, *Adenophthal'mia*—is seated chiefly in the tarsus; the sebaceous crypts secreting a viscid and acrid fluid, that glues and ulcerates its edges, and irritates the eye.

The *Ophthalmia Membranarum*, when slight, requires little treatment: the antiphlogistic regimen—and, particularly, avoiding exposure to light,—being all that is ne-

cessary. When more severe, along with this, general and local blood-letting, especially by leeches to the sides of the septum narium, must be employed, so as to make a decided impression on the system: with nauseating doses of antimony, purgatives, blisters (at some distance from the organ), refrigerants; and astringents, cold or warm, according to circumstances, to the eye.

In the *Purulent Ophthalmy*, these measures must be still more actively employed, otherwise disorganization will speedily follow:—the granulations, which form on the adnata of the eyelids, may be removed with the scissors, and the sore touched with a solution of alum.

The *Ophthalmia Tarsi* must be treated on general principles, when severe. It usually, however, requires merely the antiphlogistic regimen, with the occasional use, especially at night, of a slightly stimulating ointment; such as the unguentum hydrargyri nitricooxydi, considerably reduced with lard. The ointment prevents the eyelids from being glued together, during the night, and thus obviates the irritation caused by attempts at separating them.

OPHTHAL'MIC, *Ophthalm'icus*, from *οφθαλμος*, 'the eye.' That which relates or belongs to the eye.

The OPHTHALMIC ARTERY, *A. orbitaire* (Ch.), arises from the internal carotid, and issues from the cranium by the foramen opticum. At first, it is situate at the outer and lower side of the optic nerve, but ascends above this nerve, and passes towards the inner angle of the orbit. It furnishes, in its course, the *lachrymal*, *centralis retinae*, *infra-orbitars*, *ciliaries*, *anterior ciliaries*, *inferior and superior musculars*, *anterior and posterior ethmoidals*, and *superior and inferior palpebrals*. After having given off these, it divides into two branches—the *frontal* and *nasal*, which furnish a number of ramifications,—some superficial, others deep-seated.

The OPHTHALMIC VEIN has the same arrangement as the artery, which it accompanies in all its divisions. It issues from the orbit at the inner part of the sphenoidal fissure, and discharges its blood into the cavernous sinus.

The name *Facial Ophthalmic* has been given to the branch, by which the facial vein communicates with the ophthalmic.

The OPHTHALMIC NERVE, or *Ophthalmic Nerve* of Willis, *Or'bito-frontal* (Ch.), is the smallest and first of the three branches given off by the 5th pair. It proceeds along the external paries of the cavernous sinus, and enters the orbit by the sphenoidal fissure. It divides into three branches: one, *external*—the *lachrymal nerve*; another, *superior*—*frontal nerve*, and the last, *internal*—the *nasal nerve*. See *Lachrymal*, *Frontal*, *Nasal*.

The OPHTHALMIC GANGLION, *Lentic'ular G.*, *G. orbitaire* (Ch.), is one of the smallest

ganglions of the body. It is situate at the outer side of the optic nerve, near the bottom of the orbit; is irregularly quadrilateral and flat: its colour being of a reddish gray. Behind, it communicates by its posterior angles—by means of nervous filaments—with the nasal nerve of the ophthalmic and the motor oculi. Each of its anterior angles furnishes a fasciculus of small nerves. These are the ciliary nerves.

An OPTHALMIC or OPTIC REMEDY, (F) *Topique ophthalmique*, is a medicine employed in ophthalmia.

OPHTHALMO-CARCINOMA, from *οφθαλμος*, 'the eye,' and *καρκινωμα*, 'cancer.' Cancer of the eye.

OPHTHALMODYNIA, from *οφθαλμος*, 'the eye,' and *δυνη*, 'pain,' especially rheumatic pain of the eye. Plenck has given this name to neuralgia of the frontal nerve, in which the pain irradiates, particularly, towards the bottom of the orbit. See Neuralgia, Frontal.

OPHTHALMOGRAPHY, from *οφθαλμος*, 'the eye,' and *γραφη*, 'a description.' The part of anatomy which gives a description of the eye. An anatomical description of the eye.

OPHTHALMOL'OGY, from *οφθαλμος*, 'the eye,' and *λογος*, 'a discourse.' The part of anatomy which treats of the eye. An anatomical treatise on the eye.

OPHTHALMOM'ETER, from *οφθαλμος*, 'the eye,' and *μετρον*, 'measure.' An instrument of the nature of compasses, invented by F. Petit, for measuring the capacity of the anterior and posterior chambers of the eye in anatomical experiments.

OPHTHALMOPL'EGIA, from *οφθαλμος*, 'the eye,' and *πλησσω*, 'I strike.' Paralysis of one or more of the muscles of the eye.

OPHTHALMOPTO'SIS, from *οφθαλμος*, 'an eye,' and *πτωσις*, 'a prolapse.' A word, employed by some authors in the sense of exophthalmia: by others, in that of hydrophthalmia.

OPHTHALMORRHA'GIA, from *οφθαλμος*, 'the eye,' and *ρηγνυμι*, 'I break forth.' Hemorrhage from the tunica conjunctiva. It is rare.

OPHTHALMOSCO'PIA, from *οφθαλμος*, 'the eye,' and *σκοπεω*, 'I regard attentively.' The art of judging of the temperament, &c., of a person, by examining his eyes. The art of judging of health or disease by inspection of the eyes.

OPHTHALMOSTA'TUM, from *οφθαλμος*, 'the eye,' and *στασις*, 'station.' *Speculum Oculi*. An instrument for fixing the eye.

OPHTHALMOT'OMY, *Ophthalmotomy*, from *οφθαλμος*, 'the eye,' and *τεμνω*, 'I cut.' The part of anatomy, which treats of the dissection of the eye. It has, also, been applied to extirpation of the eye.

OPHTHALMOX'YSIS, from *οφθαλμος*,

'the eye,' and *ξυω*, 'I scrape.' A name given to the scarifications sometimes practised on the conjunctiva, in cases of ophthalmia.

OPHTHALMOXYS'TRUM. An instrument for scraping the eye. Name given to a small brush, with barbs like an ear of barley or rye, intended to scarify the eyelids in certain cases of ophthalmia.

OPIATE, *Opiatum*, (F) *Opiat*, from *οπιον*, 'opium.' A medicine containing opium. A medicine that procures sleep. An electuary. Formerly, an electuary, which contained opium. In this sense, the *Codex* of Paris retains it.

OPIATUM FEBRIF'UGUM,—*Electuarium de Kina-Kina*; *Electuary of Cincho'na*. (*Pulv. cinch.* 3 xvij, *ammon. muriat.* 3 j, *mellis, syrup. absinth.* aa 3 ij. Make into an electuary. *Ph. P.*) Given, when cinchona is indicated.

OPIATUM MESENTER'ICUM, *Electuarium de Aloe, Muriate Hydrargyri et Ferro*. (*Gum. ammon.* 3 ss, *sennæ* 3 vj, *hydrargyri submuriat.*, *rad. ari, aloës socotrin.* aa 3 ij, *pulv. scammon. comp.* (vulg. *de tribus*), *rhæj. rad.* aa 3 iij, *ferri limatur. porphyrisat.* 3 ss. Bruise and mix together, add compound syrup of apples double the weight of the other matters, and make into an electuary. *Ph. P.*) Dose, 3 ss to 3 ij, in obstructions of the liver, mesentery, &c.

OPSIONU'SI, from *οψις*, 'vision,' and *νους*, 'a disease.' *Morbi visus*. Diseases of vision.

OPIS'THENAR, *οπισθεναρ*, from *οπισθε*, 'backwards,' and *θεναρ*, 'the flat of the hand.' The back of the hand.

OPISTHOT'ONOS, *οπισθοτονος*, *Raptus post terga'neus*, *Tet'anus dorsa'lis*, *T. posticus*, *T. post terga'neus*, from *οπισθε*, 'backwards,' and *τεινω*, 'I stretch.' A species of tetanus, in which the body is bent backwards.

OPODEL'DOCH, *Opodel'toch*. An unmeaning term, frequently used by Paracelsus. Formerly, it signified a plaster for all external injuries; now, it is applied to the *Liniamentum Saponis Compositum*, (q. v.)

OPODELDOCH, STEER'S. A liniment, called after the inventor. There are many formulæ for its preparation. The following is one. *Sap. alb.* ℞ j, *camphor* 3 ij, *ol. rorismarini* 3 iv, *spiritus vini rectificati* ℞ ij.

OPO'RICE, *οπωρικη*, from *οπωρεα*, 'autumnal fruits.' A medicine, composed of several autumnal fruits, particularly of quinces, pomegranates, &c., and wine. It was formerly administered in dysentery, diseases of the stomach, &c.

OPPO'NENS, (F) *Opposant*. That which faces or is put in opposition to something. The name has been given to two muscles of the hand.

OPPONENS POL'ICIS, *Flexor ossis metacarpi pollicis*, *Opponens pollicis manus*, *Flexor primi interno'dii* (Douglas), *Antith'enar*,

sive *semi-interosseus pollicis*, *Carpo-métacarpien du pouce* (Ch.), *Métacarpien du pouce*, (F) *Opposant du Pouce*. A small, flat, triangular muscle, situate in the substance of the *thenar* eminence. It is attached, on the one hand, to the anterior annular ligament of the carpus and to the trapezium; and, on the other, to the whole of the outer margin of the first metacarpal bone. This muscle impresses on the first bone of the metacarpus a movement of rotation, which opposes the thumb to the other fingers.

OPPONENS MIN'IMI DIGITI, *Carpo-métacarpien du petit doigt* (Ch.), *Métacarpien du petit doigt*, (F) *Opposant du petit doigt*. This muscle has the same shape and arrangement as the preceding, but is of less size. It is situate in the *hypothenar* eminence. Its fibres are inserted into the anterior annular ligament of the carpus, and terminate on the whole length of the inner edge of the 5th metacarpal bone. This muscle carries the 5th metacarpal bone forwards and outwards, and thus augments the concavity of the palm of the hand.

OPPRESSION, *Oppres'sio*, *Thlipsis*, *Catathlip'sis*. A state, in which the patient experiences a sensation of weight in the part affected. When employed abstractedly, it means, particularly, *oppression of the chest*—*Oppressio Pec'toris*, (F) *O. de Poitrine*.

OPPRESSION, (F) *Oppression des forces*, *Oppres'sio vir'ium*, is, also, used for that condition, at the commencement of fevers, &c., in which the system is oppressed rather than debilitated, and where the vascular action rises, as the obstruction to free circulation is relieved by bleeding, purging, &c.

OPSOMA'NIAC, *Opsom'anes*, (F) *Opsomane*, from $\sigma\phi\sigma\upsilon$, 'aliment,' and $\mu\alpha\upsilon\alpha$. One, who loves some particular aliment to madness.

OPTIC, *Op'ticus*, *Opo'pios*, from $\sigma\tau\omicron\mu\alpha\iota$, 'I see.' That which relates to vision.

FORA'MEN OPTICUM, (F) *Trou optique*. A round opening in the sphenoid bone, near the base of its lesser ala, through which the optic nerve passes.

OPTIC NERVE, *Nervus op'ticus*, *Par secundum* seu *op'ticum* seu *viso'rium*, *Nerve of the 2d pair*, *Nervus visivus* seu *visorius*, *Ocular nerve* of Chaussier. These nerves are remarkable for their size; for their running a longer course within, than without, the cranium; and for their furnishing no branch, from their origin to their termination. They do not seem to arise, as was long supposed, from the optic thalami, but from the tubercula quadrigemina. Immediately after their origin they proceed forwards; are, at first, broad and flat; but afterwards become narrower and round. In front of the fossa pituitaria, they unite and decussate, each nerve proceeding through the optic foramen with the ophthalmic artery. The nerve passes to the back part of the globe of the eye, becomes narrower, and enters that organ to

give rise to the nervous expansion called the Retina, (q. v.)

Besides its neurilema, the optic nerve is surrounded by a sheath, furnished by the dura mater. This accompanies it as far as the eye.

The optic nerve is the nerve of special sensibility of the eye.

ORANGEADE (F). A drink, made with orange juice diluted with water. It is antiphlogistic, and often recommended in acute diseases.

ORBICULAR, *Orbicula'ris*, from *orbis*, 'a circle.'

The Os ORBICULA'RE, seu *lenticu'lare*, seu *Sylvii*, seu *orbicula're Syl'vii*, *Globulus stapedis ossis*, *Epiph'ysis cruris longio'ris incudis*, is the smallest of the four bones of the ear. It is scarcely perceptible, round, convex on two surfaces, and situate between the long ramus of the incus and the head of the stapes.

ORBICULAR MUSCLES are muscles with circular fibres surrounding some natural opening of the body.

1. ORBICULA'RIS ORIS, *Sphincter Labio'rum*, *Semi vel Demi-orbicula'ris*, *Supra-semi-orbicula'ris*, *Constrictor Oris*, *Labia'lis*, *Osculato'rius*, *Basia'tor*, (F) *Labial*, *Orbiculaire des lèvres*. A muscle situate in the substance of the lips, and, extending from one commissure to the other. It is formed of two very distinct portions; of a semi-oval shape; one belonging to the upper lip, the other to the lower. Their extremities cross at the commissures and are confounded with the other muscles of the parts. The use of this fleshy muscle is to bring the lips together, and to close the aperture of the mouth, by making it represent a sort of *Bourrelet* (q. v.), with radiated wrinkles. It is an antagonist to every other muscle of the lips.

ORBICULARIS PALPEBRA'RUM, *Orbicularis oc'uli*, *Orbicularis palpebra'rum cilia'ris*, *Palpebrarum duo musculi*, *Maxillo-palpebral*, *Palpebra'lis*, *Constrictor palpebra'rum*, *Sphincter Palpebra'rum* seu *Oculi*, *Naso-palpebral* (Ch.), (F) *Palpébral*, *Orbiculaire des paupières*. A muscle, common to both the eyelids, and seated in their substance. It is broad, thin, transversely oval, and cleft in its great diameter. It is attached to the nasal process of the superior maxillary bone; to the internal angular process of the frontal bone, and to the orbital process of the superior maxillary bone. From these origins the muscle passes outwards, under the skin of the eyelids, surrounding the orbit in a circular manner, extending somewhat beyond it, and covering the upper part of the cheek. It is inserted into the skin of the eyelids, its upper and inner edge being intimately connected with the frontal and corrugator muscles. Its use is to close the eye, by bringing the eyelids together.

The part of the orbicularis, which covers the cartilages of the eyelids, and which is re-

markably thin, is the *Musculus Ciliaris* of some authors.

ORBIT, *Or'bita*, *Trochia*, from *orbis*, 'a circle.' The circular cavities are so called, which lodge the organs of sight. The *orbits* or *orbital fossæ* or *cavities*, *conchi*, *κογχή*, are situate at the upper part of the face, and are composed of 7 bones:—viz. the *frontal*, above; the *palate* and *superior maxillary*, below; the *sphenoid* and *malar*, externally, and the *ethmoid* and *lachrymal*, internally.

The orbit is filled by the globe of the eye, with its different accessory parts,—muscles, nerves, vessels, the lachrymal gland, &c.

ORBITAR, *Orbita'rius*, *Orbitalis*; same etymon. Relating or belonging to the orbit.

The ORBITAR ARCH, (F) *Arcade orbitaire*, is the projecting, round margin, which separates the *frontal* and *orbital* surfaces of the *os frontis*; and forms part of the circumference of the orbit.

The ORBITAR APOPH'YSES or PROC'ESSES terminate the two extremities of the orbital arch. The *external* is much more prominent, and is articulated with the cheek bone:—the *internal* is thinner, and joins the *os unguis*.

The ORBITAR FORAM'INA. Of these there are several:—

1. The *Foramen orbitarium superius*, (F) *Trou orbitaire supérieure*, is situate at the junction of the inner third of the orbital arch with its two outer thirds, and gives passage to the frontal nerve.

2. The *Foramina orbitaria interiora* vel *inter'na*, *Foramina ethmoidea*. These are situate at the upper part of the internal paries of the orbit, and are formed by the union of two notches of the *os frontis* with two similar ones of the *ethmoid*; and are distinguished into *anterior* and *posterior*. The former gives passage to the ethmoidal filament of the nasal nerve and to a small artery.

The ORBITAR FISSURES, (F) *Fentes orbitaires*. These are situate in the orbit. They are two in number; one *superior*, the *Sphenoidal* (q. v.); the other *inferior*, *Sphenomaxillary*, (q. v.)

The ORBITAR NERVE, *Nervus orbita'lis* seu *orbita'rius*, is a branch, given off from the superior maxillary. It enters the orbit by the sphenomaxillary fissure, and divides into two filaments; the one—*malar*—which passes over the cheek-bone, is distributed to the *bicularis palpebrarum*, and anastomoses with the facial nerve: the other—*temporal*—which passes to the temporal fossæ and anastomoses with the inferior maxillary and facial, to become afterwards subcutaneous.

ORCHIDOCATABASIS, *Orcheocatabasis*, from *ορχις*, 'the testis,' and *καταβασις*, 'descent.' The descent of the testes into the scrotum.

ORCHIOCE'LE, *Orcheoce'le*, from *ορχις*, 'the testicle,' and *κηλη*, 'a rupture.' A tumour of the testicle. *Hernia humoralis*. A name, given to several diseases of the testicles and

its envelopes, essentially differing from each other.

ORCHIS MAS'CULA, *Satyr'ion*, *Male Orchis*, *Testic'ulus caninus*, *Cynosor'chis*, *Dog's stones*, *Male Fool's stones*. The root has had a place in some pharmacopœias, on account of the glutinous, slimy juice it contains. The root of the *Orchis bifolia* or *Butterfly orchis* has likewise been collected. It has been used as a demulcent. Its fancied aphrodisiac virtues seem to be owing to its resemblance to *ορχις*, 'a testicle,' whence its name.

The *Salep* is obtained from a variety of the orchis;—the *Orchis morio*.—See *Salep*.

ORGAN, *Or'ganum*, *Or'ganon*. An instrument. Part of an organized being, destined to exercise some particular function. Thus, —the eyes are organs of sight; the muscles are organs of motion, &c. The collection of organs, which concur in any function, is called apparatus, (q. v.)

ORGAN'IC, *Organ'icus*, relating to an organ or organs. It is, also, used synonymously with *vital*, in contradistinction to *physical*.

ORGANIC DISEASES or LESIONS are such as concern the organ itself, in contradistinction to *functional*, which merely concern the function. Of course, *organic* diseases of a part are always more serious than *functional*.

ORGANISM. Same etymon. Many physiologists have used this word synonymously with organization; but more especially, to designate the aggregate of forces, which govern organized beings,—animals as well as vegetables.

ORGANIZA'TION, *Organisa'tio*, from *οργανον*, 'an organ.' The manner of structure, proper to different beings. The collection of parts composing an organized body, and the laws which govern it. It is also employed in the sense of the structure of a part; as, the organization of the heart, &c.

ORGANIZED, *Organis instruc'tus*. That which is composed of organs.

ORGANIZED BODIES, (F) *Corps organisés*, are those endowed with life,—i. e. animals and vegetables,—in opposition to *inorganic* bodies, which term comprises the mineral kingdom.—See *Corpus*.

ORGASM, *Orgas'mus*, *Orgo'sis*, from *οργαω*, 'I desire ardently.' State of excitement and turgescence of any organ whatever. Applied, particularly, to the genital organs.

ORGAS'TICA. Same etymon. The second order of the class *Genetica* of Good. Defined:—diseases affecting the orgasm;—organic or constitutional infirmity disordering the power or the desire of procreating.

ORIG'ANUM, *Origanum vulgar'e*, *Cuni'la bubula*, *Marjora'na mancura'na*, *O. heracleot'icum*, *Zazarhen'di herba*, *Wild marjoram*, *Common marjoram*, *Mancura'na*, (F) *Pied de lit*. Family, *Labiatae*. Sex. Syst. Di-

dynamia Gymnospermia. This plant resembles marjoram in smell; and has a pungent taste, much like thyme. It is aromatic and stimulant; and its oil possesses the properties of the essential oils, in general. The oil is very pungent, and is rarely given internally. It is used in toothache.

ORIGANUM DICTAM'NUS, *Dictamnus Creticus*, *O. Creticum*, *Oni'tis*, *Dit'tany of Crete*, (F) *Dictamne de Crète*. The leaves of this plant were once recommended as emmenagogue and alexipharmic.

ORIGANUM MAJORA'NA, *Marjorana*, *O. majoranoides*, *Majorana*, *Sweet marjoram*, *Samp'sucus*, *Agriorig'anum*, *Amar'acus*, (F) *Marjolaine*. Its odour is strong and fragrant; taste aromatic and bitterish. Its properties are those of a stomachic and errhine. It is chiefly used, however, for culinary purposes and as a snuff in headache.

ORIGINAIRE (F). This term has been used, by French writers, in the same sense as *congenital*. It is particularly applied to affections, depending upon faulty conformation or to faulty conformation itself.

ORMSKIRK MEDICINE. A celebrated antilyssic remedy, supposed to consist of *Pulv. Cretæ*, 3 ss; *Bol. Armen.* 3 iij; *Alumin. gr.* x; *Pulv. Inulæ* 3 j; *Ol. Anisi*, gtt. vj.

This is taken for a dose every morning for six times, in a glass of water, with a small proportion of fresh milk.

OROBAN'CHĒ VIRGINIA'NA, *Virgin'ia broom rape*, *Beech-drops*, *Cancer-root*. Family, *Orobanchoidæ*. This plant is astringent, and a peculiar and extremely nauseous bitter. It is most powerful when fresh. It has been used in dysentery; and, externally, to obstinate ulcers.

OROBOI'DES, from *οροβος*, 'the orobus,' and *ειδος*, 'form.' Having the shape of the orobus. A name given to the sediment in urine, when of a fawn colour—like the orobus.

OR'PIMENT, *Auripigmen'tum*, *Orpin*, *Risigal'lum*, *Cloanz*, *Elome*, *Sira*, *Lempnias*, *Spec'ulum citrinum*, *Yrides*, *Yride*. The native yellow sulphuret of arsenic. It is poisonous, but less so than the oxide. It is, also, called *Adarigo*, *Adarnech*, *Ahusal*, *Althanacha*, *Azarnet*. The Turks prepare a depilatory with it, which they call *Rusma*.

ORRHOPYG'ION. The inferior extremity of the vertebral column; from *ορος*, 'extremity,' and *πυγην*, 'the nates.' Also, the raphe, extending from the penis to the anus, and separating the scrotum into two parts.

ORTHODO'RON. A measure with the Greeks, equal to eleven finger-breadths.

ORTHOPÆDI'A, from *ορθος*, 'right,' and *παις*, 'a child.' The part of medicine, whose object is to correct and prevent deformity in the bodies of children.

ORTHOPNŒ'A, *Suffoca'tio*, *Strangula'tio*, *Præfoca'tio*, *Pnix*, *Pnigmus*, *Angor*, *Ap-*

nœa, from *ορθος*, 'right,' 'straight,' and *πνεω*, 'I respire.' Impracticability of breathing in the horizontal posture. Necessity of being in the erect posture, in order to respire.

ORVIETA'NUM. From the Italian *Orvieta'no*. An electuary regarded as an invaluable antidote, and composed of *Old theriac*, *Dried vipers*, *Scorzonera*, *Carlina*, *Imperatorium*, *Angelica*, *Bistort*, *Rosemary*, *Juniper*, *Cinnamon*, *Cloves*, *Mace*, *Honey*, and a crowd of other substances. Its medical properties resembled, in some respects, those of the theriac. It was so called, according to some, because invented by Orvietano, a celebrated charlatan; or, according to others, from Orvieto, a town in Italy.

ORY'ZA, from *Orez* (Arab.), *Ory'za sativa*, *Rice*, (F) *Riz*. Family, *Graminæ*. Sex. Syst. *Hexandria Monogynia*. A plant, almost aquatic, and indigenous in China; one of the richest productions of Egypt, and which prospers in the warmer regions of the four quarters of the globe. Its amylaceous seeds nourish more men than those of wheat and rye together. Besides being alimentary, they are demulcent and emollient.

OS CROTOPHALE. A name, given by M. Béclard, to a bone sometimes met with at the anterior and inferior angle of the parietal bone; from *κροταφος*, 'the temple.'

OS EPACTALE. A name given to one of the ossa Wormiana; particularly, to one met with in the posterior fontanelle, and which has been described by G. Fischer, under the name, *Os epactale sive Goethianum*.

OS EXTERNUM. The entrance into the vagina, in contradistinction to the *Os internum* or *Os u'teri*.

OS U'TERI, *Os tincæ*, *Protos'poros*, *Os internum*, *Os amphid'eon seu amphide'um*, *Oschæon*, (F) *Museau de Tanche*. The mouth of the womb. See Uterus.

OSCHEOCE'LE, from *οσχον*, 'the scrotum,' and *κηλη*, 'tumour.' *Scrotal hernia*. See Bubonocèle. Sauvages uses it in the sense of *Dropsy of the scrotum*. See Hydrocèle.

OSCHI'TIS, from *οσχον*, 'the scrotum,' and *itis*, 'inflammation.' Inflammation of the scrotum.

OS'CITANT (FEVER), *Febris os'citans*, (F) *Fièvre oscitante*. A fever, in which the patient is continually yawning.

OS'MAZOME, *Os'mozome*, *Matière extractive du Bouillon*, *Extrac'tive of meat*, *Saponaceous extract of meat*; from *οσμη*, 'smell,' and *ζαμος*, 'soup.' M. Thénard has given this name to an extractive matter, contained in muscular flesh and in the blood of animals, which he considers of a peculiar nature. It has an agreeable smell and taste, and is found in *Bouillons* of meat, in the proportion of one part to seven of gelatine. Vauquelin discovered it in some fungi. It is the substance, which gives the flavour of meat to soups, and hence its name.

OSMON'OSI, *Osmonu'si*, *Morbi olfac'tūs*; from *οσμη*, 'odour,' and *νοσος*, 'a disease.' Diseases of olfaction.

OSMUN'DA REGA'LIS, *Filix flor'ida*, *Osmund-royal*. Family, *Filicoideæ*. This plant was once thought to possess astringent and emmenagogue virtues.

OSPHRESIOL'OGY, *Osphresiol'ogia*; from *οσφρησις*, 'odour,' and *λογος*, 'a discourse.' A treatise on olfaction and odours.

OSPHYI'TIS, from *οσφυς*, 'the hip,' and *itis*, denoting inflammation. Inflammation of the parts about the hip.

OSSIC'ULUM, *Ostarion*. Diminutive of *os*, a bone:—a small bone.

The name OSSIC'ULA AUDI'TUS, O. AURIS, (F) *Osselets de l'oreille*, O. de l'ouïe, has been given to the four small bones situate in the cavity of the tympanum, and forming an uninterrupted chain from the membrane of the tympanum to that of the fenestra ovalis. They are four in number; and their series, from without to within, is as follows, *Mal-leus*, *Incus*, *Os orbiculare*, *Stapes*, (q. v.)

OSSIFICA'TION, *Ossifica'tio*; from *os*, 'a bone,' and *fa'cere*, 'to make.' *Osteoge'nia*, *Osteogen'es*is, *Osteo'sis*. Formation of bones. Development, or increase of the osseous system. Ossification takes place in the same manner as the nutrition of other organs. The bones are, at first, mucous, and afterwards cartilaginous; the cartilage, at length, receives the phosphate of lime, and is, at the same time, replaced by a gelatinous parenchyma, when the bone has acquired the whole of its development.

OSSIFICATION, POINTS OF, *Puncta ossifica'tio'nis*, are the points where the ossification of a bone commences, whence it extends to other parts. Almost all the bones present a greater or less number of points of ossification.

Besides the natural ossification, which we observe in the fœtus and in the first periods of life, there are, also, *acciden'tal ossifica'tions*, such as those, frequently remarked, after the inflammation of serous membranes, in the parietes of arteries, and to which the terms *Osthex'ia*, *incrusta'tion*, or *petrifac'tion* have, sometimes, been applied.

OSSIV'ORUS, from *os*, 'a bone,' and *voro*, 'I devour.' A species of tumour, mentioned by Ruysch, which destroys the bone.

OSTAGRA, *Osteagra*, from *οστέον*, 'a bone,' and *αγχα*, 'seizure.' A forceps to cut or remove portions of bone.

OSTALGI'TIS, *Osti'tis*, from *οστέον*, 'a bone,' and *itis*. Inflammation of the bones; characterized by violent shooting and lancinating pains in the bones.

OSTEMPYE'SIS, *Osteëmpye'sis*, *Ostem-pyo'sis*, from *οστέον*, 'a bone,' and *εμπυσις*, 'effusion of pus.' An abscess in the interior of a bone.

OSTEOCE'LE, from *οστέον*, 'a bone,' and *κηλη*, 'a tumour.' A hernia, in which the

sac is cartilaginous and bony. A rare case.

OSTEOCOL'LA, from *οστέον*, 'a bone,' and *κωλλα*, 'glue.' *Glue-bone*, stone or bone binder, *Ossif'raga*, *Holos'teus*, *Ossisa'na*, *Ostri'tes*, *Ostei'tes*, *Amos'teus*, *Osteol'ithos*, *Stelochi'tes*. A name given to a petrified carbonate of lime, found in some parts of Germany and other portions of the globe; so called, because it was supposed to possess the power of favouring the formation of callus in fractures. It is the *Chaux carbonatée concrétionnée incrustante* of Haüy. Not used.

OSTEOC'OPUS, *Osteal'gia*, *Osteodyn'ia*, from *οστέον*, 'a bone,' and *κοπος*, 'fatigue.' An epithet given to pains felt in bones, which are commonly owing to constitutional syphilis.

OSTEOG'RAPHY, *Osteogra'phia*, from *οστέον*, 'a bone,' and *γραφειν*, 'to describe.' Description of the bones. The part of anatomy, which describes the bones.

OSTEOL'OGY, *Osteologia*, from *οστέον*, 'a bone,' and *λογος*, 'a discourse.' The part of anatomy, which treats of bones.

OSTEON'OSI, *Osteonu'si*, from *οστέον*, 'a bone,' and *νοσος*, 'a disease.' Diseases of the bones. *Mor'bi os'tium*.

OSTEO-SARCO'MA, *Osteo-sarcosis*, *Sar-costosis*, from *οστέον*, 'bone,' and *σαρξ*, 'flesh.' Disease of the bony tissue, which consists in softening of its laminæ, and their transformation into a fleshy substance, analogous to that of cancer, and which is accompanied with general symptoms of cancerous affection. The word has often, also, been used synonymously with *spina ventosa*.

OSTEO-STEATO'MA, *Exosto'sis steatomato'des*, from *οστέον*, 'a bone,' and *στεαξ*, 'suet or fat.' A name given to bony tumours or degenerations, which sometimes belong to osteo-sarcoma; at others to *spina ventosa*, *exosto'sis*, &c.

OSTEOT'OMY, *Osteoto'mia*, from *οστέον*, 'a bone,' and *τεμνειν*, 'to cut.' The part of practical anatomy whose object is the dissection of bones.

OSTIUM, *οστέον*, a door. *Orific'ium*, a door or gate;—of the heart, for example. The opening between the auricle and ventricle of each side; *Os'tium veno'sum*, that of the right side; *Os'tium arterio'sum*, that of the left.

OSTIUM U'TERI. The vagina;—the neck of the uterus.

OSTREA, *Ostreum*. The oyster. The oyster is a wholesome article of diet, often advised as analeptic and easy of digestion.

The shells, TESTÆ OSTREÆ, (F) *Écailles d'huitres*, have been received into the Pharmacopœias and used medicinally. Their virtues are similar to those of the carbonate of lime. See Creta.

OTACOUSTIC, *Otacous'ticus*; from *οὖς*, 'the ear,' and *ακουα*, 'I listen.' Any instru-

ment is so called, which improves the sense of hearing,—as the different species of trumpets.

OTAL'GIA, *Ot'agra*, *Otod'yne*, from *ous*, 'the ear,' and *αλγος*, 'pain.' Pain in the ear; *Dolor aurium*, earache. See Otitis.

OTAL'GIC, *Otal'gicus*. An epithet for remedies used in otalgia.

OTEN'CHYTES, *οτεγχυτης*, *Oten'chyta*, from *ous*, 'the ear,' *εν*, 'into,' and *χυω*, 'I pour.' *Sypho auricula'ris*. A species of syringe, used for injecting the ear.

OT'ICUM. A medicine, employed in diseases of the ear.

GANGLION OTICUM, *Otic ganglion*, *Auricular ganglion*, *Ganglion maxillo-tympanique*. This is a small ganglion, although more than double the size of the ophthalmic, ash-coloured and pulpy like the ganglions of the sympathetic. It is situate in advance of the ganglion of Gasser, on the lower surface of the inferior maxillary nerve at the inner margin of the foramen ovale of the sphenoid bone. See Petrous Ganglion.

OTIRRHE'A, *Otorrhæ'a*, *Blen'notorrhæ'a*, (F) *Catarrhe de l'oreille*, from *ous*, 'the ear,' and *ρεω*, 'I flow.' Discharge of a puriform liquid from the meatus auditorius externus. It is a symptom of chronic otitis. Some authors have used the term synonymously with chronic otitis.

OTI'TIS, *Empres'ma otitis*, *Inflammation of the ear*. Inflammation of the mucous membrane of the ear; characterized by excruciating pain; insupportable humming in the ear, with a discharge of mucus generally from the meatus externus or from the eustachian tube. Otitis is divided into *external* or *internal*, according as it affects the meatus auditorius, or the cavity of the tympanum. It may be *acute* or *chronic*. *Acute otitis* commonly terminates in a few days in a favourable manner, with the aid of antiphlogistics. *Chronic otitis* is almost always accompanied by a purulent discharge from the meatus auditorius. It is often incurable, and may ultimately give occasion to disease of the internal ear, and even of the brain.

OTOGRAPHY, *Otographia*; from *ous*, 'the ear,' and *γραφη*, 'a description.' The part of anatomy, which describes the ear.

OTOL'ITHI, (F) *Otolithes*, from *ous*, 'the ear,' and *λιθος*, 'a stone.' A white calcareous substance contained in the membranous vestibule and seeming to be suspended in the fluid of the vestibule by means of a number of nervous filaments proceeding from the auditory nerve. Their universal presence in the ears of the mammalia would seem to show that they are inservient to audition. When of a looser consistence, they are called *Otoconies*, from *ous*, 'the ear,' and *κονια*, 'dust.'

OTOL'OGY, *Otologia*; from *ous*, 'the ear,' and *λογος*, 'a discourse.' The part of anatomy, which treats of the ear. An anatomical treatise of the ear.

OTOPLAS'TICE, from *ous*, 'the ear,' and *πλαστικός*, 'forming.' The operation for restoring a lost ear.

OTOT'OMY, *Ototo'mia*; from *ous*, 'the ear,' and *τεμνω*, 'to cut.' The part of practical anatomy, which teaches the mode of dissecting and preparing the ear.

OUNCE, *Uncia*, a weight, equal to the 16th part of a pound avoirdupois, the 12th of a pound troy. It is composed of 8 drachms. See Pondera.

OVAL, *Ova'lis*; from *ovum*, 'an egg.' That which is round and oblong like an egg.

The **FOSSA OVALIS**, *Valvula seu Vestigium Foram'inis ovalis*, is a depression observed in the right auricle of the heart, on the septum, which separates it from the left auricle. It has thick and strong edges, at its upper and fore part, called *Colum'næ foram'inis ova'lis*, *Isthmus Vieussé'nii* vel *an'nulus fossæ ovalis*; in the fœtus called *an'nulus foram'inis vel fossæ ova'lis*.

The fossa ovalis, in the adult, replaces the inter-auricular aperture in the septum, which, in the fœtus, is called *foramen ovale*, (F) *Trou ovale*, *Trou de Botal*.

The term **FORAMEN OVALE**, (F) *Trou ovale*, has also been given to the foramen obturatorium, as well as to the foramen in the inner paries of the middle ear, which opens into the vestibule, and to the foramen in the sphenoid bone, through which the third branch of the fifth pair issues from the cranium.

O'VARISTS, *Ovists*. Those physiologists, who think that the phenomena of generation, in the human species and in every species of animal, result from the developement of the ova or ovula of the female, fecundated by the male. Not many of the physiologists of the present day can be classed among the ovarists.

OVAR'IIUM. Diminutive of *ovum*, 'an egg.' The *Ovary*, *Testis mulie'bris*, *T. femineus*, *Oar'ion*, *Ooph'oron*. The ovaries are the organs in which the ova are formed in oviparous animals. By analogy, the name has been given to the organs which the ancients called the *testicles* of the female.

They are two ovoid bodies, almost as large as the testicles in men, placed on each side of the uterus between the fallopian tube and round ligament and in the substance of the broad ligament. Their outer extremity gives attachment to one of the projections of the fimbriated extremity of the fallopian tube; and the internal is fixed to the uterus, by a small ligamentous cord, called *Ligamentum rotundum ova'rii*. The ovaries are composed of a very close, spongy texture, and of small vesicles filled with a clear fluid; these have been regarded as so many ova, which detach themselves from the ovarium after fecundation and are carried into the cavity of the uterus by the fallopian tube.

OVIP'AROUS, *Oviparus*; from *ovum*, 'an

egg,' and *pa'rio*, 'I bring forth.' An epithet applied to animals, which are hatched from eggs outside of the body.

OVUM, *ovon*, *Oon*, an egg. The eggs of poultry are chiefly used as food. The different parts are, likewise, employed in medicine. The shell, *Auran'cum*, *Auran'tum* (calcined), (F) *Coque d'œuf*, *Coquille d'œuf*, is esteemed an absorbent. The Oil of the egg is emollient and is used, externally, to burns and chaps. The Yolk of the egg—*Vitellum ovi*, renders oils, &c. miscible with water.

Eggs, when light boiled, are easy of digestion; but, when very hard boiled or fried, they are more rebellious.

In *pharmacy*, the white of egg, which consists chiefly of albumen is used for clarifying syrups, &c.

The yolk of egg, (F) *Jaune d'œuf*, beaten up with warm water and sugar, and aromatized with orange-flower water, forms an emulsion, which is emollient, and known under the name—*Lait de poule* or *chicken's milk*.

Anatomists give the name *Ova*, (F) *Œufs*, to round vesicles, containing a humour similar to the white of egg, which are situate in the ovaries of the female, and, when fecundated, constitute the rudiments of the fœtus. During gestation, the embryo and its enveloping membranes retain the name *Ovum*, (F) *Œuf*.

The changes induced in the mammalia after impregnation greatly resemble those in the bird. Dr. Allen Thomson has given the following tabular view of the parts that correspond.

IN THE QUADRUPEL.

The Ovary contains:

1. Graafian vesicles which are filled with fluid, granules, and the proligerous disc, in the centre of which is placed
2. The ovulum or vesicle of Von Baer, consisting of
3. A yolk, on the surface of which is
4. A germinal membrane, in the middle of which is placed
5. The germinal vesicle, or vesicle of Purkinje.

IN THE BIRD.

The Ovary contains:

1. Capsules entirely filled with ovula, there being no intervening fluid or proligerous disc.
2. The ovula or yolks consisting of
3. A yolk,
4. A germinal membrane or cicatricula, with the
5. Vesicle of Purkinje in its centre.

OXAL'IC ACID, *Acidum oxali'num*, *A. sacchari'num*, *A. hydro-carbon'icum*, *A. acetosel'læ*, *A. oxal'icum*, *Acidum sac'chari*, *Acid of sugar*; *Acid of sorrel*, *Car'bonous acid*, from *οξαλις*, 'sorrel.' An acid found in sorrel. It crystallizes in long, colourless, quadrangular prisms, and is generally found, in nature, united with lime or potassa. It has been proposed, in a diluted state, as a refrige-

rant, but it is unnecessary; and, besides, in quantity, it is a virulently acrid poison. It is largely employed for cleaning boot tops; and, as it strongly resembles the sulphate of magnesia, has often been mistaken for it. Several fatal cases are, indeed, on record. For its antidotes, &c.—See Poison.

OX'ALIS ACETOSEL'LA. The systematic name of the *Woodsorrel*, *Cuckowbread*, *Trifo'lium acetosum*, *Oxitriphyl'lum*, *Lujula*, *Allelu'ja*, *Acetosel'la*, *Oxyphyl'lon*, *Oxytriphylon*, *Panis cu'culi*, (F) *Surelle*, *Oxalide*, *Pain à Coucou*, *Alleluia*. Family, Geraniæ. Sex. Syst. Decandria Decagynia. The plant has a gratefully acid taste, and is used in salads. It has been esteemed refrigerant, antiscorbutic, and diuretic.

OXAL'ME, *οξαλμη*. A mixture of vinegar and salt, from *οξυς*, 'acid,' and *αλς*, 'salt.'

OXELÆ'ON, from *οξυς*, 'acid,' and *ελαιον*, 'oil.' A mixture of vinegar and oil, used as a condiment.

OXINES, *οξινης*, from *οξυς*, 'acid.' Wine already sour, but not yet vinegar.

OXYCAN'THA GALE'NI, *Ber'beris*, *Ber'beris vulga'ris*, *Spina ac'ida*, *Crespinus*, (F) *Épine vinette*, *Vinettier*. Family, Berberidæ. Sex. Syst. Hexandria Monogynia. The *Bar'berry*. The fruit or berries are gratefully acid, and moderately astringent.

By preparing an alcoholic extract of the root and adding water to it, a pulverulent brown substance is thrown down, which when dissolved in alcohol and evaporated yields the bitter principle, *Berberine*. It is an excellent stomachic in the dose of 2, 5, or 10 grains.

OX'YCRATE, *Oxycra'tum*, *Posca*, *Phusca*, from *οξυς*, 'acid,' and *μεινω*, 'I mix.' A mixture of vinegar and water; frequently used in medicine as refrigerant and antiseptic.

OXYCRO'CEUM (EMPLAS'TRUM), from *οξυς*, 'acid,' and *κροκος*, 'saffron.' A plaster, composed of *saffron*, *pitch*, *colophony*, *yellow wax*, *turpentine*, *galbanum*, *gum ammoniac*, *myrrh*, *olibanum*, and *mastic*. It was employed as a strengthening plaster.

OXYD, *Oxid*, *Oxide*, *Oxyde*, *Oxy'dum*, from *οξυς*, 'acid.' A combination, not acid, of a simple body with oxygen.

OXYDA'TION, *Oxyda'tio*, *Oxygena'tion*. The action of oxydizing a body; that is, of combining it with oxygen; a combination from which results an oxyd.

OXYDE, CYSTIC. A species of urinary calculus, having the shape of confused, yellowish, semi-transparent, insipid, very hard crystals. When distilled, it furnishes subcarbonate of ammonia, like all azoted matters. It dissolves in the nitric, sulphuric, phosphoric, and oxalic acids.

OXYDUM FERRI NIGRUM, *Black oxyd of iron*. The scales, which fall from iron, when heated, consist of iron, combined with oxy-

gen. They have been used like the chalybeates in general.

OXYDUM STIBII SULPHURATUM, *Hepar antimonii*, *Crocus metallo-rum*, *Crocus antimonii*, (F) *Oxyde d'antimoine sulfuré*, *Foie d'Antimoine*. This was formerly exhibited in the cure of fevers, but it is now rarely employed.

OXYDERCICUS, *Oxyder'ces*, from *οξύς*, 'sharp,' and *δῆκω*, 'I see.' A medicine, which sharpens the sight.

OXYG'ALA, from *οξύς*, 'sour,' and *γάλα*, 'milk.' Sour milk. The *Oxygala equinum*, *Caracos'mos*, is reckoned amongst the delicacies of the Tartars.

OXYG'ARON, from *οξύς*, 'acid,' and *γάρων*, 'garum.' A composition of garum and vinegar.

OX'YGEN, *Oxygé'nium*, *Empyr'eal air*, *Pure air*, *Vital air*, *Dephlogisticated air*, *Oxygenes*, *Ox'ycum*, *Princip'ium oxyg'enans* seu *oxygineticum* seu *acid'ificans* seu *ac'i-dum*, *Elemen'tum acidificum*, (F) *Air du feu*, from *οξύς*, 'acid,' and *γενεσθαι*, 'I engender,' i. e. *generator of acids*; and such it was believed to be, *exclusively*, at the period when the name was given to it. This is now known not to be the case. Oxygen is largely distributed in nature. It exists in the air, in water, in several acids, all the oxyds and all the salts, except in some ammoniacal salts, and in vegetable and animal substances, &c. It is obtained by decomposing the peroxyd of manganese or the chlorate of potassa by heat and in close vessels.

Although oxygen, in the state of admixture in which it is found in the atmosphere, is of vital importance, yet it cannot be respired in a pure state with impunity. Animals die in it long before the whole of the oxygen is consumed.

The properties of oxygen seem to be stimulant. It increases the force and velocity of the pulse, and has, accordingly, been used in cases of chronic debility, chlorosis, asthma, serophula, dropsy, paralysis, &c. It requires to be diluted with from 10 to 20 parts of atmospheric air; one to two quarts being given during the day.

OXYGÉNÈSES. A name, given by Baumes to diseases, which he attributed to disordered oxygenation.

OXYG'LYCUS, *Oxyg'lycy*, *Oxyg'lyces*, *Mulsa acida*, *Acetum mulsum dulce*. Prepared by macerating and boiling honey-comb (from which the greater part of the honey has been taken) in water, and adding vinegar. An *oxymel*.

OX'YMEL, *Apom'eli*, *Mel aceta'tum*, from *οξύς*, 'acid,' and *μέλι*, 'honey.' Honey and vinegar boiled to a syrupy consistence.

SIMPLE OXYMEL, *Oxymel simplex* is prepared as follows; (*Mellis despumati* ℥ ij, *acidi acetici* ℥ j. Boil in a glass vessel, over

a slow fire, to a proper thickness. *Ph. L.*) It is cooling;—externally, detergent.

OXYMEL COL'CHICI, *Oxymel of meadow saffron*, (F) *Oxymel colchique*. (*Rad. colch. recent. in laminas tenues sectæ* ℥ j, *aceti distillati* ℥ j, *mellis despumat. pond.* ℥ ij. Macerate in a gentle heat for 48 hours. Press and boil the liquor with the honey to the thickness of a syrup; stirring with a wooden spoon. *Ph. D.*) It is expectorant and diuretic. Dose ℥ j in gruel.

OXYMEL SCILLÆ, *Oxymel of squill*, *Mel scillæ*, *Oxymel scillit'icum*. (*Mellis despumat.* ℥ iij, *aceti scillæ* ℥ ij. Boil in a glass vessel over a gentle fire to a proper consistence. *Ph. L.*) It is reputed to be expectorant and diuretic. Dose ℥ j.

OXYNI'TRON, from *οξύς*, 'acid,' and *νίτρον*, 'nitre.' Name of a plaster, composed chiefly of vinegar and nitre, and recommended by Aëtius.

OXYO'PIA, *Acies visus*, from *οξύς*, 'quick,' and *ὥψ*, 'sight.' Excessive acuteness of the sense of sight. Instances have occurred, where persons could see the stars in the daytime. The cause is seated in great sensibility of the retina. The term has been used synonymously with nyctalopia.

OXYOSPHRE'SIA, from *οξύς*, 'acute,' and *ὀσφρησις*, 'smell.' Acuteness of the sense of smell.

OXYPHLEGMA'SIA, *ὀξυφλεγμασία*, *Acuta et vehemens inflammatio*. A very violent inflammation.

OXYPHO'NIA, *Vox acu'ta*, from *οξύς*, 'sharp,' and *φωνή*, 'voice.' *Parapho'nia clangens*, *P. ulcero'sa*, *Leptopho'nia*. A shrill and squalling voice; frequently, a symptom of morbid affection of the larynx.

OXYREG'MIA, *acidus ructus*, from *οξύς*, 'sour,' and *ερευνᾶω*, 'I belch.' Acid eructations.

OXYRRHOD'INON, from *οξύς*, 'acid,' and *ῥόδον*, 'a rose.' A composition of vinegar and roses. (*Ol. rosat.* ℥ ij, *acet. rosat.* ℥ j.) Used as a liniment in herpes and crysipelas.

OXYSAC'CHARON, from *οξύς*, 'acid,' and *σακχαρόν*, 'sugar.' A mixture of sugar and vinegar. It was called *Oxysac'charum vomiti'vum*, when it held in solution the glass of antimony; and *Oxysac'charum scillit'icum*, when it contained squills.

OXYSAL DIAPHORET'ICUM AN'GE-LI SALÆ. A preparation of Angelo Sala. Acetate of potass exposed to the atmosphere; and, consequently, fallen into a state of deliquium.—Orfila.

OXYT'OCOS, from *οξύς*, 'quick,' and *τινῶ*, 'I bring forth.' A medicine, which promotes delivery.—Dioscorides.

OZÆ'NA, *Cory'za enton'ica*, *C. ozæno'sa*, *Coryza virulen'ta*; from *ὀζᾶω*, 'I smell badly.' (F) *Ozène*. An affection of the pituitary membrane, which gives occasion to a disa-

greeable odour, similar to that of a crushed bed-beg: hence the name *Punais*, by which the French designate one labouring under ozæna. It is, sometimes, owing to caries of

the bones; but is, perhaps, most frequently dependent upon syphilitic ulceration of the pituitary membrane, with or without caries of the bones of the nose.

P

P. A contraction of *Pugil-*
lus.

P. Æ. A contraction of
Partes æquales.

P. P. A contraction of *Pul-*
vis patrum.

See Abbre-
viation.

PABULUM, *Trophe*, *Phorbe*, *Alimen'tum*.
Food, aliment.

The *animal heat* and *animal spirits*—un-
meaning terms—were formerly considered
the *Pabulum vitæ*.

PACCHIO'NI, GLANDS OF, *Glan'dulæ*
Duræ Matris, *G. duræ meningis*, *Tuber'cula*
parva duræ matris, *Cor'pora glandifor'mia*
duræ matris, (F) *Granulations cere'brales*.
Small, whitish, or yellowish bodies, sometimes
separate, sometimes united like a bunch of
grapes, which are observed in several parts of
the dura and pia mater. They receive vessels,
but apparently no nerves. Their texture and
uses are unknown. A considerable number
is observed in the longitudinal sinus, covered
by the internal membrane.

PACHÆ'MIA, *Pachyæ'mia*, from *παχυς*,
'thick,' and *αἷμα*, 'blood.' Too great thick-
ness of the blood.

PACHEABLEPHARO'SIS, *Pacheableph'*
ara, *Pachybleph'aron*, *Pachyblepharó'sis*, *Pa-*
chytes, from *παχυς*, 'thick,' and *βλεφάρων*, 'an
eyelid.' A name given, by some authors, to
a thickening of the eyelids, produced by tu-
bercles or excrescences formed on their mar-
gins. It is the same affection as that which
Sauvages designates *Caligo à Pacheableph-*
aró'si.

PAD, (S) *Pajado*, from *paja*, 'straw.' *Plu-*
maceolus, *Pulvil'lus*, *Parvum pulvi'nar*;—a
cushion; a *little cushion*; a *Junk*; (F) *Cous-*
sinet. Small bags, filled with feathers, wool,
hair, bran, chaff, &c. They are used to com-
press or support certain parts.

In the treatment of fractures, soft pads or
cushions, called by the French *Remplissage*,
are placed between the splints and the frac-
tured limb, in order that the prominent parts
may not be chafed by the splints.

PAD'UA, MINERAL WATERS OF.
Near Padua, in Italy, there are several ther-
mal, sulphureous springs; the hottest of
which is 188° Fahr. The chief establishments
are Abano, Battaglia and Montegrotto.

PÆDAN'CHONE, from *παις*, 'a child,'
and *αγγα*, 'I strangle.' *Angi'na Sicca*. Name
of a fatal species of cynanche, mentioned by
M. A. Severinus;—probably the *Cynanche*
Trachealis, (q. v.)

PÆDATROPH'IA, from *παις*, *παιδος*, 'a
child,' *α*, privative, and *τροφη*, 'nourishment.'
Atrophy of children.

PÆDERAS'TIA, from *παις*, 'a boy,' and
ερας, 'love.' The love of boys. A disgraceful
passion, common in ancient times, but now
unknown.

PÆDIATRI'A, *Pædiat'rica*, from *παις*, 'a
child,' and *ιατρεια*, medical management.
Treatment of the diseases of children.

PÆDOPHLEBOTO'MIA, from *παις*, 'a
child,' *φλεψ*, 'a vein,' and *τομή*, 'incision.'
Venæsectio puero'rum. Bleeding performed
on children.

PÆDOT'RIBA, *Min'ister Gymnas'tæ*,
from *παις*, 'a child,' and *τρίβω*, 'I train.' In
ancient gymnastics, the officer acquainted
with all the prescribed exercises, and who
carried them into effect, according to the di-
rections of the superior.

PÆO'NIA, *P. officina'lis*, *Glycys'idè*, *Hæ-*
mago'gum, *Pæony*, *Pæony*, *male and female*.
(F) *Pivoine*, *Pione*. The root, flowers, and
seeds were long esteemed powerful medicines.
They are feebly astringent, and have been
considered to be narcotic and antispasmodic.
They have been given, particularly, in inter-
mittents and epilepsy, but are not now used.
The flowers are called *Rosæ benedic'tæ*, *R.*
regiæ.

PAIN, (old F) *painer*, 'to torment;' Sax.
pin: *Dolor*, *Algos*, *Alge'ma*, *Alge'don*, *Alge'-*
sis, *Od'yne*, (F) *Douleur*. A disagreeable sen-
sation, which scarcely admits of definition. It
is generally symptomatic, and is called *acute*,
(F) *aigue*, when very violent: *pungent*, (F)
pongitive, when it resembles that which would
be produced by a sharp instrument run into
the part: *heavy*, (F) *gravative*, when attend-
ed with a sensation of weight: *tensive*, when
the part seems distended: *lan'cinating*, when
occurring in shoots: *lac'rating* or *tearing*,
when the part seems to be tearing: *burning*,
(F) *brûlante*, when resembling that produced
by a burn, &c.

PAINS, *Labour pains*, *Parturien'tis dolo'res*,

Odin, Dolo' res ad partum, Mal d'Enfant, Douleurs. The uneasy sensations that accompany labour, and are owing to uterine contraction. The pains that precede actual delivery, and are simply employed in dilating the os uteri, are called *grinding*; those which extrude the child, *forcing*. Those which take place in the first days after delivery, and are employed in forcing away coagula, &c., are termed *After pains, Dolo' res post partum, D. puerpera' rum, (F) Tranchées utérines.*

"TO TAKE A PAIN,"—"To try a pain,"—is to make an examination *per vaginam*, during labour, to discover its progress, character, &c.

The French term the pains, which precede and announce labour, *mouches*; those which accompany it, *douleurs*; and those which occur immediately afterwards, *tranchées ou coliques*.

PAINT, from *pinctum*, 'painted,' (I) *pinto*, (F) *peint*. *Pigmen'tum, Fucus, (F) Fard.* A name given to different substances, employed for embellishing the complexion or rendering the skin softer. The substances most commonly used for this purpose are:—the *Subnitrate of Bismuth, (F) Blanc de fard.* A spirituous solution of Benzoin, precipitated by water, and forming the *Virgin's milk, (F) Lait virginal*; the red or *rouge* of the carthamus, *Spanish white*, the oxides of lead, tin, and mercury, vermilion, red saunders, &c.

All paints may be said to be noxious. They injure the skin, obstruct perspiration; and, thus, frequently lay the foundation for cutaneous affections. See Cosmetic.

PALATE, *Pala'tum, Hypero'a, Epis'ion*, the *Roof of the Mouth, Fossa Palati'na, Palatum stabile, (F) Palais.* The upper part of the cavity of the mouth; a kind of parabolic vault, formed by the two superior maxillary bones and the two palate bones, covered with a thick and dense mucous membrane: bounded, before and at the sides, by the superior dental arch; and, behind, by the velum palati. A whitish line runs along the middle, from before to behind; at the anterior extremity of which is a tubercle corresponding to the inferior orifice of the anterior palatine canal. The arteries of the palate and corresponding gums proceed from the palatine, alveolar, infra-orbital, labial, and buccal branches. The veins follow a similar course. The nerves are given off from the palatine, facial, infra-orbital, superior dental, and from the naso-palatine ganglion.

PALATE, PAL'ATINE, *Palati'nus*, from *pala-tum*, 'the palate.' Relating or belonging to the palate.

The PALATE BONE, *Os Palati, Os Basila'rè, (F) Os Palatin, Os du Palais*, is a small bone of an irregular shape, situate at the posterior part of the nasal fossæ and palate. It seems formed by the union of two bony

plates joined at right angles to each other; so that one is *inferior* and *horizontal*:—the other, *superior* and *vertical*.

The *horizontal* or *palatine* portion is quadrilateral. Its upper surface forms part of the nasal fossæ; the lower, of the palatine arch, and contains the inferior orifice of the *posterior palatine canal*. Its *anterior* edge is articulated with the palatine process of the superior maxillary bone; the *posterior* is free and sharp. It gives attachment to the velum palati, and presents an eminence, which, when joined with one on the opposite side, forms the posterior nasal spine. Its inner edge is articulated with the corresponding bone: its outer is confounded with the vertical portion.

The *vertical* or *ascending* portion has the form of a long square. The inner surface forms part of the outer paries of the nasal fossæ. Its outer surface is unequal, and is articulated with the superior maxillary bone: behind, it presents a vertical groove, which forms part of the posterior palatine canal; and, above, a small free surface, which looks into the zygomatic fossa. Its anterior edge is united with the superior maxillary bone: the posterior is unequal, and rests on the internal ala of the pterygoid process. The angle, which it forms by uniting with the posterior edge of the horizontal portion, presents a very prominent pyramidal eminence, called the *tuberosity of the palate bone*. Its upper margin is surmounted by two eminences;—the one, anterior, called the *orbital process*:—the other, posterior, the *sphenoid process*. These two processes are separated by an almost circular notch, which the sphenoid bone forms into a foramen, called the *spheno-palatine*.

This bone appears to be developed from a single point of ossification. It is articulated with the sphenoid, ethmoid, the cornua sphenoidalia, superior maxillary bone, the inferior spongy bone, the vomer, and its fellow.

PALATE, ARTIFI'CIAL, (F) *Obturbateur du Palais*. A plate of tortoise shell, silver, &c., used to close the deficiency of the palate in cases of such affections.

The PALATINE MEMBRANE is the fibro-mucous membrane, that lines the palate or roof of the mouth.

The PALATINE CANALS or DUCTS. These are two in number. The *anterior, Ductus incisivus*, vel *Nasa'lo Palati'nus*, is situate at the anterior part of the palatine arch, and is formed by the two superior maxillary bones. It is single beneath, but opens above by two apertures, one into each nasal fossa. The foramen is called the *Fora'men incisivum*, vel *F. Palatinum antèrius, F. Alveola'rè antèrius, F. cæcum ossis maxilla'ris superioris*.

The *posterior palatine canal* is situate at the posterior part of the palate. It is formed by the palate and superior maxillary bones, ascends between these two bones; and, in its

course, gives rise to two or three small accessory palatine canals, which open above the tuberosity of the palate bone. It transmits the nerves and vessels which bear its name. The foramen is called, *F. Palati'num poste'rius*, *F. Palato-maxilla'rē*, *F. alveola'rē poste'rius*.

The PALATINE OR PALATAL ARTERIES are two in number. They are distinguished into, 1. The *superior palatal* or *palatine*, *Palatina descen'dens* or *Palato-maxillary*, which leaves the internal maxillary behind the top of the orbit; descends into the pterygo-maxillary fissure, and enters the posterior maxillary canal. Its branches are distributed to the velum palati and the nasal fossæ. 2. The *inferior* or *ascending palatine* or *palatal*, which is very small, and separates from the facial near its origin. It passes along the lateral and superior part of the pharynx, between the pillars of the velum palati, and divides into a number of ramusculi, which are distributed to the pharynx, the corresponding tonsil, the eustachian tube, and the velum palati.

The PALATINE OR PALATAL NERVES, *Gut-turo-palatins* (Ch.), are three in number; and arise from the inferior part of the sphenopalatine ganglion. 1. The *great palatine*, *Palatin inférieur* (Ch.), is situate anteriorly to the two others, and descends into the posterior palatine canal; gives a *nasal* filament and a *staphyline* filament, and is distributed on the palate. 2. The *middle palatine*, *Gut-tural* (Ch.), which arises behind the preceding: enters one of the accessory palatine canals, and is distributed to the tonsils and velum palati. 3. The *little palatine nerve*, situate still more backward than the last, which loses itself by several filaments in the uvula, tonsils, and follicles of the palatine membrane.

PALATO-PHARYNGEUS, *Pharyn'go-staphyli-nus*, *Staphyli'no-pharyngeus*, *Thyro-pharyn'go-staphyli'nus*, part of the *Stylo-pharyngien* (Ch.), *Hyp'ero-pharyngeus*, (F) *Palato-pharyngien*. A membranous muscle, broader at its middle than at its extremities, and situate vertically in the lateral paries of the pharynx and velum palati. It includes the peristaphylo-pharyngeus, pharyngo-staphylinus, and thyro-staphylinus of Winslow. When the two palato-pharyngei contract together, they depress the velum. They elevate and shorten the pharynx, and act principally in deglutition.

PALENESS, *Pallor*, *Och'rotes*, *Ochro'ma*, (F) *Paleur*. Whiteness of complexion. It appears to be owing to a diminution of the blood circulating in the capillary vessels, and is often a sign of disease.

PALETTE (F), *Pal'mula*, *Fer'ula*. An instrument of percussion. It has the shape of a spatula with a long handle; is made of very light, white wood, and has been proposed, by Percy, for what is called the *Massage*, a kind of pressure or knead-

ing, exerted by the hand on the body and limbs, to excite the tone of the skin and subjacent tissues.

PALETTE A PANSEMENT. A small splint of thin, scooped wood; having the shape of the hand, and used to support the hand in certain cases—when burnt, for example—in order to prevent the fingers from being deformed by the cicatrices.

PALETTE DE CABANIS. An instrument, invented by Cabanis of Geneva, to draw out the extremity of the stylet when passed into the nose, in the operation of fistula lachrymalis. It is composed of two plates of silver, pierced with several holes, and movable on each other. To use it, the instrument must be carried into the nose, so that the holes of the two plates correspond. When the end of the stylet is received into one of these holes, it is pinched, by sliding one of the plates on the other, and is easily withdrawn.

PALINDROMIA, *παλινδρομια*, from *παλιν*, 'again,' and *δρομος*, 'a course.' This word signifies, with some, a reflux of fluids from the exterior towards the interior, and, according to others, the relapse of an affection—the recurrence of a paroxysm. *Recur-sio*, *Repetitio*.

PALLIATION, *Pallia'tio*, from *pallia're*, 'to cover, mask;' from *pal'lium*, 'a mantle.' The act of palliating, that is, of causing the symptoms of a disease to mitigate, without curing it. The medical art can frequently, only moderate the symptoms of a disease, prevent it from making progress, prolong the days of the patient, and diminish his sufferings. This is a *palliative treatment*.

PAL'LIATIVE, *Palliativus*, *Antipath'ic*, *Enantiopath'ic*. A remedy or mode of treatment, which only relieves a disease, without curing it.

PALM, *Palma*, *Vola*, *Thenar*, *Ages*, *Agos'tus*, (F) *Paumē de la main*. The hollow or inside of the hand. It is limited, *without*, by the thenar eminence, which answers to the thumb; *within*, by the hypothenar eminence, which answers to the little finger; *above*, by the wrist-joint: and, *below*, by the four fingers.

PALMAR, *Palma'ris*, from *palma*, 'the palm of the hand.' That which concerns the palm of the hand. The palm has, sometimes, been divided in three regions, called *palmar*. 1. The *external palmar region* corresponds to the thenar eminence. 2. The *internal palmar region* is formed by the hypothenar eminence: and, 3. The *middle palmar region* is the hollow of the hand, (F) *Creux de la main*.

PALMAR APONEUROSIS. A strong triangular aponeurosis, which arises from the inferior tendon of the palmaris brevis, and the anterior annular ligament of the carpus. It covers the whole palm of the hand, and adheres, somewhat strongly, to the skin of the part. The *palmar ligaments* are small, very nume-

rous, fibrous fasciæ, which unite the different bones of the carpus and metacarpus.

PALMAR MUSCLES. These are three in number.

1. *Palmaris Magnus, Flexor carpi radialis, Radialis internus, Epitrochlo-métacarpien*, (F) *Palmaire grand, Radial antérieur*. A long fusiform muscle, which passes obliquely from the inner tuberosity of the humerus to the upper extremity of the second metacarpal bone. It bends the hand.

2. *Palmaris Longus, Latescentis chordæ, Ulnaris gracilis, Epitrochlo-carpi-palmaire*, (F) *Palmaire long, P. grêle*. This muscle is situate on the inner side of the last. It is very slender, and passes from the inner tuberosity of the humerus to the anterior annular ligament of the carpus, and to the palmar aponeurosis, which it seems to form by the vanishing of its fibres. It stretches the palmar aponeurosis, and bends the hand.

3. *Palmaris Brevis, P. Brevis vel Caro quadra'ta, Palmaire cutané, Carpiæ'us*, (F) *Palmaire cutané*. A small, thin, quadrilateral muscle; situate before the thenar eminence. It passes from the annular ligament of the carpus to the integuments of the palm of the hand, which it wrinkles by its contractions.

PALMAR ARCHES, (F) *Arcades ou Crosses palmaires*. The curved extremities of the radial and cubital arteries in the palm of the hand. There are two palmar arches:—the one *cubital* or *superficial*,—*grande Arcade palmaire* of Chaussier, furnishes, at its convexity towards the fingers, the collateral arteries of the fingers, and the internal collateral of the thumb; the other, the *radial, profound, or deep-seated*,—*Petite Arcade palmaire* of Chaussier, is deep in the palm of the hand beneath the tendons of the flexor muscles of the fingers. It gives some small branches only to the surrounding parts.

PAL'PEBRA, *Bleph'aron*, (F) *Paupière*. The eyelids are two movable vela, situate in front of the eye; which by their separation permit the organ to receive the impression of light, or by their greater or less occlusion protect it from the influence of too great light, or from the action of extraneous bodies.

They are separated, above, from the forehead, by the eyebrows; and, below, are confounded with the cheeks. They are distinguished into *upper* and *lower*. The former is much broader and more movable than the latter. They are separated by a transverse cleft; and their edges are thick, and furnished with the cilia or eyelashes. Supported by the tarsal cartilages, they unite at the extremities of the transverse diameter of the orbit: forming two angles; the innermost being called the *greater angle of the eye*, or *inner or greater canthus*; the other, the *lesser or external angle* or *canthus*.

The eyelids are formed, 1. Of a thin dermoid texture: 2. Of a muscular membrane,—a portion of the orbicularis: 3. Of a particular fibrous membrane: 4. Of the tarsi:

and 5. Of a mucous membrane,—a part of the tunica conjunctiva.

Their vessels and nerves are called Palpebral, (q. v.)

PAL'PEBRAL, *Palpebra'lis*, from *palpebra*, 'the eyelid.' That which belongs or relates to the eyelid.

The **PALPEBRAL ARTERIES** are those distributed to the eyelids. They are two in number; an *upper* and a *lower*. The *former* arises from the ophthalmic, a little beyond the cartilaginous pulley of the greater oblique muscle and descends towards the upper eyelid, over which it is distributed. The *latter* arises at the side of, and a little behind, the preceding, and sends its ramifications into the lower eyelid and the neighbouring parts. The palpebral veins have a similar arrangement; except that some of them open into the temporal and labial veins.

The **PALPEBRAL NERVES**, or *Nerves of the Eyelids*, arise, particularly, from the frontal and lachrymal branches; from the ophthalmic nerve of Willis; from the facial, nasal, and from the infra-orbital branch of the superior maxillary nerve.

The **PALPEBRAL LIGAMENTS** are distinguished into *superior* and *inferior*. Some anatomists, with Winslow, have described, under this name, the fibrous layer, which is attached,—on the one hand, to the outer part of the circumference of the orbit; on the other, to the tarsal cartilages.

PURIFORM PALPEBRAL FLUX. A puriform discharge, furnished by the glands of Meibomius, when inflamed; and to which Scarpa attributes fistula lachrymalis, in many cases.

PALPITA'TION, *Palpita'tio, Palmus, Palpita'tio Cordis, Subsultio, Clonus Palpita'tio*, (F) *Palpitation, P. du Cœur*. A name, given to the pulsations of the heart, when they become stronger, more extensive, or more sensible to the individual, than ordinarily.

Palpitations occur in a number of affections. They are, sometimes, owing to organic disease of the heart, hypertrophy, inflammation, &c.; at others, to a disease in some other viscus; whilst, frequently, they are merely nervous.

PALPITATION is sometimes felt in the arteries, constituting the *Palpitatio Arteriosa*.

PALPITATIO MEMBRO'RUM. A term, used by Gaubius for involuntary shaking of the legs.

PAMPLE'GIA, *Panplegia*; from *παν*, 'all,' and *πληγῶ*, 'I strike.' General paralysis. Palsy of the whole body.

PANACE'A, from *παν*, 'all,' and *αἰσμαι*, 'I cure.' *Universa'lè reme'dium, Panchrestos*. A pretended universal remedy. There is no such thing in existence.

PANA'DA. Diminutive of Ital. *Pane*, 'bread,' (Lat. *Panis*.) *Pana'ta, Panatel'la*. Bread, boiled in water to the consistence of pap. Sometimes administered to the sick.

PANAX QUINQUEFOLIUM, *Ginseng*, *Ninsing*. Family, *Araliaceæ*. Sex. Syst. Polyandria Monœcia. This plant grows in Tartary and North America. The root is about the thickness of the little finger; an inch or two in length, often dividing into two branches; of a whitish-yellow colour; wrinkled on the surface, and of a compact, almost horny, texture. It has no smell, but a very sweet taste, combined with a slight degree of aromatic bitterness. It is much esteemed by the Chinese, who pay a high price for it. It is a gentle and agreeable stimulant.

PANBIO'MA, *Pambio'ma*, from παν, 'all,' and βίος, 'life.' The original animating principle. The general principle of life.

PANCHYMAGO'GUM, *Pantago'gon*, from παν, 'all,' χυμος, 'juice,' and ἀγω, 'I drive away.' A medicine, which the ancients believed capable of purging away all sorts of humours.

PAN'CREAS, from παν, 'all,' and κρεας, 'flesh;' i. e. quite fleshy. *Callic'reas*, *Totum carnosum*, *Gland'ula saliva'lis abdom'inis*, *Pancr'ne*. A gland, deeply seated in the abdomen, and lying transversely on the vertebral column; between the three curvatures of the duodenum; behind the stomach, and to the right of the spleen. Its left extremity is called the *tail* of the pancreas; it is smaller than the right, which is called the *head*. At its right portion, it has, almost always, a greater or less prolongation; called, by Winslow and some others, the *lesser pancreas*, (F) *Petit pancréas*, or *Pancreas of Aselli*, *Pancreas minus*.

The pancreas resembles the salivary glands in structure, and has been called the *Abdominal Salivary Gland*. It is composed of lobes and granulated lobules, distinct and united by cellular tissue. From each of the granulations of these lobes arise the radicles of its excretory duct, which are very delicate, and are united like veins. The duct itself, *Ductus Pancreat'icus*, *Canal* or *Duct* of *Wirsung* or *Wirsungus*, (F) *Canal pancréatique*, proceeds in a serpentine course into the substance of the organ; and, when it has reached behind the second portion of the duodenum, it becomes free, and is of the size of a crow's quill. It opens at an acute angle into the choledoch duct, or proceeds close to it, opening separately into the duodenum. The *Pancreatic arteries* are very numerous and small. They proceed from the cœliac, splenic, superior mesenteric, right gastro-epiploic, coronaria ventriculi, and left capsular. Its veins open into the radicles of the vena porta; and, particularly, into the splenic and lesser mesenteric. Its nerves emanate from the solar plexus, and its lymphatics pass into ganglions, to which it gives its name. The pancreas secretes the pancreatic juice, *Succus seu Liquor Pancreaticus*, *Lympha Pancreat'is*, which resembles the saliva.

PANCREATEMPHRAXIS, from παγ-

κρεας, 'the pancreas,' and εμφρασσα, 'I obstruct.' Obstruction of the pancreas.

PANCREATIC SARCO'MA OF ABERNETHY, *Emphy'ma Sarco'ma pancreat'icum*. A tumour, in irregular masses, connected by loose fibrous substance, like the irregular masses of the pancreas. Found in the cellular substance; but, more usually, in lymphatic glands: chiefly in the female breast.

PANCREATITIS. Inflammation of the pancreas;—an affection, the phenomena of which are unknown to us.

PAN'CREATOID, from παγκρεας, 'the pancreas,' and εδος, 'appearance.' A tumour, resembling the pancreas in structure.—Mau-noir.

PANDICULA'TION, *Pandicula'tio*, *Scordine'ma* or *Scordine'ma*, *Scordinis'mos*, *Clonus Pandicula'tio*, from pandiculari, 'to stretch one's self,' *Stretching*, *Hal'ices* (Pl.) An action, which consists in elevating the upper limbs, and throwing the head and trunk backwards; at the same time that the lower limbs are extended. This series of motions of the extensor muscles is, in some measure, independent of the will, and is accompanied with yawning, which is equally involuntary. In the state of health, stretching occurs before and after sleep; especially when we are fatigued. It is, also, observed at the onset of certain paroxysms of fever, hysteria, &c.

PAN'ICUM ITAL'ICUM, *Italian Panic Grass*, *Indian Millet*, *Guinea Corn*, *Barbadoes Millet*, *Milium In'dicum*, *Sorghum*, *Hoc'us Sorghum*, (F) *Millet des oiseaux*. Nat. Ord. Gramineæ. The seed—*Mil'ii Sem'ina*—are much esteemed in Italy, being a constant ingredient in the soups, and made into a variety of forms for the table.

PANICUM MILIA'CEUM, *Common Millet*, *Milium*, *Cenchron*, *Cenchrus*, (F) *Millet ordinaire*. Millet-seed are esteemed as a nutritious article of diet and are often made into puddings.

PANNIC'ULUS. Diminutive of *Pannus*, cloth. A piece of fine cloth.

The **PANNICULUS CARNO'SUS**, *Tu'nica carnosa*, *Muscular Web*, *Mantle*, is a general covering, found in the quadruped, and formed by a thin, subcutaneous muscle, which serves to move the skin. It exists only in certain parts of the human body; as in the forehead, where it is formed by the occipito-frontalis; in the neck, by the platysma myoides; and, in the scrotum, by the cremaster muscle.

PANNUS. A piece of cloth. This word has several other meanings, which are equivocal. It means a tent for a wound. Also, a speck in the eye, resembling a piece of rag; and, an irregular nævus or mark on the skin.—Castelli.

PANOPHO'BIA, *Pantopho'bia*, *Athym'ia*, *Pavor*, (F) *Frayeur nocturne*, *Souci*, from Παν, 'the god Pan,' and φόβος, 'fear.' A panic, or fear,—inspired by the god Pan, ac-

cording to the opinion of the ancients. Some derive it from *παν*, 'all,' and *φοβος*, 'fear.' This is sometimes morbid, and is a symptom of melancholy.

PANSPER'MIA, from *παν*, 'all,' and *σπέρμα*, 'sperm.' The theory of *Dissemination of Germs*, according to which ova or germs are disseminated over all space, undergoing developement under favourable circumstances.

PAPA'VER, *P. somniferum*, *Mecon.* The *White poppy*, *Papaver sativum*, (F) *Pavot des Jardins.* Family, *Papaveraceæ.* Sex. Syst. *Polyandria Monogynia.*

The **CAPSULE OF THE WHITE POPPY**, *Codia*, *καδία* or *καδία*, *Scaphion*, *σκαφίον*, *Papav'eri* *Caput vel Cap'sula*, is used in fomentation, as anodyne and relaxant—to inflamed or ulcerated parts. The expressed oil of the seeds is called by the French *Huile d'Œillette.* It is from this poppy that we procure—

OPIUM; called, also, *Opium Theba'icum*, *Meco'nium*, *Opion*, *Manus Dei*, *Affion*, *Amphiam*, *Afium*, *Osoron*, *Lau'danum.* It is the milky juice, obtained, after the flowering of the plant, by making longitudinal incisions in the capsules and stalks. It is commonly obtained from the Levant or India, where the poppy grows abundantly.

Opium is a compound of morphine, meconic acid, narcotine, caoutchouc, fecula, resin, oil, and several other substances.

Turkey Opium is of a heavy, and slightly fetid odour. Its taste is nauseous, bitter, acrid, and warm; it is in flat pieces; solid and tenacious; of a dark brown colour and yellowish, when powdered; marking a light brown, interrupted, streak on paper. In *East India Opium*, the odour is the same and empyreumatic; the taste is less bitter, but more nauseous, and the colour darker.

Opium is stimulant, in small doses; sedative, in large; narcotic and anodyne; operating through the nervous system. It is a most valuable remedy in all painful affections and in inflammations, when given so as to produce its full, sedative effect, especially in peritonitis. In diarrhoea and dysentery it acts as an astringent; in intermittents, it will often prevent the paroxysm. In typhus, in small doses, it acts as a cordial; in larger, it allays irritation and produces sleep. When applied externally, its narcotic effects are developed; and, hence, it is a useful application to irritable sores, painful tumours, &c. Dose, gr. $\frac{1}{4}$ to $\frac{1}{2}$ as a stimulant; gr. j to iv as a sedative.

PAPAVER NIGRUM. This is merely a variety of the white poppy, producing black seeds.

PAPAVER RHEAS. The systematic and pharmacopœial name of the *Red corn-poppy.* *Papaver errat'icum*, *Papaver cerea'le*, *Rheas*, (F) *Coquelicot.* The heads of this species contain, also, a milky juice of a narcotic quality. A syrup has been directed of its flowers, which has been esteemed diapho-

retic and slightly soothing; but is more admired for its colour than for any other property.

PAPIL'LA, *Thele.* The end of the breast, or nipple. An eminence similar to a nipple. A name given to small eminences, more or less prominent, at the surface of several parts, particularly of the skin and mucous membranes, in which latter situation they are also called *Villi.* See *Villous.* They appear formed by the ultimate expansion of the vessels and nerves, and are susceptible, in some cases, of a kind of erection. They are also called *Papillæ nervosæ*, *P. pyramida'les*, *Nervous papillæ*, (F) *Papilles ou Papilles nerveuses*, *Houppes nerveuses.*

The **PAPILLÆ OF THE KIDNEY**, (F) *Mamelons du rein*, are the projections into the pelvis of the kidney of the apices of the cones of the tubular substance of the kidney. They are also called *Proces'sus mamilla'res*, *Caruncula' papilla'res*, *Pyram'ides Malpighia'næ*, *Papill'æ renum.*

The **PAPILLÆ OF THE TONGUE** are very numerous and marked. They are observed, particularly, at the upper surface of the organ, and are distinguished into:—

1. The *Lentic'ular papillæ*, *Papillæ mucosæ*, *P. maxima*, *P. capita'tæ*, *P. valla'tæ*, *P. trunca'tæ*, *P. caliciformes.* They are arranged at the base of the tongue in two oblique lines having the shape of the letter V; and united angularly at the foramen cœcum. They have, in general, an ovoid or spherical shape, and are merely mucous follicles similar to those of the palate, lips, &c.

2. The *Fun'giform* or *Fungoid papillæ*, *Papillæ mediæ*, *P. Semi-lenticula'res*, are of indeterminate number, but always more numerous than the preceding. They are irregularly disseminated near the edges and the point of the tongue:—have a rounded and flattened head, supported by a short and narrow footstalk. Their tint is whitish. Of their real nature we are ignorant.

3. The *Con'ical*, *Conoi'dal*, or *Pyram'idal papillæ*, *P. minima*, *P. villosæ*, are the most numerous of all. Their arrangement is more regular in the forepart of the tongue than behind. They resemble small cones; the base being towards the tongue, and the apex free. The anterior are very small, and have been called *Fil'iform papillæ.* They appear to be produced by the terminations of the filaments of the lingual nerve, and are surrounded by an evident vascular network.

PAP'ULA. A *pimple*, *Exor'mia.* (F) *Bouton*, *Bourgeon.* A small, acuminate elevation of the cuticle, with an inflamed base; very seldom containing a fluid, or suppurating, and commonly terminating in scurf or desquamation.

Papulæ form the first order of Willan and Bateman's arrangement of cutaneous diseases.

PARA, *παρά*, a common prefix, 'by, near, contrary to, through,' (*per*); 'above and be-

yond,' (*ultra*); 'besides,' (*præter*.) In certain terms, as in *Paracusis*, *Parapsis*, *Parabysma*, &c., used by Dr. Good, *Para* means a defective or morbid condition.

PARABALANUS, from *παράβαλλειν*, 'to expose.' A name given, by the ancients, to a person who devoted himself to the service of the sick in hospitals; and particularly during epidemics and the plague.

PARACENTE'RIUM. Woolhouse has given this appellation to a small trocar, employed by Nuck for puncturing the eye in cases of dropsy of that organ.

PARACENTE'SIS, *Perfora'tio*, *Punc'tio*, *Punctu'ra*, *Cenembate'sis*, *Cente'sis*, *Compunc'tio*; from *παράκινται*, 'I pierce through.' The operation of *tapping* to evacuate the collected fluid in ascites, ovarian dropsy, &c.

PARACMAS'TIC, *Paracmas'ticus*, from *ταρακμαζω*, 'I decrease.' Decreasing. An epithet to a distemper, which gradually decreases. Also, according to Galen, the period of life when a person is said to grow old, which he places at from 35 to 49, after which he is said to be old,—a definition that would not suit us at the present day.—Gorræus and Castelli.

PARAC'OPĒ, *Paraph'ora*, *Paracrusis*, from *παράκοπτω*, 'I strike falsely.' Delirium. In Hippocrates, it means the slight delirium, which sometimes occurs in febrile diseases.

PARACU'SIS ACRIS, *Audi'tus a'crior*, *Paracusis oxycoi'a*, from *παρα*, 'defective,' and *ακουσις*, 'the act of hearing.' Hearing painfully acute and intolerant of the lowest sounds; a symptom in otalgia, epilepsy, cephalitis, and febrile affections.

PARACUSIS PERVER'SA, *P. Willisia'na*, *P. imperfec'ta*, *Perverse hearing*. The ear only sensible to articulate sounds, when excited by other and louder sounds intermixed with them.—Good.

PARACYNAN'CHĒ. Inflammation of the external muscles of the larynx. According to others, a slight cynanche.

PARAGLOS'SA, from *παρα*, and *γλωσσα*, 'the tongue.' Swelling of the tongue, *Dyspha'gia Linguo'sa*. Sauvages, under the term *Paruglossa deglutito'ria*, means a pretended doubling of the tongue into the pharynx, (F) *Renversement de la langue*.

PARAGOMPHO'SIS, *Paragomphosis cap'itis*; from *παρα*, 'by,' 'near,' and *γομφωσις*, 'a nailing.' Wedging of the head of the child in the pelvis during labour.

PARALAMP'SIS, *παράλαμψις*, from *παράλαμπα*, 'I shine a little.' A cicatrix on the transparent part of the eye.—Hippocr.

PARALLE'LA. A kind of scurfy, cutaneous eruption, affecting the palms of the hands and symptomatic of the venereal disease.—Forestus.

PARALO'PHIA, from *παρα*, 'near,' and *λοφια*, 'the first vertebra of the back.' The lower and lateral part of the neck, near the vertebræ.—Keil.

PARAL'YSIS, *Par'esis*, *Resolu'tio mem-*

bro'rum, *Carus paralysis*, *Catal'ysis*, (F) *Paralysie*, *Résolution des membres*; *Palsy*, from *παράλυα*, 'I relax.' Abolition or great diminution of the voluntary motions, and, sometimes, of sensation, in one or more parts of the body.

Palsy is said to be *local*, when it affects only a few muscles. When it extends to half the body, vertically or horizontally, it is called *Hemiple'gia*, or *Paraple'gia*, (q. v.) It is commonly symptomatic of disease of the brain or of the nerves themselves, and is a frequent accompaniment, precursor, or successor of apoplexy. The immediate cause is, generally, pressure, either by blood effused or by serum, or by vascular turgescence. At its onset, therefore, bloodletting may be advisable; but, afterwards, the disease becomes one of nervous debility and requires stimulants—to the paralyzed parts, or to the mucous membranes:—Frictions, sinapisms, blisters, the moxa, baths, electricity, galvanism, purgatives, and the nux vomica, which last has the property of exciting movements where the will has no longer power. The disease generally admits only of palliation, and is extremely apt to recur.

PARAME'NIA, *παραμηνια*, from *παρα*, 'badly,' and *μην*, 'a month.' *Mismenstruation*. Difficult menstruation.

PARAME'RIA, *παραμηνια*, from *παρα*, 'about,' and *μηρος*, 'the thigh.' The internal parts of the thigh.

PARANYM'PHUS, from *παρα*, 'near,' and *νυμφη*, 'a young spouse,' 'a bride.' A name given, by the ancients, to him who led the bride to the house of her husband. The term was adopted into the ancient schools of medicine, to designate the usual discourse pronounced at the end of the prescribed period of study for licentiate, in which the qualifications and merits of the candidate were described.

PARAPHIMO'SIS, *Periphimo'sis*; from *παρα*, 'about,' and *φιμωα*, 'I bridle.' Strangulation of the glans penis, owing to the opening of the prepuce being too narrow. It frequently happens in persons affected with phimosis, when the prepuce has been pushed violently behind the base of the glans, during copulation, &c.

In paraphimosis, the narrow and resisting aperture of the prepuce forms, behind the corona glandis, a kind of ligature, which strangulates the part, causes it to swell and inflame and even to become gangrenous.

Attempts must be made to bring back the prepuce. These excite considerable pain, yet they must be persevered in for some time; and should they not succeed, the rings, formed by the tumefied prepuce, must be cut transversely, and the antiphlogistic treatment be adopted.

PARAPHO'NIA, *Clangor*; from *παρα*, and *φωνη*, 'the voice.' Affection of the voice, when its character or *timbre* is disagreeable.

PARAPHRENI'TIS, from *παρά*, 'near,' and *φρενίς*, 'the diaphragm.' *Paraphrene'sis*. A name given to inflammation of the diaphragm (see *Diaphragmitis*), which was supposed always to produce delirium:—as well as to the delirium itself, accompanying that affection.—See *Phrenitis*.

PARAPLE'GIA, *Paraplex'ia*, *Rhachiparalysis*, *Rhachioparalysis*, *Paralysis spina'lis*, *P. medulla'ris*, *Carus paralysis paraplegia*, from *παρά*, dim. particle, and *πλησσω*, 'I strike.' Palsy of the lower half of the body, including the bladder and rectum. It is, generally, owing to disease of some part of the cerebro-spinal axis; especially of the spinal portion.

The ancients sometimes used the term for incomplete apoplexy. Some authors have, also, made a distinction between *paraplegia* and *paraplexia*,—using the former for a *partial apoplexy*:—the latter for *general or complete apoplexy*.

PARAP'OPLEXY, *Parapoplex'ia*; from *παρά*, dim., and *ἀποπληξία*, 'apoplexy.' False apoplexy; a soporous state, resembling apoplexy; and, especially, that which occurs in the paroxysms of pernicious intermittents.

PARAP'SIS, from *παρά*, 'defectively,' and *ἅπτομαι*, 'I touch.' Sense of touch or general feeling vitiated or lost.—Good.

PARARRHYTH'MOS, from *παρά*, dim., and *ῥυθμός*, 'rhythm.' An epithet for the pulse, when it has not the rhythm proper to the age and constitution of the individual.

PARARTHRE'MA, from *παρά*, and *ἄρθρον*, 'a joint.' Incomplete luxation.

PARASCEPAS'TRA, from *παρά*, and *σκιπάζω*, 'I cover.' A cup or bandage, which covers the whole head.—Galen.

PARAS'CHIDES, from *παρά* and *σκιζω*, 'I cleave.' Fragments or splinters of a broken bone.

PAR'ASITE, *Parasitus*, *παράσιτος*, from *παρά*, 'near,' and *σιτος*, 'corn,' 'food.' Parasites are plants, which attach themselves to other plants; and animals which live in or on the bodies of other animals,—so as to subsist at their expense. The mistletoe is a parasitic plant:—the louse a parasitic animal. The chief parasitic animals are the *Pediculus humanus corporis*, *P. capitis*, *P. pubis*, *Pulex irritans*, *P. penetrans*, and the *Acarus Scabiei*.

PARASPA'DIA, from *παρά*, and *σπᾶω*, 'I draw.' A preternatural opening of the urethra at the side of the penis. One whose urethra opens in this manner is called *Paraspadicus* and *Paraspadias*.

PARAS'PHAGIS, from *παρά*, 'near,' and *σφαγή*, 'the throat.' The part of the neck contiguous to the clavicles.

PARAS'TATÆ, from *παριστήμι*, 'I stand near.' In Hippocrates, it means the epididymis. The epididymes were called by Herophilus and Galen *Varico'sæ parastatæ* to distinguish them from the *glandulo'sæ paras-*

tatæ or *prostate*. Rufus of Ephesus called the *Tubæ Fallopianæ* *Parastatæ varico'sæ*.

PARASTREM'MA, from *παρὰστρεψα*, 'I distort or pervert.' Convulsive distortion of the face, the soft parts being drawn laterally.

PARATH'ENAR, from *παρά*, 'near,' and *ἄναξ*, 'the sole of the foot.' Winslow called *grand parathenar*, *Parathenar major*, a portion of the abductor of the little toe; and *petit parathenar*, *Parathenar minor*, the short flexor of that toe.

PAREIRA BRAVA, *Cissampelos*, *Parreira*, *Pareyra*, *Butua*, *Pariera brava*, *Abu'ta*, *Ambu'tua*, *Botou*, *Caa-peba*, *Overo butua*. Family, *Menispermæ*. *Sex. Syst.* *Diœcia* *Monadelphia*. The root of this plant,—a native of South America and the West Indies,—has a sweet taste with considerable bitterness and slight roughness. It has been recommended in nephritic and calculous affections; but is not much used.

PARENCEPHALOC'E'LĒ, from *παρεγκεφαλις*, 'the cerebellum,' and *κλήλη*, 'a tumour.' *Hernia of the cerebellum*; a very rare disease. It occurs under the form of a soft, indolent, or slightly painful tumour, without change in the colour of the skin, and is situate in the occipital region. It is constituted of the cerebellum, which escapes through an aperture in the occipital bone. Great attention must be paid not to mistake it for an ordinary tumour; as its extirpation would be attended with fatal consequences.

PAREN'CHYMA, *Caro parenchymatica* seu *viscerum* seu *visceralis* seu *viscerosa*, *Substantia parenchymatosa*, *Procheuma*. The texture of glandular and other organs, composed of agglomerated globules united by cellular tissue, and tearing with more or less facility. Such is the texture of the liver, kidneys, &c. *Παρεγχυμα* signifies, in Greek, effusion; and it was believed that this tissue consisted of effused blood or other fluid.

PAR'ESIS, from *παρῆμι*, 'I relax.' Paralysis, (q. v.) According to some, a slight, incomplete paralysis, affecting motion, not sensation.

PARESTHE'SIS or **PARÆSTHE'SIS**, *Sensus imperfectus*, from *παρά*, 'defective,' and *αἴσθησις*, 'sensation.' Congenital misconstruction of the external organs of sense. A genus in the nosology of Good.

PARIETAL, *Parietalis*, from *paries*, 'a wall.'

The **PARIETAL BONES**, *Ossa parietalia*, *Ossa verticilia*, *Ossa verticis*, *Ossa sincipitis*, *Ossa bregmatis*, *Ossa nervalia*, are two fellow-bones, occupying the lateral and upper parts of the cranium, in the formation of which they assist. They have a quadrilateral shape; their external surface is convex, and presents, at its middle part, an eminence called the *Parietal protuberance*, (F) *Bosse parietale*. Their inner or cerebral surface, which is concave, has a depression, that corresponds with the preceding eminence, and

which is called the *Fossa parietalis*. Above and behind, near the superior edge of these bones, is a foramen, which does not always exist, called the *Parietal foramen*, *Foramen parietale*, through which passes a vein that opens into the superior longitudinal sinus of the dura mater. Each parietal bone is articulated *above*, with its fellow; *below*, with the temporal bone; *before*, with the frontal; *behind*, with the occipital, and by the anterior and inferior angle with the great ala of the sphenoid. Each parietal bone is developed from a single point of ossification.

PARIETARIA, *P. officinalis*, *Helxine*, *Vitruaria*. The *Wall pellitory*, (F) *Pariétaire commune*. Family, *Urticæ*. Sex. Syst. *Polygamia Monœcia*. This plant grows on old walls, and contains much nitrate of potassa. It is diuretic, but not much used.

PARIETES, *Paries*, (F) *Parois*, 'a wall.' A name given to parts, which form the inclosure—the limits of different cavities of the body, as the *Parietes of the cranium*, *chest*, &c.

PARIS, *P. quadrifolia*, *Oneberry*, *True-love*, (F) *Parisette*, *Raisin de Renard*. It possesses narcotic properties, and was formerly considered a powerful love philter. It is emetic, and is sometimes used externally as a resolvent and anodyne.

PARISTH'MIA, *παρισθμια*. A word employed to designate the tonsils, and, likewise, inflammation of the tonsils.

PARISTHMIOTOMUS, from *παρισθμια*, 'the tonsils,' and *τεμνω*, 'I cut.' An instrument with which the tonsils were formerly scarified.

PARODON'TIDES, from *παγα*, 'near,' and *δους*, 'a tooth.' Tumours on the gums; *parulis*, &c.

PARONIR'IA, from *παγα*, and *ονειρον*, 'a dream.' Depraved, disturbed, or morbid dreaming. *Oneirodyn'ia acti'va*, *Erethis'mus oneirodyn'ia*. The voluntary organs, connected with the passing train of ideas, overpowered by the force of the imagination during dreaming, and involuntarily excited to their natural or accustomed actions, while the other organs remain asleep.—Good.

PARONY'CHIA, *Pan'aris*, *Redu'via*, *Panarit'ium*, *Pandalit'ium*, *Passa*, *Dactylitis*, *Pana'rium*, *Onych'ia*, from *παγα*, 'near,' and *ονυξ*, 'the nail.' The ancients gave this name to an inflammatory tumour, seated near the nail. Some of the moderns have extended it to inflammation of the hand and even of the forearm. It usually means every phlegmonous tumour of the fingers or toes and especially of the first phalanx. Four kinds of paronychia are commonly pointed out. 1. That seated between the epidermis and skin called in France *Tourniole*. 2. That, seated in the subcutaneous cellular tissue. 3. That, occupying the sheath of a tendon, and 4. That, considered to be seated between the periosteum and bone. These three last are only different degrees of the same

disease, constituting *Whitlow*, (F) *Mal d'aventure*:—the worst kinds, in English, are called *Felon*.

The inflammation generally commences in the subcutaneous cellular tissue, and spreads to other parts, occasioning excessive, lancinating pain, owing to the parts being put upon the stretch; hence, the necessity of dividing them freely,—even down to the bone, when there is reason to believe that the affection belongs to the fourth division, making use of emollient applications, the antiphlogistic treatment, and opiates to relieve pain.

PAROPTE'SIS, from *παγα*, and *οπταω*, 'I roast.' Forcing a sweat by placing a patient before the fire or putting him in a dry bath.

PARORA'SIS, from *παγα*, dim., and *οραω*, 'I see.' Perversion of sight, which prevents the person from judging accurately of the colour of objects.—Galen.

PARORCHID'IUM, from *παγα*, dim., 'something wrong,' and *ορχις*, 'testicle.' Any position of one or both testicles, different from that which they ought to occupy in the scrotum;—whether they may not have descended through the abdominal ring, or are drawn up to the groins by the cremaster muscle.

PAROR'CHIDO-ENTEROCE'LE, *Hernia paror'chido-enter'ica*. Intestinal hernia complicated with displacement of the testicle.—Sauvages.

PAROS'TIA, from *παγα*, 'defectively,' and *οσσειν*, 'a bone.' Bones, untempered in their substance; and incapable of affording proper support.—Good.

PAROT'ID, *Gland'ula parotidea*, *G. ad Aures*, *Parot'is*, *Animel'læ*, *Alimel'læ*, *Lacticin'ia*; from *παγα*, 'about,' and *ους*, 'the ear.' The largest of the salivary glands, seated under the ear, and near the angle of the lower jaw. It is composed of many separate lobes, giving rise to excretory ducts, which unite to form one canal, called the *Parotid duct* or *Steno's canal*—the *Ductus superior* or *Superior salivary canal* of some. This duct, after having advanced horizontally into the substance of the cheek, proceeds through an opening in the buccinator muscle, and terminates in the mouth opposite the second upper molaris. About the middle of its course, it sometimes receives the excretory duct of a glandular body, situate in its vicinity, and called the *Accessory Gland of the Parotid*, *Socia Parotidis*.

In the substance of the parotid are found;—a number of branches of the facial nerve, of the transverse arteries of the face, and the posterior auricular. It receives, also, some filaments from the inferior maxillary nerve, and from the ascending branches of the superficial cervical plexus. Its lymphatic vessels are somewhat numerous, and pass into ganglions situate at its surface or behind the angle of the jaw.

The parotid secretes saliva, and pours it copiously into the mouth.

PAROTIS, (F) *Parotide, Phleg'monē parotideā, Inflamma'tio parotidum, Paroti'tis*, (F) *Oreillon, Ourle*, is, also, the name of a tumour, seated under the ear; which is reddish, hard, and attended with obtuse pain; the progress to suppuration being slow and difficult. Sometimes, it is of a malignant character, sloughing, and long protracted.

PAROTIDON'CUS, from *παρωτις*, 'the parotid,' and *ογκος*, 'a tumour.' A swelling of the parotid.

PAR'OXYSM, *Paroxys'mus*, from *παροξύνω*, 'I irritate.' *Im'petus, Insul'tus, Invasio, Exacerba'tio, Acces'sio, Acces'sus*, (F) *Exacerbation, Redoublement*; also, *Accès*. The augmentation, which supervenes at equal or unequal intervals in the symptoms of acute diseases. Also, a periodical exacerbation or fit of a disease.

PARTHEN'IUS, (*Morbus*); from *παρθενος*, 'a virgin.' A disease in a young female. Also, chlorosis.

PARTU'RIENT, *Parturiens*, from *pario*, 'I bring forth.'

The *Parturient, Childbed, or Lying-in state* requires careful management, and is subject to various diseases.

PARTURI'TION, *Puerpe'rium, Partus, Partio, Parturi'tio, Parturi'go, Partu'ra, Tocos, To'cetos, Lochi'a, Apocye'sis, Labour*, (F) *Accouchement, Couche, Travail d'Enfant*. The delivery of the fœtus and its appendages. Labour is the necessary consequence of conception, pregnancy, and the completion of gestation. It does not take place at the full time, until nine months of utero-gestation: the causes producing it being the contraction of the uterus and abdominal muscles. By different authors, the stages of labour have been variously divided. We may, perhaps, admit of four. The *first stage* comprises the precursory signs. One, two, or three days before labour, a mucous discharge, streaked with blood, takes place from the vagina, which is

called the *Signum, Leucorrhœa Nabothi, Hæmorrhœgia Nabothi, Labour-show, or Show*; and, along with this, trifling grinding pains—called by the French *Mouches*—are felt in the loins and abdomen. *Second stage*:—Peculiar pains, which extend from the lumbar region towards the uterus;—tension and dilatation of the neck and orifice of that organ: protrusion into the vagina of the envelopes of the fœtus, forming the *bag of waters*, (F) *Poche des eaux*; and rupture or breaking of the waters. *Third stage*:—Contractions of the uterus and abdominal muscles: forcing pains: the head of the fœtus becomes engaged in the pelvis; the occiput being commonly situate above the left acetabulum, passes beneath the arch of the pubis. *Fourth stage*:—the head now presents at the vulva, the perineum being considerably distended; at length it clears the external parts, and the rest of the body is easily disengaged. The child still continues attached to the mother by the umbilical cord, which has to be divided. In the course of 15 or 20 minutes, trifling pains occur, and the secundines are expelled. This completes delivery. In by far the majority of cases, the head is the presenting part, the occiput directed anteriorly, and the face posteriorly. Of 12,633 children, born at the Hospital *La Maternité* in Paris, from the 10th of December, 1797, to the 31st of July, 1806, the following were the presentations.

The head, with the face posteriorly,	12,120
The head anteriorly,	63
The breech,	198
The feet,	147
The knees,	3
Other positions,	102
	12,633

The following table, drawn up from data furnished by Velpeau, gives an approximative view of the comparative number of presentations, according to the experience of the individuals mentioned.

TABLE, EXHIBITING THE RATIO OF PRESENTATIONS IN 1000 CASES.

Labour has received different names, according to the period of pregnancy at which it occurs, and the mode in which it takes place. It is called *miscarriage* or *abortion*, (q. v.), prior to the 7th month; *premature labour*, between this and 8 months and a half; and *labour at the full period*,—(F) *Accouchement à terme*,—when it happens at the end of 9 months.

Labours have, likewise, been variously divided by different authors. Perhaps the one, into *Natural*, *Preternatural*, and *Laborious*, is as common as any;—*Natural Labour* meaning, that which would occur without

manual assistance; *preternatural*, requiring the assistance of art, but by the hand solely; and, *laborious*, requiring instrumental assistance; which M. Capuron calls *Accouchement Mécanique*.

The French use the term *Part*, at times, synonymously with *delivery*; at others, with *fœtus*. *Suppression de part* means concealment of delivery: *Part légitime*, a fœtus which comes into the world with the conditions necessary for its enjoying advantages granted by law; and *Part illégitime*, one that does not fall under those conditions.

TABLE OF THE COURSE AND MANAGEMENT OF DIFFERENT KINDS OF LABOURS.

I. NATURAL LABOURS:		
<i>Or those in which Delivery can be effected without Assistance.</i>		
HEAD PRESENTING. (Four Positions.)	1. Occiput towards the Left Acetabulum.	The head with the chin bent upon the chest clears the brim of the pelvis. Motion of rotation produced by the inclined planes of the pelvis: the occipital protuberance is carried behind the symphysis pubis, and the face towards the hollow of the sacrum.
	2. Occiput towards the Right Acetabulum.	The head attains the outlet; clears it; the occiput being first disengaged, and the face afterwards, which passes successively along the whole of the hollow of the sacrum. The shoulders enter the brim diagonally; and execute the movement of rotation. The one behind first clears the outlet. The same thing occurs with the nates.
	3. Occiput towards the Right Sacro-iliac Symphysis.	The same course is here followed; except that after the rotatory movement, the face passes behind the symphysis pubis, and the occiput into the hollow of the sacrum. The occiput is first extruded:—the face next.
	4. Occiput towards the Left Sacro-iliac Symphysis.	When the chin presents and is turned forwards, the face is first expelled: the head is thrown backwards. This presentation is uncommon. If the chin presents and is thrown backwards, natural delivery cannot be effected.
LOWER EXTREMITY PRESENTING. (Four Positions of the Feet, Knees, and Breech.)	1. Heel, Tibia, or Sacrum towards the Left Acetabulum.	The nates enter the brim diagonally: movement of rotation: the one passes behind the symphysis pubis; the other towards the hollow of the sacrum. The one behind is first extruded.
	2. Heel, Tibia, or Sacrum towards the Right Acetabulum.	The same thing happens to the shoulders. The chin is bent upon the chest to clear the brim: movement of rotation: the occiput passes behind the symphysis pubis, and the face towards the hollow of the sacrum. The face clears the outlet first; the occiput last.
	3. Heel, Tibia, or Sacrum towards the Right Sacro-iliac Symphysis.	The same progress, except that after the movement of rotation, the face is towards the pubes, and the occiput towards the sacrum. The face is here again delivered first.
	4. Heel, Tibia, or Sacrum towards the Left Sacro-iliac Symphysis.	
II. PRETERNATURAL LABOURS:		
<i>Or those which require Manual Assistance only.</i>		
I. PRESENTATION OF THE	1. When the labour is without any serious complication, and the head is not in a good position at the brim of the pelvis; endeavours are to be made to place it in its natural position; the hand to be introduced with the fingers united, and the long diameter of the head to be placed diagonally in the brim, if possible. Or, the lever may be fixed over the occiput, by drawing down which, a closer approximation of the chin and chest may be effected; the position of the head to the pelvis being at the same time attended to.	
	2. If complicated with syncope, convulsions, hemorrhage, want of uterine action, &c., the feet must be laid hold of, and the child turned. For this purpose, empty the rectum and bladder; and turn, if possible, prior to the escape of the liquor amnii. Generally, the female may be placed on her left side, with the breech over the edge of the bed. Use the right or left hand, according as the feet of the child are to the right or left side of the	

HEAD, UPPER EXTREMITIES, BACK, ABDOMEN, &c.	pelvis; always so introducing the hand, that the child shall be in its palm, and the back of the hand opposed to the inner surface of the uterus. The hand and arm to be introduced during an interval of pain; and they must be flattened and tranquil whilst the uterus is contracting forcibly. If both feet cannot be readily brought down, seize one, and tie a fillet around it. If the toes point to the vertebral column or to the abdomen of the mother, the head, in its descent, will not enter the pelvis: the chin and occiput will be hitched on the pubis and promontory of the sacrum. In such case, grasp the nates as soon as they have passed the os externum; and, during a pain, endeavour to direct the toes towards either sacro-iliac synchondrosis. When the fingers can be passed along the body of the child and over the shoulders to the bend of the elbows, draw down the arms successively. When the body is expelled, and the head filling up the brim, the termination of labour must be accelerated by passing two fingers over the shoulder of the child; using moderate and steady extracting power, whilst one finger of the other hand, passed into the mouth, depresses the chin on the sternum. In this way the head may be extracted.
III. INSTRUMENTAL LABOURS:	
<i>Or those requiring the Assistance of appropriate Instruments.</i>	
GENERAL OBSERVATIONS.	If the pains become feeble, or inadequate from any cause;—or if the presenting part is firmly wedged in the pelvis; or the woman is becoming exhausted, instrumental assistance may be required. In all such cases, empty the bladder and rectum; wait till the os uteri is in a fit state; afford assistance during the pains; introduce the instrument during the intervals between the pains; have the patient on her left side (generally); and extract according to the axes of brim and outlet, as the case may be.
1. <i>Short Forceps.</i>	Apply these to the sides of the head of the child, so that the ears and parietal protuberances may be within the fenestræ. Introduce the left-hand blade first; the index and middle fingers of the right hand guiding it to the ear. With the right hand pass the other in an opposite line, corresponding with the course of the first blade, guided by the fore and middle fingers of the left hand; the third and little finger being employed to retain the left-hand blade in place; humour the instrument so as to allow the blades to lock. The handles may now be tied gently together. The force used must be from blade to blade, with a gentle, tractile effort.
2. <i>Long Forceps.</i>	Applicable where the head does not enter the brim. The long forceps must be applied, in most cases, over the occiput and face of the child, so that the convex edges of the blades may be towards the hollow of the sacrum. When used, the power may be exerted from side to side, with moderate traction.
3. <i>Lever or Vectis.</i>	The lever is applicable to the same cases as the forceps. It must not be used strictly as a lever, but as a hook with which to draw downwards. It may be applied to any part of the head, but is generally hitched on the occiput.
4. <i>Fillet and Blunt Hook.</i>	In certain cases of breech and knee presentation, where the hand is insufficient, it may be necessary to pass over the joint a fillet, or the blunt hook, with which to exert some force of traction. The operation is very simple.
EMBRYULCIA.	Disproportionate size of head, or distorted or deformed pelvis, may require the child to be destroyed, and its bulk lessened; or the Cæsarean section or symphysiotomy, or the induction of premature labour may be called for. The instruments required here, are the <i>Perforator</i>, <i>Crotchet</i>, and <i>Craniotomy Forceps</i>. Make steady pressure on the abdomen: pass two fingers of the left hand up to the head; feel for a suture or fontanelle; introduce the perforator and bore through, until the progress of the instrument is arrested by its <i>shoulders</i>. Open the handles, and turn the instrument in different directions, so that the opening may be large enough to admit the perforator, with which the brain must be broken down. If, after this, delivery cannot be accomplished without farther aid, pass up the craniotomy forceps; open the handles slightly, and introduce the blade without teeth within the cranium. On closing the forceps, a hold is obtained; and a tractile force can now be exerted during the pains; and the extrusion of the child be effected. Should great difficulty exist at the brim, the bones at the top of the head may have to be removed, until the base alone remains. The chin must then be brought through first. The crotchet is often used instead of the craniotomy forceps, being passed into the opening made by the perforator, and hooked upon some bony projection in the interior of the skull; but it is not a good instrument. In presentations of the face demanding perforation of the cranium, the perforator should be introduced just above the nose in the sagittal suture. When it is necessary to open the head after the lower extremities have been expelled, the perforation must be made behind the ear.
SYMPHYSIOTOMY AND CÆSAREAN SECTION.	In cases of great narrowness of the pelvis, the operation of <i>Symphysiotomy</i> (q. v.) has been adopted by French practitioners,—rarely by British or American; and in extreme cases recourse has been had to the <i>Cæsarean Section</i>, (q. v.)
SEPARATION OF THE HEAD OF THE FŒTUS FROM THE BODY.	If the body of the fœtus have been forcibly separated, and the head left in the uterus, it must be laid hold of with one hand; and the forceps be applied, or the head opened and delivered as under Embryulcia. Should the head have been brought away, and the body left behind, the feet must be brought down.

INDUCTION OF PREMATURE LABOUR.

In cases of narrowness of the pelvis, where the fœtus, at the full term, cannot be born alive, delivery may be brought about at an earlier period, or as soon as the child is capable of carrying on its functions independently of the mother.

The most advisable plan of accomplishing this object is merely to pass the finger round and round within the os and cervix uteri, so as to detach the decidua;—the membranes being thus left entire, and the life of the child not so much endangered, as where the membranes are punctured and the waters evacuated. Parturition usually follows within 48 hours.

PARULIS, from *παρά*, 'near,' and *ουλον*, 'the gum.' *Apostéma parulis* vel *paroulis*, *Gum Boil*. Small abscesses are so called, which form in the gums, sometimes without any known cause, but which often depend upon carious teeth.

PARURIA, from *παρά*, 'defectively,' and *ουρία*, 'I pass urine.' Morbid secretion or discharge of urine.

PARYGRON, from *παρά*, and *υγρός*, 'humid.' A liquid or moist preparation, for allaying topical inflammation.

PASSIFLORA LAURIFOLIA, *Bay-leaved passion flower*. A native of Surinam. The fruit has a delicious smell and flavour, and quenches thirst, abates heat of the stomach, increases the appetite, &c.

PASSIFLORA MALIFORMIS, *Apple-shaped Granadilla*. The fruit of this species is esteemed a delicacy in the West Indies, where it is served up at table in desserts.

PASSION, *Passio*, *An'imi Pathe'mata*, *Affectus*. A lively affection of the mind; as rage, terror, love, hatred, &c.

PASSIVE, *Passivus*. An epithet for diseases, which seem owing to a greater or less diminution of the strength, or which are without apparent reaction.

Thus, passive hemorrhages are such as supervene in debilitated individuals or under conditions in which increased action of the arteries can scarcely be presumed. The term *passive* has, also, been given to aneurisms of the heart with extenuation of the parietes; in opposition to *active* aneurisms,—with thickness of the parietes—hypertrophy.

PASSULA'TUM, *Uvæ passæ*, 'raisins,' 'dried grapes.' A medicine in which the pulp of raisins is a chief ingredient.

PASSY, MINERAL WATERS OF. This village is in the vicinity of Paris. There are several springs, containing sulphates of lime, iron, and magnesia; alum; common salt; carbonate of iron; carbonic acid, &c. They are employed as tonic and astringent.

PASTE, *Pasta*, (F) *Pâte*. A compound medicine like the *pastil*, but less consistent, flexible, less saccharine, and more mucilaginous.

MARSHMALLOW PASTE, *Massa de gummi-Arab'ico*, *Pasta de althæ'â*. A compound of gum arabic, sugar, white of egg, and orange flower water. Ph. P. It is demulcent.

DATE PASTE, *Massa seu pasta de dac'tylis*. Composed of dates, sugar, gum arabic, water,

and orange flower water. Ph. P. Demulcent.

PASTE OF JU'JUBES, *Pasta de ju'jubis*, *Massa de zizypho'rum fructu*: composed of jujubes, gum senegal, sugar, water, and tincture of lemon peel. Demulcent.

PASTA GLYCYRRHIZÆ GUMMA'TA ET ANISA'TA, seu *Massa de extracto glycyrrhizæ*. A compound of extract of liquorice, gum senegal, sugar, Florence orris root, and volatile oil of aniseed. Demulcent.

PASTIL, *Pastil'lus*, *Diocres*, *Aric'ula Cip'ria*, *Cand'la fuma'lis*, *Phthois*, *Phthois-cus*. A compound of aromatic substances, in various shapes; used as a fumigating material, when set fire to. See Fumigation.

The French use the term *Pastille*, for a solid, dry, round, oblong, square, or triangular compound; whose base is essential oil, and sugar the excipient. These pastilles are in fact small lozenges, and only differ from the *tablette* in their smaller size.

PASTIL'LI DE MENTHA PIPERITA. *Peppermint drops*. (*Sacch. alb.*, *aquæ menthæ pip. distillat.* aa 3 ij. Boil to the consistence of an electuary. Take of fine white sugar, in powder, 3 iv, volatile oil of peppermint 3 ss. Mix, and add the electuary whilst warm. Drop it then on marble, and dry the drops. Ph. P.)

PASTINA'CA OPOP'ANAX. The name of the plant, which furnishes the *Opopanax*. The plant, whence the gum-resin is obtained, has, also, been called, *Opopanaxum*, *Panax heracle'um*, *Panax costi'num*, *P. pastinacea*, *Kyna*, *Her'cules-all-heal*, *Opop'anaxwort*.

OPOPANAX, *Opopanaxis gummi-resi'na*, *Gezir*, *Pop'anax*, *Gummi panacis*, exudes from the roots, when wounded. Its odour is strong and peculiar; taste bitter and acrid. It is met with in the shops, in lumps of a reddish-yellow colour, without; white, within. It has been recommended as an antispasmodic and emmenagogue; but is seldom used. Dose, gr. x to ʒj in powder.

PASTINA'CA SATIVA, *Elaphobos'cum*, *Pastinaca sylves'tris*, *Ban'ica*, *Garden parsnep*. The root is sweet and nutritious, and is in esteem as an article of food. It has been used as a diuretic and demulcent in calculous affections, &c.

PATELLA, *Rot'ula*, *Epigon'atis*, *Epigon'tis*, *Epigou'nis*, *Mola*, *Concha*, *Oculus genu*, *Os scutifor'mē*, *Supergenua'lis*, *Caucaloï'des*, *Myl'acris*, *Mylē*, (F) *Rotule*. Diminutive of *pat'ina*, 'a dish,' so called from its shape. A sort of sesamoid, flat, short, thick, rounded

bone, situate in front of the knee, and enveloped in the substance of the tendon common to the extensor muscles of the leg. The posterior surface of the patella is divided into two *facettes*, united angularly, which are incrustated with cartilage, and each of which is articulated with one of the condyles of the femur. The patella is developed by a single point of ossification. When the patella is fractured, it is difficult to produce bony union. This can only be accomplished by keeping the fractured extremities closely in apposition.

PATHETIC, *Patheticus*. That which moves the passions. A name given to the *superior oblique muscle of the eye* (q. v.), and, also, to a nerve.

The **NERVUS PATHETICUS**, *N. trochlearis seu trochleatorius seu trochleator*, the 4th pair of nerves, *Oculo-musculaire interne* (Ch.), (F) *Nerf pathétique*, is the smallest encephalic nerve. It arises behind the inferior pair of the tubercula quadrigemina (*the testes*) at the lateral parts of the valvula Vieussenii. Its roots unite into one thin, round cord, which makes a turn upon the peduncles of the brain, and passes into a canal of the dura mater near the posterior clinoid process. It enters the orbit by the broadest part of the sphenoidal fissure, and terminates in the superior oblique muscle of the eye, by dividing into several filaments.

PATHOGENY, *Pathogenia*; from *παθος*, 'a disease,' and *γενεσις*, 'generation.' The branch of pathology, which relates to the generation, production, and development of disease.

PATHOGNOMONIC, *Pathognomonicus*, *Signum conjunctum*; from *παθος*, 'an affection,' and *γινωσκα*, 'I know.' A characteristic symptom of a disease.

PATHOL'OGY, *Pathematology*, from *παθος*, 'a disease,' and *λογος*, 'a discourse.' The branch of medicine, whose object is the knowledge of diseases. It has been defined *diseased physiology*, and *physiology of disease*. It is divided into *general* and *special*. The *first* considers diseases in common;—the *second* the particular history of each. It is subdivided into *internal* and *external*, or *medical* and *surgical*.

PATOR NARIUM. The cavity or the opening of the nostrils.

PAVIL'ION. The French give this name to the expanded extremity of a canal or cavity, e. g. of a catheter, sound, &c.

The **PAVILION OF THE EAR**, *Auricula*, *Pinna*, *Ala*, (F) *Auricule ou Oricule*, *Pavillon de l'oreille*, is seated behind the cheeks, beneath the temple and anterior to the mastoid process. Its size varies in individuals. It is free above, behind, and below. Anteriorly and within, it is continuous with the neighbouring parts. Its outer surface has several prominences, the *Helix*, *Anthelix*, *Tragus*, *Antitragus*, and *Lobe*; and several

cavities—the *groove of the Helix*, the *fossa navicularis seu scaphoides*, and the *Concha*. The skin, which covers the pavilion, is very fine and studded with a number of sebaceous follicles. The auricle is fixed to the head by three fibro-cellular ligaments;—a *superior*, *anterior*, and *posterior*.

PEARL, *Perla*, *Mar'garon*, *Margari'ta*, *Unio*, (F) *Perle*. A roundish concretion, of a silvery white colour, and brilliant polish, found in several shells and especially in the *Avic'ula margaritifera*, which has, hence, been called *Mater perlarum*, *Mother of pearl*, and is much used in the fabrication of handles for surgical instruments, &c.

Pearls were, formerly, given in powder as astringents and antacids. They consist of lime and an animal matter.

PECCANT, *Peccans*. An epithet given, by the Humourists, to the humours, when erring in quality or quantity.

PECHURIM CORTEX. A highly aromatic bark, the produce of a species of *laurus*. It is extremely fragrant like that of cinnamon, which it greatly resembles in its properties. In Portugal, it is used in the cure of dysentery, &c.

PECHYAG'RA, *Pectihag'ra*, from *πῆχυς*, 'the elbow,' and *αἴρεσις*, 'a seizure.' Gout affecting the elbow.

PECTINA'LIS, from *pecten*, 'the pines;' *Pectinæus*, *Pubio-fémoral*, *Suspubio-fémoral* (Ch.), (F) *Pectiné*. This muscle is situate at the inner and upper part of the thigh. It is long, flat, and triangular: is attached, above, to the space, which separates the ileo-pectineal eminence from the spine of the os pubis; and, below, by a flat tendon, to the oblique line, which descends from the lesser trochanter to the linea aspera. The pectinalis bends the thigh on the pelvis; and carries it outwards in adduction and rotation. It may, also, bend the pelvis on the thigh.

PECTINA'TI MUSCULI, from *pecten*, 'a comb.' The fascicular texture, observed in the right auricle of the heart:—*Musculi Auriculæ Pectinati*. Their main use probably is—to prevent the over dilatation of the auricles.

PECTORA'LIS MAJOR, from *pectus*, 'the breast.' *Pectoralis*, *Sterno-costo-clavio-huméral*, *Sterno-huméral* (Ch.), (F) *Grand Pectoral*. A large, flat, triangular muscle, situate at the anterior part of the chest, before the axilla. It is attached, on the one hand, by means of aponeurotic fibres, to the inner half of the anterior edge of the clavicle; to the anterior surface of the sternum, and to the cartilages of the six first true ribs;—on the other, by a strong tendon, which is inserted at the anterior edge of the bicipital groove of the humerus.

The use of this muscle is—to move the arm in various directions. If it be hanging by the side of the body, it carries it inwards and a little forwards. When the arm is

raised, it depresses it and carries it inwards. It can, also, move it in rotation inwards. If the humerus be raised and fixed, the pectoralis major draws the trunk towards the upper extremity.

PECTORALIS MINOR, *Serra'tus anti'cus minor*, *Costo-coracoïdien* (Ch.), (F) *Petit pectoral*, *Petit dentelé antérieur*. This muscle is situate beneath the preceding, at the anterior and upper part of the chest. It is flat and triangular. It is attached by its base, which appears digitated, to the upper edge and outer surface of the 3d, 4th, and 5th true ribs, and is inserted at the anterior part of the coracoid process.

The pectoralis minor draws the scapula forwards and downwards, and makes it execute a rotatory motion, by virtue of which its inferior angle is carried backwards, and the anterior depressed. When the shoulder is fixed, it elevates the ribs to which it is attached, and aids in the dilatation of the chest.

PECTORALS, *Pectoralia*, *Thorac'ica*. Medicines, considered proper for relieving or removing affections of the chest.

BATEMAN'S PECTORAL DROPS consist, chiefly, of *tincture of castor*, with some *camphor* and *opium*, flavoured by *aniseed*. Gray gives the following formula. *Castor* 3 j, *ol. anisi* 3 j, *camph.* 3 v, *coccin.* 3 iss, *opii* 3 vj, *proof spirit*, a gallon.

A form, advised by a committee of the Philadelphia College of Pharmacy, is the following:—*Alcohol. dil. cong.* iv, *Santal. rubr.* ras. 3 ij, *Digere per horas* xxiv; *cola, et adde Pulv. opii, Pulv. catechu, Camphoræ aa* 3 ij, *Ol. anisi.* 3 iv. Digest for 10 days.

PECTORILOQUE, from *pectus*, 'the chest,' and *loqui*, 'to speak.' Laennec calls thus, one who presents the phenomenon of *Pectoriloquism*.

PECTORILOQUISM. 'Cavernous voice.' Same etymon. *Pectorilo'quia*, (F) *Pectoriloquie*. Speech or voice coming from the chest. Laennec has designated, by this name, the phenomenon often presented by consumptive individuals, when their chests have been examined with the stethoscope. The voice seems to issue *directly* from the chest, and to pass through the central canal of the cylinder,—a phenomenon owing to the voice resounding in those anfractuous cavities, produced in the lungs by the suppuration or breaking down of tubercles, which constitute abscesses or *Ulcers of the Lungs*.

PEDICULUS, The *Louse*, *Phtheir*, (F) *Pou*. A genus of parasitic insects. The human body is infested with three kinds; the *Body-louse*, (F) *Pou de corps*; the *Head-louse*, (F) *Pou de la tête*, which lives in the hair; and the *Crab-louse*, *Mor'pio*, *Plat'ula*, (F) *Morpion*, which infests the hair of the pubes. Infusion of tobacco, or mercurial ointment, or ointment of white precipitate of mercury, or the white or red precipitate of mercury, readily destroys them.

PEDILUVIUM, from *pedes*, 'the feet,' and *lavo*, 'I wash.' *Lavipe'dium*, (F) *Bain de pieds*. A bath for the feet.

PEDORA. The sordes of the eyes, ears, and feet.

PEDUNCLE, *Peduncul'us*. This term has been applied to different prolongations or appendices of the encephalon. Thus, the *Peduncles of the brain* are the *Crura cerebri*; the *Peduncles of the cerebellum*, the *Crura cerebelli*.

The **PEDUNCLES OF THE BRAIN**, called also *Crura anterio'ra medullæ oblongatæ*, are two white cords, about $\frac{3}{4}$ ths of an inch in diameter, on the outside of the corpora albicantia. They arise from the medullary substance of the brain, and gradually approach, till they join the tuber annulare. They are formed, internally, of a mixture of cineritious and medullary matter; the former of which, being of a darker colour at one point than in any other part of the brain, has been called *Locus niger crurum cerebri*.

The **PEDUNCLES OF THE CEREBELLUM**, called also *Crura posterio'ra*, arise from the medullary part of the cerebellum, and unite at the tuber annulare.

The **PEDUNCLES OF THE PINEAL GLAND** are two medullary bands or strips, which seem to issue from the pineal gland, and proceed on each side upon the upper and inner region of the optic thalami.

PEGANELÆON, *Oleum ruta'ceum*, *Oil of Rue*; from *παρανον*, 'rue.'

PELAGIA. A kind of scaly erysipelas of the hands, sometimes of the legs, at others, of the face. Pellagra. (?)

PELICAN, *Pelica'nus*. An instrument, curved at the end like the beak of a pelican. Its use is to extract teeth.

PELICIDÆ, *Pelu'dæ*, *Mel coctum*, Boiled Honey.—Ruland and Johnson.

PELIO'MA, from *πελος*, 'black.' A livid ecchymosis.—Forestus.

PELL'AGRA, *Pelagra*, *Ichthyo'sis Pellagra*, *Elephantiasis Ital'ica*, *Tuber Pellagra*, *Lépra Mediolanen'sis*, *Mal del Sole*, *Dermatagra*, *Erysipelas period'ica nervo'sa chronica*, *Mal de misère*, *Paral'ysis scorbutica*, *Scurvy of the Alps*, *Impeti'go Pellagra*. A disease, particularly noticed amongst the Milanese, which consists in the skin becoming covered with wrinkles, and assuming a scaly appearance, especially in the parts exposed to the air. The strength diminishes, the intellectual faculties and sensations become obscure, and cramps, convulsions, and other lesions of muscular contractility supervene. It is a singular, endemic affection.

PELVIC, *Pel'vicus*, *Pelvi'nus*. Belonging or relating to the pelvis.

The **PELVIC CAVITY**, (F) *Cavité pelvienne*, is the cavity of the pelvis.

The **PELVIC SURFACE OF THE IL'IUM** is that which faces the pelvic cavity.

The PELVIC MEMBERS are the lower extremities.

M. J. Cloquet gives the name PELVIC APO-NEURO'SIS, (F) *Aponévrose pelvienne*, to an aponeurotic expansion, of greater or less thickness, which is attached to the brim of the pelvis, being continuous with the fascia iliaca and the aponeurotic expansion of the psoas parvus. This aponeurosis forms a kind of resisting partition, which effectually supports the peritoneum, and has several apertures, through which different organs pass.

PELVI-TROCHANTE'RIAN, *Pelvi-trochanteria'nus*. That which relates to the pelvis and great trochanter. The *Pelvi-trochanterian region* is formed by the muscles—*pyramidalis*, *two obturators*, *gemini*, and *quadratus femoris*, which pass from the pelvis to the distal cavity of the great trochanter.

PELVIMETER, *Pelycom'etrum*, *Pelyom'etrum*, from *pelvis*, and *μετρον*, 'a measure.' A barbarous hybrid. This name has been given to different instruments, invented for measuring the diameters of the pelvis, and, particularly, the antero-posterior or fore-and-aft diameter of the brim. Two have been chiefly employed; especially by French practitioners—the *Compas d'épaisseur*, and the *Pelvimeter* of Coutouly.

1. The COMPAS D'EPAISSEUR is formed like a pair of compasses—with blunt extremities—the branches of which can be moved at will. One of these is applied to the symphysis pubis, and the other on the sacrum. About 3 inches must be deducted from this measurement for the thickness of the mons veneris, pubes, and the base of the sacrum.

2. The PELVIMETER OF COUTOULY resembles the instruments used by shoemakers for measuring the length of the foot. The two branches are introduced, in a state of approximation, into the vagina; and then separated, so that one touches the promontory of the sacrum, the other comes behind the os pubis. It is a barbarous contrivance, and its introduction ought never to be attempted on the living subject. It does not, indeed, seem possible to introduce it without mischief.

The finger is, decidedly, the best pelvimeter, and by it we can judge whether the base of the sacrum be unusually prominent.

PELVIS, *Chō'ana*, *Py'elos*, (F) *Bassin*; so called, because fancied to be shaped like an ancient basin. The part of the trunk, which bounds the abdomen below. It is a large, bony, irregular, conoidal cavity,—open above and below,—which supports and contains a part of the intestines, and the urinary and genital organs; and serves, at the same time, as a fixed point for the articulation of the lower limbs, the attachment of their muscles, and the execution of their movements. The pelvis supports, behind, the vertebral column, and is sustained, before, by the ossa femorum. It is situate, in the adult, near

the middle part of the body, and is composed of four broad, flat, unequally thick bones, differing much in their shape, size, and arrangement, which touch, are articulated at some part of their surface, and intimately united by means of a number of ligamentous fasciæ. Of these bones, two are behind, on the median line,—the sacrum and coccyx; the two others are before and at the sides,—the ilia. They are fellows, and unite, before, with each other.

The most important parts of the pelvis, in an obstetrical point of view, are the *brim* and the *outlet*.

The BRIM, *Angus'tia abdomina'lis*, *Intro'itus* or *Upper Opening of the Cavity of the Pelvis*, (F) *Détroit supérieur*, *D. abdominal*, is the narrow part, which separates the greater pelvis from the less—the *false* from the *true*. In the well formed woman, it is elliptical, and slightly inclined forwards. Its antero-posterior or sacro-pubic diameter, in a standard pelvis, measures $4\frac{1}{2}$ inches, but with the soft parts, $3\frac{1}{2}$ inches; its transverse or iliac or lateral, $5\frac{1}{4}$ inches, with the soft parts 4 inches; and its oblique with the soft parts, $4\frac{1}{2}$ inches.

The OUTLET, (F) *Détroit inférieur*, *D. perineal*, *Ex'itus*, *Inferior opening*, *Angus'tia perineæ'lis*, forms the lower aperture of the pelvis. The antero-posterior diameter is here, on account of the mobility of the coccyx, 5 inches; the lateral, 4 inches.

The AXIS OF THE PELVIS is important to be known in obstetrics. The *Axis of the Brim* is indicated by a straight line drawn from the umbilicus to the apex of the coccyx. The *Axis of the Outlet* by a line drawn from the first bone of the sacrum to the entrance of the vagina.

PELVIS OF THE KIDNEY, *Pelvis rena'lis*, *Sinus*, *Venter seu Alvus Renum*, (F) *Bassinet*. This is a small, membranous pouch, occupying the posterior part of the fissure of the kidney. It is placed behind the renal artery and vein; is elongated from above to below; flattened from before to behind; irregularly oval in figure; and, below, contracts considerably, to be continuous with the ureter. It receives the orifices of the infundibula, which pour the urine secreted in the kidney into its cavity.

PEMPHIGUS, *Febris bullo'sa*, *vesicula'ris*, *ampullo'sa* seu *pemphygo'des* seu *pemphingo'des*, *Exanthe'ma sero'sum*, *Morta*, *Pemphigus Helvet'icus*, *Pemphigus major*, *Pemphigus minor*, *Morbus bullosus*, *Pemphinx*, *Pemphix*, *Typhus vesicula'ris*, *Vesic'ular Fever*, *Bladdery Fever*. A disease, defined to consist of vesicles, scattered over the body; transparent, filbert-sized, with a red, inflamed edge, but without surrounding blush or tumefaction; on breaking, disposed to ulcerate: fluid, pellucid or slightly coloured; fever, typhous. It is doubtful, whether any such idiopathic fever has ever existed; the

probability is, that the fever and vesications have been an accidental complication.

The *Pemphigus Helveticus*, Cullen thinks, must have been malignant sore throat. If, however, such a distinct disease did exist, it was probably only as an endemico-epidemic.

PEN'ETRATING, *Pen'etrans*. A wound is so called, which penetrates one of the great splanchnic cavities.—*Vulnus penetrans*.

A medicine is, also, so called, which is supposed to pass through the pores and stimulate.

PENICIL'LUS, *Penicillum*. A tent or pledget, (q. v.) The secreting, glandiform extremities of the vena portæ (*Acini biliosi*), have also been so termed, as well as the vilous textures.

PENID'IUM, *Penidium saccharatum*. A kind of clarified sugar, made up into rolls. *Barley sugar*. It is demulcent.

PENIS, *Caulis, Coles, Caules, Men'tula, Menta, Phall'us, Posthe, Crithe, Pria'pus, Virga, V. vir'ilis, V. genita'lis, Vere'trum, Sathë, Membrum vir'ilë, Membrum, Verbus, Vir'ilë, Pars Vir'ilis, Membrum seminale seu genitale viro'rum, Sic'ula, Tentum, Hasta, H. nuptia'lis, Cauda salax, Cauda, Fas'cinum, F. vir'ilë, Muto, Nervus, N. fistulo'sus seu fistula'ris, Scapus, Vena, Contus, Telum, Gurgu'lio, Scep'trum, Hortus, Arma Ventris, Columna ad'tans inguinibus, Colum'na, Pyr'amis, Trabs, Spina, Catapulta vir'ilis, Verpa, Machæ'ra, Tauros; the Yard, Male organ, &c., (F) Verge, Mem-bre viril. This organ, the use of which is to carry the seminal fluid into the female organs of generation, is cylindroid, long, and erectile, and situate before and beneath the symphysis pubis. In the ordinary state, it is soft and pendent in front of the scrotum. During erection, it becomes elongated, upright, and assumes a triangular shape. Its upper surface is called the *Dorsum Penis*, (F) *Dos de la verge*; and at its inferior surface there is a longitudinal projection formed by the canal of the urethra.*

The two sides of the penis are round; and its posterior extremity or root is attached to the pelvis. Its anterior extremity is free, and presents the glans, prepuce, and orifice of the urethra.

The penis is formed of the corpora cavernosa,—the principal seat of erection; of the urethra for the conveyance of the urine and sperm; and of the glans, which terminates the canal.

PEN'NIFORM, *Pennifor'mis*, from *pen-na*, 'a pen.' An epithet for muscles, whose fleshy fibres are inserted on each side of a middle tendon, like the feathers of a pen on their common stalk.

PENTAM'YRON, *Pentamæ'ron*, from *πεντε*, 'five,' and *μυρον*, 'ointment.' An ancient ointment, consisting of five ingredients.

—Paulus and Aetius. These are said to have been—storax, mastich, wax, opobalsam, and unguentum nardinum.

PENTAPHAR'MACON, from *πεντε*, 'five,' and *φαρμακον*, 'remedy.' Any medicine consisting of five ingredients.

PEN'TATEUCH (SURGICAL), *Penta-teu'chus*, which signifies the five books of Moses,—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy. By analogy, some surgeons have given the name *Surgical Pentateuch* to the division of external diseases into five classes;—wounds, ulcers, tumours, luxations, and fractures.

PENTATH'ETON. Name of a plaster for bruises, excoriations, &c.

PEPAS'TIC, *Pepas'ticus*; from *πεπαινω*, 'I concoct.' A medicine, supposed to have the power of favouring the concoction of diseases. *Maturative*, (q. v.)

PEPTIC, *Pep'ticus*, from *πεπτω*, 'I ripen.' A substance, which promotes digestion, or is digestive.

PERCEP'TA. A word used, by some writers on Hygiene, to indicate, in a general manner, the effects of the nervous action on the animal economy: in other words, the sensations, the functions of the mind, and their deterioration or privation.

PERCEP'TION, *Percep'tio*, from *percip'ere*, 'to conceive,' 'receive.' The sensation, which the brain has of an impression made on an organ of sense.

PERCEPTIV'ITY. Same etymon. The power of perception.

PERCUS'SION, *Epicrousis, απιγκρουσις, Percus'sio*, from *percu'tere*, 'to strike.' When immediate or direct percussion is made on the chest or abdomen, the more or less perfect resonance is an index of the state of the contained organs: and the physician is thus aided in his diagnosis. For this purpose, the chest may be struck with the fingers, gathered into a bundle, and their tips placed upon a level. It is better, however, to employ *Mediate percussion*, which consists in interposing, between the point of the fingers and the chest, the finger of the other hand, or the *Plexim'eter* (q. v.), and striking this, instead of the naked chest.

PERCUTEUR COURBE A MAR-TEAU (F). An instrument used by Baron Heurteloup in the operation of lithotomy, in which a hammer is employed instead of a screw, to force together the blades of the instrument on the foreign body.

PERDON'IUM. In Paracelsus, a medicated wine of herbs.

PER'FORANS. A name given to different muscles, whose tendons pass through intervals between the fibres or tendons of other muscles; thence called *perforated*. See *Flexor Longus Digitorum*, &c.

Under the name *Per'forating Ar'teries*, are included, 1. *In the hand*;—arterial branches, given off by the profound palmar arch, which

traverse the muscles and interosseous spaces. 2. *In the thigh*;—three or four arteries, furnished by the profunda, which pass through the openings of the adductor magnus. 3. *In the foot*;—the anterior and superior branches of the plantar arch.

PERFORA'TION, *Perfora'tio, Anatre'sis*, from *perfora're*, 'to pierce.' An accidental opening in the continuity of organs, either from an external or internal cause.

PER'FORATOR, (F) *Perce-crane*. An instrument for opening the head of the fœtus in utero, when it is necessary to diminish its size. The operation is called *Cephalotomia*.

PERFORA'TUS. That which is pierced. Anatomists have given this name to muscles, whose fibres or tendons separate, to suffer other parts to pass through them. Such are the *Flexor brevis Digitorum pedis*, *F. sublimis perforatus*, and *Coraco-brachialis*.

PERFRIC'TIO, *Catapsyx'is, Peripsyx'is*, from *perfrig'ere*, 'to be cold.' Considerable refrigeration. Great sense of cold:—shivering.

PERI, *περι*, 'about, on all sides, round about.' An augmentative prefix. Hence:

PERIBLEP'SIS, from *περι*, 'around,' and *βλεπω*, 'I look.' The wild look that accompanies delirium.—Foësius.

PERIB'OLE, from *περιβαλλω*, 'I surround.' The dress of a person. Also, the translation of morbid matters towards the surface of the body.

PERIBRO'SIS, *Pericrasis*, from *περιβρωσσω*, 'I eat around.' Ulceration or erosion at the corners of the eyelids.

PERICARDI'TIS, from *περικαρδιον*, 'the pericardium.' *Inflamma'tion of the Pericardium*, (F) *Péricardite*. This is, probably, the proper appellation for most of those cases, which have received the name of *Carditis*, *Cardipericardi'tis*. Along with signs of pyrexia, the local symptoms resemble those of pneumonia. Such as point out that the pericardium is the seat of disease, are the following:—pain, referred to the region of the heart, or scrobiculus cordis,—sometimes pungent, at others, dull and heavy: palpitation, accompanied with spasmodic twitchings in the neighbourhood of the heart, shooting up to the left shoulder; pulsation, and sometimes soreness of the carotids, with tinnitus aurium and vertigo: the breathing is by catches: dyspnoea considerable: pulse jarring, jerking, peculiar: the tongue white, covered with a mucous coat, and the skin often bathed in sweat, as in acute rheumatism.

The *physical signs* during the first period, are as follows. The action of the heart is generally evident to the eye, and may be felt by the hand. There is soreness to the touch, over the intercostal spaces, and over a small surface in the epigastric region, when the pressure is directed upwards towards the pericardium. Percussion is usually natural, but

at times there is dulness. On auscultation, the cardiac movements are found to be frequent, abrupt, jerking, and tumultuous; often irregular and intermittent. The pulse presents corresponding characters.

When effusion of lymph has occurred, percussion may be negative, or be but slightly affected. On auscultation, in addition to the preceding signs, there may be one or more of the rubbing or friction *bruits* (q. v.), resembling the rustling of parchment, or of a sawing or rasping character. In some cases, the sound is like the creaking of new leather. This has been supposed to be pathognomonic of effused lymph.

The most important point, in the pathology of pericarditis, is its connexion with acute rheumatism: and it forms one of the most dangerous occurrences in the latter disease. It may be *acute* or *chronic*: in either case it is, of course, formidable.

The most active depletion must be used; with large doses of opium, counter-irritants, and all the means required in the most violent internal inflammations.

PERICAR'DIUM, *Pericar'dion, Membrana Cor circumflex'a, Involu'crum seu Ar'cula seu Capsa seu Cap'sula seu Cam'era seu Indumen'tum seu Pannic'ulus seu Membra'na seu Theca seu Sac'culus Cordis, Sac or Capsule of the Heart, Arca Cordis*, (F) *Péricarde*, from *περι*, 'around,' and *καρδια*, 'the heart.' The pericardium is a membranous sac, which envelopes the heart, and the arterial and venous trunks that pass from or into it. It is seated in the separation of the mediastinum, above the central aponeurosis of the diaphragm, to which it strongly adheres. Its shape is triangular, like that of the heart, to which it is fitted. The pericardium is composed of two membranes;—the one—*external*—fibrous; the other—*internal*—serous. The latter, having lined the inner surface of the external layer, is reflected over the heart, and covers it entirely; without, however, having the heart within it; in which arrangement it resembles other serous membranes.

The pericardium envelopes the heart; retains it in position, and facilitates its movements by means of the serous fluid, *Liquor seu Aqua seu Humor seu Lympha Pericar'dii, Hydrocar'dia*, which it contains in greater or less quantity.

PERICHON'DRIUM, from *περι*, 'around,' and *χονδρος*, 'a cartilage.' A membrane of a fibrous nature, which covers cartilages, that are non-articular, and bears considerable analogy to the periosteum in organization and uses.

PERIC'LASIS, from *περι*, 'about,' and *κλαω*, 'I break.' A comminuted fracture, with denudation of the bone.—Galen, Foësius.

PERICNE'MIA, from *περι*, 'about,' and *νημη*, 'the leg.' The parts surrounding the tibia:—the tibia itself.

PERICRA'NIUM, *Pericra'nion*, from $\pi\epsilon\rho\iota$, 'around,' and $\kappa\rho\alpha\nu\iota\omicron\nu$, 'the cranium.' The periosteum, which covers the cranium externally.

PERIDES'MIC, *Perides'micus*; from $\pi\epsilon\rho\iota$, 'around,' and $\delta\epsilon\sigma\mu\omicron\varsigma$, 'a ligament.' Some nosologists have given this name to ischuria, caused by a ligature round the penis or by stricture of the urethra.

PERID'ROMOS, from $\pi\epsilon\rho\iota$, 'about,' and $\delta\rho\omicron\mu\omicron\varsigma$, 'a course.' The extreme circumference of the hairs of the head.—Gorræus.

PERIÆR'ESIS, from $\pi\epsilon\rho\iota$, 'about,' and $\alpha\iota\rho\epsilon\omega$, 'I take away.' A sort of circular incision, which the ancients made in the neighbourhood of large abscesses. The periæresis is now only practised in some cases of tumours.

PERIG'RAPHĒ, from $\pi\epsilon\rho\iota\gamma\rho\alpha\phi\omega$, 'I circumscribe.' The aponeurotic intersections of the rectus abdominis are so called.—Vesalius.

PERIN, $\pi\eta\rho\iota\nu$. With some, this means the scrotum; with others, the testicle; with others, the perinæum; and, with others, the anus.

PERINÆOCE'LE, from $\pi\epsilon\rho\iota\nu\alpha\iota\omicron\nu$, 'the perinæum,' and $\kappa\eta\lambda\eta$, 'rupture.' Hernia in the perinæum.

PERINÆUM, *Interfemineum*, *Perineum*, *Gressura*, *Plechas*, *Am'phiplex*, *Peché'deon*, *Mesos'celon*, *Perineon*, *Perinæos*, *Perineos*, *Orrhos*, *Tramis*, *Tauros*, *Interforamineum*, *Cochone*, *Plichos*, *Mesomerion*, *Fæmen*, *Regio Perinæi*, (F) *Perinée*; from $\pi\epsilon\rho\iota$, 'around,' and $\nu\alpha\iota\sigma\iota\nu$, 'to dwell.' The space at the inferior region of the trunk, between the ischiatic tuberosities, anus, and genital organs. It is smaller in the female than in the male; has a triangular shape; and is divided into two equal parts by a median line, called *Raphe*. It is occasionally ruptured in labour. The part between the pudendum and anus is sometimes called *antérieur perinæum*, to distinguish it from the part which extends from the anus to the coccyx, called *postérieur perinæum*.

PERINE'AL, *Perinæus*, *Perineal'is*. That which relates or belongs to the perinæum; as *Perineal artery*, *Hernia*, &c.

ISCHU'RIA PERINEALIS. A name, given by Sauvages to retention of urine, caused by a tumour seated in the perinæum.

PERINYC'TIDES, from $\pi\epsilon\rho\iota$, and $\nu\upsilon\chi$, 'night.' An eruption, appearing at night and disappearing by day.—Erotian.

PERIOD, *Periodus*, *Periodeia*, *Periodeusis*, *Circu'itus*, from $\pi\epsilon\rho\iota$, 'about,' and $\epsilon\delta\omicron\varsigma$, 'way.' *Circuit*. *Periods* are the different phases or revolutions of a disease. The epochs, which are distinguishable in the course of a disease. Three periods are commonly enumerated. 1. The *augmentation*, *increase*, or *progress* (*Incremen'tum*); 2. The *acme* or *height*, (F) *Etat* (*Status*); and, 3. The *decline* (*Decremen'tum*). Some au-

thors reckon only the *invasion* and *termination*.

Period is sometimes used, in describing an intermittent, for the time between the commencement of a paroxysm and that of the next, including the fit as well as interval.

PERIODIC'ITY, *Periodic'itas*; same etymon. The aptitude of certain physiological and pathological phenomena, in health or disease, to recur at particular periods, after longer or shorter intervals, during which intervals they cease completely. Diseases, thus recurring, are called *Periodical*.

PERIODYN'IA, from $\pi\epsilon\rho\iota$, and $\omicron\delta\upsilon\nu\eta$, 'pain.' A circumscribed and acute pain.—Hippoc.

PERIOR'BITĒ, from $\pi\epsilon\rho\iota$, 'around,' and *or'bita*, 'the orbit.' An appellation used, by some, for the periosteum lining the orbit. The inflammation of this periosteum is termed *Periorbitis* or *Periorbiti'tis*.

PERIOS'TEUM, *Perios'teon*, *Perios'teos*, *Perios'tium*, *Circumossa'le*, *Membra'na ossis*, *Omen'tum ossium*, *Circumossa'lis Membra'na*, from $\pi\epsilon\rho\iota$, 'around,' and $\omicron\sigma\tau\epsilon\omicron\nu$, 'a bone.' The periosteum is a fibrous, white, resisting medium, which surrounds the bones every where, except the teeth at their coronæ, and the parts of other bones that are covered with cartilage. The external surface is united, in a more or less intimate manner, to the neighbouring parts by cellular tissue. Its inner surface covers the bone, whose depressions it accurately follows. It is united to the bone by small, fibrous prolongations; and, especially, by a prodigious quantity of vessels, which penetrate their substance.

The periosteum unites the bones to the neighbouring parts. It assists in their growth, either by furnishing, at its inner surface, as M. Bécclard demonstrated, an albuminous exudation, which becomes cartilaginous, and at length ossifies;—or by supporting the vessels, which penetrate them to carry the materials of their nutrition. See *Medullary membrane*.

PERIOSTO'SIS. Tumour of the periosteum. Tumours are so called, which are developed on bones, and formed by their outer membrane. These tumours are more rapidly developed, have a less degree of consistence, and sooner disperse than exostoses, which they resemble greatly.

PERIP'LYSIS, from $\pi\epsilon\rho\iota$, and $\pi\lambda\upsilon\sigma\iota\varsigma$, 'the act of washing.' *Proflu'vium*. A copious discharge from any part, especially from the bowels.

PERIPNEUMO'NIA, *Peripleumo'nia*, *True peripneu'mony*, from $\pi\epsilon\rho\iota$, 'around,' and $\pi\nu\epsilon\upsilon\mu\omega\nu$, 'the lung.' Inflammation of the substance of the lungs.—See *Pneumonia*.

PERIPNEUMO'NIA NOTHA, *P. spu'ria*, *P. pituito'sa*, *P. catarrha'lis*, *Blennotho'rax*, *Obstruc'tio pulmo'num pituito'sa febr'ilis*, *Bronchi'tis asthen'ica*, *False* or *Bastard Peripneu'mony*, (F) *Péripneumonie bâtarde* ou

fausse. An inexact name, under which some affections are comprised that resemble pneumonia; and, especially chronic bronchitis with pleurodynia.—See Bronchitis (chronic).

PERIPNEUMONIA BILIO'SA. Inflammation of the lungs, accompanied with bilious fever.

PERIPNEUMONIA CATARRH'ALIS. Bronchitis or pulmonary catarrh, with pain in some part of the chest.

LATENT PERIPNEUMONY is that whose symptoms are so obscure as to be recognized with difficulty.

PERIPYEMA, from *περι*, 'about,' and *πυον*, 'pus.' Suppuration around an organ;—a tooth, for example.

PERIRRHŒA, from *περι*, 'about,' and *ρεω*, 'I flow.' Afflux of fluids from every point of the body towards an organ which has to remove them from the economy.

PERISCYPHISMUS, *Periscythis'mus*, *Periscythisis*, *Periscytis'mus*, *Periscytisis*, *Scalping*, from *περι*, 'around,' and *Σκυθης*, 'a Scythian,' i. e. 'scalping after the manner of the Scythians.' An operation, described by Paulus of Ægina. It consisted of an incision made around the cranium, and was employed in habitual weakness of the eyes, pains of the head, &c.

PERISPHAL'SIS, *Circumduc'tio*, from *περι*, 'about,' and *σφαλλω*, 'I move.' A circular motion impressed on a luxated bone, for the purpose of reducing it.

PERISTER'NA, from *περι*, 'about,' and *στέρνον*, 'the sternum.' The lateral parts of the chest.

PERISTOLĒ, *Motus Peristal'ticus*, *M. compressorius* seu *vermicula'ris* seu *testudineus*, from *περι*, 'around,' and *στέλλω*, 'I contract,' 'I close.' The *peristaltic action* of the intestines, *Motus peristal'ticus*. It consists of a kind of undulation or vermicular movement, in appearance irregular, but in which the circular fibres of the muscular membrane of the intestine contract, successively, from above downwards, in proportion as the chyme advances in the alimentary canal; so that, being compressed above, it is pushed into the next portion of the intestine, whose fibres are in a state of relaxation. When the fibres contract inversely, they occasion an *antiperistaltic action*.

The peristaltic action is involuntary, and is not under the immediate influence of either brain or spinal marrow. It continues for some time after death.

PERISTROMA, *Peristo'ma*, *Musculus villosus*, *Crusta membrana'cea*, *Crusta vermicula'ris*, from *περι*, 'around,' and *σπρῶννυμι*, 'to spread.' The villous or mucous coat of the intestines.—Castelli.

PERISYSTOLE, from *περι*, 'about,' and *συστολη*, 'a contraction.' The interval, that exists between the systole and diastole of the heart, which is only perceptible in the dying.—Bartholine.

PERITONÆRIX'IS, *Peritonæorex'is*,

from *περιτοναιον*, 'the peritonæum,' and *εγγυω*, 'I break.' Hernia formed by a rupture of the peritonæum.

PERITONÆUM, *Peritone'um*, *Peritonæ'on*, *Peritonei'on*, *Peritonæ'os*, *Peritoni'on*, *Peritoneos*, *Velamen'tum abdominale*, *Tunica præten'sa* seu *Operimen'tum prætensum*, seu *Membra'na abdom'inis*, *Zephach*, *Ziphac*, (F) *Péritoine*, from *περι*, 'around,' and *τεινω*, 'I stretch.' A serous membrane, which lines the abdominal cavity; extends over the greater part of the organs contained there; envelopes them wholly or in part, and maintains their respective relations by means of different prolongations and ligamentous folds:—the *mesentery*, *epiploon*, *mesocolon*, &c. (q. v.) Like all the serous membranes, the peritoneum is a sort of sac without aperture, which covers the abdominal organs, without containing them within it, and the internal surface of which is smooth, and lubricated by a serous fluid.

In the male fœtus, the peritonæum furnishes a prolongation, which accompanies the testicle at the time of its descent, and, in the female fœtus, forms the *Canal of Nuck*, (q. v.) Below the neck of the gall-bladder, the peritonæum has a triangular opening, called the *Foramen* or *Hiatus of Winslow* (q. v.), through which it proceeds behind the stomach, to form a sort of secondary cavity, called the *posterior cavity of the peritonæum*, (F) *Arrière cavité péritonéale* ou *Cavité des Epiploons*.

PERITONITIS, *Empres'ma Peritonitis*, *Peritonæi'tis*, *Cauma Peritonitis*, *Phlegmasia* or *Inflammation of the Peritonæ'um*. The characteristic signs of acute inflammation of the peritonæum are;—violent pain in the abdomen, increased by the slightest pressure, often by the simple weight of the bed-clothes. It generally occurs in the parturient state; and begins on the 2d or 3d day after delivery. At times, a malignant epidemic, and perhaps contagious, variety has made its appearance, and destroyed numbers of females.

This has been described under the name *Puerperal Fever*, but it really seems to be a malignant inflammation of the peritonæum and uterus, *Metroperitonitis*.

In any form it requires the most active treatment, early employed. The appearances, on dissection, are such as occur whenever a serous membrane has been inflamed, and such inflammation has produced death:—effusion of fluid with flakes of coagulable lymph in it; appearances of vascularity, &c., in the membrane.

The treatment—in *active peritonitis*—must consist of the same course as recommended under Enteritis, (q. v.) In the *chronic* kind, symptoms must be combated as they arise, and it may be advisable to excite a new action in the system by means of mercury.

In the epidemic and malignant variety,

unless bleeding be freely employed at the very outset, it does harm. If used early, it is of the most decided advantage. Every thing depends upon arresting the morbid process at the outset.

PERIZOMA, from περιζώννυμι, 'to gird around.' A bandage, girdle. In Fabricius Hildanus, a truss.

PER'KINISM. A therapeutical means, first employed by Dr. Elisha Perkins of Norwich, Connecticut, towards the termination of the last century, and named after him. It consisted in drawing over the affected or other parts the pointed extremities of two metallic rods, called *Metallic Tractors*, each made of a different metal.

The success obtained was through the influence of the imagination; and, consequently, it ranks as high as animal magnetism (q. v.), but no higher. The operation was, also, called *Tractora'tion*.

PEROMELIA, from πηγος, 'wanting,' and μελος, 'a limb.' Congenital misconstruction, or mutilation of the limbs. A genus in the nosology of Good.

PERONE'AL, *Peronæus*, from περονη, 'the fibula.' Belonging or relating to the fibula.

The *Peroneal Muscles* are three in number.

1. **PERONÆUS BREVIS**, *P. secundus*, *P. anti'cus*, *P. Me'dius*, *Semi-fibula'us*, *Grand péronéo-sus-métatarsien*, *Court péronéo-latéral*, (F) *Moyen Péronier*. A muscle, situate beneath the peronæus longus. It is attached, above, to the outer surface of the fibula, and terminates, below, at the posterior extremity of the 5th metatarsal bone, after having been reflected beneath the malleolus externus. It extends the foot upon the leg, at the same time raising a little the outer edge. It may, also, act upon the leg, and extend it upon the foot.

PERONÆUS LONGUS, *Peronæus primus seu posti'cus*, *P. max'imus seu poste'rior*, *P. pri-mus*, *Tibi-péronéotarsien*, *Long péronier latéral*, *Péronéo-sous-tarsien* (Ch.), (F) *Muscle grand péronier*. This muscle is situate at the outer part of the leg. It is long, thick, and triangular above; thin, narrow, and flat below. It is attached, above, to the outer edge of the upper extremity of the fibula, and to the upper third of the outer surface of that bone. Below, it terminates at the outer part of the posterior extremity of the first metatarsal bone. This muscle extends the foot on the leg, turning its point outward, and raising its outer edge. It acts, also, upon the leg, which it extends on the foot.

PERONÆUS TERTIUS,—*Nonus Vesa'lii*, *Péronier antérieur*, *Petit péronéo-sus-métatarsien* (Ch.), (F) *Petit Péronier*. A muscle, situate at the anterior, outer, and inferior part of the leg. It is long and flat, and is attached, above, to the inferior third of the anterior margin and inner surface of the fibula; terminating, below, at the posterior extremity

of the 5th metatarsal bone. This muscle bends the foot on the leg, by raising its outer edge. It can, also, bend the leg on the foot.

The **PERONEAL ARTERY**, or *Fibular A.*, arises from the popliteal, and is situate deeply at the posterior and outer part of the leg. It gives off branches of little importance. Near the outer ankle, it divides into two branches. 1. The *posterior peroneal*, which descends behind the lower joint of the fibula, on the outer surface of the calcaneum. 2. The *anterior peroneal*, which crosses the inferior extremity of the interosseous ligament, to be distributed on the dorsal surface of the foot.

The **PERONEAL VEIN** follows the same course as the artery.

PEROSPLANCH'NICA, from πηγος, 'wanting,' and σπλαγχνον, 'a viscus.' Congenital misconstruction of the viscera. A genus in the Nosology of Good.

PERPERACU'TUS. Extremely acute. An epithet applied to very violent and rapid diseases.

PERSPIRA'TION, *Perspira'tio*, *Transpira'tio*, *Diffila'tio*, *Diap'noë*, *Diapna'ea*, from per, 'through,' and spira're, 'to breathe, exhale.' The *insensible transpiration* or exhalation, continually going on at the surface of the skin and membranes. Sensible perspiration is called *sweat*.

The perspiratory fluid is secreted by an appropriate apparatus, termed by Breschet *Diapnogenous*, and consisting of a secreting parenchyma, situate in the true skin, and of spiral ducts, which open obliquely under the scales of the epidermis. A certain portion of the perspired fluid is thrown off by ordinary physical evaporation.

The *Pulmonary Exhalation*, or *Transpiration*, is that which takes place in the bronchi, and is sent out with the expired air.

PERTURBA'TRIX (*Medici'na*), *Perturbating Treatment*. A mode of treatment in which very active means are employed, and such as impress upon diseases a different course from that natural to them. Much evil has resulted from such treatment, especially in febrile diseases.

PERTUS'SIS, *Tussis feri'na*, *convulsi'va*, *clango'sa*, *suffocati'va*, *clamo'sa*, *spasmod'ica*, *Morbus Cucul'tus*, *Bechorthopna'ea*, *Bex convulsi'va*, *Bex therio'des*, *Hooping-cough*, *Whooping-cough*, *Chin-cough*, *Kin-cough*, *Kind-cough*, (Germ. Kind, 'a child,') (F) *Coqueluche*. A violent, convulsive cough, returning by fits, (F) *Quintes*, at longer or shorter intervals; and consisting of several expirations, followed by a sonorous inspiration or *whoop*. The fits of coughing generally recur more frequently during the night, morning, and evening, than in the day. It is contagious, and attacks the young more particularly. It is rare for it to attack an individual for the second time. The duration is various;—six or eight weeks or more. Although the paroxysms are very violent, it is not a dangerous disease. It

may, however, give rise to other affections, as convulsions, pneumonia, &c., when the complication is very dangerous; as the cause cannot be removed. Those children suffer the least, who evacuate the contents of the stomach during the fit. In the treatment, all that can be done is to palliate. It must be borne in mind that the disease will, in time, wear itself out. If there be much tensile pain of the head, or fever, V. S. may be required, but it is seldom necessary. Narcotics occasionally afford relief, but it is temporary. Gentle emetics, given occasionally, when the paroxysms are long and dry, give decisive relief, and aid in the expectoration of the morbid secretions. After the disease has continued for some weeks, and persists in part from habit, change of air is essential, and this, even should the change be to an atmosphere that is less pure.

PERVER'SION, *Dias'trophê*, *Diastrem'ma*. One of the four modifications of function in disease: the three others being augmentation, diminution, and abolition. The Humourists used this term, also, to designate disorder or morbid change in the fluids.

PES, *Pous*, *πους*, (F) *Pied*. The inferior extremity of the abdominal member, representing a bony arch, an elastic vault, which transmits the weight of the body to the ground. It is divided into three parts;—the *tarsus*, *metatarsus*, and *toes*, (q. v.)

PES'SARY, *Pessa'rium*, from *πῆσος*, 'a small stone.' *Pessus*, *Pes'sulus*, *Supposito-rium uteri'num*. A solid instrument, composed of cork, ivory, or elastic gum, which is introduced into the vagina to support the uterus, in cases of prolapsus or relaxation of that organ; to keep vaginal herniæ reduced, &c. The ancients made use of medicated pessaries, which they distinguished into emollient, astringent, aperient, &c.

The form of pessaries is very variable;—round, oval, &c. according to circumstances.

PESTILEN'TIAL, *Pestilentia'lis*. Relating to the plague. *Pestilential diseases* are those, that bear some resemblance to the plague, in respect to mode of propagation, symptoms, danger, &c.

PETE'CHIAE, *Petic'ulae*, *Punctic'ulae*, *Por'phyra Græco'rum*. Small spots, similar in shape and colour to flea-bites, which occur spontaneously upon the skin, in the course of severe fevers, &c. They are, under such circumstances, signs of great prostration.

PETRO-OCCIP'ITAL, *Petro-occipita'lis*. Belonging to the petrous portion of the temporal bone and to the occipital bone.

The **PETRO-OCCIPITAL SUTURE** is formed by the junction of the petrous portion of the temporal, to the occipital, bone. It is a deep groove separating the bones, which have between them a thin layer of cartilage.

PETRO-SALPIN'GO-PHARYNGE'US. A fleshy fasciculus, which extends from the sphenoid bone, from the petrous portion of

the temporal bone, and from the eustachian tube to the upper part of the pharynx. See Constrictor.

PETRO-SPHENOIDAL, *Petro-sphenoida'lis*. Belonging to the petrous portion of the temporal bone and to the sphenoid bone.

PETRO-SPHENOIDAL SUTURE;—a name given to the small suture, which is formed by the anterior edge of the petrous portion of the temporal bone and the posterior edge of the sphenoid.

PETROLÆ'UM, *Petræleum*, *Petræ oleum*, *Petroleum*, *Bitu'men Petroleum*, *Pissellæ'um Indicum*, *Rock Oil*, *Petroleum Barbaden'se*, *Barbadoes Tar*, from *πέτρος*, 'rock,' and *ελαίον*, 'oil.' A bituminous substance of a foetid odour, and bitter, acrid taste. It is semi-liquid, tenacious, semi-transparent; of a reddish-brown colour, insoluble in water and alcohol; combines with fixed and essential oils and sulphur; and is partially soluble in ether. The petroleum, found at Gabian, near Béziers, in France, has been called *Oleum Gabia'num*, (F) *Huile de Gabian*, *Petroleum rubrum*.

PETROLEUM SULPHURATUM, *Bal'samum Sulphuris Barbaden'se*, (F) *Pétrole ou Pétréole*.—Composed of *petrol. barbad.* 3 xvj, *sulph.* 3 iv,—has been used as a pectoral; and as a detergent to ulcers. It has been accounted antispasmodic and sudorific. Dose, gr^{ss}. x to xxx. Externally, it is used as a stimulant and discutient.

PETROUS, *Petro'sus*, from *πέτρος*, 'a stone.' Resembling stone; having the hardness of stone.

OS PETROSUM. See Temporal.

The **PETROSAL GANGLION**, or *Ganglion of Andersch*, is formed by the glosso-pharyngeal nerve, shortly after it emerges from the jugular fossa. From this ganglion, M. Jacobson, of Copenhagen, traced an anastomosing loop through the cavity of the tympanum, which left branches there, and was thence reflected downwards to join the vidian nerve. See Otic ganglion. This has been called the *Nerve of Jacobson*, and the inosculation, *Jacobson's Anastomosis*.

The **PETROSAL SINUSES** are two venous sinuses of the dura mater, connected with the petrous portions of the temporal bone, and distinguished, on each side, into:—

1. The *superior petrosal sinus*. It arises from the cavernous sinus; follows the upper edge of the petrous portion, which affords it a gutter; passes into the great circumference of the tentorium cerebelli, and opens into the lateral sinus, where the latter experiences a bend, near the base of the pars petrosa. Its form is triangular.

2. The *inferior petrosal sinus* arises from the cavernous sinus at the same point as the last, with which it communicates at the moment of its origin. It descends between the inferior edge of the pars petrosa and the basilar process; and terminates in the lateral

sinus, at the sinus or gulph of the internal jugular vein. It is triangular, and broader at its extremities than middle.

PEUCEDANUM, *P. officinale*, *Mar'athrum sylvestre*, *Marathrophyl'um*, *Pinastel'lum*, *Fenic'ulum porci'num*, *Bonus Genius*, *Hog's Fennel*, *Sulphur Wort*, (F) *Queue de Pourceau*, *Fenouil de Porc*. Family, Umbelliferae. Sex. Syst. Pentandria Digynia. The root has a strong, fetid smell—somewhat resembling that of sulphureous solutions,—and an acrid, unctuous, bitterish taste. It has been recommended as anti-hysterical and nervine.

PEUCEDANUM SILAUS,—*Saxifraga vulgaris*, *S. Anglica*, *Hippomar'athrum*, *Fenic'ulum erraticum*, *English or Meadow Saxifrage*, (F) *Séséli des prés*. The roots, leaves, and seeds have been recommended as aperients, diuretics, and carminatives. Rarely used.

PEY'ERI GLAN'DULÆ, *G. Peyeriana*, *Pey'eri Plexus glandulosi*, *Gland'ulæ mucosæ coagminatæ* seu *agminatæ* seu *muciparæ racematim conges'tæ intestinorum*, *G. intestinales* seu *plexiform'es* seu *spuriæ*, *Corpus'cula glandularum similia* seu *glandulæ in agmen congregatæ intestinorum*, *Enteradenes*, *Peyer's Glands*, *Lieberkuhn's Glands*. Small glands or follicles, situate beneath the villous coat of the intestines. They are clustered together, and are extremely numerous.

PEZA, *πέζα*. This word, according to some anatomists, signifies *Malleolus*; according to others, the sole of the foot.

PEZI'ZA AURIC'ULA, *Auricula Judæ*, *Fungus sambucinus*, *Agar'icus Auriculæ formâ*, *Jew's Ear*. This fungus is said to be astringent; but has chiefly been used as a gargle in relaxed sore throat.

PHACI'TIS, from *φακος*, 'a lens,' and *itis*, a termination denoting inflammation. *Capsi'tis*, *Capsuli'tis*, *Lenti'tis*. Inflammation of the crystalline lens.

PHACO'TOS, *Phaco'tæ*, from *φακος*, 'a scraper.' A name given by the ancients to a kind of scissors or rasp, used in cases of fracture of the skull.—J. Cloquet.

PHAGEDEN'IC, *Phagedæ'nicus*, from *φαγω*, 'I eat.'

A PHAGEDENIC ULCER, *Nomē*, *Phagedæna*, *Ulcus depascens*, is one, which rapidly eats and corrodes the neighbouring parts.

In *Materia Medica*, *Phageden'ic* is a substance used for destroying fungous granulations in ulcers, &c.

PHALAI'A. A barbarous term, employed by Basil Valentine, to designate a universal medicine or panacea.

PHALANGETTIEN. Professor Chaussier uses this term for any thing relating to the third phalanx of the fingers or toes:—*Phalangien*, for what relates to the first;—and *Phalanginien*, to the second.

PHALANGO'SIS, *Hispid'itas*, from *φα-*

λαγξ, 'a row of soldiers.' An affection of the eyelids, in which the lashes are arranged in two or three rows. See *Trichiasis*. Also, dropping of the upper eyelid, from paralysis of the levator palpebræ superioris muscle.

PHALANX, same etymon. A name given to the small bones, which form the fingers and toes, because placed alongside each other like a phalanx. They are distinguished into the *Phalanges of the Fingers*, *Ossa seu Agmina seu Acies seu Articuli seu Scutic'ula seu Nodi seu Interno'dia seu Scytal'ides seu Con'dyli Digito'rum Manus*, and the *Phalanges of the Toes*, *Ossa seu Articuli seu Interno'dia Digito'rum Pedis*.

I. PHALANGES OF THE FINGERS, (F) *Phalanges des Doigts*. They are, in each hand, 14,—three to each finger, and two to the thumb; and are situate one above the other. They are distinguished, numerically, reckoning from the base towards the tip of the finger. 1. The first or metacarpal, (F) *Premières phalanges* ou *Phalanges métacarpiennes*. 2. The second or middle phalanges, (F) *Secondes phalanges* ou *Phalanges moyennes*, *Phalangines*, (Ch.) 3. The third phalanges, *Metacondyli*, *Phalanges unguium*, (F) *Troisièmes phalanges* ou *Phalanges unguéales*, *unguifères*, *unguinales*, *Phalangettes* (Ch.), which terminate each finger, and support the nail.

II. PHALANGES OF THE TOES, (F) *Phalanges des Orteils*. They are the same in number as those of the fingers, but much smaller, and of a very different shape.

The phalanges of a finger or toe are united with each other; and the first with the metacarpal or metatarsal bone. They are developed from two points of ossification; one for the superior extremity, and the other for the body and inferior extremity.

PHAL'ARIS CANARIEN'SIS, *Cultivated Cana'ry Grass*, (F) *Alpiste*. Family, Gramineæ. Sex. Syst. Triandria Digynia. The seed of this grass, (F) *Graines d'aspic*, afford a nourishing meal. The ancients recommended them, for allaying pains in the kidney and bladder.

PHALLOCARCINO'MA, from *φαλλος*, 'the male organ,' and *καρκινωμα*, 'cancer.' Carcinoma or cancer of the penis.

PHALLOPSO'PHIA, from *φαλλος*, 'the male organ,' and *ψεφος*, 'a noise.' Discharge of wind from the male urethra.

PHALLORRHA'GIA, from *φαλλος*, 'the male organ,' and *ρηνυμι*, 'I break out.' Hemorrhage from the male urethra.

PHANTASM, *Phantas'ma*, from *φανταζω*, 'I make appear.' A phantom, false appearance; apparition. Derangement of the sense of sight or of the intellectual faculties, causing objects to be perceived, which are not before the eyes.

PHARMACEU'TIC; *Pharmaceu'ticus*, from *φαρμακον*, 'a medicine.' An epithet

for every thing belonging to Pharmacy. Thus, we say, *Pharmaceutical preparation*, &c.

PHARMACOCATAGRAPHOLOGIA, from *φαρμακον*, 'a medicine,' *κατα*, 'beneath,' *γραφη*, 'a writing,' and *λογος*, 'a description.' The art of writing prescriptions.—J. J. Plenck.

PHARMACOPŒIA, *Pharmacopœia*, (F) *Pharmacopée*, from *φαρμακον*, 'a medicine,' and *ποιω*, 'I make.' A work, containing a collection of formulæ for the preparation, &c., of medicines: generally published by authority.

PHARMACOPOLIUM, *Apotheca*, *Officina*. The shop of the druggist or apothecary, from *φαρμακον*, 'a medicine,' and *πωλεω*, 'I sell.'

PHARMACOPO'SIA, from *φαρμακον*, 'a medicine,' and *ποσις*, 'a portion.' A liquid medicine, especially one that is cathartic.

PHARMACO'SA MEDICAMENTA, from *φαρμακον*, 'a poison.' Medicines, that contain poisonous substances.—Fallopian.

PHARMACOTHE'CA, *φαρμακοθηκη*, from *φαρμακον*, 'a medicine,' and *τιθημι*, 'I place.' A case for certain medicines.

PHAR'MACUM AD AURES, *Ægyptium Medicamentum ad Aures*. A name given to a medicine, composed of bitter almonds, white pepper, saffron, myrrh, opium, frankincense, castor, verjuice, sulphate of iron, vinegar, pomegranate bark, unguentum nardinum, &c. It was believed to be useful for cleansing fetid ulcers in the ears.

PHAR'MACY, *Pharmacîa*, *Pharmaceutice*, from *φαρμακον*, 'a medicine.' The art, which teaches the knowledge, choice, preservation, preparation, and combination of medicines. It was, formerly, divided into *Galenical* and *Chymical*. The former, called after Galen, embraced the operations undertaken on medicines without analyzing them:—the latter, *Chymical Pharmacy* or *Pharmaceutic Chymistry*, *Pharmacochymia*, comprised the preparation of medicines, founded on the chymical action of their principles.

PHARYNGÆUM (SAL). A compound of cream of tartar, nitrate of potassa, burnt alum, and distilled vinegar. It was formerly employed, united with honey and plantain water, to make gargles, which were advised in quinsy.

PHARYNGE'AL, *Pharyngæus*, (F) *Pharyngé*, *Pharyngien*. That which relates to the pharynx. A name given to the muscles, vessels, and nerves of the pharynx.

The **PHARYNGEAL ARTERIES**. These are two in number. The one—*superior* or *pterygo-palatine*, *Ramus Pharyngæus superior* of Haller—arises from the internal maxillary at the base of the zygomatic fossa, passes through the pterygo-palatine canal, and proceeds to be distributed to the pharynx and the corresponding part of the eustachian tube.

The other—the *inferior*,—*Pharyngæa ascendens* of Haller—arises from the external carotid, on a level with the facial. It ascends along the lateral and posterior part of the pharynx, and divides into two branches: the one—the *pharyngeal*, properly so called—is distributed to the pharynx; the other—the *meningeal*—gives its branches particularly to the dura mater.

The **PHARYNGEAL NERVE**:—a branch sent by the pneumogastric to the pharynx. It descends behind the internal carotid; communicates with the glosso-pharyngeal; and divides, opposite the *middle constrictor* of the pharynx, into a great number of filaments, which anastomose, in a multitude of different directions, with filaments of the glosso-pharyngeal nerve, of the superior laryngeal branch, and of the first cervical ganglion. These different nervous filaments, united, constitute the *pharyngeal plexus*, the irregular meshes of which send numerous ramifications to the pharynx.

PHARYNGOCE'LE, *Pharyngeury'sma*, *Diverticulum* seu *Hernia* seu *Prolapsus Œsophagi* vel *pharyngis*. An enlargement at the upper part of the gullet, in which the food sometimes rests in considerable quantity.

PHARYNGO-GLOSSAL, *Glosso-pharyngeal*, *Pharyngo-glossianus*. That which belongs to the pharynx and tongue.

The *Glosso-pharyngeal Nerve* or *Pharyngo-glossal*, *Lingua'lis latera'lis*, (F) *Nerv Glosso-pharyngien*, *Pharyngo-glossien*—a portion of the 8th pair—arises from the superior and lateral parts of the spinal marrow, between the facial and pneumogastric nerves, by several filaments, which soon unite into a single cord, that passes out of the cranium by the foramen lacerum anterius; goes downwards and forwards, and gains the posterior and inferior part of the tongue. Immediately after its exit from the cranium, it gives a branch to the meatus auditorius externus, and receives a filament from the facial, and another from the pneumogastric nerve. It then furnishes two other filaments, which descend upon the carotid artery, and unite at the bottom of the neck with branches from the cervical ganglions and cardiac nerves, and give two filaments to the stylo-pharyngeus muscle.

The glosso-pharyngeus, after sending a twig or two to the tonsil, to the upper part of the pharynx and membrane of the epiglottis, divides into many branches, which run partly to the margin and partly to the middle of the root of the tongue; supplying, especially, the papillæ majores, and the parts in their neighbourhood.

By some, this nerve is regarded as the controller of the associated motions of the tongue and pharynx. By others, it is esteemed to be the special nerve of gustation.

PHARYNGOG'RAPHY, *Pharyngogra'*

phia, from *φαρυγξ*, 'the pharynx,' and *γραφη*, 'a description.' Anatomical description of the pharynx.

PHARYNGOLOG'OGY, *Pharyngolo'gia*, from *φαρυγξ*, 'the pharynx,' and *λογος*, 'a discourse.' The part of anatomy, which treats of the pharynx.

PHAR'YNGOTOME, *Pharyngot'omus*, from *φαρυγξ*, 'the pharynx,' and *τεμνω*, 'I cut.' An instrument, invented by J. L. Petit, and used to scarify inflamed tonsils, and to open abscesses, which form in the parietes of the pharynx. It is composed of a long, narrow blade with a lancet point, and inclosed in a sheath or canula of silver, slightly curved. This instrument is carried to the part to be cut, and the point of the blade is made to pass out of the sheath, by pressing on a button at the end of the pharyngotome. A spring causes the blade to re-enter as soon as the pressure is removed.

PHARYNGOTOMY, *Pharyngoto'mia*; same etymon. Some authors have used this word synonymously with œsophagotomy, (q. v.) It means, also, scarification of the tonsils, or an incision, made for opening abscesses there, &c.

PHARYNX, *Pharyx*, *Pharus*, *Gula*, *Læmos*, *Fauces*, *Pharyn'gethron*, *Pharyn'gethros*, *Pharygathron*, *Isthmos*, *Isth'mion*, *Inglu'vies*, *Princip'ium Gulæ*, *Os pos'terum*, (F) *Arrière-bouche*, *Gosier*. A species of musculo-membranous, symmetrical canal, on the median line, irregularly funnel-shaped, and situate between the base of the cranium and the œsophagus, in front of the vertebral column. It is very narrow above; but dilates in the middle, and again contracts below, at its junction with the œsophagus. Into the anterior paries of the pharynx open, successively, from above to below;—the posterior orifices of the nasal fossæ; the eustachian tubes; the posterior aperture of the mouth, and the top of the larynx.

The pharynx is formed, externally, of a muscular coat, and, internally, of a mucous membrane, which is continuous, above, with the Schneiderian membrane; in the middle, with that of the mouth; below, with that of the œsophagus; and, at the sides, with those of the eustachian tubes. This membrane has no villi, and presents only a few inequalities, which are owing to the presence of muciparous follicles.

The muscular coat of the pharynx is composed of the constrictor muscles, stylo-pharyngei, and pharyngo-staphylini. The vessels and nerves are called 'pharyngeal.'

The pharynx serves as a common origin for the digestive and respiratory passages. It gives passage to the air, during respiration; and to the food at the time of deglutition.

PHASE'OLUS VULGA'RIS, *Fase'lus*, *Fase'olus*, *Bona*, *Boona*; the *Kidney Bean*; the *French Bean*, (F) *Haricot*. *Family*, Leguminosæ. *Sex. Syst.* Diadelphia Decan-

dria. When young and well boiled, this is easy of digestion, and delicately flavoured. It is less flatulent than the pea.

PHASEOLUS CRETICUS, *Cajan*, *Cayan*. A decoction of the leaves, according to Ray, restrains the hemorrhoidal flux, when excessive.

PHASIA'NUS GALLUS, (F) *Coq*. The parts of generation of the cock, dried and pulverized, were formerly regarded proper for increasing the quantity of semen. The fat was used as emollient and resolvent; the brain, in diarrhœa; the gall, in freckles and diseases of the eyes. These phantasies are now abandoned.

PHATNORRHA'GIA, from *φατνιον*, 'an alveolus,' and *εργυμι*, 'I break forth.' Hemorrhage from an alveolus.

PHAUSIN'GES, *φαισιγγες*, from *φαιζω*, 'I roast.' Spots or blisters on the legs, produced by heat; and, in a more extensive signification, by any other cause. Also, a Pustule.—Fœsius.

PELLAN'DRIUM AQUAT'ICUM, *Phellandrium*, *Fœnic'ulum aquaticum*, *Cicuta'ria aquatica*, *Water Fennel*, *Fine-leaved Water Hemlock*, (F) *Phellandre*, *Fenouil d'eau*, *Cigue d'eau*. *Family*, Umbelliferae. *Sex. Syst.* Pentandria Digynia. This plant is stimulant and narcotic. It has been used in intermittents and dyspepsia. It has, also, been given in phthisis pulmonalis, and in cases of scrophulous, atonic ulcers.

PHENIG'MUS, *Phænig'mus*, from *φοινιξ*, 'red.' *Red Jaundice!* A cutaneous affection, consisting of redness diffused over the skin, without fever. Sauvages makes it a genus of his order *Icteritiæ*. Also, the act of irritating a part by a stimulating application.

PHENOM'ENON, from *φαινομαι*, 'I appear.' Any extraordinary and unexpected event.

In *Medicine*, it means any change, appreciable by our senses, which supervenes in an organ or function:—as the *phenomena* of the circulation, respiration, &c. It is used in pathology, synonymously with symptom or sign.

PHI'ALA. A *Phial* or *Vial*, (F) *Fiole*. A small bottle, in which apothecaries are in the habit of sending out their mixtures, draughts, &c.: hence called *Medicine Vials*, (F) *Fioles à Médecine*. They are usually sold in grosses, and assorted into vials of oz. 8; oz. 6; oz. 4; oz. 3; oz. 2; oz. 1½; oz. 1; and oz. ½.

PHILIA'TROS, *φιλιατρος*, from *φιλειω*, 'I love,' and *ιατριαν*, 'medicine.' An amateur of medicine. One who studies medicine.

PHILTER, from *φιλειω*, 'I love.' *Philtrum*, *Philetron*, *Phar'macum* vel *poc'ulum amato'rium*, *Amato'rium venefi'cium*, (F) *Philtre*. A medicine or drink, considered capable of causing love.

PHIL'TRUM, *φιλτρον*, in *Anatomy*, means

the fossula or depression on the upper lip, beneath the septum of the nose, which seems to divide the lip into two parts.

PHIMOSICUS, Relating to phimosis.

Sauvages calls *Ischu'ria phimo'sica*, *Ischu'ria urethra'lis a phimo'si*, the retention of urine, which depends upon phimosis.

PHIMO'SIS, *Phymosis*, *Capistra'tio*, from φιμω, 'I bind up.' A disease, which consists in a preternatural narrowness of the opening of the prepuce, so that it cannot be carried behind the corona glandis. This affection is most commonly congenital. Sometimes, it is accidental, and dependent upon tumefaction of the glans, or of the prepuce, as occurs in syphilis. To remedy this state, the prepuce may be divided by means of a bistoury and director; or circumcision may be practised.

PHLEBECTA'SIA, from φλεβ, 'a vein,' and εκτασις, 'dilatation.' Dilatation of a vein, or of a portion of a vein.—Alibert.

PHLE'BION, diminutive of φλεβ, 'a vein.' A vein.—Hippocr.

PHLEBITIS, from φλεβ, 'a vein,' and itis, the termination for inflammation. Inflammation of the inner membrane of a vein, which sometimes follows blood-letting, and extends from the small wound, made in that operation, to the neighbouring parts of the venous system. The symptoms are, first, inflammation in the punctured part; and, afterwards, a knotty, tense, painful cord, following the direction of the vessel, and accompanied with more or less fever, according to the extent of the inflammation, the nervous symptoms, &c.

Phlebitis, also, sometimes supervenes on the ligature or excision of varices; after amputation, gunshot wounds, delivery, the ligature of the umbilical cord, &c. It may terminate by resolution, suppuration, ulceration, or gangrene.

PHLEBOG'RAPHY, *Phlebogra'phia*, from φλεβ, 'a vein,' and γραφω, 'a description.' Description of the veins.

PHLEBOL'OGY, *Phlebolo'gia*, from φλεβ, 'a vein,' and λογος, 'a discourse.' The part of anatomy, which treats of the veins.

PHLEBOPALI'A, φλεβοπαλια, φλεβοπαλεια, from φλεβ, 'a vein,' and παλλω, 'I palpitate.' With the ancients, *pulsation*, which they conceived to be produced by the veins.

PHLEBOPHTHALMOTO'MIA, *Ophthalmophleboto'mia*, from φλεβ, 'a vein,' οφθαλμος, 'the eye,' and τεμνω, 'I cut.' Blood-letting in the eye.

PHLEBORRHA'GIA, from φλεβ, 'a vein,' and γηγρυμι, 'I break out.' Rupture of the veins; and, in a more extensive sense, venous hemorrhage.

PHLEBORRHEX'IS, from φλεβ, 'a vein,' and ρηξις, 'a rupture.' Rupture of a vein. Also, hemorrhage from a vein. *Phleborrha'gia*.

PHLEBOT'OMIST, from φλεβ, 'a vein,'

and τεμνω, 'I cut.' A bleeder. One who practises, particularly, the operation of phlebotomy. See Blood-letting.

PHLEGM, *Phlegma*, *Pituite*, *Pitui'ta*. One of the four natural humours of the ancients, which was, according to them, cold and moist, as atrabilis was cold and dry. It predominated, especially, in winter.

Pituita was afterwards applied to every aqueous or excrementitious humour, such as the saliva, nasal and intestinal mucus, serum, &c. The terms *phlegm* and *pituita* are no longer used in Physiology; the different humours having received particular names; but the vulgar still use *phlegm* to designate a stringy mucus, expectorated or rejected by vomiting. The ancient chymists gave the name 'phlegm' to aqueous, insipid, and inodorous products, obtained by subjecting moist vegetable matters to the action of heat.

PHLEGMAGOGUE, from φλεγμα, 'phlegm,' and αγω, 'I expel.' A medicine, formerly believed capable of "cutting" or removing phlegm.

PHLEGMA'TIA, from φλεγμα, 'phlegm.' Edema, Anasarca.

PHLEGMA'TIA DOLENS, *P. lactea*, *P. dolens puerpera'rum*, *Leucophlegmasia dolens puerperarum*, *Scelon'cus*, *Anasar'ca sero'sa*, *Ecthy'ma œdemat'icum*, *Spargano'sis puerpera'rum*, *Ecchymo'ma lymphat'ica*, *Ischias a spargano'si*, *œde'ma puerpera'rum*, *œd. lacteum*, *White leg*, *Swelled leg*, *White swelling of lying-in-women*, (F) *Dépot laiteux sur la cuisse*, *œdème actif des nouvelles accouchées*, *Enflure des jambes et des cuisses de la femme accouchée*. It occurs, for the most part, in the second or third week after delivery:—is limited to the lower extremity, and chiefly to one side; exhibiting to the touch a feeling of numerous irregular prominences under the skin. It is hot, white, and unyielding; and is accompanied, sooner or later, with febrile excitement. After a few days, the heat, hardness, and sensibility diminish; and the limb remains œdematous, for a longer or shorter period.

The disease frequently, if not generally, consists in obstruction of the iliac or other veins. Owing to the pressure of the gravid uterus—the flow of blood being obstructed—the serous part of it is thrown out into the cellular membrane of the limb. Sometimes, the vein is found completely obliterated.

The treatment consists in the use of anti-phlogistics:—the application of leeches or cupping-glasses near the groin: fomentations to the limb, &c.; and, when the active state has subsided, the use of a roller, applied gently at first, but, afterwards, gradually tightened.

PHLEGMATORRHA'GIA, *Phlegmatorrhœ'a*, from φλεγμα, 'phlegm,' and ρεω, 'I flow.' Stahl and his partisans gave this name to a copious secretion, by the nostrils, of a

limpid and thin mucus, without inflammation. It is the *Coryza Phlegmatorrhagia* of Sauvages.

PHLEGMON, from φλεγμα, 'I burn.' *Phlogosis phlegmonē*, *Phlegmonē*, *Phlegma'sia*, *Incedium*, *Inflamma'tio*. Inflammation of the cellular texture, accompanied with redness, circumscribed swelling, increased heat and pain; which is, at first, tensive and lancinating; afterwards, pulsatory and heavy. It terminates, most commonly, in suppuration. It requires the antiphlogistic treatment; until suppuration seems inevitable, when the suppuration must be encouraged, as the next favourable termination to resolution.

PHLEG'MONOUS, *Phlegmono'des*, from φλεγμων, 'a phlegmon,' and εἶδος, 'resemblance.' That which relates or belongs to a phlegmon.

PHLEGMONOUS INFLAMMA'TION, is the active inflammation of the cellular membrane; in contradistinction to erysipelatous inflammation or that of the skin.

PHLEGMYMENTIS, from φλεγμα, 'phlegm,' ὅμη, 'a membrane,' and itis, the termination for inflammation. Inflammation of a mucous membrane.

PHLOGO'DES, from φλογ, 'flame,' and εἶδος, 'resemblance.' *Inflamed*, *Inflamatus*. An epithet employed, particularly, to express the red colour of the face.

PHLOGOSIS, *Inflammation*. Some writers use the word exclusively for external inflammations—phlegmons; others, for those that are superficial or erysipelatous.

PHLOGOTICA, *Inflammations*. The second order in the class *Hæmatica* of Good.

PHLORIDZINE, *Phloridzi'na*, from φλωρος, 'inner bark,' and ρίζα, 'root.' The bitter or active principle of the root and trunk of the apple, pear, cherry, and plum tree. It is deposited from the decoction on cooling; crystallizes in silky spicula of a dead white colour, when in masses, or in long slender prisms or tables, when crystallized with care. 1000 parts of water, at a temperature of from 32° to 71°, only dissolve about one part; but at from 70° to 212°, it is dissolved in all proportions. It is very soluble in pure alcohol, but only slightly so in ether; s. g. 1.429.

It has been administered successfully in intermittents, 10 to 20 grains being generally required to arrest the paroxysm. It may be given either in the form of pill or powder.

PHLYCTÆNA, *Phlyza'cion*, *Ampul'la*, *Holophlyc'tides*, *Phlyc'tides*, *Phly'sis*, φλυκτιδες, from φλυζω, 'I boil.' Tumours, formed by the accumulation of a serous fluid under the epidermis.

PHLYCTENOID, *Phlyctenoï'des*. Resembling phlyctænæ. An epithet for a variety of herpes.

PHLYSIS, from φλυζω, 'I am hot,' 'I boil.' A cutaneous eruption. An ulcerative, subcutaneous tumour: flat, tensive, glabrous;

diffused; hot; throbbing; at length fluctuating with an acrid ichor.—Good.

PHONA'TION, *Phona'tio*, from φωνη, 'voice.' The physiology of the voice.

PHON'ICA, φωνικά, from φωνη, 'voice.' The first order of the class *Pneumatica* in Good's Nosology. Defined:—diseases affecting the vocal avenues:—the passage of the voice impeded, or its power suppressed or depraved.

PHONON'OSI, *Phononu'si*, from φωνη, 'the voice,' and νοσος, 'a disease.' *Morbi vocis*. Diseases of the voice. *Phonopathi'a*.

PHORONOM'IA, from φορομαι, or φερομαι, 'I put myself in motion,' and νομος, 'law.' The doctrine of muscular motion.

PHOROUS, from φερω, 'I carry.' A suffix denoting conveyance. Hence, *Galactophorous*, &c.

PHOSPHORENÆSES. M. Baumes unites, under this generic name, the diseases which he attributes to disordered phosphorization: i. e. to excess or deficiency of calcareous phosphate or its decomposition. Amongst these affections he ranks rachitis, osteomalacia, and gout.

PHOSPHORES'CENCE, *Phosphorescentia*. The property, possessed by certain bodies of being luminous in obscurity, or under particular circumstances. In the eye of the cat, something of this kind seems to occur.

PHOSPHOR'IC ACID, *Ac'idum Phosphoricum*. A solid, colourless compound; very sapid; very soluble in water, and vitriifiable by fire. It exists in bones combined with lime. It has been employed in medicine in the form of lemonade, in passive hemorrhage, typhus, phthisis, marasmus, &c., and in injection in cases of cancer of the uterus. It does not seem preferable to other acids.

PHOSPHORUS, *Phosphorum*, *Autophosphorus*, from φως, 'light,' and φερω, 'I carry.' (F) *Phosphore*. 'A light-carrier.' An elementary or undecomposed substance; not metallic; solid; transparent or semi-transparent; colourless: brilliant: flexible: of a sensible garlic odour: very inflammable, and susceptible of combining with the oxygen of the atmosphere, at even the ordinary temperature. It does not exist pure in nature, but is found frequently united to other bodies.

Phosphorus has been used in medicine, dissolved in ether or suspended in the yolk of an egg, as a stimulant: but the greatest precautions are necessary in its administration, so that it is rarely employed.

PHOTOPHO'BIA, from φως, 'light,' and φοβος, 'fear.' Aversion to light:—intolerance of light.

PHRAGMOS, φραγμος, from φρασσω, 'I inclose.' A row of teeth.

PHREN, φρεν, 'the mind.' Also, the diaphragm.

PHREN'ICA, from φρεν, 'the mind.' Diseases, affecting the intellect; characterized

by error, perversion, or debility of one or more of the mental faculties. The first order of the class *Neurotica* of Good.

PHRENITIS, *Phrené'sis*, *Phreneti'asis*, *Phrenis'mus*, *Cephal'i'tis*, *Sphacelis'mus*, *Cephalal'gia inflammato'ria*, *Karabitus* (Arab.), *Sibare*, *Empres'ma cephal'i'tis*, *Siri-asis*, *σιγισσις*, *σιγισσις*, *Sidera'tio*, *Inflamma'tio phreni'tis*, *Encephali'tis*, *Cauma phreni'tis*, *Phrensy*, *Brain Fever*, (F) *Phrénésie*. A disease, characterized by violent pyrexia; pain in the head; redness of the face and eyes; intolerance of light and sound; watchfulness; and delirium, either furious or muttering. Its causes are the same as those of other inflammations; sometimes, however, it is induced by a *Coup de soleil*; by inebriation; violent mental emotions, &c.

Some authors have given the name *Phrenitis* and *Meningitis* to inflammation of the membranes of the brain; and that of *Cephalitis*, *Encephalitis* or *Cerebritis* to inflammation of the substance of the brain: but there are no pathognomonic symptoms, which can lead us to refer the seat of the disease to either of those parts exclusively.

Phrenitis is, of course, a very dangerous affection, from the importance of the organ concerned. The most active treatment must, necessarily, be pursued. Bleeding *ad deliquium*; purging; the application of ice to the shaved head; a position in which the head is raised; and the avoiding of irritation of every kind;—form the remedial means during the violent stage. After this has yielded, counter-irritants to the nape of the neck or to other parts of the body will be useful adjuvants.

When the brain and meninges were affected only symptomatically, as in inflammation of the diaphragm, the disease was formerly called *Paraphrenitis*, (q. v.)

Hydrocephalus acutus (q. v.) is a variety of phrenitis.

PHRICO'DES (FEBRIS), from *φρίκν*, 'a shivering.' *Horrificus*. A fever, in which the chill is very intense and prolonged.

PHRYG'IUS (LAPIS). An earthy matter, found in Phrygia and Cappadocia, and formerly employed as an astringent.—*Goræus*.

PHTHIERE'MIA, from *φθειρω*, 'I corrupt,' and *αἷμα*, 'blood.' A state in which the plastic powers of the blood are deteriorated.

PHTHEIRIASIS, *Phthiriasis*, from *φθῆγ*, 'a louse.' *Morbus pedicul'osus*, *Pedicula'tio*, *Malis pedic'uli*, *Lousiness*, *Lousy disease*, (F) *Maladie pédiculaire*. A disease, which consists in the excessive multiplication of lice on the human body, under conditions, in which it does not ordinarily take place, and in spite of cleanliness. It has been asserted, that the affection has often caused death.

Simple and medicated baths have been recommended for its removal; lotions of the decoction or infusion of tobacco and stavesacre, mercurial frictions, &c.

PHTHIS'ICUS, *Phthino'des*, *Tab'idus*. (F) *Poitrinaire*. Belonging to phthisis. *Phthisical*. Also, one labouring under phthisis.

PHTHISIOLOGY, *Phthisiolo'gia*, from *φθισις*, and *λογος*, 'a treatise.' A treatise on phthisis.

PHTHISIS, *Phthoe*, *Tabes*, *Consumption*, *Decline*, from *φθίω*, 'I dry,' 'I fade.' This word, taken in a general sense, means progressive emaciation of every part of the body. It is usually, however, restricted to

PHTHISIS PULMONA'LIS, *Maras'mus phthisis*, *Hectica phthisis*, *Hæmop'tysis phthisis*, *P. pulmona'ris*, *Phthisi-pneumo'nia*, *Tabes pulmona'lis*, *Phthisis scrophulo'sa*, *Pneumop'thoe*, *Pulmo'nia*, *Phthisis tuberculo'sa*, *Pulmonary consumption*, *Consumption*, *Decline*, (F) *Phthisie*, *P. pulmonaire*, *Crachement de pus*. Occasionally, this formidable disease occurs accidentally: but, usually, it is caused by a conformation obtained from progenitors. This, at least, predisposes to it; and but a slight exciting cause is required to rouse the predisposition into action. It is not a disease of the torrid zone; and, in the temperate regions of the globe, its pathology is often intimately allied with that of scrophula. It usually consists in the formation of tubercles in the lungs, which sooner or later inflame and break down. In such a constitution, ulcerations of the lungs do not readily heal; and hectic fever—the universal attendant upon irritability and debility—is established. This persists, and gradually wears down the patient, till he ultimately expires, exhausted by the irritative fever. The chief symptoms are the following. The patient feels a sense of uneasiness in the chest, with severe fits of coughing, or a short and dry cough, with dyspnœa. This may be considered the incipient stage. The cough then becomes extremely troublesome, especially in the morning; dyspnœa is increased on the slightest exertion. Expectoration evidently purulent:—fever in the evening, with circumscribed redness of the cheeks; wasting; colliquative sweats early in the morning. This must be considered the confirmed stage. In the third or last stage, the hectic becomes constant, with small pulse, pungent heat, colliquative sweats, and diarrhœa. The weakness becomes extreme, and the patient exhausted.

Broussais regards the affection as a chronic inflammation of the lungs.

Physical Signs.—1. In the first stage whilst there are yet scattered miliary tubercles, the only appreciable change at the exterior of the chest, and this is not constant, is a want of freedom in the movements of the chest under one or both clavicles. Percus-

sion will generally discover a slight diminution of sound corresponding to the summit of one lung.

In the same situation, auscultation shows that the inspiratory murmur is either weaker, rougher, or confused. The sound of expiration is more distinct. The voice and cough are rather more resonant, and wheezing or mucous *râle* are occasionally heard in the same region.

2. When the tubercular deposition has become more abundant, the motion of the chest is more markedly diminished under one or both clavicles. The loss of sound on percussion is more distinct, the inspiration, on auscultation, is bronchial, the expiration louder and more superficial, and the resonance of the voice and cough is increased. The rest of the lung is perhaps healthy, or the respiration may be puerile.

3. When the tubercles are undergoing softening,—in addition to the preceding signs, auscultation exhibits subcrepitant *râle* around the apex of the lung, decreasing from above downwards. It is most distinct during or after the cough, and at the close of a deep inspiration. As the disease proceeds the bubbling becomes successively larger, and ultimately *gargouillement* is heard. The inspiration and expiration are cavernous or tracheal. The voice and cough indicate unusual resonance and pectoriloquy. The intercostal spaces are often depressed locally, and percussion may become gradually clearer and even tympanitic as the cavern increases.

It is only in the incipient state of this formidable disease, that advantage can be expected from any plan of treatment; and of all means that can be devised, that of removing to a climate in which air and exercise can be daily enjoyed during the autumnal, winter and spring months is the best. See Climate. If this be impracticable, the patient must be kept in a regulated temperature, taking care that the chamber be duly ventilated; and gestation in the open air be used, whenever the atmosphere, although cold, is dry.

The other indications will be: 1. To moderate inflammatory action: 2. To support the strength: and, 3. To palliate urgent symptoms.

The whole treatment indeed is palliative. Counter-irritants relieve pain: demulcents and mild opiates alleviate the cough: the mineral acids united with opium relieve the colliquative sweats: and chalk and opium the diarrhœa.

Dr. Wilson Philip has pointed out a particular species of phthisis, which is characterized, in the early stage, by a deranged state of the digestive organs; flatulent, irregular bowels; furred tongue; impaired appetite; unnatural fæces; and the epigastric region more or less full and tender on pressure. The affection of the lungs is here secondary. He calls it *Dyspeptic phthisis*.

PHTHISIS LARYNGE'A, (F) *Phthisie laryngée*, *Ulcère du larynx*, is a species of consumption analogous to phthisis pulmonalis, and produced by inflammation and ulceration of the interior of the larynx, and sometimes by caries of the cartilages. *Phthisis trachea'lis* is a similar affection, seated in the trachea.

PHYGETH'LON, *Panus*, *Phypella*, from *φύγω*, 'I broil.' Inflammation of the superficial lymphatic glands, not ending in suppuration.

PHYLACTERIUM, from *φυλάσσω*, 'I preserve.' A *Phylactery*. An amulet:—a prophylactic.

PHYLLAN'THUS URINA'RIA, *Binkohumba*. A plant, employed in Ceylon, in decoction, as a diuretic.

PHYMA, *Phi'ma*, from *φύομαι*, 'I spring up.' With the ancients, this word was used with great latitude: sometimes, in the sense of phlegmon, for tumours larger than a boil, and perfectly suppurative. In the Nosology of Sauvages, *Phymata* is an order of diseases, to which he refers erysipelas, œdema, phlegmon, emphysema, scirrhus, &c. In that of Dr. Good it is a genus, including hordeolum, furunculus, sycosis, and anthrax.

PHYS'ALIS, *P. Alkeken'gi*, *Sola'num vesica'rium*, *Alchachen'ge*, *Alkeken'gi*, *Halicac'abum*, *Winter Cherry*, (F) *Alkekenge*, *Coqueret*. Family, Solanææ. Sex. Syst. Pentandria Monogynia. The berries are recommended as a diuretic, from 6 to 12 for a dose, in dropsical and calculous cases.

PHYSO'NIA, from *φυσκη*, 'a bladder.' *Ventros'itas*, *Ecphy'ma physco'nia*, *Hyposar'ca*, *Emphrac'tica*, *Visco'nia*, *Hypersarchidios*. A generic term, under which Sauvages has comprised every large tumour, developed in the abdomen, that is neither fluctuating nor sonorous. Linnæus calls them *Hyposarca*.

PHYSE'SIS, *Physe'ma*, from *φύσσω*, 'I inflate.' An emphysematous tumour.

PHYSI'CIAN, *Med'icus*, *Iatros*, *Aces'tor*, *Altheus*, from *φύσις*, 'nature.' (F) *Médecin*. One who has graduated at a University as Doctor of Medicine. The French, formerly, used the word *physicien* in the same sense. It is now appropriated to the natural philosopher.

PHYS'ICS, *Iatrophys'ics*. Physics, directly applied to Medicine: either to the explanation of the vital phenomena, the preservation of individuals, or the treatment of disease.

PHYSIOG'NOMY, *Physiognó'mia*, *Physiognom'icá*, *Physiognom'ice*, *Physionom'ia*, *Physiognomon'ica*, *Physiognom'one*, *Physiognomos'yne*, *Physiognomosia*, *Anthroposcopia*, *Prosopomanti'a*, *Semiotice faciei*, *Physiognom'nia*, *Physiognom'onny*, *Metopos'copy*, *Prosopo'sis*, from *φύσις*, 'nature,' and *γινώσκειν*, 'I know.' The art of knowing the dispositions of men from their external appearance; especially from the features.

Every inference of this kind must necessarily be extremely fallacious, and cannot be reduced to rule, as was attempted by Lavater and others.

In infantile diseases numerous shades of expression are evident, which experience teaches how to appreciate; and which afford useful guides in the pathology of that period of existence.

PHYSIOL'OGY, *Physiolo'gia*, *Biol'ogy*, *Physiologie*, *Œcomó'mia animalis*, *Anat'omia viva*, *Anat'omē anima'ta*, *Anthropologia*, *Microcosmogra'phia*, *Microcosmica scientia*, *Cognit'io physiolog'ica*, *Pars natura'lis medicinæ*, *Philosoph'ia cor'poris vivi*; from φυσικ, 'nature,' and λογος, 'a description.' Formerly, Physiology meant the same as Physics, in its extensive signification, now does. At the present day, it includes the science, which treats of the functions of animals or vegetables; an acquaintance with the phenomena, the aggregate of which constitute life. It is the *science of life*.

It is divided into *animal* or *vegetable*, according as it considers the life of animals or of vegetables singly. *Comparative Physiology* comprises both. Physiology is, also, *general* or *special*; according as it treats of life in the abstract or in some particular species. To the latter belongs the *Physiology of Man*,—called, also, *Hygienic Physiology*, to distinguish it from *Pathological Physiology* or *Pathology*.

PHYSOCE'LE, *Pneumatoce'lē*, *Hernia vento'sa*, from φυσω, 'I insufflate,' and κηλη, 'a tumour.' An emphysematous tumour of the scrotum; probably, a case of intestinal hernia, containing much flatus.

PHYSOCEPH'ALUS, from φυσα, 'flatus,' and κεφαλη, 'the head.' *Physocephalus*. Emphysematous tumefaction of the head.

PHYSOME'TRA, *Emphyse'ma Uteri*, *Hysteroph'ysē*, *Hysteropsophia*, *Emphy'sema uteri'num*, *Infla'tio Uteri*, *Tym'pany of the Womb*, *Uterine tympanites*, from φυσω, 'I inflate,' and μήτρα, 'the womb.' A light, tense, circumscribed protuberance in the hypogastrium, obscurely sonorous,—with wind occasionally discharged through the os uteri.

PHYTOLAC'CA DECANDRA, *Poke Weed*, *Amer'ican Night Shade*, *Cancer root*, *Jucato Calleloe* (?), *Jalap*, *Pigeon Berries*, *Sola'num racemo'sum America'num*, *S. magnum Virginia'num rubrum*, (F) *Raisin d'Amérique*, *Phytolaque à dix étamines*, *Morelle en grappes*, *Mechoachan du Canada*. Family, *Chenopodeæ*. Sex. Syst. *Decandria Decagynia*. The leaves, berries, and roots are employed. The young stems, when boiled, are sometimes eaten at table; but when old, they must be cautiously used, as the plant is emetic and cathartic. It is most celebrated as a remedy in chronic rheumatism; and is given in the form of tincture of the ripe berries. It is, also, used in cuta-

neous eruptions; as *tinea capitis*, itch, cancerous ulcers, &c.

The root is gathered and dried in the fall.

PIA MATER, *Pia seu mollis seu ten'uis Mater*, *Meninx inte'rior*, *Meninx choroi'des*, *Inner lam'ina of the Méninge* (Ch.), *Membrana vasculo'sa Cerebri*, (F) *Pie mère*, *Meningette*. The pia mater is a very delicate membrane, which covers the brain immediately, penetrates into its anfractuosités, and envelopes, also, the cerebellum and the spinal prolongation, &c. Bichat does not regard it as a membrane, properly so called, but as a network of blood-vessels, united by a lax cellular tissue. The *Pia Mater exterior* is the portion of membrane which covers the exterior of the encephalon, and faces the arachnoid externally. The *Pia Mater interior* is that, which lines the cerebral fossæ; into which it penetrates by a cleft situate beneath the posterior part of the corpus callosum and the fornix; and by two other fissures, situate between the corpora fimbriata and thalami nervorum opticorum. The pia mater contains a great number of granulations, similar to the *Glandulæ Pacchioni*.

PICROTOX'INE, *Picrotoxi'na*, *Picrotox'ia*, from πικρος, 'bitter,' and τοξικον, 'poison.' A vegetable alkali, discovered by M. Boullay in the *Menispermum Cocculus*. It crystallizes in quadrangular, white, brilliant, semi-transparent prisms; which are excessively bitter, soluble in 3 parts of alcohol and in 15 of boiling water.

The *Cocculus Indicus* owes its poisonous properties to this principle.

PIESTRON, from πιζω, 'I press.' An instrument, recommended by Hippocrates for breaking the bones of the fœtal head, when too large to be extracted otherwise.

PIGNUT, *Earthnut*, *Groundnut*. The bulbous root of the *Bunium Bulbocastanum*. Called *pignuts* from the fondness of the pig for them. They have been considered to possess a styptic quality; and are deemed serviceable in atonic affections of the kidney.—Hooper.

PILA, *Sphæra*, *Ball*. A gymnastic exercise, much used by the ancients as well as moderns.—Galen. Also, a mortar and a pestle. *Aconē*.

PILA MAR'INA, *Sphæra Marina*, *Sphæra Thalass'ia*, *Halcyo'nium rotundum*, (F) *Pelote de Mer*. Certain light, round, depressed or oblong masses:—inodorous and insipid—in which rushes, hairs, and the debris of shells are met with. These are found on the sea shores, and have been regarded by Spielmann as consisting chiefly of the roots of the *Zostera Marina*. Iodine is detected in the ashes, which accounts for its success in goitre. They have, also, been given as a vermifuge.

PILA'TIO. Fracture of the cranium, in which the fissure is narrow, and has the appearance of a hair. A *Cap'illary fissure*, (F) *Fente capillaire*.

PILEOUS, *Pilo'sus*, (F) *Pileux*. That which relates to the hair.

The **PILEOUS SYSTEM** of Bichat is that formed by the hair. It comprises the different species of hair of the human body.

PILEUS, *Pile'olus*. A shield. A nipple-like instrument, formed of various materials, and used by females for protecting the nipple during the child's sucking, when the part is painful. Also, a Caul, (q. v.)

PILLAR, *Pila*, *Colum'na*, *Columel'la*, (F) *Pilier*. A name given to several parts; as the pillars of the *velum palati*, *diaphragm*, &c. (q. v.)

PIL'ULA. Diminutive of *pila*, 'a ball:' *Spærid'ion*, *Catapô'tion*, *Sphæ'rion*, *Gongyl'ion*, (F) *Pilule*. A simple or compound medicine; weighing from one to five grains, of a firm consistence and spherical form, intended to be swallowed at once, without chewing. The *Pill* differs from the *Bolus* in the latter being softer and larger.

Medicines are often given in the form of pill, on account of their disagreeable taste and odour. *Pilula*, also, means a *Pilular mass*.

PILULÆ ALOET'ICÆ, *Pilulæ ex Aloë et Sapo'nē*, *Aloetic Pill*. (F) *Pilules d'aloës ou aloétiques*. (*Gummi resin. aloes socotrin. in pulv. trit.; saponis, sing. p. æ. syr. q. s. Ph. E.*) Dose, gr. x to xx in habitual costiveness.

PILULÆ ALOES ET ASSAFET'IDÆ, *Aloetic and Assafætida Pills*. (*Gum. res. aloes socotr. trit.; assafætida, saponis, sing. p. æ.; mucilag. mimos. nilotic. q. s. Ph. E.*) Purgative and stomachic. Dose, gr. x.

PILULÆ ALOES ET CAMBO'GIÆ, *P. de Aloë et Cambô'giâ*, *P. Hydragogæ Bontii*, *Pill of Aloes and Camboge*. (*Aloes, cambog., gum. ammoniac., aa. p. æ. Make into a powder. Dissolve in vinegar; pass through a cloth; express the residuum strongly; and afterwards evaporate, in a water-bath, to a pilular consistence. Ph. P.*) Purgative: used in dropsy. Dose, gr. xij to xxx.

Peter's Pills—a nostrum—are formed of aloes, jalap, scammony, and camboge, each equal parts.

PILULÆ ALOES ET COLOCYN'THIDIS, *P. ex Colocynthidē cum aloë*, *P. Aloes cum Colocynthidē*, *P. coccinæ*, *P. Cocchii*, *P. colocyn'thidis compos'itæ*, *P. coccinæ mino'res*, *Pill of Aloes and Colocynth*. (*Pulp. coloc. 3 ss, aloes hepat., scammon., aa 3 j, sapon. 3 ij, ol. caryoph. 3 j, syrup. q. s. Ph. D.*) Cathartic. Dose, gr. v to x or more.

Foth'ergill's Pills consist of aloes, scammony, colocynth, and oxide of antimony.

PILULÆ ALOES COMPOS'ITÆ, *Pilulæ ex Aloë*, *Compound Aloetic Pills*. (*Aloes spic. extract. cont. 3 j, ext. gentianæ 3 ss, olei carui g^{tt}. xl. syr. q. s. Ph. L.*) These are sometimes, also, called *Family pills*, *Antibilious pills*, &c.

PILULÆ DE ALOE ET FÆT'IDIS, *P. Benedic'*

tæ Fulleri, *Pill of aloes and fætid gums*; *Pilulæ ecphrac'ticæ*, *Female pills*, *Pilulæ aloes martia'les*. (F) *Pilules bénites de Fuller*. (*Aloes socotr., sennæ, assafætida, galbani, aa 3 ij, myrrh, 3 iv, croci, macis, aa 3 j, ferri sulphat. 3 iss. Reduce to powder separately, and add ol. succin. g^{tt}. viij, syr. artemisiæ q. s. Ph. P.*) Purgative, and given in hysteria. Dose, gr. xv to xx.

PILULÆ ALOES ET JALAP'Æ, commonly called *Anderson's Pills*, *Anderson's Scots' Pills*, *Scotch Pills*. (*Aloes Barbad. 3 j, rad. helleb. nigr., rad. jalapæ, potassæ subcarb., aa 3 j, ol. anisi 3 iv, syrup. simpl. q. s.—Gray.*) Dose, gr. x to xxx.

A committee of the Philadelphia College of Pharmacy recommend the following: *Aloes Barbadens. 3 xxiv, Saponis, 3 iv, Colocynthid. 3 j, Gambogiæ, 3 j, Ol. anis. f. 3 ss.*

PILULÆ ALOES ET KINÆ KINÆ, *P. stomachicæ*, *P. ante cibum*; *Pill of Aloes and Cinchona*. (F) *Pilules Gourmandes*. (*Aloes socotr. 3 vj, ext. cinchon. 3 iij, cinnam. 3 j, syrup. absinth. q. s. Ph. P.*) Stomachic and laxative. Dose, gr. x to xx.

Lady Crespi'gny's Pills, *Lady Webster's Pills*, and the *Pilulæ stomachicæ Mesues*, Ph. L. 1635, resemble those.

PILULÆ ALOES ET MYRRHÆ, *P. Aloes cum Myrrhâ*, *P. de Aloë et Myrrhâ*, *Rufus's Pills*, *Common Pills*, *Pilulæ Rufi*, *P. commu'nes*, *Pills of Aloes and Myrrh*. (*Aloes spic. ext. 3 ij, croci stigmat., myrrh, sing. 3 j, Syr. q. s. Ph. L.*) Cathartic and emmenagogue. Dose, gr. x to xx.

Hooper's Pills, according to one of Gray's formulæ, are made as follows. *Ferri sulph., aquæ, aa 3 viij: dissolve. Add aloes barbad. 3 ij and 3 viij, canellæ albæ, 3 vj, gum. myrrh. 3 ij, opopanax 3 iv.*

The committee of the Philadelphia College of Pharmacy recommend the following form. *Aloes Barbadensis, 3 viij, Ferri Sulphatis exsiccata. 3 ij, 3 iss, vel Ferri Sulph. crystall. 3 iv, Ext. Helleb. nigr. 3 ij, myrrh. 3 ij, Saponis, 3 ij, Canellæ in pulv. tritæ, 3 j, Zingib. in pulv. tritæ, 3 j.*

Speediman's Pills consist of aloes, myrrh, rhubarb, extract of chamomile, and essential oil of chamomile.

PILULÆ ALOES CUM ZINGIB'ERE, *Pill of aloes and ginger*. (*Aloes hepat. 3 j, rad. zingib. in pulv. 3 j, sapon. hispan. 3 ss, ol. ess. menthæ pip. 3 ss. Ph. D.*) In habitual costiveness. Dose, gr. x to xx.

PILULÆ AMMONIURE'TI CUPRI, *Pills of Ammoniuret of Copper*, *Pilulæ Cupri*. (F) *Pilules d'ammoniure de cuivre*. (*Ammoniur. cupri in pulv. ten. trit. gr. xvj, micæ panis 3 iv, aquæ carbonatis ammoniæ q. s. Beat into a mass, and divide into xxxij pills. Ph. E.*) Tonic and antispasmodic, in epilepsy, &c. Dose, one pill twice daily: gradually increasing the dose.

PILULÆ ANTIBILIO'SÆ,—*Barclay's Antibilious Pills*. (*Extract of colocynth 3 ij, resin*

of jalap 3j, almond soap 3iss, guaiac. 3ij, emetic tart. gr. viij, ol. junip., ol. carui, ol. rosmarin. aa g^{tt}. iv, syrup of buckthorn q. s., to form 64 pills.) Dose, 2 or 3.

Dixon's Antibilious Pills are formed of aloes, scammony, rhubarb, and tartarized antimony.

PILULÆ ANTI-SCROPHULO'SÆ, *P. ex Oxido Stibii et Hydrargyri sulfure'to nigro compos'itæ.* (*P. scammon., hydrarg. sulphur. nigr., aa 3ij, antimonii oxidi albi, milleped., sapon. amygdalin, aa 3ij, extract. glycyrrh. 3v.* Make into a mass. *Ph. P.*) Dose, gr. iv to l.

PILULÆ BALSAM'ICÆ, *P. Docto'ris Morton.* (*Milleped. pulverisat. 3xviij, gum. ammon. 3xj, acid. benzoic. 3vj, croci, balsam. Peruv. aa 3j, balsam. sulph. anisat. 3vj.* Mix. *Ph. P.*) Tonic, expectorant, and balsamic.

PILULÆ CAMBO'GIÆ COMPOS'ITÆ, *P. de guttâ gaman'drâ, P. hydrago'gæ, Gamboge pills, Pilulæ gummi guttæ aloet'icæ; Compound camboge pills.* (*F*) *Pilules de gomme gutte composées.* (*Cambogiæ contritæ, aloes spicat. extract. contriti, pulv. cinnam. comp. sing. 3j, saponis 3ij.* *Ph. L.*) Cathartic. Dose, gr. x to xx.

PILULÆ DE CYNOGLOS'SO, *P. de extrac'to opii.* (*Pulv. rad. cynogloss., semin. hyoscyam. alb., extract. opii vinos. aa 3iv, pulv. myrrh. 3vj, oliban. 3v, croci, castor., aa 3iss, syrup. opii q. s.* *Ph. P.*) Anodyne. In cough, &c. Dose, gr. iv to gr. viij.

PILULÆ FERRI COMPOS'ITÆ, *Compound Pills of Iron, Pilulæ Ferri cum Myrrhâ.* (*F*) *Pilules de Fer composées.* (*Myrrh. cont. 3ij, sodæ subcarb., ferri sulph., sacch. aa 3j.* Mix. *Ph. L.*) Tonic. Dose, gr. x to xx.

PILULÆ GAL'BANI COMPOS'ITÆ, *P. assafœtidæ compositæ, P. fœtidæ, P. gummosæ, P. e gummi, Compound gal'banum pill, Pilulæ antispas'ticæ, P. antihyster'icæ, P. myrrhæ, compos'itæ, Gum pill.* (*Galban. gum. 3j, myrrhæ, sagapeni, aa 3iss, assafœtidæ 3iv, syrup. q. s.* *Ph. L.*) Antispasmodic and emmenagogue. Dose, gr. x to xx.

PILULÆ EX HELLEBORO ET MYRRHÆ, *P. tonicæ, Bacher's Pills, Tonic Pills of Bacher, Pills of Hellebore and Myrrh.* (*Ext. helleb. nig., extract. myrrh., aa 3j, fol. cardui benedict., in pulv. 3ij.* Mix. *Ph. P.*) Tonic and emmenagogue. In dropsical, cutaneous, and verminous affections. Dose, gr. iv to viij.

Matthews' Pills,—Starkey's Pills, are formed of rad. helleb. nigr., rad. glycyrrh., sapon. Castill., rad. curcumæ, opii purif., syrup. croci, aa 3iv, ol. tereb. q. s. ut fiat massa. —Gray.

PILULÆ HYDRAR'GYRI, *P. mercuria'les, Mercurial pill, Blue pill.* (*F*) *Pilules de Mercure.* (*Hydrarg. purif. 3ij, confect. rosæ gallic. 3ij, glycyrrh. rad. cont. 3j.* Rub the quicksilver with the confection, until the globules disappear: then add the li-

quorice powder, and beat the whole into a uniform mass. *Ph. L.*) Antisyphilitic. Mercurial:—in large doses, purgative.

PILULÆ DE HYDRARGYRO, SCAMMO'NIO, ET ALOE, vulgo MERCURIA'LES, (*F*) *Pilules Mercurielles, ou de Mercure, Scammonée et Aloès.* (*Hydrarg. purif. 3j, mellis 3xij.* Rub until the globules disappear: then add aloes socot., scammon. aa 3ij, macis, cinnam., aa 3ij. Make into a mass. *Ph. P.*) Uses, same as the last, but they are more purgative. Dose, gr. viij to xxx. These pills are nearly the same as the *Pastilles de Renaudot.*

PILULÆ HYDRARGYRI SUBMURIA'TIS COMPOS'ITÆ, *Pilulæ ex Stibio et Hydrargyro, P. antiherpet'icæ, P. ex hydrargyro muriat'ico miti cum sulphure stibia'to auriantiaco, P. resoven'tes cum mercurio, P. depurantes; Compound Pills of Submuriate of Mercury, P. Hydrargyri Submuriatis, Calomel Pills, Plummer's Pills, the Red Pill.* (*Hydrarg. submur., antimon. sulphur. precipitat. sing. 3ij, guaiac. gum. resin. contrit. 3iv, spirit. rect. 3ss.* Beat together. *Ph. L.*) Mercurial, and reputed to be diaphoretic and alterative. Dose, gr. v to x.

Leake's *Pilu'la saluta'ria* resembles these. It is used in syphilis.

PILULÆ OPIA'TÆ, *P. Theba'icæ, Opiate Pills, Common Night Pills, Anodyne Pills, Nepen'thes opia'tum.* (*F*) *Pilules Opiacées.* (*Opium, p. 1; ext. glycyrrh. p. 7; fruct. myrt. piment. p. 2.* Mix. *Ph. E.*) Five grains contain gr. ss of opium.

PILULÆ RHEI COMPOS'ITÆ, *P. de Rhabar'baro, Compound Rhubarb Pills.* (*Pulv. rhei 3j, aloes socotr. 3vj, myrrh. 3iv, ol. menthæ pip. 3ss.* Beat into a mass, with syrup of orange peel. *Ph. E.*) Laxative and stomachic. Dose, gr. x to xx.

The stomachic nostrum, sold under the name Moseley's Pills, consists merely of rhubarb and ginger.

PILULÆ SAPO'NIS CUM OPIO, *P. saponac'cæ, Pills of Soap and Opium, Pilulæ Opii.* (*F*) *Pilules de Savon et d'Opium.* (*Opium duri contriti 3iv, saponis duri 3ij.* *Ph. L.*) Five grains contain one of opium.

PILULÆ SCILLÆ COMPOS'ITÆ, *P. Scillit'icæ, P. Scillæ cum Zingib'ere, P. e Scillâ, Compound Squill Pill.* (*Scillæ rad. recent. exsiccata. et contus. 3j, zingiberis rad. contritæ, saponis duri, aa 3ij, ammoniaci contriti 3ij.* Form the mass into syrup. *Ph. L.*) Expectorant and diuretic. Dose, gr. x to xx.

PILULÆ STRYCHNI'NÆ, *Pills of Strychnine.* (Very pure strychnine, 2 gr.; conserve of roses, 3ss. Make into 24 pills.) One or two for a dose.

PILULÆ E STY'RACE, *Storax Pills.* (*Styracis pur. 3ij, opii purif., mellis, croci, sing. 3j.* *P. D.*) Six grains contain one of opium.

PILULÆ DE TEREBIN'THINA, *Tur'pentine Pills.* Made of turpentine boiled in 3 times

its weight of water, until, when thrown into cold water, it forms a soft paste. It has the properties of turpentine, and has been administered in gleet, &c.

PILULIER (F), *Pill machine*. An instrument, invented by the Germans for rolling and dividing pills. Also, the earthen pot in which pills are preserved.

PILUM, *Pistillus*, *Pistillum*, *Hyp'eros*, *Cer'cis*, (F) *Pilon*. A pestle. A wooden, iron, bell-metal, marble, agate, porcelain, or glass instrument for beating or dividing substances in a mortar.

PIMELORRHŒA, from *πῖμαλη*, 'fat,' and *ρῆω*, 'I flow.' A morbid discharge or disappearance of fat.

PIMPINEL'LA ANISUM. The *Anise plant*. *Anisum*, *Anisum vulga're*, *Sola'men intestino'rum*, *An'isum*, (F) *Anis*. Family, Umbelliferæ. Sex. Syst. Pentandria Digynia. A native of Egypt. The seeds, *Sem'ina An'isi*, *An'iseed*, have an aromatic odour; and sweetish, warm, grateful taste. They are carminative; and used in dyspepsia and the tormina of infants. Dose, gr. xv to 3j, bruised.

The oil,—**OLEUM ANISU**, (F) *Huile d'anis*—is officinal. Dose, gr. v to xv.

PIMPINEL'LA MAGNA, *P. nigra*; the *Greater Pimpinella*; *Tragoselinum majus*, *Daucus Cyan'opus*, (F) *Boucage majeur*. The root has been extolled as diuretic and resolvent, as well as in erysipelatous ulcerations, tinea capitis, rheumatism, &c.

PIMPINELLA SAXIFRAGA, *Burnet sax'ifrage*, *Poter'ium sanguisor'ba*, *Sorbastrel'la*, *Tragoselinum*, *Pimpinella hirci'na*, *P. umbellifera*, (F) *Boucage mineur*, *Petit B.*, *Pimprenelle*. The root has an unpleasant smell, and hot, pungent, bitterish taste. It has been recommended as a stomachic; and as a stimulating gargle in paralysis of the tongue.

PIN. Perhaps from *Pennum*, low Latin; or from *Spina*; *Spina ferrea*, *Acus capita'ta*, (F) *Epingle*. An iron or brass instrument, generally of small size; pointed at one extremity, and having a head at the other. It is used, in Surgery, to fix rollers and dressings; and, occasionally, in sutures.

PINCHED, *Contractus*, (F) *Pincé*, *Grip-pé*. An epithet applied to the face, when the features are contracted; as in violent abdominal affections, or during intense pain.

PINCKNE'YA PUBES'CENS, *Georgia Bark*. This bark has been used in Georgia in the cure of intermittents, and successfully. It is a powerful bitter. Dose, of the powder, 3j.

PINEAL, *Pinea'lis*, from *pinus*, 'a pine.' That which resembles a pine-apple.

The **PINEAL GLAND**, *Glandula pinea'lis*, *Cer'ebral epiph'ysis*, *Cona'rium*, *Conoi'des corpus*, *Penis cer'ebri*, *Corpus turbina'tum*, is a small body, of a conical shape; pale red

or grayish colour; and soft consistence; situate between the fornix and the tubercula quadrigemina. It almost always contains sabulous particles. When these are grouped together over the base of the gland, they form the *Acervulus Cer'ebri* of Sömmerring. From its anterior part arise two medullary striæ, which proceed over the posterior commissure; coast along the optic thalami, and unite at the anterior pillar of the fornix.

The uses of the pineal gland are unknown. Descartes supposed it to be the seat of the soul!

PINGUE'DO, *Pim'elè*, *Piar*, *Pieiron*, *Lipos*, *Stear*, *Adeps*, *Sevum*, *Sebum*, *Corpus adipo'sum*, *Axun'gia*, *Fat*, (F) *Graisse*. A soft, white, animal substance; inodorous; insipid; oily; inflammable; easy to melt; spoiling in the air, and becoming rancid by union with oxygen: almost insoluble in alcohol; insoluble in water; soluble in the fixed oils. Fat is formed of two immediate principles, *stearine* and *elaine*, to which are, almost always, joined an odorous and a colouring principle. It is found in a number of animal tissues, and is very abundant in the neighbourhood of the kidneys and in the epiploon. It is generally fluid in the cetacea; soft, and of a strong smell in the carnivora; solid, and inodorous in the ruminating animals; white, and abundant in young animals; and yellowish in old. It forms about a 20th part of the weight of the human body.

The fat, considered physiologically, has, for its function, to protect the organs; maintain their temperature; and to serve for nutrition in case of need; as is observed in torpid animals.

PINGUIC'ULA VULGA'RIS, *Sanic'ula monta'na*, *S. Eboracen'sis*, *Viola palus'tris*, *Dodecath'eon Plin'ii*, *Butter-wort*, *Yorkshire San'icle*. Family, Personneæ. Sex. Syst. Diandria Monogynia. The unctuousness of this plant has caused it to be applied to chaps, and as a pomatum to the hair. Decoctions of the leaves, in broths, are used by the common people in Wales as a cathartic.

PINK DYE, *Stripped safflower* 3j, *subcarb. of potass*, gr. xvij, *spirit of wine* 3vij: digest for two hours, add *distilled water* 3ij: digest for two hours more, and add *distilled vinegar* or *lemon juice* q. s., to reduce it to a fine rose-colour. Used as a cosmetic.

PINUS ABIES, *Abies rubra*, *El'atè thelei'a*, *Picea*, *Norway Spruce Fir*, *Yew-leaved Fir*. Nat. Ord. Coniferæ. Sex. Syst. Monœcia Monadelphia. The tops are used in making *Spruce Beer*, (q. v.)

The **ESSENCE OF SPRUCE** is a fluid extract, prepared by decoction from the twigs of this species of fir. From this is made the *Spruce Beer*, (q. v.)

This fir affords the Burgundy pitch and common frankincense.

1. **BUR'GUNDY PITCH**, *White pitch*, *Pix*

Burgundica, Pix alba, Resina abietis humida, Resina alba humida, Pini abietis resina sponte concreta, Pix arida, Pix abietina, (F) Poix blanche, Poix grasse, P. jaune, P. de Bourgogne. It is of a close consistence, rather soft, of a reddish brown colour, and not unpleasant smell. It is very adhesive to the skin; and, consequently, forms excellent plasters for remaining upon the part, for some time;—as in cases of affections of the chest.

2. ABIETIS RESINA, (Ph. L. since 1809.) Thus, *Common Frankincense, Perrosin, Thus fœmini-num, T. vulgare, Olibanum vulgare, Resina abietis sicca, Resin of the Spruce Fir.* It is solid, dry, brittle; externally, brownish-yellow; internally, whitish. Used in plasters like the last.

PINUS BALSAMEA, *Abies Canadensis.* The tree which affords the *Canada Balsam, Balsamum Canadense, Resina strobilina, Terebinthina Canadensis, Pini balsameæ resina liquida, Resina fluida Canadensis, Terebinthina balsamea.* *Canada Balsam* is one of the purest turpentine. It has the common properties of those substances.

PINUS CEMBRA, *Aphernous'li Pine.* It yields an agreeably scented turpentine:—the *Carpathian Balsam, Balsamum Carpathicum, B. Libani, Carpathicum, Briancon Turpentine.* The nuts, *Cembro nuts*, have an eatable kernel, and yield oil. The shoots yield *Riga balsam* by distillation.

PINUS LARIX, *Larix.* The *Larch, (F) Melèze.* From this tree exude *Or'enburg gum*, and *Briancon manna*. It also yields, by boring, *Common Venice Turpentine, Resina Laricis, Terebinthina Veneta, Pini Laricis resina liquida, (F) Térébenthine de Vénise, T. de Melèze.* It is usually thinner than the other sorts of turpentine.

PINUS MUGHOS. The *Mountain or Mugho Pine, Pinus Pumilio.* From the extremities of the branches exudes the *Resina strobilina* of the Germans, or *Hungarian balsam.* It is also obtained, by expression, from the cones. By distillation, the Hungarian balsam affords the *Krumholz Oil, Oleum Templinum.*

PINUS PICEA, *Silver Fir Tree, (F) Sapin commun, El'ate, Abies, A. Gallica.* By piercing the tubercles of the bark of this fir, the *Strasburgh Turpentine* is obtained:—the *Resina Abietis* (Ph. L. before 1809), *Oleum Abietis, Terebinthina Argentoratensis.*

PINUS PINEA, *Stone Pine, Pine, Pinus, P. uber'ima.* The nuts, *Zirbelnuts, Pine nuts, (F) Pin à pignons*, are eaten raw; or preserved like almonds. They are, also, used in emulsions.

PINUS SYLVES'TRIS, *Pinaster, Peuce, Scotch Fir.* This pine affords common turpentine and its oil, resin, tar, and pitch.

1. COMMON TURPENTINE, *Terebinthina vulgaris, T. communis, Resina Pini, Bijon, Horse Turpentine*, is obtained by wounding the

tree in hot weather. It is used, chiefly, as a dressing for wounds, &c. in horses, and for the distillation of the oil, (see *Oleum Terebinthinæ.*) When the oil is distilled with water, yellow resin or *Rosin—Resina flava*—is left, which is only used in the formation of ointments and plasters: if without the addition of water, the residuum is common resin or *Colophony*, (q. v.)

2. When the cold begins to check the exudation of the common turpentine, part of it concretes in the wounds. This is called, in France, *Galipot, Barras*; and *White Rosin, Resina alba*, when hardened after long exposure to the air.

3. When the old trees are subjected to distillation, in a coarse manner, Tar is obtained, —*Hygropissos, Pissa, Pix cedria, Resina pini empyreumatica liquida, Terebinthina empyreumatica, Alchitram, Alchitu'ra, Cedria, Pix liquida, (F) Goudron, Brai liquide.*

Tar water, Aqua Picea, Infusum Picis liquidum seu Picis empyreumaticæ liquidæ, Potio picea, (F) Eau de Goudron, was, at one time, a fashionable remedy in numerous complaints, and of late its use has been revived, since its virtues have been presumed to be owing to Creosote. It is employed chiefly in pulmonary affections. (Writers. Bishop Berkeley, Lond. 1744, and Prior, Lond. 1746); and the vapour has been recommended in phthisis and other diseases of the lungs. It is used, externally, as a detergent.

4. COMMON PITCH, *Pix nigra, Black Pitch, Burnea, Burnia, Stone Pitch, Pix sicca, P. atra, P. nava'lis, Palimpis'sa, P. arida* (Ph. L. before 1809), (F) *Poix navale, P. noire*, is obtained by inspissating tar. It is used only as a resolvent, in plasters.

PIOULQUES (F). A kind of sucking-pump, invented by Louis, for extracting water that had entered internal cavities, in cases of drowning. A useless instrument.

PIPER CUBEBA, *Com'peper, Com'peba, Cubal sini, Piper caudatum, Cubeb Pepper, Tailed Pepper, Cuma'mus, (F) Poivre-à-queue, Quabebe.* A native of Java and Guinea. The odour of these berries is aromatic; taste at first cooling, afterwards pungent. The active principle is an essential oil. The properties of the cubeb are stimulant and purgative. It is used only in gonorrhœa. Dose, from ʒj to ʒj, in powder, three or four times a day.

The "Turkey yellow berries,"—the dried fruit of the *Rhamnus Catharticus*, are often substituted for the cubebs.

PIPER LONGUM, *Macropiper, Acapat'li, Catu-trip'ali, Pim'pilim, Long Pepper, (F) Poivre long.* As we receive the berries, they consist of the unripe fruit, dried in the sun; and are small, round grains, disposed spirally on a cylindrical receptacle. They are stimulant, carminative and tonic, like the other peppers. Dose, gr. v to ʒj.

PIPER NIGRUM, *Melanopiper, Molagoco'di,*

Lada, Piper aromaticum, Black Pepper, (F) Poivre noir. Black pepper is the unripe fruit, dried in the sun. *Virtues*, same as those of the other peppers.

PIPER ALBUM, *White Pepper* is the black, freed from its cuticle.

PIPERINA, *Pip'erine*. A resinoid substance, obtained from the piper nigrum, by M. Ærstadt, in which the virtues of the pepper seem to reside. It has been employed, like the quinine, in intermittents, and successfully.

PISCIARELLI, MINERAL WATERS OF. A spring at Monte Secco, in Italy, between Lake Agnano and Solfatara. It is thermal (100° Fabr.), sulphureous and carbonated, and is chiefly used in old ulcers, leucorrhœa, chronic diarrhœa, and in cutaneous affections.

PISCIDIA ERYTHRINA, *Jamaica Dog-wood*. A small branching tree common in most of the West India Islands. Diadelphia Decandria of Linnæus. It is used in the West Indies to poison fish. It appears to be an acro-narcotic.

PISIFORM, *Pis'iformis*, from *pisum*, 'a pea,' and *forma*, 'shape.'

OS PISIFORME, *Os lenticula'rê, Os orbicula'rê, Os extra or'dinem Carpi, (F) Os hors de rang*, is the fourth bone of the first row of the carpus. It is round, and gives attachment to the tendon of the cubitalis anterior, and to the anterior transverse ligament of the carpus. It is articulated, behind, with the os cuneiforme.

PISSASPHALTUS, *Pissasphal'tum, Mineral pitch*, from *πισσα*, 'pitch,' and *ασφαλτος*, 'bitumen.' (F) *Poix minérale*. A thicker kind of *Petroleum* or *Rock Oil*; formerly employed as a vulnerary. It is synonymous with *Glu'tinous bitu'men, Malta bitu'men*, and *Min'eral tar*.

PISSELÆUM, *Oleum Picinum*, from *πισσα*, 'pitch,' and *ελαιον*, 'oil.' An oily matter, obtained from boiling pitch, and used for the same purposes as tar.

PISSE'ROS, from *πισσα*, 'pitch.' Ancient name of a cerate, prepared of *olive oil, oil of roses*, and *dried pitch*. It was, also, called *Cera'tum pica'tum*, and *C. tetraphar'macum*.—Hippocr.

PISSI'TES, *Vinum pica'tum*. A wine, prepared from tar and the must of the grape. It was regarded to be stomachic.

PISTACIA LENTISCUS, *Terebin'thus lentiscus, Lentiscus vulga'ris*; the *Mastich Tree*. Family, *Terebinthaceæ*. The wood of this tree abounds with the resinous principle of mastich; and a tincture, made from it, has been used in the cure of dyspeptic affections, gout, and dysentery. It yields, by incision, the resin *Mastich, Resi'na Lentisci'na, Men'-frigê, Masti'chê, Mastix, Pistaciæ Lentis'ci Resina*. This resin has an agreeable smell, when heated: is almost insipid: in globu-

lar, irregular, yellowish, semi-transparent masses: soluble in ether; partially so in alcohol. It is stimulant, and has been used in old coughs, and gleet, and is chewed to sweeten the breath. It is sometimes, also, employed to stop the holes in carious teeth.

PISTACIA TEREBIN'THUS, *Turpentine Tree, Hab-el-Kalimbat, Terebinthus vulga'ris, Termin'thos*. The tree, which affords the *Cyprus Turpentine, Chio Turpentine, True Venice Turpentine, Resi'na Terebin'thi, Terebin'thina vera, T. Chia, T. Cypria*. This substance is classed amongst the resins. It is procured by wounding the bark of the trunk. The best Chio turpentine is of about the consistence of honey; very tenacious, clear, and almost transparent; of a white colour, inclining to yellow, and of a fragrant smell; moderately warm to the taste, but free from acrimony and bitterness. It resembles, in virtues, the other turpentines.

PISTACIA VERA. Name of the tree, which affords the *Nux Pistacia*. *Pista'chio nuts* have a sweetish, unctuous taste, resembling that of sweet almonds. Like these they afford an oil, and may be formed into an emulsion.

PITAYA BARK. This bark is preferred in Columbia to any other. It contains a new vegetable alkali, to which the name *Pitayine* has been given.

PITTA'CIUM. A pitch plaster, from *πιττα*, 'pitch.'

PITTO'TA. Medicines in which pitch is the chief ingredient.

PITTSBURG, MINERAL WATERS OF. A chalybeate mineral spring, situate about four miles S. W. of Pittsburgh, in Pennsylvania. It contains muriate of soda, muriate of magnesia, oxide of iron, sulphate of lime, and carbonic acid.

PITUITARY, *Pituita'ris*, from *pitui'ta*, 'phlegm.' A name given to several parts.

1. FOSSA PITUITARIA. A depression on the cerebral surface of the sphenoid bone, which lodges the pituitary gland. It is called, on account of its shape;—*Sella Turcica, Ehip'pium*. Chaussier calls it *Fossa supra-sphenoida'lis*, from its situation.

2. The PITUITARY GLAND, *Glan'dula Pituitosa vel pituitaria, Glandula basila'ris, Lacu'na vel Appendic'ula cer'eбри, Hypoph'ysis seu Appendix Cer'eбри, Pituitary body, Corpus pituitarê*;—*Appendice sus-sphenoidale du cerveau*, (Ch.) A small, round body; the anterior portion of which is of a cineritious yellow hue, and the posterior, which is smaller, is whitish and pulpy. Its functions are unknown.

3. The PITUITARY MEMBRANE, *Schneide'rian Membrane, Membrana pituitaria, M. olfacto'ria*. The mucous membrane, which lines the nasal fossæ, and extends to the different cavities communicating with the nose.

In the nasal fossæ, the membrane appears formed of two layers, intimately united:—the one, in contact with the bones, is fibrous;—the other, free at one surface. The latter is a mucous membrane, on which papillæ are not easily distinguishable, but which contains them, as well as a number of very small mucous follicles, that open into the cavity of the nares. On penetrating the maxillary, frontal, sphenoidal, and ethmoidal sinuses, the membrane becomes very thin, transparent, less vascular, and seems reduced to its mucous layer.

The pituitary membrane receives the impression of smells, by means of the expansions of the olfactory nerves upon it. It is the seat of smell.

PITYRIASIS, from *πιτυριον*, 'bran;' *Lepido'sis Pityriasis*, *Dandriff*:—a very superficial affection: characterized by irregular patches of thin scales, which repeatedly exfoliate and recur; but which never form crusts, or are accompanied with excoriations. It is not contagious. It occurs under three or four varieties of form.

PLACEBO, 'I will please.' An epithet given to any medicine, intended rather to satisfy the patient than to cure a disease.

PLACENTA, *P. uteri seu uteri'na seu uteri carnea*. A Latin word, signifying a *Cake*. *Hepar uteri'num*, *Jecur uteri'num*, *Caro seu Affu'sio orbicula'ris*. A soft, spongy, vascular body, formed at the surface of the chorion, adherent to the uterus and connected with the fœtus by the umbilical cord. It is not in existence during the first period of the embryo state, but its formation commences, perhaps, with the arrival of the embryo in the uterus. Its mode of attachment to the uterus is a topic of dispute; but it seems clear, that the main circulation through it is of the blood of the fœtus. The placenta is formed of several *lobes* or *cotyledons*, which can be readily distinguished from each other on the uterine surface; but, towards the fœtal surface, are confounded into one mass. It is composed of the umbilical vessels, cellular tissue, and whitish, resisting filaments, which are vascular ramifications obliterated. Lymphatic vessels have also been presumed to exist in it; and nerves have been traced, proceeding from the great sympathetic of the fœtus.

The function of the placenta appears to be like that of the lungs in the adult. It admits of the blood of the fœtus being *shewn* to that of the mother, and of undergoing the requisite changes.

PLADAROSIS, *Pladarotes*, from *πλαδαρος*, 'soft.' A soft tumour on the eyelid, unaccompanied with redness or pain.

PLAGUE, *Pestis*, *Pestilen'tia*, *Loimos*, *Febris ade'no-nervo'sa*, *Læmos*, *Læmop'ya*, *Chaosda*, *Anthra'cia Pestis*, *Febris pes'tilens*,

Typhus pestis, *Exanthe'ma pestis*, from *πληγη*, *Plaga*, 'a stroke,' the *Pest*, (F) *Peste*, *Typhus d'Orient*. An eminently contagious disease; endemic in the Levant; frequently epidemic, and destroying at least two-thirds of those it attacks. It is a typhus of the most aggravated kind, with affection of the lymphatic glands of the groin, or axillæ, and carbuncles. Its contagious miasmata adhere to different organic textures, to woollen goods, clothing, and furniture; and may thus be transported to a considerable distance.

The mean duration of the disease is 6 or 7 days; some die in 24 hours, others not till 10 or 12 days. Pathological anatomy has afforded us no light with respect to it.

Various means have been used for arresting the disease, but none have seemed to be pre-eminently distinguished. The great point is,—to watch the indications as they develop themselves; and to treat the case, in general, like one of typhus gravior. It is universally agreed, that the suppuration of the buboes should be aided as far as practicable.

For preventing the importation and spread of the plague, the *Quar'antine Laws* have been instituted; and when the disease has actually appeared, a *cordon sanitaire* has been drawn round the infected district, so as to prevent all communication.

PLANETES, *πλανητης*, *Errabun'dus*, *erratic*. An epithet, given to some diseases, whose returns are irregular; especially to intermittent fevers.

PLANTA'GO, *P. major*, *Centiner'via*, *Arnoglos'sum*, *Septiner'via*, *Polyneu'ron*, *Planta'go latifo'lia*, *P. major*, (F) *Plantain commun*. *Family*, Plantaginæ. *Sex. Syst.* Tetrandria Monogynia. The leaves have been said to be refrigerant, attenuant, substyptic, and diuretic.

PLANTAGO *CORON'OPUS*, *Coronopo'dium*, *Cornu cervi'num*, *Stella terræ*, *Plantago*, *Buckshorn Plantain*. Properties like the last.

PLANTAGO PSYL'LIIUM, *Psyllium*, *Pulica'ris herba*, *Crystal'ion*, *Cynomoi'a*, *Branching Plantain*, *Fleawort*, (F) *Herbe aux puces commune*. The seeds have a nauseous, mucilaginous taste, and no remarkable smell. The decoction of the seeds is recommended in hoarseness and roughness of the fauces.

PLANTAR, *Planta'ris*, from *planta*, 'the sole of the foot.' That which relates or belongs to the sole of the foot. This name has been given to several parts.

The **PLANTAR APONEUROSIS**.—A thick, dense, resisting aponeurosis; of a triangular shape, and superficially situate, which occupies the middle and sides of the sole of the foot, and furnishes insertions to several of the muscles of the region, either directly or through the medium of septa, which it sends between them.

The **PLANTAR ARTERIES**. These are two in number, and arise from the extremity of the posterior tibial artery. They are distinguished into :—

The *internal plantar artery*. Situate above the abductor pollicis pedis. It extends from the termination of the posterior tibial to the trunk of one of the collaterals of that toe.

The *external plantar artery* is larger than the preceding, and ought to be considered as the termination of the posterior or tibial. Situate above the flexor communis digitorum pedis, it extends from beneath the calcaneum to the posterior extremity of the last metatarsal space. When it has reached this part, it turns from without inwards; advances towards the posterior extremity of the first metatarsal bone, and anastomoses with the perforating branch of the *dorsalis tarsi*. In the first part of its course, it furnishes calcaneal, articular, muscular, and adipous branches. The second portion of the artery is called the *Plantar Arch* or *Cross*. It gives branches in all directions. The inferior and posterior have received no name. The superior—three in number—are the *posterior perforating arteries*. The anterior branches are larger, and there are commonly four. They furnish the *anterior perforating*, and the *collaterals* of the four last toes.

The **PLANTAR VEINS** follow a similar arrangement.

PLANTAR LIGAMENTS. A name given to the inferior ligaments, which unite the bones of the tarsus and metatarsus, to distinguish them from the superior, called *dorsal*.

PLANTAR NERVES. These are two in number, and are furnished by the termination of the posterior tibial nerve. They are distinguished into :—

The *internal plantar nerve*. It extends from the inferior part of the tibial nerve to both sides of the three first toes, and the inner side of the fourth. It furnishes, also, branches to the abductor of the great toe; to the short flexor of the toes; to the accessory; to the short flexor of the great toe, the lumbricales, &c.

The *external plantar nerve* proceeds from the termination of the posterior tibial to the posterior extremity of the 5th metatarsal bone, and gives branches to the flexor brevis digitorum pedis, the accessory and the abductor of the little toe. This trunk subsequently divides into two branches;—the one—*profunda*—is distributed to the short flexor of the great toe; the interosseus and abductor pollicis pedis: the other—*superficialis*—sends filaments to the short flexor of the little toe, the two sides of that finger, the outer side of the 4th, and the last lumbricalis.

The **PLANTAR MUSCLE**, *Planta'ris*, *P. gracilis*, *Tibia'lis gracilis*, *Extensor tarsi minor*, *Plantaire*, *P. grêle*, *Jambier grêle*, *Petit fémoro-calcaneien*, (Ch.) A muscle, situate at the posterior part of the leg. It is long, thin,

and narrow. Above, it is attached to the posterior part of the external condyle of the femur: below, it terminates by a long tendon, which is attached to the posterior and inner part of the calcaneum. This muscle extends the leg on the foot, and *vice versa*. It can, also, assist in the flexion of the leg on the thigh.

The **PLANTAR REGIONS** are different regions of the sole of the foot. Three are generally reckoned:—the *internal*, *middle*, and *external*.

PLANUM, **OS**, from *Planus*, 'soft, smooth.' The papyraceous or *orbital plate* of the ethmoid bone was, formerly, so called.

PLASTIC, *Plas'ticus*, from *πλασσω*, 'I form.' That which forms; which serves to form.

The **PLASTIC FORCE** is the generative power in organized bodies. It is also called *Nisus formativus*, *Vis plastica*, *Vis reproductiva*. *Force of Nutrition*, *F. of assimilation*, *Plasticismus*.

PLATIASMUS, from *πλατυς*, 'broad.' Excessive development of the lips, causing the articulation to be imperfect.

PLATINA, **MURIATE OF**, *Mu'rias Platinæ*, *Chlorure'tum Platinæ*. This preparation, made by dissolving platina in oxy-muriatic acid, has been advised in the treatment of syphilis. From a quarter of a grain to a grain to be rubbed upon the gums.

PLATYSMA, from *πλατυς*, 'broad.' Any thing broadly extended. A spread plaster.

PLATYSMA MYOIDES, *P. myoides*, *Mus'culus cuta'neus*, *M. subcuta'neus*, (Winslow,) *Quadratus genæ vellatis'simus colli*, *Tetragnathus*, *Stomomandicon*, *Thoraco-maxillo-facial*, *Thoraco-facial* (Ch.), (F) *Peaucier*. A muscle, situate superficially on the lateral parts of the neck. It is flat, broad, and quadrilateral. Its fibres, which are all parallel to each other, pass obliquely downwards, and from without inwards. They arise from the cellular tissue, which covers the anterior and superior part of the chest; pass before the clavicle, and proceed to attach themselves at the inferior part of the symphysis menti, at the external oblique line of the jaw, and at the commissure of the lips. The fibres of this last insertion form a distinct fasciculus, called by some anatomists *Musculus Risorius Santorini*. The platysma myoides depresses the commissure of the lips, and carries it outwards. It contributes, also, to the depression of the lower jaw. When it contracts, it wrinkles the skin of the neck transversely.

PLATYSTER'NOS, from *πλατυς*, 'broad,' and *στέγνον*, 'the sternum.' One who has a well developed chest.—D. Pechlin.

PLECTANĒ, *Plica*, *Plegma*, *Plexus*. A fold, a plexus. Also, a cornu of the uterus.

PLECTRUM. The styloid process of the temporal bone. Also, the uvula, and the tongue.—Castelli.

PLEDGET, (D) *Plagghe*, *Plumaceolus*,

Lintea'men, Plag'ula, (F) *Plumaceau, Plumasseau*. A small compress or *gâteau* of lint—(the filaments arranged parallel to each other)—flattened between the hands after the extremities have been cut off or folded down. It is applied over wounds, ulcers, &c. to preserve them from the contact of the air, to retain dressings *in situ*, or to absorb the discharges.

PLEIN (F). 'Full.' The middle part of a roller.

PLERO'SIS, from *πλησις*, 'full;' also, *Reple'tio, Refec'tio, Reple'tion*. Restoration of flesh after sickness.

PLES'MONE, *Plenitu'do, Sati'etas, Sati'ety*. Condition opposite to that of hunger.

PLETHO'RA, from *πληθω*, 'I fill.' *Polyæ'mia, Plenitu'do, Multitu'do, Redundan'tia, Reple'tio, En'chyma, Comple'tion*, (F) *Abondance*. The word *plethora*, which means repletion, expresses a superabundance of blood in the system, or in some part of it:—hence the division of *plethora* into *general* and *local*;—the latter being called, according to its seat, *cerebral, pulmonary, uterine*, &c. The principal symptoms of *plethora* exist in the circulatory system:—such as redness of the surface; swelling of the veins; increase in the fulness of the pulse; in the strength of the heart's pulsations, &c.; with spontaneous hemorrhages, occasionally. With these are usually united, general heaviness, torpor, lassitude, vertigo, tinnitus aurium, flushes of heat, &c.

The tendency to *plethora* or its actual existence must be obviated by purgatives, proper diet, exercise, &c.; and, if the danger from it be pressing, by blood-letting. This is, however, a doubtful remedy for general *plethora*, as it increases hæmatisis.

PLEURA, *πλευρα*, 'the side.' *Membra'na pleurit'ica* seu *costas succin'gens* seu *succin'gens*, *Membra'na* seu *Tu'nica costa'lis* seu *subcosta'lis*, *Hypopleu'rios*, (F) *Plèvre* ou *Pleure*. The *pleuræ* are two thin, diaphanous, perspirable membranes, which line each side of the chest, and are reflected thence upon each lung. Like all serous membranes—to which class they belong—each represents a sac without aperture. From the junction of the *pleura* of each side the *mediastina* are formed.

That portion of the *pleura*, which lines the parietes of the chest, is called *Pleura Costa'lis*; the portion, that covers the lungs, *Pleura Pulmona'lis*.

The arteries of the *pleuræ* are from the intercostals, internal mammaries, phrenic, inferior thyroid, &c. The veins correspond with the arteries. They are, also, supplied with lymphatics, but nerves are not traceable in them.

Pleura is also used for *Cavity of the Pleura*.

PLEURITIS, from *πλευρα*, 'the *pleura*;'

Morbus latera'lis, Empres'ma Pleuritis, Pleuris, Pleure'sis, Pleuropneumoni'tis, Pneumopleure'sis, Pleurit'ica Febris, Cauma Pleurit'is, Passio pleurit'ica, Pleurisy, Inflammation of the Pleura, (F) *Pleurésie, Fièvre pleurétique*, may be acute or chronic. Perhaps, the most violent of all internal inflammations is the active form; known by acute, lancinating pain in one side of the chest, increased by inspiration, by coughing, and often by pressure; dyspnœa, the inspirations being short and frequent; cough dry, or with little expectoration; difficulty of lying on the affected side. Symptoms, attending the phlegmasiæ in general, strongly marked.

Physical Signs. There is seldom any perceptible alteration in the exterior of the chest. When effusion has taken place to a great extent, the signs will be similar to those of chronic pleurisy. The motion of the affected side is diminished; and the vibrations of the voice cannot be detected by the hand.

There is more or less dulness of sound on percussion, the dulness diminishing or disappearing by change of position.

On auscultation, the inspiration is feeble, distant or inaudible, but change of position modifies it.

Egophony is usually present, when the effusion is in moderate quantity, and is best heard over a portion of the thoracic parietes, represented by a band of three inches, running from below the inferior margins of the scapula in the direction of the ribs to the sternum.

Simple pleurisy rarely attacks both sides at once: when such is the case, the presence of tubercles may be suspected.

Formerly, a *true pleurisy* meant one seated in the *pleura*: a *mediastinal pleurisy*, one situate in the anterior mediastinum; and *false pleurisy* or *rheumatismal pleurisy*, that which occupied the intercostal muscles. This last has received the name *Pleurodyn'ia*; that of *pleurisy* being exclusively appropriated to inflammation of the *pleura*. Pleurisy has, also, been distinguished into *dry* and *humid*; according as it is accompanied or not by expectoration. *Humid* or *moist pleurisy* is, now, properly regarded as a complication of pleurisy with pulmonary catarrh. It is the *catarrhal pleurisy* of some. The majority of the species of pleurisy, admitted by Sauvages, consist of complications.

The causes of pleurisy are like those of other internal inflammations. It may terminate by resolution, effusion, or suppuration.

CHRONIC PLEURISY, which has been particularly described by Bayle, Broussais, and Laennec, most commonly terminates by a serous or purulent effusion, which sometimes simulates hydrothorax; at others, phthisis pulmonalis. It may form slowly, without

evident symptoms; or it may succeed acute pleurisy. In the former case, vague pains are felt in the chest, with small, dry cough; oppression at intervals; shivering; irregular febrile symptoms, and hardness of pulse.

Physical Signs. The affected side is smoother, more rounded and motionless; the intercostal spaces are dilated and filled up or may even protrude slightly. In very chronic cases, however, the affected side may be smaller. The triangular space above the clavicle and the depression immediately above the sternum are often drawn downwards on the diseased side. No vibration is experienced by the hand when the patient speaks. The parietes of the thorax are sometimes œdematous and fluctuation may be occasionally felt between the ribs. On percussion, the sound is dull, or if clear only so in the upper portions of the chest. On auscultation, there is an absence of the usual sounds over the affected parts, excepting occasionally transmitted sounds.

There are no physical signs that can enable us to know whether pus or serum is effused into the chest. The introduction of a grooved needle through the intercostal space, as recommended by Dr. Thomas Davies, would of course settle the question.

On *dissection* of those who have died of pleurisy, the pleura is found thickened, red, inflamed, and covered with membranous exudations or false membranes. Sometimes, it seems cartilaginous or ossified. Its cavity, frequently, contains serous or sero-purulent effusions.

The acute form of the disease requires the most active treatment. General blood-letting, to such an extent as to make a very decisive impression on the system, and repeated if necessary. This is the most important agent. After the violence of the disease has been got over, counter irritants will be found highly beneficial; as well as when it has passed into the chronic state. The cough may be relieved by demulcents.

BILIOUS PLEURISY, *Pleuritis biliosa*, is pleurisy accompanied with bilious symptoms;—the effect of duodenitis or duodeno-hepatitis.

Sauvages has given the name *Pleuritis ventosa*, and Pringle that of *Pleurodynia ventosa*, to a pain behind the false ribs, attributed to the presence of air in the intestines.

PLEUROCELE, from *πλευρα*, 'the pleura,' and *κηλη*, 'a tumour.' *Hernia of the pleura*. This name, employed by Sagar, is inaccurate, as the pleura never protrudes alone. It only forms a hernia, when it serves as an envelope to the lung, to tumours, or to purulent collections, which have protruded from the thoracic parietes.

PLEURO-COLLE'SIS, from *πλευρα*, 'the pleura,' and *κολλαω*, 'I glue.' An adhesion

between the pleura costalis and pleura pulmonalis.

PLEURODYN'IA, *Pleural'gia*, *Pseudo-pleuritis*, *Pseudo-pleurisy*, *Pleurodyne*, *Aural'gia dolorosa*, *A stitch*, *Pain in the side*, *Parapleuritis*; *False Pleurisy*, *Rheumatic or rheumatis'mal pleurisy*, *Pleuritis spuria simula'ta*, *Pneumonia externa*, *Lagonop-onos*, *Thoracodyne*, (F) *Point de côté*, *Douleur de côté*; from *πλευρα*, 'the side or pleura,' and *δυνη*, 'pain.' A spasmodic or rheumatic affection, usually seated in the muscles of the chest, and, ordinarily, in the intercostals. It is usually augmented by outward pressure, on inspiration, coughing, exertion, moving the thorax, and sometimes, even the corresponding arm. It is unaccompanied by fever, cough, or dyspnœa, except when under the form of a *stitch*, when dyspnœa exists.

It is, generally, by no means obstinate, and yields promptly to warm applications and to cupping or leeches. If it still resist, a blister will, almost always, remove it.

PLEURO-PERIPNEUMONY, *Pleuro-peripneumonia*, *Pleuro-pneumonia*. Inflammation occupying the pleura and the lung at the same time. Pleurisy and peripneumony existing simultaneously.

Physical Signs. A dull sound is yielded by percussion for a variable extent over the more dependent portions of the affected side. The loss of sound is partially modified by change of position.

The respiratory murmur on auscultation is very feeble or absent inferiorly; higher up the crepitation or bronchial respiration of pneumonia may be detected: round the root of the lung and near the inferior angle of the scapula egophony is generally present. There is seldom much enlargement of the affected side, or displacement of the adjacent organs, as in the case of simple chronic pleurisy.

PLEURORTHOPNŒA, from *πλευρα*, 'the side,' *ορθος*, 'straight,' and *πνεα*, 'I respire.' Pain of the side, which does not permit the patient to breathe, except when in the vertical position.

PLEUROTHOTONOS, *Pleurotonos*, *Tetanus lateralis*, from *πλευροθεν*, 'laterally,' and *τονος*, 'tension.' Variety of tetanus, in which the body is curved laterally, by the stronger contraction of the muscles of one side of the body.

PLEXIM'ETER, *Plessim'eter*, *Plexim'etrum*, *Plessim'etrum*, from *πλησσω*, 'I strike,' and *μετρον*, 'measure,' 'a measurer of percussion.' An ivory plate, of a circular or ovoid shape, from an inch and a half to two inches in diameter, and about one sixth of an inch in thickness. It has either a raised rim or edge, or projecting handles on its upper side, to permit its being held between the finger and thumb of the left hand, whilst it is struck with the right. It is used in percussion of the chest. A piece of metal, a

coin, or the finger of the left hand may be used with equal advantage.—See Percussion, Mediate.

PLEXUS, *Plegma*, *Plec'tane Plane*, *Rete*, from *plecto*, 'I interlace,' 'I entwine,' (F) *Lacis*. A network of bloodvessels or of nerves.

The nervous plexuses belong:—some to the system of encephalic nerves—others to that of the great sympathetic; whilst some, as the pharyngeal, seem to be formed of the two sets. The plexuses represent complex networks, with more or less loose meshes, formed by the numerous and diversified anastomoses of the nervous filaments; and from which proceed other branches, that are distributed to organs or to other plexuses.

PLICA, *Tricho'sis plica*, *Tricho'ma*, *Plica Polon'ica*, *Matted hair*, *Plaited hair*, *Lues Sarmat'ica*, *Helot'is*, *Cir'ragra*, *Cir'rhagra*, *Morbus Cirro'rum*, *Trichæ Incubo'rum*, *Plica caput medu'sæ*, *Plica longicau'da latera'lis*, *Coma cæsa'rea*, *Kolto*, *Rhopalo'sis*, *Plica'tio*, *Plicatu'ra*, (F) *Plique*. A disease, endemic in Poland, Lithuania, and other parts of Northern Europe; so called on account of its being characterized by interlacing, twisting, and agglutination or matting of the hair. By some, it has been regarded as a disease; by others, as the result of a want of attention to cleanliness. However this may be, it generally appears upon the hair of the head, but, sometimes, in that of other parts, as the beard, the hair on the axilla, pubes, &c. Alibert admits three species of plica. 1. The *Plica multiform'is* or *Plica caput Medu'sæ*, in which the hairs are mixed and agglutinated in greater or less masses; and this has been again subdivided into two varieties, according as the meshes are almost straight (*P. C. M. lacinia'ta*, (F) *Plique en lanières*) or much twisted (*P. C. M. lacinia'ta* (F) *P. en vrilles*.) 2. *Plica longicau'da* (F) *Plique solitaire* ou à queue; when the hair is united into a single long mass, and 3. *Plica cespito'sa*, (F) *Plique en masse*, in which the hairs are matted into one large, shapeless mass. Pinel places this disease amongst the *Cutaneous phlegmasiæ*; but it is far from being demonstrated, that it is the result of inflammation of the skin. Certain it is, however, that the tangling of the hair is symptomatic of an affection of the dermoid system, *sui generis*. The idea that it is entirely owing to want of cleanliness, as has been conceived by some, is not tenable.

PLIN'THIUM, *πλινθιον*. A machine, invented by one Nileus, which was formerly employed in the reduction of fractures and luxations. Scultetus describes it in his *Ar-mamentarium Chirurgicum*.

PLOMBIERES, MINERAL WATERS OF. P. is a town in the department of the Vosges, 17 leagues from Nancy, and 2 from Remiremont. Here are several sources of

Thermal water. That, which is called *Saponaceous* (*Savonneuse*) is formed of the subcarbonate, sulphate, and muriate of soda, silica, carbonate of lime, and much vegeto-animal matter. This last component, when held in solution by means of the subcarbonate of soda, gives to the water an unctuous appearance. This is the origin of its name.

The waters of Plombières are employed as solvents in engorgements of the abdominal viscera, and as alteratives in chronic diseases of the skin.

PLUGGING, (Sw.), *Plugg*. (F) *Tamponnement*. The act of stopping a hole. The introduction of plugs of lint or rag into a wound or natural cavity—as the uterus or vagina—to arrest hemorrhage; or of some substance into a carious tooth to prevent toothache.

PLUMBA'GO EUROPEA, *Denta'ria*, *Crepanell'a*, *Squama'ria*, *Dentela'ria*. (F) *Dentelaire*. Family, Plumbaginæ, *Sex. Syst.* Pentandria Monogynia. The root was formerly much esteemed as a cure for the toothache; like the *Pellitory of Spain*, which is also called *Dentaria*.

PLUMBUM, *Molybdos*, *Saturn'us*, *Capricor'nus*. (F) *Plomb*. Lead. A solid metal, of a bluish white colour; more malleable than ductile; soft enough to be scratched by the nail; very fusible and oxydizable, when heated in the air; and existing, in nature, under a number of different shapes; the principal of which are those of sulphuret and oxyd. S. P. 11.352.

Its use is to form oxyds and salts. In its metallic state, it has no action upon the body; but, when oxydized or united with an acid, it acts, in large doses, as a powerfully astringent poison.

PLUMBI OXYDUM SEMIVIT'REUM, *Lithar'gyrus*, *Lithargyrum*, *Lithargyrium*, *Oxydum plumbi fusum*, *Spuma argenti*, *Semi-vit'rified oxyd of lead or litharge*, *Calciteo'sa*, *Cath'mia*, (F) *Oxide de plomb fondu*, *Oxide de plomb semi-vitreux*, (a yellow protoxyd of lead, prepared by heat and combined with carbonic acid.) It occurs in scales of a whitish-red colour and semi-vitrified. It is employed for pharmaceutical purposes, as in the *Liquor plumbi acetatis*, *Emplastrum plumbi*, &c. Formerly, the *Litharge of gold* (*Chrysitis*), and *Litharge of silver*, *Almariab*, were distinguished in commerce. These were merely ordinary litharge, resembling gold or silver in colour.

PLUMBI OXYDUM RUBRUM, *Min'ium*, *Deutoxydum plumbi rubrum*, *Superoxydum plumbi sum*, *Plumbum oxyda'tum rubrum*, *Red lead*. (F) *Oxide de plomb rouge*. It is, sometimes, used to kill vermin.

PLUMBI SUBCAR'BONAS, *Car'bonas plumbi*, *Oxydum plumbi carbona'tum perac'idum aceto'sum*, *Cerus'sa alba Nor'ica* seu *Hollan'dica*, *Oxydum plumbi album*, *Cerussa* *Psimmythion*, *Psimmython*, *Simitium*, *Flake white*,

Blanca, Gersa, If'fides, subcar'bonate of lead, Cerusse, White lead, (F) Blanc de plomb, Plomb blanc, (prepared by exposing spiral rolls of lead to the fumes of vinegar, in vessels placed in dung.) It is inodorous; has a sweet taste; is brittle; friable; snow white, and of a minute, scaly texture. It is astringent and sedative, and is sprinkled on parts affected with local inflammation, or to prevent chafing in children. It is, also, used in the formation of ointments and plasters.

PLUMBI SUPERACE'TAS, Cerus'sa aceta'ta, Plumbi acid'ulus siccus, Plumbi ace'tas, Sal vel sac'charum satur'ni, Superac'etate of lead, Dulce'do satur'ni, Ace'tas plum'bicum crystallisa'tum, Sal plumbi, Sugar of lead, Protoac'etate of lead, (F) Sel ou sucre de Saturne. (Plumb carb. ℞ j. Acid acetic. cong. 1½. Boil the lead with the acid till it is saturated; then strain through paper, and evaporate to a pellicle, that crystals may be formed. Wash the crystals and dry on blotting paper. Ph. L.) The acetate of lead has a sweet, styptic taste; a very white colour and silky lustre. It is astringent; and, in *weak* solutions, cooling and sedative; in *strong*, stimulant. It is given, internally, in visceral and other hemorrhages, combined with opium, and is used, externally, in solution, in inflammation, burns, bruises, gonorrhœa, &c. Dose, gr. ss to iss.

PLUNKETT'S OINTMENT. This empirical cancer remedy consists of *Arsenious acid, Sulphur*, and the powdered flowers of the *Ranunculus flammula*, and *Cotula fœtida*;—levigated and made into a paste with the white of egg, and applied, on a piece of pig's bladder, to the surface of the cancer.

PLUTEA. Avicenna gives this name to duplicatures of the dura mater, such as the *Falx cerebri*.

PNEUMATIC PHYSICIANS. Name given to a sect of physicians, at the head of whom was Athenæus, who made health and disease to consist in the different proportions of an element—which they called *Pneuma*, πνευμα—to those of the other elementary principles. This πνευμα was a fancied spiritual principle, which the Stoics regarded as an element, different from water, air, earth and fire;—the sole elementary principles previously admitted.

PNEUMATICA, from πνευμα, 'air.' Appertaining to the breathing. Diseases of the respiratory function;—the second class in Good's system of nosology.

PNEUMATO'DES, from πνευμα, 'wind,' and ομοις, 'resemblance.' One, distended with air, or who breathes with difficulty, owing to an accumulation of flatus in the digestive tube; or, according to others, owing to emphysema.

PNEUMATOM'PHALUS, from πνευμα, 'flatus,' and ομφαλος, 'the umbilicus.' Um-

bilical, intestinal hernia, containing a considerable quantity of flatus.

PNEUMATO'SIS, from πνευμα, 'air,' flatus. (F) *Maladies venteuses.* Flatulent distention of the stomach. Sauvages uses the word synonymously with emphysema. Frank comprises under it all flatulent diseases.

PNEUMOGAS'TRIC, *Pneumogas'tricus*; from πνευμων, 'the lung,' and γαστρης, 'the stomach.' Chaussier gives this name to the *Eighth pair of nerves, Par vagum, Pars vaga, Nervus vagus, Middle sympathetic*; because it is distributed especially to the organs contained in the chest and abdomen. This nerve arises from behind the eminentiæ olivariæ and near the corpora restiformia by one or two rows of filaments, regularly arranged. These filaments unite to form a flat cord, which issues from the cranium by the foramen lacerum posterius, behind the glossopharyngeal nerve. At its exit from the cranium, the pneumogastric nerve has the appearance of a very compact plexus. It then descends along the neck, deeply seated on the outside of the carotid artery and the internal jugular vein. When it has attained the lower part of the neck it enters the chest, gliding behind the subclavian vein, and passing on the right side, in front of the subclavian artery, and, on the left, before the arch of the aorta. It proceeds, at first, backwards increasing in size. Afterwards, it passes from behind the bronchi to the œsophagus; accompanies it through the diaphragm and terminates on the stomach.

In the neck, the pneumogastric nerve anastomoses with the spinal, glosso-pharyngeal, great hypoglossal, and great sympathetic nerves; and furnishes, 1. a *pharyngeal branch*, 2. a *superior laryngeal*, 3. *cardiac branches*. In the chest, it gives off, 1. The *inferior laryngeal* or *recurrent*, 2. The *pulmonary plexus*, and 3. The *œsophageal branches*.

On entering the abdomen, the œsophageal branches, which terminate the pneumogastric, are distributed upon the stomach; and give numerous filaments to that viscus, to the hepatic, celiac, gastro-epiploic, and solar plexuses. Some go, also, to the pancreas, liver, gall-bladder, duodenum, &c.

PNEUMOG'RAPHY, *Pneumogra'phia*; from πνευμων, 'the lung,' and γραφει, 'a description.' The part of anatomy that describes the lungs.

PNEUMOL'OGY, *Pneumolo'gia*; from πνευμων, 'the lung,' and λογος, 'a discourse.' An anatomical treatise of the lungs. Anatomical doctrine of the lungs.

PNEUMO'NIA, *Empres'ma Pneumoni'tis, Pleumonia, Peripneumonia, Pneumonia peripneumonia, Pneumonitis, Pulmonia, Pulmona'ria, Inflamma'tio pneumon'ica, I. pec'toris acu'ta, Inflammation of the lungs, (F)*

Fièvre péripneumonique. The chief symptoms of pneumonia are:—pyrexia, accompanied by pain,—sometimes obtuse, at others pungent,—in some part of the thorax; pulse more or less quick and hard, according to the violence and extent of the local disorder; pain aggravated by the cough, which with dyspnœa exists throughout the disease. At first, the expectoration is difficult and painful; but in the course of a few days it becomes free, and the oppressed breathing is mitigated.

When the inflammation, instead of going off by resolution, passes on to suppuration, rigors are experienced; the respiration becomes more oppressed but less painful, and a sense of weight is felt in one of the pleuræ.

Pneumonia may, also, terminate by gangrene (but this rarely happens); by induration and by hepatization.

Physical Signs. First stage. Diminution of the sound is generally observed over the affected part on percussion; auscultation exhibits an equal, dry, crepitating *râle*, which is best heard at the close of a deep inspiration, and on coughing. The respiratory murmur is intermingled with the crepitant *râle*, or it may be absent. In the neighbourhood of the affected parts it is natural or puerile. The voice and cough are rather more resonant than usual.

2. When *Hepatization* has occurred, the motion of the affected side is impeded, and immediately above the sternum and in the corresponding triangular space on either side, there is often an evident depression. Percussion is dull over the affected part in every position of the patient. On auscultation, the crepitation is found to be replaced by bronchial respiration. The respiratory murmur is louder in the other portions of the lung, the voice and cough are more resonant, and the heart's action is more distinct.

3. When *Suppuration* supervenes, the same signs persist; but usually the voice and cough are less resonant, and a coarse mucous *râle* is heard. When gangrenous or suppurative cavities are formed, they present the ordinary signs.

The prognosis, in pneumonia, must be guarded. It is not a disease, which we can always subdue.

Great extent of inflammation; very considerable oppression; orthopnœa, and difficult expectoration are unfavourable symptoms.

The most active treatment is of course necessary. General bleeding forms the sheet anchor,—employed so as to make a decided impression on the system, and repeated, if necessary; local blood-letting; nauseating doses of antimonials; purgatives; and, when the violence of the inflammation has been got under,—counter-irritants, &c. Chronic pneumonia sometimes succeeds the acute, and, at others, occurs accidentally. It must be

managed on general principles. Small bleedings, especially locally; and counter-irritants of all kinds are indicated.

PNEUMONICA: Diseases affecting the lungs, their membranes or motive power; characterized by irregular, impeded, or painful respiration.

The second order of the class *Pneumatica* of Good.

PNEUMONICULA, from πνευμων, 'the lung.' Diminutive of pneumonia. A slight inflammation of the lung.

PNEUMONOSSES, from πνευμων, 'the lung.' Diseases of the lungs.

PNEUMO-PERICARDIUM, from πνευμα, 'air,' and περικαρδιον, 'pericardium.' Laennec designates, under this name, the effusion of air into the cavity of the pericardium.

PNEUMOSIS, from πνευμων, 'the lung.' A term, under which Alibert comprises every affection of the lungs.

PNEUMOTHORAX, *Emphysema pectoris*, *Asthma ærium*, *A. emphysematicum*, *Dyspnœa pneumatica*, *D. physothoracica*, *Physothorax*, from πνευμων, 'the lung,' and θωραξ, 'the thorax.' An accumulation of air in the cavity of the pleura. A complaint generally sudden in its invasion and fatal in its character. In many instances, along with the air a liquid is effused. The disease may be spontaneous and simple, but in a large proportion of cases it is complicated with pleurisy and pulmonary tubercles. The signs vary according as there is, or is not, a communication between the pleura and the bronchia. The affected side gives a hollow tympanitic sound, even where the thickness of the parietes of the thorax is great.

When the effusion is considerable, the affected side is dilated, but there is no *râle* of any kind. When a gaseous and a liquid effusion are present at the same time, the sound on percussion is found to be clear at the superior part of the thorax, but dull inferiorly; hence, by varying the position of the patient, and by consequence that of the contained fluids, the seats of the clear and the dull sound can be varied.

When the gaseous effusion is owing to a fistulous communication between the pleura and bronchia, the metallic respiration and resonance are heard; and if there be both gaseous and liquid effusion with a fistulous communication, in addition to these signs there is the *Tintement métallique*.

The presence of liquid can always be ascertained by succussion. See *Emphysema* of the Lungs.

PNEUMOTOMY, *Pneumotomia*, from πνευμων, 'the lung,' and τεμνω, 'I cut.' Dissection of the lungs.

PODAGRA, *Podorrhœuma*, from πους, 'the foot,' and αἴμα, 'seizure.' Pain which attacks the feet. Gout, situate in the articulations of the foot. It has, also, been used,

in a more extensive signification, synonymously with *gout*.

PODARTHROC'ACE, from *πους*, 'the foot,' *αρθρον*, 'an articulation,' and *κακος*, 'bad.' Caries of the articulation of the foot.

PODENCEPH'ALUS, from *πους*, 'the foot,' and *κεφαλη*, 'the head.' A monster whose brain is placed outside the skull, and seems to be supported on a pedicle, which traverses the summit of the skull.—G. St. Hilaire.

PODOL'OGY, *Podolo'gia*, from *πους*, 'the foot,' and *λογος*, 'a discourse;' a description of the foot: a treatise on the foot.

PODOPHYL'LUM PELTA'TUM, *Podophyl'lum*, *May apple*, *Mandrake*. Family, Podophylleæ. Sex. Syst. Polyandria Monogynia. A common plant throughout North America. The fruit is eatable and esteemed by many. The leaves are said to be poisonous. The root is purgative, in the dose of 20 grains. It has, also, been used as an anthelmintic.

PODOTHE'CA, from *πους*, 'a foot,' and *θηκη*, 'a receptacle,' 'a sheath.' The cuticle of the foot, an anatomical preparation. *Chirothe'ca*, has been used for the cuticle of the hand.

POGONI'ASIS, *Pogonia*, from *παγων*, 'the beard.' A female beard. Also, great strength or quantity of beard.

POINT, BLISTERING. A name given, by Rush, to a particular period in the course of a continued fever, intermediate between its stage of high excitement and collapse, in which blisters will usually produce unequivocally good effects.

POISON, *Tox'icum*, *Vene'num*, *Virus*, *Delete'rium*. A generic name for all substances, which, when introduced into the animal economy, either by cutaneous absorption, respiration, or the digestive canal, act in a noxious manner on the vital properties or the

texture of an organ. Poisons exist in the three kingdoms of nature, but those which proceed from animals are often called *venoms*, as the venom of the viper, scorpion, tarantula, &c., whilst those, that are the products of disease have the name *virus*. In common parlance, therefore, *poison* is restricted to deleterious articles, furnished by the mineral and vegetable kingdoms. Orfila has divided poisons into four classes.

1. ACRID, IR'RITATING, CORRO'SIVE, or ESCHAROT'IC, such as the concentrated acids and alkalies; mercurial, arsenical, cupreous, and antimonial compounds, cantharides, &c.

2. NARCOT'IC;—those that act particularly upon the brain; as opium, hyoscyamus, &c., but without inflaming the organ, with which they come in contact.

3. NARCOT'ICO-ACRID or ACRONARCOT'IC;—those act on the brain, but, at the same time, inflame the parts to which they are applied; as aconite, belladonna, &c.

4. SEPTIC or PUTRES'CENT;—those furnished by the animal kingdom. See *Venom* and *Virus*.

Various classifications, of a similar character, have been recommended by different Toxicologists; but they are liable to the objection, that they throw substances together, whose physiological action on the system is very different. It is, indeed, difficult to avoid the unnatural compression of matters into places not properly belonging to them, in all such arrangements.

The following Table which exhibits a *coup d'œil* of the chief poisons, with every circumstance of importance connected with them, is not free from these objections. The division of mineral Poisons has been revised—rewritten, indeed—by the Author's friend, Professor W. R. Fisher, of the University of Maryland.

TABLE, EXHIBITING THE SYMPTOMS, TREATMENT, AND MODES OF DETECTING THE VARIOUS POISONS, MINERAL, VEGETABLE AND ANIMAL.

N. B. In all cases the Stomach-Pump should be used as soon as possible.

I. INORGANIC POISONS.

POISONS.	SYMPTOMS.	TREATMENT.	TESTS.
ACIDS.	The acids, generally, are strong corrosive poisons.	The carbonates of soda, potassa, lime and magnesia, are all antidotes to the acids; calcined magnesia also. They are to be used with the following restrictions: for the acetic, citric, muriatic, sulphuric, and tartaric acids, they may be used indiscriminately. For the nitric and oxalic, carbonates of magnesia and lime can alone be employed with safety. In the case of sulphuric acid, water should not be drunk on account of the great heat, which is	<i>Sulphuric acid</i> is known by a white precipitate with any salt of baryta, insoluble in nitric acid. <i>Muriatic acid</i> is known by a white precipitate with nitrate of silver, insoluble in nitric acid, which turns black by the action of light. <i>Nitric acid</i> gives rise to orange-coloured fumes, when copper is placed in it, and an ability to dissolve gold when mixed with muriatic acid. <i>Acetic acid</i> exhales the odour of vinegar. <i>Citric acid</i> blackens when heated. <i>Tartaric acid</i> precipitates crystals
<i>Acetic Acid.</i>	Sour, acrid taste, burning in the throat, which is increased by pressure, swallowing or coughing; eructation, and excruciating pain in the stomach; more or less corrugation of the lining membranes of the mouth and primæ viæ; excoriation about the mouth or such other parts of the skin as the acid may have touched. The matter vomited effervesces with carbonate of lime. The coun-		
<i>Citric Acid.</i>			
<i>Muriatic Acid.</i>			
<i>Nitric Acid.</i>			
<i>Sulphuric Acid.</i>			
<i>Tartaric Acid.</i>			

POISONS.	SYMPTOMS.	TREATMENT.	TESTS.
<i>Oxalic Acid.</i>	tenance becomes glazed, extremities cold and clammy; convulsions and death. Nitric acid occasions yellow stains, and sulphuric acid, black.	produced by their mixture. Subsequent inflammation to be treated by ordinary means. The carbonates of the alkalies and of magnesia and lime have the inconvenience, that a large quantity of gas is extricated in the stomach.	with a solution of potassa; and a white precipitate is thrown down by lime-water. <i>Oxalic acid</i> gives a white precipitate with lime-water, which, when heated, is converted into carbonate of lime.
<i>Prussic Acid.</i> — <i>Oil of Bitter Almonds.</i> — <i>Laurel Water.</i>	Is a sedative poison; nausea, giddiness, debility, hurried pulse, weight and pain in the head; eructations having the flavour of the acid; spasms, tetanus, contractile pupil; convulsions, death.	Ammonia is an antidote; but it should not be employed in a very concentrated form. Liquid chlorine has also been found efficacious. The cold <i>douche</i> to the head has been recommended.	<i>Prussic acid</i> exhales the odour of peach kernels; forms a white precipitate with nitrate of silver; neutralized with an alkali, gives a blue precipitate with the per-salts of iron.
ALKALIES and their SALTS. — AMMONIA, Strong Li- quor, or Water of. — Muriate of Ammonia or Sal Ammo- niac. — POTASSA. — Caustic Pot- ash, and Liquor Pot- assa. — Carbonate of, or Pearl Ash, and Salt of Tartar. — Nitrate of Potassa, or Saltpetre. — Sulphuret of, or Liver of Sulphur. — SODA.	Violent caustic, acrid taste; great heat in the throat, with destruction of its lining membrane; difficult and painful deglutition; vomiting of bloody matter, which turns the yellow of turmeric brown; acute pain in the stomach; cold sweats, weakness, hic-cough; violent colic pains, with purging of bloody stools and membranous flakes; death.	The vegetable acids, such as vinegar, lemon juice, citric and tartaric acid in solution are antidotes to the alkalies and their carbonates. The fixed oils, such as castor, linseed, almond and olive, form soaps with the free alkalies, and therefore destroy their caustic effects.	The alkalies are known by their action on turmeric paper; restoring the colour of litmus, which has been reddened by an acid. Carbonates are known by their effervescence with an acid; some of them affect the turmeric paper. Sal ammoniac gives out the pungent odour of ammonia, when mixed with quicklime.
EARTHS and COM- POUNDS. — BARYTA: — Carbonate of Baryta. — Muriate of Baryta. — Nitrate of Baryta. — LIME.	Analogous with those of the corrosive metals. Violent burning in the stomach, vomiting, gripes, diarrhoea, excessive muscular debility, headache, convulsions, death. Lime differs from baryta in being a pure irritant.	The sulphates of soda and magnesia are prompt and effective antidotes to all the poisonous salts of baryta. Phosphate of soda will also counteract their effects. Lime may be neutralized by dilute acids. Carbonic acid, in soda water, effervescing draught or yeast, it is supposed would answer a good purpose. The fixed oils may be employed either for baryta or lime, when not in a compound state.	Baryta and its salts invariably give a white precipitate insoluble in acid, with a soluble sulphate. Lime, when dissolved, gives a white precipitate with oxalic acid. Also with carbonic acid, or a soluble carbonate. The same of baryta.
ALCOHOL. — Brandy, Wines, and all Spirituous Liquors.	Intoxication, and when taken very freely, complete insensibility, with apoplexy or paralysis of one side; the countenance swollen, and of a dark-red colour; the breathing diffi-	A powerful emetic of white vitriol, or tartar emetic, should be got into the stomach as soon as possible; and if the person has lost the power of swallow- ing, a flexible catheter or	

POISONS.	SYMPTOMS.	TREATMENT.	TESTS.
	cult, and often stertorous, with a peculiar puffing out of the lips; the breath smells of liquors, which will distinguish the symptoms from those of spontaneous apoplexy.	tube should be the means of conveying it thither. The vomiting should be encouraged as much as possible with warm water, and large and active glysters of salt and water should be thrown up. The patient should be placed erect, and if the countenance and other appearances are not improved after these means have been used, the jugular vein may be opened, and cold wet cloths applied to the head, particularly if the body is hotter than natural. If the extremities become cold, warmth and friction should be perseveringly used.	
EMPYREUMATIC OILS. <i>Creosote.</i> <i>Dippel's Animal Oil.</i> <i>Oil of Tar.</i> <i>Oil of tobacco.</i> <i>Oil of Turpentine.</i>	General action that of irritant poisons. Burning pain, vomiting, pungent taste, purging, &c. The oils of turpentine and tobacco affect the nervous system; the peculiar odour of each oil will be manifested in the matter vomited.	Creosote is immediately coagulated by albumen. Dippel's animal oil may be counteracted with dilute acids and the fixed oils. The other oils have no particular antidotes, and their effects must, therefore, be counteracted upon general principles.	No better mode of recognizing these substances exists, than that derived from their peculiar odour. Dippel's oil has the pungent odour of ammonia; creosote and oil of tar, a peculiar smell of smoke; the odour of tobacco and turpentine are well known.
GASES. <i>Carbonic Acid or Fixed Air.</i> <i>Carbonic Oxide.</i> <i>Fumes of Burning Charcoal.</i> <i>Chlorine.</i> <i>Sulphuretted Hydrogen.</i>	Chlorine produces when inhaled, violent irritation of the organs of respiration; cough, bloody expectoration, inflammation of the lungs, and permanent pulmonary disease. The other gases, although producing some effect on the respiratory organs, act as poisons in consequence of their sedative agency. The symptoms, therefore, are those of apoplexy or narcotic poisoning.	The antidotes to chlorine, are the cautious inhalation of ammonia, or sulphuretted hydrogen. The inflammatory symptoms from chlorine to be treated on general principles. For the other gases, cold effusions to the head, blood-letting, artificial respiration.	Chlorine is recognized by its peculiar odour and bleaching properties. Sulphuretted hydrogen by its fetid smell, and the rapid blackening of lead. Carbonic acid by its occasioning turbidness in lime-water placed in its atmosphere. Carbonic oxide, by the blue colour of its flame.
IODINE. <i>Hydriodate of Potassa.</i>	Irritant symptoms: burning pain in the throat, lacerating pain in the stomach and fruitless efforts to vomit; suffusion of the eyes; excessive pain and tenderness of the epigastrium.	Iodine combines with starch and forms an insoluble compound. The prompt administration of starch, wheat flour, or other vegetable matter containing fecula, beat up in water, is recommended. Hydriodate of potassa has no antidote. Vomiting should be promoted by draughts of warm water, and inflammation subdued by general treatment.	Iodine is known by its odour, and the formation of a blue precipitate when brought in contact with a cold solution of starch. Hydriodate of potassa gives a crystalline precipitate, with tartaric acid in excess. The supernatant fluid will give the blue colour to starch.
METALS. ANTIMONY. <i>Tartar Emetic.</i> <i>Muriate, or Butter of Antimony.</i>	Vomiting. If vomiting do not occur promptly, violent irritant effects are produced. Burning pain in the pit of the stomach; purging; colicky pains, sense of tightness in the throat, violent cramps; repeated recurrence of vomiting.	If vomiting have not been produced, it should be brought about, by tickling the fauces, and administering copious draughts of warm water. Astringent infusions, such as of galls, oak bark, Peruvian bark, act as antidotes, and should be given promptly: powdered yellow bark may	Antimony in solution is best distinguished by the peculiar orange-red precipitate, which it forms with sulphuretted hydrogen or solutions of the hydrosulphates. Free alkalis produce white precipitates. The muriate is known by a white precipitate, when it is poured into water. In its solid forms, it may be known by the formation of white fumes, when heated, which redden

POISONS.	SYMPTOMS.	TREATMENT.	TESTS.
<i>Oxide of Antimony.</i> <i>Glass of Antimony.</i>		be used, until the infusion is prepared.	litmus. It may also be converted into muriate, and then precipitated by adding water.
ARSENIC. <i>Arsenious Acid, or White Arsenic.</i> <i>Orpiment, or Yellow Sulphuret of Arsenic.</i> <i>King's Yellow.</i> <i>Realgar, or Red Sulphuret of Arsenic.</i> <i>Fly Powder.</i> <i>Fowler's Solution.</i> <i>Arsenical Paste.</i> <i>Arsenical Soap.</i> <i>Arsenite of Copper. Scheele's Green.</i>	Violent burning pain in the region of the stomach and bowels; tenderness on pressure; retching, vomiting; sense of dryness and tightness in the throat; thirst; hoarseness and difficulty of speech; the matter vomited greenish or yellowish, sometimes streaked with blood; diarrhoea; tenesmus; sometimes excoriation of the anus; urinary organs occasionally affected with violent burning pains and suppression; convulsions and cramps; clammy sweats; lividity of the extremities; countenance collapsed, eyes red and sparkling; delirium; death.	The hydrated peroxide of iron diffused through water; or the precipitated carbonate; or the rubigo ferri, in very fine powder, to be administered every five or ten minutes, until relief is obtained. This is particularly efficacious when the <i>white arsenic</i> has been swallowed. If the arsenic have been taken in the form of Fowler's Solution, lime-water in copious draughts, may be given. For either of the other forms, emetics of sulphate of zinc; diluents; demulcents, such as flaxseed tea, infusion of slippery elm, &c. Counter-irritants may be used to relieve the spasm, and violent pain in the stomach. Bleeding, as promoting absorption, should not be employed until the stomach is completely evacuated.	If the suspected substance can be obtained free from organic matter, the presence of arsenic may readily be shown by boiling it in distilled water, filtering, and testing with, 1st. Ammoniacal sulphate of copper. 2d. Ammoniacal nitrate of silver. 3d. Sulphuretted hydrogen gas. The first will produce a <i>green</i> precipitate; second, a <i>pale yellow</i> precipitate; third, a <i>bright yellow</i> precipitate, if arsenic be present. A portion of the powder, or one of these precipitates carefully and thoroughly dried, is then to be mixed with charcoal and exsiccated carbonate of soda, to be placed in a small glass tube closed at one end, and then to be heated to a red heat in the flame of a lamp. The arsenic will be reduced, and sublime in the upper part of the tube—forming a dark crust, having considerable lustre on its exterior surface, resembling polished steel. By gently heating this crust in a very small flame, crystals of white arsenic will be formed, having a high adamantine lustre. If organic matter be present it must be entirely destroyed by heating the substance with nitro-muriatic acid. After this has been done, and a clear transparent solution in distilled water has been obtained, the subsequent process is as above indicated.
BISMUTH. <i>Nitrate of Bismuth.</i> <i>Pearl Powder.</i> <i>Oxide of Bismuth.</i>	Similar to those produced from other irritant poisons. General inflammation of the whole alimentary canal; suppression of urine; hiccough, disagreeable metallic taste; vomiting; cramps; delirium; death.	Milk and sweet mucilaginous drinks, are recommended. Leeches, general bleeding, glysters; fomentations to be employed on the general principles of treatment for inflammatory symptoms.	Bismuth is known by the formation of a white precipitate when its solution in nitric acid is poured into water; and by the formation of a black precipitate with sulphuretted hydrogen gas, and hydrosulphates in solution.
COPPER. <i>Sulphate of Copper.</i> <i>Blue Vitriol.</i> <i>Acetate of Copper.</i> <i>Verdigris.</i> <i>Carbonate of Copper.</i> <i>Blue Verditer.</i> <i>Arsenite of Copper. Scheele's Green.</i> <i>Food cooked in dirty copper vessels, or Pickles made green by copper.</i>	Very similar to those produced by arsenic. Coppery eructations and taste. Fatal cases are generally terminated by convulsions, palsy, insensibility.	Albumen to be administered in either of its forms, which can be most readily obtained, as milk or whites of eggs. Vinegar should not be given. The inflammatory symptoms, are to be treated on general principles, and so of the nervous.	The presence of copper is readily shown in solutions. By ammonia a beautiful bluish precipitate is thrown down, which dissolves in an excess of the precipitant, and the solution has a rich blue colour. A bright iron bar, introduced into solutions of copper, occasions the separation of the copper in a metallic form, which deposits itself upon the iron.

POISONS.	SYMPTOMS.	TREATMENT.	TESTS.
GOLD. <i>Muriate of Gold.</i> <i>Fulminating Gold.</i>	Very analogous to those of other irritant poisons. This substance communicates a pink stain to the flesh, and patches of that colour may be found about the lips, and inside the mouth.	The salts of gold are decomposed, by sulphate of iron; and this has, therefore, been recommended as an antidote. Inflammatory symptoms to be treated on general principles.	Muriate of gold is very readily decomposed and the gold separated in a metallic state. Protosulphate of iron, nitrate of silver and protomuriate of tin, all answer this purpose. The precipitated powder will be found insoluble except in nitro-muriatic acid.
IRON. <i>Sulphate of Iron.</i> <i>Copperas.</i> <i>Green Vitriol.</i> <i>Muriate of Iron.</i>	Symptoms of irritant poisoning: colic pains, constant vomiting and purging. Violent pain in the throat, tension of the epigastrium, coldness of the skin and feebleness of the pulse.	Carbonate of soda would be a most excellent antidote to either of these substances. Mucilaginous drinks might also be employed; and particular symptoms relieved by general treatment.	Iron is recognized by a bluish-black precipitate, with tincture of galls; rich blue, with prussiate of potassa; and a greenish or reddish precipitate, with the free alkalies or their carbonates.
LEAD. <i>Acetate of Lead.</i> <i>Sugar of Lead.</i> <i>Carbonate of Lead.</i> <i>White Lead.</i> <i>Red Oxide, or Red Lead.</i> <i>Litharge.</i> <i>Wines sweetened by Lead.</i> <i>Water which has been kept in leaden vessels.</i> <i>Acid food cooked, or left standing in vessels glazed with lead.</i>	Irritation of the alimentary canal; spasm; nervous symptoms, paralysis either partial or complete. When taken for some time in small quantity, violent and obstinate colic; rigidity of abdominal muscles, cramps, remissions of pain; obstinate constipation, urine diminished, saliva increased; countenance anxious and gloomy. If relief is not promptly obtained, giddiness, debility, torpor, coma, convulsions and death. The paralysis affects generally the upper extremities.	Sulphate of magnesia and phosphate of soda, are both good antidotes for the soluble salts of lead. For the solid forms, dilute sulphuric acid may be drunk. These are applicable to the irritant forms of poisoning by lead. In the chronic form or colica pictonum, purgatives and anodynes are resorted to; venesection; and external applications to relieve the cramps. The use of strychnine is recommended for the paralysis.	Soluble salts of lead yield a white precipitate with sulphates and carbonates in solution. Salts of chromic acid and hydriodate of potassa occasion a yellow precipitate. Sulphuretted hydrogen, a black precipitate. If solid, the lead may be converted into a state of solution by nitric acid, and the dilute solution be tested as above.
MERCURY. <i>Corrosive Sublimate.</i> <i>Cyanuret of Mercury.</i> <i>Nitrate of Mercury.</i> <i>White Precipitate.</i> <i>Red Oxide, or Red Precipitate.</i> <i>Sulphate, or Turbith Mineral.</i> <i>Vermilion, or Red Sulphuret.</i>	Violent symptoms of irritant poisoning: harsh metallic, astringent taste; burning pain in the stomach; vomiting and purging frequently of bloody matter; often irritation of the urinary organs and sometimes suppression; tightness and burning in the throat, occasionally so great as to prevent speech; countenance not always pale, but sometimes flushed; tendency to doze, stupor, convulsions and death.	Albumen in some form must be promptly administered; either white of eggs beaten up with water, milk, or wheat flour beaten up. The inflammatory symptoms to be counteracted by the usual means.	The free alkalies differ in their precipitates from solutions of mercury. Potassa gives, with corrosive sublimate, a yellowish one; ammonia, a white; lime-water, an orange; and sulphuretted hydrogen, a black. A drop of the solution placed on a piece of gold, and touched with a knife or key, reduces the mercury which amalgamates with the gold, producing a white spot. The nitrate of mercury gives a black precipitate with the free alkalies. All the solid forms of mercury are volatile, and may be reduced by heating them in a glass tube with charcoal and carbonate of soda—when the metallic mercury will sublime, and may be collected in a globule.

POISONS.	SYMPTOMS.	TREATMENT.	TESTS.
SILVER. <i>Nitrate of Silver, or Lunar Caustic.</i>	Those of other irritant poisons.	Muriate of soda or common salt immediately decomposes this substance and destroys its activity. Antiphlogistic treatment is to be employed for the inflammatory symptoms.	Nitrate of silver is distinguished by the formation of a white precipitate insoluble in nitric acid, with muriate of soda; a gray precipitate with ammonia, which is redissolved in an excess of ammonia; yellow precipitate with phosphate of soda. The precipitate of chloride of silver, obtained by adding muriate of soda to the nitrate of silver, is readily reduced, and the metallic silver obtained, by mixing it with dilute sulphuric acid and granulated zinc.
TIN. <i>Muriate of Tin.</i> <i>Solution of Tin, used by Dyers.</i> <i>Oxide of Tin, or Putty Powder.</i>	The same as those from other irritant poisons, and a peculiar tanned appearance of the villous coats of the stomach.	Milk to be given copiously, and the subsequent treatment to be regulated by the symptoms.	The muriate precipitates vegetable colouring matter; also albumen and gelatine. The white oxide is precipitated from its solution by free alkalies; with sulphuretted hydrogen gas, a brown precipitate.
ZINC. <i>Oxide of Zinc.</i> <i>Sulphate of Zinc.</i> <i>White Vitriol.</i> <i>Acetate of Zinc.</i>	Violent vomiting; astringent taste, burning pain in the stomach; pale countenance; cold extremities; dull eyes; fluttering pulse. Death seldom ensues, in consequence of the emetic effects.	The vomiting may be relieved by copious draughts of warm water. Carbonate of soda, administered in solution, will decompose the sulphate of zinc. Milk and albumen also act as antidotes. General principles to be observed in the subsequent treatment.	A white precipitate is thrown down by the free alkalies from the soluble salts of zinc, which becomes yellow when strongly heated—recovering its white colour on cooling. Sulphuretted hydrogen occasions a white precipitate.
PHOSPHORUS.	Symptoms of irritant poisoning: pain in the stomach and bowels; vomiting, diarrhoea, tenderness and tension in the abdomen.	An emetic to be promptly administered; copious draughts containing magnesia in suspension; mucilaginous drinks; general treatment for inflammatory symptoms.	Phosphorus is known by its ready inflammability, luminousness at ordinary temperatures, and alliaceous odour.
GLASS, or ENAMEL.	If taken in very coarse powder, it produces irritation and inflammation of the bowels.	Large quantities of crumb of bread should be eaten to envelope the particles. (?) An emetic of sulphate of zinc should then be given, and vomiting be promoted by demulcent drinks.	

II. ORGANIC POISONS.

1. VEGETABLE POISONS.

IRRITANT POISONS.	SYMPTOMS.	TREATMENT.
<i>Anemone pulsatilla.</i> Wind Flower. <i>Arum maculatum.</i> Wake Robin. <i>Brionia dioica.</i> Bryony. <i>Caladium seguinum.</i> Dumbcane. <i>Calla palustris.</i> Water Arum. <i>Caltha palustris.</i> Marsh Marigold. <i>Chelidonium majus.</i> Celandine. <i>Clematis vitalba.</i> Virgin Bower. <i>Convolvulus jalapa.</i> Jalap. <i>Convolvulus scammonia.</i> Scammony. <i>Croton tiglium.</i> Purging Croton. <i>Cucumis colocyntis.</i> Colocynth. <i>Cyclamen Europæum.</i> Sow Bread. <i>Daphne gnidium.</i> Spurge Flax. <i>Daphne mezereum.</i> Mezereon.	The general effects of this class of vegetable poisons are;—an acrid pungent taste, with more or less of bitterness, excessive heat, great dryness of the mouth and throat, with sense of tightness there; violent vomiting, the efforts being continued even after the stomach is emptied; purging, with great pain in the stomach and bowels; pulse strong, frequent, and regular; breathing often quick.	If vomiting has been occasioned by the poison, and the efforts are still continued, they may be rendered easier by large draughts of warm water, or thin gruel; but if symptoms of insensibility have come on without vomiting, it ought to be immediately excited by the sulphate of zinc, or some other active emetic substance, and after its operation a sharp purgative should be given. After as much as possible of the poison is got rid of, a very strong infusion of coffee, or vinegar diluted with water, may be given with advantage. Camphor mixture with ether may be taken

Mountain Ash. <i>Taxus baccata</i>. Yew.	lively delirium, sometimes pain; convulsions of different parts of the body, or palsy of the limbs. The pulse is variable, but at first generally strong and full; the breathing is quick, and there is great anxiety and dejection, which, if not speedily relieved, soon ends in death.	assist in getting rid of the poison, and active purgatives may be given after the vomiting has ceased. When as much as possible of the poison has been expelled, the patient may drink, alternately, a tea cupful of strong hot infusion of coffee, and vinegar diluted with water. If the drowsiness, which is sometimes extreme, and the insensibility bordering on apoplexy, be not remedied by these means, blood may be taken from the jugular vein, blisters may be applied to the neck and legs, and the attention be roused by every means possible. If the heat declines, warmth and frictions must be perseveringly used. Vegetable acids are on no account to be given <i>before</i> the poison is expelled, and it is desirable that but little fluid of any kind should be administered. N. B. Bromine, chlorine, and iodine are said to be antidotes to the alkaloïds generally.
POISONOUS MUSHROOMS. <i>Agaricus muscarius</i>. Fly Agaric. <i>Agaricus piperatus</i>. Pepper Agaric. <i>Agaricus necator</i>. Deadly Agaric. <i>Agaricus bulbosus</i>. Bulbous Agaric. <i>Agaricus chantarellus</i>. Champignon.	Nausea, heat, and pain in the stomach and bowels, with vomiting and purging; thirst; convulsions, and faintings; pulse small and frequent; delirium; dilated pupil, and stupor; cold sweats, and death. Poisonous mushrooms may be distinguished from the edible by their botanical characters, and by the following criteria. The former grow in wet, shady places, have a nauseous odour; are softer, more open, and porous; have a dirty looking surface, sometimes a gaudy colour or many very distinct hues, particularly if they have been covered with an envelope; they have soft, bulbous stalks, grow rapidly, and corrupt very quickly.	The stomach and bowels to be cleared by an emetic of tartarized antimony, followed by frequent doses of Glauber's or Epsom salt, and large, stimulating glysters. After the poison is evacuated, ether may be administered, with small quantities of brandy and water; but if inflammatory symptoms manifest themselves, such stimuli should be omitted, and other appropriate means be had recourse to.

2. ANIMAL POISONS.

	SYMPTOMS.	TREATMENT.
POISONOUS FISH. <i>Balistes monoceros.</i> Old Wife. <i>Cancer astacus.</i> Crawfish. <i>Cancer ruricolus.</i> Land Crab. <i>Clupea thryssa.</i> Yellow-billed Sprat. <i>Coracinus fascus major.</i> Gray Snapper. <i>Coracinus minor.</i> Hyne. <i>Coryphæna splendens.</i> Dolphin. <i>Mormyra.</i> Blue Parrot Fish. <i>Muræna major.</i> Conger Eel. <i>Mytilus edulis.</i> Mussel. <i>Ostracion globellum.</i> Smooth Bottle Fish. <i>Perca major.</i> Barracuda. <i>Perca venenosa.</i> Grooper. <i>Perca venenata.</i> Rock Fish. <i>Physalia.</i> Portuguese Man of War. <i>Scomber cæruleus.</i> Spanish Mackerel. <i>Scomber maximus.</i> King Fish. <i>Scomber thynnus.</i> Bonetta. <i>Sparus chrysops.</i> Porgie. <i>Tetrodon sceleratus.</i> Tunny. <i>Tetrodon ocellatus.</i> Blower.	In an hour or two, or often in a much shorter time, after stale fish has been eaten, a weight at the stomach comes on, with slight vertigo and headache, sense of heat about the head and eyes, considerable thirst, and often an eruption of the skin (urticaria), and in many cases death.	An emetic should be speedily administered, or, in the absence of it, vomiting may be excited, by tickling the throat with the finger, and taking large draughts of warm water. After full vomiting, an active purgative should be given, to remove any of the noxious matter that may have found its way into the intestines. Vinegar and water may be drunk after the above remedies have operated, and the body may be sponged with the same. Water made very sweet with sugar, to which ether may be added, may be drunk freely as a corrective, and a very weak solution of alkali has been recommended to obviate the effects of the poison. If spasm ensue; after evacuations, laudanum, in considerable doses, is necessary. If inflammation should occur, the usual means of removing it must be employed.
POISONOUS SERPENTS. <i>Bonæ crotaloides.</i> Copperhead. <i>Cenchrus mockeson.</i> Mockeson. <i>Coluber berus.</i> Viper. <i>Coluber prester.</i> Black Viper. <i>Crotalus</i> , (5 species.) Rattle Snake. <i>Scytale piscivorus.</i> Water Viper.	A sharp pain in the wounded part, which soon extends over the limb or body; great swelling, at first hard and pale, then reddish, livid, and gangrenous in appearance; faintings, vomitings, convulsions, and sometimes jaundice; pulse small, frequent, and irregular; breathing difficult, cold sweats, the sight fails, and the intellectual faculties are deranged. Inflammation, and often extensive suppuration and gangrene, followed by death.	A cupping glass to be applied over the wound or a moderately tight ligature above the bites, and the wound left to bleed after being well washed with warm water; the actual cautery, lunar caustic, or butter of antimony, to be then applied freely to it, and afterwards covered with lint, dipped in equal parts of olive oil and spirit of hartshorn. The ligature to be removed if the inflammation be considerable. Warm, diluting drinks, and small doses of ammonia or hartshorn to cause perspiration; the patient to be well covered in bed, and a little warm wine given occasionally. If gangrene be threatened, wine may be given more freely, and the bark should be had recourse to. Arsenic, the principal ingredient in the Tanjore Pill, has been strongly recommended.
CANTHARIS VESICATORIA. Spanish, or Blistering Fly. <i>Lytta vittata.</i> Potato Fly.	Nauseous odour of the breath; acrid taste; burning heat in the throat, stomach, and abdomen; frequent vomitings, often bloody, with copious bloody stools; excruciating pain in the stomach; painful and obstinate priapism, with heat in the bladder, and strangury or retention of urine; frightful convulsions, delirium and death.	Vomiting to be excited by drinking sweet oil, sugar and water, milk, or linseed tea, very freely. Emollient glysters should be administered, and if symptoms of inflammation of the stomach, kidney, or bladder supervene, they must be subdued by appropriate treatment. Camphor dissolved in oil may be rubbed over the belly and on the thighs.
VENOMOUS INSECTS. <i>Tarantula.</i> <i>Scorpio.</i> Scorpion. <i>Vespa crabro.</i> Hornet. <i>Vespa vulgaris.</i> Wasp. <i>Apis mellifica.</i> Bee. <i>Culex pipiens.</i> Gnat. <i>Cæstrus bovis.</i> Gad-fly.	In general, the sting of these insects occasions only a slight degree of pain and swelling; but occasionally the symptoms are more violent, and sickness and fever are produced by the intensity of the pain.	Hartshorn and oil may be rubbed on the affected part, and a piece of rag moistened in the same, or in salt and water, may be kept upon it till the pain is removed. A few drops of hartshorn may be given frequently in a little water, and a glass or two of wine may be taken. The sting may, in general, be removed by making strong pressures around it with the barrel of a small watch key.

	SYMPTOMS.	TREATMENT.
SALIVA OF THE RABID DOG.	At an uncertain interval after the bite, generally however, between the twentieth day and three or four months, pain or uneasiness occurs in the bitten part, though the wound may have been long healed. Anxiety, uneasiness, languor, spasms, horror, disturbed sleep, difficult respiration succeed, and are soon very much increased; violent convulsions affect the whole body, hideously distorting the muscles of the face; the eyes are red and protruded, the tongue swells and often hangs out, and viscid saliva flows from the mouth; there is pain in the stomach, with bilious vomitings, a horror of fluids, and impossibility of drinking them. All these symptoms are aggravated till the sufferer is relieved by death.	Hydrophobia is more easily prevented than cured, indeed it is doubted whether it ever has been cured. Mercury, arsenic, opium, musk, camphor, acids, wine, vegetable and mineral alkali, oil, various herbs, and many other remedies whose effects are quite opposite, have been employed, but none can be relied on. Large blood-lettings, the warm and cold bath, and almost every other remedial agent, have been tried without success. The bitten part should be completely cut out, even after it has healed, if the symptoms have not yet come on; the part should then be immersed in warm water, or washed with it as long as it will bleed, and after the most persevering ablution, caustic should be applied to every part of the surface, and then the wound covered with a poultice, and suffered to heal by granulations. No milder discipline can ensure safety.

The most energetic poisons are used therapeutically; and, often, with considerable advantage. They have, of course, to be administered in extremely small doses; to avoid producing poisoning.

POISONING, *Veneficium*, *Toxicatio*, *Intoxicatio*, *Pharmaceutia*, (F) *Empoisonnement*. The art of applying a poisonous substance to any of the textures, in a dose capable of occasioning more or less serious symptoms. Rigorously speaking, therefore, if a physician, in treating any case, employs a deleterious medicine in a small dose, which, owing to particular circumstances, produces unpleasant symptoms, he may be said to have poisoned. The term is, however, generally restricted to poisoning by design.

Poisoning has also been used, by a few, to denote the series of symptoms resembling those produced by certain poisons, which occasionally follows the use of substances that are generally innoxious. Overloading the stomach with indigestible food has, for example, given occasion to symptoms resembling those produced by a narcotic poison, and the effect has been termed *poisoning*.

Secret poisoning was, at one time, practised as an art. It consisted in administering medicines, which should act as *slow poisons*, and gradually undermine the strength and life. Its agency was far from being so extensive as was imagined.

POLIA'TER, from *πολις*, 'the town,' and *ιατρος*, 'a physician.' A physician, exercising his profession in a town, by the appointment of the government.—Castelli.

POLICE, MEDICAL. Rules established, or which ought to be established by the medical practitioner, for the prevention of disease, to assist its cure, and to contribute to the progress of Medicine. The salubrity of districts,

especially during the existence of spreading disease, is greatly ensured by an efficient medical police.

POLIO'SIS, *Trichosis poliosis*, *Spilosis poliosis*. Hair, prematurely gray or hoary.

POLLEX, *An'ticheir*, *Prom'anus*, from *polle're*, 'to have much strength.' (F) *Pouce*. The first of the fingers in size and strength. It is asserted, that the term *poltroon* is derived from *Pol'licē trunca'to*;—the Romans, who were desirous of being exempted from military service, being accustomed to cut off the thumb, and thus render themselves unfit to handle arms.

Pollex pedis is the great toe.

POLLINCTO'RES. They, who were employed in anointing bodies before they were placed on the funeral pile.

POLLUTION, *Pollutio*, from *polluo*, 'I profane.' The excretion of the seminal liquor or sperm, at other times than during coition. When occasioned by a voluntary act it is called, simply, *Pollution* or *Masturbation* (q. v.): when excited, during sleep, by lascivious dreams, it takes the name *Nocturnal pollution*, *Exoneiro'sis*, *Oneirog'mos*, *Oneirog'onos*, *Gonorrhœa dormientium*, *G. oneirog'onos*, *G. Vera*, *G. libidinosâ*, *Proflu'vium Sem'inis*, *Spermatorrhœa*, *Paroniria salax*, *Night pollution*. (F) *Pollution involontaire*.

POLY, *Polys*, *πολυς*, 'many, full.' Hence:

POLYCHO'LIA, from *πολυς*, 'much,' and *χολη*, 'bile.' Superabundance of bile; such as is supposed to exist in bilious fevers.

POLYCHRES'TUS, from *πολυς*, 'much,' and *χρηστος*, 'useful.' Having many virtues. An ancient name for certain medicines, considered to be useful in many diseases.

POLYDACTYLUS, from *πολυς*, 'many,'

and δακτυλος, 'a finger.' One who has a supernumerary finger or fingers, or toes.

POLYDIP'SIA, from πολυς, 'much,' and διψη, 'thirst;' *Sitis morbo'sa, Polypo'sia, Exces'sive thirst,—Dipso'sis avens.* (F) *Soif excessive.* A constant desire for drinking, with a sense of dryness in the mouth and throat. It is mostly symptomatic of fever, inflammation, dropsy, excessive discharges, &c.

POLYG'ALA, from πολυς, 'much,' and γαλα, 'milk:' *P. vulga'ris, Common Milkwort. Family, Rhinanthoidæ. Sex. Syst. Diadelphia Octandria.* The leaves are bitter, and are used in the same cases as the polygala amara.

POLYGALA AMARA, *Bitter Milkwort.* A powerful bitter; and, consequently, tonic. Its reputed virtues are balsamic, demulcent, and corroborant.

POLYG'ALA SEN'EGA, *Sen'eka, Rattlesnake Milkwort, Senega or Rattlesnake root, Polygala Virginia'na,* (F) *Polygala de Virginie ou le Seneka.* The bark is the active part of the root. Its taste is at first acrid, and afterwards very hot and pungent. It was once esteemed to be specific against the poison of the rattlesnake, and in pleurisy, pneumonia, &c., after the inflammatory action had been got under. It has been given also in humoral asthma, chronic rheumatism, dropsy, croup, amenorrhœa, &c. According to Peschier, it contains three particular principles, *Polyg'aline or Sen'egine, Isol'usine, and Polygalic Acid.* Dose, gr. 30 to 40 of the powder.

POLYG'ONUM AVICULA'RE, from πολυς, 'much,' and γονη, 'seed.' *Centino'dia, Centumno'dia, Knot-grass, Sanguina'lis Corrig'iola,* (F) *Renouée, Trainasse, Centinode. Family, Polygonæ, Sex. Syst. Octandria Trigynia.* This grass is said to be a feeble astringent.

POLYGONUM BISTOR'TA,—*Bistorta, Offic'inal Bistort, Great Bistort or Snakeweed.* The root is a powerful astringent and tonic; and, as such, has been used in internal hemorrhage, atonic diarrhœa, ague, &c. Dose, gr. xv to 3j.

POLYGONUM DIVARICA'TUM;—the *Eastern Buckwheat plant.* The roots, reduced to a coarse meal, are said to be much used as an article of diet by the Siberians.

POLYGONUM FAGOP'YRUM,—*Fagop'yrum, Buckwheat, Trit'icum Fagi'num,* (F) *Sarrasin, Blé noir.* The grain of this plant constitutes a principal article of food with the inhabitants of Russia, Germany, and Switzerland. It is much used in the United States.

POLYGONUM HYDROF'IPER, *Hydropiper, Persica'ria urens, Mercurius terres'tris;* the *Poor Man's Pepper, Biting Arse-smart, Lake-weed, Water-pepper,* (F) *Poivre d'eau.* The leaves of this plant have an acrid, burning taste; and resemble those of the arum. They have been recommended as possessing antiseptic, aperient, and diuretic virtues. The

fresh leaves have been applied, externally, as a stimulating cataplasm.

POLYGONUM PERSICA'RIA, *Persicaria, Persicaria mitis, Plumba'go, Arse-smart,* (F) *Persicaire douce.* This plant is said to possess vulnerary and antiseptic qualities. It has been given in wine, to arrest gangrene.

POLYMERIS'MUS, from πολυς, 'much,' and μέρος, 'a part.' A monstrosity, which consists in the existence of supernumerary organs; as a sixth finger of the hand.

POLYOP'SIA, from πολυς, 'much,' and οψις, 'sight.' Vision is so called, when multiple.

POLYPE'RIA, from πολυς, 'much,' and περος, 'mutilated.' Congenital misconstructions of various parts or organs.—Good.

POLYPHA'GIA, *Multivoran'tia,* from πολυς, 'much,' and φαγω, 'I eat.' Voracity. Faculty of digesting many kinds of food.

POLYPHARMACI'A, from πολυς, 'much,' and φαρμακον, 'a medicine.' A prescription, consisting of a number of medicines: hence the name *Polyphar'macus* given to one, who is in the habit of prescribing a number of medicines, and whose prescriptions are loaded with ingredients. The term is taken in bad part.

POLYPODI'TES. Wine, impregnated with polypody.

POLYPO'DIUM FILIX MAS, *Aspid'ium Filix Mas, Pteris, Athyr'ium Filix Mas, Blechnon, Polyrrhizon, Blancnon Oriba'sii, Lonchi'tis, Filic'ula, Male Polypody or Fern, Filix mas, Nephro'dium crena'tum,* (F) *Fougère mâle. Nat. Ord. Filices. Sex. Syst. Cryptogamia Filices.* The root of this plant has been much extolled as an anthelmintic, and in cases of tœnia. It was the basis of a once celebrated remedy—*Madame Nouffer's*;—but perhaps more of the efficacy was to be attributed to the active purgatives by which it was followed than to the fern. Dose, 3ij to 3iij of the powdered solid part of the root; followed, in the morning, by a strong cathartic of camboe or jalap. An ethereal extract has been proposed by Dr. Peschier, of Geneva.

POLYPO'SIA, πολυποσια, from πολυς, 'much,' and ποσις, 'drink.' Great thirst: great desire for drink.

POL'YPUS, *Pseudometamorpho'sis polyposa,* from πολυς, 'many,' and πους, 'a foot.' A name given to tumours, which occur in mucous membranes especially; and which have been compared to certain zoophytes.

Polypi may form on every mucous membrane. They are most commonly observed in the nasal fossæ, pharynx, and uterus; more rarely in the stomach, intestines, bronchial tubes, bladder, and meatus auditorius externus. They vary much in size, number, mode of adhesion, and intimate nature. Accordingly, they have received various appellations;—*mucous, soft, vesic'ular,* when their substance has been soft, spongy, vesicular, and, as it were, gorged with fluid. Others

have been called *hard*; and these have been distinguished into *fibrous* or *fleshy*, and into *scirrhus* or *cancerous*. *Fibrous* polypi are of a dense, compact texture, and whitish colour. They contain few vessels, and do not degenerate into cancer. The *scirrhus* or *carcinomatous* are true cancerous tumours, painful and bleeding. They present all the pathological changes, which belong to cancerous affections, and the prognosis is of course unfavourable.

The mode of treating polypi must differ according to their character.

The means used to destroy them have been, 1. To subject them to the action of certain astringent powders or solutions, to obtain their resolution. 2. *Cauterization* or the application of the actual cautery or caustics. 3. *Excision* or ablation with a cutting instrument. 4. *Extirpation* with the fingers or with the polypus forceps. 5. A *ligature*, put round them, so as to prevent their nutrition. A seton has, also, been sometimes used, to gradually destroy the pedicle.

The term *POLYPI*, *Pseudopolypi*, has likewise been applied to collections of blood—fibrinous concretions—found in the heart or great vessels after dissolution. These were once, erroneously, regarded as morbid.

The presence of these concretions may be suspected, when in the course of an acute or chronic affection of the heart, or at the close of chronic diseases in general—especially those of the lungs—the heart's action becomes suddenly tumultuous, obscure, and accompanied with a soft bellows' murmur, whilst the general symptoms indicate the effects of obstructed circulation. The right cavities are most frequently affected.

POLYPUS BRONCHIALIS, *Bronchlemmitis*. A membraniform secretion in the bronchial tubes, of a diphtheritic character, having the shape, when expectorated, of the bronchia. It is the result of inflammation of the lining membrane of those tubes.

POLYSARCIA from *πολυς*, 'much,' and *σαρξ*, 'flesh.' *Carnositas*, *Polysomatia*, *Adeliparia*, *Obesitas*, *Corpulentia*, *Steatites*. Excessive corpulency. Authors have distinguished two varieties of this:—*Polysarcia carnosita*, *Corpulency* (q. v.), and *P. adiposa* or *Obesity*, *Hyperpimelia*, *Liparia*, *Adiposis*, *Polysarcia faginosita*. A severe regimen and exercise are the best preventives.

POLYSPASTON, from *πολυς*, 'much,' and *σπασω*, 'I draw.' A powerful instrument for reducing luxations.—Goræus.

POLYTRICHUM, from *πολυς*, 'much,' and *τριχ*, 'hair.' *Polytricon*, *Polytrichum vulgare*, *Adiantum aureum*, *Golden Maiden-hair*, (F) *Perce-mousse*. It is possessed of astringent properties, and was formerly given in diseases of the lungs, and in calculous affections.

POLYTROPHIA, from *πολυς*, 'much,'

and *τρέφω*, 'I nourish.' Abundant or excessive nutrition.

POLYURICUS, from *πολυς*, 'much,' and *ουρον*, 'urine.' Sauvages calls—*Ischuria polyurica*—a kind of ischuria, caused by accumulation of urine in the bladder.

POMATUM, *Pomma'tum*, (F) *Pommade*. A pharmaceutical preparation, employed only externally; which differs but little from an ointment, except in having, generally, less consistence. It is, generally, made aromatic, and coloured to render it more agreeable.

COMMON POMATUM is made of *lard*, 12℔s; *suet*, 4℔s; *essence*, 3 viij.

POMPHOLYX, from *πομφος*, 'a bladder.' A small vesicle on the skin. An eruption of *bullæ* or *blebs*, appearing without any inflammation around them, and without fever. It is the *Ecphlysis Pompholyx* of Good.

POMUM ADA'MI. The projection, formed by the thyroid cartilage in the neck,—of males particularly. It is so called from a notion, that it was caused by the apple sticking in the throat of our first parent.

PONS VAROLII, *Corpus annula're*, *Processus annularis*, *Eminentia annularis*, *Varoli's bridge*, *Nodus encephali vel Cerebri*, *Cerebral protuberance*, *Mesocephalum*, *Protuberantia annularis Willisii*, *Annular protuberance*. An eminence at the upper part of the medulla oblongata, first described by Varolius. It is formed by the union of the *crura cerebri* and *crura cerebelli*.

POPLES, *Gare'tum*, *Garretum*, *Ignys*, *Ignye*, the *Ham*, (F) *Jarret*. The posterior part of the knee joint. The ham forms, what is called, the popliteal region.

POPLITEAL, *Poplitæ'us*, from *Poples*, 'the ham.' That which relates to the ham. A name given to various parts.

1. The *POPLITEAL ARTERY*—*Popliteal portion of the crural* (Ch)—is really a continuation of the femoral, which changes its name on passing through the adductor magnus muscle. It descends a little obliquely outwards into the hollow of the ham, and extends from the commencement of the lower third of the thigh to the end of the upper quarter of the leg, where it terminates by dividing into the *posterior tibial* and *peroneal* arteries. In the ham, it gives off the three *superior articular arteries*; and, at the top of the leg, the arteries of the *gemini muscles* or *gemini branches*, (F) *branches jumelles*, the *two inferior articular arteries*, and the *tibialis antica*.

2. The *POPLITEAL VEIN* has the same arrangement as the artery, behind which it is situate.

3. The *POPLITEAL NERVES*. They result from the bifurcation of the sciatic, and are two in number, viz. 1. The *external popliteal*, *Branche péronière*, (Ch.) It is smaller than the internal; turns to the outside of the fibula at the upper part of the leg, and divides

into the *musculo-cutaneous branch*,—*nerf pré-tibio-digital* (Ch.), and into the *anterior tibial*,—*nerf pré-tibio-susphalangéaire* (Ch.)
 2. The *inter'nal poplite'al nerve*, *Branche tibiale* (Ch.), which is larger than the other, and seems to be the real continuation of the sciatic nerve. It descends vertically into the hollow of the ham; and passes beneath the aponeurotic arch of the solaris muscle, beyond which it takes the name of *tibial nerve*. It furnishes the *external saphena nerve*, and a number of branches, that are distributed to the posterior muscles of the leg. It then passes to the sole of the foot to be divided into two branches called *Plantar nerves*.

4. The *POPLITEUS MUSCLE*, *Muscle Jarretier*, *Fémoro-popliti-tibial* (Ch.), *Subpopliteus*, (F) *Muscle poplité*, is seated in the popliteal region. It is triangular, long, flat; and is inserted, on the one hand, by means of a strong tendon, into the tuberosity at the outer condyle of the femur, terminating below at the upper part of the posterior surface of the tibia. This muscle bends the leg on the thigh, and, reciprocally, the thigh on the leg. When the leg is bent, it causes it to turn, in rotation, inwards.

POPULUS, *Populus nigra*, *Ægei'ros*, *Acheró'is*, *Black poplar*, (F) *Peuplier noir*. The young *buds*, *oculi*, or rudiments of the leaves, which appear in the beginning of spring, were formerly used in an officinal ointment—the *unguen'tum popule'um*. It was, also, recommended in chronic affections of the lungs.

PORE, *Porus*, *Inter'stice*. Anatomists have given this name to the openings at the extremities of vessels, at the surface of different membranes.

Exhalant Pores are those, which terminate the extremities of arteries, and transmit the fluids exhaled,—*Absorbent Pores* being the absorbent mouths of vessels, employed in taking up parts that have to enter the circulation.

Pores exist in the cuticle; yet Humboldt, with a powerful magnifying glass, was unable to observe them. The pores of the skin have also been called *spiracula*.

The *PORI BILIA'RII* are ducts, which receive the bile from the penicilli of the liver, and convey it to the hepatic duct.

POREIL'IGON. The scales, which fall from iron, when forged.—Ruland.

PORFIRETICUM. A copper mortar; also a rasp.—Ruland.

POROCE'LE, from *παρος*, 'a callus,' and *κηλη*, 'a tumour.' A hard tumour of the testicle or its envelopes.

POROM'PHALON, from *παρος*, 'hard,' and *ομφαλος*, 'the navel.' Umbilical hernia with hard and thickened parietes.

POROT'IC, *Porot'icus*, from *παρος*, 'callus.' A remedy believed to be capable of assisting the formation of callus.

POR'PHYRY, *Porphyri'tes*, from *πορφυρεα*,

'purple.' A species of very hard, compound rock, susceptible of considerable polish and used in the fabrication of mortars and slabs for the apothecary.

PORRA'CEOUS, *Porraceus*, *Prasinus*, from *porrum*, 'a leek.' Having the green colour of the leek. An epithet given to certain excreted matters;—the sputa and fæces particularly.

PORRIGO, *Tin'ea*, *Furfura'tio*, *Fur'fures*, *Pityri'asis*, *Ecpye'sis porrigo*, *Phlysis porrigo*, (F) *Teigne*, *Rache*. This is a contagious disease,—with the exception of the *Porrigo larvalis*,—and is principally characterized by an eruption of the pustules, called favi and achores, unaccompanied by fever.

1. *PORRIGO LARVA'LIS*, *Crusta lactea*, *Ecpyesis Porrigo crusta'cea*, *Achor*, *Tinea lactea*, *T. Faciei*, *Milky scall* or *Tetter*, *Lactu'men*, (F) *Croute de lait*, *Croute laiteuse*, *Féux volages*. This is, almost exclusively, a disease of infancy. It commonly appears first on the forehead and cheeks, in an eruption of numerous, minute, whitish achores on a red surface. These break and discharge a viscid fluid, which becomes encrusted, in thin, yellowish, or greenish scabs. The patches spread, until the whole face becomes, as it were, enveloped in a mask (hence the epithet *larvalis*). Sometimes, the eruption appears on the neck and breast; and, occasionally, on the extremities. In general, the health of the child does not suffer, but the eruption is always attended with much itching and irritation.

The treatment consists in mild, tepid ablu-tion, and the application of gently stimulating ointments, as of the oxydum zinci. The bowels must be kept in a soluble state by small doses of calomel or by rhubarb and magnesia.

The *PORRIGO FUR'FURANS*, *Ecpyesis porri-go furfura'cea*, *Tinea furfuracea*, *Tinea por-rigino'sa*, *Teigne furfuracé* (Alibert) commences with an eruption of small achores, the fluid of which soon concretes and separates in innumerable, thin, laminated scabs, or scale-like exfoliations. It is attended with a good deal of itching and some sore-ness of the scalp, to which the disease is confined. It occurs, chiefly, in adults.

In the treatment, the scalp must be kept shaved. The part must be washed repeatedly with soap and water, and an oiled silk cap worn. The nature of the ointments used must vary according to the period of the disease and the irritability of the part affected. The *Zinc ointment*;—one made with the *Cocculus indicus*;—the *Sulphur ointment*;—*Citrine ointment*, and *Ung. hydrargyri nitri-co-oxydi*; *Tar ointment* and *Nitric acid ointment* have all been found useful. Should inflammation or discharge arise, these applica-tions must of course be intermitted.

The *PORRIGO LUPINO'SA*, *Tinea lupi'na*,

Scabies cap'itis, *Ecpyesis porrigo lupino'sa*, consists of minute pustules in small patches, mostly commencing on the scalp; the patches terminating in dry, delving scabs, resembling lupine seeds; the interstices often covered with a thin, whitish, and exfoliating incrustation. It occurs, chiefly, in early life, and requires the same treatment as the last.

PORRIGO SCUTULA'TA, *Tinea granula'ta*, *Ecpyesis porrigo galeata*, *Tinea fico'sa*, *Acho'res seu scabies capitis*, *Ringworm of the scalp*, *Scalled head*. It commences with clusters of small, light, yellow pustules, which soon scab off; and, if neglected, become hard by accumulation. If the scabs are removed the surface is left red and shining, but studded with slightly elevated points. If not attended to, it involves the whole head.

It occurs in children 3 or 4 years of age, and is very unmanageable.

The rules, laid down under the *Porrigo furfurans*, must be, here, still more perseveringly enforced. The whole tribe of stimulating ointments may be used in succession. No one will always succeed, and hence the necessity of change, provided advantage should not seem to follow any particular application. The *Unguentum ad scabiem* of Banyer sometimes succeeds, when others fail.

THE PORRIGO DECA'LVANS, *Tricho'sis area*, *Area*, *Alope'cia area'ta*, consists of patches of baldness, without decay or change of colour in the surrounding hair, the exposed parts of the scalp being glabrous, white, and shining. The morbid condition, sometimes spreads, so that the patches coalesce, rendering the baldness extensive.

The treatment consists in keeping the scalp cleared by constant shaving and in the steady application of some stimulating liniment or ointment.

THE PORRIGO FAVOSA, *Cerion*, *Favus*, *Ecpyesis porrigo favosa*, *Tinea favosa*, *Scabies capitis favosa*, *Honey-comb Scall*, or *Tetter*. (F) *Teigne faveuse*. This consists in an eruption of pustules common to the head, trunk, and extremities; pea-sized; flattened at the top; in clusters, often uniting; discharge, fetid; scabs, honey-combed; the cells filled with fluid. It occurs both in early and adult life.

The treatment, in this variety, must consist in the exhibition of laxatives and the mildest stimulating ointments, such as the *Ung. zinci*, *Ung. hydrargyri præcipitat. alb. &c.*

PORTA, πύλη, *Pylē*, a gate. The part of the liver, where its vessels enter as by a gate.

VENA PORTA, *Vena portæ*, *V. porta'rum*, *Rama'lis vena*, *Jan'itrix*, *Vena magna seu quæ ad portas est seu stelechiæ'a seu lactea seu ostia'ria*, *Porta Jecoris*, *Porta*, *Vena arterio'sa seu arteria'lis*, *Manus Jecoris seu*

hep'atis, *Vena ad portas*. The System of the *vena porta* or the *Abdom'inal venous system*, (F) *Veine porte*, is a vascular apparatus of black blood, situate in the abdomen; and resulting from two distinct orders of vessels, united into one common trunk.

1. One of these trunks, much more extensive than the other, has received the name *Vena porta abdomina'lis* because it arises from all the organs inclosed in the cavity of the abdomen, except the kidneys and bladder; and, in the female, the uterus.

The *Abdominal vena porta* has two principal roots,—the *splenic vein* and the *superior mesenteric*,—which have their ramifications in all the digestive organs.

2. The other trunk, destined solely to the liver, has been called the *Hepat'ic vena porta*. It appears to be a continuation of the abdominal vena porta, and proceeds towards the inferior surface of the liver. Opposite the transverse fissure of that organ, it divides, like an artery, into two branches, which, by their union, seem to form a canal or duct, called by some the *Sinus of the vena porta*. These branches are distributed in the substance of the liver, whither they are accompanied by a prolongation of the fibrous capsule of that organ,—the capsule of Glisson. The different branches of the vena porta are devoid of valves.

PORTE-AIGUILLER, *Acutenac'ulum*; *Needle carrier*, *Needle bearer*; from (F) *porter*, 'to carry,' and *aiguille*, 'a needle.' An instrument for accurately laying hold of a needle, and giving it greater length, when it is so fine and small, that it cannot be held by the fingers. It is of steel or silver, about 2 inches long, and throughout the whole, almost, of its length, divided into two branches, so as to form a kind of forceps, capable of being closed by means of a sliding ring. A modification of this instrument has been devised by Dr. Physick, for taking up deep-seated arteries, beyond the reach of a tenaculum or common needle. It consists of a forceps, so constructed as to hold in its extremity a needle armed with a ligature. The handles of the forceps are fastened together, temporarily, by a spring or catch; and, when the needle is fairly deposited beneath the vessel, it is disengaged from the forceps and drawn out, leaving the ligature behind, which can be tied without difficulty.

PORTE-BOUGIE (F). A silver canula similar to that of a trocar, except that it is longer. It is used for conducting bougies into the urethra.

PORTE-MÈCHE (F), from *porter*, 'to carry,' and *mèche*, 'a tent.' An instrument for carrying tents deeply into fistulous openings, or sinuses, to the bottoms of ulcers, &c. It is a wire of silver or steel, 4 or 5 inches long, having a notch at one extremity, and a button at the other.

PORTE-MOXA. A small instrument for

keeping the moxa applied to the part to be cauterized. It consists of a metallic ring—separated from the skin by three small supports of ebony—to which a long handle is adapted.

PORTE-PIERRE, *Caustic bearer*. An instrument similar to a *porte-crayon*, for carrying the lunar caustic.

PORTE-SONDE. An instrument, resembling a *porte-crayon*, employed for holding the style or *sonde*, and inserting it more readily into the nasal duct, during the operation for fistula lachrymalis.

PORTIO MEDIA INTER PORTIONEM DURAM ET PORTIONEM MOLLEM. A small nerve, which arises from the brain, between the origin of the portio dura and trunk of the portio mollis.—Wrisberg.

PORTION GODRONNÉE DE LA CORNE D'AMMON. A name given by Vicq d'Azyr to a small denticulated cord of a compact tissue and granular appearance, which unites the cornu ammonis to the paries of the lateral ventricle.

PORTULA'CA, *Andrach'nē*, *Allium Gallicum*, *Portula'ca olera'cea*, *Purslane*, (F) *Pourpier cultivé*. This plant abounds with a watery and somewhat acid juice; and is often put into soups or pickled with spices. It is regarded as antiseptic and aperient.

POSOL'OGY, *Posolo'gia*; from ποσον, 'quantity,' and λογος, 'a discourse.' Indication of the doses in which the different articles of the materia medica ought to be exhibited.

POSSET, *Posse'tum*; from *Posca*, (q. v.) Milk curdled with wine or any acid or treacle. A preparation of beer and milk. *Zythog'ala*.

POSTERIOR ANNULA'RIS. An external, interosseous muscle, which arises from the corresponding sides of the metacarpal bones of the ring, and little, finger, and is inserted into the inside of the tendon on the back of the ring finger. Its use is to draw the ring finger inwards.

POSTERIOR INDICIS MANUS. An internal, interosseous muscle, which arises from the inner or ulnar side of the metacarpal bone of the fore finger, and is inserted into the inside of the tendon on the back of the fore finger. Its use is to draw the fore finger inwards.

POSTERIOR INDICIS PEDIS, *Abduc'tor Indicis Pedis*. An external, interosseous muscle, which arises from the contiguous sides of the metatarsal bones of the fore toe, and second of the small toes, and is inserted into the outside of the root of the first bone of the fore toe. Its use is to pull the fore toe outwards.

POSTERIOR MEDII DIG'ITI MANUS. An external, interosseous muscle, which arises from the corresponding sides of the metacarpal bones of the middle and ring fingers; and

is inserted into the inside of the tendon on the back of the middle finger. Its use is to draw the middle finger inwards.

POSTERIOR MEDII DIG'ITI PEDIS, *Ad'duc'tor medii digiti pedis*. An external, interosseous muscle, which originates from the contiguous sides of the metatarsal bones of the second and third of the small toes, and is inserted into the outside of the root of the first bone of the second of the small toes. Its use is to pull the toe outwards.

POSTERIOR TERTII DIGITI, *Adductor tertii digiti*. An external, interosseous muscle, which arises from the contiguous sides of the metatarsal bones of the 3d and 4th of the small toes, and is inserted into the outside of the root of the first bone of the third of the small toes. Its use is, to pull the toe outwards.

POSTHITIS, from ποσθιον, 'the prepuce,' and itis:—the termination for inflammation. Inflammation of the prepuce.

POSTHON'CUS, from ποσθιον, 'the prepuce,' and ογκος, 'a tumour.' Swelling of the prepuce.

POSTPOSITIO. Delay in the return of a paroxysm. It is opposed to *anticipatio*, which means the return of a paroxysm earlier than its accustomed hour.

In this sense we speak of an *anticipating* and *postponing* intermittent.

PO'TABLE, *Potabilis*, *Potimos*, *Potos*, *Posimos*, 'drinkable.' Water is said to be potable, when it contains atmospheric air; is not brackish; and has no mineral impregnation of consequence.

POTASH. So called from the pots or vessels in which it was made;—*Potas'sa*, *Kali*, *Vegetable alkali*, *Gastri'num*.

The POTASH OF COMMERCE, *Potassa impura*, *Impure potass*, *Alu'men cati'num*, *Cin'eres Rus'sici*, *Subcar'bonas potas'sæ impuræ*, *Potas'sæ car'bonas impurus*,—the *Pearl-ash* of commerce is prepared from the ashes of land plants by calcination, solution in water, filtration, and evaporation. It usually consists of subcarbonate of potass, sulphate of potass, muriate of potass, silex, oxide of iron, &c.

From the ashes of lees of wine, and from vine twigs a much purer alkali is obtained. It is called *Cinis infecto'rius*, *C. fæcum*, *Cin'eres clavella'ti*, *Alu'men fæcum*, *Cendres gravêlées*, *Cendres de sarment*, *Cineres gravellati*.

Another variety of the alkali is afforded by burning argol in a crucible; afterwards powdering and calcining it, till it is nearly white; then dissolving in water, filtering, and evaporating. It is called *Salt of tartar*, *Sal Tar'tari*, *Kali præpara'tum e tartaro*, *Kali e tartaro*, *Subcar'bonas potassæ puris'simus*, *Potassæ Subcarbonas e tartaro*.

Lastly, when wormwood is burnt to ashes, dissolved in water, filtered and evaporated to dryness, it affords another variety of vegeta-

ble alkali,—the *Sal absinthii* or *Salt of worm-wood*.

Impure potass is used for preparing the subcarbonate for medical use.

POTASSA CUM CALCE, *Potass with lime*, *Calx cum kali puro*, *Caus'ticum commu'nē for'tius*, *Lapis infernalis sive septicus*, *Kali cau'sticum cum calcē*, *Potas'sa opē calcis para'ta et ignē fusa*, *Lapis causticus*, (F) *Potasse préparée avec la chaux*, *P. à la chaux*, *Pierre a cautère*. (*Liquor. potassæ* ℞ iij, *calcis recent.* ℞ j. Boil the solution of potass to ℞ j; then add the lime, slaked with water, and mix. *Ph. L.*) Used for the same purposes as the next, but more manageable; being less deliquescent.

POTASSA FUSA, *Potassa*, *Kali causticum*, *Fused potass*, *Cau'sticum commu'nē acer'rium*, *Kali purum*, *Al'kali vegeta'bile fixum causticum*, *Causticum alkali'num*, *C. commu'nē*, *C. potentia'lē*, *C. sali'num*, *Hydras kalicum*, *Hydras potas'sæ puræ fusæ*, *Lapis cau'sticus*, *Lapis causticus chirurgorum*, *Lapis infernalis alcali'nus*, *L. Septicus*, *Ruptorium commu'nē*, (F) *Potasse caustique*. (Prepared by evaporating the solution of potass to dryness in an iron vessel.) This preparation is generally run into cylindrical moulds, covered with paper, and kept in well corked vessels. It is powerfully escharotic, and is used for forming issues, curing strictures, &c.

POTASSÆ ACETAS, *Acetas kali*, *Oxytar'tarus*, *Acetas lixiv'ia seu kalicum*, *Al'cali tartari acet'o satura'tum*, *Alcali vegeta'bile cum aceto*, *Magiste'rium tartari purgans*, *Terra folia'ta Tartari*, *Kali aceta'tum*, *Sal diuret'icus*, *Sal Senner'ti*, *Ac'etate of potass*, *Arca'num tartari*. (*Potassæ subcarb.* ℞ j, *acid. acet. fort.* ℞ ij, *aquæ* ℞ ij. Mix and add, by degrees, enough acetic acid to saturate the alkali. Then evaporate till a pellicle is formed, which is to be dried upon bibulous paper; evaporate again in a water bath, and, removing the pellicles, dry them.)

It is generally cathartic and diuretic. Dose 3j to 3ij or more.

POTASSÆ CAR'BONAS, *Kali aëra'tum*, *Bicar'bonas potassæ*, *Deuto'carbonas potas'sii*, *Carbonate of potass*, *Supercar'bonate of potass*. This is not caustic, like the subcarbonate of potass, and hence, has been preferred to relieve acidity. (*Solution. potass. subcarb. cong. j.* Pass carbonic acid through the solution until it is saturated, and filter. Evaporate at a heat, not exceeding 120°, and dry the crystals on bibulous paper. *Ph. L.*) Dose, gr. x to 3ss. It is used in forming the soda powders, as well as for its antacid properties.

POTASSÆ HYDRIODAS, *Potassii Protohy'dri'odas*, *Potas'sii protox'idi hydri'odas*, *Hydri'odate of potass*. If a solution of potass be poured on iodine in its metallic state, an iodate and hydriodate are formed. These may be separated by means of alcohol, which only dissolves the latter of these salts. The

hydriodate or rather the *Iodide of Potassium*, *Kalium Ioda'tum*, *Kali Hydriodin'icum*, *K. Hydriod'icum*, *Hydriodas Ka'licus*, *Potassii Ioduretum*, may be obtained by evaporation. When the *Iodide of Potassium* is dissolved in water, it becomes the *Hydriodate of Potassa*. The *hydriodate of soda* is made in the same way. Virtues,—those of iodine, (q. v.)

POTASSÆ MURIAS, *Sal Digestivus vel Sal Febrifugus Sylvii*, *Muriate of Potass*, *Spir'itus salis mari'ni coagula'tus*. Bitter and refrigerant.

POTASSÆ MURIAS HYPEROXYGENA'TUS, *Potassæ Chloras*, *P. oxymu'rias*, *Oxymu'riate of potass*, *Euchlo'rate of potass*, *Alcali vegeta'bile salito-dephlogisticatum*, *Chloruretum potassæ oxydatum*, *Haloidum oxygenatum*, *Oxyge'no-chlorure'tum potas'sii*, *Protochlorate of potassium*, *Kali chlor'icum*, *Chloras Kal'icus depura'tus*. It has been regarded as anti-neuropathic, and as an alterative purifier of the blood and humours. It is of doubtful efficacy. Dose 3 to 6 grains or more.

POTASSÆ NITRAS, *Nitrate of Potass*, *Nitrum*, *Sal nitrum*, *Nitre*, *Saltpetre*, *Sal petræ*, *Salse'do mucrum*, *Sanguin'ea*, *Bereni'cium*, *Halinitrum*, *Protoni'trate of Potas'sium*, *Nitrate of protox'ide of Potas'sium*, *Kali nit'ricum*, *Nitras ka'licum*, *Nitras lixiv'ia*. Obtained from the putrefaction of animal matters, in contact with calcareous or alkaline earths, by elixivation; adding if necessary, wood ashes to supply the alkaline bases. It is formed, in an impure state, by nature, in warm climates.

It is diuretic and refrigerant, and, in large doses, purgative; externally, cooling and detergent. Dose, gr. x to 3ss. In large doses it is an acrid poison.

POTASSÆ NITRAS FUSUS SULPHA'TIS PAUCILLO MIXTUS; *Sal prunel'læ*, *Crystal'lus minera'lis*, *Nitras potassæ cum sul'phurē fusus*, *Nitrum tabula'tum*, *Lapis prunel'læ*, *Sore throat salt*, *Min'eral crystal*, *Anod'ynum minera'le*. Nitrate of potass, mixed with a little sulphate of potass and run into moulds. Its properties are those of nitre.

POTASS, OX'ALATE OF, *Superox'alate of Protox'ide of Potas'sium*, *Ox'alas Acid'ulum Potas'sæ seu Potas'sæ acid'ulus seu bas'icus*, *Superox'alas ka'licum*, *S. Potassæ*, *Hyperox'alas Potassæ*, *Sal Acetosel'læ*, *Oxal'ium*, *Kali oxal'icum acid'ulum*, *Ox'alas subpotas'sicus*, *Salt of sorrel*. Prepared from the juice of wood sorrel. It is refrigerant and is used to make lemonade, &c.

POTASSÆ SUBCAR'BONAS, *Subcar'bonas Kali*, *Car'bonas Potassæ*, *Kali præparatum*, *Sal Herba'rum*, *Calca'reous Tartar*, *Sal Planta'rum*, *Subcar'bonate of Potass*, *Sal Tartari*, *Sal Absin'thii*, *Mephite of potass*, &c. (See Potash.) A filtered solution of the impure subcarbonate, evaporated to dryness. *Ph. L.*) This deliquescent salt is given in the same cases as the potassæ carbonas, than which it is more caustic and disagreeable.

The Parisian codex has a *Subcarbonas Potassæ ex tartaro combusto, vulgo Sal Tartari*; —a *Subcarbonas Potassæ ex deflagrantibus simul tartrate acidulo et Nitrate Potassæ paratus, vulgo Nitrum ex Tartaro fixum*, —and a *Subcarbonas Potassæ ex deflagrante cum Carbonibus Nitrate Potassæ paratus, vulgo Nitrum fixum*. They are all used like the preceding.

POTASSÆ SULPHAS, *Kali vitriola'tum, Sulfas Kali, Kali sulphu'ricum, Lixiv'ia vitriola'ta, Nitrum vitriolatum Schroedé'ri, Sal Sapien'tiæ, Sal Tar'tari Sulphura'tum, Specificum Paracelsi, Spiritus vitrioli coagula'tus Mynsichti, Protosulph'ate of Potas'sium, Al'kali vegeta'bile vitriola'tum, Sal de duobus, Arca'num duplica'tum, Nitrum vitriola'tum, Tartarum vitriolatum, Panace'a Ducis Holsa'tiæ, Panace'a duplica'ta, Sal Polychres'tus, Sulphate of Potass*. (The salt, that remains after the distillation of nitric acid, dissolved; the excess of acid saturated with subcarbonate of potass and crystallized.) Purgative and diuretic. Dose 3 ss to 3 j as a laxative; 3 ss to 3 vj, as a purge.

POTASSÆ SULPHAS CUM SUL'PHURE; *Sal Polychres'tus Glase'ri, Lixiv'ia Vitriola'ta Sulphu'rea*. (Formed by deflagrating nitrate of potass with sublimed sulphur.) Same virtues as the last. Dose, gr. xv to xxx.

POTASSÆ SULPHURE'TUM, *Kali sulphure'tum, Hepar Sulphuris sali'num, H. sulphu'ris vulga'rè, Sulphure'tum lixiv'iæ, S. kal'icum, Hepar Sulphuris, Liver of Sulphur, Sulphuret of Potass, (F) Foie de Soufre*. (Sulphur. lot. 3 j, Potassæ Subcarb. 3 ij. Rub them together and place the mixture in a covered crucible upon the fire until they unite.) It has been employed, in affections of the chest, as an expectorant, in the dose of from 3 ss or 3 j, largely diluted; but it is chiefly used as a bath or wash in cases of itch, tinea capitis, and other cutaneous affections.

POTASSÆ SUPERSUL'PHAS, *Supersulphate of Potass, Sal febrif'ugus of Lem'ery, Acid Sulphate of Potass, Bisulphate of Potass, Superprotosulphate of Potas'sium*. (The salt remaining after the distillation of nitric acid, dissolved, strained, and crystallized.) It is refrigerant and purgative. Dose 3 ss to 3 ij.

POTASSÆ SUPERTAR'TRAS IMPU'RUS, *Tartarus crudus, Tartarum, Lapis Vini, Magneti'nus, Pedagra, (F) Tartre cru, T. brut*. It is called, also, *Tartarum rubrum* when obtained from red wines, and *Red Argol*; *Tartarum album* or *White Argol*, when from white wines.

Tartar is the saline deposit from wines as they become aged; which attaches itself to the sides of the casks and bottles, in which they are kept. It consists of a considerable quantity of acidulous tartrate of potass, tartrate of lime, silica, alumen, oxyd of iron, manganese, and a red colouring matter, if the

wine be red. It is chiefly used for the preparation of cream of tartar.

POTASSÆ SUPERTAR'TRAS, *Crystal'li Tartari, Tartras Acid'ulus Potassæ purus, Supertar'trate of Protox'ide of Potas'sium, Bitartrate of Potass, Hypertartras Potassæ, Tartras superpotas'sicus, T. subpotas'sicus, Crystals of Tartar, Cremor Tartari, Cream of Tartar* (when in powder), *Supertar'trate of Potass*. (F) *Crème de Tartre*. (The tartar of wine purified.) It requires 120 parts of water at 60° to dissolve it. It is mildly purgative, refrigerant, and diuretic. Dissolved in water, with a small quantity of white wine, some sugar and lemon peel, it forms an agreeable beverage in febrile diseases, under the name of *imperial*. Dose, as a diuretic, 3 j to 3 ij; as a purgative 3 ss to 3 j.

POTASSÆ TARTRAS, *Kali tartariza'tum, Al'cali fixum tartarisatum, Tartarum solu'bile, Tartarus tartarizatus, Lixiv'ia Tartarisa'ta, Sal Panchres'tum, Tartras Kalinus, T. lixiv'iæ, Sal vegetabilis, Alkali vegeta'bile tartarizatum, Tartrate of Potass, Salt of Tartar*. A saline cathartic in the dose of 3 ij to 3 j.

POTEN'TIAL, *Potentia'lis*. An epithet for remedies, which, although energetic, do not act till some time after their application. The caustic alkalies, for instance, are called *Potential cauteries* in contradistinction to the hot iron, which is termed *actual*.

POTENTIL'LA ANSERI'NA, *Argentine, Chenobos'con, Argenta'ria, Anseri'na, Silver Weed, Wild Tansey*. (F) *Argentine, Potentille*. The leaves are mildly astringent and tonic.

POTENTIL'LA REPTANS, *Pentaphyl'lum, Quinqueso'lium, Common cinquefoil*. (F) *Quintefeuille*. The roots are possessed of astringent properties.

POTION, *Potio*; from *poto*, 'I drink.' A liquid medicine, from 4 to 8 ounces or more in quantity, the composition of which varies, and which is administered in divided doses. It corresponds to the English *mixture*.

POTION OF RIVÉRIUS. A mixture of *Lemon Juice* and *Subcarbonate of Potass*, —generally given in a state of effervescence. It is the *Potio efferves'cens anti-emet'ica, dicta Rivé'rii*, of the Parisian codex. The name, in the codex, indicates its use.

POULET (VIN DE) (F), *Pullet Wine*. A disgusting preparation, made by infusing the excrement of the pullet in white wine. According to Nysten, it is employed by the vulgar in France in a number of diseases, and especially in falls, contusions, &c.

POUND, *Libra, Litra, λιβρα*, Lat. *Pondo, Bage'dia* (of 12 oz.), *Barda'dia*, (F) *Livre*, from *pon'derè*, 'to weigh.' A weight, consisting of 12 ounces troy; or 16 ounces avoirdupois.

POWDER, (F) *Poudre*. See *Pulvis*.

POWDER OF FAYNARD. A celebrated powder for arresting hemorrhage, said to be nothing more than the charcoal of beech wood finely pulverized.

POWDERS, SODA. *Sodæ carb.* 3 ss, in each *blue* paper; *tartaric acid*, gr. xxv, in each *white* paper; for half a pint of water. A pleasant, cooling drink; taken during the effervescence.

POZZUOLI, MINERAL WATERS OF. P. is in the neighbourhood of Naples. The springs are 1. *Acqua della pietra*, Temp. 91° Fah. 2. *Acqua di Cavalcanti*, Temp. 100°, *A. di subveni homini*, Temp. 102°, *A. del cantarello*, Temp. 86 to 89; and that of the Temple of Serapis in Pozzuoli, Temp. 102 to 107. The last contains carbonic acid, carbonates of lime, magnesia, alumina, and iron, carbonate of soda, muriate of soda, sulphate of lime, and silica.

PRÆCOR'DIA, from *præ*, 'before,' and *cor*, 'the heart.' The diaphragm: also, the abdominal viscera, and the epigastrium.

The **PRÆCOR'DIAL RE'GION** is the epigastric region. Also, and more properly, the region of the heart.

PRÆLIN'GUA. The anterior part or tip of the tongue.

PRÆSERVATO'RIA INDICA'TIO. A preservative indication: one proper for preventing the developement of disease.

PRASI'TES, from *pra'sium*, 'horehound.' Wine, in which the leaves of horehound have been infused.

PRECIPITA'TION, *Præcipitatio*. (F) *Précipité*. The action, by which a body abandons a liquid in which it is dissolved; and becomes deposited at the bottom of the vessel. The matter, so thrown down or precipitated, is called a *precipitate*.

PRECUR'SORY, *Præcurso'rius*; from *præ*, 'before,' and *curro*, 'I run.' That which precedes.

PRECUR'SORY OR PREMON'ITORY SIGNS OR SYMPTOMS, (F) *Signes précurseurs*, *S. avant-coureurs*, are those which indicate an approaching disease.

PREDISPOSI'TION, *Prædispositio*, from *præ*, 'before,' and *dispon'ere*, 'to dispose.' That constitution or condition of the body, which disposes it to the action of disease under the application of an exciting cause.

Thus, in hereditary diseases, the conformation is such, that a slight exciting cause is required to produce them.

When the disease arises, solely, from the predisposition; or under the additional influence of an extremely slight, exciting cause, it is, by some, termed a *disposition*.

PREDOR'SAL, *Prædorsa'lis*, from *præ*, 'before,' and *dorsum*, 'the back.'

The **PRÆDORSAL REGION** of the vertebral column is the anterior surface of the dorsal region.

PREG'NANCY, *Utero-gesta'tio*, *Præгна'tio*, *Impræгна'tio*, *Gravid'itas*, *En'cymon*,

Cyesis, *Encye'sis*, *Encymo'sia*, *Cyopho'ria*, *Gesta'tion*, *Fæta'tion*. (F) *Grossesse*. The state of a female who has, within her ovary or womb, a fecundated germ, which gradually becomes developed in the latter receptacle. When placed in the cavity of the uterus;—by virtue of the vital principle which animates it, it becomes attached to the inner surface of that viscus, and obtains from it indirectly the nutriment, necessary for its gradual developement, during the space of ten lunar months or 280 days,—the ordinary term of gestation, although the period may be protracted perhaps to 300 days,—at the expiration of which parturition occurs.

Pregnancy is commonly limited to a single foetus; at times, the uterus contains two or three.—See Reproduction. Occasionally, one or two moles—the degenerated products of conception—alone occupy the uterus:—at other times, a foetus likewise exists. In certain cases, and owing to accidental circumstances, the fecundated ovum remains in the ovarium, or is arrested in the fallopian tube.

Pregnancy has, accordingly, been distinguished into, 1. *Natural* or *uterine*, when the foetus is carried in the cavity of the womb: and, 2. *Preternatural* or *extra-uterine*, *Paracye'sis* seu *Eccye'sis*, *Dysto'cia* *Dyscye'sis* *extra-uteri'na*,—when it occurs in the ovarium, tube, or cavity of the abdomen.

During pregnancy, the female experiences remarkable changes in the condition of her organs and functions. The genital apparatus is, of course, most affected. The uterus changes its shape, situation, size, and texture.

The usual signs of pregnancy are;—suppression of the catamenia; the abdomen gradually enlarging and forming a hard tumour; the umbilicus prominent in the latter months; the breasts increasing in size; the areola round the nipple becoming darker and the follicles more developed; a bluish tint of the vagina after the 4th week; about the 5th month, the evidence by *Ballotement*, (q. v.) and the placental *souffle* and sound of the foetal heart heard on auscultation; the motion of the foetus perceptible, and the neck of the uterus diminishing in length at the advanced periods.

PREGNANCY ABDOM'INAL, *Eccye'sis abdomi'na'lis*. (F) *Grossesse abdominale*. That, in which the ovum has escaped into the cavity of the abdomen.

PREGNANCY, AFÆ'TAL, *Pregnancy without a foetus*, (F) *Grossesse afætale*, *G. sans foetus*. Pregnancy, produced by a false or degenerate conception; or any other affection, which has given place to unusual developement of the uterus. Madame Boivin includes in this class, *Sarco-hysteric*, *hydro-hysteric*, *gazo-hysteric*, and *hemato-hysteric pregnancies*, (q. v.)

PREGNANCY, BIGEM'INAL, (F) *Grossesse*

bigeminale, Double pregnancy. Pregnancy, in which there are twins in utero.—Madame Boivin.

PREGNANCY, COMPLEX, (F) *Grossesse complexe, G. inter-extra-utérine*, is when the womb, besides a fœtus, contains much water, hydatids, a mole, &c.

PREGNANCY, COMPOUND, (F) *Grossesse composée*, is when there are two or three fœtuses in the cavity of the uterus.

PREGNANCY, FALSE, *Graviditas spu'ria*, (F) *Grossesse fausse ou apparente, Pseudo-cye'sis*. Authors have called thus, different affections of a more or less serious character, which resemble pregnancy; so as, at times, to impose upon the best informed practitioners. These diseases may be seated in the uterus or its dependencies; in the intestines or some other part of the abdomen. They may be:—a mole, hydatids, water, blood or polypus distending the parietes of the uterus:—chronic enlargement of the uterus; the development of tumours, &c. in its substance:—scirrhus; dropsy of the ovaria; ascites; tympanites, &c.

PREGNANCY, FŒTAL, (F) *Grossesse fœtale*. Pregnancy, in which there is a fœtus, or more than one, in the uterus or out of it. Madame Boivin puts in this class—the *solitary, bigeminal, trigeminal*, and *sarco-fœtal* pregnancies, which form the first order: and the *tubal, ovarial*, and *abdominal*, which constitute the second.

PREGNANCY, GAZO-HYSTERIC, (F) *Grossesse Gazo-hystérique*. Afœtal pregnancy, caused by the development of air or gas in the cavity of the womb.—Madame Boivin.

PREGNANCY, HEMATO-HYSTERIC, (F) *Grossesse hémato-hystérique*. Afœtal pregnancy, caused by accumulation of blood in the uterus.—Mad. Boivin.

PREGNANCY, HYDRO-HYSTERIC, (F) *Grossesse hydro-hystérique*. Afœtal pregnancy, occasioned by the secretion and accumulation of serous fluid in the uterus.

PREGNANCY, INTERSTI'TIAL, *Graviditas in uteri substan'tiâ, Graviditas interstitia'lis*. The development of the embryo in the proper substance of the uterus. The case generally terminates fatally at an early period of gestation: the thin, external paries of the uterus being ruptured, and the ovum passing into the abdominal cavity.

PREGNANCY, MORBID, *Paracye'sis, Disto'cia Dyscy'e'sis*. The progress of pregnancy disturbed or endangered by the supervention of general or local disorder.—Good.

PREGNANCY, OVA'RIAL, (F) *Grossesse ovarienne ou de l'ovaire, Eccye'sis ova'ria*. Pregnancy, in which the fœtus is developed in the interior of the ovary.

PREGNANCY, PRETENDED. The criminal act of a female, who, not having been delivered, presents an infant as having been born of her. (F) *Supposition de part*. [This term, in French, likewise includes

the case of a female, who, having been delivered of a dead child, substitutes for it a living child, which is not hers.]

PREGNANCY, SARCO-FŒTAL, (F) *Grossesse sarco-fœtale*. Pregnancy, in which there are one or more fœtuses, and one or more moles.—Mad. Boivin.

PREGNANCY, SARCO-HYSTERIC, (F) *Grossesse Sarco-hystérique*. Afœtal pregnancy formed by moles, hydatids, or a false conception.—Mad. Boivin.

PREGNANCY, SOLITARY, (F) *Grossesse solitaire ou simple*. Pregnancy, in which there is a single fœtus.—Mad. Boivin.

PREGNANCY, TRIGEM'INAL, (F) *Grossesse trigéminale ou triple*. Pregnancy, in which there are three fœtuses in the cavity of the uterus.—Mad. Boivin.

PREGNANCY, TUBAL, (F) *Grossesse tubaire, Eccye'sis tuba'lis*. Pregnancy, where the fœtus remains and is developed in the Fallopian tube.

PREGNANCY, UTERO-ABDOM'INAL, (F) *Grossesse utéro-abdominale*. Pregnancy, consisting of two fœtuses; one in the uterus—the other in the abdominal cavity.—Mad. Boivin.

PREGNANCY, UTERO-OVA'RIAL, (F) *Grossesse utéro-ovarienne*. Pregnancy, with two fœtuses; one in the womb—the other in the ovary.

PREGNANCY, UTERO-TUBAL, (F) *Grossesse utéro-tubaire*. Pregnancy, in which there is, at the same time, a fœtus in the womb and another in the Fallopian tube.

PREGNANT, *Prægnans, Encar'pos*, (F) *Enceinte*. One in a state of pregnancy:—one with child.

PREHEN'SION, *Prehensio*, from *prehen'dere*, 'to lay hold of.'

PREHENSION OF FOOD is the act of carrying it to the mouth, and introducing it into that cavity. It is, also, called *Assumptio, Proslep'sis, Pros'phora*.

PRELUM'BAR, *Prælumba'ris*, (F) *Prélombaire*, from *præ*, 'before,' and *lumbi*, 'the loins.' That which is placed before the loins. The prelumbar surface of the spinal column is the anterior surface of the lumbar portion.

PREPARA'TION, *Præparatio*. The act of making ready any substance whatever, that has to be employed for any purpose.

Also, the product of any pharmaceutical operation;—*Præpara'tum*.

Any part of the human body, preserved for the uses of the anatomist, is so called.

PREPUCE, *Præpu'tium, Epago'gium, Posthê*, the *Foreskin*. The prolongation of the integuments of the penis, which covers the glans.

The prepuce is composed of two membranous layers;—one external or cutaneous—the other internal or mucous,—separated by cellular membrane. The mucous membrane lines the inner surface of the cutaneous layer

till beyond the glans, when it is reflected over the latter; forming, behind the corona, a small *cul-de-sac* above the corpora cavernosa, which is interrupted by a triangular duplicature of the mucous membrane, called the *frænum*, fixed in the furrow at the inferior part of the glans, and terminating at a little distance from the orifice of the urethra. The clitoris is covered by a semilunar fold formed by a continuation of the skin of the labia. It is called *Præputium clitoridis*.

PRESBYTIA, *Presbyopia*, *Amblyopia proximum*, *Visus senilis*, (F) *Vue longue*, from *πρεσβυς*, 'an old person.' Condition of vision, common in old persons, and which consists in the circumstance of near objects being confusedly seen, whilst those at a greater distance are clearly distinguished. It is supposed to depend generally on diminution of the convexity of the cornea; whence results an alteration in the convergency of the rays, so that they form a focus behind the retina. This defect is remedied by the use of convex glasses, which augment the convergence of the luminous rays.

It is, also, called *Longsightedness*, *Paropsis longinqua*, *Dysopia proximum*.

PRESCRIPTION, *Præscriptio*, *Anagraphe*, from *præ*, 'before,' and *scribere*, 'to write.' *Formula*, (F) *Formule*, *Ordonnance*. The formula, which the physician writes for the composition of medicine, adapted to any case of disease. A prescription should be as simple as possible, and should bear, upon its face, the evidence of the objects to be fulfilled by it. No article should form part of it, unless adapted for serving some useful purpose.

A prescription has been divided into four parts:—the *basis* or principal ingredient of the prescription: the *adjuvans*, or that which is designed to promote the action of the former: the *corrigens*, or that intended to correct its operation or obviate any unpleasant symptom, which it may be apt to produce: and the *constituens*, *excipient*, or substance which gives, to the other ingredients, consistence or form. All these are seen in the following formula for cathartic pills.

R

Aloes,	dr. j.	<i>Basis.</i>
Hyd. Submur.	gr. x.	<i>Adjuvans.</i>
Olei Carui,	gtt. v.	<i>Corrigens.</i>
Syrupi,	q. s.	<i>Constituens.</i>
fiant Pilulæ. xx.		

It is obvious however that most prescriptions are more simple than this. The basis, for example, may require neither adjuvant, corrigent, nor constituent.

Dr. Paris has given the following synopsis of the principles of medicinal combination, which may serve as an instructive guide to the prescriber.

TABLE.**OBJECT I.****TO PROMOTE THE ACTION OF THE BASIS.**

A. By combining the several different forms or preparations of the *same substance*.

B. By combining the basis with substances, which are of the same nature: i. e. which are individually capable of producing the same effects, but with less energy than when in combination with each other.

C. By combining the basis with substances of a *different nature*, and which do not exert any chymical influence upon it, but are found by experience or inferred by analogy, to be capable of rendering the stomach or system more susceptible of its action.

OBJECT II.

TO CORRECT THE OPERATION OF THE BASIS BY OBVIATING ANY UNPLEASANT EFFECTS IT MIGHT BE LIKELY TO OCCASION, AND WHICH WOULD PERVERT ITS INTENDED ACTION, AND DEFEAT THE OBJECT OF ITS EXHIBITION.

A. By *chymically* neutralizing or *mechanically* separating the offending ingredient.

B. By adding some substance calculated to guard the stomach or system against its deleterious effects.

OBJECT III.

TO OBTAIN THE JOINT OPERATION OF TWO OR MORE MEDICINES.

A. By uniting those medicines, which are calculated to produce the *same ultimate* results, but by modes of operation totally different.

B. By combining medicines, which have entirely different powers; and which are required to obviate different symptoms, or to answer different indications.

OBJECT IV.

TO OBTAIN A NEW AND ACTIVE REMEDY, NOT AFFORDED BY ANY SINGLE SUBSTANCE.

A. By combining medicines, which excite different actions in the stomach and system, in consequence of which *new* or *modified results* are produced.

B. By combining substances, which have the property of acting *chymically* upon each other: the results of which are;—

a. The formation of new compounds.

b. The decomposition of the original ingredients, and the developement of the more active elements.

C. By combining substances, between which no other change is induced than a diminution or increase in the *solubility* of the principles in which their medicinal virtues reside.

a. By the intervention of substances that act *chymically*.

b. By the addition of ingredients, whose operation is entirely *mechanical*.

OBJECT V.

TO AFFORD AN ELIGIBLE FORM.

a. By which the *efficacy* of the remedy is enhanced.

b. By which its *aspect* or *flavour* is rendered more agreeable, or its mode of administration more convenient.

c. By which it is *preserved* from the spontaneous decomposition to which it is liable.

[The vocabulary in the Author's "Medical Student," p. 117, Philad. 1837, will aid the student, not only in translating, but in writing his prescriptions *more solito*.]

PRESENTA'TION, from (Lat.) *præsens*. The part of a fœtus, which is felt *presenting*, on an examination *per vaginam*.

When the head presents, and especially the vertex, or the feet, knees, or breech, the presentation is said to be *natural*: when any other part, *preternatural*: and the labour is styled *perverse*, or *preternatural*, *Parodyn'ia perversa*, *Dysto'cia perversa*, *Cross-birth*, (F) *Accouchement contre nature*.

When any other part, besides the head, feet, knees, or breech presents, the operation of *turning* (q. v.) becomes necessary. See Parturition.

PRESPINAL, *Præspina'lis*, from *præ*, 'before,' and *spina*, 'the spine.' That which is situate before the spine. The prespinal surface of the vertebral column is the anterior surface.

PRESS, *Prælum*, *Prelum*, *Presso'rium*, *Piester*, *Pieste'rium*, (F) *Pressoir*, *Presse*. An instrument for subjecting matters to considerable pressure, for the purpose of separating their juices or oils.

PRESSE-ARTÈRE. An instrument, invented by Deschamps, for the immediate compression of arteries. It is composed of a plate, 6 or 7 lines long, and 3 broad, and of a rod or stem, 2 inches long, placed perpendicularly above the plate, and riveted. At each extremity of the plate is a hole, through which each of the ends of the ligature, to be placed upon the artery, is passed. The ligature is then to be tightened by drawing the ends, and fixing them to the perpendicular rod. This *presse-artère* or *serre-artère*, surrounded with charpie, remains in the wound, until there is no longer danger of hemorrhage. The ligature is then cut, and the instrument withdrawn.

It is an unnecessary instrument.

PRESSE-URÈTHRE, *Jugum Penis*. A kind of forceps of elastic iron, the branches of which, padded, may be approximated or separated by means of a screw. The penis is introduced between the branches, the urethra being applied to one of them, and the screw is tightened so as to exercise a degree of pressure, sufficient to bring the parietes of the canal in contact.

This instrument is sometimes used, in incontinence of urine, to prevent the constant discharge of that fluid.

PRESSURE, *Pressio*, from *premo*, 'I press.' The action of pressing.

ABDOMINAL PRESSURE, (F) *Pression abdominale*. A mode of examination, by means of which the sensibility, size, suppleness, or

hardness of any morbid abdominal viscus may be compared, in these respects, with its healthy condition. Bichat proposed, with the view of exploring the state of the thoracic organs, to exert a pressure from below upwards on the abdominal organs, so as to crowd them upon the diaphragm, and thus to diminish the dimensions of the cavity of the chest, noticing to what extent respiration was affected by this action. No great information can, of course, be derived from it.

PRETIBIAL, *Pretibia'lis*, from *præ*, 'before,' and *tibia*, 'the tibia.' That which is situate before the tibia; as the *ilio-pretibial* and *ischio-pretibial* muscles.

PREVENTIVE, ROYAL. An empirical preparation, used as a prophylactic against the venereal virus. It is a solution of acetate of lead.

PRIAPIS'COS. Same etymon as the next. Name of a piece of wood, which forms part of the *scamnum Hippocraticum*. Paulus of Ægina calls thus, a tent of linen shaped like the penis.

PRIAPIS'MUS, *Tenti'go*, *T. Penis*, *Priapism*, *Horn-colic*, (*vulg.*), *Enta'sia Priapismus*, *Rhopalis'mus*, from *Πριαπός*, *Priapus*, 'the male organ.' Constant and distressing erection, without any voluptuous idea or desire for venery. It is often symptomatic; and sometimes the immediate result of morbid causes,—of the action of cantharides, for example. The application of cold liquids to the penis, and the internal use of opium and camphor are the means usually had recourse to for its removal.

PRICKING. Sax. *priccian*, (D) *pricken*, (F) *Picotement*. A variety of pain, compared to that which pointed bodies would occasion.

PRIMÆ VIÆ. The *first passages*. The stomach and intestinal canal:—the lacteals being the *secundæ viæ*, or *second passages*.

PRIMULA VERIS, from *primulus*, 'the beginning;' so called, because it flowers in the beginning of the spring. *Verbas'culum*, *Paral'ysis*; the *Cowslip*, *Paigil*, or *Peagle*, (F) *Primevère*. Family, *Primulacæ*. Sex. Syst. Pentandria Monogynia. The flowers have been considered to be mildly tonic, antispasmodic, and anodyne.

PRIMULA VULGARIS. The leaves and roots of this plant have been used as sternutatories.

PRIMIP'ARA, from *primus*, 'first,' and *parere*, 'to bring forth.' A name given to females, who bring forth for the first time.

PRIMI-STERNAL, *Primi-sterna'lis*, from *primus*, 'the first,' and *sternum*, 'the sternum.' M. Beclard has called *os primi-sternal*, or *clavi-sternal*, the first bony portion of the sternum.

PRIMI'TIÆ. The *first waters*, or the waters discharged before the extrusion of the fœtus.

PRINCIPLE, COL'OURING, OF THE BLOOD. A name, given to the immediate

principle in animals, to which the blood owes its red colour. It is solid, inodorous, and insipid. When recently separated from blood, it has a purple-red colour. When distilled, it furnishes, amongst other products, a purple oil. It is insoluble in water; but, if diluted with that liquid, acquires a vinous red hue. It communicates a red colour to the albumen of the blood, and affords, on analysis, iron, to which the colour is perhaps owing.—See Hæmatine.

PRINCIPLES, IMMEDIATE, (F) *Principes immédiats, Matériaux immédiats*. A name, given to a considerable number of substances, composed at least of three elements, and which are obtained from animals and vegetables, without alteration, by simple processes, and, in some measure, *immediately*.

IMMEDIATE PRINCIPLES OF ANIMALS, Proximate principles, Organic Elements, Compounds of Organization. These are divided into acid principles, fatty principles, and principles which are neither fat nor acid. The first include the *uric, rosacic, purpuric, allantoic, caseic, butyric, &c.* The fatty principles are:—*stearine, elaine, cholesterine, &c.*; and the last division includes the most important compounds of organization:—*fibrine, gelatine, albumen, urea, picromel, osmazome, &c.*

PRINOS, P. verticillatus, Black Alder, Virginia Winter Berry, (F) *Apalachine à feuilles de Prunier. Nat. Ord. Rhamni. Sex. Syst. Hexandria Monogynia*. The bark of this common shrub of the United States is astringent, bitter, and pungent. The berries are, likewise, bitter. The bark has been used as a substitute for the cinchona, in intermittents, and as a tonic.

PRIONODES, from *πριον*, 'a saw,' and *ειδος*, 'shape.' *Serra'ted*. Applied to the sutures of the head.

PRIOR ANNULARIS, Interosseus quartus of Winslow. An internal interosseous muscle, which arises from the outside of the metacarpal bone of the ring finger, and is inserted into the outside of the tendon on the back of the ring finger. Its use is to draw the ring finger outwards.

PRIOR INDICIS; Exten'sor ter'tii interno'dii indicis; Sous-méta-carpo-lateri-phalangien. It arises from the outer or radial side of the metacarpal bone of the fore finger, and is inserted into the outside of the tendon on the back of the fore finger. *Action*:—to draw the finger outwards, towards the thumb.

PRIOR VEL ABDUCTOR INDICIS PEDIS. An external, interosseous muscle of the foot, which arises from the contiguous sides of the metatarsal bones of the great and fore toes, and is inserted into the inside of the root of the first bone of the fore toe. *Action*:—to pull the fore toe inwards.

PRIOR MEDII DIGITI, Prior Medii, Second interosseous of Douglas. An external, inter-

osseous muscle of the hand, which arises from the corresponding sides of the metacarpal bones of the fore and middle fingers, and is inserted into the outside of the tendon on the back of the middle finger. *Action*:—to draw the middle finger outwards.

PRIOR VEL ABDUCTOR MEDII DIGITI PEDIS. An internal, interosseous muscle of the foot, which arises from the inside of the metatarsal bone of the middle toe, and is inserted into the inside of the root of the first bone of the middle toe. *Use*:—to pull the middle toe inwards, or towards the inner side of the foot.

PRIOR VEL ADDUCTOR MINIMI DIGITI. An internal, interosseous muscle of the foot, which originates from the inside of the metatarsal bone of the little toe; and is inserted into the inside of the root of the first bone of the little toe. *Action*:—to pull the little toe inwards.

PRIOR VEL ADDUCTOR TERTII DIGITI PEDIS. An internal interosseous muscle of the foot, which arises from the inner and under part of the metatarsal bone of the third of the small toes, and is inserted into the inside of the root of the first bone of the third of the small toes. *Action*:—to pull the third of the small toes inwards.

PRO, προ, 'before.' A common prefix to words; as in *Procatartic, Prostate, &c.*

PROBANG, Detrusorium ex bale'na. A long, slender rod of whalebone, with a piece of sponge at its extremity, intended to push down extraneous bodies, arrested in the œsophagus, into the stomach. A similar instrument is called by J. L. Petit, *Repoussoir d'arêtes*.

PROCES'SUS. A *Process*; from *proce'do*, 'I go before.' *Projectu'ra*. An apophysis or eminence of a bone, (see Apophysis.) Also, any part, which seems prolonged beyond other organs with which it is in connexion; as the *Ciliary processes*.

PROCHEILON, Procheilidion, Prolabium. The extreme projecting part of the lips.

PROCON'DYLOS, προκονδυλος, from *προ*, 'before,' and *κονδυλος*, 'a knot.' The first joint of the fingers;—the second being called *κονδυλος*; and the third *μετακονδυλος*.

PROCTAL'GIA, Proctica simplex, Proctagra, from *πρωκτος*, 'the anus,' and *αλγος*, 'pain.' Pain in the anus. Generally symptomatic of disease, as of hemorrhoids, scirrhous, &c.

PROCTATRE'SIA, from *πρωκτος*, 'the anus,' and *ατρησια*, 'imperforation.' Imperforate state of the anus.

PROCTORRH'ŒA, from *πρωκτος*, 'the anus,' and *ρρω*, 'I flow.' A discharge of blood or slime from the anus.

PROCTICA. Pain or derangement about the anus, without primary inflammation. A genus in the class *Cæliaca*, order *Enterica*, of Good.

PROCTITIS, *Clune'sia*, *Cysso'tis*, from *πρωκτος*, 'the anus.' Inflammation of the anus.

PROCTOCE'LE, from *πρωκτος*, 'the anus,' and *κλη*, 'hernia.' *Prolap'sus Ani*, *Procto'to'sis*, *Procto'sis*, *Archeopto'ma*, *Archopto'sis*, *Exa'nia*, *Proctica exa'nia*, *Hæmor'rhois proce'dens*, *Hæmor'rhois ab exaniâ*, *Proci-den'tia Ani*, *P. intesti'ni recti*, *P. sedis*, *Ecto'pia Ani*, *Sedes proci'dua*, *Falling down of the Fundament*, *Coming down of the Body*, (F) *Chute du rectum*, *C. du fondement*, *Renversement du Rectum*. Inversion and prolapse of the mucous coat of the rectum, from relaxation of the sphincter, with more or less swelling. In the treatment, the application of cold water and astringent lotions must be recommended: and, if other means fail, one of the radii of skin, which converge at the anus, may be snipped off. On cicatrizing, the verge of the anus will be contracted, and the cure probably complete. In the way of palliation, the parts may be retained by an appropriate bandage.

PROD'ROMUS, from *πρo*, 'before,' and *δρομος*, 'course.' The period immediately preceding an attack of disease; and in which the precursory signs occur.

PRODUCT, from *produ'co*, 'I produce,' (F) *Produit*. The result, sought to be attained by any pharmaceutical operation.

PRODUCTION, *Produc'tio*; same etymon. This word is used, especially by the French, synonymously with *prolongation*. The mesentery is, in this sense, a production of the peritoneum.

PROEM'INENT, *Proem'inens*, from *pro*, 'forwards,' and *emine're*, 'to project.' Some anatomists call the 7th cervical vertebra, the *proeminent vertebra*, on account of the length of its spinous process, which passes the level of those of the neighbouring vertebræ.

PRÆO'TIA, *Proioles*, *πρωιότης*, or *πρωιότης*, 'Precocity,' *Præcox matu'ritas*, *Præcocious matu'ritas*. Premature developement of sexual organization or power.—Good.

PROFLU'VIUM, *Discharge*, *Fluxus*, *Polyrrhœ'a*, from *pro'fluo*, 'I run down.' A term, under which some Nosologists have comprised all morbid discharges or fluxes:—others, increased excretions, attended by fever.

PROFUN'DUS, *Altus*. A name given to different parts, which are seated profoundly as regards others.

1. ARTERIA PROFUNDA FEM'ORIS, *A. vasta posterior seu muscula'ris femoris*, *Artère grande musculaire de la cuisse*, (Ch.) This large branch arises commonly from the posterior part of the crural, between the pubis and lesser trochanter. It descends deeply, situate before the adductors; passes through the third adductor above the opening in it for the trunk of the femoral; and terminates in the short portion of the biceps. The *muscularis profunda* gives off, 1. The *external circumflex*: 2.

The *internal circumflex*: and, 3. The three *perforantes*.

2. The ARTERIA PROFUNDA PENIS. Chaussier has given this name to the *cavernous artery*, which arises from the artery of the penis, furnished by the internal pudic.

PROFUNDA HUMERI, *P. superior*, *Artéria spiralis*, (F) *Artère humérale profonde*, *A. collatérale externe*, *Grand musculaire du bras*, (Ch.) Its origin is variable. When it arises from the brachial artery, it is given off opposite the groove of the humerus destined for the radial nerve, and descends backwards between the three portions of the triceps, accompanied by the nerve; giving branches to that muscle and to the humerus. When it reaches the posterior part of the bone, it divides into two branches, which are distributed to the triceps, supinator longus, &c.

The PROFUNDA INFERIOR vel MINOR is often a branch of the last; but, commonly, is given off from the brachial, near the middle of the arm. It gives off branches to the muscles, &c. about the inner side of the os humeri. It is, also, called *large communicating ulnar* or *profundo-ulnar*.

Certain muscles are distinguished by the names *profound* or *deep-seated* and *superficial*. Thus, we speak of the *superficial* and *deep-seated* muscles of the neck, &c.; the *Flexor profundus perforans*, &c.

PROGLOS'SIS, from *πρo*, 'before,' and *γλωττα*, 'the tongue.' The extremity or tip of the tongue.

PROGNOSIS, *Prorrhê'sis*, *Præcognitio*, *Prædictio*, (F) *Prognostic*, *Pronostic*, from *πρo*, 'before,' and *γινωσκα*, 'I know.' The judgment formed by the physician, regarding the future progress and termination of any disease.

A GENERAL PROGNOSIS is the opinion formed of a disease in the abstract. Thus, we say, the *General prognosis* of *Cynanche tonsillaris* is favourable;—of *Phthisis pulmonalis* unfavourable, &c.

A PARTICULAR PROGNOSIS is the opinion formed of any particular case of a disease. The *particular prognosis* of one case of typhus, for example, may be favourable, whilst that of another may be unfavourable.

PROLAPSUS, from *pro'labor*, 'I slip down.' *Proci-den'tia*, *Delap'sio*, *Propto'ma*, *Propto'sis*, *Produc'tio*, *Propeden'tia*, *Promi-nen'tia*, *Pto'sis*, *Casus*, (F) *Chute*; a *protru-sion*; a *falling down*. A genus of diseases in the class *Locales* and order *Ectopiæ* of Cullen, distinguished by the falling down of a part through the orifice, with which it is naturally connected.

PROLAPSUS UTERI, *Exome'tra*, *Metropto'sis*, *Falling down of the womb*, *Ædoptosis uteri*, *Hysteropto'sis*, *Hysteroce'le nuda*, *Proci-den'tia uteri*, (F) *Abaissement de la matrice*, *Chute de la matrice*, *Descente de la matrice*, *Précipitation de la matrice*. Some use the term '*Proci-den'tia Uteri*' for a minor degree,

some for a greater degree of the affection than prolapsus;—*Relaxatio uteri* expressing the slightest stage of all. A falling down of the uterus, owing to relaxation of the parts about the utero-vaginal region. In the treatment, the horizontal posture must be insisted upon; the injection of astringent substances *per vaginam* be advised; and if the affection be not remediable by these means, a pessary must be employed as a palliative.

PROLAPSUS VAGINÆ, *Hysteropto'sis Vaginæ Prolapsus*, *Ædoptosis Vaginæ*, *Coleopto'sis*, *Colpopto'sis*, *Elythropto'sis*—Protrusion of the upper part of the vagina into the lower. This, like the descent of the uterus, may be *relaxation*, *proidentia*, *prolapsus* or complete *inversion*.

PROLECTATIO. Action of separating the finer parts of a body from the grosser.

PROLIFIC, *Prolificus*; from *proles*, 'offspring,' and *facio*, 'I make.' That which has the faculty of engendering; applied to man, animals, and their sperm or seed; as well as to remedies, which, by strengthening the genital organs, increase the secretion of sperm.

PROMALACTERIUM, from *πρῶ*, 'before,' and *μαλασσω*, 'I soften.' The room, in the ancient gymnasium in which the body was softened and anointed. One of the operations in bathing.

PROMETOPIS, *Prometopid'ion*, from *πρῶ*, 'before,' and *μετωπεν*, 'the forehead.' The skin of the forehead.

PROMONTORY, *Promontorium* seu *Tuber* seu *Tuberositas Tym'pani*. A small projection at the inner paries of the cavity of the tympanum, which corresponds to the external scala of the cochlea and especially to the outer side of the vestibule.

PRONA'TION, *Prona'tio*, from *pronus*, 'inclined forwards.' Anatomists understand, by pronation, the motion by which the inferior extremity of the radius passes before the ulna, and thus causes the hand to execute a kind of rotation from without inwards.

PRONA'TOR. That which produces the motion of pronation. This name has been given to two of the muscles of the forearm.

PRONATOR RADII QUADRATUS, *P. quadratus*, *Quadratus radii*, *P. quadratus sive transversus* (Winslow), *Pronator radii brevis* seu *quadratus* (Cowper), *Cubito-radial*, (Ch.) (F) *Petit ou carré pronateur*. This muscle is situate at the anterior, inferior, and profound part of the forearm. It is flat and square, and is attached, within, to the inferior quarter of the anterior surface of the ulna; and, without, to the inferior quarter of the anterior surface of the radius. It produces the motion of pronation.

PRONATOR RADII TERES, *P. teres* sive *obli'quus* (Winslow), *Epitrochlo-radial* (Ch.), (F) *Grand ou rond pronateur*. A muscle, seated at the upper and anterior part of the forearm. It is long, flat; and larger above than below.

It is attached, above, to the inner tuberosity of the humerus and to the coronoid process of the ulna. From thence it passes obliquely downwards and outwards, and terminates at the middle of the outer surface of the radius. It causes the radius to turn on the ulna, to produce the motion of pronation. It can, also, bend the forearm on the arm and *vice versa*.

PROPERTIES, VITAL. Those which depend upon organization, such as *sensibility* and *contractility*.

PROPERTIES, PHYSICAL, of the Tissues. These are *flexibility*, *extensibility* and *elasticity*, *racornissement* and *imbibition*.

PROPHYLACTIC, *Prophylacticus*, *Diaphylactic*, *Diasostic*, *Synteret'icus*, from *πρῶ* and *φυλασσω*, 'I defend.' A preservative.

PROPHYLAXIS, *Prophylaxe*, *Prophylactice*. Same etymon. *Præserva'tio*. Preservative or preventive treatment.

PROP'OLIS, *προπολις*, from *πρῶ*, 'before,' and *πολις*, 'city;' literally, "that which is before the city." *Ceranthemus*, *Commo'sis*, *Bee-bread*. A red, resinous matter, with which bees cover the bottom of the hive. Its fume has been esteemed antiasthmatic.

PROP'OMA, from *πρῶ*, 'before,' and *πομα*, 'a drink.' Ancient name of a medicine, composed of seven parts of *honey* and four of *wine*. It was drunk before a meal.—Paulus of Ægina.

PROPOTIS'MOS. Same etymon. *Præpo'tio*. An ancient name for medicines, which were given to patients, before purging them, and, in some sort, to prepare them.

PROPTOMA AURICULARUM, *Paræsthe'sis auditûs flacca*, *Flap Ear*. Lobe of the ear broad, loose, and pendent, from birth.—Good.

PROS, *προς*. In composition, this prefix generally signifies 'in addition to,' 'over and above,' 'besides.'

PROS'PHYSIS, 'adhesion, connexion.' from *προς*, and *φύω*, 'I grow.' In a more limited sense, this word means, morbid adhesion of the eyelids, either between themselves, or with the globe of the eye.

PROS'TASIS, *προστασις*, 'superiority, preponderance,' same etymon as *Prostate*. A predominance or abundance of excrementitious humours.—Hippocr.

PROSTATAL'GIA, from *προστατα*, 'the prostate,' and *αλγος*, 'pain.' Pain in the prostate.

PROSTATE, *προστατα*, from *πρῶ*, 'before,' and *στημι*, 'I stand.'—*Pros'tata gland'ula*, *Pros'tatæ*, *P. glandulo'sæ*, *Paras'tatæ*, *P. gland'ulæ*, *Pros'tatæ adenoïdes*, *Testes mino'res*, *Corpus glandulo'sum*, *C. adeniforme*, *C. glandiforme*, *C. glando'sum*, *C. adenoïdes*; the *Prostate gland*, *Assisten'tes glandulæ*, *Ads'tites glandulosi*. A glandular, cordiform body, of the size of a chestnut, situate before the neck of the uterus, behind the symphysis pubis, and surrounding

the first portion of the urethra. Its excretory outlets, to the number of 10 or 12, open into the part of the urethra that traverses it, and pour into it a whitish, viscid humour, intended to lubricate the interior of the urethra, and to serve as a vehicle for the sperm in its ejaculation.

PROSTATIC, Prostat'icus. That which relates to the prostate. Winslow has named—*Superior Prostatic Muscles*—ligaments which pass from the pubis to the lateral parts of the prostate. He, also, calls—*Inferior Prostatic Muscles*—the fleshy fibres, which, from the lateral parts of the urethra, near its membranous portion, pass to be inserted into the pubis.

THE PROSTATIC PORTION OF THE URETHRA is the part of the canal of the urethra included by the prostate. It is about 15 lines long.

THE PROSTATIC BISECTOR is an instrument employed by Dr. Stevens, of New York, in the bilateral operation of lithotomy. In form it resembles a large olive, with a beak at the extremity, with cutting edges at the sides, parallel to its longest axis, and with a straight handle.

PROSTATON'CUS, from *πρωστατα*, 'the prostate,' and *εγχεσ*, 'a tumour.' Swelling of the prostate.

PROSTRA'TION, Prostra'tio vi'rium, (F) *Prostration des forces*. Great depression of strength. Almost total loss of power over the muscles of locomotion.

PROTH'ESIS, Pros'thesis, Adjunc'tio, Adjec'tio, Apposi'tio, 'addition, application;' from *πρω*, 'in addition to,' and *τιθημι*, 'I put.' That part of surgery, whose object is to add, to the human body, some artificial part, in place of one that may be wanting, as a wooden leg, an artificial eye, &c.

PROTU'BERANCE, Protuberan'tia, Ex-tubera'tio; Prominen'tia, Excrescen'tia, Ex-tuberan'tia, from *pro*, 'before,' and *tu'ber*, 'a projection.' (F) *Bosse*. A name given to rough, unequal protuberances, seen at the surface of certain organs; the *parietal protuberances*, *occipital protuberances*, *annular protuberances*, &c.

PROULIMATE'SIS. A word employed, by Forestus, for hernia of the stomach.

PROVERBS, MEDICAL. A proverbial expression frequently contains sound sense in its directions. In medicine, the greatest collection is in the *Regimen of Health of the school of Salernum*, composed in the 11th century, by John of Milan. Yet, although good sense is often inculcated, we often meet with the reverse.

Most of the proverbs are hygienic. The following are a few.

1. *Qu'après la soupe un coup d'excellent vin
Tire un écu de la poche du médecin.*
2. *Surge quintâ, prande nonâ, cana quintâ, dormi
nonâ, nec est mortî vita prona.*

3. *Nunquam recte corpus exerceri sine animo, neque
animum sine corpore posse.*

4. *Viande bien machée est à demi digérée.*

5. *Opitimum condimentum fames.*
Appetite is the best sauce.

6. *Plures occidit gula quam gladius.*

7. Early to bed and early to rise,
Makes a man healthy, wealthy, and wise.

8. One man's meat 's another man's poison.

9. An ounce of prevention is better than a pound of cure.

PRUNEL'LA, P. vulga'ris, Consol'ida minor, Sym'phitum minus, Self-heal, Bugle, Brunel'la, (F) *Brunelle*. Family, Labiatæ. Sex. Syst. Didynamia Gymnospermia. This plant has been recommended, as an astringent, in hemorrhages and fluxes; and, also, in gargles against aphthæ and inflammation of the fauces.

PRUNUM. A Plum, a Prune. Three sorts of plums have, usually, been ranked amongst the articles of the materia medica. 1. The *Prunum Brignolen'së*; the *Brignole plum* or *Prunel'loe*; from Brignole in Provence. It is of a reddish-yellow colour; and has a very grateful, sweet, subacid taste. 2. The *Prunum Gal'licum*, the *French Prune*; and 3. The *Prunum Damasce'num* or *Damson, Brab'ylon*. All these possess the same general qualities as the other summer fruits. They are emollient and laxative.

PRUNUS ARMENIACA. The *Apricot, Apricock, Bericocce, βερίκοκκον, Præcocia*, (F) *Abricot*. Family, Rosacæ. Sex. Syst. Icosandria Monogynia.

The apricot, when ripe, is easily digested, and considered as a great delicacy.

PRUNUS A'VIUM—The *Black Cherry Tree, Cerasus Avium*. (F) *Merisier*. The fruit is eaten; and a gum exudes from the tree; the properties of which are similar to those of gum Arabic.

PRUNUS CER'ASUS. The *Red Cherry Tree*, (F) *Cérisier*. The fruit *Cerasum, Cera'sion*, has a pleasant, acidulous, sweet flavour. It is wholesome.

PRUNUS DOMES'TICA. The *Plum* or *Damson tree, Coccyme'lea, Proune*, (F) *Prunier ordinaire*. The damson, when perfectly ripe, affords a wholesome fruit for pies, tarts, &c. It is gently laxative. See Prunum.

PRUNUS INVI'TIA. The *Bullace Plum tree*. The fruit of this tree is used like the damson.

PRUNUS LAURO-CER'ASUS, Poison Laurel, Cherry Laurel, Common Laurel, Lauro-cerasus, Cerasus Lauro-cerasus, (F) *Laurier-cerise, L. amandier*. The leaves have a bitter, styptic taste, with the flavour of bitter almonds. The flowers have a similar flavour. The powdered leaves, applied to the nostrils, excite sneezing. The flavour of the leaves has given occasion to their being employed in tarts, custards, &c., but in large quantities they are poisonous. The poisonous principle is the Prussic acid. The distilled water, called

Laurel Water, is poisonous. (See Poisons, Table of.)

PRUNUS PADUS, *Padus*, *Cer'asus Padus*, *Cer'asus racemo'sus sylvestris*, *Wild cluster*, or *Bird Cherry Tree*, (F) *Cerisier à grappes*, *Bois puant*. The bark of the tree has a fragrant smell, and a bitter, subastringent taste, somewhat similar to that of bitter almonds. It has been recommended in intermittents, &c. in the form of decoction. The berries have been used in dysentery.

PRUNUS SPINOSA. The *Sloe Tree*, *P. sylvestris*, *Agriococcime'lea*, *Agru'na*, *Agrune'la*, (F) *Prunellier*, *Prunier sauvage*. The fruit—the *sloe*—is sometimes employed in gargles, and was formerly much used in hemorrhage, owing to its astringent properties. The *Aca'cia nostras*, *A. German'ica*, *Succus acaciæ nostratis*, *S. German'icæ inspissatus*, is obtained from this.

PRUNUS VIRGINIANA, *Wild Cherry Tree*, (F) *Cerisier de Virginie*. The bark of this tree has been found useful in intermittents. The leaves are poisonous to certain animals, and the berries intoxicate different kinds of birds. The Indians use the bark in the cure of syphilis. It is bitter and astringent, and possesses some aromatic warmth; and, likewise, a narcotic quality. It is stimulant and tonic. The leaves contain Prussic acid. The distilled oil of the bark is very nearly identical with that of the bitter almonds. A strong decoction of the bark is anthelmintic.

PRURIGO, *Pruri'tus*, from *prurio*, 'I itch.' This word is often used synonymously with *itching*.

Willan and Bateman use the term for a genus of cutaneous diseases, the characteristic symptoms of which are, a severe itching, accompanied by an eruption of papulæ of nearly the same colour as the adjoining cuticle. It affects the whole surface of the skin, under three varieties of form;—the *P. mitis*, *P. formi'cans*, *P. seni'lis*, &c. as well as some parts of the body as the *P. pod'icis*, *P. pudendi mulie'bris*.

PRUSSIAN BLUE, *Ferrum Zoöl'icum*, *F. Borus'sicum*, *F. Cyanogena'tum*, *F. oxydula'tum hydrocyan'icum*, *Ferri Ferocy'anas*, *Borus'sias Ferri*, *Ceruleum Borus'sicum*, *C. Berolinen'se*, *Prussias Ferri*, *Hydrocy'anas Ferri*, *Cyanure'tum Ferri*, *Trito-hydroferrocy'anate of iron*. This salt is chiefly used for the preparation of the hydrocyanic acid and the cyanide of mercury. It has been advised in the treatment of intermittents, and in epilepsy and scrophulosis. Externally, it has been applied to ill-conditioned ulcers. (3j to 3j of Cerate.) Dose 4 to 6 grains.

PSAMMIS'MOS, from *ψαμμος*, 'sand.' The application of sand to any part of the body for the cure of disease.—Paulus.

PSELLIS'MUS, *ψελλισμος*, from *ψελλίζω*, 'I stutter.' Imperfect or depraved state of the articulation. A genus in the class *Pneumatica*; order, *Phonica*, of Good.

PSEUDAC'OE, *Pseudacoi'a*, from *ψευδης*, 'false,' and *ακουη*, 'audition.' *Pseudacu'sis*. False hearing.

PSEUDÆSTHE'SIA, from *ψευδης*, 'false,' and *αισθανε'μαι*, 'I feel.' *Parap'sis illuso'ria*. Depraved feeling. Imaginary sense of touch or general feeling in organs that have no existence. Common to those who have suffered amputation; and in hypochondriacs and the insane.

PSEUDARTHRO'SIS, *Pseudarticula'tio*, *Pseudartic'ulus*; from *ψευδης*, 'false,' and *αρθρον*, 'a joint.' A false joint or articulation.

PSEUDOBLEP'SIA, from *ψευδης*, 'false,' and *βλεψις*, 'sight.' *Pseudopsia*, *Parop'sis illuso'ria*, *Suffu'sio*, *Phantas'ma*, *Pseudoblep'sis*, *False sight*. A generic name, used by Cullen for perversion of vision. See *Metamorphopsia*.

PSEUDO-LIEN, *Pseudosplen*. Glands situate in the neighbourhood of the spleen; probably, lymphatic glands.

PSEUDOPHTHISIS. False phthisis. Emaciation, occasioned by other cause than organic lesion of the lungs.

PSEUDOREX'IA, *Pseudorex'is*, from *ψευδης*, 'false,' and *ορεξις*, 'appetite.' False appetite.

PSID'IUM POMIF'ERUM. The *Apple Guava*. This plant and the *P. pyrif'erum* bear fruits; those of the former like apples; of the latter like pears. The apple kind has an acid flavour, the other is sweet. Of the inner pulp of either, the natives of the Indies make jellies; and, of the outer rind, tarts, marmalades, &c. They are somewhat astringent; this quality, indeed, exists in every part of the tree and abundantly in the leaf buds, which are occasionally boiled with barley and liquorice as an excellent drink in diarrhœa. A simple decoction of the leaves is said to be useful in the itch and most cutaneous eruptions.

PSOÆ, *ψοα*, 'the loins.' *Alop'eces*, *Ne-phrome'træ*, *Neurome'tres*. The *psoæ* muscles.

PSOAS MAGNUS, *P. seu lumba'ris inter'nus*, *Pré-lombo-trochantin*, *Pré-lombo-trochantien* (Ch.), *Femur moven'tium sextus*. A muscle, seated on the lateral parts of the lumbar portion of the vertebral column; and passing down to the superior and anterior part of the thigh. It is long; fusiform; and attached, above, to the body and transverse processes of the four first lumbar vertebræ, and last dorsal. Below, it terminates, by a very thick tendon,—common to it and the iliacus muscle,—which is inserted into the top of the lesser trochanter. This muscle bends the thigh upon the pelvis and carries it in rotation outwards. It may, also, bend the pelvis on the thigh, and the loins on the pelvis. It acts considerably in station and progression.

PSOAS PARVUS, *Pré-lombo-pubien*, (Ch.)

A muscle, situate anterior to the last. It is long, thin, flat, and narrow; and is attached, above, to the body of the last dorsal vertebra, and below, to the linea ileo-pectinea, by means of a slender tendon, which furnishes two expansions;—one to the *Iliac-aponeurosis*, and the other to the *pelvic*. This muscle bends the vertebral column on the pelvis; and, reciprocally, the pelvis on the vertebral column.

PSOÏTIS. Inflammation of the psoas muscles and of the parts situate before the lumbar vertebræ; accompanied, from its commencement, by considerable fever, violent pains in the part affected and in the thigh of the same side, which remains commonly half bent. Psoritis may terminate by suppuration, and form Lumbar Abscess, (q. v.)

PSOLĒ, ψαλη, 'the male organ,' also, the glans.

PSOLON'CUS, from ψαλη, and ογκος, 'a tumour.' Swelling of the glans, or of the penis generally.

PSOPHOS, ψοφος, 'noise.' A loud noise; a hollow sound.

PSORA, ψαγα, *Scabies*, *Ecpye'sis Scabies*, *Phlysis Scabies*, *Itch*, (F) *Gale*, *Mal Saint-Main*, *Rogne*. A contagious eruption of very minute pimples—pustular, vesicular, papular, intermixed and alternating; itching intolerably and terminating in scabs. It seems to be caused by an insect, of the genus *Acarus*;—the *Ac'arus* or *Sarcop'tes* or *Sarcop'tus Scabie'i*, *Ac'arus Ciro*, (F) *Ciron*. The itch occupies, particularly, the spaces between the fingers, the backs of the hands, wrists, elbows, axillæ, groins, hams, &c. and rarely affects the face.

The best applications, for its cure, are;—the *Unguentum Sulphuris* or *Ung. Sulph. comp.*, night and morning; but the unpleasant smell of the sulphur has given occasion to the use of other means;—as the *White Hellebore*, *Potass in deliquescence*, *Muriate of Ammonia*, *Sulphuric Acid*, &c. The repugnance of the smell of sulphur ought not, however, to be regarded; especially as, in the course of four or five days, it will, in almost all cases, produce a perfect cure.

PSORA'LEA GLANDULO'SA, *Alva-quill'a*. Family, Leguminosæ. Sex. Syst. Dialectica Decandria. A shrub, used in Chili as a vulnerary.

PSORA'LEA PENTAPHYL'LA, *Contrayer'va nova*, *Mex'ican Contrayer'va*. The root is little, if at all, inferior to the *Contrayer'va* in its medical properties: which, by the by, are unimportant.

PSORI'ASIS, *Lepido'sis psori'asis*, *Impe-ti'go*, *Sca'hies sic'ca*, *Psora lepro'sa*, *P. squamo'sa*, *Scaly Tetter*, *Dry Scale*, *Dry Scall*, (F) *Dartre squameuse lichenoïde*, *Gratelle*, *Gale miliaire*, *G. canine ou sèche*. A cutaneous affection, consisting of patches of rough, amorphous scales; continuous or of indeterminate outline: skin often chappy. Psoriasis

occurs under a considerable variety of forms. The surface, under the scales, is more tender and irritable than in lepra, which psoriasis, in some respects, resembles. Dr. Willan has given names to eleven varieties of psoriasis: the chief of which are the *Psoriasis gutta'ta*, *P. diffu'sa* (one form of which is the *Baker's Itch*), the *P. gyra'ta*, and *P. invetera'ta*.

The treatment of psoriasis must be antiphlogistic, with the internal use of the fixed alkalies, sulphur, &c. The irritable kinds do better without any local application.

The more local and less inflammatory are ameliorated by emollient and soothing applications: or by slightly stimulating means, sea-bathing, the *Ung. hydrarg. nitric oxyd.*, *Ung. oxydi zinci*, &c.

PSORI'CUS, ψαρκος. That which has the nature of itch. A medicine for curing the itch.

PSYCHAGOG'ICA, from ψυχη, 'life,' 'soul,' and αγω, 'I lead.' Medicines which resuscitate, when life seems extinct; as in syncope and apoplexy.

PSYCHOL'OGY, *Psycholo'gia*, from ψυχη, 'mind,' and λογος, 'discourse.' A treatise on the intellectual and moral faculties. Also, the mind or intellectual and moral qualifications.

PSYCHROLU'SIA, *Psychrolu'tron*, from ψυχρος, 'cold,' and λουω, 'I wash.' A cold bath.

PSYDRA'CIA, ψυδρακια, quasi ψυγα υδρακια, 'cold drops.' The ancients used this term, sometimes, for *pimples*; at others, for *vesicles*. Willan and Bateman define *Psydracium* to be, a small pustule, often irregularly circumscribed, producing but a slight elevation of the cuticle, and terminating in a laminated scab. Many of the psydracia usually appear together, and become confluent: and, after the discharge of pus, they pour out a thin, watery humour; which frequently forms an irregular incrustation. Frank limits the term to a psoriform eruption, which differs from the itch in not originating from an insect, and which is not contagious,—perhaps the lichen. Authors have differed regarding its acceptance.

PTERIS AQUILI'NA, 'Eagles' Wings,' *Pteria*, *Thelyp'teris*, *Filix Nymphæ'a*, so called from its leaves. Common Brake or Female Fern; *Filix fæminæ'a*. (F) *Fougère femelle*, *La grande Fougère*. Nat. Ord. Filices. The root is considered to be anthelmintic; and as efficacious as that of the male fern in cases of tape-worm.

PTEROCAR'PUS SANTALI'NUS, *Santalum Rubrum*, *Red Sanders* or *Saunders Tree*. Family, Leguminosæ. Sex. Syst. Dialectica Decandria. Red Saunders wood is used only as a colouring matter; giving to rectified spirit a fine deep red. The juice of this tree, like that of the *P. Draco*, affords a species of *Dragon's blood*.

PTERY'GION, *Pterygium* or *Pteryg-*

gum, from πτερον, 'a wing,' 'a small wing,' &c.; *Onyx*, *Pyosis*, *Unguis*, (F) *Drapeau*, *Onglet*. A varicose excrescence of the conjunctiva, of a triangular shape; and commonly occurring at the inner angle of the eye; whence it extends over the cornea. Sometimes, two or three pterygia occur on the same eye, and cover the whole cornea with a thick veil, which totally prevents vision. According to Scarpa, the ancients gave the name *Panniculus* to this last complication.

If the pterygia cannot be dispelled by means of discutient collyria, it must be removed by the scissors.

PTERYGO-PALATINE, *Pterygo-palatinus*. That which belongs to the pterygoid process and palate.

The PTERYGO-PALATINE CANAL. A small canal, formed by the internal ala of the pterygoid process, and the palate bone. It gives passage to the vessels of the same name.

The PTERYGO-PALATINE ARTERY, or *superior pharyngeal*, is a very small artery, and is given off by the internal maxillary, at the bottom of the zygomatic fossa: after having passed through the pterygo-palatine canal, it is distributed to the superior part of the pharynx, the sphenoid bone, and the Eustachian tube.

PTERYGOID, *Pterygoïdes*, *Pterygoïdeus*, *Aliformis*, from πτερυξ, 'a wing,' and ἄλς, 'form.' A name given to two processes at the inferior surface of the sphenoid bone; the two laminæ, which form them, having been compared to wings. These *alæ* or *wings* or *processes*,—*Processus aliformes*,—have been distinguished, according to their position, into *internal* and *external*.

The Pterygoid Artery, *Vidian Artery*, *Ramus Ductus Pterygoïdei*, *Arteria pharyngea suprema*, arises from the internal maxillary artery, at the bottom of the zygomatic fossa, and enters the pterygoid canal with the nerve of the same name, to proceed to be distributed on the Eustachian tube and velum palati.

The name, *pterygoid arteries*, is likewise given to the branches, which the internal maxillary and some of its divisions, as the meningeal media, and posterior temporalis profunda, furnish to the pterygoid muscles, behind the neck of the lower jaw.

The PTERYGOID or VIDIAN CANAL, *Ductus pterygoïdeus*, *Canalis vidianus*, (F) *Conduit ptérygoïdien* ou *Vidien*, *Pterygo-palatine canal*, is a narrow channel, which traverses, in a direction from before to behind, the base of the pterygoid process, and gives passage to the pterygoid nerve. The *foramina* of the sphenoid, which terminate the canals, are similarly called.

The FOSSA PTERYGOIDEA, (F) *Fosse ptérygoïdienne* ou *ptérygoïde*, is the depression, which separates the two laminæ or alæ of the pterygoid process.

The PTERYGOID MUSCLES, *Alar muscles*, *Aliformes muscoli*, are two in number.

1. The *Pterygoideus externus*, *P. minor*, *Ptérygo colli-maxillaire*, *Petit Ptérygo maxillaire* (Ch.), (F) *Petit ptérygoïdien*, *Pterygoïdien externe*, is a thick, short muscle, which arises, by short aponeuroses, from the outer surface of the external ala of the pterygoid process, and from the outer surface of the great ala of the sphenoid bone; and is inserted into the anterior part of the neck of the lower jaw-bone, and the corresponding part of the inter-articular fibro-cartilage. This muscle draws the condyle of the lower jaw and the inter-articular ligament forwards. It carries the chin forwards, and to the opposite side. If the two external pterygoids act together, the jaw is carried directly forwards.

2. The *Pterygoideus internus*, *P. major*, *Ptérygo anguli maxillaire*, *Masse'ter internus*, *Latens in Ore*, *Grand Ptérygo-maxillaire*, (F) *Grand Pterygoïdien* ou *Ptérygoïdien interne*. A thick and quadrilateral muscle, which is attached by short and very strong aponeuroses; above, to the pterygoid fossa, whence it proceeds downwards, backwards, and outwards, to be inserted into the inner surface of the ramus of the lower jaw, near its angle. This muscle raises the lower jaw, and carries it a little forwards. It also performs the grinding motion.

PTERYGOID NERVES. These are two in number.

1. The *Pterygoid* or *Vidian Nerve*. It arises from the posterior part of the sphenopalatine ganglion; traverses the Vidian canal of the sphenoid; and, beyond, divides into two filaments. 1. A *superior* or *cranial*, *Nervus superficialis* sive *petrosus*, which ascends into the cranium, and enters the hiatus of Fallopius to unite with the facial nerve. 2. An *inferior* or *carotid*, *Nervus profundus* sive *major*, which traverses the carotid canal, and unites with the ascending branches of the superior cervical ganglion of the trisplanchnic.

2. The *Pterygoid Nerve*, properly so called, *Nervus muscoli pterygoïdei*, is given off by the inferior maxillary branch of the 5th pair.

PTERYGO'MA. A wing; a projecting or pendulous body. A swelling of the vulva, which prevents coition.—M. A. Severinus.

PTOCHOCOMIUM, from πτωχος, 'a poor person,' and κομια, 'I take care of.' *Ptochodochium*. An almshouse.

PTOSIS IRIDIS, *Prolapsus Iridis*, from πτωσις, 'a falling.' A prolapsus of the iris through a wound of the cornea. It is known by a blackish tubercle, which projects a little from the cornea in various forms.

PUBERTY, *Pubertas*, *Hebē*, *Pubes*, *Aphrodisia*, *Ephebia*, *Ephebotes*, *Ephebosyne*. The period of life at which young people, of both sexes, become nubile. According to the civil law, puberty occurs at 12

years in females, and at 14 in boys. The period, however, varies considerably in different climates, and in different individuals of the same climate.

PUBES, *Pubis*, *Epis'chion*, *Cteis*, *Pecten*; the *Pubic Region*; from *pube're*, 'to begin to be covered with hair.' The middle part of the hypogastric region; so called, because it is covered with hair, in both sexes, at the period of puberty. The hair is called *Pubes*.

PUBIC, *Pubian*, *Pu'bicus*, *Pubiæ'us*, (F) *Pubien*. That which belongs to or concerns the pubis.

The **PUBIC ARTICULATION** or *Sym'physis Pubis* results from the junction of the ossa pubis. The medium of union is cartilage.

The **PUBIC ARCH** or *Arch of the Pubis*, (F) *Arcade pubienne*. The arch at the anterior part of the inferior circumference of the pelvis. It is more expanded in the female than in the male; to correspond with the additional functions, which she has to execute.

The **PUBIC LIG'AMENTS** are two very solid, fibrous fasciæ, situate before and beneath the symphysis pubis, which they strengthen. The one is called the *anterior pubic ligament*, the other, the *inferior or subpubic*.

PUBIO-COCYGIEN-ANNULAIRE, *Pubio-coccygeus annula'ris*. Dumas gave this name to the levator ani and ischio-coccygeus, which he considered a single muscle.

PUBIS, *OS Episei'on*, *Episi'on*, *Share Bone*, *Os Pec'tinis*. The anterior part of the os innominatum, so called because it corresponds to the genital organs and pubic region. The *angle of the pubis* is formed by the union of the body and rami of each side.

PUBLICÆ PARTES. Those organs are so called, the object of whose functions is the nutrition of all the others. Such are the digestive and respiratory organs.

PUDEND'AGRA. A hybrid word; from *pudenda*, 'the genital organs,' and the Greek *αγρᾱ*, 'a seizure.' According to some, this term means pain in the genital parts: according to others, it is synonymous with syphilis.

PUDEN'DAL HERNIA. Hernia, which descends between the vagina and ramus ischii, and forms an oblong tumour in the labium; traceable in the pelvis, as far as the os uteri.

PUDIC, *Pudi'cus*, *Puden'dus*, (F) *Honteux*, from *pudor*, 'shame.' That which causes shame. A name, given to the genital organs (q. v.) as well as to different other parts.

The **PUDIC ARTERIES** are distributed to the organs of generation. They are,—

1. The *internal Pudic*, *Sous-pubienne* (Ch.), *Arteria Pudi'ca*, *A. puden'da commu'nis*, (F) *Artère honteuse interne*, *Gen'ital Ar'tery*. It is furnished by the hypogastric, and divides into two branches; the one—the *inferior or perineal*—which gives off the inferior hemor-

rhoidal and the artery of the septum; and the other—the *superior*, (F) *Ischio-pénienne*—which furnishes the transverse perineal artery, and divides into two branches; the *artery of the corpus cavernosum*, and the *dorsalis penis*. This latter, in the female, has the name *Dorsalis Clitoridis*.

2. The *external Pudic Arteries*, *A. scrotales* ou *vulvaires* (Ch.), *A. honteuses externes*, which are two in number. The one is *superficial* or *subcutaneous*; and the other *deep-seated* or *subaponeurotic*. They are given off from the femoral artery or some one of its branches; and are distributed to the external parts of generation.

The **PUDIC NERVE**, (F) *Nerf honteux*, *Nerf Ischio-pénien* ou *Ischio-clitorien* (Ch.), is a branch furnished by the sacral plexus, which is distributed to the genital organs; and, especially, to the penis in man, and the clitoris in the female.

PU'ERILE, *Pueri'lis*, from *puer*, 'a child.' A term applied to the respiration when it becomes very sonorous by the stethoscope, as in healthy children.

PUER'PERA, *Tokas*, *Lochos*; a *lying-in-woman*, (F) *Femme en Couche*, *Accouchée*. A female in child-bed. One recently delivered.

PUER'PERAL FEVER. Any fever, occurring during the puerperal state—*Febris Puerpera'rum*, *Child-bed fever*. Most commonly, restricted to a malignant variety of Peritonitis, (q. v.)

PUF'FINESS, from (D) *poffen*, 'to blow;' *Infla'tio*, *Tumefac'tio mollis*, (F) *Bouffissure*, *Boursouffure*. A soft intumescence, without redness, which may be partial or general, and be produced by an accumulation of serous fluid, extravasation of blood, effusion of air into the subcutaneous cellular tissue, &c. Puffiness is most frequently seen in the face and legs; and, sometimes, appears around a wound.

PUGIL'LUS, *Drax*, *Drachion*, from *pug-nus*, 'the fist;' *Dragmis*, (F) *Pincée*. The quantity of any substance, which may be taken with the end of two or three fingers. The eighth part of a handful.

PULICA'RIS, *Pulicula'ris*, from *pulex*, 'a gnat.' An epithet given to cutaneous eruptions, resembling gnat-bites;—and, also, to the diseases in which such eruptions occur.

PULMO, *Pulmo'nes*, *Pneumon*, *Pleumon*, *Spiramen'tum animæ*, *Ergaste'rion spir'itus*, *Flabell'um et ventila'brum cordis*, the *Lung*. The essential organ of respiration, which is double, and occupies the two sides of the chest. The lungs, which are of a spongy, soft, flexible, compressible, and dilatable structure, fill exactly the two cavities of the thorax, and are separated from each other by the mediastinum and the heart. The right lung, which is shorter and broader than the left, is divided, by two oblique fissures, into

three unequal lobes. The left has only two lobes; and, consequently, only one fissure. At the internal surface of those organs, which is slightly concave, there is, about the middle, a pedicle, formed by the bronchia and pulmonary vessels, and called, by anatomists, the *root of the lungs*, (F) *Racine des Poumons*.

Essentially, the lungs are composed of prolongations and ramifications of the bronchia, and of the pulmonary arteries and veins,—the divisions of which are supported by a fine, cellular tissue.

When the surface of the lungs is examined in a clear light, we may see, even through the pleura, that their parenchyma is formed by the aggregation of a multitude of small vesicles, of an irregularly spheroid or ovoid shape, full of air, and separated by white and opaque septa. These vesicles are called *air-cells*. Along the partitions or septa is deposited, in greater or less quantity, the *black pulmonary matter*, (F) *Matière pulmonaire noire*, as it has been called, which seems to be natural. Sometimes, it is seen in points; at others, in spots.

The colour of the lungs varies, according to age and other circumstances. In youth, it is more red; and, afterwards, grayish or bluish; often, as if marbled. The pleura pulmonalis is their investing membrane.

The air is carried to the lungs by means of the trachea and bronchi. The black venous blood, which requires oxygenation, is conveyed to them from the heart, by the pulmonary artery; and, when it has undergone this change, it is returned to the heart by the pulmonary veins. The blood-vessels, inservient to the nutrition of the lungs, are the *bronchial* arteries and veins. The pulmonary lymphatics are very numerous. Some are superficial; others, deep-seated. They pass, for the most part, into the *bronchial ganglions* or *glands*. The nerves are furnished by the pulmonary plexus.

PULMONA'RIA, *P. officina'lis*, *P. Maculata*, *P. Maculo'sa*, *Lungwort*, *Spotted Lungwort*, *Jeru'salem Cowslip*, *Jerusalem Sage*, *Spotted Comfrey*, (F) *Sauge de Jerusalem*. Family, Boragineæ. Sex. Syst. Pentandria Monogynia. The leaves of this plant have been used as demulcents and pectorals; partly, from their resemblance to lungs; and, partly, because they manifest a slightly mucilaginous taste. The plant is not worthy of notice.

PUL'MONARY, *Pulmona'ris*, *Pulmona'lis*. That which relates or belongs to the lungs. A name, given to various parts.

1. The **PULMONARY ARTERY**, *Arte'ria pulmona'ris*, arises from the upper and left part of the right ventricle of the heart; whence it passes obliquely upwards and to the left side; dividing into two trunks, opposite the second dorsal vertebra;—one passing to each lung. At its origin, it is furnished with three

sigmoid or semilunar valves. It carries the blood to the lungs for aeration.

2. The **PULMONARY VEINS**, *Venæ pulmona'res*, *Arte'riæ veno'sæ*. These arise in the lungs from the final terminations of the arteries of the same name; collect in ramusculi and rami of greater and greater size, and ultimately unite in four trunks; two of which issue from each lung to open into the left auricle of the heart. The pulmonary veins have the same structure as the other veins of the body; from which they differ, in containing arterial blood, as the pulmonary artery differs from the others in conveying venous blood. They carry the blood back to the heart after aeration.

3. The **PULMONARY PLEXUS**, *Plexus pulmonaris*. A considerable, nervous network, situate behind the bronchi; and which is formed by the filaments of the pneumogastric nerve or par vagum, and by other filaments from the inferior cervical ganglion and the first thoracic ganglia. This plexus forms a kind of areolar web, with numerous meshes of different sizes, in which vessels are lodged, surrounded by much cellular tissue. This plexus sends filaments to the bronchi, which they accompany to their extremities.

PULMON'IC, *Pulmon'icus*, *Pneumon'icus*, *Pulmona'rius*. One attacked with pneumonia:—one labouring under disease of the lungs. Any thing relating or belonging to the lungs. A medicine for the lungs.

PULP, *Pulpa*, *Pulpa'men*, *Sarz*. The soft and parenchymatous parts of vegetables, reduced to a paste by the operation of pulping.

PULPING, *Pulpa'tion*, *Pulpa'tio*. An operation—the object of which is to reduce certain vegetable substances to a pulp. For this purpose, they are bruised in a mortar, and then passed through a hair sieve,—by the aid of a wooden spatula, called a *Pulper*, (F) *Pulpoire*.

PULSA'TION, *Pulsa'tio*, *Sphygmus*, *Sphyxis*, *Pede'sis*, *Pedeth'mos*, (F) *Battement*. The beating of the heart and arteries. Also, the beating felt in an inflamed part.

PULSE, from *pulso*, 'I beat;' *Pulsus*, *Pulsa'tio*, *Pulsus cordis et arteria'rum*, *Ictus Cordis et arteria'rum*, *Incursus arteria'rum*, *Sphygmus*, *Diasphyxis*, (F) *Pouls*. Beating of the arteries, produced by the afflux of the blood propelled by the heart in its contractions. For the sake of convenience, we choose the radial artery at the wrist to detect the precise character of the pulse. These characters relate to the number of pulsations in a given time; to their degrees of quickness; hardness, and strength:—to the equality or inequality, either of the pulsations themselves or of their intervals: to the development or fulness of the artery, and to the different impressions it may produce on the finger.

The following estimates have been made of the pulse at various ages.

Ages.	Number of beats per minute, according to		
	HEBERDEN.	SÖMMERING.	MÜLLER.
In the embryo,	—	—	150
At the birth,	130 to 140	Do.	Do.
One month,	120	—	—
One year,	120 to 108	120	115 to 130
Two years,	108 to 90	110	100 to 115
Three years,	90 to 80	90	90 to 100
Seven years,	72	—	85 to 90
Twelve years,	70	—	—
Puberty,	—	80	80 to 85
Adult,	—	70	70 to 75
Old age,	—	60	50 to 65

It does not appear, from recent researches, that the pulse of the aged is less frequent, but the contrary.

In general, the pulse is more frequent in females and in irritable persons, than in males and those of an opposite temperament. In the healthy state, the pulse, besides having the proper number of pulsations, is neither hard nor unusually soft; it is moderately developed; of a medium strength; and perfectly equal, both as regards the pulsations and their intervals. In disease, it wanders, more or less, from these physiological conditions.

The different characters of the pulse, that have been enumerated, are remarkably great. In a Dictionary, it is necessary to detail them, although many of them are not now regarded; and some are ridiculous.

At times, when an impediment exists to the flow of blood along the pulmonary arteries, either owing to mechanical obstruction or to diminished force of the ventricle, a reflux takes place, along the veins, giving rise to the '*venous pulse*.'

PULSE, ARDENT, *Pulsus ardens*, (F) *Pouls ardent*, *Pouls élevé*. One, which seems to raise itself to a point in order to strike the finger.

PULSUS CAPRI'ZANS, (F) *Pouls caprisant*. One, which seems to leap, as it were.

PULSE, COMPLEX, (F) *Pouls combiné* ou *composé*, *P. compliqué*. A pulse, which has the character of several critical pulses united.

PULSE, CONVUL'SIVE, *Pulsus convulsi'vus*, (F) *Pouls convulsif*. That which is unequally frequent or unequally hard; in short, which resembles the irregular pulsation of a muscular fibre in a state of convulsion.

PULSE, CRIT'ICAL, *Pulsus crit'icus*. A pulse which, after having possessed the characters of irritation, becomes free, open, soft, &c.

PULSE, DEEP, (F) *Pouls profond*. One which cannot be felt without difficulty, and without strong pressure by the finger.

PULSUS DEFIC'IENTS, (F) *Pouls défaillant*, *P. insensible*. One which seems, every instant, about to cease.

PULSE, DEPRESSED, *Pulsus depres'sus*, (F) *Pouls déprimé*. That which is deep and weak.

PULSE, DEVEL'OPED, (F) *Pouls développé*. That which is broad, full, strong, and frequent.

PULSUS DIC'ROTUS, *P. bife'riens*, (F) *P. dicrôte*, *P. rebondissant*, *P. redoublé*. That in which the finger is struck twice at each pulsation: once lightly, the other time more strongly.

PULSE OF IRRITATION, *Pulsus ab irritatio'nē seu nervi'nus seu acrit'icus*. It is frequent, hard, and contracted.

PULSE, HARD, *Pulsus durus*, (F) *Pouls dur*. That in which the pulp of the finger seems to yield to the pulsation.

PULSUS INTRICA'TUS, (F) *Pouls embarrassé*. That which is but little developed, and unequally slow.

PULSE, EQUAL, *Pulsus æqua'lis*. That in which the pulsations resemble each other, and return at equal intervals.

PULSUS STRICTUS, (F) *Pouls étroit*. One, which strikes the finger to a small extent in breadth.

PULSE, FEBRILE, *Pulsus febr'ilis*. One very frequent.

PULSE, FEEBLE, WEAK. *Pulsus deb'ilis*, (F) *Pouls faible*. One, which strikes the finger feebly.

PULSE, FIL'IFORM, *P. thready*. One, which resembles a thread slightly vibrating.

PULSUS FORMI'CANS, (F) *Pouls formicant*. One which resembles, by being small and scarcely perceptible, the motion of an ant.

PULSUS FORTIS; a strong pulse; (F) *Pouls fort*, *P. véhément*. One, which strikes the finger strongly.

PULSE, FREQUENT, (F) *P. agité*, *P. précipité*, *Pulse quick*. One, which strikes more frequently than usual in a given time.

PULSE, FULL, *Pulsus plenus*, (F) *Pouls plein*. One, which gives the notion of great repletion in the vessel.

PULSE, LARGE, *Pulsus crassus*, *P. magnus*, (F) *Pouls grand*, *P. large*. That which is large and full.

PULSE, GUT'TURAL, *Pulsus guttura'lis*, (F) *Pouls guttural*. A pulse, which has been supposed to indicate the termination of affections of the throat.

PULSE, HEMORRHOI'DAL, (F) *Pouls des hé-morrhoides*. A critical pulse, announcing the appearance of the hemorrhoidal flux. It is

described as unequal;—the pulsations not being alike in force, and still less the intervals.

PULSE, HEPATIC, (F) *Pouls du Foie*. A pulse, imagined to indicate affections of the liver. It is not worthy of description.

PULSUS INEQUA'LIS. *Unequal pulse*, (F) *Pouls inégal*. One, whose pulsations are not alike, or return at unequal intervals.

PULSUS INFERIOR, (F) *Pouls inférieur*, *P. abdominal*, *P. ventral*. One, supposed to announce evacuations below the diaphragm.

PULSE, INTERCURRENT, One, in which a superfluous pulsation seems to occur from time to time.

PULSE, INTERMITTENT, (F) *Pouls intercadent*. One, in which the pulsations fail from time to time.

PULSE, INTESTINAL, (F) *Pouls des Intestins*, *P. de la diarrhée*. A critical pulse, presumed to announce an evacuation by the intestines.

PULSE, IRREGULAR, *Pulsus anormalis*. One, whose pulsations are unequal, and return at unequal intervals.

PULSE, LANGUID, (F) *Pouls languissant*. A slow and feeble pulse.

PULSE, LONG. One, which strikes the finger to a great extent in length.

PULSE, LOW, *Pulsus humilis*, (F) *Pouls bas*. One, in which the pulsations are scarcely perceptible.

PULSE, MYURUS, (F) *Pouls myure*. One, which goes on diminishing. See Myurus.

PULSE, NASAL, (F) *Pouls nasal*, *P. capital*, *P. du Nez*. One, supposed to announce the end of an irritation in the nasal fossæ.

PULSE, NATURAL, (F) *Pouls naturel des Adultes*, *P. parfait*, *P. des Adultes*, *P. modéré*. One that is equal and regular in strength and frequency; compressible, and devoid of hardness.

PULSE, UNDULATING, (F) *Pouls ondulant*, *P. ondoyant*. One which resembles, in its movements, those of the waves.

PULSE, ORGANIC, (F) *Pouls organique*. One, which indicates the affected organ, or the organ by which any evacuation will take place.

PULSE, PECTORAL, (F) *Pouls de l'expectoration*. A critical pulse, announcing the termination of some pulmonary irritation.

PULSE, REGULAR, *Pulsus normalis* aut *regularis*. One, whose pulsations are equal, and succeed each other at equal intervals.

PULSE, RESISTING, (F) *Pouls résistant*. One a little tense, a little hard.

PULSE, CONTRACTED, (F) *Pouls serré*, *P. concentré*. One, whose pulsations are narrow, deep, and slightly hard.

PULSUS SERRINUS, (F) *Pouls serrin*, *P. serratile*. One which strikes, sometimes strongly, at others feebly, and recalls the idea of a saw.

PULSE, SHARP, (F) *Pouls prompt*, *P. vite*, *P. vif*. One, which strikes the finger sharply, rapidly. When to a greater extent, it is called a *jerking pulse*.

PULSE, SLOW, *Pulsus tardus*, (F) *Pouls lent*, *P. tardif*. *P. rare*. One, which strikes the finger slowly.

PULSE, SMALL, *Pulsus parvus*, (F) *Pouls petit*. One, whose pulsations are slender and weak.

PULSE, SOFT, *Pulsus mollis*, (F) *Pouls mou*. One, which yields under the finger.

PULSE, SIMPLE, *Pulsus simplex*. A critical pulse, indicating an evacuation by one organ only.

PULSE, SUPPLE, *Pulsus elasticus*, (F) *Pouls souple*. One, in which the pulsations have strength without hardness.

PULSE STOMACHAL, (F) *Pouls stomacal*, *P. de l'estomac*. One, supposed to announce an evacuation by the stomach.

PULSUS, SUDORALIS, (F) *Pouls Sudoral*, *P. de la sueur*. A critical pulse, indicating an approaching perspiration.

PULSUS SUPERIOR, (F) *Pouls supérieur*. A critical pulse, supervening on irritation of organs situate above the diaphragm.

PULSE, TENSE, CORDY, *Pulsus tensus*, (F) *Pouls tendu*, *P. roide*. One, in which the artery resembles a cord fixed at its two extremities. When resembling a wire, it is called *wiry*.

PULSE, TREMULOUS, *Pulsus tremulens*, (F) *Pouls tremblant*, *P. palpitant*. One, in which each pulsation oscillates.

PULSUS URINALIS, (F) *Puls de l'urine*. A critical pulse, fancied to denote an approaching evacuation of urine.

PULSUS UTERINUS, (F) *Pouls Uterin*, *P. de la matrice*, *P. des Règles*. One, which indicates the flow of the menses, or the occurrence of metrorrhagia.

PULSE, VERMICULAR. That which imitates the movement of a worm.

PULSE, VIBRATING; a *Jarring Pulse*. One, in which the artery seems to vibrate like a musical string.

PULSUS VACUUS, (F) *Pouls vide*. One, which gives the idea of emptiness of the artery.

PULSILEGIUM, *Pulsilogium*, *Pulsimeter*, from *pulsus*, 'the pulse,' and *lego*, 'I tell.' *Sphygmometer*. Any instrument for measuring the quickness of the pulse.

PULSIMANTI'A; from *pulsus* and *μαντια*, 'divination.' The art of predicting or prognosticating by the pulse.

PULVERIZATION, *Pulverizatio*, *Pulveratio*, *Coniostosis*. The operation of dividing substances, so as to reduce them to powder.

PULVIS, *Conis*, (F) *Poudre*. A substance, reduced into small particles by pulverization. *Simple powders* are those of a single substance; *compound*, those which result from a mixture of several different powders. An *impalpable powder* is one which is so fine, that it can scarcely be felt under the finger. A compound powder was, formerly, called *Species*, (F) *Espèce*.

PULVIS ALOES COMPOSITUS, *Compound Pow-*

der of Aloes, *Pulvis Aloës cum Guaiaco*, *P. aloët'icus cum Guaiaco*. (*Aloës spicat. ext. 3 iss, guaiac. gum. res. 3 j, pulv. cinnam. comp. 3 ss*. Rub the aloes and guaiacum separately, then mix the whole. *Ph. L.*) Cathartic, stomachic, and sudorific. Dose, gr. x to 3 j.

PULVIS ALOES CUM CANEL'LA, Powder of Aloes with Canella, *Species Hi'eræ picræ, Hiera picra, Pulvis Aloët'icus*. (*Aloës hepat. 3 j, canellæ albæ 3 iij*. Rub separately into a powder, and mix. *Ph. D.*) A warm cathartic. Dose, gr. x to 3 j.

PULVIS DE AMA'RIS COMPOS'ITUS, *Pulvis antiarthrit'icus amarus*, (F) *Poudre antiarthritique amère*. (*Rad. gentian., aristoloch. rotund., aa p. m 3, flor. centaur. min. p. 4, fol. chamædr. chamæpith. manipul. f. pulvis, Ph. P.*) In gouty affections, dyspepsia, &c. Dose, gr. xx.

PULVIS ANTILYS'SUS, Mead's Powder against the bite of a mad dog. It consisted of ash-coloured liverwort in powder, with an equal quantity of black pepper; a drachm and a half of the two forming a dose for an adult.

PULVIS DE ARO COMPOS'ITUS, Compound Powder of Arum, (F) *Poudre de Birckmann*. (*Rad. ari, acori veri, pimpinell. saxifrag. aa 40 p., ocul. cancror. ppt. 12 p., cinnam. 7 p., potassæ sulph. 6 p., ammoniæ muriat. 2 pt., f. pulv. Ph. P.*) Sternutatory.

PULVIS AS'ARI COMPOS'ITUS, *P. sternutato'rius*, *P. errhi'nus*, *P. capita'lis Sancti An'geli*, *P. cephal'icus*, Cephalic snuff, Compound Powder of Asarabac'ca, (F) *Poudre d'asurum composée dite sternutatoire*, *P. de Saint-Ange*. (*Folior. asar. europ. p. tres., fol. origan. majoranæ, flor. lavand. spic., sing. p. 1*. Rub into a powder. *Ph. L.*) Sternutatory.

PULVIS CINNAMO'MI COMPOS'ITUS, Compound Powder of Cin'namon, *Pulvis seu Species Imperato'ris*. *P. vitæ Imperato'ris*, *P. Diarom'aton*, *Species diacinnamo'mi*, *S. lætifican'tes Rhazis*, *Tra'gea aromat'ica*, *Species Diam'bræ sine odora'tis*, *Species aromat'icæ*, *Pulvis aromaticus*. (F) *Poudre de cannelle composée ou aromatique*. (*Cort. cinnam. 3 ij, sem. cardam. 3 iss, rad. zingib. 3 j, piperis long. fruct. 3 ss*. Rub to a fine powder. *Ph. L.*) Stimulant and carminative. Dose, gr. x to 3 j.

PULVIS COBBII seu TUNQUINEN'SIS. The famous Tonquin powder, introduced into England by a Mr. Cobb. It was composed of 16 grains of musk, and 48 grains of cinabar mixed in a gill of arrack. It was formerly regarded as a specific in hydrophobia.

PULVIS CONTRAYER'VÆ COMPOS'ITUS, *Lapis contrayervæ*, *Contrayerva balls*, Compound Powder of Contrayer'va, *Pulvis cardiacus*, *P. alexite'rius*, *P. Mantua'nus*. (*Contrayerv. rad. contrit. 3 v, test. præp. 3 iss. Mix. Ph. L.*) Stimulant and sudorific. Dose, gr. xv to 3 ss.

PULVIS CORNACHI'NI, *Diaceltates'son Para-*

celsi, *Earl of Warwick's Powder*, *Pulvis Ox'ydi Stibii compos'itus*, *Pulvis Com'itis Warwicen'sis*, *Pulvis de Tribus*, *Cer'berus Triceps*, *Pulvis Scammo'nii antimonial'is*. (F) *Poudre Cornachine*. (*Scammon. Alep., potass. supertart., antim. diaph. aa p. æ. f. pulvis. Ph. P.*) Cathartic. Used chiefly in cutaneous diseases. Dose, 3 ss to 3 j.

PULVIS CORNU USTI CUM O'PIO, *Pulvis opi-a'tus*, Powder of Burnt Hartshorn with opium, (F) *Poudre de corne brulée avec l'opium*. (*Opii duri cont. 3 j, corn. ust. et præp. 3 j, coccor. cont. 3 j. Mix. Ph. L.*) Ten grains contain one of opium. Anodyne.

PULVIS CRETÆ COMPOS'ITUS, *P. Carbona'tis Calcis compositus*, Compound Powder of chalk, *P. creta'ceus*, *Species e Scordio sine opio*, *Diascor'dium*, 1720. *Pulvis antac'i-dus*, *P. terres'tris*, *Species Diacre'tæ*, (with Bole Armeniac in place of chalk—the *Pulvis e Bolo compositus sine opio*, (F) *Poudre de craie composée*, (*Cretæ ppt. 3 ss, cinnam. cort. 3 iv, tormentill. rad., acaciæ gum., sing. 3 iij, pip. long. fruct. 3 iv*. Reduce separately to a fine powder and mix. *Ph. L.*) Antacid, stomachic, absorbent. Dose, gr. xx to 3 ij.

PULVIS CRETÆ COMPOSITUS CUM OPIO, Compound Powder of Chalk with opium, *Pulvis e Cretâ compositus cum opio* (with Bole Armeniac instead of chalk—*Pulvis e Bolo compositus cum opio*, *Species e Scordio cum opio*,) (F) *Poudre de craie composée avec l'opium*. (*Pulv. cret. c. 3 vjss, opii duri cont. 3 iv. Mix. Ph. L.*) Contains one grain of opium in 40. Anodyne and absorbent. Dose, 3 j to 3 ij.

PULVIS DUCIS PORTLAN'DIÆ, Duke of Portland's Gout Powder. (*Rad. aristoloch., gentianæ, summit. chamædr., centaur. min. aa p. æ.*) Dose, 3 ss to 3 j.

PULVIS E GUMMI GUTTA, *P. Cambog'ie compositus*, *P. hydragog'us*, Camboge Powder, (F) *Poudre hydragogue ou de gomme gutte*, *P. de Quercetanus*. (*Rad. jalap. 24 p. rad. mechoacan. 12 p., cinnam. et rhei. aa 8 p., gum. cambog. 3 p., fol. soldanellæ sicc. 6 p., semin. anisi 12 p., fiat pulvis. Ph. P.*) A drastic cathartic. In anasarca and in worms. Dose, gr. xv to xxx.

PULVIS GUMMO'SUS ALKALI'NUS, *Sapo vegeta'bilis*, (F) *Poudre de savon végétal*. (*Guaiac. pulv. 32 p., potass. carb. 4 p.* Make into a powder. *Ph. P.*) Antacid.

PULVIS EX HELMINTHOCOR'TO COMPOSITUS, *P. vermif'ugus absque mercu'rio*, (F) *Poudre vermifuge sans mercure*. (*Fuc. helminthocort., sem. contra., summitat. absinth., tana-ceti, fol. scordii, sennæ, rhæi. aa. p. æ, fiat pulvis. Ph. P.*) Dose, 3 j to 3 j.

PULVIS IPECACUANHÆ COMPOSITUS, *P. alexi-te'rius*, *P. anod'ynus*, *P. diaphoret'icus*, *P. diapno'icus*, *P. sudorificus*, *P. sudorificus Dove'ri*, Compound powder of Ipecacuanha, *P. Ipecacuanhæ et Opii*, Dover's Powder, (F) *Poudre de Dover ou d'ipécacuanha et d'opium*, *P. de Dover*. (*Ipecacuanh. rad.*

cont., opii duri cont., sing. 3j, potassæ sulphat. cont. 3j.) Mix. Diaphoretic. Dose, gr. v to gr. xij.

PULVIS JALAPÆ COMPOSITUS, *P. Diatur'pethi compositus*, Compound Powder of Jalap, *Pulvis laxans*, *P. purgans*, *P. laxativus vegetabilis*, *P. laxans cum salē*, *P. jalap'æ salinus*, *P. J. tartar'icus*, *Species Diapalapæ*, (F) *Poudre de jalap composée*. (*Pulv. jalap.* 1 p., *potass. supertart.* 2 p. Mix. Ph. E.) Cathartic. Dose, ʒj to 3ij.

PULVIS KINO COMPOSITUS, Compound Powder of Kino, (F) *Poudre de kino composée*. (*Kino* 3xv, *cort. cinnam.* 3iv, *opii duri* 3j. Rub each to powder and mix. Ph. L.) Astringent. Dose, gr. v to xx.

PULVIS DE MAGNE'SIA COMPOSITUS, *P. Galactopæ'us*, *P. Nutri'cum*, *P. Infan'tum*, *P. Infantum antac'idus*, *P. pro Infan'tibus*, *P. antiac'idus*, *P. absor'bens*, *P. epilepticus Marchio'num*, Compound Powder of Magnesia, (F) *Poudre absorbante et anti-acide*. (*Magnesia*, *sacchar.* aa p. æ. Mix. Ph. P.)

PULVIS MYRRHÆ COMPOSITUS, *P. e. Myrrhā compositus*, Compound Myrrh Powder, *Pulvis ad ul'cera ten'dinum*, *P. Emmenagogus*, (F) *Poudre Balsamique*. (*Myrrhæ*, *sabinæ*, *rutæ*, *castor. russ.* aa 3j.) A stimulant, antispasmodic, and emmenagogue. Dose, gr. xv to xl.

PULVIS QUERCUS MARINÆ, Powder of Yellow Bladder-Wrack. (The wrack in fruit, dried, cleaned, exposed to a red heat in a crucible with a perforated lid, and then reduced to powder. Ph. D.) Virtues dependent on the iodine. Used, consequently, in bronchocele, &c. Dose, gr. x to xl.

PULVIS SCAMMO'NEÆ COMPOSITUS, Compound Powder of Scammony, *Pulvis e Scammonio compositus*, *Pulvis Scammonii*, *Pulvis de Jalapā et Scammo'nio compositus*, *dictus Cathar'ticus*, (F) *Poudre cathartique ou Poudre de Scammonée composée*. (*Scammon.*, *ext. jalap. dur.*, sing. 3ij, *zingib. rad.* 3ss. Rub separately to a powder and mix. Ph. L.) Cathartic. Dose, gr. viij to gr. xv.

PULVIS SCAMMONII CUM ALOE, *P. e Scammonio cum Aloē*, Scammony and Aloes Powder. (*Scammon.* 3vj, *ext. jalap. dur.*, *aloēs socotr.* aa 3iss, *zing.* 3ss.) Cathartic. Dose, gr. x to xv.

PULVIS SENNÆ COMPOSITUS, Compound Powder of Senna, *Pulvis e Sennā compositus*, *P. e Sennā compositus*, *Pulvis Diase'næ*, (F) *Poudre de séné composée*. (*Sennæ folior.*, *potass. supertart.*, sing. 3ij, *scammon.* 3ss, *rad. zingib.* 3ij. Ph. L.) Cathartic, hydragogue. Dose, ʒj to 3j.

PULVIS DE SENNA SCAMMONIO ET LIGNIS COMPOSITUS, *dictus ANTIARTHRIT'ICUS PURGANS*, (F) *Poudre de Pérard*. (*Gum. arab.*, *potass. supertart.*, *fol. sennæ*, *chinæ*. aa, 4 p., *scammon.*, *rad. sarsapar.*, *chinæ*, *guaiac. lign.*, aa 2. p., *fiat pulvis*. Ph. P.) Purgative. Used to obviate gout. Dose, 3j.

PULVIS SULPHA'TIS ALU'MINÆ COMPOSITUS,

P. aluminosus, *P. alu'minis kinosa'tus*, *Pulvis stypticus*, *Pulvis aluminis compositus*, *Alumen kinosa'tum*, Compound Alum Powder, (F) *Poudre styptique ou d'alun composée*. (*Sulphatis aluminæ*, p. iv, *kino*, p. 1. Ph. E.) Astringent. In intestinal hemorrhage and diarrhœa. Dose, gr. x to xv.

PULVIS DE SULPHURE ET SCILLA, *P. antiasthmaticus*, *P. incisi'vus*, *P. ad mucum pulmona'lem libe'rius cien'dum*, (F) *Poudre incisive ou anti-asthmaticque*. (*Sacchar. alb.* p. 3, *sulphur. lot.* p. 2, *scillæ. siccata.* p. j. Ph. P.) Dose, gr. v to 3ss.

PULVIS DE SULPHA'TE POTAS'SÆ COMPOSITUS, *P. tem'perans Stah'lii*, (F) *Poudre tempérante de Stahl*. (*Potass. sulph. et nitrat.* aa 9 p., *hydrarg. sulph. rubr.* 2 p. Mix. Ph. P.) As an antiphlogistic and in acidity of the first passages. Dose, ʒj to ʒij.

PULVIS E SULPHURE TO HYDRAR'GYRI NIGRO ET SCAMMO'NIO, *dictus VERMIFUGUS MERCURIALIS*, (F) *Poudre vermifuge mercurielle*. (*Pulv. cornachin.*, *hydrarg. sulphuret. nigr. recent. præp.*, aa p. æ. Mix. Ph. P.) Dose, ʒj to 3ss.

PULVIS TRAGACAN'THÆ COMPOSITUS, *Species Diatragacan'thæ frig'idæ*, *Pulvis e Tragacanthā compositus*, Compound Powder of Tragacanth, (F) *Poudre de gomme adragant composée*. (*Tragacanth. contus.*, *acaciæ gummi cont.*, *amyli*, sing. 3iss, *sacch. purif.* 3iij. Ph. L.) Demulcent. In coughs, &c. Dose, 3ss to 3iij.

PUMEX, *Pumice*, (F) *Pierre Ponce*. This was formerly employed as a desiccative and dentifrice.

PUNA, *Veta*. A sickness common in the elevated districts of South America, which attacks those unaccustomed to breathe the rarefied atmosphere. It strongly resembles sea-sickness, with a most acute and depressing throbbing in the head. It does not often affect the respiration considerably.

PUNCH, *Rhizagra*, ριζαγρα, from *pun'gere*, 'to prick.' *Repulso'rium*, (F) *Repoussoir*. A surgical instrument, used for extracting the stumps of teeth.

PUNCTUM AU'REUM, *Punctu'ra aurea*. Formerly, when an intestinal hernia was reduced;—by an incision made through the integuments down to the upper part of the spermatic vessels, a golden wire was fixed and twisted, so as to prevent the descent of any thing down the tunica vaginalis.

PUNCTUM SA'LIENS. The first point, which makes its appearance, after the fecundation of the germ. It is generally applied to the heart of the embryo.

PUNCTURE, *Punctu'ra*; from *Pun'gerē*, 'to prick.' *Tresis Punctura*, (F) *Piqure*. A wound made by pointed instruments, such as swords, bayonets, needles, thorns, &c. A puncture, is, generally, of trifling consequence; but, sometimes, it becomes important from the part concerned or injury done to some nerve.

PUNCTURING. Same etymon. *Com. punc'tio, Paracente'sis*, (F) *Ponction*. The operation of opening, by means of a trocar, lancet, &c. any natural or accidental cavity; with the view of evacuating any fluid, effused or accumulated there. *Paracentesis* is a sort of puncturing.

PUNGENT, (F) *Pongitif*. Pain is said to be pungent, when it seems as if a pointed instrument were forced into the suffering part.

PU'NICA GRANA'TUM. The *Pomegranate*, *Rhoa*, *ῥοα*, *Rhœa*, *ῥοιζ*, *Grana'tum*, *Malograna'tum*, (F) *Grenadier*. Family, *Myrtoideæ*. Sex. Syst. *Icosandria Monogynia*. The rind of the fruit, called *Malichor'ium*, *Malacorium*, or *Malicorium*; and the flowers—called *Balaustine flowers*—are the parts used in medicine. They have been employed both internally and externally as astringents. The seeds are called *Cocco'nes*, *κοκκωνες*.

PUPIL, *Pupil'la*, *Pupula*, *Pupil'io*, *Visio*, *Corè*, *Cora*, *Rhoz*, *Fene'stra seu Nigrum seu Foramen Oculi*, *Prunell'a*, *Lumen*, (F) *Pupille*, *Prunelle*. *Sight of the eye*. The aperture of the iris, through which the rays of light pass, that have to paint the image of an object on the retina. This aperture can be dilated or contracted so as to allow a greater or smaller quantity of luminous rays to penetrate. The pupil, in man, is round, and by it the anterior and posterior chambers of the eye communicate with each other. In the fœtus, during the first six months of gestation, it is closed by the pupillary membrane.

PU'PILLARY, *Pupilla'ris*. That which belongs to the pupil.

The **PUPILLARY MEMBRANE**, *Membra'na Pupillaris*, *Pupil'læ velum*, *Membra'na Wachendorfia'na*. The central aperture of the iris is closed, in the fœtus, during a certain period of gestation, by a very thin membrane. It disappears in the 7th month.

PU'PULÆ. The pulps or extremities of the fingers.

PUR'GATIVE. *Purgati'vus*, *Purgans*, *Moch'licus*, *Catoret'icus*, *Catoter'icus*, *A cathartic* (q. v.), (F) *Purgatif*. A medicine, which operates more powerfully on the bowels than a laxative;—stimulating the muscular coat, and exciting increased secretion from the mucous coat.

PURIFORM, *Puriform'is*; from *pus*, and *forma*. That which has the appearance of pus.

PUR'PURA, *Porphyra*. This word has been employed in many senses. (See Index.) It generally means;—livid spots on the skin from extravasated blood; languor and loss of muscular strength; pains in the limbs.—(F) *Pourpre*.

In the **PURPURA SIMPLEX**, *Porphyra simplex*, *Pete'chiæ sinè febre*, *Phænig'mus Pete'chialis*, *Profu'sio subcuta'nea*, *Pete'chial Scurvy*, the spots are numerous, but small and fleabite-shaped; chiefly on the breast, arms, and legs; with paleness of countenance.

In the **PURPURA HÆMORRHAG'ICA**, *Por-*

phyra hæmorrhagica, *Stomac'acè universalis*, *Hæmorrha'gia universa'lis*, *Petechianosis*, *Morbus maculosus hæmorrhag'icus Werlhofii*, *Pelio'sis*, *Hæmorrhæ'a petechia'lis* or *Land Scurvy*, (F) *Scorbut*—the spots are circular and of different sizes; often in stripes or patches, irregularly scattered over the thighs, arms, and trunk; with occasional hæmorrhage from the mouth, nostrils, or viscera; and great debility and depression of spirits.

In the **PORPHYRA NAU'TICA**, *Scorbu'tus*, *Pechytyr'bè*, *Gingibra'chium*, *Gingipe'dium*, *Scelotyr'bè*, *Stomac'acè*, *Scorbu'tus nau'ticus* or *Sea scurvy*, (F) *Scorbut*, there are spots, of different hues, intermixed with the livid, principally at the roots of the hair; the teeth are loose; the gums are spongy and bleeding;—the breath fœtid, and the debility universal and extreme.

This occurs chiefly at sea, after exposure to a moist, cold, foul atmosphere; with long use of salted food and stagnant water.

All these varieties of purpura resemble each other considerably. In the two first, however, there seems, at times, to be some excitement, which has led to the employment of purgatives and even of bleeding with advantage.

Generally speaking, the use of the mineral acids, will be indicated; and, in the sea scurvy, vegetable food and vegetable acids must be regarded as the best antiscorbutics. Nitre is, also, a good antiscorbutic, and in cases of great prostration it may be mixed with Peruvian bark or the sulphate of quinine. Tamarinds and cream of tartar, made into drink are, also, serviceable. But the great remedies are change from low to cheerful spirits; from filth to cleanliness; and from a cold and damp, to a temperate and dry, climate, with change of food.

The general principles of management are the same as in the land scurvy.

PURSINESS, *Dyspnæ'a pinguedino'sa*, (F) *Pousse*. Dyspnœa accompanied with oppressive fatness.

PURULENT, *Purulen'tus*, *Empyos*, *Pyodes*. That which has the character of pus or consists of pus;—as *purulent matter*, *a purulent collection*, &c.

PUS, *Matter*, *Humor purulen'tus*, *Pyon*. A secretion from inflamed textures, and especially from the cellular membrane. It is, almost always, of the same nature, whatever may be the part it proceeds from. Pus of a good quality,—*laudable pus*,—(F) *Pus louable*, is of a yellowish-white colour; opaque; inodorous, and of a creamy appearance. Heat, acids, and alcohol coagulate it. When analyzed by Schwilgué, it afforded albumen and water, a particular extractive substance, and a small quantity of soda, phosphate of lime, and other salts.

PUSILLA'TUM, *Pusula'tum*, from *pusillus*, 'small.' A coarse powder.

PUSTULE, *Pus'tula*, *Ecpye'sis*, *Ecthy'*

ma, Benath, Bube, Epanas'tasis. An elevation of the cuticle, with an inflamed base containing pus. Willan and Bateman reckon four varieties of pustules—the *Phlyza'cium*, *Psydra'cium*, *Achor*, and *Favus*. The varicellous pustule is often called, by the French, *Grain*; by us, *Pock*.

PUTREFACTION, *Putrefac'tio*, *Putrescen'tia*, *Putridity*, *Putre'do*, *Putrid'itas*, *Sepsis*, *Putrid fermenta'tion*, *Putrefac'tive fermenta'tion*. A decomposition, experienced by animal substances, when deprived of life and placed under particular circumstances. The presence of water is indispensable; of air, not; for putrefaction may occur in water, that has been boiled or in the earth. The temperature, most favourable to it, is from 66° to 90° of Fahrenheit. The most common products of putrefaction are water, carbonic acid, acetic acid, ammonia, carburetted hydrogen, and a semi-putrid substance, which is volatilized and has an infected odour. It has been supposed that something like putrefaction may occur in the living body; as in case of putrid fever.

PUTRID, *Putridus*, *Sapros*. An epithet for some affections, in which the matters excreted and the transpiration itself exhale a smell of putridity. It is particularly applied to typhus.

PUTRILA'GO, (F) *Putrilage*. The pul-taceous matter or *slough*, which forms in certain gangrenous and other ulcers, and is thrown off.

PYLEMPHRAX'IS, from *πύλη*, 'porta,' 'a gate,' and *εμπραξις*, 'obstruction.' Obstruction of the vena portæ.

PYLOR'IC, *Pylor'icus*. That which relates to the pylorus. An epithet given to different parts.

1. The PYLORIC ARTERY or *Arte'ria Corona'ria dextra*, (F) *Petite artère gastrique droite*, arises from the hepatic, and is distributed to the pylorus and to the lesser curvature of the stomach; anastomosing, particularly, with the A. coronaria ventriculi and A. gastro-epiploica dextra.

2. The PYLORIC VEIN follows the same distribution as the artery.

PYLO'RUS, *Jan'itor*, *Portona'rium*; from *πύλη*, 'a gate,' and *φυλακς*, 'a guardian.' *Orific'ium dex'trum ventric'uli*, *Ostium ventric'uli duodena'le seu pylor'icum seu dextrum seu infe'rius*, *Orificium dextrum seu inferius seu Egres'sus seu Os infe'rius seu Annu'lus seu Sphincter ventric'uli*, *Ostia'rius*, *Hostia'rius*, (F) *Pylor*. The lower or right orifice of the stomach;—*Orifice intestinal* (Ch). Called *Pylorus*, because it closes the entrance into the intestinal canal and is furnished with a circular, flattened, fibro-mucous ring, which occasions the total closure of the stomach, during digestion in that organ. This ring has been called the *Valve of the Pylorus*, *Sphincter Pylori*, (F) *Valvule de pylor*. It is a fold of the mucous and muscular mem-

branes of the stomach and is the *Pyloric muscle* of some authors.

PYOGEN'IA, *Puogen'ia*; from *πύον*, 'pus,' and *γενεσις*, 'generation.' Generation of pus. The theory or mechanism of the formation of pus. Some have believed, that pus is formed in the arterial system, and is deposited, by way of excretion, in the inflamed part: others, that it is formed by the destruction of solid parts. These opinions are, however, inadmissible; and pus is now regarded as the product of a particular secretion in the diseased part.

PYOP'TYSIS, from *πύον*, 'pus,' and *πτύω*, 'I spit.' Spitting of pus.

PYORRHŒ'A, from *πύον*, 'pus,' and *ῥέω*, 'I flow.' A discharge of pus.

PYR'AMID. *Pyr'amis*, *Eminen'tia pyramida'lis tym'pani*. A small, bony projection in the cavity of the tympanum, which is excavated, to lodge the muscle of the stapes. Also, the *Centre-pin* of the trephine.

PYRAMIDA'LIS ABDOM'INIS, *M. Fallo'pii vel succenturia'tus vel auxilia'rius*, *Pubio-ombilical*, *Pubio-sous-ombilical* (Ch.), (F) *Pyramidal de l'abdomen*. A small, fleshy pyramidal fasciculus, whose existence is not constant; and which is inserted, by its base, into the upper part of the pubis, and terminates, by its summit, at the inferior part of the linea alba. When it contracts it stretches the linea alba.

PYRAMIDA'LIS, *P. Fem'oris*, *Sacro-trochan'terien*, (Ch.) *Iliacus exter'nus*, *Pyriform'is*, *Piriformis*, *Primus et supe'rior quadrigem'i-nus*, (F) *Pyramidal de la cuisse*. A flat, triangular muscle, situate at the posterior part of the pelvis. By its base it is attached to the anterior surface of the sacrum; to the corresponding surface of the great sacro-sciatic ligament and to the posterior part of the ilium. It terminates by a tendon, which is attached to the inner surface of the great trochanter. This muscle is a rotator of the thigh outwards, or of the pelvis in an opposite direction.

PYRAMIDA'LIS NASI, *Proc'er'us nasi*, *Nasum dila'tans*, *Fronto-nasal* (Ch.), (F) *Pyramidal du nez*. It is thin, triangular, and has its summit upwards. Above, it is continuous with the occipito-frontalis. It descends vertically before the root of the nose, on which it terminates; becoming confounded with the transversalis. This muscle wrinkles the skin of the root of the nose transversely, and stretches that which covers the tip.

PYREC'TICA, febrile; from *πυρε'tος*, 'fever.' Fevers: the first order in the class *Hæmatica* of Good.

PYRETOL'OGY, *Pyretolo'gia*; from *πυρε'tος*, 'fever,' and *λογος*, 'a discourse.' *Pyrol'ogy*. A treatise on fevers. A title, sometimes given to a monograph on fever.

PYREX'IÆ, from *πυρ*, 'fire.' *Febrile diseases*. The first class of Cullen's *Nosology*.

PYRIPH'LEGES, πυριφλεγης, from πυρ, 'fire,' and φλεγω, 'I burn.' One, who has a burning fever.

PYRMONT, MINERAL WATERS OF. A celebrated mineral spring, on the Weser, in Westphalia. The waters are tonic, and contain common salt, muriate of magnesia, sulphates of soda and magnesia, and carbonates of iron, lime, and magnesia dissolved in carbonic acid, with some resinous principles. It is a highly carbonated chalybeate.

ARTIFIC'IAL PYRMONT WATER may be formed of *Epsom salt*, gr. xv, *Common salt*, gr. v, *Magnes. alb.* gr. x, *Iron filings*, gr. v, *Water* ℥ iij. Impregnated with the gas from *Marble powder* and *Sulphuric acid*, aa 3 vij.

PYR'OLA, *P. rotundifolia*, *Round-leaved wintergreen*. Order, *Pyrolaceæ*. This plant was once used as a gentle astringent and tonic.

PYROLA UMBELLATA, *Chimaph'ila vel Chimaph'ila umbellata*, *C. Corymbosa*, *Ground-holly*, *Pippsis'eva*, *Wintergreen*. This common American plant is allied to the *uva ursi*, in botanical as well as medical qualities. It is tonic and diuretic. The bruised leaves irritate the skin.

PYROLIG'NEOUS ACID, *Acidum Pyro-aceticum*, *A. Ligni pyro-oleosum*, *A. Aceticum empyreumaticum*, *A. Ligneum*, *Pyrolignic Acid*, (F) *Acide Pyroligneux*. An acid obtained by distillation, from wood, coal, &c., which was once believed to be of a peculiar character. It is now known to be formed of acetic acid and an empyreumatic oil, of which it may be freed; and, in this state, is sold in commerce for the *Acetum distillatum*. It is used for similar purposes as distilled vinegar, and for preserving animal substances. It has also been used as an antiseptic in gangrene and sphacelus, and to fowl ulcers; wherever indeed *Creosote* is indicated.—The dose of the impure pyroligneous acid internally, is from 5 to 30 drops, three or four times a day.

PYROPH'AGUS, *Igniv'orus*, from πυρ, 'fire,' and φρω, 'I eat.' One who eats fire. A juggler, who eats bodies in a state of ignition.

PYRO'SIS, *Limo'sis cardial'gia sputatoria*, *Ardor stomachi*, *A. Ventric'uli*, *Cardial-*

gia sputatoria, *Pyrosis Suec'ica*, *Apocend'sis vom'itus pyrosis*, *Dyspep'sia pyrosis*, *Water-brash*, *Waterqualm*, *Blackwater*, (F) *Fer chaud*, *Cremason*, *Soda*. This affection consists of a hot sensation in the stomach, with eructations of an acrid, burning liquid, that causes a distressing sensation in the parts over which it passes. Attention to diet, and the use of bitter absorbents, will usually relieve, when the disease is functional. Occasionally, it occurs, symptomatic of organic disease of the stomach.

PYROTECH'NY, *Pyrotechnæ*, from πυρ, 'fire,' and τεχνη, 'art.' Art of making fireworks, &c. Also, chymistry. M. Percy has used the term *Pyrotechnie Chirurgicale* for the art of applying fire or the actual cautery in Surgery.

PYRUS CYDO'NIA. The *Quince Tree*, (F) *Coignassier*. Family, *Rosaceæ*. Sex. Syst. *Icosandria Pentagynia*. The fruit is termed *Cydo'nium Malum*, *Malum canum*, *Malum coto'neum*, *Quince*, (F) *Coign*. Quince seeds are, sometimes, used in decoction (q. v.) as a demulcent. The fruit makes a pleasant preserve.

PYRUS MALUS, *Melea*. The *Apple Tree*, (F) *Pommier*. Apples are an agreeable fruit, when ripe. When unripe, they disagree, especially with those of weak digestive powers. The same may be said of the *pear*: the fruit of the *Pyrus commu'nis*, *Apios*, *P. Sorbus*, *P. Sativa*, (F) *Poirier*.—Apple, (F) *Pomme*.—Pear, (F) *Poire*.

APPLE BRANDY is a spirituous liquor obtained from the juice of the apple, and much used in the United States.

PYUL'CON, from πυον, 'pus,' and εκω, 'I extract,' (F) *Tire-pus*. A surgical instrument for extracting pus from any cavity. Many pyulca have been employed, all of which act as exhausting syringes.

PYU'RIA, *Pyoturia*, *Pyorrhœ'a urina'lis*, from πυον, 'pus,' and ουρον, 'urine.' Discharge of purulent urine. A symptom, which occurs in many diseases; particularly in cases of renal calculi, and in organic affections of the bladder.

PYXIS, πυξις. A box; a pill-box. Also, an emollient ointment.—Aëtius and Paulus.

Q

Q. See Abbreviation.

QUADRANS, *Quarta pars libræ*. A quarter of a pound. Three ounces (Troy).

QUADRA'TUS FEMORIS, *Quadratus*,

from *quadra*, 'a square.' *Tuber-Ischio-trochan-térien*, *Ischio-sous-trochantérien* (Ch.) *Quar-tus quadrigem'inus quadratus*, (F) *Carré de la Cuisse*. A muscle, situate at the posterior

and upper part of the thigh. It is thin, flat, and quadrilateral, and is attached to the outer part of the tuberosity of the ischium; whence it proceeds transversely to the inferior part of the posterior margin of the great trochanter. It rotates the limb, turning the toe outwards.

QUADRATUS LUMBO'RUM, *Quadratus seu Lumba'ris externus; Ilio-lumbi-costal, Flectens par lumbo'rum quadra'tus dorsi, Ilio-costal* (Ch.), (F) *Carré des lombes*. A flat, somewhat thick, irregularly quadrilateral muscle, situate in the loins, at the sides of the vertebral column. It is attached, below, to the crista ilii and ilio-lumbar ligament: and, above, to the inferior margin of the last rib; and, besides, to the base of the transverse processes of the four last lumbar vertebræ. This muscle inclines the loins to its side; depresses the last rib, and is thus a muscle of expiration. It can, also, raise the hip.

QUADRIGEM'INA, TUBER'CUA, *Eminentiæ Quadrigem'inæ, Optic Lobes, Corpora quadrigem'ina, Nates et Testes, Eminences bigéminés* (Ch.), *Corpora bigem'ina*, (F) *Tubercules quadrijumeaux*. Four medullary tubercles, situate at the posterior surface of the tuber annulare. They are white, externally; gray, internally; oblong; rounded; connected by pairs, and separated by two grooves, which divide them crucially. Of these tubercles—the superior, called *nates*, *Tubercula anterio'ra*, *Glutia*, are larger and more prominent than the lower, called *testes*, —*Tubercula posterio'ra*. The pineal gland corresponds exactly to the point of intersection of the two furrows that separate them.

QUANDROS. Ancient name for a precious stone, believed to exist in the brain of the vulture; and to which was attributed the property of augmenting the secretion of milk, and preserving from deadly accidents. No such stone exists.

QUAR'ANTINE, from (I) *Quaranti'na*; itself from *quaran'ta*, 'forty,' (F) *Quarantaine*. The time, during which travellers, returning from a country where the plague or any other pestilential disease exists, are compelled to remain on board ship or in a lazaretto. They, as well as the ship, are said "to perform quarantine."

Quarantine is, sometimes, extended beyond forty days, whilst its duration is frequently much less. It is sometimes enforced by land; for example, when contagious diseases require the establishment of *cordons sanitaires*, and when persons are desirous of leaving infected districts.

During quarantine, no communication is allowed between the travellers and the inhabitants of the country.

Quarantine is a great impediment to commerce; and is, doubtless, very frequently enforced where there is but little danger of contagion. The evils, however, that might arise from the introduction of a widely-

spreading contagious disease, are so disastrous, as to induce legislators to maintain these laws in perhaps an unnecessary degree of strictness.

QUARTAN, *Quarta'na Febris, An'elus Quarta'nus, Tetartæ'us, Quartan Ague*, (F) *Quarte*. An intermittent, the paroxysms of which recur every 4th day, leaving between them two days' interval. We speak, also, of the *Quartan Type*. A *Double Quartan* is one, in which one paroxysm occurs on the third and another on the second day, so that there is only one day of apyrexia and two of paroxysms in succession;—the paroxysms of every 4th day resembling each other. A *Triple Quartan* is one, in which there is a paroxysm every day; and on every three days the paroxysms correspond. A *redoub'ling* or *repeat'ing quartan*, (F) *Fièvre quarte doublée*, is one, in which there are two paroxysms every 4th day. See Intermittent.

QUARTA'RIOUS. An ancient measure, equal to one-fourth of the sextarius. See Weights and Measures.

QUARTI-STERNAL, *Quadrister'nal*. The fourth osseous portion of the sternum, corresponding to the fourth intercostal space. —Béclard.

QUASSIA, *Quassia ama'ra*. *Quassy*, *Quassia excel'sa*, (F) *Quassie*. A West India tree, from which is obtained the *Lignum Quassiæ*. It is an intensely durable bitter, without astringency; and has been employed as a tonic and stomachic. It is, generally, given in the form of infusion. The bitter principle is called *Quassine*.

QUASSIA SIMAROU'BA, *Simarouba, Simaruba, Euon'ymus*. The bark of the Simarouba is bitter, and not unpleasant. Both water and alcohol extract its virtues. It is not astringent. It is exhibited, whenever a simple tonic is required.

QUERCUS ALBA, the *White Oak*; *Quercus Robur*, the *Common Oak*; *Q. Tincto'ria*, the *Black Oak*; *Q. rubra Monta'na*, the *Red Oak* or *Spanish Oak*. Family, Amentaceæ. Sex. Syst. Monœcia Polyandria. (F) *Chêne*. The bark of all these varieties is, probably, alike in medicinal properties. It is powerfully astringent and tonic, and has been used in intermittents, and likewise in decoction, as an astringent wash, where such is indicated.

Acorns, Ceces, Nuces Quercûs, (F) *Glands*, were, at one time, much used as food; and a decoction of them was once recommended in dysentery and diarrhœa, in glandular obstructions, &c.

A pessary, made of them, has been advised in immoderate flow of the menses. They are not now used.

QUERCUS CERRIS. A tree of Asia Minor, which affords the *Turkey Galls*, *Nut Galls*, *Gallæ Tur'cicæ*, *G. Querci'næ*, *G. Tincto'riæ*, *Nux Gallæ*, *Galla max'ima orbicula'ta*, *Cicis*, *Cassenoles*, *Gallæ*, *Galls*, *Gallnut*, (F)

Noix de Galle. The nut gall is a protuberance, or tubercle, produced by the puncture of the *Diplolepis Gallæ Tinctoriæ*. It is powerfully astringent and tonic, and has been employed in diarrhœa, intestinal hemorrhage, and intermittents: but it is chiefly used, externally, in gargles and injections. The powder, made into an ointment with lard, is used in piles.

QUICK'ENING. The period of gestation when the motion of the fœtus first becomes perceptible. This usually occurs about the 18th week. It was at one time erroneously believed to mark the time at which the fœtus becomes alive. It need scarcely be said, that it possesses the principle of life from the moment of the union of the materials furnished by the sexes at a fecundating copulation. When the motion is felt, the female is said to be 'quick with child.'

QUININA, *Qui'nia*, *Quina*, *Kini'num*, *Chini'na*, *Quinine*. An alkaline, uncrystallizable substance; under the form of a porous, whitish mass; almost insoluble in water, soluble in alcohol and ether. It forms, with acids, salts that are in general soluble. It is obtained from different cinchonas, but chiefly from the yellow, and is the active principle of those valuable drugs.

The *Sulphate of Quinine*—the salt usually employed in medicine—occurs in needles of a pearly and satiny appearance. It is employed, with great success, in the treatment of intermittents; and is available in many cases, where the bark in substance could not be retained, or would be injurious. Dose, from 3 to 10 grains in the 24 hours. It is obtained, by treating the yellow bark with sulphuric acid.

The *Acetate of Quinine* (*Quini'næ Acetas*, *Chinium Aceticum*, *Acetas chinii*, *A. chini'ni*, *A. chi'nicus*, *A. Quiniæ*, *A. Quinæ*, *A.*

Quini'ni, *A. Kini'ni*); the *citrate* (*Quininæ citras*, *citras chinicus*) the *Ferrocyanate* (*Quininæ Ferrocy'anas*, *Chinium Ferrocyanogena'tum*, &c.) the *muriate* (*Quini'næ murias*, *Chinium mural'icum*, *Ch. salitum* seu *Hydrochlor'icum*, &c.) the *Nitrate* (*Chinium nitricum*, &c.) the *Phosphate*, (*Quininæ Phosphas*, *Chinium phosphoricum*, &c.) and the *Tartrates of Quinine* and *Cinchonine* have been administered in the same cases as the sulphate.

QUINTAN, *Febris quinta'na*, *F. pemptæ'a*, *F. quinta*, from *quintus*, 'a fifth.' A fever, whose paroxysms return only every five days inclusively; and between which there are, consequently, three days of apyrexia.

QUINTE (F). This word is used synonymously with *paroxysm* or *fit*,—when speaking of cough,—as *une Quinte de Toux*,—'a fit of coughing.'

QUINTESSENCE, *Quinta Essen'tia*. A name, formerly given to alcohol, impregnated with the principles of some drug. It was, consequently, often synonymous with *Alcoholic tincture*. The most volatile principles of bodies were, also, called *Quintessences*.

QUINTISTERNAL. The fifth osseous portion of the sternum. It corresponds to the 5th and 6th intercostal spaces.

QUOTID'IAN, *Quotidia'nus*, *Ephe'merus*,—itself from *quotid'ië*, 'daily.' That which takes place every day.

The **QUOTID'IAN FEVER**, *Q. ague*, *An'etus quotidia'nus*, *Cathe'merus*, *Methemer'inos*, *Amphemer'inos*, *Amphimer'inos*, *Quotidia'nus*, (F) *Fièvre quotidienne*, is an intermittent, the paroxysms of which recur every day.

A *simple*, *double*, or *triple quotidian*, is a quotidian, which has one, two, or three paroxysms in the 24 hours.

R

R. is placed at the commencement of a prescription, as a contraction of *Rec'ipē*. (See Abbreviation.) Originally, it was the sign (♃) of Jupiter, and was placed at the top of a formula, to propitiate the king of the gods, that the compound might act favourably.

RABID, *Rab'idus*, (F) *Rabique*, *Rabiéique*, from *rabies*, 'canine madness.' That which belongs to hydrophobia; as *rabid virus*, &c.

RACE, from *radicē*, abl. of *radix*, 'root.' The union or aggregate of individuals, whose conformation or particular condition differs perceptibly from those of neighbouring varieties. In the human species, several races are designated. See *Homo*.

RACHAMEL'CA, from Hebr. רחם (*rechem*), 'the womb,' and מלך (*Molech*), 'a king;' *Rechamal'ca*. A peculiar formative principle, supposed, by Dolæus, to exist in the uterus.

RACHIPHY'MA, or *Rhachiphy'ma*, *Rachiophyma*, *Tumor Dorsi*, from $\rho\alpha\chi\iota\varsigma$, 'the spine,' and $\phi\upsilon\mu\alpha$, 'a tumour.' A tumour on the spine or on the back.

RACHISAGRA, *Rhachisagra*, from $\rho\alpha\chi\iota\varsigma$, 'the spine,' and $\alpha\gamma\gamma\epsilon\alpha$, 'a seizure.' A gouty or rheumatic affection of the spine.

RACHI'TIS, *Rhachi'tis*. Inflammation of the spine; also, *Cyrto'sis Ra'chia*, *Cyrton'o-sus*, *Morbus ang'licus*, *Osteomala'cia Infan'tum*, *Tabes pectora*; the *English Disease*, the *Rickets*; from $\rho\alpha\chi\iota\varsigma$, 'the spine.' (F) *Rachitisme*, *Nouure*. A disease, characterized by crookedness of the long bones; swelling of their extremities; crooked spine; prominent abdomen; large head; and, often, precocity of intellect. It is accompanied by leanness, general debility, indigestion; and, frequently, induces atrophy and hectic. Rickets occurs, particularly, during the first years of existence, in weakly children, born of rickety or scrophulous parents; brought up in damp or confined situations; who are badly nourished, and do not take sufficient exercise. The progress and termination of the disease are very variable. Some children gradually recover their health: others become more and more deformed, and ultimately die of consumption, dropsy, or other organic disease.

The treatment is almost wholly *hygienic*. Pure air; a healthy situation; nourishing diet; exercise; sea or common cold bathing, and tonics, afford the best prospect of success.

RACHO'SIS, *Rhachosis*, from $\rho\alpha\chi\omega\sigma$, 'I cleave.' A relaxation of the scrotum. An excoriation of the relaxed scrotum.—Dictionaries.

RACORNISSEMENT (F), from *se racornir*, 'to shrivel in the fire as leather does.' A physical property, possessed by animal substances, which consists in a kind of contractility, accompanied with sudden corrugation and curling. It is produced by heat, and by chemical agents, especially by the strong mineral acids.

RADIAL, *Radia'lis*. That which relates to the radius.

1. The **RADIAL ARTERY**, *A. extern'a Cu'biti*. It arises from the brachial, at the upper and anterior part of the forearm; descends on the outer side as far as the lower part of the radius, and proceeds downwards and backwards towards the superior extremity of the space, which separates the two first metacarpal bones. It then buries itself in the palm of the hand, where it forms the *profound* or *radial* palmar arch. The radial artery gives off the *recurrent radial*, several *radio-muscular* branches, the *transverse palmar radio-carpal* artery, the *external superficial artery of the palm of the hand*, the *external dorsal of the thumb*, the *dorsalis carpi*, *dorsal interosseous artery of the index*, &c.

2. The **DEEP-SEATED RADIAL VEINS** follow the same course as the radial artery.

3. The **RADIAL NERVE**, *Radio-digital*, (Ch.) *Spiral Nerve*, *Spiral-muscular*, arises from the four inferior branches of the brachial plexus. It is, at first, situate behind the other nerves of the plexus. It then becomes engaged between the three portions of the triceps brachialis, passes behind the humerus, and descends between the supinator longus and brachialis internus, until opposite the upper extremity of the radius. In its course it gives numerous filaments to the triceps, supinator longus, extensor carpi radialis longior, and to the integuments. Opposite the upper extremity of the radius it divides into two branches;—the one *posterior*, which turns backwards into the substance of the supinator brevis, and, when it has reached the space between the two layers of muscles on the posterior surface of the forearm, divides into a great number of filaments, which are distributed to those muscles, and to the integuments of the hand. The other branch is *anterior*: it descends before the supinator brevis and the radius; until, near the inferior third of that bone, it engages itself between the tendons of the supinator longus and extensor carpi radialis longior; and, becoming afterwards subcutaneous, divides into two branches, whose filaments are distributed to the integuments of the thumb, index, middle finger, to the outer side of the ring finger, and to the first interosseous muscles of the back of the hand.

4. **EXTEN'SOR CARPI RADIALIS BRE'Vior**, *Radialis externus brevior*, *Radialis secundus*, (F) *Second radial externe*, *Petit radial*, *Épicondylo-sus-métacarpien*, (Ch.) An extensor muscle of the wrist, situate beneath the extensor carpi radialis longior. It is attached, above, to the external tuberosity of the humerus, and terminates, below, by a long tendon, inserted into the posterior part of the upper extremity of the 3d bone of the metacarpus. It has the same uses as the next muscle.

5. **EXTENSOR CARPI RADIALIS LONGIOR**, *Radialis externus longior*, *Radialis externus primus*, (F) *Premier radial externe*, *Grand radial*, *Huméro-sus-métacarpien*, (Ch.) It is seated at the outer part of the forearm; is thin, but thicker on the outside than on the inside. It is attached, above, to the inferior part of the outer edge, and to the corresponding tuberosity, of the humerus; and terminates, below, by a long tendon, which is attached to the superior extremity of the second bone of the metacarpus. It extends the hand on the forearm.

RADIATED, *Radia'tus*, (F) *Rayonné*. That which is arranged in rays; in lines, diverging from a common centre. An epithet given to several ligaments, &c., as to those which unite the ribs to the sternum; those which unite the tibia and fibula at their inferior extremity, &c.

RAD'ICAL, *Radica'lis*, from *radix*, 'a root.' A *radical cure* is one, in which the

disease is destroyed, as it were, from the root. It is used in opposition to *palliative cure*.

RADICIS'ECA. One, employed in collecting and preparing plants, was formerly so called.

RADIO-CARPAL, *Radio-carpia'nus*. That which relates to the radius and carpus.

The **RADIO-CARPAL ARTICULATION** is the *wrist joint*, or articulation of the os scaphoides, os semilunare, and os cuneiforme of the carpus with the inferior surface of the radius, and the fibro-cartilage, situate below the ulna. It is strengthened by lateral, anterior, and posterior ligaments.

RADIO-CARPAL TRANSVERSE PALMAR ARTERY, (F) *Artère Radio-carpienne-transversale-palmaire*. A transverse branch, given off by the radial artery, opposite the lower edge of the pronator quadratus, which sends several branches to the anterior or palmar surface of the carpus.

RADIO-MUSCULAR, *Radio-muscularis*. A name given to the branches sent off from the radial artery to the muscles of the forearm, in the first part of its course; as well as to the nervous filaments, which the radial nerve sends to the same muscles.

RADIUS, 'a spoke:'—so called from its shape. *Cercis, Foc'ilè minus seu superius, Canna minor, Os ad cubita'le, Additamentum ulnæ, Manu'brium manûs, Parape'chyon, Arun'do brachii minor,* (F) *Os du Rayon*. A long, prismatic bone, the upper and lesser extremity of which is called the *head*. This is supported by a *cervix* or *neck*. At the part where the neck is confounded with the *body* of the bone, is the *tubercle* or *bicipital tuberosity* or eminence for the insertion of the biceps. The radius is articulated, above, with the os humeri and with the lesser sigmoid cavity of the ulna: below, with the scaphoides, semilunare, and the head of the ulna. Its inferior extremity, which is larger than the superior, is flattened before and behind; is irregularly quadrilateral; and has, below, a double facette to be articulated with the two first bones of the carpus. On the outer side is the styloid process; and, on the inner, a concave facette, which joins the ulna. Behind, are grooves for the passage of the extensor tendons. The radius is developed from three points of ossification; one for the body, and one for each extremity.

RA'DIX, *Rhiza*. A root.

The *Root* or *fang* of a tooth is the part contained in the alveolus. The *radix* or *root* of the nail is the portion hidden under the skin, &c. Surgeons give the name to the prolongations, sent by scirrhus, cancerous, or other tumours into the neighbouring parts.

The **FIVE APERIENT ROOTS,** *Quinque radici'ces aperient'es*, were, of old,—asparagus, butchers' broom, fennel, parsley, and smallage.

The **FIVE LESSER APERIENT ROOTS,** *Quinque radici'ces aperient'es mino'res*,—were ca-

per, dandelion, eryngo, madder, and rest-harrow.

RADZYGE, *Radzygin, Radezyge*. A name given, in Norway, to a variety of syphilis, bearing considerable analogy to the yaws. Some have esteemed it a species of lepra or elephantiasis.

RAGE, *Ira, Furor brevis, Orgè, Thymos,* (F) *Colère*. Violent passion, characterized by contraction of the muscles of the face, violence in every movement, extreme irritation of the nervous system, acceleration of the blood's motion, and by redness and swelling of the face.

RAKASIRA. An American balsam; of a brownish or brownish-red colour; semi-transparent; brittle; softening and becoming tenacious by heat; inodorous when cold, but exhaling a very agreeable smell when heated; and possessing a balsamic and slightly bitter taste. The precise vegetable that furnishes it is not known. It has been used chiefly as a balsam in gonorrhœa and urinary affections.

RALE. See Rattle.

RAMIFICA'TION, *Ramifica'tio*. A division of arteries, veins, and nerves into branches. Also, the branches themselves.

RAMPANT, *Repens, Reptans*. That, which creeps or drags on the earth.

The French *Bandage rampant* has the folds arranged spirally around the part, leaving intervals between them. It is a retentive bandage, but is easily displaced, and, therefore, not employed.

RAMUS, *Clados*, a branch. (F) *Rameau*. A division of an artery, vein, or nerve.

RAMUS'culus, *Ram'ulus, Ramun'culus, Cladis'cos*. A division of a ramus. (F) *Ramuscule, Ramille, (Bot'y.)*

RANA ESCULEN'TA, (F) *Grenouille*. This frog and the bull frog—*Rana Tauri'na*—are eaten as a delicacy. They are nutritious and easily digested.

RANCID, *Ran'cidus, Sapro's,* (F) *Rance*. An epithet given to fatty bodies, which have become acrid from age or the contact of air. Mild ointments may, thus, become very irritating, and unfit for the purposes for which they were originally intended.

RAN'cula. An erratic pain in a wound, accompanied by swelling and pulsation.

RANINE, *Rani'na*; from *Rana*, 'a frog.' The termination of the lingual artery is so called; that is, the portion of the artery, which advances horizontally between the genio-glossus and lingualis muscles as far as the point of the tongue. The ranine vein follows the same course as the artery, and opens into the internal jugular or into the superior thyroid.

RAN'ULA, from *Rana*, 'a frog,' so called from its resemblance; *Dysphagia Ranula, Emphrag'ma saliva'rè, Frog Tongue, Ba'trachos, Batra'chium, Hydroglos'sa, Hypoglossis, Hypoglossum, Rana,* (F) *Grenouillette*. A small, soft, fluctuating and semi-transparent tumour, which forms under the

tongue, owing to the accumulation of saliva in Wharton's duct. In order to give exit to the accumulated fluid, and to establish a permanent opening for the discharge of the saliva, the cyst must be punctured, and the opening maintained by a minute cylinder, with a button at each extremity, as has been recommended by Dupuytren; or a portion of the cyst may be removed by the scissors, and the mouth be frequently washed by any astringent lotion. Sometimes, the salivary duct is found plugged by a small calculus.

RANUNCULUS, (F) *Renoncule*. Family, Ranunculaceæ. Sex. Syst. Polyandria Polygynia. A genus of plants, most of the species of which, when taken internally, act as acrid poisons. See Poison. They are, also, acrid and vesicant, when applied to the skin, and have, accordingly, been often used as counter-irritants.

The following species answer to this description.

RANUNCULUS ABORTIVUS.

RANUNCULUS ACRIS, *R. pratensis*. Meadow Crowfoot, Butter Cups, (F) *Bouton d'or*.

RANUNCULUS BULBOSUS, *R. pratensis*, *Bulbous-rooted Crowfoot*, (F) *Renoncule bulbeuse*, *Bassinet*.

RANUNCULUS FLAMMULA, *Surrecta alba*, *Smaller Water Crowfoot*, *Spearwort*, (F) *Petite douve*.

RANUNCULUS ILLYRICUS.

RANUNCULUS LINGUA.

RANUNCULUS SCELERATUS, *R. Palustris*, *Marsh Crowfoot*.

RANUNCULUS FICARIA, *Pilewort*, *Chelidonium minus*, *Scrophularia minor*, *Ficaria ranunculoïdes*, *Chelidonia rotundifolia minor*, *Cursuma hæmorrhoidalis herba*, *Ranunculus vernus*, *Lesser celandine*. (F) *Petite chélidoine*, *Petite Eclaire*, *Ficaire*. The leaves and root have been used medicinally:—the leaves as an antiscorbutic:—the root as a cataplasm in piles.

RAPHANE'DON, from *ραπαγιον*, 'a radish,' 'like a radish.' *Rhaphanodon*. A transverse fracture of a long bone, leaving no splinters. What has been called in France, *Fracture en rave*.

RAPHA'NIA, *Convulsio Raphania*, *Rhaphania*, *Morbus spasmodicus malignus seu popularis*, *M. Silesiacus*, *Eclampsia typhoides*, *Sync'lonus Raphania*. Linnæus gave this name to a convulsive disease, not uncommon in Germany and Sweden, and which has been attributed to the seeds of the *Raphanus Raphanistrum* being mixed with the corn. The convulsions are seated in the limbs, and are attended with acute pain. See *Convulsio cerealis*, and *Ergotism*.

RAPH'ANUS HORTENSIS, *Raphanus*, *R. sativus*, *R. niger*, *Radic'ula*. The Radish. (F) *Raifort*, *Radis*. Family, Cruciferae. Sex. Syst. Tetradynamia Siliquosa. The root of this plant is a common esculent. It has, also, been given as a diuretic in calculous affections. The juice, made into a

syrup, is exhibited to relieve hoarseness. Radishes have long been celebrated as antiscorbutics.

RAPHE, or **RHAPHE**, *ραφή*, 'a suture.' A name given to prominent lines resembling a raised stitch. Such is the Raphe or *Tramis* that divides the scrotum into two parts, and which extends from the anterior part of the anus to the extremity of the penis. The name *Raphe*, or *Linea media'na*, is, also, given to two prominent lines which are longitudinal and parallel, and are seen at the upper surface of the corpus callosum, extending from the anterior to the posterior extremity of that commissure.

RAPHIANKISTRON, from *ραπίον*, 'a needle,' and *αγκιστρον*, 'a hook.' An instrument, employed by Dr. Embden in the formation of artificial pupil.

RAPPORT (F), *Rela'tio*, *Renuncia'tio*. A deposition made by the physician or surgeon to prove the condition of a person, the nature of a disease, the existence or non-existence of pregnancy, a sudden or violent death, &c. Formerly, there were the *Rapports dénonciatifs*, made at the desire of the injured or their friends, and intended to point out to the judges the details of the crime or misdemeanour:—the *Rapports provisoires*, the object of which was to obtain provisions for the injured individual, both as regarded food and medicine, and to defray the expenses of prosecution;—and *Rapports mixtes*, or those which were both *dénonciatifs* and *provisoires*. At present, reports or depositions are generally divided into *judiciary*, or those which serve to throw light on the subject matter of any civil or criminal cause; and *administrative*, which afford information on subjects relating to any branch of the public administration, as on the nuisance or otherwise of certain establishments; the character of any epidemic, &c.

RAREFA'CIENS, *Aræot'icus*, (F) *Raréifiant*, from *rarus*, 'rare,' and *facere*, 'to make.' Medicines were so termed, which were supposed to be possessed of the power of giving more bulk or extension to the blood or other humours.

RASPATO'RIMUM, *Raso'rium*, *Rat'ula*, *Scalprum raso'rium*, *Xyste'ra*, *Rad'ula*, *Runcin'ula*, *Scalprum*, (F) *Rugine*, *Grattoir*. An instrument, used for rasping bones, to detach the periosteum,—either in certain surgical operations, or for anatomical purposes.

RASU'RA, *Xysma*, *Xysmos*, (F) *Rapure*. A rasure or scratch or erosion. Also, the rasping or shaving of any substance;—as *Rasu'ra Cornu Cervi*, *Hartshorn shavings*.

RATAFI'A. A liquor, prepared by imparting to ardent spirits the flavour of various kinds of fruits, and adding sugar.

RATIO. A reason, cause, an explanation;—as *Ratio symptom'atum*, an explanation of the symptoms.

RATIONAL, *Rationa'lis*. That which

is conformable to reason. This epithet is often opposed to *empirical*;—as *rational treatment*. The French, also, say *Signes rationales*, in opposition to *Signes sensibles*.

RATTLE, *Rhonchus*, *Rhynchus*, *Rhenxis*, from (D) *Ratel*. *Rhuncus*, *Cerchnus*, *Rhogmos*. (F) *Râle*. Noise produced by the air in passing through mucus, of which the lungs are unable to free themselves. This condition is chiefly observed at the approach of death; and is commonly called “the rattles.”

The name *Râle* has been given to different sounds during respiration, caused by the air passing through fluid contained in the bronchi, or areolæ of the pulmonary tissue; and which are perceived by the stethoscope.

RALE CREPITANT, *Rhonchus crepitans*. See Crepitation.

RALE MUQUEUX, *Rhonchus mucosus*, ‘*Mucous Rattle*.’ The sound produced by the passage of air through mucus accumulated in the bronchi or trachea, or through softened tubercular matter.

This *râle* occurs in catarrh, and in softened tubercle. When carried to a very high degree it constitutes a *gurgling*, (F) *Gargouillement*.

RALE SIBILANT, *Rhonchus sibilans*, *Sibilant Rattle*. A slight, though prolonged hissing sound, occurring either at the commencement of inspiration, or of expiration, owing to the presence of mucus, thin and viscid, but not abundant, which obstructs, more or less completely, the smaller bronchial ramifications. It is seated in the small tubes, and occurs in the first stage of bronchitis.

RALE SONORE, *Rhonchus sonorus*, *Sonorous Rattle*. A sound resembling at times the snoring of a person asleep, at others the sound of the bass string of an instrument when rubbed with the finger, and not unfrequently the cooing ((F) *Rucoulement*) of a dove. It seems to be caused by a contraction of the bronchial tubes, and is characteristic of chronic catarrh.

RAUCE'DO, *Rau'citas*, *Paraph'snia rauca*, *Asper'itas Arte'riæ as'peræ*, *Vox rauca*, *Branchus*, *Hoarseness*, (F) *Enrouement*, *Raucité*. A change in the voice, which loses its smoothness and becomes low and obscure. It is a common symptom in diseases of the larynx and trachea.

REACTION, *Reactio*. An action of resistance to a power applied. A species of vital movement or excitement, tending to prevent or destroy the effects of any noxious power applied to the animal economy, and which, by some, has been attributed to the *vis medicatrix naturæ*. It is certainly dependent on the organic instinctive actions of the frame.

REAL'GAR, *Realgal*, *Arlada*, *Arladar*, *Auripigmen'tum rubrum*, *Arsen'icum rubrum facti'tium*, *Abessi*, *Sandara'cha Græco'rum*, the *Red Sulphuret of Mercury*. A violent poison. See Poison.

REASON, *Ratio*, *Logos*, (F) *Raison*. The faculty or property of the mind, by means of which man perceives the distinction between right and wrong, in physics as well as morals. *Reason* is a just conclusion resulting from the comparison of two ideas; by virtue of which we form a judgment.

REBISOLA. A name for medicines, formerly prepared from urine, and administered in jaundice.

RECEPTAC'ULUM CHYLI, *R. Pecquet'i* seu *Pecquetia'num*, *Diverso'rium Chyli*, *Sac'culus chylifer* seu *rorifer*, *Saccus lacteus*, *Alveus ampullo'sus* seu *ampulles'cens*, *Utric'ulus lacteus*, *Vesic'ula chyli*, *Ampulla chylifera* seu *chyli*, *Cister'na lumba'ris*, *Chyl'ocyst'is*, *C. Chyli*, *Latices lactei*. (F) *Reservoir du chyle*, *R. de Pecquet*, *Citerne lombaire*. A considerable dilatation of the thoracic duct, in front of the lumbar region of the vertebral column.

The *Receptaculum Cotun'nii* is a triangular space, formed by a separation of the two laminae of the dura mater in the internal ear, near the middle of the posterior surface of the pars petrosa of the temporal bone, where the aquæductus vestibuli terminates. It is always filled with the *Fluid of Cotugno*.

RECEPTIV'ITY, (F) *Réceptivité*. A word, used by Tissot to express the susceptibility of certain organs to receive morbid impressions.

REC'IPE (L). A Latin word, which signifies “take,” (F) *Prenez*, and with which prescriptions are commenced. It is, often, represented by R, R, and, at times, by ʒ. See Abbreviation.

RECLINA'TION, *Reclina'tio*; from ‘*re-clina're*, ‘to bend back.’ A mode of operating for the cataract, which consists in applying the needle, in a certain manner, to the anterior surface of the cataract and depressing it into the vitreous humour, in such a way, that the front surface of the cataract is the upper one and its back surface the lower one.

REC'REMENT, *Recremen'tum*. A humour, which, after having been separated from the blood, is again returned to it; such as the saliva, the secretion of serous membranes, &c. Such fluid is said to be *recrementital*.

RECRUDESCEN'TIA, *Palincote'sis*, *παλινκοτησις*, *Recrudes'cence*. An increase of a disease after a temporary remission.

RECTIFICA'TION, *Rectificatio*. An operation, by which certain liquids are purified by distilling them either singly, or after admixture with other substances.

RECTO-VAGINAL, *Recto-vagina'lis*. That which relates or belongs to the rectum and vagina.

The **RECTO-VAGINAL SEPTUM**, (F) *Cloison recto-vaginale* is formed by the junction—back to back—(or by what the French term *adossement*) of the rectum and vagina. It separates these two canals from each other.

RECTO-VAGINAL FISTULA is owing to a preternatural communication between the rectum and vagina, through the above septum.

RECTUM, so called from a notion that it is straight. It is not so. *Intestinum Rectum*, *Apeuthys'menos*, *Euthyen'teron*, *Longaon*, *Longas*, *Longanon*, *Archos*, *Cys'saros*, *Princeps*, *Monoco'lon* (?) The third and last portion of the great intestine. It forms the continuation of the sigmoid flexure of the colon, occupies the posterior part of the pelvis and extends from the left side of the sacro-vertebral articulation to the coccyx, before which it opens outwards by the orifice called the *anus*. It is cylindrical, but *sac-cated*, as it were, at its inferior portion, where it is consequently larger, and is attached to the sacrum by the mesorectum. Like the other portions of the canal it is formed of three membranes. Towards the lower extremity, some parallel and longitudinal wrinkles are observable on its inner surface; these are the *Columns of the Rectum* or of *Morgagni*, (F) *Colonnes du rectum ou de Morgagni*. They are merely folds of the mucous membrane, between which are a number of *Lacunæ*.

The arteries of the rectum are numerous. They proceed from the inferior mesenteric, hypogastric, and internal pudic, and are called *hemorrhoidal* (q. v.) The veins open, partly into the hypogastric vein, partly into the inferior mesenteric. The nerves proceed from the sciatic and hypogastric plexuses. The rectum receives the fecal matters, which accumulate there, as in a reservoir, until it becomes necessary to void them.

RECTUS ABDOMINIS, *Pubio-sternal*, *Sterno-pubien* (Ch.), (F) *Droit de l'abdomen*. A long, flat muscle, situate at the anterior part of the abdomen, and separated from that of the opposite side by the linea alba. It is attached, above, to the cartilages of the three last true ribs; and, below, to the pubis by a very strong tendon, the outer edge of which is continuous with the fascia transversalis. This muscle is inclosed in an aponeurotic sheath; and, in its course, has three or four transverse, aponeurotic intersections. It bends the chest on the pelvis and *vice versa*.

RECTUS CAPITIS INTERNUS MAJOR, *R. internus major*, *R. anterior longus*, *Trachélo-basilaire*, *Rectus capitis anti'cus longus*, (F) *Grand droit antérieur de la tête*. This muscle is long in proportion to its breadth; flat, and broader above than below. It is situate at the anterior and lateral part of the neck, and arises from the transverse processes of the 3d, 4th, 5th, and 6th cervical vertebræ. It is inserted into the basilar process of the occipital bone.

RECTUS CAPITIS INTERNUS MINOR, *R. internus minor*, *Ren'uens*, *An'nuens*, *R. anterior brevis*, *Petit trachélo-basilaire*, (F) *Petit droit antérieur de la tête*. This is situate deeper than the last. It is thin, flattened, irregularly

quadrilateral, and passes from the anterior surface of the body of the first vertebra, near the origin of the transverse process, to be inserted into the basilar process.

RECTUS CAPITIS LATERA'LIS, *R. lateralis Fallo'pii*, *Transversa'lis anti'cus primus*, *Rectus lateralis*, *Trachélo-atloïdo-basilaire*, *Atloïdo-sous-occipital* (Ch.), (F) *Droit latéral de la tête*. There is a muscle of this name on each side of the head. It is flat, quadrilateral, and passes from the transverse process of the atlas to the occiput, behind the jugular fossa. It inclines the head to one side.

RECTUS CAPITIS POSTI'CUS MAJOR, *R. Major*, *R. Capitis posti'cus minor* (Albinus), *Spini-axoïdo-occipitalis*, *Axoïdo-occipitale* (Ch.), (F) *Grand droit postérieur de la tête*. A flat, triangular muscle situate at the posterior and superior part of the neck. It extends from the spinous process of the second cervical vertebra to the external surface of the lower semicircular ridge of the occipital bone. This muscle extends the head; inclines it to one side; and causes it to experience a rotatory motion, which directs the face to its side.

RECTUS CAPITIS POSTI'CUS MINOR, *R. Minor*, *Tuber-atloïdo-occipital*, *Atloïdo-occipital* (Ch.), (F) *Petit droit postérieur de la tête*. A flat, triangular muscle, situate beneath the last, and which passes from the posterior arch of the atlas to the occipital bone. It extends the head.

RECTUS EXTERNUS OCULI, *Abductor oculi*, *Indignabun'dus*, *Indignato'rius*, *Iracun'dus*, *Oc'ulum movens secundus*, *Orbito-extus-scléroticien*. All the recti muscles of the eye, four in number, arise from the bottom of the orbit, and are inserted into the sclerotic coat of the eye. The *Rectus externus*, (F) *Droit externe*, *Iracible*, ou *Abducteur* is divided, at its posterior extremity, into two portions, one of which is attached to the outer part of the foramen opticum, and the other to the sphenoid bone.

The RECTUS INFERIOR OCULI, *Depres'sor oculi*, *Tim'idus*, *Dep'rimens*, *Humilis*, *Oc'ulum movens quartus*, *Sous-optico-spheno-scléroticien*, (F) *Droit inférieur ou abaisseur de l'œil*, arises below the optic foramen, from the sphenoid bone. It depresses the eye.

The RECTUS INTERNUS OCULI, *Addu'cens oculi*, *Bibito'rius*, *Oculi adductor*, *Oculum movens primus*, *Orbito-intus-scléroticien*, (F) *Droit interne de l'œil ou adducteur ou buveur*. It arises from the sphenoid at the inferior part of the foramen opticum. It turns the eye towards the nose.

The RECTUS SUPERIOR OCULI, *Attol'lens oculi*, *Levator oculi*, *Superbus*, *Eleva'tor oculi*, *Oculum movens tertius*, *Sus-optico-spheno-scléroticien*, (F) *Droit supérieur, ou élévateur de l'œil*, *Dédaigneux*, is attached to the circumference of the foramen opticum.

(All the recti muscles are concerned in the

voluntary motions of the eye. The oblique muscles execute the involuntary.—Sir C. Bell.)

RECTUS FEMORIS, *Rectus sive gracilis anterior, Rectus cruris, Ilio-rotulien*, (F) *Droit antérieur de la cuisse*. A straight muscle seated at the anterior part of the thigh. It extends from the anterior and inferior spine of the ilium and the cotyloid cavity of the patella. This muscle extends the leg upon the thigh and conversely. It can, also, bend the thigh upon the pelvis or carry the pelvis forward.

RECUR'RENT, *Recurrens*; from *recur-rerē*, 'to run back.' A name given to several arterial and nervous branches, which seem to re-ascend towards the origin of the trunk whence they emanated.

RECURRENT ARTERIES. This name has been given to several arteries of the forearm, and to one of the leg.

In the forearm, there are, 1. The *Radial recurrent, Artère recurren-te de l'épicondyle* (Ch.), which arises from the superior part of the radial, and ascends between the supinator longus, s. brevis, and the brachialis internus. 2. The *anterior cubital recurrent, A. recurren-te de l'épitrochlée* (Ch.), which arises from the upper and inner part of the cubital, and ascends between the pronator teres and brachialis internus. 3. The *posterior cubital recurrent*, which arises from the preceding artery, or from the cubital itself, and ascends between the olecranon and internal tuberosity of the humerus. 4. The *posterior radial recurrent, A. recurren-te olécranienn-e*, (Ch.) It arises from the posterior interosseous, and ascends between the posterior cubital and anconeus muscles.

In the leg,—the *Arteria recurrens tibia'lis, A. recurren-te du genou* (Ch.), is furnished by the anterior tibial, and ascends to the tibialis anticus muscle.

REDUC'TION, *Reduc'tio, Reposi'tio, Res-titu'tio*. A surgical operation, the object of which is to restore displaced parts to their original situation. Thus, we say the reduction of a luxation, when the displaced parts are again brought to their proper relative situation. The reduction of a hernia is the restoration of the protruded parts to the cavity of the abdomen. This is, also, called *Taxis*.

REFRACTION, *Photocamp'sis*, from *re-tro*, 'backwards,' and *frango*, 'I break.' The change of direction, which rays of light experience, when they pass obliquely from one medium into another of different density. If the light passes from a rarer to a denser medium it approaches the perpendicular raised at the point of immersion. The contrary occurs, when it goes from a denser to a rarer medium. The theory of lenses, telescopes, and of the eye rests entirely on this property of light.

REFRIG'ERANTS, *Refrigeran'tia*,

Psych'tica, (F) *Refrachissans, Réfrigeratifs*. Medicines, which depress the morbid temperature of bodies. The chief reputed refrigerants, are the Potassæ Nitras (?), the Sodæ Boras (?), but chiefly the abstraction of caloric by ice and iced drinks, cold water, lemonades, soda water, and effervescing draughts internally; and externally cool air, ice, cold water, evaporating lotions and frigorific mixtures.

REGENERATION, *Regenera'tio, Palin-genesia*. Reproduction of a part of the body, which has been destroyed.

REG'IMEN, from *reg'erē*, 'to govern.' The rational and methodical use of food, and of every thing essential to life; both in a state of health and disease. It is often restricted, in its meaning, to *Diet*.

REGION, *Regio*. Anatomists have called *re'gions*, determinate spaces on the surface of the body or of different organs. Thus, the abdomen has been divided into several; to which different names have been given.—See Abdomen, Epigastrium, Hypochondrium, Hypogastrium, &c.

REGURGITA'TION, *Regurgita'tio*. The act by which a canal or reservoir frees itself, without effort, from substances accumulated in it. Usually, it is applied to the *puking* of infants; and to the *rising* of solids or fluids into the mouth in the adult.

The substances brought into the mouth by regurgitation, the French call *Renvois*.

REINFORCEMENT, FASCICULUS OF, F. Cunea'tus. A band of fibres from the *corpus innominatum* or lateral part of the antero-lateral column of the medulla, which is continued up behind and around the corpus olivare, is lined on its inner or central surface with cineritious substance, enlarges as it ascends, passes over the upper surface of the Pons Varolii, and is expanded into the optic thalamus. It thus forms, in its course, the anterior paries of the 4th ventricle, and is brought into view by brushing away the *tuberculum cinereum* or gray matter of the ventricle. The band has received these names owing to its constantly increasing as it ascends, and being mixed up with gray matter on its inner face, from which it seems to derive new fibres.

REJEC'TIO, *Anagoge*. Every excretion by the mouth; spitting, expectoration, regurgitation or vomiting.

RELAPSE, *Hypot'ropē, Hypotropiasmus*, from *re*, 'again,' and *labor*, 'I fall down.' The return of a disease, during, or shortly after, convalescence. The French use *Rechute* in this sense; and *Récidive* (*Morbus recidi'vus*) for the return of a complaint, at a greater or less period after the complete restoration of health.

RELAXANT, *Laxans, Malact'icum*, (F) *Relâchant*. A medicine which diminishes the tension of organs. Mucilaginous and fatty substances are relaxants.

RELAXA'TION, *Chala'sis, Chalas'mos*,

(F) *Relâchement*. In *Physiology*, relaxation is opposed to contraction. In *Pathology*, it means great looseness of a part.

RELIQUAT (F). The *remnant* or remains of a disease.

REMIS'SION, *An'esis*, *Submis'sio*, *Aph'esis*, *En'dosis*, *Remis'sio*, from *remitt'ere*, 'to relax.' In a more extensive signification, a temporary diminution in the symptoms of a disease, either acute or chronic. Diminution in the febrile symptoms, such as occurs in a remittent fever, between the exacerbations.

REMIT'TENT, *Remittens*, same etymon. Any disease, which presents *remissions*, (q. v.)

A **REMITTENT FEVER**, *Febris remittens*, *Epan'etus*, is one which strikingly exacerbates and remits, but without intermission.

REM'ORA, from *remora'ri*, 'to arrest.' The name of two surgical instruments, intended to retain parts *in situ*. The one was used, formerly, in castration, to prevent the intestines from protruding at the inguinal ring: the other, called *Remora Hilda'ni*, (F) *Arrêt d'Hildan*, *Echene'is*, *εχηνις*, was employed to maintain fractures and luxations reduced. It is not now used.

RENAL, *Ren'al*, from *Ren*, 'the kidney.' That which relates to the kidney.

1. The **RENAL** or **EMUL'GENT ARTERIES** are very large and short, and commonly two in number,—one to each kidney. They arise from the sides of the abdominal aorta, forming with it a right angle. The left is commonly a little more anterior and elevated than the right. After a short course, they arrive at the fissure of the kidney, where they divide, before entering it, into three or four very considerable branches.

2. The **RENAL** or **EMULGENT VEINS**. These are very large. Their roots follow the same course as the arteries in the substance of the kidney. In the fissure or pelvic portion of the kidney, they unite into a single trunk, which passes transversely inwards, and opens at the side of the vena cava descendens.

3. The **RENAL** or **EMULGENT PLEXUSES**. These are two:—one on each side. They proceed from fasciculi of the solar and celiac

plexuses; from the outer part of the semilunar ganglion and the final expansion of the small splanchnic nerves. These plexuses begin by three or four ganglions, situate at the commencement of the renal artery; and they give off from their circumference many fine, straight filaments, which do not anastomose, and which enter the kidney with the divisions of the renal artery. These divisions they accompany.

RENNET, *Runnet*. When the fourth stomach or *Abomasus* (q. v.) of the calf is salted and dried, it possesses the property of coagulating milk, when a portion of it is soaked in water, and the infusion is added to the milk.

RENOUEUR (F), *Rebouteur*, *Rhabilleur*. A *bone-doctor*:—a *bone-setter*. One, who makes a trade of reducing fractures and dislocations.

REPEL'LENTS, *Repellen'tia*, *Repercussien'tia*, *Apocrus'tica*, (F) *Répercussifs*. Medicines which, when applied to a tumefied part, cause the fluids, that render it tumid, to recede, as it were, from it. Astringents, cold water, ice, &c. are repellents.

REPERCUS'SION, *Anac'lusis*. Disappearance of a tumour or cutaneous eruption, in consequence of the application of a repellent. The action of a repellent remedy. The French writers use the term *délitescence* for the sudden disappearance of a tumour, inflammation, eruptive disease, or purulent collection, without the disease occurring in any other part of the body: in this respect *delitescence* differs from *metastasis*: *Delitescence* of an inflammation, or 'sudden disappearance,' is distinguished by certain French pathologists from *Resolution*, (q. v.)

Repercussion also means *Ballottement*, (q. v.)

REPRODUCTION, *Regenera'tio*. The function, by which living bodies produce bodies similar to themselves. See *Generation*. As a general remark, it will be found true, that the larger animals are uniparous; and the smaller, which are more exposed to destruction, multiparous. The mammalia being of the same natural class as man, it may be useful to compare them in this respect.

COMPARATIVE TABLE OF REPRODUCTION IN THE CLASS MAMMALIA.

Species.	Age capable of engendering.	Duration of gestation.	Number of young at each birth.	Period of cessation of the functions.
Primates.				
Man,	14 years	9 months	1 to 3	At a somewhat advanced age.
Monkeys (large), . . .	3 years	7 months	Do.	
Do. (long tailed), . .	2 years	6 months	Do.	
Carnivora.				
Bear,	2 years	112 days	1 to 4	25 to 30 years.
Badger,			3 to 4	20 to 25 years.
Hedgehog,	1 year	1 month and 10 days	3 to 5	Produces during life
Ferret,	11 months	Do.	5 to 9 twice a year	
Otter,		3 months	3 to 4	
Pole-cat,	before 1 year	56 days	3 to 6	8 to 10 years.
Marten,				
Weasel, and				
Ermine,				
Didelphus,			4 to 6	10 years. (?)
Opossum, and				
Philander,				
Lion,	2 years	3 to 4 months	3 to 4	20 to 25 years.
Tiger,	Do.	3 months	4 to 5	Do.
Leopard,				
Lynx,		9 weeks	3 to 4	9 years.
Wild Cat,	before 1 year	56 days	4 to 6	
Wolf,	2 years	73 days	5 to 9	
Dog in the most } natural state, }	10 months	63 days	3 to 6	15 years.
Fox,	1 year	2 months (?)	Do.	10 or 12 years.
Jackall,		Do.	5 to 8	
Isatis,		63 days	6 to 7	
Phoca,		3 months (?)	2 to 3	
Rodentia.				
Squirrel,	1 year	45 days	3 to 4 twice a year	Produces during life.
Flying Squirrel, . . .			3 to 4	Do.
Ondatra,			3 to 5	Lives 6 years.
Beaver,		4 months	2 to 3	Lives 8 years.
Hare,	1 year	30 days	{ 2 to 4 several }	
Rabbit,	6 months	Do.	times a year }	
Rat,	Do.	5 or 6 weeks	4 to 8 do.	Lives 8 or 9 years.
Mouse,	Do.	1 month	5 to 6 do.	Produces during life.
Marmot,		6 weeks	Do.	Do.
Guinea Pig,	5 to 6 weeks	3 weeks	2 to 4	Do.
Dormouse,	1 year		{ 5 to 8 times }	Do.
			a year }	
			3 to 5 }	
Edentata.				
Armadilla,			4 times a year	7 to 8 years. (?)
Ruminantia.				
Camel,	4 years	11 months or 1 year	1	40 to 50 years.
Dromedary,	Do.	Do.	1	Do.
Buffalo,	3 years	9 months	1	15 to 18 years.
Beef,	2 years	Do.	1 to 2	9 years.
Lama,	3 years		Do.	12 years.
Reindeer,	2 years	8 months	1	Lives 16 years.
Buck and Doe,	1½ year	Do.	1 to 2	Lives 25 or 30 years.
Roebuck,	Do.	5 months	Do.	Lives 12 or 15 years.
Saiga (Antelope), . . .	1 year	Do.	Do.	Lives 15 or 20 years.
Chamois and Wild Goat,	Do.	Do.	1, 2, and 3	Lives 18 or 20 years.
Goat,	Do.	Do.	Do.	7 years.
Musimon,	1½ year	Do.	1 to 2	8 or 10 years.
Sheep,	1 year	Do.	Do.	8 years.
Solipedes.				
Horse,	2½ years.	290 days	1 or 2	25 or 30 years.
Ass,	Do.	Do.	Do.	Do.
Zebra,	Do.	Do.	Do.	Do.
Pachydermata.				
Hog,	9 months or 1 year.	4 months	10 to 20	15 years.
Elephant,	16 years (?)	9 to 11 months	1 or 2	Lives 70 years. (?)
Rhinoceros,	5 years (?)		1 or 2 (?)	Lives 60 years. (?)
Hippopotamus,			1	
Morse,		9 months	1	

REPURGA'TIO, *Anacathar'sis*. According to Castelli—purgation by transpiration or by expectoration. Medicines, producing this effect, are called *Repurgan'tia*.

RES CONTRA NATURAM, (F) *Choses contre nature*, are those things, which tend to destroy man;—as disease, and every thing connected with it.

RES NATURA'LES, (F) *Choses naturelles*. Those things, which, by their union, were conceived to constitute the nature of man; such as the elements, temperaments, humours, spirits, &c.

RES NON NATURA'LES, (F) *Choses non-naturelles*. Those things, which, anciently, formed the matter of hygiene. See *Non-Naturals*.

RESECTION, *Resectio*, from *reseca're*, 'to cut off.' A name given, especially by the French surgeons, to operations, in which the carious extremities of long bones, or the unconsolidated extremities of fractured bones, forming irregular joints, are removed with the saw.

RESIN, *Resi'na*, *Rheti'ne*, *ῥητινῆ*. A vegetable product, commonly dry and concrete, more or less brittle, inodorous or slightly odorous, insipid, or of an acrid, warm taste; of a smooth, glassy fracture, heavier than water, inflammable, insoluble in water, soluble in alcohol, ether, and yolk of egg, and negatively electrifiable by friction. Many resins are used in medicine: the greater part are purgative and irritating. Some act like acrid poisons.

RESINA'TUM, *Rhetino'ton*, *ῥητινωτόν*. An epithet for wine impregnated with resin, and used by the ancients as a stomachic.

RESINOCE'RUM, *Rhetinoce'ron*, *ῥητινοκρηγον*. A mixture of resin and wax.—Galen.

RESOLU'TION, *Resolutio*, *Discus'sio*, from *resol'vere*, 'to loosen.' One of the terminations of inflammation, in which the inflamed part returns gradually, and without suppuration, to the healthy condition.

RES'ONANCE, from *re*, 'again,' and *sono*, 'I sound.' 'A return of sound.' A thrilling of the voice more loud than natural, or its existence in a part where it is not heard in health; as detected by auscultation. A thickened and hardened state of the lung, caused either by a mass of crude tubercles, or by inflammation, produces this phenomenon, by rendering the lung a better conductor of the murmur of the voice in the bronchi. Hence the origin of the term *Bronchophony*, from *βρονχος*, 'bronchus,' and *φωνη*, 'the voice.' (F) *Voix bronchique*.

RESORP'TION, *Resorptio*, from *resor-be're*, 'to absorb again.' Absorption of a fluid, which has been previously deposited in a part by the exhalants:—as of pus, blood, serum, &c.

RESPIRABLE, *Respirabilis*. Any gas is so called, which can be breathed without positive danger.

RESPIRA'TION, *Anap'noë*, from *respi'ro*, 'I take breath.' *Anapneu'sis*, *Pneu'sis*, *Spira'tio*, *Respira'men*, *Respiramentum*, *Respira'tus*, *Respir'itus*, *Spir'itus*. A function, proper to animals, the object of which is, to place the materials of the blood—the mixture of the venous blood with lymph and chyle—in contact with atmospheric air, in order that it may acquire the vivifying qualities that belong to arterial blood.

The organs, for executing this function, are,—in the mammalia, birds, and reptiles,—the *lungs*. In man, the respiration consists of mechanical and chymical phenomena. The former are *Inspiration* (q. v.), and *Expiration*, (q. v.)

The evident chymical phenomena consist in the formation of a certain quantity of carbonic acid, in the absorption of a part of the oxygen of the air, and in the disengagement of a quantity of water in the state of vapour.

In the healthy condition, the respiration is easy, gentle, regular, and without noise. In man, the respirations are, generally, about 35 per minute in the first year of life; 25 during the second; 20 at puberty; and 18 in the adult age.

RESPIRATORY. An epithet applied to the *murmur* heard by auscultation in a healthy adult, during inspiration and expiration. It marks the entrance of the air into the cells, and its passage out of them. See *Murmur*.

RESPIRATORY TRACT, *Tractus respirato'rius*; the middle column of the spinal marrow, described by Sir Charles Bell as that whence the respiratory nerves originate. See *Nerves*.

RESTAURA'TIO. Restoration of strength after disease or great fatigue. *Refec'tio*, *Analep'sis*, *Anatrep'sis*, *Anacom'ide*, *Analte'sis*, *Anacte'sis*, *Apocatas'tasis*.

RESUSCITA'TION, *Resuscita'tio*, from *resuscita're*, 'to stir up anew.' *Revivification*. The restoration of persons, apparently dead, to life. See *Asphyxia* and *Suffocation*.

RETE, *Reticulum*; a net; *Dictyon*, (F) *Réseau*. A name given to the interlacing and decussation of blood-vessels, lymphatics, fibres, and nerves, when they form a kind of network.

RETE has, also, been applied to the epiploon.—Castelli.

RETE MIRAB'ILE, (F) *Reseau admirable*, *R. merveilleux*. A name given to the ramifications and anastomoses of the internal carotid and vertebral arteries, at the base of the brain.

The **RETE MIRABILE** vel **RETE VASCULO'SUM MALPI'GHII** is the plexus formed on the cells of the lungs by the minute ramifications of the pulmonary artery.

RETE VASCULOSUM TESTIS. An irregular plexus or network, formed by the communication of the *Vasa recta* at the upper and back part of the testicle.

These *Vasa recta* are sent out at the back part of the testicle, from the convoluted seminal tubes.

The *Rete Vasculosum Testis* sends out from 12 to 18 straight tubes, called *Vasa efferentia*, which convey the semen from the testes to the epididymis.

RETENTION, *Reten'tio*, from *retine're*, 'to hold back.' Accumulation of a solid or liquid substance, in canals intended for its excretion, or in a reservoir, intended to contain it only for a short period.

RETENTION OF URINE; *Paru'ria Retentio'nis vesica'lis*, *Ischu'ria vesica'lis*, *Retentio Uri'næ*. (F) *Rétention d'urine*. A disease, in which the urine, accumulated in the bladder, cannot be evacuated; or, at least, cannot be passed without extreme difficulty. In the former case, the retention is said to be *complete*; in the latter, *incomplete*. Many writers have distinguished three degrees of this affection, to which they have given the names *Dysury* (q. v.), *Strangury* (q. v.), and *Ischury*, (q. v.) Retention of urine may depend upon loss of contractility, paralysis of the bladder, &c., or on some obstacle to the passing of the urine, as in cases of pressure of the womb on the bladder, of tumours in its vicinity, foreign bodies in its cavity, inflammation of the urethra, swelling of the prostate, stricture, &c. The pain is extremely violent, and the bladder may be found distended above the pubis.

The treatment consists in introducing the catheter, or puncturing the bladder, and in combating the cause, which has produced the retention, by particular means adapted to each case.

RETICULAR, *Ret'iform*, *Reticula'ris*, *Amphiblestroïdes*, *Dyctoi'des*, *Retifor'mis*. That which resembles a net. An epithet applied to many structures in the body.

RETINA, from *rete*, 'a net:' *Tu'nica ret'ina* seu *reticula'ris* seu *retifor'mis* seu *in'tima oc'uli*, *Involucrum reti compositum*, *Verricula'ris membra'na*, *Amphiblestroïdes*. A soft, pulpy, grayish, semi-transparent, very thin membrane; extending from the optic nerve to the crystalline, embracing the vitreous humour, and lining the choroid; without, however, adhering to either of those parts. It is constituted, according to most anatomists, by the expansion of the optic nerve. The retina appears formed of two laminæ; so joined together, that it is almost impossible to separate them. The one—the innermost—is medullary, pulpy: the other—the outer—is stronger, and fibro-vascular.

The retina is the essential organ of vision: on it the images of objects are impressed. Both it and the optic nerve are devoid of general sensibility. They may be punctured or lacerated, without pain being experienced. The nerve of general sensibility, distributed to the eye, is the 5th pair.

RETINACULUM. A surgical instrument, formerly used in the operation of castration; and in that of hernia, to prevent the

intestines from falling into the scrotum.—Scullet.

RETORT, *Retor'ta*, *Ba'tia*, *Cornu*, *Cornu'ta*, *Cornes'ta*, *Cornumu'sa*. (F) *Cornue*, from *retor'queo*, 'I bend back.' A vessel, commonly of glass or earthenware, employed in distillation. It may be *plain*, or have a *tubulure* for admitting substances, whilst the distillation is going on. In the latter case, it is said to be "tubulated."

RETRAC'TION, *Retractio*. State of a part, when drawn towards the centre of the body or backwards;—as retraction of the testicles. Sometimes, it is used synonymously with *shortening* or *drawing up*; as in *retraction of the thigh*.

RETRAHENS AURIS, *Poste'rior Auris*, *Tricauda'lis*, *Triceps Auris*, *Retrahens Auriculæ*, *R. Auriculam*, *Secun'dus proprio'rum Auriculæ*, *Bicauda'lis*, *Deprimens Auriculæ*, *Proprius Auris externæ*, *Mastoïdo-conchi-nien*, *Mastoïdo-oriculaire* (Ch.), (F) *Auriculaire postérieur*. It consists of one or more small fasciculi of fleshy, thin, somewhat irregular fibres, situate behind the ear. These are attached to the mastoid process, and pass horizontally forwards, to terminate at the convexity, formed by the concha of the ear. If this muscle had any use, it would carry the ear backwards.

RETROCES'SION, *Retrocessio*. The act of going back. A disappearance or metastasis of a tumour, eruption, &c. from the outer part of the body to the inner.

RETROVER'SIO UTERI, *Retroversion of the Uterus*, *Ædopto'sis Uteri retrover'sa*, *Retroflex'io Uteri*, (F) *Rétroversion*, *Rétraction*, *Obliquité ou Rétropulsion de la Matrice*. A change in the position of the uterus, so that the fundus of the organ is turned towards the concavity of the sacrum, whilst the neck is directed towards the symphysis pubis. This displacement is commonly attended with constipation, tenesmus, and retention of urine. Its usual period of occurrence is between the 3d and 4th months of pregnancy; before the uterus has escaped above the superior aperture of the pelvis. In the treatment, the catheter must be regularly used, twice a day, until the uterus, by its growth, rises above the pelvis. The catheter should be small, flat, and curved considerably more than common, in consequence of the distorted course of the urethra. The bowels must be kept open; and absolute rest, in a recumbent posture, be enjoined. Should it be impracticable to draw off the urine, attempts must be made to replace the uterus. The woman being on her hands and knees, the fore and middle fingers of the accoucheur's left hand are to be passed up the rectum to the fundus uteri; which they must elevate, whilst the cervix uteri is carefully depressed by two fingers of the right hand in the vagina. Should the fingers, employed to elevate the fundus, not be long enough to effect this object, a piece of whalebone may

be substituted, having a small piece of sponge, attached to one extremity, as a pad.

REVULSION, *Revul'sio*, *Antis'pasis*. The act of turning the principle of a disease from the organ, in which it seems to have taken its seat. Rubefacients vesicatories, bleeding in the foot, &c. are often used for this purpose.

RHACHI'TÆ, *Rhachiæi*, *Rachi'tæ* or *Rachia'i*. The muscles of the spine.

RHAG'ADES, *ῥαγὰδεις* *Rhag'adia*, *Scissu'ra*, *Fissu'ra*, *Rimæ*. Ruptures, chaps or narrow and long ulcers, which form near the origin of mucous membranes; especially around the anus, and which are generally owing to the syphilitic virus.

RHAGĒ or RAGĒ, *ῥαγν*, a suffix denoting violent rupture or discharge, as in *Hemorrhage*, *Menorrhagia*, &c.

RHAMNUS, *Rhamnus catharticus*, *Spina cervi'na*, *Rhamnus solutivus*, *Spina infecto'ria*, *Cervispina*, *Buckthorn*, *Purging buckthorn*. (F) *Nerprun purgatif*. Family, *Rhamnoidæ*. Sex. Syst. Pentandria Monogynia. The berries,—*Rhamni Baccæ*—have a faint and disagreeable odour; and bitterish, nauseous taste. They are cathartic, and are apt to excite griping, which must be obviated by the use of diluents.

RHAMNUS ALATER'NUS, *Common alaternus*, (F) *Alaterne*. The leaves have been used as detergents and astringents, in the form of gargle especially.

RHAMNUS FRAN'GULA. The *Black Alder*, *Frangula Alnus*, *Alnus Nigra*, (F) *Aune noir*, *Bourdain*, *Bourgène*. All the parts of this tree, as well as of the common alder, are astringent and bitter. The bark is most so. The inner, yellow bark of the trunk or root acts as a cathartic. It has also been employed as an anthelmintic.

RHEUM, *R. palma'tum*, *R. compac'tum*, *R. undulatum*, *Rhabar'barum*, *Rheon*, *Rha*, *Rhæum*, *Lap'athum orientale*, *L. Chinen'se*, *Rhabar'barum ve'rum*, *R. Tartar'icum*, *R. Siber'icum*, *R. Tur'cicum*, *Rhubarb*, (F) *Rhabarbe*. Family, *Polygonæ*. Sex. Syst. Enneandria Trigynia. The root is the part used in medicine. Its odour is aromatic, peculiar, and rather nauseous; taste, somewhat aromatic, subacid, bitterish, and astringent. It colours the saliva and urine yellow. It is easily pulverized, and forms a powder of a bright buff yellow colour. Both water and spirit extract its virtues. The Chinese and Tartary rhubarbs are those generally used.

Rhubarb root is purgative, stomachic, and astringent. (?) It is chiefly used for the properties, first mentioned: externally, the powder is sometimes sprinkled over ulcers, to assist their granulation.

Dose, ʒj to ʒss of the powder. In a smaller dose, it is stomachic.

RHEUM RHAPON'TICUM, *Rhapon'tic Rhubarb*; *Rhapon'ticum*, *Rhabarbarum Dioscor'idis*, *R. Antiquo'rum*, (F.) *Rhapontique*, *Rhapontic*. The root of this seems to have

been the rhubarb of the ancients. It is more astringent than that of the *rheum palmatum*, and less purgative; for the latter purpose, two or three drachms being required for a dose.

RHEU'MATISM, from *ῥευμα*, 'a defluxion, catarrh.' *Dolor Rheumat'icus et arthrit'icus* (Hoffmann), *Myoso'tis*, *Rheuma*, *Myody'nia*, (F) *Rheumatisme*. A kind of shifting phlegmasia, sometimes seated in the muscles, sometimes in the parts surrounding the joints; and at others, within them. Hence the name, *Muscular*, *Articular*, and *Synovial*, which have been applied to it. The disease may be *acute*, or *chronic*.

ACUTE RHEUMATISM, *Arthro'sia acuta*, *Rheumatismus*, *Rh. inflammato'rius seu hypersthenicus*, *Rheumat'ic Fe'ver*, *Rheumatopyra*, *Febris rheuma'tica inflammato'ria*, *Synocha rheumat'ica*, *Myosotis*, *Myitis*, *Cauma rheumatismus*, *Arthrit'is rheumatismus*, (F) *Rhumatisme aigu*, *Fièvre rhumatismale*, usually comes on with the ordinary symptoms of fever; soon after which, or simultaneously, or even before the appearance of febrile signs. excruciating pains are felt in different parts of the body; particularly in the larger joints, which are more or less red and swollen; the pain shifting from one to the other, at times with great rapidity. The disease rarely terminates in less than six weeks, during the greater part of which period the febrile symptoms remain severe; and what is peculiar to the disease, the skin will be covered daily with a profuse perspiration, although it feels extremely hot, and the pulse appears in no way modified by it. It is one of the essential symptoms of the affection, and consequently affords no relief. The only danger to be apprehended from acute rheumatism, notwithstanding the apparent severity of the symptoms, is the translation or extension of the disease to some internal part, especially to the heart. This tendency must always be borne in mind. *Acute* rheumatism seldom terminates in the *chronic*; they who are liable to the former, are rarely so to the latter, and conversely.

The disease will generally run its course, in spite of treatment. The usual antiphlogistic plan had better be pursued, during the first days of the disease. Blood-letting may be employed, if the vigour of the patient and of the disease seems to require it; but, although the blood is generally buffy, bleeding does not usually seem to afford much relief.

The bowels must be kept open; effervescent draughts be administered, and opium given in full doses to allay pain. This is, generally, all that is necessary during the first week; after which, advantage will usually be obtained from the exhibition of the sulphate of quinine with sulphuric acid. It does not augment the excitement; and will be found proper in almost all cases. Rheumatic inflammation is very different from

other varieties, and this may account for the anomaly. After a few weeks, the disease usually goes off but leaves the patient very liable to a recurrence on slight exposures or errors of diet; at times, acute rheumatism of the joints puts on the appearance of gout, and seems to be a complication of the two affections. It is then called *Gouty* or *Arthritic rheumatism* or *Rheumatic gout*.

RHEUMATISM, CHRONIC, *Arthrosia chronica*, *Rheumatismus chronicus*, *R. vulgaris* seu *inveteratus* seu *habitualis* seu *frig'idus*, *Rheumatal'gia*, *Arthrodyn'ia*, *Arthritis arthrodynia*, (F) *Rhumatisme chronique*, is attended with pains in the hips, shoulders, knees, and other large joints. These are, sometimes, confined to one joint; at others, shift from one to another, without occasioning inflammation, or fever. In this manner, the complaint often continues for a great length of time, and then goes off. There is no danger attendant upon it; but the patient may become lame, and is always liable to painful recurrences.

Neither variety terminates in suppuration; but effusion of coagulable lymph is apt to occur, so as to occasion permanent thickening of the parts. The great preventive of chronic rheumatism, and one of the most valuable curative agents, is flannel, worn next the skin. The whole class of rubefacients may, also, be used with advantage. The warm bath, especially the natural warm bath, the temperature of which does not vary, is perhaps the most successful remedy of all.

RHEX'IS, *ῥηξις*, *Rupture*. Rupture of a vessel. Spontaneous opening of an abscess.

RHICNO'SIS, *ῥιχνωσις*, *Cutis corrugatio*. Wrinkling of the skin from extenuation of the body; opposed to *εκτασις*, or distention from repletion.

RHINALG'IA, from *ῥιν*, 'the nose,' and *αλγος*, 'pain.' Pain in the nose.

RHINEN'CHYSIS, *Rhinenchysia*, from *ῥιν*, 'the nose,' and *ῥυχω*, 'I pour in.' An infusion or injection, made into the nostrils, with a syringe called *Rhinen'chytes*.

RHINOCNES'MUS, from *ῥιν*, 'the nose,' and *κνησμος*, 'itching.' Itching of the nose.

RHINOPHO'NIA, from *ῥιν*, 'the nose,' and *φωνη*, 'the voice.' A nasal voice, called, also, *Dyspho'nia immodula'ta nasa'lis*, *Parapho'nia nasa'lis*, *Paraphonia res'onans*, *Na'sitas*. Speaking through the nose.

RHINOPLASTIC, from *ῥιν*, 'the nose,' and *πλασσω*, 'I form.' An epithet applied to the operation for forming a new nose. The *Taliacotian operation*, so called, because described by Tagliacozzi. It consists in bringing down a portion of flesh from the forehead, and causing it to adhere to the anterior part of the remains of the nose.

RHINOP'TIA, from *ῥιν*, 'the nose,' and *επιτομαι*, 'I see.' The act of seeing by the nose. A deformity, caused by a disease of the greater angle of the eye or of the root of

the nose making an opening in the parietes of the nasal fossæ, through which the luminous rays can arrive at the eye.

RHIZOPH'AGUS, from *ῥιζα*, 'a root,' and *φαγω*, 'I eat.' One who lives on roots.

RHODELÆ'ON. Oil of roses, or oil impregnated with roses.

RHO'DIA, *Rhodiola ro'sea*, *Rosea*, *Rose-wort*, (F) *Rhodiole*. *Sex. Syst.* Diœcia Octandria. The root, *Roseroot*, when dry, has a very pleasant smell, and is slightly astringent. It is not used.

RHODITES VINUM. Wine, in which roses have been macerated.

RHODIUM LIGNUM, *Rhodium* or *Rose wood*. The wood or root of a tree, supposed to be the *Genis'ta Canariensis* of Linnæus. (F) *Bois de rose*, *Bois de Chypre*. *Family*, Leguminosæ. *Sex. Syst.* Diadelphia Decandria. The essential oil is a perfume, and possesses cordial and tonic virtues. Its smell is attractive to fish, rats, &c.

RHODODEN'DRON CHRYSAN'THEMUM, *R. Chrysan'thum*. The *Olean'der*, *Rose Bay*, *Yellow rhododendron*, (F) *Rosage*, *R. Chrysanthe*. *Nat. Ord.* Ericææ. *Sex. Syst.* Decandria Monogynia. This plant has been recommended in rheumatism, gout, and syphilis. In an overdose, it produces acronarcotic symptoms.

ROGME, *ῥωγμα*, the same as *ῥηγμα*, 'a rupture.' A straight fracture of the skull.

RHOITES, *ῥοιτης*, a wine impregnated with the pomegranate; from *ῥοις*, *Pomegranates*.—Dioscorides. A confection, made by boiling the juice of the pomegranate in honey.—Paulus of Ægina.

RHOMBOIDEUS, from *ῥομβος*, 'a rhombus,' whose sides are equal, with two obtuse and two acute angles. *Rhomboideus major* and *minor*, *Rhomboi'des*, *Cervici-dorso-scapulaire*. A muscle, situate at the posterior inferior part of the neck, and at the posterior part of the back. It has a rhomboidal shape, and is attached, by its inner edge, to the posterior cervical ligament, and to the spinous processes of the last cervical vertebra, and of the first four or five dorsal. By its outer edge, it is attached to the spinal or posterior edge of the scapula. It is divided into two fasciculi, constituting the *Rhomboideus major* and *minor*, the latter being situate higher than the other. This muscle draws the scapula backwards and upwards, and impresses upon it a rotatory motion, which brings its inferior angle nearer to the spine; and, consequently, depresses the anterior angle and the shoulder.

RHOMBOS, *ῥομβος*. A bandage, mentioned by Galen, so called on account of its rhomboidal shape.

RHUS CORIA'RIA, *Sumach*, *Rhus Glabrum*, *Adu'rion*, *Elm-leaved Sumach*. (F) *Sumac des Corroyeurs*. *Family*, Terebinthaceæ. *Sex. Syst.* Pentandria Monogynia. This is the only species of the genus *rhus*,

that is innocent. Both the leaves and berries have been used as astringents and tonics.

RHUS RADICANS, *Rhus vernix*, *Poison vine*, (*America*.) This plant is poisonous, (See Poisons, Table of,) and is extremely acrid, when applied to the skin, producing erysipelas and vesications, and has been used, like the next variety, in paralysis and other nervous affections.

RHUS TOXICODENDRON, *Toxicodendron*, *Poison oak* (*America*). (F) *Sumac vénéneux*. This plant has been used in paralytic affections and cutaneous eruptions. It is poisonous, like the last. Dose, gr. ss to gr. iv.

RHYTHM, *ῥυθμός*, *Measure*. The order or proportion, which reigns between the different parts of a whole. Applied, in medicine, to the pulsations of the heart—to the pulse—to express the due proportion between one pulsation and those following it.

RIBES NIGRUM, *Cassis*. The *Black currant*. (F) *Groseillier noir*. *Sex. Syst.* Pentandria Monogynia. The berries have been recommended in sore throat and as diuretics. The leaves have been advised for the same purpose. They are chiefly used as preserves:

RIBES RUBRUM, *Grossularia non spinosa*, the *red currant*. (F) *Groseillier rouge*; of which the *white* is only a variety. It is cultivated and affords an agreeable fruit. It possesses the qualities of the subacid fruits in general, and makes an excellent preserve.

RICINUS COMMUNIS. The *Castor-oil plant*, *Catapu'tia major*, *Ricinus vulg'aris*, *Palma Christi*, *Faba purgatrix*, *Cerua* or *Kerua*, *Cici*. (F) *Ricin*, *Fève purgatif*. *Family*, Euphorbiacæ. *Sex. Syst.* Monœcia Monadelphia. Castor-oil seeds, whence the oil is obtained, are inodorous; taste acrid and slightly sweetish. One or two seeds will act as a cathartic; but the oil, *O'leum ricini*, (F) *Huile de Ricin*, is, alone, used. It is obtained by bruising the castor seeds, previously decorticated, and then expressing the oil without the application of heat. Recently drawn castor oil, *Oleum de kervâ*, *O. kervi-num*, *Alker'va*, *Oleum Ric'ini*, *O. Cicinum*, *O. Palmæ liquidum*, is inodorous and nearly insipid. It is cathartic, operating speedily, and may be used in all cases, where powerfully stimulating purgatives would be injurious. Dose, 3 ss to 3 iss.

Hufeland recommends that a drop of the croton oil (q. v.) shall be added to an ounce of the Oil of Poppy, and that the mixture shall be called *Oleum Ricini officinale*.

A variety of *Ricinus* at Cape Verd is employed by the inhabitants to increase the secretion of milk. It is applied in the form of poultice, made with the green leaves, to the mammæ, or of a strong decoction, with which the mammæ and the external parts of generation are washed.

RIDING, (of Bones.) *Ossium superpositio*. (F) *Chevauchement*. Displacement of

the fragments of a bone, chiefly produced by the contraction of muscles, which occasions shortening of the limb; the fractured extremities riding over each other, instead of being end to end.

RIGIDITY, *Rigiditas*. Great stiffness of fibre, or want of suppleness. The stiffness of the dead body, (F) *Roideur cadavérique*, is one of the most certain signs of the cessation of life.

RIGOR, *Rhi'gos*, *Algor*, *Coldness*, *Cheim'ia*. (F) *Frisson*. Sensation of cold, with involuntary shivering of the whole body:—a symptom of fever.

RIMA. A fissure, a cleft; as *Rima* or *Ri'mula Glottidis*, 'the opening of the glottis,' (q. v.), *Rima vulvæ*, 'the opening of the vulva,' (q. v.)

RING, Sax. *hring*, *ring*, Germ. *Ring*, *Cricos*. (F) *Anneau*. A name given to natural, circular, or roundish apertures, with muscular or aponeurotic parietes, which serve for the passage of some vessel or canal;—as the *umbilical ring*, *inguinal ring*, &c.

RISING or *Eleva'tion of the Pulse*. *Pulsus eleva'tio*. The pulse is said to rise, when it becomes more full and frequent, as occurs in the exacerbation of acute diseases.

RISO'RIUS NOVUS. Santorini gives this name to a portion of the platysma myoides, which passes from the cheek towards the commissure of the lips.

RISUS. *Gelos*, *Laughing*. (F) *Rire* ou *Ris*. An involuntary movement of the muscles of the face, and of the lips in particular, accompanied with a sonorous and interrupted respiration, and commonly indicating mirth and satisfaction.

RISUS SARDON'ICUS, *R. de Sardo'nia*, *R. spas'ticus*, *Sardoniasis*, *Sardiasis*, *Tortura Oris*, *Distorsio Oris*, *Gelasmus*. (F) *Ris Sardonien*, *R. Sardonique*. A convulsive separation of the lips and cheeks, which precedes and often accompanies general tetanus. It is said to have been so called from similar symptoms having been induced by a kind of ranunculus that grows in Sardinia.

ROB, *Roob*, *Robub*, *Rohob*, (F) *Extrait des fruits*. This word, of Arabic extraction, means the juice of any fruit thickened to the consistence of honey by evaporation, before it has fermented.

The juice of the grape, boiled to this consistence, was called *Sapa*; and, when not quite so thick, *Defrutum*.

ROBIN'IA AMA'RA. *Family*, Leguminosæ. *Sex. Syst.* Diadelphia Decandria. The roots of the *Robinia amara* of Cochin China are bitter, and have been recommended, especially in that country, in diarrhœa and dyspepsia.

ROBINIA PSEUDO-ACACIA, *Locust Tree*—native of America. The flowers are said to possess antispasmodic properties.

ROCHE'S EMBROCATION FOR THE HOOPING COUGH. An empirical pre-

paration, composed of *ol. oliv.* 3 xvj, *ol. succin.* 3 viij, *ol. caryoph.* q. s. to scent it strongly.

RODA'TIO, from *ro'dere*, 'to eat away.' Diminution of the hair in length.

ROSA ALBA. The White Rose, (F) *Rosier blanc*. Family, Rosaceæ. Sex. Syst. Icosandria Polygynia. The flowers of this species possess similar but inferior qualities to the damask.

ROSA CANINA; *R. sylves'tris*, *Cynor'rhodon*, *Caniru'bus*, *Caninus Sentis*, *Cynocy'tisus*, *Cynospas'tum*, *Cynos'batos*, the Dog Rose, Wild Brier, Hip Tree, (F) *Rose du chien*, *Eglantier de chien*, *E. sauvage*. The fruit of this variety, called *Heps* or *Hips*, has a sourish taste, and is formed into a conserve. See Confectio Cynosbati. It is seldom employed, except to give form to more active remedies; as in pills, boluses, linctuses, &c.

ROSA CENTIFOLIA; the Damask Rose, *Rosa Damasc'na*, *R. Pal'lida*, (F) *Rosier à cent feuilles*, *Rhodon*, *Rosa*. The petals of this rose have an extremely fragrant odour, and subacidulous taste. They are laxative; but are scarcely used for any purposes except for the distillation of rose-water, and the formation of a syrup.

ROSA GAL'LICA; the Red Rose, *Rosa rubra*, (F) *Rosier de Provins*. The petals of this variety are astringent; and are used in infusion, conserve, &c.

ROSES, MILK OF. A cosmetic wash, formed, according to one method, of subcarbonate of potass, gr. vj; oil of almonds, 3 j; essence of bergamot, 3 ij; aquæ rosæ, 3 iij; orange flower water, 3 ij. Mix.

ROSENHEIM, MINERAL WATERS OF. R. is 34 miles S. E. from Munich in Bavaria. The waters contain sulphuretted hydrogen, carbonic acid, carbonate of lime, muriates of lime and magnesia, carbonate of soda, and oxide of iron. They are used as tonics.

ROSE'OLA, *Exanthe'sis Roseola*, *Rose Rash*. An efflorescence in blushing patches, gradually deepening to a rose-colour, mostly circular or oval: often, alternately fading and reviving: sometimes, with a colourless nucleus; and chiefly on the cheeks, neck, or arms. It is frequently found, as a symptom, in dentition, dyspepsia, &c., and is of no consequence. See Rubeola and Scarlatina.

ROSMARINUS, *R. officina'lis*, *Alchachil*, *R. horten'sis*, *Libano'tis corona'ria*, *Dendro-lib'anus*, *Rosemary*, (F) *Romarin*. Family, Labiatæ. Sex. Syst. Diandria Monogynia. The leaves and tops of this plant have a fragrant, grateful smell; and an aromatic, warm, bitterish taste, which is dependent upon an essential oil, combined with camphor.

Rosemary has been recommended in nervous headaches, in the form of infusion. It is now rarely used, except for its odour. Its oil—*Oleum Rosmarini*—is officinal. The flower is called *Anthos*, ἀνθος. From two to six or

ten drops are given in nervous complaints rubbed up with sugar.

ROSTRUM, *Rinchos*, *Ramphos*, 'a beak,' (F) *Bec*. A name given to several old forceps, on account of their resemblance to the beaks of different birds. The principal were the *Rostrum corvi'num*, *anati'num*, *psittaci'num*, *vulturi'num*, *cygneum vel olori'num*, *grui-num*, *lacerti'num*, &c.

ROTACISM, *Rotacismus*, (F) *Grasseyement*. A vicious pronunciation of the Greek *ρ*, *Rau*, common in the northern parts of England; especially near Newcastle.

ROTA'TOR, from *rota*, 'a wheel.' A name given to several muscles, which turn the parts to which they are attached upon their axes;—such as, the oblique muscles of the eye, the pronators and supinators, &c.

ROUEN, MINERAL WATERS OF. This water, known under the name, *Eau des fontaines de la Maréguerie*, is cold, and contains carbonate of iron, carbonic acid, carbonate and muriate of lime, &c. It is tonic.

ROUND, *Teres*, *Rotun'dus*, (F) *Rond*. Anatomists have given this name to many organs, whose fibres are collected in round fasciculi. See *Teres*.

FORAMEN ROTUN'DUM. A foramen of the sphenoid bone, a little behind the *foramen lacerum superius*, which gives passage to the second branch of the 5th pair of nerves, called *superior maxillary*.

THE ROUND LIGAMENTS OF THE UTERUS, *Ligamenta rotunda Uteri*, *Cordons sus-pubiens* (Ch.), *Cordons vasculaires*, (F) *Ligaments ronds de l'utérus*. Two cords, which arise from the lateral and superior parts of the uterus, whence they proceed towards the abdominal rings, which they pass through, and terminate by vanishing in the cellular tissue of the groins, *mons veneris*, and *labia majora*. These cords are whitish, flattened, and narrower in the middle than at the extremities. Their fibres, which are longitudinal, are apparently albugineous.

RUBE'DO. A redness. A diffused, but not spotted, redness on any part of the skin; like that which arises from blushing.

RUBEFA'CIENT, *Erethisma*, *Rubefa'ciens*, from *rubens*, 'red,' and *fa'cio*, 'I make.' (F) *Rubéfiant*. That which produces redness. A medicine, which causes redness of the skin. The action is called *Rubefaction*.

RUBEOLA, *Rubeola vulga'ris*, *Roseolæ*, *Exanthe'sis Rubeola*, *Vetera'na*, *Blac'ciæ*, *Bovillæ*, from *ru'beo*, 'I become red:—*Morbil'li*; *M. variolo'si*, *Scarlatina pustulo'sa*, *S. Milia'ris*, the Measles; *Febris morbillo'sa*, *Typhus Morbillosus*, *Phænicis'mus*, (F) *Rougeole*, *Fièvre morbilleuse*. One of the major exanthemata; affecting individuals but once, and produced by specific contagion. The rash usually appears on the 4th, but sometimes on the 3d, 5th, or 6th day, of a febrile disorder; and, after a continuance of four days, gradually declines with the fever. The disease ge-

nerally commences from 10 to 14 days after the contagion has been received.

The eruption first shows itself in distinct, red, and nearly circular spots; somewhat less than the ordinary areolæ of flea-bites. As these increase in number, they coalesce; forming small patches of an irregular figure, but approaching nearest to that of semicircles or crescents. These patches are intermixed with single, circular dots, and with interstices of the natural colour of the skin. On the face they are slightly raised, so as to give the sensation of inequality of surface, to the finger passing over the cuticle. The disappearance of the eruption is followed by desquamation of the cuticle.

The measles is not dangerous of itself; but it is apt to induce pneumonia in winter, and dysentery in summer, which are, at times very fatal. These are apt to come on at the time of, or soon after, the disappearance of the eruption. When they supervene, they must be treated as idiopathic affections.

Measles demands a general antiphlogistic treatment.

Willan has pointed out a kind of *Rubeola spuria*, which he calls *Rubeola sine Catarrho*. In this, the rash runs its regular course, with little fever or catarrhal affection; affording no certain security against the common or regular disease.

Willan gives the name, *Rubeola Nigra* or *Black Measles*, to an unusual appearance of the measles about the 7th or 8th day, when the rash becomes suddenly livid, with a mixture of yellow. It is devoid of inconvenience or danger; and is removed in a week or ten days by the mineral acids.

RUBIA, *R. Tinctorum*, *Erythrod'anum*, *Rubia major*, *Radix rubra*, *Dyer's Madder*, *Madder*, (F) *Garance*. Family, Rubiaceæ. Sex. Syst. Tetrandria Monogynia. The roots of this plant have a bitterish, somewhat austere, taste; and a slight, not agreeable, smell. They were formerly considered deobstruent, detergent, and diuretic.

RUBIG'INOUS, *Rubiginosus*, (F) *Rouillé*. Having the colour of rust. An epithet given to the sputa in certain cases of Pneumonia.

RUBRICA FABRI'LIS. A red, heavy, earthy matter, formerly employed for making drying plasters. *Hard Ruddle*, *Red Chalk*.

RUBRICA SINOP'ICA. A heavy, compact, reddish earth: formerly used in diarrhœa.

RUBUS ARC'TICUS. The *Shrubby Strawberry*, *Baccæ Norlandicæ*. Family, Rosaceæ. Sex. Syst. Icosandria Polygynia. The fruit is recommended by Linnæus, as possessing antiseptic, refrigerant, and antiscorbutic qualities.

RUBUS CÆSIUS; the *Dewberry plant*, (F) *Ronce bleue*. The fruit resembles the blackberry in appearance and properties. The bark of the root of the *R. Trivialis* or *American Dewberry* is astringent.

RUBUS CHAMÆMO'RUS; the *Cloudberry Tree*, *Chamæmo'rus*, *Cloudberries*, *Knot'-berries*, (F) *Ronce de Montagne*. The ripe fruit is sometimes prepared like a jam, and used in fevers, &c., to allay thirst. It has been much extolled as an antiscorbutic.

RUBUS FRUTICO'SUS; the *Common Bramble*, which affords *Blackberries*, (F) *Ronce noire*. The berries are eaten as a summer fruit, of which they form a poor variety. The bark of the root of the *Rubus villosus* or *American Blackberry* is astringent, and has been used in the last stages of dysentery, and in cholera infantum.

RUBUS IDÆ'US; *Batos*, βατος; the *Raspberry*, (F) *Framboise*, *Ronce*. The fruit of the best varieties is extremely agreeable; and is much used. It was, formerly, called *Batimon moron*.

RUGI'TUS, *Brychethmos*, βρυχηθμος, (F) *Rugissement*. A Latin word, which ordinarily expresses the roaring of the lion: and which is used, by some medical writers, to designate a particular species of borborygmus compared to it.

RUM, *Tafia*, *Melasses Spirit*. A spirit, distilled from sugar, or melasses. See Spirit.

RUMEX ACETO'SA. The *Common Sorrel*, *Ox'alis Aceto'sa*, *Acetosa vulga'ris*, *A. praten'sis*, *Anax'yris*, *A. arven'sis*, *Sorrel*, *Sour dock*, *Acetosa nostras*, (F) *Oseille*. Family, Polygonæ. Sex. Syst. Hexandria Trigynia. The leaves are sour, and are used in cookery, and also as a refrigerant.

RUMEX ACU'TUS; *Sharp-pointed Wild dock*, *Oxylap'athum*, *Lap'athum*, *Rumex*, *Lapathos*, (F) *Patience sauvage*. The decoction of the root has been long used in cutaneous affections. It is, sometimes, employed for the cure of the itch.

RUMEX ALPI'NUS. The systematic name of the plant, that affords the *Monk's Rhubarb*, (F) *Rhabarbe des Moines*. See Rumex Patientia.

RUMEX HYDROLAP'ATHUM, *Water-Dock*, *Hydrolapathum*, *Rumex aquat'icus*, *Herba Britann'ica*, *Lapathum aquaticum*, (F) *Parelle*, *Patience d'eau*. The leaves of this plant are subacid, and said to be laxative. The root has been used as a tonic, astringent, and antiscorbutic. It has, also, been employed externally, in some cutaneous affections.

RUMEX PATIEN'TIA;—*Garden Patience*, *Rhabar'barum monacho'rum*, *Hippolap'athum*, *Patientia*, *Monk's Rhubarb*, (F) *Patience*. This root, which is supposed to possess the virtues of rhubarb, but in an inferior degree, according to Linnæus, is obtained from the Rumex patientia; according to Murray, from the *Rumex alpinus*.

RUMEX SANGUI'NEUS. The root of the *bloody dock* has an austere and astringent taste; and has been employed in dysentery. It is called, also, *Lapathum sanguineum*, (F) *Oseille ou Patience rouge*, *Sangdragon*.

RUMEX SCUTA'TUS, *French Sorrel*, *Acetosa rotundifo'lia*, *A. Roma'na*, *A. Rotundifolia hortens'is*, *Roman or Garden Sorrel*, *Green Sauce*, (F) *Oseille boucher*, *Oseille ronde*, *Petite O*. Virtues the same as those of the common sorrel.

RUMINA'TION, *Rumina'tio*, *Merycis'mus*. A function, peculiar to ruminating animals, by which they chew the food they have swallowed a second time. An analogous phenomenon is sometimes seen in man.

RUNNING, *Cursus*, (F) *Course*. A succession of leaps, executed with rapidity, to transport the body quickly from one place to another.

RUSCUS, *R. aculea'tus*, *Bruscus*, *Oxy-myrrhi'nē*, *Oxymyrsi'nē*, *Myrtacan'tha*, *Catan'gelos*, *Myacan'tha*, *Scopa regia*, *Wild Myrtle*, *Centromyri'nē*, *Butcher's Broom*, (F) *Petit houx*, *Fragon*. Family, *Smilacæ*. Sex. Syst. *Diœcia Monadelphia*. The root has been recommended as an aperient and diuretic.

RUSCUS HYPOGLOS'SUM; *Uvula'ria*, *Hypoglossum*, *Bislin'gua*, *Bonifa'cia*, *Laurus Alexandri'na angustifo'lia*, (F) *Laurier Alexandrin*. Formerly used against relaxed uvula.

RUSPINI'S TINCTURE FOR THE TEETH. An empirical preparation, com-

posed of *Florentine orris* 3 viij, *cloves* 3 j, *rectified spirit* ℞ ij, *ambergris* ʒ j.

RUTA, *Ruta grav'eolens*, *R. hortens'is*, *Common Rue*, *Pega'nium*, *Besa'sa*, (F) *Rue*, *Rhue*, *Rue sauvage*. Family, *Rutacæ*. Sex. Syst. *Decandria Monogynia*. The plant has a strong, ungrateful odour, and bitter and pungent taste. It is acrid, so as to blister the skin. Its properties are reputed to be tonic, stimulant, antispasmodic, and emmenagogue. Dose, gr. xv to ʒ ij.

The *Oleum Rutæ* or *distilled Oil of Rue* is antispasmodic; and, externally, rubefacient. Dose, gr. ij to vj.

RUTA'CEUM, from *Ruta*, 'rue.' Vinegar of rue.

RUTIDO'SIS, *Rytido'sis*, *Rhytido'sis*. A destruction or atrophy of the eye. Corrugation and subsidence of the cornea.

RUYSCHIA'NA TUNICA, (F) *Lame ou Membrane Ruyschienne*. According to Ruysch and the greater part of his disciples, the choroid coat of the eye is formed of two laminæ. His son gave to the inner the name *Tunica Ruyschiana* or *Membra'na Ruyschia'na seu Ruyschii*.

The *TUNICA CELLULO'SA RUYSCHIA'NA* is the cellular substance, under the peritoneal covering of the stomach. It is not numbered among the coats of that organ.

S

S. S. A. &c. See Abbreviations.

SAB'ULOUS, *Sabulo'sus*, *Areno'sus*, *Psammo'des*. The sandy deposit, often seen in urine.

SABUR'RA, *Sordes*. This word signifies, by derivation, coarse sand. In its common acceptation, it means *foulness of the stomach*, as it is sometimes called; or vitiated matters supposed to be retained and accumulated in the stomach—the result of imperfect digestion—and which have been sometimes considered as a morbid product of the mucous secretion of that organ or of the biliary secretion; at others, as a residuum from alimentary substances, badly digested. The *Sabur'ral state*, *Collu'ries gas'trica*, *Crudita'tes ventric'uli*, (F) *Embarras gastrique*, is an accumulation of saburræ in the stomach, which the Humourists considered to be the cause of a number of diseases.

SAC, *Saccus*, *Secluso'rium*.

HERNIAL SAC, *Saccus hernio'sus*, (F) *Sac herniaire*. An envelope or pouch, formed by

the serous membrane of the cavity, whence a viscus has escaped. We distinguish, in a hernial sac, its *orifice* or the opening by which it communicates with the great cavity lined by the serous membrane: its *cervix* or *neck*, (F) *Collet*, the narrow portion on the outside of the orifice, where strangulation sometimes occurs: the *body*, (F) *Corps*, which is the round prominent part; and the *fundus* or *bottom*,—the part opposite to the orifice.

SAC'CHARUM. From the Arabic, or rather Sanscrit, *Sa-kar*, 'white earth;' *Suchar*, *Succhar*, *Sutter*, *Zuchar*, *Zu'caro*, *As'sakur*, *Tigala*, *Zac'charum*, *Zozar*, *Zu'charum*, *Zuchra*, *Sugar*, (F) *Sucre*. The product of the juice of the *Sac'charum officina'rum vel officina'lē* of Linnæus, (*Cal'amus In'dicus*, *Cal'amus Sacchari'nus*, *Sugar Cane*, (F) *Canne à Sucre*, *Cannamelle*; the *Arun'do saccharifera* of Sloane. Family, *Graminæ*. Sex. Syst. *Triandria Digynia*,) and also of the beet, maple, &c.

True sugars are those with which alcoholic fermentation *may be effected*, by the addition of yeast and water. They are:—

Species.	Varieties.
1. . . .	{ Hard sugar of the cane, maple, beet, chestnut, &c.
2. . . .	{ Liquid sugar, sugar of malt, of the sweet potato, melasses, honey, &c.
3. . . .	{ Hard sugar of the grape, ripe fruits, starch, diabetes, &c.
4. . . .	Hard sugar of the mushroom.

Imperfect sugars are those in which alcoholic fermentation *cannot be effected* by means of yeast and water.

Species.	Varieties.
1. . . .	Manna.
2. . . .	Sugar of milk.
3. . . .	Sugar of jelly or glue (<i>gelatine</i> .)
4. . . .	Liquorice.
5. . . .	Picromel.

Sugar is prepared from the expressed juice of the sugar-cane, boiled with the addition of quicklime or common vegetable alkali. It is used, in pharmacy, for the preparation of syrups, conserves, lozenges, &c. It is very nutritious, and is employed as an aliment, and as a demulcent and antiseptic. Dissolved in small quantities in water, as in tea, it is apt to ferment with dyspeptics; an evil, which does not always occur, when the same substance is taken more largely.

Muscovado, raw or brown or moist sugar, is the *Saccharum non purificatum*, *S. rubrum*, *Mel cannae*, or coarse sugar.

Saccharum acerinum, *S. Canadense*, Maple Sugar, is often used as a demulcent.

Saccharum album, *S. purificatum*, White Sugar, Refined Sugar, *Sal Indus*, is the Loaf Sugar. Double-refined Sugar has been called *Tabarzet*.

Saccharum Candidum, Sugar Candy, ((F) *Sucre Candi*), *Alphenic*, *Nabot*, is the crystallized juice of the cane.

Barley Sugar, *Penides*, *Saccharum hordeatum*, is a variety of sugar candy.

SACCULUS, 'a little sac.' This name has been given to two sacs formed by the membranous vestibule, which open into each other, and contain the *otolithes*, and *otoconies*; one of these is termed the *sacculus vestibuli*, the other *sacculus*. See Semicircular canals.

SACCULI MEDICINALES are bags containing medicinal substances.

SACK. A wine used by our ancestors. *Vin sec*. Probably Sherry.

SACRAL, *Sacer*, (F) *Sacré*. That which belongs or relates to the sacrum. A name given to several parts.

The SACRAL NERVES, (F) *Nerfs sacrés*, are generally six in number. They arise from the termination of the spinal marrow. The first, united with the great cord which descends from the lumbar plexus, concurs with

the three others in the formation of the sacral or sciatic plexus. The 3d and 4th, with branches of the great sympathetic, form the hypogastric plexus. The 5th and 6th are distributed to the ischio-coccygeus muscle, and to the sphincter and levator ani.

The SACRAL or SCIATIC PLEXUS,—the *sacral portion of the crural plexus* of Chaussier, constituted as just mentioned, is situated in front of the pyramidalis. It gives off, backwards, two branches, called the *pudic*, (F) *honteux*, and the *lesser sciatic*. It terminates in the great sciatic nerve.

The SACRAL ARTERIES are distinguished into, 1. The *anterior or middle sacral, Median Artery of the Sacrum* of Chaussier, which arises from the posterior part of the abdominal aorta, in front of the 4th lumbar vertebra. It descends, in a serpentine manner, upon the sacro-vertebral articulation, and on the anterior surface of the sacrum. It furnishes many lateral branches, which unite with the lateral sacral arteries, and enter the anterior sacral foramina, to be distributed to the membranes of the marrow, &c. 2. The *lateral sacral arteries* which are two in number; one on each side. They arise from the hypogastric, from the ilio-lumbar, or from the gluteal; and descend before the anterior sacral foramina, anastomosing in an arched manner, towards the coccyx, with the middle sacral.

They give off *external and posterior branches*, which enter the sacral foramina; and internal branches, which are distributed to the pyramidalis, sacrum, &c.

The SACRAL GROOVES, (F) *Gouttières sacrées*. Two longitudinal excavations, but slightly marked, at the posterior surface of the sacrum; which appear to terminate the vertebral grooves or gutters.

SACRO-COCCYGEUS. Relating to the sacrum and coccyx.

The SACRO-COCCYGEAL ARTICULATION is that of the lower extremity of the sacrum with the superior *facette* of the coccyx. It is closed by two ligaments;—an *anterior* and a *posterior sacro-coccygeal*.

SACRO-COXAL'GIA, from *sacrum*, 'the os sacrum,' *coxa*, 'the hip,' and *αλγος*, 'pain;' a hybrid term. Some authors have called thus, a rheumatic affection of the sacro-iliac symphysis.

SACRO-IL'IAC, *Sacro-Iliacus*. That which relates to the sacrum and ilium.

The SACRO-IL'IAC or ILIO-SACRAL ARTICULATION, SYMPHYSIS or SYNCHONDROSIS, is the union of two surfaces;—two inclined planes, broader above than below: one, formed by the sacrum;—the other, by the ilium. Both surfaces are incrustated by an articular cartilage. The bands, which strengthen them, are the two *sacro-sciatic ligaments*, the *sacro-spinal*, a *sacro-iliac* ligament, and some irregular fibres. The *sacro-iliac* ligament is a very thick assemblage of short, dense, irregu-

lar fibres, occupying the space which the sacrum and ilium leave between them, behind their articular surface. Some authors have termed some irregular fibres, situate in front of the sacro-iliac articulation, *anterior sacro-iliac ligaments*, in opposition to the preceding fasciæ, which they call *posterior sacro-iliac*.

SACRO-LUMBAR, *Sacro-lumba'lis*, *Sacro-lombus*. That which belongs to the sacrum and loins.

The **SACRO-LUMBA'LIS**, or *Sacro-lumba'ris Muscle*, *Lombo-costo-trachélien*, *Sacro-costa'lis*, *Dorso-trachélian portion of the Sacro-spinal* of Chaussier, (F) *Sacro-lombaire*, is seated at the posterior part of the trunk: is thick and triangular below; flat and thin in the remainder, and terminates in a point at its upper extremity. It is attached to the posterior surface of the sacrum; to the corresponding portion of the crista ilii; to the extremities of the transverse processes of the lumbar vertebræ; to the angles of the 11 inferior ribs; to the tuberosity of the first, and the posterior tubercle of the transverse processes of the last five cervical vertebræ.

The sacro-lumbalis straightens the vertebral column when bent forwards, and maintains it straight. By means of its insertion into the ribs, it can elevate or depress these bones, according as it contracts from above to below, or from below to above. It acts, consequently, sometimes as an inspiratory, at others, as an expiratory, muscle.

From six or eight of the lower ribs arises an equal number of fleshy portions, which terminate at the inner side of this muscle, and are called *Mus'culi Accesso'rii vel Additamentum ad Sacro-lumba'lem*, (F) *Accessoires du Sacro-lombaire*.

From the upper part of the sacro-lumbalis, a fleshy slip, called *Cervica'lis descen'dens*, *Cervicalis descendens Diemerbroeck'kii*, *Transversa'lis collatera'lis colli*, *Accesso'rius ad Sacro-lumbalem*, *Transversaire grêle*, runs up, to be fixed to the transverse processes of the 4th, 5th, and 6th cervical vertebræ, by three distinct tendons. These last parts, though separated by some anatomists, belong to the sacro-lumbalis.

SACRO-SCIATIC, *Sacro-ischiat'icus*. That which belongs to the sacrum and ischium.

The **SACRO-SCIATIC LIGAMENTS** are two ligaments, which assist in securing the sacro-iliac articulation. The *great* or *posterior sacro-sciatic ligament* extends from the crista ilii and the sides of the sacrum and coccyx to the tuberosity of the ischium. The *less* or *anterior sacro-sciatic ligament* arises from the same point, and terminates in the spine of the ischium.

SACRO-SPINA'LIS. That which relates to the sacrum and spine. Under this name, Chaussier describes the sacro-lumbalis, longissimus dorsi, transversalis, transverso-spinalis, and inter-transversalis. It divides it into three portions.

SACRO-VER'TEBRAL, *Sacro-vertebra'lis*. That which relates to the sacrum and the vertebræ.

The **SACRO-VERTEBRAL ARTICULATION** is the junction of the last vertebra of the loins with the sacrum. The angle which these two bones form at the anterior part has been called the *Promontory of the Sacrum*, or the *Sacro-vertebral Angle*.

The **SACRO-VERTEBRAL LIGAMENT** is a strong ligament, which passes from the anterior part of each of the transverse processes of the last lumbar vertebra to be attached to the base of the sacrum. Its use is to maintain the articulation of those two bones *in situ*.

SACRUM, *Os sacrum*, *Os basila'rè*, *Os Alagas*, *Albagiazi*, *Hieron osteon*,—from *sacer*, 'sacred,' because it contributes to protect the genital organs, which were considered sacred, or because it was offered in sacrifice. The bone, which forms the posterior part of the pelvis, and is a continuation of the vertebral column. The sacrum is symmetrical and triangular; situate at the posterior part of the pelvis, and concave anteriorly. It has,—

1. A *pelvic* or *anterior surface*, which corresponds to the pelvic cavity, and has four transverse furrows, that point out the parts where the primitive portions of the bone were separated from each other. On each side there are four foramina, called *anterior sacral*; these are oblique, and decrease in size, from above downwards. Through these pass the anterior branches of the sacral nerves.

2. A *spinal* or *posterior surface*, which is convex, rough, and covered by muscles. Upon the median line are four horizontal, tubercular eminences, forming a continuation of the spinous processes of the vertebræ; and, below, a triangular notch, where the *sacral canal* terminates. On each side of this surface are four foramina, called *posterior sacral*, which are smaller than the anterior, and give passage to the posterior branches of the sacral nerves.

3. The *vertebral surface* or *base*. Its greatest extent is transversely. It is articulated with the last lumbar vertebra. On it we see the orifice of the *sacral canal*, of a triangular shape, which decreases in width from above downwards; terminates the vertebral canal; is lined by a prolongation of the cerebral membranes; contains the fasciculi of the sacral nerves; communicates, externally, by the sacral foramina; and terminates at the triangular notch on the posterior surface of the bone. At the sides of the upper orifice of the sacral canal are two articular processes, which receive the articular processes of the last lumbar vertebra. The projection, formed by the union of the base of the sacrum with the last lumbar vertebra, is called the *Promontory* or *greater Angle of the Sacrum*, or *Sacro-vertebral Angle*.

4. A *coccygeal face* or *apex*, (F) *Face coccygienne* ou *Sommet*, which is very narrow, and is articulated with the coccyx.

5. *Two lateral margins*, which have, above, a broad, oblique surface, articulated with the ilium.

The sacrum is developed by 30 or 36 points of ossification.

SAGAPE'NUM, *Sag'apin*, *Serapi'non*. (F) *Gomme séraphique*. A gum-resin, supposed to be obtained from the *Fer'ula Për'sica*. *Family*, Umbelliferæ. *Sex. Syst.* Pentandria Digynia. Its odour is fetid and alliaceous; taste pungent, bitterish, nauseous. It is in small, agglutinated masses of a yellow colour; tenacious; breaking with a horny fracture. It is a reputed antispasmodic and emmenagogue. Dose, gr. x to 3 ss.

SAGIT'TAL, *Sagitta'lis*, from *sagit'ta*, 'an arrow.'

The **SAGITTAL SUTURE**, *Obelæ'a sutu'ra*, *O. Raphe*, *S. Virga'ta*, *Sutura juga'lis*, *S. Rhabdoi'des*. The suture which unites the two parietal bones, and which extends, from before to behind, on the median line, from the coronal suture to the lambdoidal. It is so called, from *sagitta*, 'an arrow,' because it seems to meet the coronal suture as an arrow meets the string of a bow.

The **SAGITTAL FURROW** or **GROOVE**, (F) *Gouttière sagittale*, is a channel on the median line of the inner surface of the skull-cap. It is excavated in the os frontis, in the two parietal and the occipital bones, and extends from the crista galli to the internal occipital protuberance. It lodges the longitudinal sinus, which has been called the *sagittal sinus*.

SAGITTA'RIMUM ALEXIPHAR'MACUM, *Malac'cæ Radix*, *Canna In'dica*, *Arundo Indica*. A root, cultivated in the West Indies, and supposed to be a remedy for wounds by poisoned arrows.

SAGO, *Sagus*, *Sagu*. A fecula, obtained from the pith of many kinds of palms growing in the Moluccas, Philippine Isles, &c., and which is brought to us in small grains. The same substance is, also, obtained from the West Indies, but it is inferior to that from the East.

By boiling in water or milk, sago becomes soft and transparent, and forms an agreeable and nutritious food in febrile, calculous, and other disorders. It is made palatable by sugar, lemon-juice, or wine, where the last is not contra-indicated.

SAILORS, Diseases, &c. of. Sailors, by nature of their occupation, are liable to many diseases. Several of these may, however, be ward off by proper attention to cleanliness and ventilation.

SAINT MYON, MINERAL WATERS OF. Some cold, acidulous waters at Saint Myon, near Riom, in the department of Puy-de-Dôme. They contain free carbonic acid,

subcarbonate and muriate of soda, and carbonate and sulphate of lime.

SALER'NUM, SCHOOL OF. An ancient School of Medicine at Salerno in Italy. It was established by Charlemagne, in 802; and was the first Christian university, at which Medicine was taught. It was much celebrated, especially in the 12th century. The work on Hygiène, "*De Conservandâ Valetudine*," which bears its name, has passed through several editions in various languages. It is supposed to have been written by John of Milan, in 1100, and is in Leonine verses.

SALINE, *Sali'nus*, *Salina'cius*, *Salinac'idus*. That which contains a salt, or has the properties of a salt.

SALINE DRAUGHT, or Mixture. This may be made as follows:—*Potass. carbon.* ʒj, *acid. citric. vel tartar. gr.* xv, *vel succ. limon. recent.* 3 ss, *aquæ* 3 viij, *syrup cujusvis* 3j. M. Given in divided doses as a febrifuge.

The **SALINE EFFERVESCING DRAUGHT** or **MIXTURE** is made by adding a due proportion of either of the acids above mentioned or of lemon juice to the proper proportion of the carbonate of soda or potassa: about 25 grains of the acid saturate, 30 grains of the carbonate. See Powders, Soda.

SALI'VA, *Si'alon*, *Si'elon*, *Pty'alon*, *Py'e-lon*, *Spittle*. An inodorous, insipid, transparent, slightly viscid fluid; secreted by the parotid, submaxillary, and sublingual glands, and poured into the mouth by the ducts of Steno, Wharton, and Rivinus; the use of which is to mix with the alimentary bolus, and to serve in the process of digestion. It is composed, according to Berzelius, of 992.2 parts of water, 2.9 of a particular animal matter, soluble in water, and insoluble in alcohol, of 1.4 of mucus, of 1.7 of muriates of potassa and soda, 0.9 of lactate of soda and animal matter, and 0.2 of soda.

SAL'IVARY, *Saliva'rius*, from *saliva*. That which belongs to the saliva.

The **SALIVARY GLANDS** or *secreting organs of the saliva*, or *salival glands*, are situate symmetrically, to the number of three, on each side of the face; and behind and under the lower jaw. Their form is very irregular, and their extent varies according to individuals. Their excretory ducts—*Ductus saliva'rii*, (F) *Canauz* ou *Conduits salivaires*, carry the saliva directly into the mouth, without pouring into any intermediate reservoir, as happens in the case of some of the other glands. The salivary glands have been distinguished into, 1. The parotid; 2. The submaxillary; 3. The sublingual.

SALIVARY FISTULE, *Sialosyrin'ges*, are such as depend upon an accidental opening into the excretory ducts of the salivary glands. Such fistulæ are, most commonly, met with in the duct of Steno.

SALIVATION. *Saliva'tio*, *Saliva'tio cal'ida*, *Epiph'ora ptyalis'mus*, *Sialisma*, *Sialis'mus*, *Sialachus*, *Sielismos*, *Pty'alism*, *Fluxus salivæ*. (F) *Flux de bouche*, *Flux salivaire*. A superabundant secretion of saliva; occasioned either locally by the use of irritating masticatories, or under the influence of some cause which acts on the whole economy, and especially by mercurial preparations. In this last case, it is accompanied by a coppery taste in the mouth, by swelling of the gums, and, sometimes, by looseness of the teeth. Salivation may usually be diminished by the use of astringents, laxatives, &c.

The *Ptyalismus acut'us sympathet'icus*, *Salivæ fluxus cibo viso*, or *Mouth watering*, the increased flow of saliva produced by the sight, smell, or thought of agreeable food, is a species of ptyalism, as well as the *Ptyalismus acutus mellit'us*, *Apocenosia ptyalis'mus mellitus*, or *Sweet spittle*. In this, the saliva has a sweet or mucilaginous taste.

SALIX. The Willow, *Itea*, (F) *Saule*. A genus of plants in the Linnæan system.

The *Salix frag'ilis* or Crack willow; Ph. D. *Salix alba* or White willow; Ph. D. *Salix latifo'lia* or Broad-leaved willow. *Salix ca'prea* or Great round-leaved willow; Ph. L. *Salix pentan'dria*. *Salix vituli'na*. *Salix eryceph'ala*, (Ph. Americ.)

The bark of each of these has a slightly aromatic odour, and a bitter and astringent taste, which is nearly the same in all the species. It is tonic and astringent, and has been used in intermittents, and in cases of dyspepsia, worms, &c. The active principle has been separated, and called *Sal'icine*. It is equal to the quinine in medicinal efficacy. Dose, ʒj to 3j of the powder. Dose of *Salicine* from 4 to 6 grains.

SALPINGEMPHRAX'IS, from *σαλπιγξ*, 'the Eustachian tube,' and *εμπεραξις*, 'obstruction.' Obstruction of the Eustachian tube;—a cause of deafness.

SALPIN'GO-CYE'SIS, *Paracyesis tuba'ria*, *Graviditastubaria*, from *σαλπιγξ*, a 'tube or trumpet,' and *κυνσις*, 'pregnancy.' Tubal pregnancy.—See Pregnancy.

SALP'INGO-PHARYNGÆ'US, from *σαλπιγξ*, 'a trumpet,' and *φαρυγξ*, 'the pharynx.' Valsalva and Douglas have given this name to a bundle of fibres, which passes from the Eustachian tube to the pharynx.

SALSO'LA KALI, *Prickly Saltwort*, *Kali spinosum cochlea'tum*, *Tragus* sive *Tragum Matthi'oli*. This plant, as well as the *Salsola sati'va*, and the *Salsola soda*, produces the alkaline salt, commonly called *Barilla*, *Soda*, or *Kelp*.

SALT, *Sal*, *Hal*, *Hals*, (F) *Sel*. A name, formerly given to a considerable number of substances of very different nature. At present, chymists apply the term, *Salts*, exclusively to the combinations of an acid with one or more bases. *Neutral salts* are those,

in which the acid and base reciprocally saturate each other. *Acid salts* or *supersalts*, (F) *Sur-sels*, are those, in which the acid predominates over the base. *Alk. line salts* or *subsals*, (F) *Sous-sels*, those in which the base is, on the contrary, predominant.

The different denominations of the salts are compounded, 1. Of the name of the acid; the termination of which is changed into *ite*, when the name of the acid is in *ous*;—*ate*, when it is in *ic*. Thus the salts formed by the *sulphurous* acid are *sulphites*: those by the *sulphuric*, *sulphates*. 2. This name is followed up by that of the oxyd, that enters into the composition of the salt. Thus, the *sulphate of protoxyd of iron* is a combination of sulphuric acid with the protoxyd of that metal. Frequently, to shorten the name, the word *oxyd* is suppressed; and *proto*, *deuto*, *trito*, &c. put before the acid;—as *protosulphate of iron*. *Simple salts* are those, resulting from the combination of an acid with a single base: *double salts*, with two different bases: *triple*, with three, &c.

When *salt* is used in an abstract sense, it means the muriate of soda.

SALU'BRITY, *Salu'britas*. Any thing, which contributes to the health of individuals or of communities. Situations differ materially from each other in this respect; and the cause of the difference is often an interesting topic of inquiry.

SAL'UTARY, *Peries'ticos*, *Salutaris*, *Salubris*, *Hygiei'nos*, from *salus*, 'health.' That which is favourable to health. Some diseases have been considered salutary, but this is doubtful.

SALVATEL'LA, from *serva're*, 'to preserve or save.'

The **VENA SALVATEL'LA**, is situate on the back of the hand, near its inner margin. It begins on the posterior surface of the fingers and dorsal surface of the hand, by a plexus, formed of a number of radicles, frequently anastomosing with each other; it then ascends to the inner part of the forearm, where it takes the name—*posterior cubital*.

The ancients recommended this vein to be opened in certain diseases, as in melancholic and hypochondriacal affections; and they attributed to such abstraction of blood considerable efficacy in the cure of disease: hence its name.

SAL'VIA, *S. officina'lis*, *S. hortens'is*, *Elelis'phacos*, *Sage*, (F) *Sauge*, *Thé de France*. Family, Labiatae. Sex. Syst. Diandria Monogynia. Sage has a peculiar, aromatic odour, and a warm, aromatic, bitterish taste. Its virtues depend upon an essential oil. It is tonic, stimulant, and carminative. In the form of a weak infusion, it is occasionally used as a diluent, and as a wash for sore mouth. Dose, gr. xv. to xxx or more.

SALVIA SCLA'REA, *Sclarea*, *Gallit'richum*, *Æthiopis*, *Biser'mas*, *Colus Jovis*, *Common Clary*, (F) *Orvale* ou *Toute-bonne*. The leaves

have been recommended as corroborants and antispasmodics.

The *SALVIA HORMINUM*, or *Horminum*, (F) *Sauge hormin*, of the Pharmacopœias, is used in similar cases.

SAMBU'CUS, *Sambucus nigra*, *S. vulgaris*, *S. arborea*, *Acte*, *Infe'lix lignum*; the *Elder*, (F) *Sureau commun*. Family, Caprifoliaceæ. Sex. Syst. Pentandria Digynia. (The flower, and bark were formerly called *Cano'pum*.) The flowers, berries, and bark of the elder have been used in medicine. The flowers have been reputed diaphoretic and discutient: the berries, aperient and sudorific: the bark, purgative, and, in small doses, deobstruent.

The flowers are sometimes used in fomentations: and to form a cooling ointment.

SAMBUCUS EB'ULUS, *Ebulus*, *Chamæactê*, *Od'ocos*, *Sambucus Chamæactê* seu *Helion*, *Sambucus hu'milis*, *S. herba'cea*, *Dwarf-elder*, *Danewort*, (F) *Hièble*. The root, interior bark, leaves, flowers, berries (*Baccæ* seu *Grana Actes*), and seeds have all been given in moderate doses as resolvents and deobstruents; and in large doses, as hydragogues.

The berries of the *Sambucus Canaden'sis* are made officinal in the American Pharmacopœia.

SAMI TERRA, *Samian Earth*. An argillaceous earth, found in the island of Samos, and to which were ascribed virtues, similar to those of the Terra Lemnii.—Galen, Dioscorides.

SAMIUS LAPIS. A stone found in the Isle of Samos, which the ancients believed to be astringent and refrigerant.

SAMPSYCH'INON, *Sampsu'chinum*. An ointment composed of the *σαμψύχον*; which was, perhaps, the marjoram.—Dioscorid.

SAN GIULIANO, MINERAL WATERS OF. At the foot of the mountain San Giuliano, a league and a half from Pisa, are several mineral springs, temp. from 84°, to 107°, Fahr.

The spring *Pozzetto* contains carbonic acid, sulphate of soda, lime and magnesia; muriates of soda and magnesia; carbonates of lime and magnesia; argil and silica.—Santi.

SAN'DARAC, *Sandara'cha*, *Gum Ju'niper*, *Gum Sandarach*, *Pounce*, *Gummi Juniperi*, *Sandara'ca*, *Vernix sicca*, *Resi'na Juniperi*. A name given, by the Arabs, to an odorous resin, that flows from the *Thuya aphylla*. Family, Coniferæ. Sex. Syst. Monœcia Monadelphia. It is stimulant, like all the resins, but very little used.

SANDASTROS, *Garamati'tes*. Ancient name of a precious stone, spotted with yellow, which the ancients ranked amongst the cordials and antidotes.

SANGUINA'RIA CANADEN'SIS, *Blood-root*, *Puccoon*, *Indian Paint*, *Tur'meric*. Nat. Ord. Papaveraceæ. Sex. Syst. Polyanthia Monogynia. A North American plant, the root and seeds of which are used in medi-

cine. They are emetic. Dose, of the powder, 8 to 20 grains. They are said to reduce the velocity of the pulse, like the digitalis.

SANGUIN'OLENT, *Sanguinolen'tus*. That which is tinged with blood. An epithet applied, particularly, to the sputa when so tinged.

SANGUIPUR'GIUM. Purgation of the blood. A name, given by some authors to mild fevers; from an idea that they purged the blood of noxious matters.

SANGUISOR'BA OFFICINA'LIS. The *Italian Pim'pinel*, *Pimpinel'la Ital'ica*. (F) *Pimprenelle noire*. It was, formerly, used as an astringent and tonic, in hæmorrhages, dysentery, &c.

SANGUISU'GUM. A barbarous term, to denote too great an accumulation of blood in the heart.—Bonetus.

SANIC'ULA, *S. Europæ'a*, *Cuculla'ta*, *Dodeca'theon*, *Sym'phytum petræ'um*, *Sanic'ula mas*, *Diapen'sia cortu'sa*, *San'icle*. (F) *Toute-saine*. Family, Umbelliferæ. Sex. Syst. Pentandria Digynia. This herb was, formerly, used as a mild astringent. It is bitterish, and somewhat austere.

SANIDO'DES, *Sanio'des*, 'resembling a board,' from *σάγις*, gen. *σαγιδος*, 'a board,' and *ειδος*, 'resemblance.' One whose thorax is narrow, and, as it were, contracted.

SANIES, *Ichor*, *Ta'bum*, *Virus*, *Pus malignum*, *P. corrosi'vum*. (F) *Sanie*. A thin, serous fluid, presenting some of the qualities of pus and blood, and commonly exhaled at the surface of ulcers.

SANITAI'RE (F). That which relates to the health—as *Etablissement sanitaire*; *Police sanitaire*.

SAN'ITAS, *Hygiei'a*, *Valetu'do*, *Hygei'a*, *Health*. (F) *Santé*. Health has been defined,—a state, in which all the functions are exerted with regularity and harmony. A person may, however, be in health, although certain functions are not performed. A blind man, for example, has health when all his functions, except sight, proceed with regularity.

SAN'TALUM ALBUM, *S. cit'rinum*, *S. pal'lidum*, *Yellow Saunders*, *Sir'ium myrti'folium*, (F) *Santal*. Sex. Syst. Tetrandria Monogynia. The virtues of the wood of the white saunders reside in a volatile oil and resinous principle. The odour is fragrant, and resembles a mixture of ambergris and roses. It has been used as a stimulant and sudorific, but is not now employed. The Saunders woods are called in (F), collectively, *Santaux*.

SANTORI'NI, FISSURES OF, (F) *Inci'sures* ou *Scissures de Santorini*. Some clefts at the upper and back part of the fibro-cartilaginous portion of the external ear.

SANTORINI, TU'BERCLES OF. Small, cartilaginous projections at the top of the arytenoid cartilages, which support the ligaments of the glottis.

SAPHA'DA. Paracelsus has given this

name to reddish scales adherent to the hair in some eruptions of the hairy scalp.

SAPHE'NA, from *σαφης*, 'manifest,' 'evident.' A name given to two subcutaneous veins of the lower limb. These are,—

1. The GREAT SAPHENA VEIN, or *Saphena inter'na*, *Tibio-malleolar*, (Ch.) Its radicles occupy the inner part of the great toe, and form a transverse arch on the back of the foot, which unites with the saphena externa, and receives at its convex part, which is turned forwards, a number of branches coming from the toes. These radicles, when united, ascend before the inner ankle, and form a trunk, the size of which is farther increased by several branches that proceed from the region of the tarsus and that of the metatarsus. This trunk ascends vertically at the inner part of the leg; passes behind the inner condyle of the femur; proceeds along the inner part of the thigh; receives other subcutaneous veins, such as the abdominal subcutaneous, the external pudic, &c., and passes through the inferior opening of the crural canal to empty itself into the femoral vein.

2. The LESSER VENA SAPHENA or *Saphena externa*; the *Peroneo-malleolar Vein* of Chaussier, commences by several roots, which are spread over the dorsum and outer side of the foot, and embrace the outer ankle. Behind this, they unite into a single trunk, which ascends obliquely, approaching the tendo Achillis, and proceeds vertically towards the ham to open into the popliteal vein.

SAPIDITY, *Sapor*. The quality of bodies that gives them taste.

SAPIN'DUS SAPONA'RIA. (F) *Savonnier commun*. The name of the plant, that affords the *Soap nuts*, *Sapona'riae Nuculae*, *Baccæ Bermuden'ses*, *Soap-berries*. A spherical fruit, about the size of a cherry, the cortical part of which is yellow, glossy, and so transparent, as to show the spherical, black nut that rattles within, and includes a white kernel. The cortical part of this fruit, which has similar effects with soap, in washing, has been recommended in chlorosis; and as a stomachic and deobstruent.

SAPO, *Soap*, *Smegma*. (F) *Savon*. A product, obtained by treating fatty bodies with caustic alkalies dissolved in water.

MEDIC'INAL SOAP, *Sapo amygdal'inus*, (F) *Savon médicinal*, is made with oil of sweet almonds and half its weight of caustic alkali.

COMMON or SOFT SOAP, *Sapo mollis*, *S. viridis*, *S. niger*, *S. ka'licus*, (F) *Savon mou*, *Savon noir*, is made of potass and oil or tallow.

SPANISH or CASTILE SOAP, *Sapo durus*, (F) *Savon dur*, of olive oil and soda.

BLACK SOAP, *Melanosmegma*, is a composition of train-oil and an alkali: and GREEN SOAP, of hemp, linseed, or rape oil with an alkali.

YELLOW SOAP is formed of turpentine, oil, and alkali. The Castile soap, being made of

fine olive oil, is generally used internally. The yellow and soft soaps are the most stimulating; and are, consequently, best adapted for particular cutaneous eruptions.

An ACID SOAP is a combination of a fixed oil with an acid.

Internally, soap is purgative and diuretic: externally, it is detergent and stimulant. Soapy water is used, with the greatest success, in cases of poisoning by acids. It is most commonly applied externally to bruises and sprains. In *Pharmacy*, it is used to favour the solution of resins.

SOAP OF THE COCOA NUT OIL, *Sapo coco'neus*, *S. cacaotinus*. (F) *Savon de cacao*. It has been much used in Germany in herpetic affections.

LIQUID SOAP, *Lotio saponacea*, is a cosmetic, which is composed of olive oil 3 iv, ol. tartari per deliquium 3 ss. Rub together, and add aquæ rosarum 3 xij.

SAPONA'RIA. *Soap-wort*, *Bruise-wort*, *Strut'hium*, *Lana'ria*, *Lychnis sylvestris*, *Ibix'uma*. (F) *Saponaire*. Family, Caryophyllæ. Sex. Syst. Decandria Digynia. A decoction of the leaves of this plant has been recommended in scrophula, cancer, old syphilis, cutaneous eruptions, jaundice, visceral obstructions, &c. It is hardly ever used.

SAPO'NEA. A pectoral medicine, prepared with sweetened syrup of violets and oil of sweet almonds.

SAPON'ULES, *Sapon'ula*, (F) *Savonules*. Combinations of volatile or essential oils with different bases.

ACID SAPON'ULES, are combinations of such oils with different acids.

SAPO'TA, *Acras Sapota*, *Oval-fruited Sapota*, (F) *Sapotier*, *Sapotillier*. Sex. Syst. Hexandria Digynia. A tree which grows in the Antilles, and particularly at Saint Domingo. Its fruit is much esteemed. It resembles the marmalade of quinces; and hence has been called *natural marmalade*. The seeds make an emulsion, which has been given in nephritic affections. The bark has been recommended as a febrifuge.

SAPROS'TOMUS, from *σαπρος*, 'foul, of a bad odour,' and *στομα*, 'mouth.' One who has an offensive breath.

SAR'APUS, *Sar'apous*. One who has a large foot; whose toes are largely separated, or whose feet are much asunder in walking: from *σαρξ*, 'I grin,' and *πους*, 'the foot.'

SARATOGA, MINERAL WATERS OF. The Saratoga springs in New York are 10 miles N.E. from Ballston. They contain the same ingredients as those of the latter place: and are much frequented by visitors from every part of the United States.

SARCOCE'LE, *Hernia carno'sa*, *Scirrhus Testic'uli*, from *σαρξ*, 'flesh,' and *κελη*, 'a tumour;' *Sarco'ma scroti*, (F) *Hernie charnue*. Scirrhus or cancer of the testicle. This disease affects the adult particularly; and appears, most commonly, after an inflammatory

swelling of the testicle. Sometimes, it is dependent upon a blow; at others, it makes its appearance without any appreciable cause.

It is known by a hard, heavy, ovoid or spherical swelling of the testicle, which is, at first, slightly, if at all, painful, and merely causes an unpleasant traction on the spermatic cord. There is no heat or change of colour of the skin: the spermatic cord is swollen, and participates in the affection: very painful shootings occur: the lymphatic glands of the abdomen become swollen, and form a tumour, which may, at times, be felt through the abdomen; and the patient, at length, dies with every sign of the cancerous diathesis. The prognosis is very unfavourable. The only means, indeed, that can save life is the extirpation of the testicle.

SARCOCOLLA, (F) *Colle-chair*, from σαρκξ, 'flesh,' and κολλα, 'glue.' A resinous matter, obtained from the *Penæa Sarcocolla*, an African shrub, which has been so called, from a belief that it facilitates the consolidation of flesh. It is in the form of small, oblong, semitransparent globules; of a yellowish or reddish blue, and smells like aniseed. It was once employed as an astringent and detergent.

SARCO-EPIPLOCE'LE, from σαρκξ, 'flesh,' επιπλοον, 'the epiploon,' and κηλη, 'a tumour.' Epiplocele, complicated with sarcoma or sarcoccele.

SARCO-EPIPLOM'PHALUS; from σαρκξ, 'flesh,' επιπλοον, 'the epiploon,' and ομφαλος, 'the navel.' Umbilical hernia, formed by scirrhus epiploon or complicated with sarcoma.

SARCOL'OGY, *Sarcolo'gia*, from σαρκξ, 'flesh,' and λογος, 'a discourse.' The part of anatomy, which treats of the soft parts. It comprises myology, angiology, neurology, and splanchnology.

SARCO'MA, *Emphy'ma Sarcoma*, *Sarcomatous tumour*, *Sarco'sis*, *Porrus*, *Sarcophyia*, *Ecsarco'ma*, *Exsarco'ma*, *Tumor car'neus*, *Excrescen'tia carno'sa*. Any species of excrescence, having a fleshy consistence.

The COMMON VASCULAR OR ORGANIZED SARCOMA of Abernethy, *Emphy'ma Sarcoma Vasculo'sum*, is vascular throughout: texture simple: when bulky, mapped on the surface with arborescent veins. Found over the body and limbs generally.

SARCOM'PHALUS, from σαρκξ, 'flesh,' and ομφαλος, 'the navel.' A scirrhus or fleshy tumour, developed at the navel.

SARCOPYO'DES, from σαρκξ, 'flesh,' πυον, 'pus,' and ειδος, 'resemblance.' Having the appearance of pus mixed with flesh. An epithet, given to certain excreted matters, and particularly to the sputa of those labouring under consumption.

SARCO'SIS, σαρκωσις. The formation of flesh. Also, Sarcoma.

SARSAPARIL'LA GERMAN'ICA, *Gra-*

men major, *G. rubrum*, *Salsaparil'la German'ica*, *Carex Arena'ria*, (F) *Laiche*, *L. des Sables*, *Salsepareille d'Allemagne*. Family, Cyperoidæ. Sex. Syst. Monœcia Triandria. A plant, which grows plentifully on the sea-coasts of Europe. It has been recommended in some mucous affections of the trachea, rheumatism, gout, &c.

SARTO'RIOUS, from *Sartor*, 'a tailor,' because used in crossing the legs. *Suto'rius*, *Longis'simus Fem'oris*, *Il'io-cresti-tibial*, *Fascia'lis*, *Ilio-prétibial*, (Ch.) A muscle, situate at the anterior part of the thigh. It is long, small, and flattened, and extends, obliquely, from the anterior and superior spine of the ilium to the superior and inner part of the tibia. This muscle can, also, bend the pelvis on the thigh, and conversely.

SATELLITE, *Satelles*. That which guards:—that which is placed near.

SATELLITE VEINS are those, that accompany the arteries.

SATI'ETY, *Satietas*, *Satu'ritas*, *Plethos*, *Plesmone*. Disgust for food; commonly produced by repletion.

SATURA'TION, *Satura'tio*, from *satis*, 'enough.' That state of a compound, in which its elements are combined in such proportions, that a fresh quantity of either cannot be added without producing excess.

SATUREIA HORTEN'SIS, *Satureia*, *S. sati'va*, *Cuni'la sativa* Plinii, *Thymbra*, *Summer Sa'vory*, (F) *Sarriète*. Family, Labiatae. Sex. Syst. Didynamia Gymnospermia. An aromatic plant, cultivated for culinary purposes. It has been used, as an excitant, in anorexia, anaphrodisia, &c.

SATUREIA CAPITA'TA, *Cil'iated Sa'vory*, *Thymus*, *Thymus sylves'tris*, *Thymus Cret'icus*, *Cunila*, (F) *Sarriete de Crète*. Possesses similar properties to thyme.

SATYRI'ASIS, from Σατυρος, 'a Satyr;' because the Satyrs are said to have been greatly addicted to venery. *Satyriasis*, *Priapis'mus*, *Salac'itas*, *Brachu'na*, *Aros'con*, *Satiri'asis furens*, *Lagne'sis Salac'itas*, *Lagnesis furor masculin'us*, *Tenti'go veretri*. An irresistible desire, in man, to have frequent connexion with females, accompanied with the power of doing so without exhaustion. The causes are commonly obscure. Sometimes, the abuse of aphrodisiacs has occasioned it.

The principal symptoms are:—almost constant erection; irresistible and almost insatiable desire for venery; frequent nocturnal pollutions. Cold lotions; the cold bath; a mild diet; active exercise, &c., are the only means that can be adopted for its removal.

SAUER KRAUT (G), 'Sour Cabbage,' (F) *Chou-croute*. A culinary preparation, made with chopped cabbage, left to attain an incipient state of acetous fermentation. It is reputed, by the Germans, to be salubrious, easy of digestion, and eminently antiscorbutic.

SAVOUR, *Sapor, Taste*, (F) *Saveur*. Quality of bodies, by which they act upon the sense of taste. The taste is not the same in all sapid bodies. It may be sweet, bitter, metallic, &c. Chymists, at times, avail themselves of this quality of bodies to analyze an unknown substance.

SAVOURY, *Sap'idus*, (F) *Savoureux*. An epithet given to bodies that have taste; and particularly to those, that excite a very agreeable impression on the organ of taste.

SAW, *Prion, Serra*, (Dan.) *Sawe*, (Sax.) *raga*, (F) *Scie*. A surgical instrument, made like a common saw; and used for sawing the bones in amputations, or for removing exostoses, &c.

Saws, of different sizes and shapes, are used in surgery. The crown of the trepan is nothing more than a species of circular saw.

SAW, HEY'S. An instrument used by Mr. Hey, of Leeds, in fractures of the cranium. It consists of a long handle, to which a small saw with a convex, or straight edge is attached: and by which a piece of bone of any shape may be removed, whilst with the trephine it must always be circular.

SAXIFRAGA CRASSIFOLIA. *Family*, Saxifragæ. *Sex. Syst.* Decandria Digynia. The root of this species of Saxifrage has been extolled by Pallas, as preeminently antiseptic.

SAXIFRAGA GRANULATA, *S. alba, Sanic'ula, Sedum, White Saxifrage*, (F) *Saxifrage granulée*. Recommended as diuretic and lithontriptic: but not used.

SAXONICUS PULVIS. A powder, prepared with the roots of the wild and cultivated angelica; the *Asclepias vincetoxicum*, &c. It was considered, formerly, as an antidote. *Pharm. Aug.*

SCAB, from *Sca'bies*. An incrustation, which forms upon a sore, owing to the concretion of the fluid discharged from it.

SCABBY or SCABBED; covered or diseased with scabs.

SCABIOSA, *S. Arven'sis, Field Scabious*, (F) *Scabieuse ordinaire*. *Family*, Dipsacæ. *Sex. Syst.* Tetrandria Monogynia. The plant is bitter and substringent; and was formerly used in the cure of leprous affections and diseased lungs.

The SCABIOSA SUCCI'SA, *Succisa, Morsus Diab'oli*, (F) *Mors du Diable*, has similar properties.

SCALA. 'A ladder.' A machine, formerly used for reducing dislocations of the humerus.

The SCALE OF THE COCHLEA, (F) *Rampes ou Échelles du Limaçon*—called, also, *Canals* and *Gyri*—are the cavities in the cochlea, separated from each other by the spiral septum. The one—*Scala exte'rna, S. Tym'pani*—would communicate with the *cavitas tympani* by the *fenestra rotunda*, were it not for the membrane that closes it. The other—*Scala inter'na, S. vestib'uli*—opens into the

cavity of the vestibule. The *scalæ* communicate with each other by an opening at the top of the partition.

SCALE, *Squama, Lepis*, (F) *Écaille*. An opaque and thickened lamina of cuticle: commonly produced by some degree of inflammation of the true skin, over which it is formed.

SQUAMÆ or SCALY DISEASES, *Lepido'ses*, form the second order in Willan and Bateman's system of cutaneous diseases.

SCALE'NUS; 'irregular or unequal.' Geometers employ this word to designate a triangle whose three sides are unequal. Anatomists have given the name to two muscles.

1. The SCALENUS ANTI'CUS, *Portion of the Costo-trachelian* (Ch.), (F) *Scalène antérieur*, is situate at the lateral and inferior parts of the neck. It is long and triangular; and is inserted, below, at the upper surface of the first rib; and, above, at the anterior tubercle of the transverse processes of the 3d, 4th, 5th, and 6th cervical vertebræ. This muscle bends the neck, and draws it to its side. It can, also, raise the first rib.

The SCALENUS POSTI'CUS, *Portion of the Costo-trachelian* (Ch.), is situate behind the last. (F) *Scalène postérieur*. It is, also, long and triangular; but more bulky than the *S. anticus*. It is attached, below, to the outer surface of the two first ribs; and terminates, above, at the summit of the transverse processes of the six last vertebræ of the neck. This muscle bends the neck laterally, and can elevate the two first ribs. Some anatomists, as Albinus and Sommering, have described five *scaleni* muscles on each side, and have called them, *Scalenus prior, S. minimus, S. lateralis, S. medius, S. posticus*. Riolan and Chaussier only describe one *scalenus* muscle on each side. Cowper and Douglas, and the generality of English anatomists, admit three, *S. anticus, medius*, and *posticus*; or *Primus, secundus*, and *tertius*;—Winslow, Boyer, and many of the French anatomists,—two, as above described.

SCALP. Teut. *Schelp*e, 'a shell.' The integuments covering the head. The hairy scalp is called, also, *Capillitium, Trichotom*.

SCAL'PEL, *Scalpel'lum, Culter, Incisori'um, Smi'leon*; from *scal'po*, 'I rasp, I cut.' A cutting instrument, formed of a blade of well-tempered steel, very sharp, of variable shape and size, and fixed solidly in a handle. Its use is to divide the soft parts in operations, dissection, &c.

SCAMNUM HIPPOCRATIS, *Bathron Hippocrati'on* of Galen, (F) *Banc d'Hippocrate*. A machine invented by Hippocrates for reducing fractures. It was a sort of bed, six feet long; on which the patient was fixed. Straps were attached above and below the fracture or luxation, and the extension and counter-extension were effected by a winch.

It is described in Galen, Oribasius, Scultetus, &c.

SCANDIX CEREOFOLIUM, *Cerrefolium*, *Daucus Seprini*, *Chærophyl'ium*, *Chærefolium*, *Chervil*. (F) *Cerfeuil*. Family, Umbelliferae. Sex. Syst. Pentandria Digynia. A culinary herb, which is slightly aromatic and grateful. It is said to be gently aperient and diuretic.

SCANDIX ODORATA; the *Sweet Cic'ely*. Properties the same as the other.

SCAPHA, σκαφη, 'a skiff or cock-boat;' from σκαπτω, 'I make hollow.' The excavation or cavity of the external ear, between the helix and anthelix. Also, the name of a bandage for the head, mentioned by Galen, and called, likewise, *Tholus Diocle'us*.

SCAPHIUM OCULA'RE, *Pelvis Ocularis*, *Eyeglass*. (F) *Bassin oculaire*, *Gondole oculaire*. A small porcelain, glass, or metallic vessel, used for applying lotions to the eye.

SCAPHOID, *Scaphoides*, from σκαφη, 'a skiff,' and εδος, 'form.' A name given to several parts.

1. **OS SCAPHOIDES MANUS**, *Os navicula'rē*, *Boat-like bone*. (F) *Scaphoïde de la main*. The first bone of the first row of the carpus. The upper surface is convex, and articulated with the radius. The under and outer surfaces are also convex,—to be articulated with the trapezium and trapezoides. Between the upper and under cartilaginous surfaces, there is a *rough fossa* for the insertion of the capsular ligament. The anterior and inner surface has an *oval cavity*, which gives name to the bone, where it is articulated with the os magnum. There is a *process*, on the outer end of the bone, for the attachment of part of the anterior transverse ligament of the wrist.

2. **OS SCAPHOIDES PEDIS**, *Os navicula'rē*, *Boat-like bone*. (F) *Scaphoïde du Pied*. This bone is situate at the forepart of the astragalus and inner part of the foot. The *posterior surface* forms a cavity, somewhat like that of a boat, for receiving the head of the astragalus. There is a prominence at the inner side of the bone, for the insertion of tendons, muscles, and strong ligaments. The forepart of the bone is convex, and divided into three articular surfaces for articulation with the ossa cuneiformia. Between the os naviculare and astragalus, the foot has its principal lateral and rotatory motions; although each of the other joints of the tarsus contributes a little. Part of the tibialis posticus is inserted into it.

FOSSA SCAPHOIDES, (F) *Enfoncement Scaphoïde*. A small cavity at the upper part of the internal ala of the pterygoid process, in which the peristaphylinus internus is attached.

SCAPHOIDO-ASTRAGALAN, *Scaphoïdo-astragala'nus*. That which relates to the scaphoid bone and astragalus. The articulation of these bones is so called; and the ligament, which strengthens it, is termed the *Scaphoïdo-astragalan ligament*.

SCAPHOIDO-CUBOID, *Scaphoïdo-cuboidæ'us*. That which relates to the scaphoid and cuboid bones. The articulation of those bones is so called.

SCAP'ULA, *Scap'ulum*, *Plata*, *Omopla'ta*, *Homopla'ta*, *Scop'tula*, *Epino'tion*; the *Blade-bone*, the *Shoulder-blade*, (F) *Omoplate*. An irregular, broad, flat bone, of a triangular shape, situate at the posterior part of the shoulder. It has, 1. A *posterior* or *dorsal surface*, or *Dorsum*; divided transversely into two parts, by a triangular process, called *Spine of the Scapula*; which terminates by a considerable eminence, called *Acromion*. Above the spine, is the *Fossa supraspinata*; below it, the *F. infra-spinata*. 2. An *anterior* or *costal surface*, or *Venter*; forming the *Fossa subscapularis*. 3. A *superior* or *cervical edge*, which is thin, and terminates, anteriorly, by a strong, curved apophysis, called the *coracoid process*. 4. A *posterior* or *vertebral edge*, called, also, the *base*. 5. An *outer* or *axillary* or *inferior edge*, having a thick, truncated angle, in which is the *glenoid cavity*. With this is articulated the head of the humerus. The glenoid cavity is separated from the body of the bone by a narrower part, called the *cervix* or *neck*. The edges or margins are, also, called *Costæ*.

The scapula has three angles—an *inferior*, *superior*, and *anterior*.

SCAP'ULAR, *Scapula'ris*, from *scapula*, 'the shoulder-blade.' That which relates or belongs to the scapula: *Scap'ulary*.

1. **SCAPULAR APONEURO'SIS**. A broad, thin, aponeurosis, with decussating fibres; which is attached, *above*, to the spine of the scapula; *below*, to a crest between the teres major and infra-spinatus; *within*, to the spinal edge of the scapula; and which, at its middle, unites with the thin aponeurosis, that covers a part of the external surface of the deltoid.

2. The **SCAPULAR AR'TERIES**. These are several.

a. The *superior scapular*, *superficial scapular* of Sommering, *Dorsa'lis scapulæ superior*, *Transversa'lis scapulæ*, *T. Hu'meri*. This arises from the subclavian; and often from the inferior thyroid, or from a trunk common to it and the *posterior scapular* or *transverse scapular* or *cervical*. It passes behind the clavicle, above the superior edge of the scapula, and buries itself between the dorsal surface of that bone and the muscles inserted into it.

b. The *inferior scapulary* or *common scapulary*, or *internal scapular* or *subscapular artery*, *A. Thorac'ica axilla'ris* vel *ala'ris*, is of considerable size. It arises from the inferior part of the axillary artery, behind the brachial plexus; gives off several branches to the armpit, and divides into two branches:—the one, *Scapula'ris inter'na*, and the smaller of the two, is distributed, almost entirely, to the serratus major anticus, and latissimus dorsi: the other—the larger of the two—the

Dorsa'lis Scap'ulae infé'rior vel Circumflex'a Scapula'ris, which distributes its branches to the subscapular, and supra-spinal,—and infra-spinal regions.

3, The SCAPULAR VEINS follow the same course as the arteries,—which they accompany.

SCAP'ULARY, from *scapula*. A broad, linen bandage, divided into two tails for three quarters of its length, the undivided extremity of which is attached to the posterior and middle part of a bandage carried round the body; each of the tails passing over a shoulder; and being attached to the anterior part of the body bandage, to prevent it from slipping down.

SCAPULO-HU'MERAL. An epithet given to the *shoulder-joint*. It is an orbicular articulation, resulting from the reception of the head of the humerus into the glenoid cavity of the scapula. To keep the bones in connexion, there are: 1. A very strong, conoidal capsular ligament; passing from the circumference of the glenoid cavity around the neck of the humerus. 2. A *fibro-cartilaginous ring*, called the glenoid ligament, and a synovial capsule.

SCAR'BOROUGH, MINERAL WATERS OF. *Scarborough Spa*. A celebrated English chalybeate, at Scarborough, in Yorkshire. One of the springs is a simple, carbonated chalybeate, like that of Tunbridge: the other has an admixture of purging salt. Scarborough, having the additional advantage of sea-bathing, is much frequented by invalids.

SCARIFICA'TION, *Scarifica'tio*, *Am'y-chē*, (Galen), *Amyg'mos*, *Amyx'is*, *Schasis*, *Catachas'mos*, *Catachas'mus*, *Encharax'is*, from *σκαρίζω*, 'to cut.' A small incision, made into the skin with a lancet, bistoury, or scarificator, for different therapeutical purposes: as to draw blood, or to discharge some effused fluid.

When the scarifications are very superficial, and do not go farther than the skin, they are termed, by the French, *Mouchetures*.

SCARIFICA'TOR, *Scarificato'rium*. An instrument for making scarifications. It consists of a small brass box, of a cubical shape; in which 10 or 12 lancet points turn upon a common pivot. By means of a spring, all these blades can be made to issue at once, and make as many scarifications.

SCARLATINA, from *scarlatto*, (I) 'a deep red.' *Enanthé'sis Rosa'lia*, *Rosa'lia*, *Rossa'lia*, *Morbil'li ignei*, *Morbus scarlatino'sus*, *Febris scarlatino'sa*, *Gutturis morbus epidem'icus Foresti*, *Pur'pura*, *Typhus scarlati'nus*, *Febris rubra*, (F) *Fièvre rouge*. The characteristic symptoms of scarlatina are:—a scarlet flush, appearing about the second day of fever, on the face, neck, and fauces; and progressively spreading over the body; terminating about the 7th day. Two great varieties may be reckoned;—the S.

simplex, *S. febris*, *S. benigna*, in which the fever is moderate and terminates with the efflorescence; the prostration of strength being trifling, and the contagious property slight;—and the *S. Angino'sa*, *S. Paristhmit'ica*, *S. Cynanch'ica*, in which the fever is severe; the throat ulcerated; the eruption later in its appearance and less extensive; often changing to a livid hue; the fever being highly contagious.

The *Scarlatina maligna* has been reckoned a variety of this, in its worst degree. It agrees with the *Cynanche maligna* of Cullen.

Scarlatina belongs to the *Major exanthemata* (q. v.), and is a disease, chiefly, of children. The eruption differs from measles, in being an efflorescence, not raised above the cuticle. Measles, too, is attended with catarrhal symptoms, whilst the complication, in scarlatina, is cynanche.

The treatment of simple scarlatina need not be much. It must be antiphlogistic. If the throat is very much ulcerated, acid gargles and counter-irritants must be employed; and if the affection becomes manifestly typhoid, and the sore throat of a malignant character, the case must be treated like typhus gravior; along with antiseptic gargles of bark, acid, &c.

Anasarca, sometimes, supervenes on scarlatina, and requires attention. Purgatives are here demanded as well as the use of sorbents, such as mercury and squill, &c.

SCHERBET', *Sherbet'*, *Serbet'*. A drink prepared by the Turks, Persians, &c., with sugar and the juice of acid fruits.

SCHERLIEVO, *Mal di Scherlievo*, *Mal di Breno*, *Mal di Fiume*, *Margaretizza*, *Morbus croatus*, *M. fluminiensis*, *Falcadina*, *Malo di Scarlievo*, *Scabies vene'rea contagio'sa*. A name, given to a particular form of syphilis, observed in Illyria. It is said to be capable of being communicated without immediate contact; and, that its principal symptoms are:—pains in the bones, ulceration of the fauces, pustules, and fungi in different parts of the body.

SCHERO'MA. A dryness of the eye from the want of lachrymal secretion.—Dictionaries.

SCHIDAKE'DON, from *σκίζω*, 'I cleave.' A longitudinal fracture of a bone.—Galen.

SCHINDYLE'SIS, *σχινδυλισις*, *Schindale'sis*, *Schindal'mos*. An articulation of bones,—by furrowing, as it were; as in that of the bones of the septum narium with each other. Also, the act of splitting into small pieces.—Hippocr.; from *σχίμδωλειω*, 'I split into small pieces.'

SCHINELÆ'ON, from *σχινος*, 'the mastic tree,' and *ελαιον*, 'oil.' *O'leum lentis'cinum*. Oil of mastic.—Dioscorides.

SCHIZATRICH'IA, *Trichoschi'sis*, *Schizotrich'ia*, from *σχίζω*, 'a cleft,' 'a split.' The splitting of the hairs at their extremities.—J. P. Frank.

SCHOOL, Schola. A place of education, (F) *École*. In Europe, the large Medical Schools are usually attached to the universities. In England, however, there has been no medical school of celebrity at either of the universities of Oxford or Cambridge; owing greatly to their provincial situation. Of late, two schools have existed in London, attached to the London university—University college and King's college. Excellent private schools have, however, long existed in that metropolis. The medical schools of Europe which have been most celebrated are those of Edinburgh, Leyden, Berlin, Halle, Tubingen, Paris, Montpellier, Bologna, Padua, Pavia, and Pisa. In the United States, the medical schools are numerous; at this time, not fewer than 30. Those most numerous attended are the medical department of the University of Pennsylvania, Jefferson Medical College of Philadelphia, and the medical department of Transylvania University, at Lexington, Kentucky.

SCHOOLEY'S MOUNTAIN, MINERAL WATERS OF. The waters of this New Jersey Spring are chalybeate. According to Dr. McNeven, they contain, extractive, muriate of soda, muriate of lime, muriate of magnesia, carbonate of lime, sulphate of lime, carbonate of magnesia, silex, and carbonate, and oxide of iron.

SCHWALBACH, MINERAL WATERS OF. S. is a town of Germany, seated on the Aa, 32 miles west of Frankfort. The waters contain muriate of soda, carbonates of lime and magnesia, iron, sulphate of lime, carbonic acid, and oxygen, &c. Employed as a tonic.

SCHWENDECK, MINERAL WATERS OF. These waters are about 5 leagues from Munich in Bavaria. They contain carbonic acid; carbonate, sulphate, and muriate of lime; muriate of magnesia; carbonate of soda, and oxide of iron, and are much used for cutaneous affections.

SCIATIC, Ischiaticus; from *ισχίον*, 'the haunch.' A word, formed by contraction from *ischiatric*, which latter is still used. See *Ischiatic*.

The great **SCIATIC NOTCH, or FORAMEN**, (F) *Grande échancrure sciatique*, ou *grand trou sciatique*, is a large notch, at the posterior edge of each os innominatum, below the posterior and inferior iliac spine, which is converted into a foramen by the sacrum and sacro-sciatic ligaments.

The **SCIATIC SPINE** or *Spine of the Ischium*, or *Spinous process of the Ischium*, is a short, flat, pyramidal eminence on the os innominatum, above the preceding foramen; which gives insertion to the lesser sacro-sciatic ligament.

The **LESSER SCIATIC NERVE**, *Inferior gluteal branch of the sacral plexus*, *lesser fem'oro-poplite'al nerve* (Ch), (F) *Nerf petit sciatique*, which seems especially formed by the 2d and 3d sacral, is given off from the

lower part of the sciatic plexus, and escapes from the pelvis beneath the pyramidalis muscle. It gives branches to the glutæus maximus,—a *sciatic branch* or *infra-pelvic cutaneous*, which passes under the tuberosity of the ischium, and furnishes filaments to the glutæus maximus, and to the muscles of the perinæum, urethra, penis, scrotum, &c.—and a *posterior femoral cutaneous branch*, the filaments of which traverse the femoral aponeurosis to be distributed on the skin of the posterior part of the thigh. The principal branch of the lesser sciatic nerve divides, near the ham, into two or three filaments, which descend under the integuments almost as far as the inferior part of the leg.

The **GREAT SCIATIC NERVE**, *Great fem'oro-poplite'al* (Ch), (F) *Grand nerf sciatique*, ought to be esteemed a continuation of the sacral plexus. It issues from the pelvis between the pyramidalis and superior gemellus; descends along the posterior part of the thigh; and, after having given branches to the gemini, quadratus, obturator externus, glutæus maximus, semi-membranosus, semi-tendinosus, biceps and third adductor muscles, it divides, about the inferior third of the thigh, into two branches; the one, named the *external popliteal*; the other the *internal*.

SCILLA, Scilla maritima, Aschil, Schinos, Oc'ulus Typhonis, Ornithog'alum marit'imum, Squilla—the squill or sea onion.—The *Eye of Typhon*, (F) *Oignon marin*. Family, Liliacæ. Sex. Syst. Hexandria Monogynia. Native of Spain, Austria, &c.

The bulb or root of the squill has a bitter, nauseous taste, and is extremely acrid; inflaming the skin when rubbed on it. Its acrimony, on which its virtues depend, is destroyed by heat, drying, and keeping. It is extracted by vinegar, spirit, and water.

In large doses, the squill is emetic and purgative; in small doses, diuretic and expectorant. Its active principle has been called *scillitine*.

Dose, gr. j to v of the dried root, united or not with mercury.

SCINCUS, σκινκος. A species of *Saurus* or *Lacer'ta*, common in Egypt, and much extolled, by the ancients, as alexipharmic and aphrodisiac.

SCINTIL'LA VEN'ERIS. A name given, by Paracelsus, to the impotence and loss of power in the limbs, produced by syphilis.

SCIRRHUS, Squirrhus, Scirrho'ma, Scirrho'sis, Indura'tio malig'na, Scirrhocèle, Sclirrus, Sclerus; from *σκιός*, 'marble,' (F) *Squirre, Scirrhe, Skirre*. A disease so called, from the hardness, that characterizes it. It is a state of induration, of a peculiar kind, affecting glandular structures generally, but capable of occurring in other textures. It usually precedes carcinoma, of which it may, indeed, be considered as the first stage. Scirrhus must not be confounded with the induration, which succeeds inflammation;

although the two states are often complicated, and may stand, occasionally, in the relation of cause and effect to each other.

Scirrhus is ordinarily accompanied by violent, shooting pains. It is, also, irregular on its surface; and, when cut into, has a bluish or grayish-white colour.

When the surgeon is satisfied of the existence of scirrhus, it had better be at once removed. No other treatment seems to possess much advantage. Galen uses the term *Scirrhus* for a livid excrescence, caused by inflammation.

SCIRRHOUS SARCO'MA OF ABERNETHY. *Emphy'ma sarcoma scirrhusum.* Hard, rigid, vascular infarction of glandular follicles; indolent, insentient, glabrous; sometimes shrinking and becoming more indurated. Found in glandulous structures.

SCISSORS, *Forfex, Forpex, Psalis, Tomis.* (F) *Ciseaux.* A well known instrument, in common use, and often employed in surgery. Scissors are composed of two cutting blades crossing each other and moving upon an axis. They are *straight* or *curved*. Sometimes, the curve is on the flat side, when they are called in France *Ciseaux a cuiller*, at others, on their edges. The scissors, bent so that the blades make an obtuse angle with the handles, are also much used. They are called, in France, *Ciseaux coudés*.

Scissors are used for dividing soft, loose, isolated parts, which it would be difficult to stretch and to cut with the bistoury. They are employed, likewise, in the operation for harelip; and for removing warts, fungous excrescences, &c.

SCLERIASIS. *Sclero'ma, Sclero'sis, Scleria, Sclerismus,* from *σκληρος*, 'hard.' Any kind of hardness or induration. Sometimes hardness of the eyelids, *Callositas palpebrarum, Scirrholepharon'cus*; at others, hardness of the genital organs of the female;—probably synonymous with scirrhus.—Galen. Paulus.

SCLEROSARCO'MA, from *σκληρος*, 'hard,' and *σαρκωμα*, 'a fleshy tumour.' A hard, fleshy tumour, seated on the gums, and resembling a cock's comb.

SCLEROTIC, *Sclerot'ica*; from *σκληρῶω*, 'I harden.' *Cornea opa'ca, Sclero'des, Tunica innomina'ta seu dura seu albugin'ea seu du'rrior et crass'ior seu ex'tima seu alba seu can'dida seu innomina'ta oc'uli, Sclero'tis.* (F) *Sclérotique, Blanc de l'œil.* A hard, resisting, opaque membrane; of a pearly white colour and fibrous nature, which covers nearly the posterior four fifths of the globe of the eye, and has the form of a sphere, truncated before. It is strengthened by the expansion of the muscles of the eye; to which expansion many anatomists have given the name *Tunica albuginea*.

The sclerotic is penetrated, posteriorly, by a round opening, for the passage of the optic nerve; and, anteriorly, it has a much larger

opening, into which the transparent cornea is received. There are, besides, many small, oblong apertures in it for the passage of nerves and vessels, proceeding to the interior of the eye. In the fœtus, the sclerotic may be separated into two very distinct laminæ.

SCLEROTICONYX'IS, *Scleronyx'is*, from *σκληρος*, 'hard,' and *νυξικ*, 'puncturing.' Perforation of the sclerotica in the operation for cataract by depression.

SCLEROTITIS, *Rheumatic ophthalmia, Ophthalmia arthritica.* Inflammation of the sclerotic coat of the eye.

SCLERYS'MA, *σκληρυσμα.* Induration; also, induration of the liver.

SCOBs, *Prisma, Xysma, a shaving, Ramen'tum, Rasu'ra.* Also, an *alkali*; and the scoria of any metal.

SCOLIO'SIS, *σκολιασις*, from *σκολιος*, 'crooked.' A distortion of the spine.

SCOLOPOMACHÆ'RION, from *σκολοπαζ*, 'the woodcock,' and *μαχαίρα*, 'a knife;' so called because it is bent, a little, at the extremity, like a woodcock's bill. A sort of blunt-pointed bistoury.—Sculletus.

SCOOP. Teut. *Schoepe.* *Cochlea'rē.* (F) *Curette.* A surgical instrument of the shape of a spoon, which is used for the extraction of certain foreign bodies. The scoop is often employed to extract balls, impacted in the soft parts; to remove calculi from the urinary bladder in lithotomy, &c. A small scoop is, sometimes, used to extract foreign bodies from the meatus auditorius externus, nasal fossæ, &c.

SCOPE, *σκοπη, Scopia, σκοπια, Scopus, σκοπος*, from *σκοπειω*, 'I look around.' A common suffix to words meaning 'view and inspection,' as *cranoscopy, stethoscopy, &c.*

SCORACRA'SIA, *Scoracra'tia, Scatacra'sia, Scatacra'tia, Copracra'tia*; from *σκαζ*, 'the excrement,' and *ακρασια*, 'debility.' Want of power to retain the fæces. Involuntary evacuation of the fæces.

SCORBU'TIC, *Scorbu'ticus.* That which belongs to scurvy. One affected with scurvy.

SCORPION, *Scorpio*, from *σκορπιω*, 'I puncture.' A genus of insects, having a sting at the extremity of the tail, with which they make dangerous wounds. An Oil of Scorpion was once made from them, which is not now used.

SCORZONE'RA, *S. hu'milis, Escorzone'ra, Vipera'ria, Serpenta'ria Hispan'ica, Offic'inal viper's grass, Viper's grass, Goat's grass.* Family, Cichoraceæ. Sex. Syst. Syngenesia Polygamia. The roots have been used as alexipharmics, and in hypochondriacal disorders and obstructions of the viscera. The root of the *Scorzonera Hispanica* is esculent, but inefficacious as a drug.

SCOTODYN'IA, *Scotodinia, Scoto'mia, Dinus Scoto'ma, Scotoma, Scotodine, Tenebrico'sa verti'go, Scotos, Scotas'ma, Scoto'sis.* Giddiness, with impaired sight, often succeeded by headache.

SCOTT'S ACID BATH, *Nitro-muriatic acid bath*. A bath of dilute Aqua Regia, employed by Dr. Scott, of India, as a remedy in hepatic diseases. Three pints by measure of muriatic acid, and two of nitric acid, were mixed to form the Aqua Regia. In preparing this for use, a pint of it was mixed with an equal quantity of water. The acid bath consisted of 3 oz. of this dilute acid to every gallon of water.

SCROBICULUS CORDIS, *Anticar'dium*, *Procar'dium*. (F) *Fossette du cœur*, *Avant-cœur*, *Anticœur*. The pit of the stomach. The depression at the anterior part of the abdomen, below the xiphoid cartilage.

SCROFULA, *Scroph'ula*, *Scrophulæ*; from *scrofa*, 'a sow;' because swine were presumed to be subject to a similar complaint. *Scrophulo'sis*, *Morbus scrophulo'sus*, *Vitium scrophulo'sum*, *Cachex'ia seu Dyscrasia scrophulo'sa*, *Pædatroph'ia glandulo'sa*, *Struma*, *Chærus*, *Coiras*, *Chræas*, *King's evil*. (F) *Scrophules*, *Ecouelles*, *Humeurs froides*, *Tubercules des glandes lymphatiques*. A state of the system, characterized by indolent, glandular tumours, chiefly in the neck; suppurating slowly and imperfectly, and healing with difficulty; the disease ordinarily occurring in those of a sanguine temperament, with thick upper lip, &c. The tumours, after supuration, degenerate into ulcers; which, in process of time, cicatrize, leaving scars. The internal organs are apt to be attacked in those disposed to scrophula; hence they are, often, the subjects of phthisis and mesenteric affections. Scrophula is hereditary; and is, frequently, excited by insufficient or improper regimen, and by a close, confined air, during the first years of existence.

The best treatment is:—to strengthen the system by animal diet; pure air, and exercise, and cold bathing, or sea water bathing, &c.

SCROPHULARIA AQUATICA, *Beton'ica aquat'ica*, *Fica'ria*, *Ferra'ria*, *Castran'gula*, *Greater Water Figwort*, *Water Bet'ony*. (F) *Scrofulaire aquatique*. The leaves are celebrated as correctors of the bad flavour of senna. They were, at one time, regarded as eminently antiscrophulous, stomachic, and carminative.

SCROPHULARIA NODO'SA, the *Figwort*, *Kneltwort*, *Scrofula'ria foet'ida*, *Scrophularia vulga'ris*, *Millemor'bia Scrophula'ria*. (F) *Scrofulaire*, *Herbe aux écrouelles*. The root and leaves of this plant have been celebrated, both as an internal and external remedy, against inflammations, piles, scrophulous tumours, ulcers, &c.

SCROTOCE'LE. A hybrid term; from (L) *Scrotum*, and *κηλη*, 'a tumour.' *Hernia scrota'lis*, *Scrotal hernia*. Inguinal hernia, descending into the scrotum—*Oscheocele*, (q. v.)

SCROTUM, *Scrotum* (a leather purse), *Os'cheon*, *Och'eus*, *Perin*, *Scortum*, *Marsu'*

pium, *Bur'sula*, *Bursa tes'tium seu viri'lis*, *Os'cheus*, *Or'chea*, the *Purse*, *O'scus*. (F) *Les bourses*. The integuments, which cover the testes. These are nothing more than a prolongation of the skin of the inner part of the thighs, perinæum and penis. The skin is remarkable for its brown colour, for the numerous rugæ, especially when the scrotum is contracted; for the great number of sebaceous follicles it contains; and for the long and few hairs, which issue from it, in the adult. The scrotum is divided into two equal parts by a raphe, which extends from the anus to the root of the penis. Its organization is similar to that of the skin of other parts of the body; except that the chorion is thinner.

SCRUPLE, *Diob'olon*, *Scrupulus*; a weight of 20 grains, Troy; 24 grains, Poids de marc.

SCURF, Sax. *reurf*, Teut. *Schorft*, *Furfura*. Small exfoliations of the cuticle are so called.

SCUTELLARIA GALERICULA'TA, *Tertiana'ria*, *Skull-cap*. (F) *Casside bleue*. Family, *Personæ*. Sex. Syst. *Didynamia Angiospermia*. This plant has a bitter taste and a garlic smell. It has been esteemed especially serviceable in tertian ague.

SCYBALA, plural of *Scybalon*, *σκυβαλον*, 'dung.' *Enterolithus Scyb'alum*, *Excrementa Alvi siccio'ra*. Hard fecal matters, discharged in round lumps.

SEA-AIR. The air, in the neighbourhood of the sea, contains saline particles commingled with it, which render it a valuable change for scrophulous and debilitated individuals. The sea and sea coast are usually, also, more equable in their temperature than places inland.

SEARCHING, *Sounding*; from (F) *Chercher*. The operation of ascertaining whether a patient has a stone in the bladder, by the introduction of a metallic instrument.

SEBA'CEOUS, *Seba'ceus*; from *sebum*, 'suet.' That which has the nature of suet.

The **SEBACEOUS GLANDS**, **FOL'LICLES** or **CRYPTS**, *Mil'iary glands*, are small hollow organs of a rounded or pyriform shape, seated in the substance of the skin, and opening on its surface by a small, excretory duct; furnishing a yellow, unctuous humour, having some analogy with suet, which is destined to lubricate the surface of the body.

Follicles of a similar nature exist around the corona glandis of the male, and under the skin of the labia majora and nymphæ of females. They secrete a sebaceous matter, which emits a peculiar odour; and, hence have been called *Glandulæ odoriferæ*.

SEBESTINA, *Cordia myxa*, *Sebes'ten*, *Sebsten*, *Myxa*, *Cornus sanguinea*, *Prunus sebestena*, *Smooth-leaved Cordia* or *Assyr'ian plum*. (F) *Sebestier myxa*. The dark, black fruit of the *Sebestina* possesses glutinous and aperient qualities, and is exhibited in decoction, in various diseases of the chest.

SECA'LE. *S. cerea'le.* The *Rye plant.* (F) *Seigle.* Rye is chiefly used as an article of diet, particularly in the northern parts of Europe, where they, also, extract a spirit from it. The grain is disposed to acescency: and hence its internal use, at first, generally produces a laxative effect.

SEC'ONDARY, from *secun'dus*, 'the second.' Something that acts subordinately to another; as the *secondary symptoms* of a disease; i. e. those which supervene on the *primary*.

SECRE'TION. *Secre'tio apoc'risis*, from *secer'nerè*, 'to separate.' An organic function, which is chiefly executed in the glands, and consists in an elaboration or separation of the materials of the blood, at the very extremities of the arterial system, or rather of the vascular secretory system; and which differs, in each organ, according to its particular structure; hence the formation of different fluids;—bile, saliva, urine, milk, &c. The secretions are of three kinds:—*exhalant*, *follicular*, and *glandular* (q. v.)

SEC'UNDINES. *Hys'tera, Deu'tera, Deuter'ia, After-birth, Secun'dæ, Secundi'næ.* (F) *Arrière-faix, Sécondines, Délivre.* All that remains in the uterus, after the birth of the child,—viz. the placenta, a portion of the umbilical cord, and the membranes of the ovum. These are, commonly, not expelled till some time after the birth of the fœtus; hence their name. See *Delivrance*.

SED'ATIVES. *Pauonta, Sedan'tia, Ad-ec'ta,* (F) *Calmants, Temperants,* from *sedo*, 'I settle or assuage.' Medicines which directly depress the vital forces, and which are consequently employed whenever it is necessary to diminish preternaturally increased action. The chief reputed sedatives are: *Acidum Hydrocyanicum, Acidum Hydro-sulphuricum, Tabacum, Missio Sanguinis,* and certain gases by inhalation, as azote, carbonic acid, (?) carburetted and sulphuretted hydrogen.

SED'IMENT. *Sedimen'tum.* (F) *Dépôt.* A deposit, formed by the precipitation of some one or more of the substances held in solution or suspension by a liquid. That which is formed in urine, at the time of cooling, has been called *Hypostasis, Hyposte'ma, Residen'tia, Subsiden'tia.* This sediment or deposit varies in different states of the system. In calculous affections, it is one of the most important objects of attention.

SEDLITZ, MINERAL WATERS OF. *Seidlitz or Seydschütz water.* Springs in Bohemia, near Prague, which are simple salines. They contain a large quantity of sulphate of magnesia, a little sulphate of soda and sulphate of lime, carbonic acid, carbonates of lime and magnesia, and a resinous matter. (?) They are employed, as purgatives, in a multitude of diseases.

SEDLITZ POWDERS may be formed of *Soda tartarizata* ʒij, *Sodæ carbon.* ʒij, in one pa-

per. *Acid tartaric.* xxxv, in another. For half a pint of water.

SEDUM. *Sedum acré, Illece'bra, Vermicula'ris, Piper mura'lè, Sedum minus, Sem-pervi'vum acré, Wall pepper, Stone crop, Aei-chryson, Æonion.* (F) *Joubarbe âcre, Orpin brûlant, Vermiculaire brûlante, Sédon brûlant.* Family, Crassulaceæ. Sex. Syst. Decandria Pentagynia. In its recent state, it is very acrid, and proves both emetic and cathartic. Externally, in the form of cataplasm, it produces vesications and erosions. It has been recommended in cancerous and malignant ulcers.

SEDUM TELE'PHIUM, *Faba crassa, Cras'sula, C. major, Illece'bra major, Tele'phium, Faba'ria cras'sula, Anacamp'seros, Orpine.* (F) *Sédon reprise, Orpin reprise, Grand orpin, Fève épaisse, Joubarbe des vignes, &c.* Formerly used as a cataplasm in cuts, hemorrhoids, corns, whitlows, &c.

SEGRAY, MINERAL WATERS OF. Near Pithiviers, in Gâtinais, in the French department of Loiret, there is a chalybeate spring, which has some reputation.

SELI'BRA, Sembella, half a pound. Six ounces, Troy; eight, Avoirdupois.

SELINI'TES, *σελινιτης.* Wine impregnated with the seeds of the *σελινον* or *smallage*.—Dioscorides.

SELLA TUR'CICA, *Ehip'pium, Fossa Pituita'ria, Turkish Saddle, Cella Tur'cica, Sella, S. equina seu sphenoida'lis,* (F) *Selle Turcique ou du Turc.* A depression at the upper surface of the sphenoid bone, which is bounded, anteriorly and posteriorly, by the clinoid processes; and lodges the pituitary gland. It is so called from its resemblance to a *Turkish saddle*.

SELTZ or SELTZER, MINERAL WATERS OF. Cold, acidulous springs, the source of which is at Seltz, nine leagues from Strasburgh and in the Department of the Bas-Rhin. They contain carbonates of lime, magnesia, and soda, muriate of soda, and much carbonic acid. They are refrigerant, tonic, diuretic, and aperient.

ARTIFICIAL SELTZER WATER may be made from *muriat. acid.* gr. xxxv, *water* ℥j, *white marble,* gr. iij. Stop up till dissolved. Add *carbonate of magnesia,* gr. v, and, after some time, *subcarbonate of soda,* gr. xxxij. Close it till used.

SEMEIOL'OGY, *Semeiot'icè; Semiology,* or *Semiot'icè,* from *Semeio'sis, σημειωσις,* 'signification,' 'designation,' (F) *Séméiotique.* The branch of pathology, whose object is an acquaintance with the signs of disease.

SEMI, from *ἡμισυ,* 'half.' *Semi* or *demi,* in composition, universally signifies 'half;' both in French and English.

SEMICIRCULAR, Semicircula'ris. That which represents the half of a circle.

The **SEMICIRCULAR CANALS,** *Canal'es semicircula'res seu tubæformes seu circula'res, Semicir'culi ossei, Funes seu Canalic'uli semi-*

annula' res, (F) *Canaux demi-circulaires*, are seated in the pars petrosa of the temporal bone, and open into the vestibule, behind which they are situate. They are three in number, of which one is *superior* or *vertical*; another *posterior* or *oblique*; and the third *exterior* or *horizontal*. Their parietes are formed of a bony, compact, hard plate. Their uses in audition are not known: at their termination they have the elliptical arrangements, called *ampul'lae*; and by both extremities they open into the vestibule, in the sac at its superior part—the *Sac'culus Ellip'ticus*, *Al'veus commu'nis*, *utricle*, *sinus* or *Alveus utriculo'sus*, *Sacculus vestibuli* or *Median sinus*. In front of the S. ellipticus, nearer the cochlea, and opposite the foramen ovale, is the *Sac'culus sphericus* or *sacculus*.

SEMI-CON'GIUS. Half a gallon, or 4 pints, English.

SEMI-CU'PIUM, *Inses'sio*, *Inces'sio*, *Encathis'ma*, *εγκάθισμα*, *Excathis'ma*, (F) *Demi-bain*. A half-bath, or such as receives only the hips or extremities.

SEMIL'LA DEL GUACHARO. Various kinds of hard and dry fruits, found in the stomachs of the young Guacharoos, a sort of nocturnal bird;—a celebrated South American remedy in ague.

SEMILU'NAR, *Semiluna'ris*, (F) *Demi-lunaire* ou *Sémi-lunaire*. Having the shape of a half-moon.

The SEMILUNAR CARTILAGES or *Semilunar fibro-cartilages* are two fibro-cartilages, which exist between the condyles of the os femoris and the articular surfaces of the tibia. The innermost, which is longer from before to behind than transversely, is nearly semicircular. The outermost forms almost an entire circle; an arrangement, in both cases, corresponding to the different surfaces of the tibia. They are thicker at their outer circumference, which is convex, than at the inner which is concave, and very thin. Both are inserted, before and behind, into the spine of the tibia, by means of fibrous fasciæ.

The SEMILUNAR GANGLION,—*Ganglion abdomina'le seu splanchnicum seu transversum seu solare*, *G. surréal* (Ch.), belongs to the great sympathetic. These ganglia present considerable variety; and are deeply situate in the abdomen, above and behind the suprarenal capsules. They correspond, posteriorly, to the pillars of the diaphragm and the aorta. They have the shape of a crescent reversed, often surrounded by other ganglia of a smaller size. From their periphery the numerous filaments proceed, which go to the formation of the solar plexus.

SEMI-MEMBRANO'SUS, *Ischio-popliti-fémoral*, *Ischio-popliti-tibial* (Ch.), (F) *Demi-Membraneux*. A muscle situate at the posterior part of the thigh. It is flat, thin, narrow, and aponeurotic in its upper third; broader and fleshy in the middle, and tendinous below.

It is attached above, to the tuberosity of the ischium; and below, by a tendon, which has three divisions,—to the outer condyle of the femur, and to the posterior and inner part of the internal tuberosity of the tibia. This muscle is a rotator inwards, and a flexor of the leg. It can, also, bend the thigh upon the leg. In standing, it maintains the pelvis in position, and can even draw it downwards.

SEMI-SICIL'ICUS. A weight of one drachm or three scruples.—Rhodius.

SEMI-SPEC'ULUM. An instrument, used for dilating the incision made into the neck of the bladder in the operation of lithotomy.—Fabricius Hildanus.

SEMI-SPINALIS COLLI, *Transver'so-spinalis Colli*, *Spinalis cervi'cis*, *Spinalis Colli*, *Transversa'lis Colli*, *Transverso-spinal*. (F) *Demi-épineux* ou *transversaire-épineux du cou*. This muscle arises from the transverse processes of the six uppermost dorsal vertebræ, by an equal number of distinct tendons, which run obliquely under the complexus, and is inserted into the spinous processes of all the cervical vertebræ, except the first and last. Its *action* is,—to extend the neck obliquely backwards and to one side.

SEMI-SPINALIS DORSI, *Semi-spinalis exter'nus*, *Transver'so-spinalis dorsii*, *Semi-spina'tus* (Riolan), *Transverso-spinal*, (F) *Demi-épineux du dos*, *Transversaire-épineux du dos*. This muscle arises from the transverse processes of the 7th, 8th, 9th, and 10th dorsal vertebræ, by as many distinct tendons, which soon grow fleshy; and, then, again become tendinous, and are inserted into the spinous processes of the 6 or 7 uppermost dorsal, and two lowest cervical vertebræ, by as many tendons. Its *action* is,—to extend the spine obliquely backwards.

SEMI-TENDINO'SUS, *Semi-nervo'sus*, *Ischio-crêti-tibial*, *Ischio-prétibial* (Ch.), (F) *Demi-tendineux*. This muscle is situate at the posterior part of the thigh. It extends obliquely downwards and inwards, from the tuberosity of the ischium—to which it is attached by a flat tendon, common to it and the biceps,—as far as the posterior and inner part of the tibia, to which it is attached by means of another round tendon. Its fibres are commonly interrupted by an aponeurosis. Its *uses* are the same as those of the semi-membranosus.

SE'MINA FRIG'IDA MAJO'RA. The *greater cold seeds*. The ancients gave this name to the emulsive seeds of the cucumber, melon, gourd, and water-melon.

SEMINA FRIGIDA MINORA. The *lesser cold seeds*. The ancients gave this name to the seeds of the lettuce, purslane, endive, and chicory.

SEMINIF'EROUS, from *semen*, 'sperm,' and *fero*, 'I carry,' *Seminiferus*. An epithet given to the vessels, which secrete and convey the seminal fluid.

SEMPERVIVUM TECTO'RUM, *House-*

Leek, Sedum majus, Aizoön, Beialhalalen, Bupthalmus, Barba Jovis, Sengreen, Agriocin'ara, Andrachahara, Chrysosper'mum, (F) Joubarbe des toits. The leaves have a mild, subacid austerity, and are often applied to bruises and old ulcers.

SENE'CIO, *S. vulga'ris, Erig'gerum, Cor'talon, Erigeron, Groundsel, (F) Seneçon commun.* Family, Corymbiferæ. Sex. Syst. Syngenesia Polygamia Superflua. A common plant in Europe; frequently applied, bruised, to inflammations and ulcers, as refrigerant and antiscorbutic.

SENECIO JACOBÆ'A, *Jacobæ'a, St. James' Wort, Ragwort, (F) Jacobée.* The leaves have a roughish, bitter, subacid, and extremely nauseous taste. A decoction has been used in dysentery. A poultice of the leaves has been recommended in rheumatic affections; and a decoction of the root has been often employed in cases of wounds and bruises.

SENECTA AN'GUIUM. The cast-skin of a serpent. A decoction of it is said to cure deafness!

SENECTUS, *Geras, Old age, (F) Vieillesse.* The last period of life, commencing, according to some, at 60 years of age, but varying according to numerous circumstances. It is characterized by the progressive diminution of the physical and moral faculties.

SEN'EGAL, GUM. The exudation from the *Mimosa Senegal, Family, Leguminosæ.* Sex. Syst. Polygamia Monœcia, which grows in the country of Africa, through which the river Senegal runs. It is in loose or single drops, much larger than Gum Arabic, or the gum which exudes from the cherry tree; and is much more difficult of solution than the former.

SENSA'TION, *Sensa'tio, Æsthe'ma.* An impression, caused by external bodies, on the organs of the senses, and transmitted to the brain, which appreciates it. It is not necessarily, however, confined to bodies external to us: for we can receive an impression by touching any part of our own body. The body, which communicates the impressions, needs but to be external to the part impressed.

Sensations are divided into *external, internal* and *morbid*. The *external* are communicated by the five organs of the senses. The *internal* are such as occur within the body, and arise from some alteration in the function of the part, for the time being. Hunger and thirst are internal sensations, as well as all the natural wants.

Morbid sensations may be either internal or external.

SENSE, *Sensus, Æsthe'sis, (F) Sens.* A faculty, possessed by animals, of receiving impressions from external objects. (F) *Sentiment.* The senses are five in number: sight, hearing, smell, taste, and touch. Of these, the two first and the last administer more to the intellect; and, hence, have been called, by some, the *intellectual senses*: the

other two seem more destined for the nutrition of the body; and, hence, have been termed *corporeal* or *nutritive senses*.

Other senses have been suggested—as the intense sensation experienced during the venereal act; a sense of heat and cold: a muscular sense, a common sense or Cœnæsthesia (q. v.), &c.

SENSIBIL'ITY, *Sensibil'itas, Æsthema.* The faculty of receiving impressions, and having the consciousness of them. Bichat defines it as the property, possessed by living bodies, of receiving impressions, whether the individual is conscious of them or not. In the former case, where conscious, he calls the sensibility, *animal*: in the latter, where not, he terms it *organic*. This last is common to vegetables and animals, and presides over nutrition, absorption, exhalation, secretion, &c. The other does not exist in vegetables: it is the origin of the sensations,—olfaction, vision, gustation, audition, thirst, hunger, pain, &c.

There are few parts of the animal body, but what are sensible,—if not in health—in disease. The free extremities of the hair, and nails, and the epidermis are not so. See Insensibility.

SENSO'RIMUM, *Senso'rium commune, Organon senso'rium internum, Senito'rium, Empo'rium spirituum, Æsthetè'ron.* The common centre of sensations.

SENTIENT, *Sentiens.* Feeling.

The SENTIENT EXTREMITIES of nerves are their minute terminations in the organs.

SEPARATO'RIMUM, from *se'paro*, 'I separate.' A surgical instrument, for separating the pericranium from the skull. A *Sep'aratory*—*Vitrum Hypoclepticum*,—is, also, a pharmaceutical vessel for separating fluids of different densities from each other.

SEPEDONOGEN'ESIS, *Sepedogen'esis*, from *σπρεσσω*, 'putrescency,' and *γενεσις*, 'generation.' A septic disposition or tendency: such as is met with in typhus gravior.

SEPHI'ROS. A word used, by some writers, for the hardness that follows small abscesses, from which the pus has been absorbed; as in the case of furuncles.

SEPIA, *S. officina'lis, Sepium, Præcip'itans magnum, Cuttle-Fish, (F) Sèche.* The shell of the cuttle-fish has been used as an absorbent; and is often added to tooth-powders.

SEPLASIA'RIUS. A name formerly given to those, who sold perfumes, ointments, &c. It is derived from *Seplasia*,—the name of a public place at Capua, where these kinds of preparations were frequently sold.

SEP'TENARY. Consisting of seven. The septenary years, of the old believers in critical periods, were supposed to be times at which important changes might be expected to take place. The grand climacteric (q. v.) was fixed at 63, and it was considered, that if a person passed that age, he had well-founded expectations, that his life might be protracted to 90.

SEPTIC, *Sep'ticus.* That which produces putrefaction. Any substance, which corrodes

and disorganizes the soft parts, without causing much pain.

SEPTUM, (F) *Cloison*. A part intended to separate two cavities from each other, or to divide a principal cavity into several secondary cavities.

These septa are numerous in the human body. The chief are the following.

SEPTUM CORDIS, *Septum medium cordis*. The partition, which separates the two ventricles of the heart.

SEPTUM LU'CIDUM seu *pellu'cidum* seu *tenuet* *et pellucidum* seu *medium* seu *Spec'ulum lu'cidum* seu *Lapis specula'ris* seu *Mediasti'num* seu *Diaphrag'ma ventriculo'rum latera'lium cer'e'br'i*, *Spec'ulum*, *Septum mé'dian* (Ch.), (F) *Cloison transparente*. The soft portion or medullary substance, which separates the two lateral ventricles of the brain from each other. This septum is composed of two laminæ; between which a small cavity exists, filled by a serous fluid, and called the *Fossa of Syl'vius*, *5th ventricle of Cuvier*, *Sinus of the mé'dian septum*, (Ch.) The brothers Wenzel are of opinion, that this cavity is lined by a peculiar membrane.

SEPTUM NA'RIVM, *Interseptum*, seu *Dissepi-men'tum*, seu *Interfinium*, seu *Discri'men*, seu *Imbrex*, seu *Diaphrag'ma narium*, (F) *Cloison des Fosses nasales*, the partition between the nares. It is formed by the vomer, the perpendicular plate of the ethmoid bone, and a cartilage of a triangular shape. These parts are lined by the pituitary membrane, which receives a considerable number of nerves and vessels.

SEQUESTRUM, from *seques'tro*, 'I separate.' The portion of bone, in necrosis, which is dead, and separated from the living bone; acting, whilst retained, as an extraneous body. When the sequestrum is superficial and small, it is called *Exfoliation*, (q. v.)

SE'RIOUS, (F) *Sérieux*, *Grave*. A term, applied to diseases and symptoms, that are attended with danger.

SER'ICUM, *Silk*, from *Seres*,—the Thibetans probably—from whom it was first obtained. (F) *Soie*. The thread spun by the *Bombyx Mori* or *Silkworm*. Silk is used by surgeons for ligatures, &c.

SERPENT, *Serpens*, *Anguis*, *Ophis*, from *serpo*, 'I creep.' A snake.

SNAKE BROTH was, at one time, recommended as a restorative.

Many serpents are venomous: and the bites of some fatal. See Poisons (Table of).

SERPIG'INOUS, from *serpere*, 'to creep.' An epithet given to certain superficial ulcerations which, as they cicatrize in one part, extend to another.

SERRATULA AMA'RA, *Family*, *Cynaroccephalæ*. *Sex. Syst.* Syngenesia Polygamia æqualis. A species of *Sawwort*, recommended in ague.

SERRA'TUS MAGNUS. So called from its serrated appearance. *Serratus major anti'*

cus, *Serratus major*, *Costo-basi-scapulaire*, *Costo-scapulaire* (Ch.), (F) *Grand dentelé*. A very broad (especially anteriorly), thin, flat, irregularly quadrilateral muscle, situate at the sides of the thorax. It is attached, before, to the external surface of the first 8 or 9 ribs, by as many distinct digitations; and, behind, to the spinal edge of the scapula. The superior fibres are almost horizontal; the lower become gradually more and more oblique upwards and backwards. This muscle carries the scapula forwards, and causes it to execute a movement of rotation, which directs its inferior angle forwards, and the anterior upwards. When the shoulder is fixed, it raises the ribs.

SERRATUS POSTI'CUS INFERIOR, *Dorso-lombo-costal*, *Lombo-costal* (Ch.), (F) *Petit dentelé postérieur et inférieur*. A broader and thinner muscle than the following, but nearly of the same shape. It is situate obliquely, at the lower part of the back; and extends from the spinous processes of the two or three last dorsal vertebræ, and the two or three first lumbar, to the inferior margin of the four last false ribs. This muscle depresses the ribs, and thus concurs in expiration. It is an antagonist to the next.

SERRATUS POSTI'CUS SUPERIOR, *Cervi'ci-dorso-costal*, *Dorso-costal* (Ch.), (F) *Petit dentelé supérieur*. A flat, thin, quadrilateral muscle; situate obliquely at the posterior inferior part of the neck, and the superior part of the back. It passes from the posterior cervical ligament, the spinous process of the last cervical vertebra; from the spinous processes of the two or three first dorsal, to the second, third, fourth, and fifth ribs; into which it is inserted by as many digitations. It raises the ribs, and is, consequently, an inspiratory muscle.

SERUM, *Orrhos*, *Seros'ity*. The most watery portion of animal fluids, exhaled by serous membranes. It is a constituent part of blood, milk, &c.

The **SERUM OF THE BLOOD**, (F) *Sérum du Sang*, is the liquid, which separates from the blood, when coagulated at rest. It is of a greenish-yellow colour; viscid; slightly coagulable by heat, acids, and alcohol. It is composed of water; muriate of soda; certain phosphates; gelatine; and albumen, constantly united to soda, almost in a saponaceous combination.

SERUM LACTIS; the *Serum of Milk*, *Whey*, (F) *Sérum du lait*, *Petit lait*. That part of milk, from which the butter and caseous matter have been separated. It is a transparent, citrine-coloured liquid, containing sugar of milk, mucilage, acetic acid, phosphate of lime, and some other saline substances. It is used as a slightly nutritious diluent and refrigerant.

The **SERUM LACTIS HOFFMAN'NI**, (F) *Petit-lait d'Hoffmann*, is a name given to the liquid, resulting from treating with boiling water,

milk which has been evaporated to an almost solid consistence. It is not much used.

RENNET WHEY is made thus: *milk* 2 pints; *rennet* 3ss, infused in a little hot water: mix, and keep in a gentle heat for some hours, then strain.—Gray.

SERUM OF SEROUS MEMBRANES, *Serum membranarum serosa'rum*, *Water of Dropsy*, (F) *Sérum des membranes séreuses*, *Eau des hydro-piques*. It resembles the serum of the blood,—especially in cases of hydrocele. The water of hydrothorax and ascites contains much less albumen:—sometimes, enough to coagulate on the application of heat: at others, not.

SESAMOID, *Sesamoïdes*, *Sesamodes*, *Sesamoideus*, from *σισαμν*, 'a grain of sesamum,' and *ειδος*, 'resemblance.'

The SESAMOID BONES are small bones, situate in the substance of tendons, near certain joints. Their number is various. They are commonly more in the male than female. Two are constantly met with, beneath the metatarso-phalangeal articulations of the great toe. Sometimes, the articulations of other bones of the metatarsus with the phalanges of the toes have them likewise. In the hand, there are two before the metacarpo-phalangeal joint of the thumb. At times, they are met with in the other metacarpo-phalangeal articulations. Occasionally, two exist, behind the condyles of the femur, in the tendons of the gastrocnemii muscles. A considerable os sesamoideum is also met with in the tendon of the peronæus longus.

These bones are commonly round, and flattened only on one surface, which is incrustated with cartilage. Their size is very variable, according to the joints in which they exist.

Traces of sesamoid bones are not observed in infants: in them, they are replaced by small, cartilaginous concretions. They are developed by a single point of ossification; and are, like the patella (which is a true sesamoid bone), composed of much cellular substance, covered by a thin layer of compact tissue.

The use of these bones is,—to allow the tendon to be inserted into the lever at a greater angle; and, thus, enable the power to act more advantageously.

Riolan has given the name *Ossa sesamoïdea*, to two bony points, sometimes met with;—the one at the outer side of the carotid canal of the temporal bone; and the other at the edge of the cavernous sinus, at the side of the internal carotid artery.

SESAMUM ORIENTALE, *Bennè*, *Oily Grain*. The seeds of this African plant are cultivated in Georgia and South Carolina, where the negroes use them with Indian Corn as an article of food. They yield a larger proportion of oil than any other vegetable; one hundred weight producing ninety pounds of oil, which is, at least, equal to Florence oil.

The *Benne Oil*, *Sesami Oleum*, is used in the Southern States as a laxative. The leaves afford, by infusion, an excellent mucilage.

SESCUN'CIA, *Sesquiun'cia*, *Hemiolion*. An ounce and a half.

SES'ELI TORTUOSUM, *Seseli Massiliensè*, *Hartwort of Marseilles*. The seeds have a warm taste; and a greater degree of pungency than those of the *Laserpitium Siler*, which is the *Seseli* of the Pharmacopœias.

SESQUI. This word, joined with any number, weight, measure, &c., signifies one and a half; as *sesquigranum*, 'a grain and a half.'

SETA EQUI'NA, *Hairworm*, *Helmin'thus Gordii*. A kind of worm, found in stagnant water, from 4 to 6 inches long, and twisted into various knots and contortions. Colour pale-brown, with dark extremities. It is common in the intestines of the Laplanders; causing the *Col'ica Lappon'ica*, in which the gripings are, at times, exceedingly severe.

SETA'CEUM, *Seto*, *Seton*, from *seta*, 'a bristle.' A long strip of fine linen or cotton twist, passed through the skin and cellular membrane, to keep up an issue; or through suppurating cavities, between the fragments of fractured bones, &c. to fulfil certain indications. The term is, also, applied to the issue so established.

The operation is simple. It consists in laying hold of a fold of skin, and passing a seton needle through it, with the thread attached. Every day, a fresh portion of the thread is drawn through the sore.

Setons are established in many diseases;—in obstinate ophthalmiæ, cephalalgæ, epilepsy, thoracic and abdominal affections, &c., but they are not as much used as formerly.

SEVUM, *Sebum*, *Stear*, *Adeps ovil'li*. Suet, mutton suet.

The SEVUM PRÆPARA'TUM, *Ovil'li Sevum Præpara'tum* or *prepared Suet*, (F) *Graisse de Mouton, Suif*, is formed by cutting the suet in pieces; melting over a slow fire, and straining through linen. It is emollient, and is sometimes boiled in milk (3 ij to ℥ j), and used in diarrhœa and dysentery. Its principal employment is in the formation of plasters.

SEX, *Sexus*, *Genos*, *Physis*. The physical difference between male and female in animals and vegetables;—as the *male sex*, *Sexus po'tior*, *S. virilis*; the *female sex*, *Sexus se'quior*, *S. mulie'bris*. In France, "the sex" means the female sex.

SEXTANS, *Sexta pars libræ*. The sixth part of a pound.—Galen.

SEXTA'RIOUS. An ancient measure, for liquid and solid substances. See *Weights and Measures*.

SEX'TULA. The sixth part of an ounce.

SEX'UAL. That which relates to the sex; which characterizes the sex.

The SEXUAL ORGANS are the genital organs; and the SEXUAL FUNCTIONS, the genital functions.

SHAMPOO'ING, (F) *Massage*. A Hindoo process, which consists in pressing the body of the bather in a peculiar manner; cracking the various joints, and employing blows and friction.

"Kneading" consists in pressing alternately upon a part of the body to arouse the muscles to more energetic action. It is employed at times in dyspepsia.

SHIN, *O'chrea*. The *spine* or anterior part of the tibia or leg. It is, also, called *Anticne'mion*, and *Crea*.

SHORT, Sax. *recept*, from *reipian*, 'to cut, to shear,' *shored*, *shor'd*, *short*, (F) *Court*. A word used, by anatomists, in opposition to *long*; and to distinguish parts from each other that have otherwise the same name.

SHORT BONES, for example, are those in which the three dimensions—length, breadth, and thickness—are nearly alike; such are the *vertebræ*, bones of the *carpus*, *tarsus*, &c.

SHRUB. Perhaps from Arabic, *sharab*, 'syrup.' A compound of spirits, lemon juice, and sugar.

SHUD'DERING. *Frem'itus*, *Phryagma*, from (G) *Schauer*, *Schauer*, (F) *Frémissement*, *Tressaillement*. A peculiar sensation, felt either externally or internally; and which seems to be the result of a spasmodic movement of the parts, in which it occurs. A slight feeling of cold sometimes accompanies it. It is, at times, the result of a moral cause, and is often the precursor of shivering.

SIAGO'NAGRA, from *σιανον*, 'the jaw,' and *αγχα*, 'a seizure.' A gouty or rheumatic affection of the joint of the lower jaw.

SIAL'AGOGUE, *Sialago'gus*, *Sialogogue*, *Ptyalagogue*, *Ptyas'magogue*, *Sali'vans*, *Apophlegmatismus* seu *apophlegmatisans per os*, from *σιαλον*, 'saliva,' and *αγω*, 'I expel.' That which provokes the secretion of saliva. *Pyrethrum* and *mercury* are *sialagogues*.

Sialagogues may be of two kinds: those which act through the circulation, and those which act immediately on the salivary organs. *Mercury* belongs to the former—the *pyrethrum* to the latter class. The chief *sialagogues* are *armoracia*, *calamus*, *mezereum*, *pyrethrum*, *tabacum*, and *zingiber*.

SIALOLO'GIA, from *σιαλον*, 'saliva,' and *λογος*, 'a discourse.' A treatise on the saliva.

SIBBENS, *Sivvens*. An infectious disease in the mountainous parts of Scotland, viewed to be of the venereal kind. *Siwin*, in the Keltic, means raspberry; and it is said that, in this affection, fungi appear like raspberries. From *siwin*, the inhabitants have made, *sievin*, *sibbin*, *sibbens*, and *sivvens*. By some, this affection is regarded as a complication of the venereal and itch. In the Orkneys, *sibbens* means itch.—Jamieson.

SICCANT'IA, *Xeran'tica*. (F) *Siccatis*. Drying medicines.—Galen.

SICCHA'SIA, *σικχασια*, 'disgust.' A distressing disgust for food; such as is experienced by women with child.

SICIL'ICUM, *Sic'lium*, *σικλιον*. A weight of four drachms; and, according to some, of only two drachms.

SICK, Sax. *reoc*, *Æger*, *Ægro'tus*, *Nos'eros*, *Noso'des*, (F) *Malade*. Labouring under disease. Such is its acceptation in old English, and generally in the United States. In England, it most commonly means, disorder of the stomach,—nausea.

SICKLY, *Morbo'sus*, *Valetudina'rius*, *Adyn'atos*, (F) *Maladif*. One who is subject to be sick.

SIDERA'TIO, *Sydera'tio*, from *Sidus*, 'a star,' because the condition was thought to be produced by the influence of the stars. The state of one struck suddenly, without apparent cause, and as if by the influence of the stars. The ancients comprised, under this name, different morbid conditions, such as paralysis, apoplexy, and gangrene.

SIFFLEMENT (F), from *siffler*, 'to whistle.' Whistling.

SIFFLEMENT MODULÉ, ou *chant des artères*, 'modulated whistling, or music of the arteries.' A kind of sound heard on auscultation, resembling, at times, the humming of certain insects.

The sound is chiefly met with in those labouring under chlorosis.

SIGMOID, *Sigmoi'dal*, *Sig'matoid*. That which has the form of the Greek S or C; from *sigma* and *ειδος*, 'resemblance.'

The **SIGMOID CAVITIES** or **FOSSÆ** of the *Ulna*, (F) *Cavités ou Fosses sigmoïdes*, are two notches at the upper part of that bone: one for the reception of the humerus; the other for that of the radius.

The **SIGMOID** or **SEMILU'NAR VALVES**, *Valvulae Sigmoïdeæ*, *Proces'sus Sigmoi'des*, (F) *Valvules sigmoïdes* ou *semilunaires*, are three valvular folds, at the commencement of the pulmonary artery and aorta. These valves have the form of a crescent, when applied against the parietes of the vessel. When the blood is sent from the ventricles by their contraction, the valves are applied against the sides of the vessel; but, during the diastole of the ventricle, they are depressed, and prevent the blood from returning to the heart. At the middle of the convexity of each valve is a small, hard, triangular granulum, called *Corpusculum Arantii*, which completely closes up the passage. It is, also, called *Corpusculum Morgagni*, and *C. Sesamoideum*, (F) *Globule d'Arantius*.

The **SIGMOID FLEXURE OF THE COLON** is the turn the colon takes immediately before its termination in the rectum.

SIGN, *Signum*, *Semi'on*, (F) *Signe*. Any present or past circumstance, afforded by the examination of a patient, or of matters concerning him, whence a conclusion may be drawn, regarding the nature and seat of his disease.

The phenomena, which precede the disease, are called *anamnes'tic* or *commem'orative*.

signs;—those, which accompany it, are termed *diagnos'tic*, if they reveal the nature or seat of the disease;—*prognos'tic*, when they indicate its probable duration and termination.

SIGNATURE, *Signatu'ra*, *Signa'tio*, *Episphagismos*. This term was applied, in the Eastern countries, in the middle ages, to mystic characters of good or bad augury, with which it was pretended, that every one was marked by the star under which he was born.

The **SIGNATURES OF PLANTS** meant certain peculiarities in their conformation or colour, by which they were judged proper for particular diseases:—as in the case of the *Lungwort*, *Liverwort*, &c.

SILACH, *Silac*. An Arabic word, used to designate thickening of the eyelids, *Cras-si'ties Palpebra'rum*; and, also, *Alopecia*.—Forest., Stephanus.

SILENE VIRGIN'ICA, *Ground Pink*, *Catch Fly*. The root has been employed in decoction, as an efficacious anthelmintic.

SIL'QUA, *Cera'tion*; the carat. A weight of about four grains.

SIMPLES. Medicinal herbs. One, skilled in simples, is called a *Simplist*, a *Rhizotomist*.

SINAPELÆ'ON, from *σινᾶπι*, 'mustard,' and *ελαιον*, 'oil.' Oil, impregnated with mustard.

SINA'PIS, *Sinapis nigra*, *Napus*, *Eru'ca*, *Sinapē*, *Sinapi*, *Common Black Mustard*, (F) *Moutarde noire*, *Sénévé*, *Sanve*. Family, *Cruciferae*. Sex. Syst. *Tetradynamia Siliquosa*. The seeds are inodorous, when entire; but, when bruised, the odour is very pungent; taste bitterish and acrid. They yield their virtues to water, and afford a bland oil by expression.

The seeds are stimulant, diuretic, emetic, and rubefacient. They are, sometimes recommended to be swallowed whole, in dyspepsia, torpor of the bowels, &c. Externally, they are applied in the form of cataplasm. See *Sinapism*.

The *White Mustard*, *Sinapis Alba*, is also used medicinally. It is somewhat less pungent than the black. The distilled oil—*Oleum Sinapis*—is a powerful stimulant and rubefacient.

WHITEHEAD'S ESSENCE OF MUSTARD consists of oil of turpentine, camphor, and a portion of spirit of rosemary: to which is added a small quantity of flour of mustard. It is a celebrated embrocation for rheumatism, &c.

WHITEHEAD'S ESSENCE OF MUSTARD PILLS consist of yellow resin and balsam of tolu, enough to make into pills.

SINAPIS'MUS, from *σινᾶπι*, 'mustard.' A cataplasm, of which mustard forms the basis; and which is used for exciting redness, and acting as a counter-irritant. It is prepared by mixing flour of mustard and vinegar together, to the due consistence. See *Cataplasma Sinapis*.

SIN'CIPUT, *Sincip'ital Region*, *Bregma*, *Syn'ciput*, *Mesocra'nium*; the top of the head. The French use it synonymously with *vertex*. By some, it is applied to the frontal region or forepart of the cranium. The parietal bones have been called *sincipital bones*, *Ossa sincipitis*.

SINDON (F), *Sindo*, Linen. Cloth, made at Sidon in Phœnicia. A small piece of rag, or a round pledget, supported by a thread at its middle, and introduced into the opening in the cranium, made by the trephine.

SINGUL'TUS, *Lynx*, *Lygmus*, *Clonus Singul'tus*, *Hiccough*, *Hiccup*, (F) *Hoquet*. A noise made by the sudden and involuntary contraction of the diaphragm, and the simultaneous contraction of the glottis, which arrests the air in the trachea. It is a symptom of many morbid conditions, and especially of gangrene, but occurs, frequently, in persons otherwise in good health.

SIN'UOUS, *Sinu'o'sus*, (F) *Sinueux*. An epithet given to certain ulcers, and especially to certain fistulæ, which are tortuous.

SINUS, *Sinu'o'sitas*, *Colpos*, *Abscon'sio*, *Eurycho'ria*, (F) *Clapier*. Any cavity, the interior of which is more expanded than the entrance. In this sense, anatomists have applied the term to cavities in certain bones of the head and face. It has been, also, applied to certain venous canals, into which a number of vessels empty themselves; such as the sinuses of the dura mater and of the spine; the sinus of the vena porta; uterine sinuses, &c.

In surgery, it means a long, narrow, hollow track, leading from some abscess, diseased bone, &c.

SINUSES OF BONES. All these form part of the nasal cavities. They are the frontal, sphenoidal, maxillary, &c. The name has also been given, occasionally, to the ethmoid and mastoid cells.

The **SINUSES OF THE DURA MATER**, *Sinus seu Fis'tulæ seu Cavita'tes seu Ventric'uli seu Tu'buli seu Sanguidu'ctus seu Receptac'ula Duræ matris* are formed by a separation of the layers of the dura mater, which act as a substitute for the outer membrane of veins. Bichat admits only four great sinuses, of which all the others seem to be dependencies;—the *two lateral sinuses*, the *straight sinus*, and the *longitudinal sinus*. To the lateral sinuses belong,—the *petrous sinuses*, superior and inferior; the *transverse sinus*; the *cavernous sinuses*; the *coronary sinus*, and the *occipital sinuses*. To the straight sinus belongs the *inferior longitudinal*. The longitudinal sinus, properly so called, has no sinus under its dependence.

SINUS CORONA'RIVS, *Sinus circula'ris*, *S. circula'ris Ridleyi*. It surrounds, in a more or less regular manner, the pituitary fossa and gland, emptying itself into the corresponding cavernous sinus by each of its extremities.

SINUS DEXTER CORDIS, *Sinus vena'rum cava'rum*, *S. veno'sus*, *Saccus vena'rum cava'rum*. The right auricle of the heart:—*A'trium cordis dextrum*. See Auricula.

SINUSES, LATERAL, *Sinus transver'si*, *S. magni*, *S. laterales*, (F) *Sinus latéraux*. Each of these sinuses, distinguished into right and left, begins at the torcular herophili, or confluence of the sinuses; and terminates at the sinus of the jugular vein.

SINUSES, LONGITUDINAL, *S. longitudina'les*. These are two in number.

1. The **SUPERIOR LONGITUDINAL SINUS**, *S. falcifor'mis superior*, *S. triangula'ris*, *Sinus médian*, (Ch.) A long, triangular canal; convex above, concave below, which occupies the whole of the upper edge of the falx cerebri. It is broad behind, and much narrower before, where it commences by a *cul-de-sac*, at the crista galli of the ethmoid bone. It passes along the frontal or coronal crest, sagittal suture, and the vertical groove of the occipital bone. It receives several veins from the dura mater; and all those that are spread over the convex and plane surfaces of the two hemispheres of the brain. It discharges itself into the upper part of the torcular herophili.

2. The **INFERIOR LONGITUDINAL SINUS**, *Sinus falcifor'mis inferior*, *Vena falcis cer'ebr'i*. This is much narrower than the last, and occupies the inferior edge of the falx cerebri, from its anterior third to the tentorium cerebelli, where it terminates, commonly by two branches, in the straight sinus.

SINUS OCCIP'ITAL, *Sinus occipita'lis*. These sinuses commence at the sides of the foramen magnum ossis occipitis, and ascend—becoming broader and nearer each other—into the substance of the falx cerebelli, where they frequently unite. Each opens into the inferior part of the torcular herophili. They receive the veins of the falx cerebelli, of the dura mater which lines the fossæ cerebelli, and of the posterior part of the cerebellum. Haller and Sömmerring have given them the name of *posterior occipital sinuses*, to distinguish them from the transverse sinus, which they have called *anterior occipital sinus*.

SINUS PULMONA' LIS, *S. sinis'ter cordis*, *Atrium cordis sinis'trum*, *S. vena'rum pulmona'lium*, *S. arterio'sus*, *Saccus vena'rum pulmona'lium*. The left auricle of the heart. See Auricula.

SINUS QUARTUS, *S. perpendicula'ris*, *Sinus choroïdien* (Ch.), *Straight Sinus*, (F) *Sinus droit*. This sinus,—triangular throughout; wide posteriorly; narrower anteriorly; slightly oblique downwards and backwards,—passes along the base of the falx cerebri, from the termination of the inferior longitudinal sinus to the torcular herophili. It receives the inferior longitudinal sinus, the veins of the lateral ventricles or *venæ Galeni*, the superior cerebellous veins, &c.

SINUS TRANSVER'SUS, *S. occipita'lis ante'*

rior. This sinus lies transversely at the anterior part of the basilar process of the occipital bone. It forms a communication between the two petrous sinuses, and the cavernous sinus of one side and those of the other. Its breadth is commonly very great. It is situate between two layers of the dura mater, and presents, internally, a kind of cavernous tissue.

SINUS UTERI'NI, *U'terine sinuses*. A name given to cavities, formed by the uterine veins in the substance of the uterine parietes. They are very large during pregnancy.

The **SINUSES OF VALSAL'VA** are three depressions in the aorta and pulmonary artery, immediately opposite the semilunar valves. Their use is to leave the edges of the valves free, so that they can be caught by the reflux blood.

Where the aorta is about to send off the first of its large branches, at the top of the thorax, it is of great size, and has been called the *Large Sinus of Valsalva*.

SINUSES, VER'TEBRAL, (F) *Sinus vertébraux*. Two great venous sinuses, different from those of the dura mater, which extend the whole length of the vertebral canal, from the occipital foramen to the end of the sacrum, behind the bodies of the vertebræ, before the dura mater, and at the sides of the posterior vertebral ligament. At their inner side, they communicate with each other by means of branches, which form true *transverse sinuses*. They are situate at the middle of the body of each vertebra, passing under the posterior vertebral ligament. They receive, at their middle part, the veins that arise in the spongy tissue of the vertebræ. By their external side, the vertebral sinuses communicate with the posterior branches of the vertebral, intercostal, and lumbar veins. At their posterior side they receive the veins, which creep on the prolongation of the dura mater that envelopes the marrow.

SISON AMMI. *Family*, Umbelliferae. *Sex. Syst.* Pentandria Digynia. The plant, that affords the *Ammi verum* of the shops. (F) *Ammi des Boutiques*. The seeds were once used as a carminative.

The **SISON AMO'MUM**, (F) *Amome faux*, is considered to be excitant and diuretic. It is the *field honewort*.

SISYMBRIUM NASTUR'TIUM, *Nasturtium aquat'icum*, *Laver odora'tum*, *Cratevæsium*, *Cressi*, *Cardami'nê fonta'na*, *Water Cress*, (F) *Cresson de fontaine*. *Family*, Cruciferae. *Sex. Syst.* Tetradynamia Siliquosa. Water cresses are commonly used in salad. They have obtained a place in the *Materia Medica* for their antiscorbutic qualities.

SISYMBRIUM SO'PHIA; the *Herb Sophia*. *Sophia Chirurgo'rum*, *Flix* or *Flux weed*, (F) *Sagesse des Chirurgiens*. It was once reputed to be anthelmintic, and valuable in hysterical affections. It is not used.

SIUM, *Sium nodiflorum*, *Creeping Water-parsnep*, (F) *Berle nodiflore*. Family, Umbelliferae. Sex. Syst. Pentandria Digynia. It is stimulant, and supposed to be diuretic and lithontriptic. It is, sometimes, employed in cutaneous eruptions.

SIUM NINSI. The plant, whose root is called *Radix Ninsi*, *Ninzi*, *Nindsin*. This root was long supposed to be the same as ginseng, and it possesses similar, though weaker properties.

SKELETOL'OGY, *Sceletologia*, (F) *Squelettologie*, from σκελετος, 'a skeleton,' and λογος, 'a discourse.' A treatise on the solid parts of the body. This part of anatomy comprehends *Osteology* and *Syndesmology*.

SKEL'ETON, *Scel'etum*, from σκελετος, *cadaver exsiccatum*, (F) *Squelette*, *Skeleton*, a dried body; from σκελλω, 'I dry.' The aggregate of the hard parts of the body, or the bones. A skeleton is found in almost all animals, although it may not be always formed in the same manner. In some, as in the crustacea and testacea, it is wholly or partly *external*. In others, as in birds, the mammalia, &c., it is *internal*. It serves as a support for other organs. On it the general shape of the body and of its various parts is greatly dependent. When the bones are united by their natural ligaments, the skeleton is said to be *natural*: when articulated by means of wires, *artificial*.

SKELETOPE'IA, *Sceletopœia*, from σκελετος, 'a skeleton,' and ποιω, 'I make.' The part of practical anatomy which treats of the preparation of bones, and the construction of skeletons. Bones are prepared to exhibit their conformation, structure, chymical composition, mode of developement, and changes;—the different cavities formed by their union; and to demonstrate their connexions, relations, modes of union, &c.

SLAVERING, from *Saliva*, *Ptyalis' musiners*, *Driv'elling*, (F) *Bave*. Involuntary flow of saliva, from sluggishness of deglutition, without increased secretion. It is seen in the infant, the aged, and the idiot.

SLEEP, *Somnus*, *Sompnus*, *Sopor*, *Dormitio*, *Hypnos*, (F) *Sommeil*. Temporary interruption of our relations with external objects. A repose of the organs of sense, intellectual faculties, and voluntary motion.

The act of quitting this condition is called *awaking*, (F) *Évigilation*, *Reveil*. Sometimes, this is progressive and natural; at others, sudden and starting, (F) *Reveil en sursaut*, as in nightmare, affections of the heart, hypochondriasis, &c.

SLING, (G) *Schlinge*, *Mitel'la*. A bandage, employed to keep the forearm bent on the arm, in cases of injury done to those parts, in fracture of the clavicle, injury of the hands, &c. A handkerchief is often sufficient for this purpose. It must be folded diagonally, and tied, by the extremities, round the

neck. The French surgeons have used many varieties of *Echarpes* or *slings*: as the *Grande écharpe*, *Écharpe moyenne*, *Petite écharpe*, *Écharpe de J. L. Petit*, &c.

SMALT, *Protoxide of Cobalt*, *Smaltum*, *Safre*, *Azur*, *Blue Starch*. This oxyd has been given in rheumatism, in the dose of 10 to 20 grains. A larger quantity excites vomiting.

SMARAG'DUS, σμαραγδος, (F) *Émeraude*. The emerald. It was formerly regarded as a tonic.

SMILAX CHINA, *China*, *China orientalis*, *Sankira*, *Gauquara*, *Smilax aspera Chinensis*, *China Root*, (F) *Squine*, *Esquine*. Family, Smilacæ. Sex. Syst. Diœcia Hexandria. Formerly much used in cutaneous, and venereal affections.

SMILAX PSEUDO-CHINA, *Smilax Indica spinosa*, *China occidentalis*, *China spu'ria nodosa*; *American* or *West India China*. In scrophulous disorders, the root has been often preferred to the oriental kind. In other cases, it possesses similar virtues.

SMILAX SARSAPARIL'LA, *Sarsaparil'la*, *Smilax aspera Peruvia'na*, *Sarsa*, *Carivillan'di*, *Iva Pecan'ga*, *Macapatli*, *Zarsa*, *Zarzaparil'la*, (America.) (F) *Salsepareille*. The root of the Sarsaparilla is inodorous; taste bitterish, feculaceous, and fibrous. It is of a dark colour externally; white within. It is possessed of diuretic and demulcent properties; and has been often employed in the sequelæ of syphilis; when, after a mercurial course, nocturnal pains, ulcerations, &c. continue. It has also been advised in scrophula, chronic rheumatism, &c., but its efficacy is, to say the least of it, a matter of doubt. Dose, ʒj to ʒj of the powder.

SMILĒ, σμιλη. A curved, two-edged bistoury.

SMYR'NIUM OLUSA'TRUM, *Hippose-linum*, *Smyr'nium*, *Macero'na*, *Macedonis'ium*, *Herba Alexandri'na*, *Gri'elum*, *Agriose-linum*, *Alexan'ders*. A plant, formerly cultivated for culinary purposes. The seeds are bitter and aromatic, and the roots more powerfully bitter. They have been recommended as resolvents, diuretics, emmenagogues, &c.

SNEEZING, from (G) *Niesen*, *Clonus Sternuta'tio*, *Sternuta'tio*, *Sternutamen'tum*, *Ptarmos*, (F) *Éternuement*. A convulsive motion of the expiratory muscles, by which the air is driven rapidly, and rushes sonorously, through the nasal fossæ, carrying with it the mucus and foreign bodies, which adhere to the pituitary membrane, and which have occasioned the movement.

SNORING, *Ronchus*, *Rhoncus*, *Stertor*, *Renchus*, (F) *Ronflement*. Noise made in the posterior part of the mouth and nasal fossæ, during the movements of inspiration, particularly in sleep, both when the person is in health, and in disease, as in apoplexy. In certain affections of the chest—in some cases of pulmonary catarrh—a kind of snoring may

be distinctly heard by applying the ear, or the stethoscope, to the chest.

SNOW, Sax. *rnap*, *Nix*, *Chion*, (F) *Neige*. Water, in a solid state, which falls from the atmosphere in white flakes. It is used externally, as a tonic and discutient.

SNUFFLES, Teut. *Snuffelen*, *Grave'do neonato'rum*, *Rhinangia*, *Rhinanch'onè*. Breathing hard through the nose. An affection to which infants are liable. It is relieved by oiling the interior of the nostrils.

SOB, from Sax. *reorjan*, 'to grieve.' (F) *Sanglot*. A spasmodic, sudden, and momentary contraction of the diaphragm, immediately followed by relaxation; by which the little air, that the contraction has caused to enter the chest, is driven out with noise. It is an evidence of corporeal or mental suffering.

SOCIETY, *Soci'etas*, (F) *Société*. An association for the promotion of some common object.

MEDICAL SOCIETIES, or associations of medical gentlemen for the promotion of science, have been numerous, and productive of valuable results.

In the United States, societies exist in many of the States, possessing the power of examining into the qualifications of every one, who may be desirous of practising within their particular jurisdiction. In some of the States, however, the qualified and unqualified are permitted to exercise their profession with equal privileges and immunities.

Amongst the medical associations, that have published, from time to time, their useful transactions, are the following.

In AMERICA. The *Massachusetts Medical Society*; the *Physico-medical*, and *Medical Society of the State of New York*; the *College of Physicians of Philadelphia*.

In EUROPE. The *Association of Fellows and Licentiates of the King's and Queen's College of Physicians of Ireland*:—the *Medico-Chirurgical*, and *Phrenological Societies of Edinburgh*:—the *College of Physicians*, the *Medico-Chirurgical*, and *Medical Societies of London*:—the *Associated Apothecaries and Surgeon-Apothecaries of England and Wales*, and the *Provincial Medical and Surgical Association*:—the *Royal Academy of Surgery*, the *Royal Society of Medicine*, the *Société Médicale d'Émulation*, the *Société de Médecine*, the *Royal Academy of Medicine*, and the *Société Médicale d'Observation*, of *Paris*:—the *Medico-Chirurgical Academy of Vienna*:—the *Medical Societies of Berlin and Copenhagen*, &c. &c.

In ASIA. The *Medical and Physical Society of Calcutta*.

Valuable medical essays are likewise contained in the published *Transactions of the American Philosophical Society*; of the *Royal Societies of London, Edinburgh, Göttingen*, &c.; of the *Royal Academy of Sciences of*

Paris; the *Imperial Society of Sciences of St. Petersburg*; the *Royal Academy of Sciences of Turin*; the *Academia Imperialis Leopoldina Naturæ Curiosorum*, &c.

SODA. An Arabic word. *Soda impu'ra*, *Baril'la*, *Barigl'ia*, *Baril'lor*, *Soda Hispan'ica*, *Ana'tron*, *Natron*, *Ana'ton*, *Nitrum Antiquo'rum*, *Kelp*, *Aphronit'rum*, *Sal alkali'nus fixus fos'silis*, *Car'bonas Sodæ impu'rus*, *Subcar'bonas Sodæ impu'ra*, *Anachron*. The mineral alkali, as soda is termed, is obtained from several sources;—by nature, in Egypt: artificially, from the incineration of marine plants; and from the decomposition of sulphate of soda, &c. It is principally, however, derived from plants growing on the sea-coast;—as the *Salso'la sati'va*, *S. soda*, *S. tragus*, *Salicor'nia herba'cea*, *Salicornia Arabica*, &c. The *Barilla* ashes are from the ashes of the *Salicor'nia Europæ'a*:—the *Kelp*, *Soude de Varecq*, from the *Fucus vesiculo'sus* and other varieties:—the *Turkey Barilla*, *Rouquette*, *Cendre du Levant*, *Rochet'ta Alexandri'na*, from the *Mesembryan'themum Copti'cum*:—the *Alicant Barilla*, *Soda Alicanti'na*, *S. Alonen'sis*, from the *Mesembryan'themum nodiflo'rum*:—and the *Carthage'na Barilla*, from the *Salicor'nia* and *Salso'la*.

The impure subcarbonate, (F) *Soude du commerce*, consists of subcarbonate of soda, potash, chloride of sodium, clay, and other earthy substances. It is chiefly used for preparing the pure subcarbonate.

SODA ACETA'TA, *Sodæ Ace'tas*, *Ac'etate of Soda*, *Terra folia'ta minera'lis*. This salt is used in similar cases with the acetate of potass.

SODA, CAR'BONATE OF, *Sodæ Carbonas*, *Carbonas Nat'ricum*, *Soda Aera'ta*, *Bicar'bonate of Soda*, *Carbonate of protox'ide of So'dium*, (F) *Carbonate de Soude*, *S. effervescente*, *Soude aérée*, *S. crayeuse*. (*Sodæ subcarb. ℞ aquæ distill. ℥iij.*) Dissolve the subcarbonate of soda, and pass carbonic acid through the solution; set it aside to crystallize. Its use is the same as the subcarbonate, than which it is less caustic, and is better adapted for effervescing draughts.

SODA CAU'STICA, *Protoxide of Sodium*, *Caustic Soda*, (F) *Soude caustique*, *S. à la Chaux*, *Soude pure*. The impure subcarbonate, treated by quicklime, and consequently deprived of its carbonic acid. It may be used as a caustic, like the *Potassa fusa*, and is even preferable to it, as it does not deliquesce, and run.

SODA, CHLORATE OF, *Sodæ Chloras*, *Oxy-muriate of Soda*. This salt is used as a disinfecting agent; both to remove offensive smells in chambers, and to alter the condition of fetid ulcers.

SODA, MU'Riate OF, *Sodæ murias*, *Soda muria'ta*, *S. muriat'ica*, *Al'kali minera'le sali'num*, *Sal commu'nis*, *Sal culina'ris*, *Sal font'ium*, *Sal gemmæ*, *Sal mari'nus*, *Natron muria'tum*, *Sal albus*, *Natrum muriat'icum*,

Common salt, Sea salt, Hydrochlorinas Natricus, Sal fos'silis, Sal lu'cidum, Muria, Rock salt, Bay salt, White salt, Quadrichlo'ruret of Sodium, Hydrochlo'rate of protox'ide of Sodium, Hydrochlo'rate of Soda, Chlorure'tum So'dii, (F) Sel de Cuisine. In an impure state, this salt is one of the most abundant of natural productions. It is soluble in 3 parts of water, and is tonic, purgative, and anthelmintic. Externally, stimulant. It is a well known and useful culinary substance.

SODA, NITRATE OF, *Sodæ Nitras, Alkali minera'le nitra'tum, Nitrum Cu'bicum, Nitrate of protox'ide of Sodium, Protoni'trate of Sodium, Nitrum Rhomboida'le, Nitras Na'tricum.* Its virtues are similar to those of the nitrate of potass, for which it has been substituted.

SODA, PHOSPHATE OF, *S. phosphara'ta, Subphosphate of protox'ide of Sodium, Phosphas Na'tricum, Natrum Oxyphosphoro'des, Subprotophosphate of Sodium, Alkali minera'le phosphora'tum, Tasteless purging salt, (F) Sel admirable perlé.* Cathartic, in the dose of from 3ss to 3j.

SODA, SUBCARBONATE OF, *Sodæ Subcarbonas, Subcarbo'rate of protox'ide of Sodium, Mephite of Soda, Natron præpara'tum, Sal Sodæ, Salt of Soda, Flos Salis, Sagi'men Vitri, Salt of Baril'la, Sal al'kali, Carbonas Sodæ, of some. (F) Sous-carbonate de Soude.* The impure subcarbonate, dissolved in water; the solution filtered and crystallized. Soluble in 2 parts of water at 60°. It is much used as an antacid: and, also, as a deobstruent in scrophulous, and other affections. Dose, gr. x to 3ss.

The dried Subcar'bonate of Soda, *Sodæ Subcar'bonas exsicca'ta, Carbonas Sodæ sicca'tum, (F) Sous-carbonate de Soude desséché,* is employed as an antacid and lithontriptic. Dose, gr. x to xv.

SODA, SULPHATE OF, *Sodæ Sulphas, Natron vitriola'tum, Sal cathar'ticus Glaube'ri; Alkali minera'le sulphu'ricum, Natrum sulphu'ricum, Soda vitriola'ta, Sulphas na'tricus, Sal mirab'ilis Glaube'ri, Ape'rient Salt of Frederick, Glauber's Salts.* Obtained from the salt that remains after the distillation of muriatic acid; the superabundant acid being saturated with subcarbonate of soda. It is soluble in 3 parts of water at 60°; is purgative; and, in small doses, diuretic. Dose, 3vj to 3x.

The LYMINGTON GLAUBER'S SALTS is a Sulphate of Magne'sia and Soda, and is obtained from the mother liquor of sea water, or by dissolving Epsom salt in a solution of Glauber's salt.

SODA, TARTRATE OF, *Soda Tartariza'ta, Tar'tarized Soda, Sal Rupellen'sis, Rochelle Salt, Sal Polychres'tum Seignet'ti, S. Seignetti, Seignette's Salt, Natron tartariza'tum, Tartris Potas'sæ et Sodæ, Tartras Potas'sæ et Sodæ. (Sodæ subcarb., p. 1; potass. supertart., p.*

3; aq. ferv., p. 15. Dissolve the subcarbonate in water; and add, gradually, the supertartrate. Filter the solution, and crystallize. It is a gentle cathartic. Dose, 3ss to 3j.

SOLA'NUM, *S. nigrum, S. vulga're, Common Nightshade; Garden Nightshade, (F) Morelle à fruit noir. Family, Solanæ. Sex. Syst. Pentandria Monogynia.* A narcotic poison. The *Huile de Morelle* is made, by macerating in oil, for several days, the leaves and fruit of this plant. The oil is anodyne and discutient.

SOLANUM DULCAMA'RA; the *Bittersweet, Dulcamara, Solanum Scandens, Glycipicros, Amara dulcis, Solanum ligno'sum, στεγχνος* of Theophrastus, *Woody Nightshade, (F) Douce-amère, Morelle grimpanie.* The taste of the twigs is bitter, followed by sweetness; hence its name. It has been used in many diseases, as a diuretic and sudorific; especially in chronic rheumatism, humoral asthma, dropsy, various skin diseases, scrophula, and jaundice. Dose in powder, ʒj to 3j.

SOLANUM LYCOPER'SICUM; the *Love apple plant.* The fruit of this, called *Toma'ta* or *Love-apple, (F) Pomme d'amour,* is much eaten in the United States; and with the French, Spaniards, Portuguese, &c., forms an esteemed sauce.

SOLANUM MELON'GENA, *Melongena, Egg plant, (F) Aubergine.* The *Mud Apple plant;* a native of Asia, Africa, and America. Its oblong, egg-shaped fruit, *Pomum Melon'genæ, Malum insa'num,* is prepared in soups and sauces in those countries, like the tomato.

SOLANUM SANCTUM; the *Palestine Nightshade.* The fruit of this is globular, and is much eaten in the countries where it is a native.

SOLANUM TUBEROS'UM, *Bata'bas, Solanum esculen'tum, Papas America'nus, Pappus America'nus, America'num Tubero'sum, Bata'ta Virginia'na, Convol'vulus In'dicus; the Pota'toe, (F) Pomme de Terre.* A native of Peru. A nutritious and wholesome vegetable; one of the most useful, indeed, that exists. One hundred pounds of potatoes afford 10 pounds of starch; which is equal to arrow root, as a nutrient and demulcent. It is called *Potatoe Flour, P. Starch, French Sago, Petit Sague, Common Arrow Root, &c.*

SOLAR, *Sola'ris.* Having rays like the sun.

The SOLAR PLEXUS, *Centrum commu'nē, Cer'ebrum abdomina'le.* A collection of ganglions and filaments, interweaving and anastomosing with each other repeatedly, and belonging to the system of the great sympathetic. This vast plexus, lying on the vertebral column, the aorta, and the pillars of the diaphragm, has a very irregular shape. The ganglions and filaments, composing it, are soft, reddish, and almost all issue from the semilunar ganglions. It receives, also, branches from the pneumogastric. It seems

to be chiefly intended for the aorta, and accompanies all its branches; furnishing many secondary plexuses, which are called the *infra-diaphragmatic, celiac, superior mesenteric, inferior mesenteric, renal or emulgent, spermatic, &c.*

SOLE, *Solum*, *Pe'dion*, *Peza*, *Pelma*, *Planta'ris superficies pedis*, *Facies concava seu inferior seu Planum seu Concavum seu Pars inferior seu Planities seu Planta Pedis*, (F) *Plante du Pied*. The sole of the foot; the under surface of the foot.

SOLENA'RIMUM, from *σωλην*, 'a canal.' An instrument of surgery, representing a kind of gutter, in the cavity of which the penis was placed, like a limb in a *cradle* (q. v.)—Galen. The word *Solen* itself—*σωλην*, *Cana'lis*—was used, in antiquity, for a grooved channel, in which a fractured limb was placed.

SOLE'US, *Gastrocne'mius inter'nus*, *Tibio-calcaneus* (Ch.); (F) *Soléaire*, from *solea*, 'a sole of a shoe.' A muscle, situate at the posterior part of the leg. It is broad, flat, and almost oval; and is attached, above, to the posterior edge of the fibula, to the oblique line on the posterior surface, and to the inner edge, of the tibia. It terminates, below, by a large tendon, which unites to that of the *gastrocnemius externus*, to form the *tendo Achillis*. This muscle extends the foot on the leg, and conversely.

SOLID, *Sol'idus*, *Stereos*. A body, whose integrant molecules are so united by the force of cohesion, that they will not separate by their own weight. The solids, in the human body, are the bones, cartilages, tendons, muscles, ligaments, arteries, veins, nerves, membranes, skin, &c. The anatomy, or rather study, of the solids, is called *Stereol'ogy*, from *στερεος*, 'solid,' and *λογος*, 'a discourse.'

SOLIDA'GO VIRGAU'REA, *Virga aurea*, *Herba do'rea*, *Cony'za coma aurea*, *Sym'phytum*, *Petræ'um*, *Elich'rysum*, *Consol'ida Saracen'ica*, *Golden Rod*. *Nat. Ord.* *Compositæ Corymbiferae*. *Sex. Syst.* *Syngenesia superflua*. (F) *Verge d'or*. The leaves and flowers have been recommended as aperients and tonics, in urinary diseases, and in internal hemorrhage.

SOL'IDISM. The doctrine of those physicians, who refer all diseases to alterations of the solid parts of the body. To the believers in this doctrine, the appellation *Solidist* has been given.

The *Solidists* think, that the solids alone are endowed with vital properties; that they alone can receive the impression of morbid agents, and be the seat of pathological phenomena. *Solidism* is, perhaps, the prevalent doctrine of the present day. It is scarcely necessary to say, that, in all our investigations, the condition of both solids and fluids must be regarded.

SOLUBIL'ITY, *Solubil'itas*. That property of a body, by virtue of which it can be dissolved in a menstruum.

TABLE OF THE SOLUBILITY OF SOME SUBSTANCES
IN WATER.

Names of Salts.	Solubility in 100 parts water.	
	at 60°.	at 212°.
<i>Acids.</i>		
Benzoic, - - -	0.208	4.17
Citric, - - -	133	200
Oxalic, - - -	50	100
Tartaric, - - -	very soluble	
<i>Salts.</i>		
Acetate of Potass, -	100	
— Soda, -	35	
Carbonate of Ammonia, -	50	
— Magnesia, -	2	
— Potass, -	25	
— Soda, -	50	
Chlorate of Potass, -	6	40
— Soda, -	35	35
Muriate of Ammonia, -	33	100
— Lime, -	200	
— Magnesia, -	100	
— Potass, -	33	
— Soda, -	35.42	36.16
Nitrate of Potass, -	14.25	100
— Soda, -	33	100
Phosphate of Soda, -	25	50
Sulphate of Ammonia, -	50	100
— Copper, -	25	50
— Iron, -	50	100
— Magnesia, -	100	133
— Potass, -	6.25	20
— Soda, -	37	125
Subborate of Soda, -	8.4	16.8
Supersulphate of Potass, -	5.0	100
Supertartrate of Potass, -	1.5	3.3
Tartrate of Potass, -	25	
Tartrate of Potass } and Soda, }	20	
— of Antimony } and Potass, }	6.6	33

SOLU'TION, *Solu'tio*, *Lysis*, (F) *Dissolution*. An operation, which consists in dissolving a solid body in a menstruum. Also, the product of such operation.

It means, also, with many, the termination of a disease:—with others, a termination accompanied by critical signs;—and with others, again, it is synonymous with crisis.

A **SOLUTION OF CONTINU'ITY** is any division of parts previously continuous;—as a wound, a fracture, &c.

SOLUTIO SULPHA'TIS CUPRI COMPOS'ITA, *Aqua vitriol'ica cæru'lea*, *Sydenham's Styp-tic Water*. (*Sulph. cupri*, 3 iij, *alum.*, *acid. sulph.*, aa 3 ij, *aquæ*, 3 viij: dissolve, and filter.)

SOLVENT, (F) *Fondant*, form *sol'vere*, 'to dissolve.' A medicine, supposed to possess the property of dissolving or removing obstructions and extraneous substances. Thus, we have *solvents* of the stone in the bladder, &c.

SOMATOL'OGY, *Somatolo'gia*, from *σῶμα*, 'the body,' and *λογος*, 'a discourse.' A treatise on the human body.

SOMNAM'BULISM, *Somnambula'tio*, *Hypnoba'te'sis*, *Hypnob'asis*, *Selenoga'mia*, *Nyctoba'te'sis*, *Seleniasis*, *Selenias'mus*, *Somnambulis'mus*, *Nyctob'asis*, *Noctambula'tio*, *Paroni'ria am'bulans*, *Sleep-walking*, *Nocti-sur'gium*, *Oneirodyn'ia acti'va*, *Somno-vigil*. A condition of the brain, which occasions the individual to execute, during sleep, some of those actions that commonly take place when awake. It has been imagined, that the somnambulist is guided, solely, by his internal senses; but there are many facts, which induce the belief that the external senses are not always entirely suspended. The causes of somnambulism are very obscure; and the principal indication of treatment is,—to so arrange the bed-chamber of the somnambulist, that he cannot get out of it during sleep; and to avoid suppers, as well as all bodily and mental excitement.

MAGNET'IC OR ARTIFI'CIAL SOMNAMBULISM is that peculiar nervous condition, into which individuals have been occasionally thrown by the *Animal Magnetizers*. It has occurred, only, in those of weak nervous temperaments; in hysterical females, &c.

SOMNAM'BULIST, *Somnam'bulus*, *Hypnob'ates*; from *somnus*, 'sleep,' and *ambula're*, 'to walk.' *Noctam'bulus*. A sleep-walker.

SOMNIF'EROUS, *Hypnot'icus*, *Soporif'ic*, *Soporif'erous*, *Soporati'vus*. A medicine, which causes sleep:—as *opium*.

SOM'NIUM, *Enyp'nion*, *Insomnium*, *A dream*, (F) *Rêve*, *Songe*. A confused assemblage, or accidental and involuntary combination of ideas and images, which present themselves to the mind during sleep. Dr. S. Mitchell, of New York, used the word *Somnium* to signify the state between sleeping and waking, in which persons perform acts of which they are unconscious.

For 'waking dreams,' see *Hallucination*.

Those distressing dreams, which occur during a state of half sleep, are called, by the French, *Réveilleries*.

SOM'NOLENCY, *Somnolen'tia*, *Heaviness*, *Carus Lethar'gus*, *Cataph'ora*, *Cataph'ora*, *Coma Somnolen'tum*, *Caro'sis*, *Slumber*, (F) *Assoupissement*. A state, intermediate between sleeping and waking. It is often a symptom of disease.

SONCHUS OLERA'CEUS, *Cicer'bita*, *Sow Thistle*, (F) *Laiteron doux*. Family, *Cichoraceæ*. Most of the species of *Sonchus* abound with a milky juice, which is very bitter, and said to possess diuretic virtues.

SONDE A CONDUCTEUR (F). A modification of the ordinary catheter;—to facilitate the changing of catheters, without the fear of making false passages. It is a common catheter, open at its beak. The *Stylet* or *Mandrin* is one half longer than that of the ordinary catheter. To use the instrument, the stylet is pushed into the cavity of the bladder through the catheter. The latter

is then withdrawn by slipping it over the stylet, which is kept in its place, and serves as a guide to a fresh catheter.

SONDE BRISÉE (F), *Eyed probe*. A long, straight stylet, composed of two parts, which may be screwed to each other: blunt at one end, and furnished, at the other, with an eye: so that it may be used either as a probe for punctured wounds, or for a seton needle.

SONDE D'ANEL. A very fine stylet of silver; awl-shaped at one end. It is used for probing the lachrymal passages, through the punctum lachrymale.

SONDE DE BELLOC. An instrument, invented by Belloc for plugging the nasal fossæ in cases of hemorrhage. It consists of a curved, silver canula, open at both ends, and furnished with a button. This instrument is passed through the nares to the throat; and a plug is attached to the button, so that, when the instrument is drawn forwards through the nose, the posterior nostril is stopped.

SONDE DE LAFOREST. A small, crooked canula, used for probing the nasal duct from below upwards, and for throwing up injections into it.

SONDE OU PINCE DE HUNTER. A cylindrical, silver canula; of the size of a common catheter; open at both extremities, and containing a wire of iron, one of the ends of which is split into two parts; each being terminated by a small scoop, and separating from each other by virtue of their elasticity, when pushed out of the canula, and again approximating when drawn in. It has been used for laying hold of small calculi in the urethra.

SOPHORA HEPTAPHYL'LA, *Anticholeric'ica*. Family, *Leguminosæ*. Sex. Syst. *Decandria Monogynia*. The root and seeds of this shrub are intensely bitter, and are said to have been found useful in cholera, colic, dysentery, &c.

SOPHORA TINCTO'RIA; *Podalyr'ia Tincto'ria*, *Indigof'era*, *Wild Indigo*, *Indigo Weed*, *Broom*. An American plant, the taste of whose root is unpleasant, subacid, and nauseous—very similar to *Ipecacuanha*. In a large dose, the bark of the root acts both as an emetic and cathartic. It has been considered antiseptic and febrifuge, and has been used, in the form of fomentation or cataplasm, in phagedenic and gangrenous ulcers. A liniment, prepared by simmering the cortical part of the root in cream, has been found an efficacious application to sore nipples and to ulcerated breasts.—Coxe.

SOPOR. A profound sleep, from which the person can be roused with difficulty. It is a symptom in many of the neuroses.

SORBEFACIENT, *Sorbefaciens*, from *sorbere* 'to suck in,' and *fa'cere*, 'to make.' A remedy that promotes absorption.

The following are the chief Sorbefacients.

Acida Vegetabilia,	Spongia usta,
Alkalia,	—
Ammoniacum,	Compression
Brominum,	(Methodical,)
Galbanum,	Friction,
Hydrargyri Præparata,	Mental Sorbefacients,
Iodinum,	(Imagination, Emo-
Liquor Calcis Muriatis,	tions.)

SORBUS DOMESTICA, *Sorbus*, *Oie*, *Service* or *Sorb Tree*, (F) *Cormier*. Family, Rosaceæ. Sex. Syst. Icosandria Trigynia. The fruit of this tree, *Sorbum*, is astringent, and has been recommended in diarrhœa and dysentery. It is given in the form of rob. A kind of cider is made from it, and also brandy.

SORBUS ACUPARIA, *Mes'pilus*, *Mountain Service*, *Mountain Ash*, *Quicken Tree*, *Roan Tree*, (F) *Sorbier des Oiseleurs*. The berries of this tree are employed for similar purposes as the last.

SORDES, *Rhypos*. A dirty-looking sanies, discharged from ulcers. The French call an ulcer, exhibiting such an appearance, *sordid*. Also, dirt of any kind.

SORE, BAY. A disease, which Mosely considers to be a true cancer. It is endemic in the Bay of Honduras.

SORENESS, from Teut. *seer*, (G) *Sehr*, 'very,' Sax. *rap*, *Parap'sis acris teneritu'do*. Painful uneasiness or tenderness, local or general, on being touched with a pressure, that does not usually excite distressing feeling. Often, a febrile symptom. Also, the tenderness of a wound, ulcer, &c.

SORORIA'TIO. The period at which the breasts of the female become developed. A young maiden, whose mammæ begin to show, was formerly called *sororians virgo*.—Plautus.

SOTIREL'LA. Ancient name of a medicine, composed of *opium*, several *narcotics*, *nutmeg*, *saffron*, *camphor*, and *soot*. It was used in certain diseases of the teeth.

SOUND, *Specillum*, *Stylus*, *Exploratorium*. An instrument used, by surgeons, to discover whether there is a stone in the bladder. It is usually made of highly polished steel, and is shaped like the catheter.

(F) *Sonde*. [This word has, however, a more extensive signification. It means, different instruments, introduced into cavities of certain organs, or into wounds, fistulas, &c. to investigate their condition; or to fulfil some therapeutical indication.] See *Sonde*, in the Index.

SPA, MINERAL WATERS OF. A town, 7 miles S. E. of Liège, where there are several springs, possessing a sharp, acidulous taste; containing much carbonic acid, carbonates of iron, lime, and magnesia; subcarbonate of soda, and muriate of soda. The water is much used as a tonic.

ARTIFICIAL SPA WATER. *Sodæ subcarb.*, gr. viij; *magnesiæ carbon.* ʒ j; *limat. ferri*, gr. iij; *sodæ muriat.*, gr. j; *aquæ*, ℥ iij. Im-

pregnate with gas from *marble powder* and *sulph. acid.*, aa ʒ x.

SPAG'IRISTS, from *σπαω*, 'I separate,' and *αγαιω*, 'I assemble.' A sect of physicians, who pretended to account for the changes, that occur in the human body in health and disease, in the same manner as the Chymists, of their day, explained those of the inorganic kingdom. *Medici'na Spagir'ica* was, likewise, called *Hermetica*; because it was believed that the means of cure, adopted in it, had been found in the books of Hermes.

SPANOPO'GON, from *σπανος*, 'rare,' and *παγων*, 'beard.' Loss of beard, or thinness of beard.—Vogel.

The Greeks called those who had little beard, or who had lost it, *Spanopogo'nes*, *σπανοπαγω'νες*.

SPARADRA'PUM, *Sparadrapus*, *Tela emplas'tica*, *Spandarapum*, (F) *Sparadrap*. Any adhesive plaster, spread upon linen or paper. The chief Sparadraps are the following.

SPARADRAPUM PRO FONTIC'ULIS, *Issue Plaster*; which is sometimes made of *simple diachylon*, ℥ ij; *Burgundy pitch*, and *sarcocolla*, each ʒ iv; *common turpentine*, ʒ j. Spread upon linen, and polished with a moistened calendering glass rubber.

SPARADRAPUM VIRIDE, *Corn Plaster*. This may be made of *yellow wax*, ℥ ij; *Burgundy pitch*, ʒ xij; *common turpentine*, ʒ vj; *verdigris*, ʒ iij; spread on cloth, and polished.

Kennedy's Corn Plaster is made of *yellow wax*, ℥ j; *Ven. Turpentine*, ʒ ij; *verdigris*, ʒ j.

SPARADRAPUM SEU TELA GALTERI, *Defensive Plaster*, (F) *Toile de Gautier*. This is made of *olive oil*, ℥ ss; *suet*, ʒ iv; *wax*, ʒ x; *litharge*, *common turpentine*, *thus*, and *mastic*, aa ʒ ij; *bole armeniac*, *flour*, aa ʒ j. Pour it, while liquid, upon cloth, and spread. To issues, and to keep on dressings.

SPARADRAPUM ADHESI'VUM, *Adhesive Plaster*. A spread plaster of the *Emplastrum adhæsivum* (q. v.) It is, also, called *Strapping*.

The ENGLISH COURT PLASTER is a Sparadrap, (F) *Taffetas agglutinatif*, *T. gommé*, *Taffetas d'Angleterre*, *Ser'icum Ang'licum*, *Emplas'trum Ang'licum*, *E. Anglica'num*, *E. adhæsivum Woodstock'ii*, *E. Ichthyocol'læ telæ induc'tum*, *E. glulino'sum*, *Tela Ichthyocol'læ glu'tinans*. It is made by stretching black silk, and brushing it over with a solution of *isinglass*, ʒ j, in *proof spirit*, ʒ xij, to which *tinct. benz.* ʒ ij, are added. When dry, this is repeated five times; after this, two coats are given it of a solution of *tereb. chiæ* ʒ iv, in *tinct. benz.* ʒ vj, which renders it less liable to crack.

SPARADRAPIER, the name of a machine for spreading sparadraps. A *Plaster machine*. It consists of a table, with two

raised pieces, movable, and furnished with points; by which the cloth can be stretched: and a lamina or blade of metal to extend the plaster over it.

SPARAL'LIUM, *Clyster uteri'nus*. An injection into the vagina.—Ruland and Johnson.

SPAREDIA, a ligature, covered with the white of egg.—Paracelsus.

SPAR'GANON, *σπαργανον*, 'swathing clothes;' forming a kind of bandage, with which children were formerly surrounded.—Foësius.

SPARGANO'SIS, *Intumescen'tia lactea mamma'rum*, *Mastody'nia polygala*, *σπαργανωσις*, from *σπαργαω*, 'I swell.' Extreme distention of the breasts by milk.—Galen.

SPARTIUM SCOPA'RIUM, *Genis'ta*, *Broom*, *Cytiso-genista*, *G. Tincto'ria*, (F) *Génet. Family*, Leguminosæ. *Sex. Syst.* Diadelphia Decandria. *Broom Tops*—*Spartii Cacu'mina*—have a bitter taste, and are possessed of diuretic properties. They have been used in dropsies. Dose, of the powder, ʒj to ʒj. All the genistæ have similar virtues.

A decoction of the genista, along with cauterization of the pustules under the tongue, has been recommended in hydrophobia.

SPASM, *σπασμος*, *Sparag'mos*, from *σπασω*, 'I draw.' The Greeks gave this name to all kinds of convulsion. It is now usually applied to involuntary, muscular contractions; and these, again, have been divided into tonic spasms (see Tetanus), which consist in complete rigidity and immobility of the muscles, that are the seat of it; and into clonic spasms, which consist in alternate contractions and relaxations, (see Convulsion.)

Cullen has a class, Spasmi.

SPASMOL'OGY, *Spasmolo'gia*, from *σπασμος*, 'spasm,' and *λογος*, 'a treatise.' A treatise on spasms.

SPASMOT'ICUS, *Spas'ticus*, *Spasmod'ic*. Any thing relating to spasm. Also, an anti-spasmodic. *Morbi constricto'rii*, *M. spasmod'ici*, &c., are diseases accompanied with spasm.

SPAS'NIA. A term, used by Mercurialis to designate the lancinating pain, produced, at times, in the chest by violent fits of coughing.

SPATHES'TER, from *σπασω*, 'I draw.' (?) A surgical instrument, used for drawing the prepuce over the glans, when too short.—P. Amman.

SPAT'ILĒ, *σπατιλη*, 'human excrement.' A liquid fæcal evacuation.—Hippocr.

SPAT'ULA. Diminutive of *Spa'tha*, *σπαθη*, 'a broad sword.' *Spathome'lē*, *σπαθομελη*, *Specill'um latum*. An instrument, used for spreading plasters, stirring ointments, &c.

SPECIF'IC, *Specif'icus*. A substance, to which is attributed the property of removing, directly, one disease rather than any other. It is doubtful whether any such remedy exists.

Mercury in syphilis, and *sulphur* in the itch have been regarded as the strongest examples we possess.

SPECIL'LUM, *Melē*, *Stylus*, from *Spe'cio*, 'I examine,'—*Specula'rion*, *Spicil'lum*: a probe, (F) *Styilet*, *Sonde*, (q. v.) A surgical instrument, employed for examining wounds, fistulas, and for passing setons, &c. It is, usually, formed of silver; and is terminated, at one end, by an olive-shaped button. The eyed probe has an aperture at the other extremity.

SPEC'TACLES, *Conspicil'la*, (F) *Besicles*, *Lunettes ordinaires*, *Conserves*. Glasses to assist the sight; arranged so as to be adapted to both eyes at the same time. These glasses are more or less concave or convex, according as the sight is more or less short (*Myopic*); or long (*Presbyopic*).

SPECULA'RIS LAPIS. A transparent mineral, but of what nature is not clear, which was formerly employed in epilepsy.

SPEC'ULUM, *Catop'ter*, *Catop'tron*, *Diop'tron*. In Latin, 'a mirror.' In surgery, it means different instruments for dilating cavities, and facilitating their examination. See Dilator. There are various instruments of this kind,—the *S. Ani*, *S. Matri'cis*, *S. Oculi*, *S. Oris* (F) *Baillon*), *S. Gutturis*, *S. Vesicæ*.

SPERM, *Spermat'ic fluid* or *liquor*, *Sem'i-nal fluid*, *Seed*, *Semen*, *S. viri'le* seu *masculi'num*, *Genita'le*, *Humor genita'lis* seu *semina'lis*, *Uri'na genita'lis*, *Genitu'ra*, *Sperma*, *S. viri'le*, *Tho'rē*, *Tho'ros*, *Lac maris*, *Male's milk*, *Propagatory* or *genital liquor*, *Vita'le virus*, *Vital* or *quicken'g venom*, from *σπυρω*, 'I sow.' A whitish, viscid fluid, of a peculiar smell, secreted by the testicles, whence it is carried by the vasa deferentia to the vesiculæ seminales, to be thrown into the vagina, during coition, through the ejaculatory ducts and the urethra. It is the fecundating fluid, and must come into actual contact with the germ of the female. The *Aura sem'inis* is incapable of effecting fecundation. The semen, at the time of emission, is composed of two different fluids: the one liquid and milky, which is considered to be the secretion of the prostate;—the other, white, and as thick as mucilage,—the product of the testicular secretion. The sperm contains, according to Vauquelin, 900 parts of water, 50 of animal mucilage, 10 of soda, and 30 of calcareous phosphate.

Microscopic observations seem to show, that, like many other animal secretions, it contains animalcules—*Spermatozo'a*, (q. v.)

SPERMAT'IC, *Spermat'icus*, *Semina'lis*. That which relates to the sperm. A name given to different parts, connected with the organs of generation.

The SPERMATIC ARTERIES, *A. Spermaticæ*, *A. præparan'tes*, *Artères testiculaires*, *A. de l'ovaire* (Ch.), are two in number;—one on each side,—and arise from the sides of the

aorta, sometimes from the renal arteries. They descend, almost vertically, at the sides of the vertebral column, and are distributed differently in the two sexes. In man, the spermatic artery, situate at the side of the vas deferens, issues by the abdominal ring; gives numerous ramifications to the spermatic chord, and divides into two fasciculi of branches, one of which goes to the testicle,—the other to the epididymis. In the female, the spermatic artery dips into the pelvis, and passes to the ovarium, Fallopian tube, and round ligament.

The SPERMATIC VEINS are two or three in number, on each side. They accompany the spermatic artery, and open:—those of the right, into the vena cava inferior:—those of the left, into the corresponding renal vein. These veins form, above the testicle, a kind of venous network, called, by some, the *Spermatic Plexus*; and another plexus before the psoas muscle, called the *Corpus pampiniforme*.

The SPERMATIC PLEXUSES of nerves, *Plexus testiculares*, are two in number, and are furnished by the renal plexuses. Their filaments, called *Spermatic nerves*, follow the arteries of the same name to the testicle in man; and to the ovary and fallopian tube in the female. They cannot be traced into the substance of those organs.

The SPERMATIC or TESTICULAR CHORD, *Funiculus Spermaticus*, *Corpus varicosum*, (F) *Cordon spermatique ou testiculaire*. The vascular and nervous chord, by which the testicle is suspended. It is composed of the spermatic artery and veins; of other small vessels; of lymphatics; of nervous filaments from the spermatic plexus, and from the genito-crural branch of the lumbo-abdominal plexus; of the vas deferens; and, very often, of a fibro-cellular chord, which unites the peritoneum to the upper part of the tunica vaginalis, and in which, encysted hydrocele of the spermatic chord occurs. All these parts are united together by a very lax, cellular tissue, and surrounded by coats, which, reckoning from without, are;—1. The skin and cellular membrane. 2. A fibro-cellular membrane, formed by the fascia superficialis. 3. A very thin layer, formed by fibres of the cremaster muscle, united archwise before, and often, also, behind, the chord. 4. The proper sheath of the spermatic vessels, or the tubular prolongation, furnished by the fascia transversalis to the chord, on a level with the superior orifice of the inguinal canal. The spermatic chord is commonly shorter on the right side than on the left; and of a different size in different individuals. It ascends, almost vertically, from the superior margin of the testicle, as far as the lower orifice of the inguinal canal: passes through this canal, and enters the abdomen, crossing the epigastric artery. Here it forms an evident elbow, directing its course backward. At this part,

also, the organs, composing it, separate from each other:—the vas deferens descending into the pelvis to pass behind the bladder;—the blood-vessels and lymphatics ascending towards the lumbar region, &c.

The SPERMATIC PASSAGES or WAYS, *Viae Spermaticæ*, are the canals concerned in the excretion of semen.

SPERMATOCELE, *Her'nia semina'lis Scroti*, *Oscheoce'le semina'lis*, *Gonocé'le*, from *σπέρμα*, 'sperm,' and *κηλη*, 'a tumour.' The ancients gave this name to certain swellings of the testicle, which were regarded as produced by an accumulation of sperm in the organ.

SPERMATOL'OGY, *Spermatolo'gia*, from *σπέρμα*, 'sperm,' and *λογία*, 'a discourse.' A treatise on sperm.

SPERMATOPCE'US, *Spermatopoicus*, from *σπέρμα*, 'sperm,' and *ποιον*, 'to make.' Food, to which has been attributed the property of augmenting the secretion of semen; and, consequently of exciting the venereal act. Very succulent and very nutritious substances have been so considered.

SPERMATORR'HŒA, *Spermorrhœ'a*, *Spermacrásia*, *Gonacrásia*, *Gonacratia*, (F) *Flux de Sperme*. An involuntary emission of sperm, without copulation. See *Gonorrhœa*.

SPERMATOZO'A, from *σπέρμα*, 'sperm,' and *ζωον*, 'animal.' *Zoospermes*. Spermatic animalcules. Animalcules said to have been seen in the sperm, and by some supposed to be the formative agents in generation.

SPHAC'ELUS, *σφακελος*, *Gangræ'na Sphacelus*. This word is used, by some, synonymously with Gangrene (q. v.); by others, with gangrene when it occupies the whole substance of a limb. Commonly, it means the disorganized portion, in cases of mortification, which must be thrown off—is, in other words, totally dead. The foul, disorganized portion of an ulcer—called the *slough*—must be considered a kind of *sphacelus*.

SPHENO-MAX'ILLARY, *Sphæno-maxilla'ris*. That which relates to the sphenoid and maxillary bones.

The SPHENO-MAXILLARY OF INFERIOR ORBITAR FISSURE, (F) *Fente sphéno-maxillaire ou orbitaire inférieure*, called, also, *Foramen lac'rum infé'rius*, *F. spheno-maxillare*, is situate at the posterior part of the angle, formed by the union of the internal and inferior parietes of the orbit. It is constituted, above, by the sphenoid bone; below, by the superior maxillary and palate bones; and, before, by the malar bone. It is narrower at the middle than at the extremities, and forms a communication between the orbitar cavity and the zygomatic fossa.

The SPHENO-MAXILLARY FOSSA, is a name given, by some anatomists, to a depression at the union of the sphenomaxillary and pterygomaxillary fissures.

SPHENO-ORBITAR. A name given, by Béclard, to the anterior part of the body of the sphenoid bone, which is developed by a variable number of points of ossification.

SPHENO-PALATINE, *Sphenopalatinus*. That which relates to the sphenoid and palate bones.

The **FORAMEN SPHENO-PALATINUM** is a round aperture, formed by the vertical portion of the os palati and the sphenoid. It establishes a communication between the nasal fossæ and the zygomatic fossa.

The **SPHENO-PALATINE ARTERY**, or *Large lateral nasal*, is the termination of the internal maxillary. It enters at the posterior part of the superior meatus of the nose, through the sphenopalatine foramen, and spreads its numerous branches on the pituitary membrane covering the septum, the cornua, and the meatus.

The **SPHENO-PALATINE GANGLION** or *Ganglion of Meckel*, *Sphenoidal G.* (Ch.) A small, nervous, cordiform, or triangular ganglion, of variable size, situate without the foramen sphæno-palatinum, in the pterygo-maxillary fissure. It seems suspended, by several nervous filaments, to the trunk of the superior maxillary nerve, and gives off *internal* or *spheno-palatine filaments*, *inferior* or *palatine filaments*, and a *posterior filament*, which is the *vidian* or *pterygoid nerve*.

The **SPHENO-PALATINE NERVES** or *Lat'eral nasal*, arise from the ganglion—just described—at its inner part, and enter the nasal fossæ by the sphenopalatine foramen. They are 5 or 6 in number, and distribute their filaments to the outer and inner parietes of the nasal fossæ. One of the most remarkable branches is the *Naso-palatine*, (q. v.)

SPHENO-PARIETAL, *Spheno-parietalis*. That which belongs or relates to the sphenoid and parietal bones.

The **SPHENO-PARIETAL SUTURE** is formed by the articulation of the extremity of the greater ala of the sphenoid with the anterior and inferior angle of the parietal bone.

SPHENO-TEMPORAL, *Spheno-temporalis*. That which belongs to the sphenoid and temporal bones.

The **SPHENO-TEMPORAL SUTURE** is the suture at the articulation of the great alæ of the sphenoid bone with the squamous portion of the temporal. Béclard gives the name—*spheno-temporal*—to the posterior part of the body of the sphenoid, which is developed by distinct points of ossification.

SPHENOID, *Sphenoides Os*, from σφην, 'a wedge,' and εἶδος, 'resemblance.' *Os basilare seu cuneiforme seu cuneo comparatum*, seu *sphenoidale*, seu *multiforme*, seu *azygos*, seu *papillare*, seu *polymorphon*, seu *paxillare*, seu *baxillare*, seu *alæforme*, seu *sphæcoïdes*, seu *vespiforme*, seu *multiforme*, seu *inconjugatum*, *Pterygoid Bone*. An azygous bone, situate on the median line, and at the base of the cranium. It articulates with all

the other bones of that cavity; supports them, and strengthens their union. Its form is singular, and resembles a bat with its wings extended. It has, 1. An *inferior* or *guttural surface*, on which is situate the crista, that joins the vomer; a channel, which concurs in forming the pterygo-palatine foramen; the pterygoid process; the pterygoid fossa; the scaphoid depression; the vidian or pterygoid canal; the foramina—ovale, spinale, &c. 2. A *superior* or *cerebral surface*, on which are:—the clinoid processes; the pituitary fossa; the foramina (ovale, rotundum, and spinale;) the *Apophysis of Ingrassias* or lesser wing; the foramen opticum, &c. 3. An *occipital* or *posterior surface*, which is articulated with the basilar process of the occipital bone. 4. An *anterior* or *orbito-nasal surface*; having, anteriorly, a crista to unite with the ethmoid bone; and, on each side, a round aperture, which leads into two cavities in the substance of the bone, separated by a middle septum, and called the *sphenoidal sinuses*. 5. Two *zygomato-temporal* or *external surfaces*, which correspond to the temporal and zygomatic fossæ.

Some divide the sphenoid into *body* or *middle portion*; and *alæ*, which are four in number, and are subdivided into *great* (*Temporal Plates* or *Wings*) and *little* (*Apophyses of Ingrassias*.) The *Sphenoid suture* surrounds the bone.

SPHENOIDAL, *Sphenoidalis*. That which belongs or relates to the sphenoid.

The **CORNUA SPHENOIDALIA**, *Cornets sphénoïdaux*, *Cornets de Bertin*, *Ossa triangul'aria*, *Pyramids of Wistar*. Two small, thin, and curved bones, situate between the sphenoid and ethmoid, with which they are confounded, in the adult. They have the shape of a hollow pyramid, with the base turned backwards; and are developed by a single point of ossification. They are articulated with the sphenoid, ethmoid, palate bone, and vomer.

The **SPHENOIDAL** or **SUPERIOR ORBITARY FISSURE**, *Foramen lac'erum superius*, (F) *Fente sphénoïdale*, is a large fissure, situate between the great and little ala of the sphenoid. It is seen at the upper and back part of the orbit, between which and the cranium it is a means of communication.

The **SPHENOIDAL SPINE**, (F) *Epine sphénoïdale*, *Spinous Process of the Sphenoid*;—1. A projecting crista at the inferior surface of the sphenoid bone, for articulation with the vomer. 2. A triangular process, *Apophyse sous-temporale* (Ch.), met with near the posterior margin of the same bone, behind the foramen spinale. At the point of the spinous process, a *styloid process* is frequently met with.

SPHINCTER, *Constrictor*; from σφιγγω, 'I constrict.' A name given to several annular muscles, which constrict or close certain natural openings.

SPHINCTER ANI, Annula'ris Ani. Many anatomists have described two sphincter muscles of the anus;—viz. 1. The *S. exter'us*, *Aspidis'cos*, *S. cutaneus*, *Coccigio-cutaneusphincter*, *Orbicula'ris Recti*, *Constrictor Ani*, *Coccygio-anal*, (Ch.) It is situate around the anus; is elliptical from before to behind; flattened, and pierced at its middle. Its fibres describe concentric arcs, which are attached, behind, to the extremity of the coccyx, by a dense, cellular substance; and are confounded, anteriorly, with the bulbo-cavernosi and transversus perinæi muscles. This muscle contracts and closes the anus.

2. The inner or internal Sphincter Ani, *Sphincter intestina'lis* of Winslow, is, by many anatomists, considered as the termination of the circular fibres of the rectum. It is annular, and situate around the inferior extremity of the rectum, to the extent of about a finger's breadth. It has the same uses as the other.

SPHINCTER VESICÆ, Sphincter of the bladder. Some anatomists have given this name to whitish, elastic, and circular fibres, which surround the neck of the bladder, but do not constitute a particular muscle. Morgagni has given the name PSEUDO-SPHINCTER to the anterior fibres of the levator ani, which pass beneath the neck of the bladder, and, by their contraction, close that opening.

SPHRAGIDONYCHARGOCOME'TA, from σφραγις, 'a seal,' ονυξ, 'the nail,' αργος, 'white,' or perhaps αργυρος, 'silver,' and κομω, 'I adorn.' A charlatan, who adorned his fingers to the very nails with rings.—Aristophanes. Hippocrates.

SPHYG'MICA ARS, from σφυγμος, 'the pulse.' The art of judging by the pulse, in health or disease.

SPHYGMOLO'GIA, from σφυγμος, 'the pulse,' and λογος, 'a description.' The doctrine of the pulse.

SPICA, Fascia Inguina'lis; the *Spica bandage*, (F) *Épi*. A bandage, so called in consequence of its somewhat resembling a spike of barley. The turns of the bandage cross like the letter V;—each leaving a third of the roller uncovered. It is distinguished into *ascending* and *descending*. It may be applied over various parts of the body; and in a different manner in each case: thus, there is the *Spica inguina'lis*, *Spica inguina'lis duplex*, the spica for the shoulder, and another for the thumb.

SPIGE'LIA MARILAN'DICA, Anthelm'ia, Spige'lia Lonic'era, Peren'nial Worm-grass or Indian Pink, Caroli'na Pink. Nat. Order, Gentianæ. Class, Pentandria. Order Monogynia. Indigenous. The root is celebrated as an anthelmintic, particularly in cases of lumbrici. It is, also, asserted to have been found serviceable in remittent fever. It is a narcotico-acrid. Dose, gr. x to 3 ss.

SPILAN'THUS ACME'L'LA, Achmella, Acmella, Balm-leaved Spilanthus. Family,

Corymbiferae. Sex. Syst. Syngenesia Polygama æqualis. This plant possesses a glutinous, bitter taste; and fragrant smell. The herb and seed are said to be diuretic and emmenagogue. They have been used in dropsies, jaundice, fluor albus, and calculous complaints;—given in infusion.

SPILANTH'US OLERA'CEUS, Spear-leaved Spilanthus, (F) *Cresson de Para*. A tincture of the plant has been recommended in toothache.

SPILSBURY'S ANTISCORBU'TIC DROPS. An empirical preparation, formed of *hydrarg. oxymur.*, *rad. gentian.*, *cort. aurant. sicc.*, aa ʒij, *antimon. crud.*, *santal. rubr.* aa ʒj, *spiritus vini rectific.*, *aquæ*, aa ʒviij.

SPINA, Spine, (F) *Épine*. A process on the surface of a bone, which has been compared to the spines or thorns on certain vegetables. The chief processes, of this name, are;—the *nasal spine*, the *spine of the scapula*, the *spine of the ischium*, the *four iliac spines*, the *palatine spine*, the *maxillary*, the *sphenoid*, &c. The *spine of the back* is the collection of vertebræ constituting the *vertebral column* (q. v.)

SPINA VENTO'SA, Spina ventos'itas, Tere'do, Fungus Artic'uli, Arthroc'acè, Pædarthroc'acè, White Swelling (of some,) *Sideratio Ossis, Cancer Ossis, Gangræ'na Ossis, Exosto'sis*. A term of no definite meaning, as is obvious from these various words having been considered its synonymes. By some, it is defined to be,—a disease of the osseous system, in which the texture of the bone dilates, seeming to be distended with air, and constituting a variety of osteo-sarcoma. By others, it is considered to be a tumour arising from an internal caries of a bone; occurring most frequently in the carpus or tarsus. The term itself is a translation from the Arabic of Rhazes.

SPINA'CIA, Spina'chia, Spina'cia olera'cea, Spin'age, Spin'ach, (F) *Épinard*. Family, Atriplicæ. Sex. Syst. Diœcia Pentandria. A plant, which resembles the cabbage, in its dietetic powers. The leaves, boiled, with the addition of oil, form a good emollient cataplasm. It has been used in phthisical complaints; but its medicinal properties, if it have any, are not now regarded.

SPINAL, Spina'lis, from *spina*, 'the spine.' That which relates to the vertebral column.

The SPINAL ARTERIES are two in number, viz. 1. The *posterior spinal*, *Artère médiane postérieure du Rachis* (Ch.) It arises from the vertebral, near the corpora pyramidalia, and descends on the posterior surface of the spinal marrow, distributing its ramifications to it. 2. The *anterior spinal artery*, *A. médiane antérieure* (Ch.), is larger than the last, and arises, also, from the vertebral. It descends, in a serpentine manner, upon the anterior surface of the marrow; furnishes ramusculi to it, and unites with that of the opposite

side, opposite the foramen magnum occipitis. A very tortuous branch arises from this union, which descends as far as the inferior extremity of the marrow, to which it sends numerous divisions.

The term *Spinal arteries* or *Rachidian arteries* is also given, in the abstract, to all the arteries of the spinal marrow and vertebral canal. The same may be said of the veins and nerves.

SPINAL IRRITATION, *Rhachialgi'tis*. A modern pathological view, which refers most nervous diseases to irritation of the spinal cord. This irritation is presumed to be indicated by tenderness on pressure over the spinous process of one or more vertebræ, or over the nerves proceeding from the cord and distributed to the parts at the sides of the spine. Such tenderness, however, by no means indicates the pathological condition in question, as it is often met with in those enjoying perfect health.

The treatment advised is cupping and counter-irritation on each side of the spine, which may be beneficial in such diseases, no matter what part of the frame may be in a morbid state, by exciting a new and revellent impression on a very sensible portion of the cutaneous surface.

The **SPINAL NERVE, *Ac'cessory of the Par vagum*** or *8th pair, Accessory Nerve of Willis, Spinal Accessory, Spino-cranio-trapezien, Superior res'piratory N., Eleventh pair of encephalic nerves, Trachelo-dorsal* (Ch.), arises from the medulla spinalis, within the vertebral canal, between the anterior and posterior roots of the cervical nerves, at a greater or less distance from the cranium. The roots unite to form the nerve, which ascends into the cranium through the foramen magnum of the occipital bone, and issues by the foramen lacerum posterius, crossing the sterno-cleido-mastoideus, to which it gives filaments, and losing itself entirely on the trapezius muscle.

The **SPINAL FORAM'INA, (F) *Trous rachidiens***. In the abstract, are the foramina, formed by every two contiguous vertebræ, through which the spinal nerves issue. See Vertebral.

The term **FORAMEN SPINALE** is especially applied, however, to a small foramen, in front of the spinous process of the sphenoid bone, through which the middle artery of the dura mater enters the cranium. It is, likewise, called *Foramen sphenospino'sum, (F) Trou sphéno-épineux ou petit rond, Trou épineux*.

SPINALIS DORSI, *Grand épineux du dos, Spinalis Dorsi major*. Winslow calls thus, some fleshy fasciculi, which are situate on the lateral surfaces of the spinous processes; from the third dorsal vertebra to the first or second lumbar; and which form part of the transversospinalis of most authors. The same anatomist calls—*Spinalis Dorsi minor, Petit épineux du dos*—some small, fleshy fibres, situate on each side of the interspinal ligament. They are short, flat, and pass from

one spinous process to the other. Like the preceding, they form part of the transversospinalis. All these fleshy fasciculi strengthen the vertebral column.

SPINOUS, *Spino'sus, (F) Épineux*. Having the shape of a spine or thorn.

The **SPINOUS PROC'ESSES** or **APOPH'YSES of the Vertebræ, *Acan'thæ, Cynol'ophoi, (F) Apophyses épineuses***, are situate at the posterior part of each vertebra, and afford attachment to the muscles, whose office it is to extend the spine. See Vertebra.

SPIRÆA FILIPEN'DULA, *Filipendula, Saxif'raga rubra, Dropwort, (F) Filipendule*. Family, Rosaceæ. Sex. Syst. Icosandria Pentagynia. The root of this plant is said to possess astringent and lithontriptic virtues.

SPIRÆA ULMA'RIA, *Ulmaria, Regi'na Prati, Barba capræ, Meadow Sweet, Queen of the Meadows, Bar'bula capri'na, (F) Ulmaire, Reine des Prés*. The leaves have been recommended as mild astringents:—the flowers as antispasmodics and diaphoretics.

SPIRIT, *Spir'itus, (F) Esprit*. A name given to every liquid product of distillation. These were formerly distinguished into—inflammable, acid, and alkaline; and consequently a number of substances were crowded together, which often resembled each other in no other property than in being volatile. The term is now confined to alcoholic liquors, of which the following are the chief.

AGUA ARDIENTE. Distilled from pulque, the fermented juice of the Agave, by the Mexicans.

ARRACK. Distilled from coarse palm sugar, named jaggery, fermented with the bark of the *Mimosa leucophlea*; also from rice and the fermented juice of the Palm; made in India. Its varieties are—

1. *Mahwah Arrack*. Made in India from the flowers of the Madhuca tree, *Bassia butyracea*.

2. *Tuba*. Made from palm wine, in the Philippine Islands.

ARAKA. Distilled, by the Tartars, from koumis, fermented mares' milk.

ARAKI. Distilled from dates, by the Egyptians.

ARIKA. A variety of koumis, distilled from fermented mares' milk, in Tartary and Iceland.

BRANDY. Distilled from wine, figs, peaches, Persimmon apple, mulberries, and sometimes other fruits, in Europe, Asia, N. and S. America, wherever wine is made. The best brandy is that of Cognac; the next, that of Bourdeaux and Rochelle. The varieties are—

1. *Lau*. Made from rice, in Siam.

2. *Rakia*. Made in Dalmatia from the husks of grapes mixed with aromatics.

3. *Rossolio*. Made at Dantzic, from a compound of brandy, rossolis, and other plants.

4. *Troster*. Made on the Rhine, from the husks of grapes, fermented with barley and rye.

5. *Sekis-kayavodka*. Made from the lees of wine and fruit at Scio.

GENEVA HOLLANDS (*genièvre*, French for juniper.) Distilled from malted barley and rye, rectified on juniper berries, in Holland. Its variety is—

Gin. Made in England, from malted barley, rye, potatoes; rectified with turpentine.

GOLDWASSER. Distilled at Dantzic, from wheat, barley, and rye, rectified with aniseeds, cinnamon, and other spices.

KIRSCHWASSER. Distilled from the Malach cherry, in Switzerland.

MARASCHINO. Distilled from the Macarska cherry, at Zara, the capital of Dalmatia.

RUM (supposed to be derived from the terminal syllable of the word *saccharum*: but the native Americans called this liquor Rum.) Distilled, in the West Indies and South America, from cane-sugar and molasses, and in North America from maple-sugar. Its variety is—

Slatkaia trava. Made at Kamtschatka, from a sweet grass.

SHOW-CHOO. Distilled, in China, from the lees of Mandarin, a wine made from boiled rice.

WHISKY (supposed to be derived from *usque*, the two first syllables of *usquebagh*, the original name in Ireland.) Distilled, in Scotland and Ireland, from malted and raw barley, rye, oats, and potatoes; and in the south of France, from sloes. In Ireland it was called *buil-ceaun*, or madness of the head. The best Scotch whisky is *Glenlivet*; the best Irish, *Ennishowen*.

Y-WER-A. Distilled, in the Sandwich Islands, from the root of the Tee-root, baked, pounded, and fermented.

To these may be added an intoxicating liquor, made, by the Afghanistans, from ewes' milk; and that made at Kamtschatka, from a species of mushroom, named Muchumer.

SPIRITUS ÆTHERIS AROMATICUS, *Æther Sulphu'ricus cum alcoho'le aromaticus*, *Elix'ir vitrioli dulcē*, *Sweet Elix'ir of Vit'riol*, *Viga'ni's Elixir of Vitriol*, *Aromatic Spirit of Ether*. (Cinnam. cort. contus. 3ij, cardam. sem. contus. 3iss, piperis longi fruct, cont., zingib. rad. concis., sing. 3j, spiritus ætheris sulphuric. ℥j. Macerate, for 14 days, in a stopped glass vessel, and strain. Ph. L.) It is used as a stimulant in nervous affections. Dose, 3ss to 3j.

SPIRITUS ÆTHERIS NITRICI, *Sp. Ætheris nitro'si*, *Sp. nitri dulcis*, *Sp. Æthe'reus nitro'sus*, *Sweet Spirit of Nitre*, *Nitre Drops*, *Æther nitricus alcoholisatus*, *Spirit of Nitric Ether*. (Spirit. rect. ℥ij, acid nitric, pondere 3ij. Pour the acid gradually on the spirit; being careful that the heat does not exceed 120°: then distil. by a gentle heat 3xxiv. Ph. L.) It is refrigerant, diuretic, antispasmodic, and diaphoretic. Dose, gtt. xxv. to f. 3j.

SPIRITUS ÆTHERIS SULPHURICI, *Æther Sul-*

phuricus cum Alcoho'le, *Liquor Æthereus Sulphuricus*, *Spiritus Vitrioli dulcis*, *Spiritus Ætheris vitriolici*, *Liquor Sulphuricus alcoholisatus*, *Spirit of Sulphuric Ether*. (Æther. sulphuric, ℥ss, sp. rect. ℥j. Mix. Ph. L.) Stimulant, diaphoretic, diuretic, and antispasmodic. Dose, 3ss to 3ij.

SPIRITUS ÆTHERIS SULPHURICI COMPOSITUS, *Sp. ætheris vitriol'ici compositus*, *Liquor anod'ynus Hoffmanni*, *Hoffmann's Anodyne Liquor*. (Spirit. æther. sulph. ℥j, olei ætherei 3ij. Mix. Ph. L.) A stimulant and antispasmodic.

SPIRITUS AMMONIÆ, *Al'kali ammoni'acum spirituosum*, *Al'cohol ammonia'tum*, *Sp. salis ammoni'aci*, *Ammoni'aca alcoholisa'ta*, *Liquor ammo'nii vino'sus*, *L. ammoniæ spirituosus*, *Lixiv'ium ammoniaca'le vino'sum*, *Spiritus salis ammoni'aci vino'sus seu dulcis seu dulcifica'tus*, *Solu'tio subcarbona'tis ammoni'aci spirituos'a*, (F) *Esprit d'ammoniaque*. (Sp. tenuior. ℥ij, ammoniæ muriat. 3iv, potassæ subcarb. 3vj. Mix, and distil ℥iss. Ph. L.) Stimulant and antispasmodic. Dose, 3ss to 3j.

SPIRITUS AMMONIÆ AROMATICUS, *Alcohol ammonia'tum aromaticum*, *Aromatic ammonia'ted Alcohol*, *Sal volat'ile Drops*, *Spiritus salis volat'ilis oleo'sus*, *Sp. volatilis aromaticus*, *Sal volatile oleosum Sylvii*, *Sp. ammoniæ compos'itus*, *Tinctu'ra aromatica ammoniata*, *Liquor oleo'sus Sylvii*, *Lixiv'ium ammoniaca'le aromaticum*. (Cinnam., cort. cont., caryoph. cont., aa 3ij, limonum cort. 3iv, potass. subcarb. ℥ss, ammon. muriat. 3v, sp. rectific. ℥v, aquæ, congium. Mix, and distil ℥vj. Ph. L.) Stimulant. Dose, 3ss to 3j.

SPIRITUS AMMONIÆ FÆTIDUS, *Sp. volatilis fæt'idus*, *Fit Drops*, *Al'cohol ammonia'tum fæt'idum*, *Tinctu'ra assafæt'idæ ammoniata*, *Fætid Spirit of Ammonia*. (Sp. ammoniæ ℥ij, assafætida 3ij. Macerate for 12 hours, and distil ℥iss. Ph. L.) Stimulant and antispasmodic. Dose, 3ss to 3j.

SPIRITUS AMMONIÆ SUCCINATUS, *Succina'ted Spirit of Ammonia*, *Common Eau de Luce*, *Ammoni'acum succina'tum*, *Aqua Lucicæ*, *Liquor ex Ammoniâ et Oleo Succini*, *Liquor excitans*, *Spiritus Ammonia cum Succino*, *Sp. Salis Ammoni'aci lactes'cens seu lacteus*. (Mastich. 3ij, sp. rect. 3ix, ol. lavand. gtt. xiv, succin. ol. gtt. iv, liq. ammon. 3x. Macerate the mastich in the alcohol, and pour off the clear tincture: add the rest, and shake. Ph. L.) Stimulant and antispasmodic. Dose, gtt. x to 3ss or 3j.

SPIRITUS ANISI, *Spiritus Anisi compos'itus*, *Aqua Anisi fortis*, *Aqua Sem'inum Anisi composita*, *Spirit of Aniseed*, (F) *Esprit d'anis*. (Anisi sem. cont. ℥ss, spirit. tenuior. cong., aquæ quod satis sit ad prohibendum empyreuma. Ph. L.) Carminative. Dose, 3ss to 3ss. In the compound spirit, the angelica is usually an ingredient.

SPIRITUS ARMORACIÆ COMPOSITUS, *Sp. Raph'ani compos'itus*, *Aqua Raphani composi-*

ta, Compound Spirit of Horseradish, (F) Esprit de raifort composé. (Armorac. rad. recent. concis., aurant. cort. exsicc., sing. ℥ j, myrist. nuc. contus. 3 ss, spirit. ten. cong. j, aquæ q. s. ad prohibendum empyreuma. Ph. L.) Stimulant and antiscorbutic. (?) Dose, 3 j to 3 iv.

The *Golden Spirit of Scurvy Grass*—an empirical preparation—is formed by adding *gamboge* 3 viij, to one gallon of the *sp. armoraciæ compositus*.

Greenough's Tincture for the Teeth is formed of *amygd. amar.* 3 ij, *lign. brasil., cassiæ bacc., aa* 3 iv, *irid. florent.* 3 ij, *coccinell., sal. acetosellæ, alum, aa* 3 j, *sp. vin. rect. ℥ ij, sp. armoraciæ comp. 3 ss.*

SPIRITUS CAMPHORÆ, Sp. camphoratus, Sp. vino'sus camphoratus, Tinctura Camphoræ, Spirit of Wine and Camphor, Spirit of Camphor, (F) Esprit de Camphre, Alcool camphré, Eau de Vie camphré. (Camphor. 3 iv, sp. rect. ℥ ij. Ph. L.) Stimulant, anodyne, and discutient. Used only externally.

SPIRITUS CARUI, Sp. Cari Carui, Spirit of Caraway, Aqua Seminum Carui fortis, A. Seminum Carui, Strong Carui Waters, (F) Esprit de Carvi. (Carui sem. cont. ℥ iss, sp. tenuior. cong. j, aquæ q. s. Distil a gallon, Ph. L.) Carminative. Dose, 3 j to 3 ss.

SPIRITUS CINNAMOMI, Sp. Lauri Cinnamomi, Spirit of Cinamon, Aqua Cinnamomi fortis, Aqua Cinnam. spirituo'sa, Strong Cinnamon Water, (F) Esprit de Cannelle. (Cort. cinnam. 3 v, sp. rect. ℥ ivss.) Stimulant and carminative. Dose, 3 j to 3 ss.

SPIRITUS COLCHICI AMMONIATUS, Ammoniated Spirit of Colchicum. (Sem. colchic. cont. 3 ij, sp. ammon. aromat. ℥ j. Ph. L.) Narcotic, cathartic, and diuretic. Used in gout, rheumatism, and dropsy. Dose, from gtt. xxx to 3 j.

SPIRITUS JUNIPERI COMPOSITUS, Compound Spirit of Juniper, Aqua Juniperi composita. (F) Esprit de genièvre composé. (Bacc. junip. cont. ℥ j, sem. carui cont., fœnicul. sem. cont., aa 3 iss, sp. ten. cong. j, aq. q. s. Distil a gallon. Ph. L.) Stimulant and diuretic. Dose, 3 j to 3 ss.

SPIRITUS LAVANDULÆ, Sp. Lavandulæ spicæ, Spirit of Lavender, Sp. Lavand. Simpl., Lavender Water, (F) Esprit de Lavande. (Lavand. flor. recent. ℥ ij, sp. rectific. cong., aquæ q. s. Distil a gallon. Ph. L.) Usually made by adding the oil to rectified spirit. Used as a perfume chiefly.

SPIRITUS LAVANDULÆ COMPOSITUS, Tinctura Lavandulæ composita, Red Hartshorn, Lavender Drops, Compound Spirit of Lavender, (F) Esprit de Lavande composé. (Sp. lavand. ℥ iij, sp. rosmarin. ℥ j, cinnam., cort. contus., myristic. nucleor. cont., sing. 3 ss, pterocarp. ligni conc. 3 j.) Stimulant. Dose, gtt. xl to 3 ij.

SPIRITUS MENTHÆ PIPERITÆ, Spirit of Peppermint, Aqua Menthæ piperitidis spirituo'sa, Sp. Menthæpiperitidis, (F) Esprit de Menthe poivrée. (Olei menth. pip. 3 vjss, sp.

rectif. ℥ ivss, aquæ, q. s. Distil a gallon. Ph. L.) Carminative and stimulant. Dose, 3 ss to 3 iij.

SPIRITUS MENTHÆ VIRIDIS, Spirit of Spearmint, Spiritus Menthæ sativæ, Aqua Menthæ vulgæris spirituo'sa, (F) Esprit de Menthe verte. (Olei Menth. virid. 3 viss, sp. rectific. ℥ ivss, aq. q. s. Distil a gallon. Ph. L.) Like the last in properties and dose.

SPIRITUS MYRISTICÆ, Spiritus Myristicæ Moschatæ, Sp. Nucis Moschatæ, Aqua Nucis Moschatæ, Nutmeg Water, Aqua Nephritica, (F) Esprit de Muscade. (Myrist. nucl. cont. 3 ij, spirit. tenuior. cong. j, aquæ q. s. Distil a gallon. Ph. L.) Cordial and carminative. Dose, 3 j to 3 iv.

SPIRITUS PIMENTÆ, Sp. Myrti Pimentæ, Spiritus Pimento, Spirit of Pimento, Aqua Mirabilis. (Piment. baccar. cont. 3 ij, sp. tenuior. cong., aquæ q. s. Distil a gallon. Ph. L.) Cordial and carminative, Dose, 3 j to 3 iv.

SPIRITUS PULEGII, Spirit of Pennyroyal, Aqua Pulegii spirituo'sa, Spirituous Pennyroyal Water, (F) Esprit de Pouliot. (Olei pulegii 3 vij, sp. rect. ℥ ivss, aquæ q. s. Distil a gallon. Ph. L.) Same as spirit of spearmint in properties and dose.

SPIRITUS RECTIFICATUS, Sp. Vini rectificatus, Cœnostagma, Sp. Vino'sus rectificatus, Alcohol, Spirit of Wine, (F) Esprit de Vin rectifié. Rectified spirit is much used, in Pharmacy, to dissolve resinous and other substances. It is seldom exhibited internally: although it exists in the diluted state in all vinous and spirituous liquors. Externally, it is employed as a discutient. S. G., according to the London and Dublin Pharmacopœias, 0.830; according to that of Dublin, 0.840; of Paris, 0.819 to 0.827.

SPIRITUS ROSMARINI, Sp. Rosmarini officinalis, Spirit of Rosemary, Spiritus Anthos, Hungary Water. (F) Esprit de Romarin. (Ol. rosmarini 3 j, sp. rect. cong. j, aquæ q. s. Distil a gallon. Ph. L.) Stimulant. Dose, 3 j to 3 iv.

SPIRITUS TENUIOR, Alcohol dilutum, Spiritus vino'sus tenuior, Proof Spirit, (F) Esprit de vin délayé. Generally made, for pharmaceutical purposes, by mixing equal parts of rectified spirit and water. S. G. Lond. and Dubl. 0.930; Edinb. 0.935. It is employed in the same cases as those in which alcohol is used:—chiefly, as a solvent of vegetable matters, in the form of tinctures.

SPITHAMA, Dodrans. A measure of twelve fingers' breadth.

SPLANCHNEURYSMA, from σπλᾱγχον, 'an intestine,' and εὐρύνω, 'I dilate.' Morbid dilatation of the intestines.

SPLANCHNIC, Splanchnicus, Visceral, from σπλᾱγχον, 'viscus.' That which relates to the viscera.

The *SPLANCHNIC CAVITIES* are the three great cavities of the body;—those of the cranium, chest, and abdomen.

The *SPLANCHNIC NERVES* belong to the

great sympathetic, and are two in number on each side. They are distinguished into, 1. The *great splanchnic nerve, Grand splanchnique* (Chaus.) Its roots—four or five in number, come from the 6th, 7th, 8th, 9th, and sometimes the 10th thoracic ganglion. They descend inwards, on the sides of the vertebral column, beneath the pleura, and unite into a single trunk, which enters the abdomen through a separation of the fleshy fibres of the pillars of the diaphragm; passes behind the stomach, and divides into several branches, which pass into the semilunar ganglion.

2. The *lesser splanchnic nerve, Splanchnique accessoire*, of Walther, *Petit splanchnique* (Ch.), is composed of two distinct branches, proceeding from the 10th and 11th thoracic ganglion, which unite on the 12th dorsal vertebra into a cord, that pierces the diaphragm singly; enters the abdomen, and divides into two branches, one of which anastomoses with the greater splanchnic nerve, whilst the other sends its filaments to the renal and solar plexuses.

SPLANCHNICA. Medicines adapted to diseases of the bowels. Also, the 2d order of the class *Cœliaca* of Good: defined,—diseases affecting the collatitious viscera; and characterized by,—disquiet or diseased action in the organs auxiliary to the digestive process, without primary inflammation.

SPLANCHNO'DYNE, from *σπλαγχνον*, 'an intestine,' and *ἔδυνη*, 'pain.' Pain in the bowels.

SPLANCHNOG'RAPHY, *Splanchnographia*, from *σπλαγχνον*, 'a viscus,' and *λεγος*, 'a description.' The part of anatomy which treats of the viscera.

SPLANCHNOL'OGY, *Splanchnologia*, from *σπλαγχνον*, 'a viscus,' and *λεγος*, 'a discourse.' A treatise on the viscera:—also, Splanchnography.

SPLANCHNOPATHI'A, from *σπλαγχνον*, 'an intestine,' and *παθος*, 'suffering.' A disease of the intestines.

SPLANCHNOT'OMY, *Splanchnotomia*, from *σπλαγχνον*, 'a viscus,' and *τεμνω*, 'I cut.' Dissection of the viscera.

SPLEEN, *σπλην*, *Lien*, (F) *Rate*. A soft, spongy, parenchymatous organ; of a more or less deep violet red, situate deeply in the left hypochondrium, below the diaphragm, above the colon, between the great tuberosity of the stomach and the cartilages of the false ribs, and above and anterior to the kidney. Its ordinary length is $4\frac{1}{2}$ inches; its thickness, $2\frac{1}{2}$; and its weight 8 ounces. Its parenchyma, which is bathed in blood, contains a multitude of grayish, soft, and semi-transparent granulations. It is covered by a serous membrane, furnished by the peritoneum; and by a proper coat, of a fibrous nature, which is intimately united with it, and transmits, into its interior, some delicate, solid, and very elastic prolongations. At its inner edge is a fissure, by which the vessels

and nerves enter the tissue. The functions of the spleen are unknown. One of the latest opinions is, that it belongs to the lymphatic system.

SPLENAL'GIA, from *σπλην*, 'the spleen,' and *αλγος*, 'pain.' Pain in the spleen.

SPLENECTO'MIA, from *σπλην*, 'the spleen,' and *τεμνω*, 'I cut.' Extirpation of the spleen.

SPLENEMPHRAX'IS, from *σπλην*, 'the spleen,' and *εμφρασσα*, 'I obstruct.' Obstruction of the spleen.—Vogel.

SPLENET'ICUS, *Spleni'cus*, (F) *Rateleux*. That which relates to the spleen: one labouring under diseased spleen. Medicines, adapted to diseases of the spleen.

SPLENIC, *Sple'nicus*, from *σπλην*, 'the spleen.' That which relates to the spleen. A name given to several parts.

1. The **SPLENIC ARTERY**. It arises from the cœliac; and passes from right to left, forming many windings along the upper edge of the pancreas, which lodges it in a special groove. It reaches the fissure of the spleen, and divides into several branches, that enter the organ. In its course it furnishes the pancreatic, left gastro-epiploic, and the *vasa brevia*.

2. The **SPLENIC VEIN** arises from the spleen, and accompanies the splenic artery; proceeding from left to right, to unite with the superior mesenteric vein, and to form, with it, the abdominal vena porta. In its course, it receives veins corresponding to the *vasa brevia*, the right and left gastro-epiploic, the duodenal, pancreatic, coronaria ventriculi, and inferior mesenteric veins.

The **SPLENIC PLEXUS** is a nervous network, which proceeds from the cœliac plexus, and accompanies the splenic artery, sending secondary plexuses to each division.

SPLENI'TIS, from *σπλην*, 'the spleen.' Inflammation of the spleen. *Empres'ma splenitis, Lienis inflammatio*. A rare disease characterized by local pain, swelling, and heat; and which, sometimes, terminates by suppuration. It must be treated like other inflammations.

SPLE'NIUS, *S. Cap'itis, S. Colli, Cervico-dorso-mastoidien et dorso-trachélien, Posterior mastoid muscle, Cervico-mastoidien* (Ch.) So called from its resemblance to the spleen of certain animals. A muscle, situate at the posterior part of the neck, and upper part of the back. It is much broader above than below, where it terminates in a point. It is attached, by its inner edge, to the spinous processes of the five first dorsal vertebræ; to that of the 7th cervical, and to the inferior part of the posterior cervical ligament. By its upper extremity, it is attached to the transverse processes of the two first cervical vertebræ, to the mastoid process, and to the posterior surface of the occipital bone. Some have considered this muscle to be formed of two portions which they have called *Splenius*

colli, and *Splenius capitis*. The splenius extends the head, inclines it, and rotates it. If the splenii of each side act together, they extend the head.

SPLENOCELE, from *σπλην*, 'the spleen,' and *κηλη*, 'a tumour.' Hernia formed by the spleen.

SPLENOGRAPHY, from *σπλην*, 'the spleen,' and *γραφη*, 'a description.' A description of the spleen.

SPLENOL'OGY, from *σπλην*, 'the spleen,' and *λογος*, 'a discourse.' A treatise on the spleen.

SPLENON'CUS, *Megalosple'nia*, from *σπλην*, 'the spleen,' and *ογκος*, 'a tumour.' Tumefaction of the spleen.

SPLENOPAREC'TAMA, from *σπλην*, 'the spleen,' and *παρεκταμα*, 'excessive volume.' Excessive enlargement of the spleen. —Ploucquet.

SPLENOT'OMY, *Splenoto'mia*, from *σπλην*, 'the spleen,' and *τεμνω*, 'I cut.' Dissection of the spleen.

SPLINT, Teut. *Splinter*, from *splijten*, 'to split:' *Hastel'la*, *Ass'ula*, *Asser'culum*, *Plag'ula*, *Narthex*, *Ferula*. (F) *Attelle*, *Éclisse*. A flexible and resisting lamina of wood, used in the treatment of fractures, to keep the fragments in apposition, and prevent their displacement. Splints are made of iron, wood, bark of trees, leather, pasteboard, &c. They are generally padded, and are fixed by a roller or by tapes, according to circumstances.

SPLINTER, (F) *Esquille*. Same etymon. This term is, sometimes, applied to a small portion of wood, which occasionally enters the skin, and gives occasion to much irritation, until it is removed.—*Aculeus lig'neus*, (F) *Echarde*.

It is, also, applied to fragments that separate from a fractured or diseased bone.

SPOLIATI'VA, from *spolio*, 'I take away.' *Phlebotomia spoliati'va*, (F) *Saignée spoliative*. Blood-letting, used for the purpose of diminishing the mass of blood.

SPONDYLAL'GIA, from *σπονδυλος*, 'a vertebra,' and *αλγος*, 'pain.' Pain in the vertebrae.

SPONDY'LUS, *σπονδυλος*. A vertebra; and, especially, the second cervical vertebra.

SPONGIA, *Spongos*, *Spongia officina'lis*, *Spongia Marina*, *Sponge*, (F) *Éponge*. An organized, marine substance, of the great class of Zoophytes, met with in many seas, but especially in the Mediterranean and Arabian. It is supple; elastic; porous; and capable of absorbing fluids in which it may be placed, and of thus increasing in size. It is employed, in surgery, for cleansing or washing; for absorbing acrid discharges from ulcers: suppressing hemorrhage, when the mouth of the vessel can be compressed by it; and for forming tents for dilating wounds, in which case, the sponge is immersed in melted wax, and cooled before being used. It

is then called *Prepared Sponge* or *Sponge Tent*.

The **SPONGIA USTA** or *Burnt Sponge* contains carbonate and phosphate of lime, carbonate of soda, charcoal, and iodine. It is used in bronchocele, scrophulous affections, and herpetic eruptions; and its good effects seem to be dependent upon the iodine, (q. v.)

SPONGIÆ LAPIS. A name given to small friable stones found in sponge. They were formerly esteemed lithontriptic.

SPON'GION, *σπογγιον*. Ancient name of an epithem made of goats' dung: and, also, of a malagma, which was considered capable of absorbing the serum in dropsies, like a sponge.—Paulus, Gorræus.

SPONTANEOUS, *Sponta'neus*. That which occurs of itself, or without any manifest external cause. Evacuations are termed *spontaneous*, which are not produced by medicine. *Spontaneous lassitude* is that, which is not the result of fatigue. Diseases are, also, *spontaneous*, which supervene without apparent cause.

SPORADIC, *Spor'ades*, *Sporad'ici*, *Morbi disper'si*, *Morbi sparsi*. Diseases are so called, which supervene indifferently in every season and situation, from accidental causes, and independently of any epidemic or contagious influence.

SPRAIN, corrupted from *strain*:—*Subluxa'tio*, *Distor'sio*, *Dias'trophe*, *Diastrem'ma*, *Exarthre'ma*, *Exarthro'sis*, *Stremma*, *Thlasma Stremma*; a wrench, (F) *Détorse*, *Entorse*, *Foulure*. A violent straining or twisting of the soft parts surrounding the joints. According to the degree of the sprain, the fibrous parts of the joint may be simply stretched, or they may be ruptured. This affection, which has been regarded as an incomplete luxation, occurs, particularly, in the ginglymoid joints;—as in the foot, wrist, knee, &c. The violence causes an afflux of blood; the serum of the blood is poured out, and, often, the blood itself, owing to the rupture of vessels: and inflammation arises, which ends in resolution or induration.

Local, antiphlogistic applications are required, with perfect rest; and, when the inflammatory action has subsided, cold pumping and friction, with the application of a plaster and bandage will afford support, till the parts affected recover their due tone.

SPRUCE BEER, *White Spruce Beer*. A beer, made as follows. To 10 gallons of water add six pounds of sugar, and 4 oz. of essence of spruce. Add yeast; and bottle, when ready. It is grateful and antiscorbutic.

SPRUCE BEER POWDERS may be formed of white sugar, 3j and ʒij; *sodæ subcarb.*, gr. xxvj; *essence of spruce*, gr. x, in each blue paper; and *acid of tartar*, 3ss, in each white paper. For half a pint of water.

SPUR, Sax. *rpun*, (F) *Éperon des Artères*. The angle, at which the arteries leave a cavity or trunk.

SPUTUM, *Sputa'men*, *Pty'elon*, *Spit*, (F)

Crachat. The substance, ejected from the mouth in the act of spitting. It is composed of saliva, and of the mucus secreted by the mucous membrane of the nasal fossæ and fauces, and by the membrane of the larynx and bronchi. The sputa are, sometimes, called *æruiginous*, when of a greenish-yellow colour; *gummy*, when they resemble a thick solution of gum; *frothy*, (F) *Mousseux*, when covered with froth; *rubiginous*, (F) *Rubigineux* ou *rouillés*, when of a reddish-yellow; and *streaked*, (F) *Striés*, when mixed with lines of blood.

SQUAMOUS, *Squamo'sus*, from *squama*, 'a scale.' That which relates to a scale.

The **SQUAMOUS PORTION** of the temporal bone, (F) *Portion squameuse* ou *écailleuse du Temporal*, is the upper part of the temporal, so called from a fancied resemblance to a scale.

The **SQUAMOUS SUTURE**, *Sutu'ra squamo'sa*, *S. mendo'sa* seu *lepidoei'des* seu *lepidod'es*, (F) *Suture squameuse* ou *écailleuse*. The suture, which unites the squamous portion of the temporal bone with the parietal.

Certain *scaly* cutaneous affections are also called *squamous*, (F) *squameux*. See *Scale*.

STAFF, (D) *Staf*. An instrument of great importance in lithotomy;—being the director for the gorget or knife. It is made of steel; and the handle is flat and rough, in order that it may be more securely held: The groove is on its convex surface.

STAGE, (F) *Estage*, *étage*, *Sta'dium*, *Stade*. The period or degree of a disease: especially the period of an intermittent:—as the *cold stage*, *hot stage*, &c.

STA'GIUM. The sixth part of an ounce.

STAGMA, from *σταζω*, 'I distil.' *Stalag'ma*. Any distilled liquid or liquor.

STAGNA'TION, *Stagnatio*, from *stagna're*, 'to form a pond.' Accumulation and retardation of fluids in any part of the body.

STAHLIAN. One who follows the doctrine of *Stahl*.

STAHL'IANISM. The doctrine of *Stahl*, which considered every vital action under the direction and presidency of the soul.

STAPE'DIUS, *Stapes*, *Pyramidal-stapé-dien*. A muscle of the middle ear, which draws the stapes obliquely upwards. (F) *Stapédien*.

STAPES, (F) *Étrier*. The innermost of the small bones of the ear, so called because it resembles a stirrup. It is situate horizontally in the cavity of the tympanum. Its head, which is directed outwards, is articulated with the os orbiculare. Its base faces inwards, and is applied to the fenestra ovalis, which it closes imperfectly, and to which it is united by a membrane. Its *branches* are one *anterior*, and the other *posterior*. They are curved; and the space between them is parabolic.

Surgeons have given the name *Stapes* to a bandage, used in bleeding from the foot; which forms a figure of 8 round the ankles.

STAPHYLEPAR'TES, from *σταφυλη*, 'the uvula,' and *επαίρω*, 'I lift up.' *Staphylagra*. An instrument for laying hold of, and removing, the uvula.—Paulus.

STAPHYLO'MA, from *σταφυλη*, 'a grape.' *Uva'tio*, *Myoceph'alon*, *Parop'sis* *Staphylo'ma*, *Staphylo'sis*, *Polygro'ma*. A name given to different tumours of the anterior surface of the globe of the eye.

STAPHYLOMA OF THE CORNEA is an unequal, embossed, bluish or whitish, round or conical tumour; of variable size; formed by the projection of the transparent cornea, which is sometimes extenuated and distended, at others thickened.

STAPHYLOMA OF THE SCLEROT'IC differs from the last, in the prominence existing on a part of the eye covered by the sclerotic, which is much thinner.

STAPHYLOMA OF THE IRIS is the disease, described by Scarpa under the name *Procidencia Iridis*. It is hernia of the iris, through an accidental opening in the cornea.

STAPHYLON'CUS, *Staphylon'cia*, from *σταφυλη*, 'the uvula,' and *ογκος*, 'tumour.' Tumefaction of the uvula.

STAPHYLEDE'MA, *Angi'na uvula'ris*, *Dyspha'gia uvulo'sa*, *Hypostaph'yle*, *Prolap'sus u'vulae*, *Ædema uvulae*, *Produc'tio uvulae a pitui'ta*, *Craspedon*. Relaxation of the uvula, which, either from inflammation or infiltration, hangs down so as to occasion difficult deglutition, cough, &c. Scarification, astringent gargles, and, if necessary, excision, constitute the treatment.

STAPHYLOR'APHY, *Velosynth'esis*, *Staphylorrhaphia*, *Kionorrhaphia*, *Uranorrhaphia*, *Uraniskorrhaphia*, from *σταφυλη*, 'the uvula,' and *ραφω*, 'a suture.' The operation for uniting a cleft palate. It consists in paring the edges of the cleft; passing ligatures through them, and bringing them together.

STASIS, *στασις*, from *σταω*, 'I stop.' This word has nearly the same signification as stagnation. Stagnation, however, sometimes includes a morbid condition of the fluids,—Stasis never.

STATIC. An epithet applied to the physical phenomena of organized bodies, in contradistinction to the organic or vital.

STATICÉ LIMON'IUM, *Behen rubrum*, *Limo'nium*, *L. majus*, *Behen*, *Staticé Carolina'na*, *Sea Lav'ender*, *Red Behen*, *Behmen Ackmar*, *Marsh Rosemary*, *Lavender Thrift*, (F) *Behen rouge*. Family, *Plumbaginæ*. Sex. Syst. Pentandria Pentagynia. The roots have been esteemed astringent, tonic, and eminently antiseptic.

STATION, *Statio*, *Stasis*, *Status*, from *sto*, 'I stand.' The act of standing.

STA'TIONARY, *Stationa'rius*, from *stare*, 'to stand.' A name given by Sydenham and Stoll to certain diseases, which depend upon a particular state of the atmosphere; and which prevail in a district for a certain number of years; and then give way to others.

STATISTICS, MEDICAL. That part of Medicine, which relates to the detail of facts connected with the mortality, salubrity, &c. of different countries and situations.

STATURE, *Statu'ra, Meg'ethos.* The height of the human figure. The following table exhibits the results of several admeasurements on the authority of Mr. Lawrence, with the heights of some of the monkey species.

	Stature.	
	Feet.	In.
An Englishman	{ 6	4 1-2
	{ 5	00
An Englishwoman	{ 5	4
	{ 5	00

Camper's Do.	less than	30
Mr. White's Monkey	2	2

STAXIS, *Apostax'is.* A slight epistaxis or nasal hemorrhage.—Hippocrates.

STEATOCE'LE, from *στέις*, 'suet,' and *κῆλη*, 'a tumour.' A tumour formed by a collection of steatomatous matter in the scrotum.

STEATO'MA, *στέατωμα,* from *στέις*, 'suet.' *Seva'tio, Steato'sis, Emphy'ma encystis steatoma.* An encysted tumour, whose contents are similar to fat.

STEGANOP'ODES, *στεγανόποδες, Planip'edes.* They who have flat feet, or are web-footed, from *στεγανός*, 'covered,' and *πούς*, 'foot.'

STEGNO'SIS, *Constipa'tio, Stipa'tio, Condensa'tio, Obstruc'tio,* from *στεγνώνω*, 'I constrict.' Constriction of the pores and vessels. Constipation. Suppression of the evacuations.

STELLA, *Fascia stella'ta,* (F) *Étoilé.* A bandage, improperly compared to a star, because it is crossed like the letter X. This bandage is applied upon one or both shoulders. In the first case, it is called *simple*; in the second, *double*. It was employed in cases of fractures of the sternum, clavicle, scapula; in luxations of the humerus, &c.

STENOTHORA'CES, from *στενός*, 'narrow,' and *θώραξ*, 'the chest.' They who have narrow chests.

STENTOROPHO'NUS, *στέντοροφωνός,* from *Στέντωρ*, *Stentor*, a Greek in the army before Troy; and *φωνή*, 'voice.' One who has a strong voice.

STEPHENS, MRS., REMEDY FOR THE STONE. This consisted of lime, pre-

pared by calcining the shells of eggs and snails, made into pills with soap. A decoction was, also, administered, consisting of chamomile, fennel, parsley, and burdock, with a portion of Alicant soap. Its virtues were dependent upon the lime and the tonic properties of the decoction. Hales, Hartley, Kirkpatrick, Lobb, and others wrote in favour of this nostrum; and it was ultimately bought by the British Parliament for £5000!

STERCORA'CEOUS, *Stercora'rius,* from *stercus*, 'dung.' (F) *Stercoraire, Stercoral.*

The French use the term *Fistules stercoraires* for those, which are kept up by the constant passage of fecal or *stercora'ceous* matter.

The name *Stercoraires* is sometimes given, in derision, to those physicians, who are fond of purging their patients: *à posteriori* has been similarly used.

STEREOT'ICA, from *στερεός*, 'hard.' Fortuitous lesions or deformities affecting the hard parts. The 2d order, class *Tychica* of Good.

STERILITAS, *Agon'ia, Steiro'sis, Stiro'sis, Agenne'sia, Steril'ity, Acye'sis, Bar'renness, Apho'ria, Atec'nia, Acie'sis.* Quality of that which is barren. Sterility may be *absolute* or *relative*. The former depends upon some vitious conformation of the genital organs, apparent or concealed; and, occasionally, admits of cure. Sterility is *relative*, when a female does not conceive with one individual, but does with another. Sterility, in females, is often dependent upon a condition of the uterus, characterized by membranous menstruation.

STERNO-CLAVIC'ULAR, *Sterno-clavicular'is.* That which relates to the sternum and clavicle.

The STERNO-CLAVIC'ULAR ARTICULATION is the union of the inner extremity of the clavicle with a round facette at each side of the superior extremity of the sternum. In this articulation there are, besides the incrusting cartilages, two *radiated sterno-clavicular*, (F) *Sterno-claviculaires rayonnées*; one anterior, and one posterior;—an *inter-clavicular ligament*, extending between the two clavicles, and two synovial capsules, separated by an *inter-articular fibro-cartilage*. The costo-clavicular ligament may, also, be considered to belong to this articulation.

STERNO-CLEIDO-MASTOIDEUS, *Sterno-mastoideus, Cleido-mastoideus, Mastoideus, Sterno-clavio-mastoïdien, Mastoideus anterior;* (F) *Sterno-mastoïdien*; from *στερνόν*, 'the sternum,' *κλείς*, 'the clavicle,' and *μαστός*, 'the mastoid process.' A muscle situate at the anterior and lateral part of the neck. It is long and flattened: simple, above; and divided into two portions below; where it is inserted into the anterior and superior part of the sternum, and the inner quarter of the clavicle. Above, it terminates at the mastoid process,—which it embraces,—at the neigh-

bouring part of the temporal bone, and at the outer third of the upper curved line of the occipital bone. It carries the head forward; inclines, and rotates it to one side. When both contract, they bend the head directly forwards.

STERNO-HYOIDEUS, *Sterno-cleido-hyoideus*, *Sterno-hyoïdes*, *Hyoïdes primus*; from *στέρον*, 'the sternum,' and *υοιδης*, 'the os hyoides.' A muscle, situate at the anterior part of the neck; inserted, above, at the inferior edge of the body of the hyoid bone; below, into the upper part of the posterior surface of the sternum;—at the posterior part of the sterno-clavicular articulation, and sometimes into the cartilage of the first rib. It depresses the os hyoides.

STERNO-THYROIDEUS, *Sterno-thyroïdes*, *Bronchius*. A muscle, situate at the anterior part of the neck. It is attached, above, to the oblique line seen on the outer surface of the thyroid cartilage; and terminates, below, at the upper part of the posterior surface of the sternum, and the cartilage of the second rib. When it contracts, it depresses the thyroid cartilage and os hyoides, by the medium of the thyro-hyoid membrane.

STERNUM, *Sternon*, from *στερνος*, 'solid;' *Os asser seu pectoris seu xiphoides seu gladioli seu ensiforme*, *Scutum cordis*, *Breast Bone*. An azygous, symmetrical bone, situate at the forepart of the chest. It is flat; broad above, narrower in the middle; and terminates, below, by a pointed cartilage—the xiphoid, (q. v.) It has an *anterior* or *cutaneous* surface, a *posterior* or *mediastinal*;—a *superior* or *clavicular extremity*, and an *inferior* or *abdominal*. It is articulated with the clavicles and the seven upper ribs on each side, by means of their cartilages. According to Bèclard, it is formed of six principal bones, which he names, from their position, 1. *Primi-sternal* or *clavi-sternal*: 2. *Duo-sternal*: 3. *Tri-sternal*: 4. *Quarti-sternal*: 5. *Quinti-sternal*: 6. *Ultimi-sternal* or *ensi-sternal*.

STER'NUTATORY, *Sternutato'rius*, from *Sternutamen'tum*, *Errhi'num*, *Ptar'micum*, (F) *Sternutatoire*; from *sternuta'rē*, 'to sneeze.' A substance, which provokes sneezing;—as tobacco, &c.—See *Errhine*.

STERTOR, *Ronchus* or *Rhonchus*, *Renchus*, *Rhenchus*, (F) *Sterteur*. That deep snoring, which accompanies inspiration, in some diseases,—particularly in apoplexy. Such respiration is said to be *stertorous*.

STETH'OSCOPE, from *στήθος*, 'the chest,' and *σκοπεω*, 'I examine.' An instrument, invented by Professor Laennec, of Paris, for exploring the chest. The stethoscope, sometimes called *Pectoriloque*, is a cylinder of wood, from four inches to a foot long; pierced through and through by a longitudinal canal about a quarter of an inch in diameter. The longer are generally composed of two portions, that fit together by

means of a screw; and one of which is hollowed at the extremity, in the shape of a funnel. These two portions being screwed to each other, the physician lays hold of the instrument, as he would of a pen, puts the funnel-shaped extremity on the chest of the patient, and applies his ear to the other end. To explore the pulsations of the heart, the funnel is plugged up by a piece of the same kind of wood accurately adapted to it, and pierced by a canal of the same width as that in the body of the instrument. This mode of examining affections of the chest, &c. is what Laennec terms, *Auscultation médiate*,—*Mediate Auscultation*.

STHENIA, *Steni'a*, *Diathesis stheni'ca*, *Status sthen'icus*, from *σθένος*, 'strength,' 'power.' Excess of strength; excitement of the organic actions. A word used, especially by the Brunonians,—as well as *Asthenia*,—its antithesis. *Sthenic* or *dynamic diseases* are such as depend upon excessive excitement.

STILLICIDIUM, *Substil'lum*. This term is often used synonymously with *Strangury*. It means the flow of any fluid—particularly of the urine—drop by drop. Also, a kind of embrocation, effected by dropping the liquid upon the part.

STIMATO'SIS, *Stymatosis*, *Hæmorrhægia Penis*, *Stymatorrhæ'gia*, *Phallorrhæ'gia*, from *στυμα*, 'priapism.' Hemorrhage from the male organ: accompanied, or not, with priapism.

STIMULANT, *Stim'ulans*, *Ex'citans*, *Excitant*. A medicine, which has the power of exciting the organic action of the different systems of the economy. Some stimulants are *diffusible*; i. e. have a prompt but temporary action; others are *permanent* or *persistent*. The action of stimulants is called *Stimulation*.

The chief stimulants are the following:

<i>Æther Sulphuricus</i> ,	<i>Nux Vomica</i> ,
<i>Ammonia</i> ,	<i>Olea Essentialia</i> ,
<i>Assafœtida</i> ,	<i>Opium</i> (in small dose,)
<i>Brucina</i> ,	<i>Piper</i> ,
<i>Camphora</i> ,	<i>Sinapis</i> ,
<i>Capsicum</i> ,	<i>Strychnina</i> ,
<i>Castoreum</i> ,	<i>Zingiber</i> ,
<i>Cinnamomum</i> ,	_____
<i>Copaiba</i> ,	<i>Alcohol</i> ,
<i>Cubeba</i> ,	<i>Caloric</i> ,
<i>Guaiacum</i> ,	<i>Electricity</i> ,
<i>Hydrargyri Præparata</i> ,	<i>Mental Emotions</i> , (the
<i>Iodinum</i> ,	<i>Impetuous</i> .)

STIMULUS, 'a goad.' *Incitamen'tum*, *Incita'tio*. Any thing, which excites the animal economy.

STOCKING (LACED), (F) *Bas lassé*. A bandage used by surgeons, which consists of a stocking made of firm cloth or dogskin, admitting of being tightly laced anteriorly. It is employed in varices and ulcers of the legs.

STOMAC'ACE, *Stomal'gia*, *Labrisul-*

cium, *Cheiloc'ace*, *Uloc'ace*, *Cheilomala'cia*, *Stomatono'ma*, *Stomatonecro'sis*, from *στομα*, 'the mouth,' and *κακος*, 'evil:' *Cancer Oris*, *Canker*. Fætor of the mouth, with a bloody discharge from the gums. (F) *Cancer aquatique*. See *Cancer Aquaticus*. Also, *Scurvy*.

STOMACH, *Stom'achus*, *Ventric'ulus*, *Nedys*, *Anocœ'lia*, *Gaster*, (F) *Estomac*. One of the principal organs of digestion. It is a musculo-membranous reservoir; continuous, on the one side, with the œsophagus; on the other, with the duodenum. It is situate beneath the diaphragm, between the liver and the spleen; and occupies the epigastrium and a part of the left hypochondrium. In it the food is converted into chyme.

When viewed externally, the stomach has, 1. An *anterior face*, which looks a little upwards. 2. An *inferior face*, directed downwards. 3. An *inferior or colic margin*, which is convex and extensive, and is called the *greater curvature*, (F) *Grand courbure*. It gives origin to the omentum majus. 4. A *superior or diaphragmatic margin*, which is shorter, concave, and is called the *lesser curvature*, (F) *Petite courbure*. The lesser omentum is attached to this. 5. A *left or œsophageal orifice*, called, also, the *cardia*, *Os ventric'uli* or *upper orifice*. 6. A *right or intestinal, or inferior orifice*, called the *pylorus*. 7. A considerable dilatation, situate to the left of the cardia and greater curvature—the *great tuberosity of the stomach*: and, 8. A less extensive dilatation, situate to the right of the greater curvature:—the *lesser tuberosity* or *lesser cul-de-sac*, *Antrum Pylori*.

The inner surface of the stomach is of a reddish-white colour, and has a marbled appearance. It is constantly covered by a thick mucus, and is lined by a mucous membrane, which presents numerous wrinkles.

The parietes of the stomach consist of three membranes in superposition. The outermost is serous; and is an extension of the peritoneum; the middle coat is *muscular*,—some of its fibres running longitudinally; others, transversely: the innermost membrane is of a mucous nature, but not exactly a continuation of the membrane that lines the œsophagus. The mucous and muscular membranes form, at the pylorus, a valve, called the *Pyloric valve*. These three coats are united by a dense, close, cellular membrane; and, between the mucous and muscular coats, along the two curvatures especially, is a quantity of muciparous glands, called *Glands of Brunner*.

The arteries of the stomach are very numerous, and proceed from the coronaria ventriculi, the pyloric, splenic, and right and left gastro-epiploic. The veins have the same name, and pursue the same course as the arteries. They pour their blood into the trunk of the vena porta. Its lymphatic vessels are very numerous, and pass into ganglia, situate along the two curvatures. The

nerves of the stomach proceed from the pneumogastric, and three divisions of the celiac plexus.

STOM'ACHAL, *Stomach'ic*, *Cardiacus*, *Stomach'icus*, *Stomacha'lis*, from *στομαχος*, 'the stomach,' (F) *Stomacal*, *Stomachique*. That which belongs to the stomach; that which is good for the stomach; which strengthens the stomach. A medicine that gives tone to the stomach.

STOMACHUS, *στομαχος*. This word has been used in several different acceptations; e. g. for the œsophagus, for the cardiac orifice of the stomach, and for the stomach itself. Hippocrates calls the neck of the bladder *στομαχος κυστιως*; and the neck of the uterus, *της μητρας στομαχος*.

STOMACH-PUMP. A useful instrument for conveying fluids to the stomach, when deglutition is impracticable, and for pumping up the contents of the stomach.

It consists of a forcing syringe, to the bottom and nozzle of which flexible tubes can be attached. When the object is to force fluids into the stomach, the stomach-tube must be attached to the nozzle, and passed down the throat,—the tube connected with the bottom of the syringe being placed in the fluid to be injected. To empty the stomach, the stomach-tube must be attached to the bottom of the instrument.

This instrument has been of great service where poisons have been taken. The antidote, when any exists, and is at hand, should be administered immediately prior to its use.

The stomach-pump was first employed in America by Dr. Physick, in the year 1812.

STOMAL'GIA, from *στομα*, 'mouth,' and *αλγος*, 'pain.' Pain in the mouth.

STOMAT'IC, *Stomaticus*, from *στομα*, 'mouth.' A medicine used in diseases, &c. of the mouth. Dentifrices, masticatories, &c. are stomatics.

STOMATOPA'NUS, from *στομα*, 'the mouth,' and *πανος*, 'a glandular tumour.' *Stomatophy'ma glandulosum*, *Panus Fau'cium*. Tumefaction of the glands of the mouth.

STOMATOPHY'MA, from *στομα*, 'the mouth,' and *φυμα*, 'a swelling.' A swelling in the mouth.

STOMATORRHA'GIA, (F) *Hémorrhagie buccale*, from *στομα*, 'the mouth,' and *εργυνμι*, 'I break out.' Hemorrhage from the mouth. *Stomorrhag'ia*.

STOREY'S WORM CAKES. An empirical preparation, formed of *calomel* ℥ j, *jalap.* 3 j, *zingib.* ℥ ij, *sacch.* 3 j, *cinnab. antim.* q. s. to colour them; *syrup. simpl.* q. s. to make into cakes.

STOVE. Old French *Estuve*, *Stupha*; a *Stew*, *Æstua'rium*, (F) *Étuve*. A limited space, warmed artificially, and in which the air is slowly renewed. It is used for drying various substances, as plants, extracts, conserves, &c. or for taking vapour baths. In this case, the *stew* or *stove* is said to be *wet*.

or humid: in the opposite case, it is said to be dry, (F) *sèche*. The latter, which is used by the Turks, is the *Laconicum* or *Calidarium* of the Romans. The former is their *tepidium* or *vaporarium*. These kinds of baths greatly excite the cutaneous transpiration; and are valuable agents in rheumatic and other affections.

STRABISMUS, *Strabilismos*, *Paropsis* *Strabismus*, from *στραβίζω*, 'I squint.' *Strabositas*, *Distor'sio*, *Lusitas*, *Illo'sis*, *Squinting*, *Goggle Eye*, (F) *Strabisme*, *Vue louche*, *Louchement*. Want of concordance of the optic axes. It may be dependent upon natural or acquired inequality in the action of the motory muscles of the eye; on a convulsive state of one of those muscles; a difference in the sensibility of the two eyes; or a cerebral affection.

In the treatment, if the disease seems to depend upon an excess of strength, in one of the motory muscles, we must endeavour to give tone to that which is too weak: by placing, before the eye, a mask having a small aperture on the side to which it is necessary to direct the pupil: or by wearing glasses, provided with a piece of looking-glass, on the side to which the eye is vitiously turned: so that the reflection may be inconvenient, and occasion the organ to be turned in an opposite direction: or by putting a black patch on the angle opposite to that to which the eye is turned. If owing to weakness in the organ, it must be strengthened by being exerted alone, and by leaving the other at rest. If the disease be symptomatic of cerebral affection, attention must, of course, be directed to the latter.

Those, affected with Strabismus, are called, *Strabi*, *Strebli*; in French, *Louches*, *Bigles*.

To **STRAIN**, *Cola'rê*, (F) *Couler*. To pass decoctions, infusions, &c. forcibly through linen; also, to exert an effort. This is accomplished by fixing firmly the parts where the muscles to be exerted originate, in order that their full power may be developed.

STRANGALIDES, from *στραγγιζω*, 'I torment.' Small, hard tumours, which form in the breast, when the milk does not find issue.

STRANGULATION, *Strangulatio*, *Pnix*, *Pnig'mos*, (F) *Etranglement*, *Strangulation*. State of a part too closely constricted. Thus we say that there is *strangulation* of an intestinal hernia, when the opening, that gives passage to the portion of protruded intestine, contracts, so as to intercept the continuity of the digestive canal.

In *Legal Medicine*, it means the forcible obstruction of the air-passages, by a ligature or by the hand for criminal purposes. See *Suffocation*.

STRANGULATION, UTERINE, *Strangulatio uterina*, *Suffocatio uterina*, *S. hystérica*, *Præfoca'tio*. The sense of suffocation, which often accompanies attacks of hysteria.

STRAN'GURY, *Strangu'ria*, *Paru'ria stillati'tia*, from *στραγγ*, 'a drop,' and *ουρον*, 'urine:' *Dysu'ria* (q. v.); *Urinæ Stillicid'ium* vel *substil'lum*. Extreme difficulty in evacuating the urine, which issues only drop by drop, and is accompanied with heat, pain, tenesmus at the neck of the bladder, &c. See *Ischuria*, and *Retention*.

STREATHAM, MINERAL WATERS OF. Streatham is a village near London. The waters are a saline cathartic.

STREPITO'SUS MORBUS. A kind of flatulent disease, said by Sorbait to be not uncommon in the Austrian Alps, in which emphysematous tumours form on different parts of the body,—accompanied by sonorous excretions of gas by the mouth and anus.

STRICTURE, *Strictu'ra*, from *stringere*, 'to tie hard.' *Coarcta'tio*, (F) *Rétrécissement*. A diminution or contracted condition of some tube or duct, as the œsophagus, urethra, &c. This must be dilated by appropriate bougies. Strictures may, also, occur in the intestines, &c., when they are unmanageable;—with the exception of those of the rectum, which admit of topical applications.

STRIDOR DENTII, *Prisis*, *Prismos*, *Bryg'mos*, (F) *Grincement des dents*. Grinding of the teeth. A common symptom, in children, of gastric and other derangement; and often present, when there is no reason to suspect any.

STRIGIL, *Strig'ilis*, *Stlen'gis*, *Stel'ngis*. An instrument, anciently used in the baths, for scraping off the sweat.

STROBILITITES, from *στροβίλος*, 'a cone of the pine.' Wine impregnated with the cones of the pine.

STRON'GYLUS, from *στρογγυλος*, 'round.' Hippocrates, Chabert, and others mean the *Ascaris lumbricoïdes* by this term. The *Strongylus Gigas*, (F) *Strongle*, is, however, distinct. It has an obtuse, flat head: mouth surrounded with six flattish papillæ: the whole bursa of the male truncated: the tail of the female rounded. It is sometimes met with,—five inches, a foot, a foot and a half, and even three feet long,—and from two lines to half an inch in diameter. It is occasionally found in the human kidney: rarely, in other viscera; and, still more rarely in the intestinal tube.

STROPHULUS, *Licheni'asis*, *Exanthe'ma strophulus*, *Exor'mia strophulus*, *Red Gum*, *Red Gown*, *Tooth Rash*, *White Gum*. It consists of an eruption of red, or sometimes, whitish pimples; occurring in early infancy, chiefly about the face, neck, and arms, surrounded by a reddish halo; or interrupted by irregular patches of cutaneous blush. All the varieties, under this genus, arise in consequence of the extreme vascularity and irritability of the skin at this period of life, when the constitution is liable to be disturbed by irritation, either in the alimentary canal, gums, or other parts.

None of the eruptions are of any importance: and no medical treatment is usually necessary. If the stomach seems at all disordered, a little rhubarb and magnesia may be occasionally administered.

Willan and Bateman reckon five species,—the *Strophulus intertinctus*, *Red gum* or *gown*; the *S. albidus* or *white gum*; the *S. confertus* or *rank red gum*, *Tooth rash*; the *S. volatilis* or *Erythema volatilis*, and the *S. candidus*.

STRUCTURE, *Structura*, *Catasceuē*, from *struo*, 'I build.' The arrangement of the different tissues or organic elements, of which animals and vegetables are composed.

STRUTHIOPHAGUS, from *στρουθός*, 'the ostrich,' and *φαγω*, 'I eat.' Struthiophagous tribes still exist in some parts of Africa.

STRYCHNINA, *Strychnine*, *Strychnia*, *Vauqueline*. An alkaline principle; solid, crystalline, inodorous, bitter, and excessively poisonous, which has been discovered in the *Strychnos nux vomica*.

The medical action of strychnine on man and animals is exactly like that of the alcoholic extract of *nux vomica*. It is, however, more active. An eighth of a grain is sufficient to kill a large dog; and a quarter of a grain produces marked effects on the human body, when in health. It has been given in paralysis and other cases like the *nux vomica*. Dose, gr. one-twelfth to one-eighth.

The ACETATE OF STRYCHNINE (*Strychnini Acetas*, *Strychnium aceticum*), the Iodate (*Strychninum Iodatum*, *Strychnium Iodicum*), in the dose of one-eighth of a grain; the Nitrate (*Strychnini nitras*, *Strychnium nitricum*), and the Sulphate (*Strychnini Sulphas*, *Strychnium Sulphuricum*), have been given in the same cases as pure Strychnine.

STRYCHNOS NUX VOMICA, *Nux Vomica*, *Nux Metel'la*, *Caniram*. Family, *Strychnoidæ*. Sex. Syst. Pentandria Monogynia. (F) *Vomiquier*. A tree of the family *Strychnoides*, which grows in India, and the seeds of which have been long sold in the shops, under the names, *Nux vomica*, *Vomic nut*, *Poison nut*, *Bachelor's Buttons*, &c. (F) *Noix vomique*. For a long time, these seeds were used only for poisoning rats; but, of late years, an alcoholic extract has been prepared from them, which has been administered in paralytic affections, in small doses. Dose of the alcoholic extract, *Extractum nucis vomicæ spirituosum*, *E. nucis vomicæ resinosum*, *E. N. V. alcoholicum*, (F) *Extrait alcoolique de noix vomique*, one or two grains. It produces a kind of tetanic convulsion in the paralyzed parts, when given to the requisite extent. It has, also, been administered in chronic diarrhœa and dysentery.

The wood of the STRYCHNOS COLUBRINA, an Indian tree, contains strychnine. It was formerly considered a specific against the bites of venomous animals; and was recommended

by Boerhaave, in intermittents. It is the *Lignum Colubrinum*, (F) *Bois de Couleuvre*.

STUNNED. Old French *Estonné*, 'astounded.' (F) *Étonné*. An epithet, applied to one, who, in consequence of a fall or other accident, has received such a concussion of the brain, as to deprive him, for a time, of his mental manifestations.

STUPA, *Stuppa*, *Stupeion*, *στυπιον*. Tow, used in certain surgical apparatus and dressings. Also, a *Stupe*, i. e. cloth or tow used in fomentations. A flannel, wrung out of hot water, and applied to a part, is a *stupe*.

STUPOR, *Ecplexis*, *Consternatio*, (F) *Stupeur*. Diminished activity of the intellectual faculties; often, amounting to lethargy. It occurs in many affections, especially in the neuroses.

STUPRUM, *Rape*, (F) *Défloration*, *Viol*. Forcible and illicit enjoyment of a married or unmarried female. When committed upon the latter, which is most commonly the case, it is also called *Defloratio*, *Defloratio*, *Devirginatio*, *Vitiatio*, *Apanthismus*, &c. In judging whether rape has been committed, under such circumstances;—the state of the genital organs; the age of the individual; and the possibility of accidents and diseases of the parts—will have to be considered. It will be necessary, also, to be acquainted with the evidences of virginity; and to determine,—if signs of virginity no longer exist,—whether its loss is to be attributed to copulation, or to the introduction, into the vagina, of another body than the male organ, &c. *Recent deflowering* can be much more readily distinguished than that which has taken place for some time.

STYGMATES. M. J. Cloquet has proposed this word or *Stigmates* to designate the marks, in form of cicatrices, which remain on the peritoneum after the obliteration of the neck of the hernial sac. They are, commonly, radiated folds, of a whitish appearance, more or less thick, and of a fibrous or fibro-cartilaginous nature.

STYLO-CHONDRO-HYOIDEUS. A name given, by Douglas and Albinus, to a fleshy fasciculus, which the stylo-hyoid muscle sometimes presents, and which is attached to the lesser cornu of the os hyoides. It is the same fasciculus, which Santorini calls *Stylo-hyoïdes novus*, *Stylo-hyoïdes alter*.

STYLO-GLOSSUS. A muscle, situate at the anterior and superior part of the neck. It is narrow behind; much broader before; and is attached to the styloid process of the temporal bone, and to the stylo-maxillary ligament; and is inserted into the side of the tongue. It raises the base of the tongue, and carries it backwards.

STYLO-HYOIDEUS, *Stylo-hyoïdien*, *Stylo-cerato-hyoïdæus*, *Stylo-ceratoïdes*, *Stylo-hyoïdes major*. A muscle, situate at the superior, anterior, and lateral part of the neck. It is thin and narrow,—especially posteriorly:

anteriorly, it opens to give passage to the tendon of the digastricus. It is attached to the styloid process of the temporal bone, and to the body of the os hyoides. It raises the os hyoides, and carries it backwards.

The STYLO-HYOID LIGAMENT is a fibrous, flattened cord, which passes from the styloid process to the lesser cornu of the os hyoides.

The STYLO-HYOID NERVE is the second branch given off by the facial nerve.

STYLO-MASTOID, *Stylo-mastoïdæ'us*. That which relates to the styloid and mastoid processes.

The FORAMEN STYLO-MASTOIDÆUM or *F. Aquæduc'tus Fallo'pii*, (F) *Trou anonyme*, is situate at the inferior surface of the petrous portion of the temporal bone, between the styloid and mastoid processes. It terminates the aqueduct of Fallopius, and gives passage to the facial nerve.

The STYLO-MASTOID ARTERY arises from the posterior auricular, and, in some subjects, from the occipital. It enters the stylo-mastoid foramen; passes along the aqueduct of Fallopius, and spreads its ramifications on the mucous membrane of the tympanum, and in the mastoid cells, and semicircular canals; and terminates by anastomosing with a branch of the *Arteria meningæa media*, which enters by the *Hiatus Fallopii*. Murray has given the name—*Stylo-mastoid*—to the posterior auricular artery itself.

STYLO-MAX'ILLARY, *Stylo-maxilla'ris*. That which relates to the styloid process and jaw.

The STYLO-MAXILLARY LIGAMENT is a ligamentous, flat cord, extending between the styloid process and the angle of the jaw.

STYLO-PHARYNGÆ'US, *Stylo-thyro-pharyngien*. A muscle, situate at the anterior and lateral part of the neck. It is slender; thin, above; attached to the styloid process of the temporal bone, and terminates in the pareties of the pharynx, as well as at the posterior margin of the thyroid cartilage. It raises the pharynx, and carries it backwards. Prof. Chaussier has united, under the name *Stylo-pharyngien*, the three constrictor muscles of the pharynx, the stylo-pharyngæus, and palato-pharyngæus.

STYLOID, *Styliform*, *Styloï'des*, *Graphioï'des*, *Belonoï'des*, from *στυλος*, 'a style,' 'a peg,' 'a pin,' and *ειδος*, 'shape,' shaped like a peg or pin.

The STYLOID PROCESSES or *pencil-like Processes*, *Proces'sus Beloï'des* seu *Belemnoï'des* seu *Belonoï'des* seu *Graphioï'des* seu *Graphoï'des*, are, 1. A long and slender process of the temporal bone, to which are attached the stylo-glossus, stylo-pharyngæus, and stylo-hyoidæus muscles; and the stylo-hyoid and stylo-maxillary ligaments. 2. Two slender and pyramidal processes at the inferior extremities of the radius and ulna.

STYMATO'SIS, from *στυμα*, 'erection

of the penis.' Hemorrhage from the canal of the urethra.

STYM'MATA, *στυμματα*, from *στυμμα*, 'that which constricts or thickens.' The most solid ointments. Also, the ingredients proper for increasing their consistence.

STYPTICS, *Contrahe'n'tia*, *Constricti'va* *Medicamen'ta*, *Constringen'tia*, *Anastal'tica*, from *στυβα*, 'I constringe.' Sometimes, used synonymously with astringent: generally, applied to a substance, employed to arrest hemorrhage;—*Enæ'mon*.

A *mechanical styptic* is one that arrests the flow of blood, by being applied immediately to the mouth of the bleeding vessel, or by inducing a coagulum, *mechanically*, in the vessel.

A *chymical styptic* is one, which coagulates, *chymically*, the blood around a bleeding orifice.

EATON'S STYPTIC. A name, first given to *Helvetius's Styptic* when introduced into Great Britain. It is now usually made of *calcined green vitriol*, 3j; *proof spirit*, tinged with a little oak bark, ℞ ij.

STYRAC'INUM O'LEUM. Oil, obtained by boiling storax in good olive oil.

STYRAX, from *στυραξ*, 'a reed,' in which it was preserved. A resin, obtained from the *Styrax officina'le*, and *S. calami'ta*. It is the *solid storax*;—*officinal storax*. There are two kinds of storax, met with: 1. The *Red Storax*, *Gum Storax*, *Thus Judæo'rum*, *Styrax rubra*, *Styr'acis balsamum*, *Balsamum styracis officinalis*, which is obtained, by incision, from the *Styrax officina'le*, and, perhaps, from the *Liquidam'bar orienta'lis*. The purest is in tears; but it has lost some of its smell in drying. 2. *Common Storax*, *Styrax calami'ta*. That which has been received in reeds or vessels, and has had sawdust added immediately to thicken it.

The odour of storax is fragrant: the taste aromatic. It is considered, like the other balsams, to be stimulant and expectorant, but is rarely used alone.

The PU'RIFIED STORAX, *S. cola'ta*, *S. purifica'ta*, is prepared by heating the storax, and pressing it in bags, between hot iron plates. Dose, gr. x. to xxx.

SUB. A common Latin prefix, signifying 'beneath.'

SUBAC'TIO, *Chiro'sis*, *χυραγος*. The operation of making plasters with the hand, pestle, and mortar.

SUB-ATLOIDÆ'US, *Infra-atloïdæ'us*, (F) *Sous-atloïdien*. That which is situate beneath the atlas or first cervical vertebra. Chaussier has given this name to the second pair of cervical nerves.

SUB-AXOIDÆ'US, *Infra-axoïdæ'us*, (F) *Sous-axoïdien*. That which is below the *axis* or *vertebra dentata*. Chaussier has given this name to the third pair of cervical nerves.

SUBCLA'VIAN, *Subcla'vius*, from *sub*,

'under,' and *clavis*, 'the clavicle.' That which is under the clavicle.

The SUBCLAVIAN ARTERIES, (F) *Artères sous-clavières*, are situate at the upper part of the chest, and the lateral and lower parts of the neck. The right arises at the corresponding side of the trachea, and comes off from the arteria innominata or brachiocephalic trunk. The left leaves the aorta at the end of the arch. Both extend as far as the superior surface of the first rib, in the space between the scaleni muscles, beyond which they take the name *axillary arteries*. The subclavian arteries run, for some distance, without sending off any branch. In the neighbourhood of the first rib, however, they give off, 1. *Upwards*, the *vertebral* and *inferior thyroideal*. 2. *Downwards*, the *internal mammary*, and *superior intercostal*. 3. *Outwards*, the *transverse cervical* or *posterior scapular*, the *superior scapular*, and the *posterior cervical* or *profunda*.

The SUBCLAVIAN VEINS, (F) *Veines sous-clavières*, succeed the axillary, and extend from the inferior extremity of the scalenus anticus, in front of which they pass, to the vena cava superior, which they form by their union. The right subclavian vein is very short: the left, longer and broader. These veins receive the mouths of the internal and external jugulars, vertebral, and superior intercostal. The left subclavian receives two veins more than the right,—the left internal mammary and left inferior thyroid. The thoracic duct opens into the left subclavian:—the corresponding great lymphatic vessel into the right.

The SUBCLAVIAN OR SUBCLAVIUS MUSCLE, *Subclavia'nus*, *Costo-claviculaire* (Ch.), (F) *Sous-clavier*, is situate at the superior and anterior part of the chest. It is attached, by its inner extremity, to the superior surface of the cartilage of the first rib; and by its superior margin and outer extremity to the inferior surface of the clavicle. This muscle depresses the clavicle, and carries it forward. When the shoulder is fixed, it can raise the first rib.

SUBCRUEN'TUS, *Hyphæ'mos*, *ὑφαίμος*. That which has the colour and nature of blood. An epithet given to certain excreted substances, which are mixed with blood, or have the appearance of blood.

SUBCUTA'NEOUS, *Subcutaneus*, *Intercuta'neus*, (F) *Sous-cutané*. That which is placed immediately under the skin.

SUB'DITA, *Subditi'tia*, *Pros'theta*. Medicines introduced into some one of the natural apertures;—as suppositories, pessaries, &c.

SUBER, *Cork*:—the bark of the *Quercus Suber* or *Cork Tree*, (F) *Liège*. *Family Amentaceæ*. *Sex. Syst.* Monœcia Polyandria. Cork, when burnt, is applied as a mechanical styptic to bleeding piles, &c. Surgeons use it for making tents; and it has been recom-

mended to be worn as an amulet to suppress the secretion of milk!

SUBFRONTA'LIS SUTU'RA. A suture, resulting from the articulation of the os frontis with the nasal process of the superior maxillary bone, and the proper bones of the nose.

SUBINFLAMMA'TION, *Subinflamma'tio*, *Inflammatiuncula*, *Hypophlegmasia*. A mild degree of inflammation, so slight as hardly to deserve the name *inflammation*.

Broussais understands by the term, an augmentation in the vital phenomena of the vessels that convey white blood. Lymphatic engorgements, scrophula, herpes, and cancer he considers subinflammations.

SUBINTRANTES FEBRES, *Communican'tes febres*. Fevers, primarily intermittent, whose paroxysms approximate, so that one paroxysm begins, before that, which preceded it, has gone through its stages.—L. Bellini.

SUBLIMA'TION, *Sublimatio*, *Meteoris'mus*, *Hypso'sis*, &c. from *subli'mo*, 'I raise up.' An operation, by which dry and solid matters are volatilized and condensed at the upper part of a subliming apparatus. The oxymuriate of mercury, sal ammoniac, &c. are commonly obtained by sublimation. The product of sublimation is a *Sub'limite*, *Sublimat'um*, (F) *Sublimé*.

SUBLI'MIS, 'high, elevated, superficial.' Anatomists have given the name *sublimis* to certain muscles; which are situate more superficially than their kindred muscles. These last they have called *profundi*. Of the former, the *flexor sublimis digitorum* is an example.

The French use the term '*respiration sublime*' for the respiration which is accompanied by considerable elevation of the ribs, with separation of the *alæ nasi* at the time of inspiration.

SUBLIN'GUAL, *Sublingua'lis*, (F) *Sous-lingual*, from *sub*, 'under,' and *lin'gua*, 'the tongue.' That which is seated under the tongue.

The SUBLINGUAL GLAND, *Glan'dula sublingua'lis*, *G. Bartholinia'na*, *G. Rivinia'na*, is seated in the substance of the inferior paries of the mouth, beneath the anterior part of the tongue. It is smaller than the submaxillary, of which it frequently seems to be only a prolongation. It is oblong, flattened, amygdaloid, and is covered by the mucous membrane of the mouth, beneath which it projects. This gland has 10 or 12 excretory ducts; *Ductus Rivinia'ni* seu *Waltheria'ni*, some of which open beneath the *frænum linguæ*, joining Wharton's duct, whilst others pierce the mucous membrane of the mouth separately. It has the same structure as the parotid.

The SUBLINGUAL ARTERY, with some, is the *Lingual*, (q. v.) With others, it is a branch, given off by the lingual opposite the *genio-glossus* muscle, which is distri-

buted, particularly to the sublingual gland, to the mylo-hyoid, and genio-glossus, muscles, &c.

SUBMAXILLARY, *Submaxilla'ris*, (F) *Sous-maxillaire*. That which is seated beneath the jaw.

The **SUBMAXILLARY GLAND**, *Maxillary Gland*, is a salivary gland, less than the parotid, seated at the inner side of the ramus and body of the inferior maxillary bone, in the triangular space between the two bellies of the digastricus. Irregularly ovoid, and flattened on three surfaces, it has the same aspect and organization as the other salivary glands. Its excretory duct is called *Wharton's Duct*, and terminates, at the side of the frænum linguæ, by a very small orifice. It is, also, called *Ductus inferior*.

The **SUBMAXILLARY GANGLION** is a small nervous ganglion, situate opposite the gland. It seems to be formed by the superior branch of the vidian nerve, and communicates with the lingual nerve of the inferior maxillary. Its filaments form a plexus, which penetrates the submaxillary gland.

SUBMENTAL, *Submenta'lis*, (F) *Sous-mental*, from *sub*, 'under,' and *mentum*, 'the chin.'

The **SUBMENTAL ARTERY** is furnished by the facial, near the base of the jaw. It passes forwards along the attachment of the mylo-hyoideus, to which it furnishes branches, that cross it, to anastomose with those of the sublingual. Near the median line it bifurcates, to be distributed to the chin and muscles of the infra-hyoid region.

The **SUBMENTAL VEIN**, which accompanies the artery, opens into the labial.

SUBMER'SION, *Submersio*, from *sub*, 'under,' and *mergo*, 'I plunge.' The act of plunging, or being entirely plunged, in a liquid.

Asphyx'ia by submersion or drowning, *Asphyxia Immer'sorum*, is not owing to a certain quantity of liquid being introduced into the alimentary or air-passages; but simply to the interception of air, and of the respiratory phenomena. It is a case of suffocation, the signs of which, on dissection, are equivocal, without circumstantial evidence.

SUBORBITAR, *Infra-orbital*, *Infra-orbita'lis*, *Infra-orbita'rius*, (F) *Sous-orbitaire*. That which is seated beneath the orbital cavity.

The **SUBORBITAR OR INFRA-ORBITAR CANAL**, (F) *Canal ou Conduit sous-orbitaire*, is a small canal, which runs obliquely through the substance of the inferior paries of the orbit. It begins, behind, by a simple gutter, and divides, anteriorly, into two branches;—one of which descends into the anterior paries of the Maxillary sinus, whilst the other passes out, in the canine fossa, by an orifice, called *Foramen infra-orbitarium*, (F) *Trou sous-orbitaire*. The infra-orbital artery and nerve pass along it.

The **INFRA-ORBITAR ARTERY** proceeds from the internal maxillary, from which it separates near the anterior and superior part of the zygomatic fossa. It enters the infra-orbital canal, and passes through it, giving branches to the anterior and superior dental canal; issues by the foramen infra-orbitarium, and divides, in the fossa canina, into a number of branches, which lose themselves in the neighbouring parts. The infra-orbital vein follows the same course.

The **INFRA-ORBITAR OR SUBORBITAR NERVES** seem to terminate the superior maxillary. They issue from the infra-orbital canal by the foramen of the same name, and spread out in a radiated manner in the fossa canina, to divide into *superior or palpebral filaments*, *inferior or labial*, *internal or nasal*, and *external or buccal*.

SUBSCAPULA'RIS, (F) *Sous-scapulaire*, from *sub*, 'under,' and *scap'ula*, 'the shoulder blade.' *Sous-scapula-trochinien*. That which is beneath the scapula.

FOSSA SUBSCAPULARIS. A considerable excavation at the anterior surface or venter of the scapula, in which the subscapularis is seated.

The **SUBSCAPULARIS MUSCLE**, *Immersus*, *Infra-scapularis*, *Sous-scapulo-trochinien* (Ch.), *Porte-feuille*, (F) *Muscle sous-scapulaire*. A muscle, situate in the preceding fossa. It is flat, broad, and triangular; is attached, by its base, to the subscapular fossa, and to the anterior lip of the edge of the spine of the scapula, and is inserted into the lesser tuberosity of the humerus. It carries the arm in rotation inwards. It can, also, depress it, and bring it towards the body.

SUBSTANTIVE, *Substanti'vus*. An epithet applied by Dr. Paris to aliments which are nutritious, in contradistinction to *adjective* aliments, which are themselves not possessed of nutritive virtues, but impart to the digestive organs greater energy, so as to enable them to extract more nutriment from the substantive aliments. Meat, for example, is a *substantive* aliment; the condiment, as mustard, eaten with it, an *adjective* aliment.

SUBSULTUS TEN'DINUM, *Clonus subsultus*, *Subsultus*, *Carpholo'gia spasmodica*, *Myopal'mus*, *Twitching of the Tendons*, (F) *Soubresaut*. Twitching, communicated to the tendons by the involuntary and instantaneous contraction of the muscular fibres. It is more observable at the wrist than elsewhere; and is an evidence of great cerebral irritability and debility, when it occurs at an advanced period of fever.

The muscular agitations or twitchings, observed in febrile diseases, especially of children, have been termed *Convulsibil'itas*, *Scelotyrbe febr'ilis*, and *Irritabilitas morbo'sa*.

SUBU'BERES, from *sub*, 'under,' and *ubera*, 'the breasts.' *Infantes sugentes*, *Sucking children*. Infants at the breast, in

contradistinction to the *Exuberes*, ἀπογαλακτοί, or those which have been weaned.

SUCCA'GO. The inspissated juices of plants—robs, jellies, &c.

SUCCEDA'NEUM, *Substitu'tum*, *Antemballom'enos*, *Quid pro quo*. An epithet for medicines, that may be substituted for others possessing similar properties.

SUCCI'NUM, *Elec'trum*, *Ambra*, *Ambra*, *Ampar*, *Bereni'cē*, *Amber*, *Yellow Amber*, (F) *Succin*, *Ambre jaune*. This substance, which is found on the shores of the Baltic, is composed of a resinous matter, of essential oil, and an acid, *sui generis*. It is inodorous, except when heated or rubbed. It is insipid; in fragments of a pale golden yellow colour; transparent, and has a shining lustre. S. G. 1.08: insoluble in water, and slightly acted on by alcohol. It is used for affording its essential oil—the *Oleum* or *Balsamum Succini*. This oil possesses stimulant, antispasmodic, diuretic, and rubefacient properties, (F) *Huile de Succin*.

The white amber, *Leucelec'trum*, (F) *Ambre blanc*, is a variety.

The **SUCCIN'IC ACID**, *Acidum Succini*, *A. Succinicum*, *Acor succineus*, *Sal Succini*, *Sal volat'ile Succini*, has been considered antispasmodic and diaphoretic, in the dose of from 5 to 20 grains.

SUC'CUBUS, from *sub*, and *cuba'rē*, 'to lie under.' Some authors have used this word synonymously with Nightmare. Others mean, by it, a female phantom, with which a man, in his sleep sometimes believes he has intercourse;—as *Incubus* has been applied to the male phantom, with which a female may dream she is similarly situate.

SUCCUS, *Juice*. The fluid, obtained by pressing plants, flesh, &c. It is, also, applied to certain animal fluids, as *S. gastricus*, &c.

SUCCUSSION, *Hippocratic Succussion*, *Succus'sio*. A mode of ascertaining the existence of a fluid in the thorax, by giving the body one or more slight shakes.

SUCKING, *Suctio*, *Suctus*, *Athelx'is*, *Bdal'sis*, *Myze'sis*, (F) *Succion*. The act of drawing liquid into the mouth, by forming a vacuum with the tongue acting as a piston, during inspiration.

To **SUCKLE**. *Lactare*, γαλακτοτρέφειν, τισιν θηλασσειν, (F) *Allaiter* ou *Alaiter*. To give suck. To nurse.

SUCTION POWER is the force exerted on the blood in the veins, by the active dilatation of the heart. See Derivation.

SUDAM'INA, *Hydro'a*, or *Hidro'a*, from *sudor*, 'sweat;' *Boa*. Small vesicles, which appear upon the skin, especially in the summer time, and in hot countries, and in diseases attended with much sweating. It is a miliary (q. v.) eruption.

SUDOR, *Hidros*, (F) *Sueur*. The product of cutaneous transpiration, when visible, on the surface of the body. It is colourless; of an odour more or less strong and variable;

and of a saline taste. It is composed, according to Berzelius, of water, lactic acid, lactate of soda united with a little animal matter, muriate of soda, and a little muriate of potassa, an atom of earthy phosphate, and some oxyd of iron.

SUDOR AN'GLICUS, *Hidron'osos*, *Hidropyretos*, *Febris sudato'ria*, *Morbus sudatorius*, *Ephem'era malig'na*, *E. sudatoria*, *E. Anglica pes'tilens*, *Sweating Sickness*, (F) *Suette*, *Sueur Anglaise*. A very severe epidemic disease, characterized by profuse sweating, which appeared in England in 1486; and recurred, at different times, until about the middle of the 16th century. It was accompanied with coldness; excessive prostration of strength; palpitation; frequency and inequality of the pulse, &c. and terminated favourably or unfavourably in the course of 24 hours.

The French have given the name **SUETTE DE PICARDIE**, *Sudor Picard'icus*, to an epidemic disease, which has appeared several times in that province; the principal symptoms of which were, profuse sweats, and a miliary eruption. The disease recurred in 1821, and has been described, at length, by M. Rayer, who considers it to consist of a simultaneous state of inflammation of various tissues; and proposes to class it with variola, scarlatina, and measles.

SUDOR CRUEN'TUS, *S. sanguin'eus*, *Hæmatidrosis*, *Ephidrosis cru'enta*. Cutaneous perspiration intermixed with blood. A very uncommon affection.

SUDORIFIC, *Sudorif'icum*, *Sudorif'erum*, *Hidrot'icum*, from *sudor*, 'sweat,' and *facio*, 'I make.' A medicine, which provokes sweating. See Diaphoretic.

The **FOUR SUDORIFIC WOODS**, *Quatuor ligna sudorifica*, were, formerly, *guaiacum*, *perfumed cherry*, *sarsaparilla*, and *sassafras*.

SUFFIMENTUM, *Hypocapnis'ma*, *Suffi'men*, *Thymia'ma*, *Suffi'tus*, *Suffumiga'tio*, (F) *Parfum*. A perfume.

SUFFOCATION, *Suffoca'tio*, *Præfocatio*, *Apopnix'is*, *Asphyxia*, (q. v.) Death, or suspended animation from impeded respiration, whether caused by the inhalation of noxious gases, drowning, hanging, strangling, or smothering. The principal morbid appearances in such cases are:—the lungs of a deep blue colour, with the blood extravasated in the air-cells; right auricle and ventricle filled with dark blood, as well as the neighbouring veins; lividity of the countenance, turgescence, and, perhaps, rupture of the vessels of the brain.

Treatment of suspended animation by suffocation in general. The patient must be conveyed into a room not too warm; and, if practicable, be immersed in a warm bath. Blood-letting must be used, if at all, with caution:—friction must be employed with salt or warm flannels:—stimulating fluids, in a dilute state, be poured into the stomach by means of a tube, and attempts be made to

inflate the lungs. Laryngotomy, if necessary.

SUFFOCATION, *Pnigophob'ia*, (F) *Etouffement*, is used for threatened suffocation, as *strangling* is. It means the state of dyspnoea and oppression, experienced when a sufficient quantity of air does not enter the lungs, or when the chemical phenomena of respiration are imperfectly executed;—as in cases of asthma.

SUGILLATION. A *bruise*. By most authors used synonymously with *Ecchymosis*. It is, also, applied to the spots or ecchymoses, which occur in consequence of intrinsic causes,—in disease and in incipient putrefaction. It is common in dead bodies. To this last case it is, indeed, restricted by some medico-legal writers: and an interesting question sometimes arises. Whether the appearance has been induced before death or afterwards? Whether it is a case of *ecchymosis* or of *sugillation*? In the former, the extravasated blood will usually be coagulated; not so in the latter. It is often, however, difficult to form a correct judgment, without reference to the history of the case.

SUICIDE, *Suicidium*; from *sui cædes*, 'murder of one's self.' The act of killing one's self. *Autoch'ria*, *Melancho'lia Suicidium*, *Autocton'ia*, *Idiocton'ia*. Suicide is, very frequently, the result of disease of the mind: the individual seeming, at times, to be irresistibly impelled to self-destruction.

SULCUS. A furrow. (F) *Sillon*. Anatomists have given this name to grooves on the surface of bones and other organs.

French writers, on anatomy, often use the term *Sillon* for the grooves, which lodge the arteries, and creep on the surface of bones; whilst those that receive veins are called *gouttières*, 'gutters.'

SULPHUR, *Sulfur*, *Scorith*, *Thei'on*, *Thi'on*, *Averich*, *Terra folia'ta*, *Fumus cit'rinus*, *Aquila*, *Brimstone*, (F) *Soufre*. The Native Sulphur is called *Rock Sulphur*, *Sulphur vivum*, &c. Sulphur, as we meet with it, is in rolls, *Sulphur in rot'ulis*, *S. rotundum*, *Roll Brimstone*. It is a volcanic production, and is obtained, in large quantities, from *Solfatara* in Italy. *Roll Sulphur* is impure sulphur, melted, and run into moulds. It is unpleasantly odourous, when heated or rubbed; insipid; solid, and brittle. S. G. 1.99. Fusible at 226°; volatilizable by heat, and condensing unchanged.

The **SULPHUR SUBLIMATUM**, *Sublimed Sulphur* or *Flowers of Sulphur*, (F) *Soufre sublimé*, *Fleurs de Soufre*, is the sulphur of commerce, sublimed in close vessels.

The **SULPHUR LOTUM**, *Sulphur sublimatum lotum*, *Washed Sulphur*, *Magisterium Sulphuris*, *Sulphuris Flores loti*, is prepared by pouring boiling water on sublimed sulphur, so as to wash away any acid it may contain, and then drying it.

The **SULPHUR PRÆCIPITATUM**, *Lac Sul-*

phuris, *Milk of Sulphur*, *Precipitated Sulphur*, (F) *Crème de Soufre*, is prepared by boiling sublimed sulphur and lime together, and adding muriatic acid to precipitate the sulphur.

Sulphur is possessed of stimulant, laxative, and diaphoretic properties. As a laxative, it is used in hemorrhoidal and other affections. In the itch, applied externally and taken internally, it may be considered as a specific; and it is a valuable remedy in most cutaneous affections, that are local. Dose, 3ss to 3ij.

The fæces or dregs, left in the purification or sublimation of sulphur, are called *Horse Brimstone*, *Dregs of Sulphur vivum*, *Sulphur caballi'num*, *S. vivum*, *Sulphuris vivi recremen'ta*. They are very impure, and are used only externally.

SULPHURIC ACID, *Ac'idum Sulfuricum* vel *Sulphuricum*, *Oleum Vitrioli*, *Spir'itus Vitrioli*, *S. V. fortis*, *Acidum vitriol'icum*, *Sulphuric Acid*, *Oil of Vitriol*, *Vitriol'ic Acid*, *Acidum Vitrioli dephlogistica'tum*, *Acor Sulphuris*. Sulphuric acid is inodorous: has a strong acid taste, and is corrosive. S. G. 1.850. It is escharotic, stimulant, rubefacient. Mixed with lard, it is sometimes used in local pains, and certain cutaneous affections.

The **ACIDUM SULPHURICUM DILUTUM**, *Dilute Sulphuric Acid*, *Acidum vitriol'icum dilutum*, *Elixir of Vitriol*, *Elixir vitrioli*, *Spir'itus vitrioli acidus Vogle'ri*, (F) *Acide sulfurique délayé*, is formed, according to the London Pharmacopœia, by adding *aq. distillat.* 3 xiss to *acid. sulph.* 3 iss. It is tonic, astringent, and refrigerant. Dose, gr^{ss}. x to xx, largely diluted. When used as a gargle, half a drachm may be added to 3vj of water.

The **ACIDUM SULPHURICUM AROMATICUM**, *A. vitriolicum aromaticum*, *A. vitrioli cum alcohol'e aromaticum*, *Elixir vitrioli*, *E. V. aromaticum*, *E. vitrioli Mynsich'ti*, *E. vitriol. Edinburgen'sium*, *E. vitrioli cum tinctu'ra aromaticâ*, *E. vitrioli dulcè seu acido-aromat'icum*, *Alcohol cum aromat'ibus sulphurica'tus*, *Tinctu'ra acidi sulphurici*, is formed of *rectified spirit* ℥ ij, *sulphuric acid* 3 xvj, *cinnamon* 3 iss, *ginger* 3 j. Dose, gr^{ss}. x. to xxx. *Ph. L.*

SULPHUROUS ACID, *Acidum sulphuros'icum*, *A. sulphuris volat'ilè*, *A. Sulphuro'sum* vel *Sulfurosum*, *Spir'itus sulphuris*, *Spir'itus sulphuro'sus volat'ilis*, *Sp. sulphuris per campa'nam*, *Sp. vitrioli phlogistica'tus*, *Gas sulphuris*, (F) *Acide Sulfureux*, *Air Acide Vitriolique*. Obtained by treating mercury with concentrated sulphuric acid, or by burning sulphur. It is sometimes used in the gaseous, at others, in the liquid state. Sulphurous acid gas is used to disinfect clothes, confined air, letters coming from infected places, &c. It is also exhibited, with great success, in the form of fumigation, in the treatment of certain chronic cutaneous affections, and of sciatic and rheumatic pains, in general. If respired pure, it acts in the man-

ner of violent irritants; and is not long in producing death.

SULTZMALT, MINERAL WATERS OF. S. is a village in the department of the Upper Rhine; where are several sources of cold, acidulous waters, which seem to contain carbonic acid, subcarbonate of soda, subcarbonate of lime, sulphate of lime, and a little bitumen. They are refrigerant, aperient, and alterative.

SUPER. A common Latin prefix; in composition, signifying 'above.'

SUPERCIL'IARY, Supercilia'ris. That which relates to the supercilia or eyebrows. (F) *Sourcilier* ou *Surcilier*.

The **SUPERCIL'IARY ARCHES** or **RIDGES**, (F) *Arcades sourcilières*, are two, slightly projecting, apophyses, situate at the anterior surface of the os frontis, above the superior margin of the orbits. They are separated by the nasal *bosse*, and covered by the superciliaris muscle, to which they give attachment.

SUPERCIL'IUM, Ophrys, Vallum, (F) *Sourcil*. The eyebrows are two arched eminences,—convex above, and more or less prominent, according to the individual,—which lie on the superciliary arch of the os frontis, above the eyelids, and extend from the sides of the root of the nose to the temple. Their inner extremity or *head* is more prominent than the outer or *tail*. The eyebrows are covered with short and stiff hairs, which are directed, obliquely, from within outwards; and are, commonly, of the colour of the hair.

The skin, in which these hairs are implanted, rests on the *orbicularis palpebrarum*, *frontalis*, and *superciliaris* muscles, which move the eyebrows in different directions.

The eyebrows serve as an ornament to the countenance; and by covering the eye, defend it from the impression of too strong a light. They direct the perspiration, also, from the eye.

SUPERCILIUM ACETAB'ULI. The edge of the cotyloid cavity of the os innominatum.

SUPERFŒTATION, Superfœtatio, Epi-cye'sis, Superimprægna'tio, Epig'onon, Super-fœcunda'tio, Epicye'ma, from *superfœtare*, 'to conceive again.' Conception of a fœtus in a uterus which already contains one. The impregnation of a female already pregnant. The possibility of this has been denied, but there is abundant evidence to show, that it is possible at a very early period of pregnancy.

SUPINA'TION, Supinatio, from *supi'nus*, 'lying on the back.' The movement in which the forearm and hand are carried outwards, so that the anterior surface of the latter becomes superior.

In Pathology, *Supination, Supina'tio, Hyp-tias'ma, Hyptias'mus*, means the horizontal position on the back, with the head thrown back, and the legs and arms extended. It is often a sign of great weakness in disease.

SUPINA'TOR. Same etymon. That which produces supination. A name given to two muscles of the forearm.

The **SUPINATOR RADII LONGUS, S. longus sive major, Bra'chio-radia'lis, Huméro-sus-radial** (Ch.), (F) *Long ou grand supinateur*, is seated at the anterior and outer part of the forearm. It arises from the inferior part of the outer edge of the os humeri, and from the external intermuscular aponeurosis; and is inserted, by a long tendon, into the outer edge of the radius, near the base of the styloid process. It causes the supination of the forearm, which it can likewise bend on the arm.

SUPINATOR RADII BREVIS, S. brevis seu minor, Epicondylo-radial (Ch.), (F) *Supinateur court ou petit supinateur*. A muscle, seated at the outer and back part of the forearm. It is flattened, triangular, and curved upon itself, in such a manner, that it embraces the superior extremity of the radius. It is attached, on the one hand, to the external tuberosity of the humerus, and to a small portion of the posterior surface of the ulna, and is inserted into the upper third of the outer and upper surfaces of the radius. It produces, by contracting, the motion of supination.

SUPPOS'ITORY, Supposito'rium, Hypoth'eton, from *suppon'ere*, 'to put under.' Any solid medicine, in the form of a long cone or cylinder, intended to be introduced into the rectum;—either for the purpose of favouring intestinal evacuations, or to act as anodynes. Purgative suppositories are made of soap, aloes, or any other irritating substance.

SUPPURA'TION, Ecpye'ma, Purulen'tia, Pyo'sis, Pye'sis, Diapye'ma, Diapye'sis, (F) *Aboutissement*. Formation or secretion of pus (q. v., and also *Pyogenia*.) It is a frequent termination of inflammation, and may occur in almost all the tissues. This termination is announced by slight chills; by remission of the pain, which, from being lancinating, becomes heavy; by a sense of weight in the part, and, when the collection of pus can be easily felt, by fluctuation. When pus is thus formed in the cellular membrane, and is collected in one or more cavities, it constitutes an *abscess*. If it be formed from a surface exposed to the air, it is an *ulcer*; and such ulcers we are in the habit of establishing artificially in certain cases of disease. See *Issue*.

SUP'PURATIVE, Suppu'rans, Suppura-ti'vus, Diapye'ticus, Ecpye'tica, Ecpyiscon'ta. That which facilitates suppuration. Suppuratives are, generally, vesicants mixed with lard.

SUPRA. A common Latin prefix; in composition, signifying 'above.'

SUPRA-COSTA'LES, Levato'res Costa-rum, (F) *Sur-costaux*. A name given to twelve small, fleshy fasciculi, which are flattened, triangular, and with radiating fibres. They pass from the transverse processes of the dorsal vertebræ to the superior margin of

the rib beneath. Spigelius, Cowper, Boyer, Chaussier, and others consider them to form part of the *intercostales externi*.

SUPRA-ORBITAR, *Supra-orbita'lis*, *Supra-orbita'rius*. That which is situate above the orbit.

The **FORA'MEN SUPRA-ORBITARIUM**, *F. orbitarium superius*, (F) *Trou sus-orbitaire ou orbitaire supérieur*, is a foramen or notch completed by a ligament at the inner third of the orbital arch. It gives passage to the *supra-orbital* or *superciliary artery*, a branch of the ophthalmic, which ascends the forehead, and is distributed thereto.

SUPRA-PUBIAN, *Supra-pubic*, *Supra-pubia'nus*. That which is seated above the pubis.

The **SUPRA-PUBIAN NERVE**, (F) *Nerf sus-pubien*, is the internal ramus of the inguino-cutaneous branch of the first lumbar nerve. It is the *genito-crural* branch of Bichat. It descends almost vertically before the psoas muscle; and, near the crural arch, divides into two branches. One of these accompanies the spermatic cord, and is distributed to the cremaster, scrotum, and integuments on the inner part of the thigh. The other issues from the pelvis with the femoral filaments; traverses the aponeurosis of the thigh; and is distributed to the integuments of the upper and anterior part of the limb.

SUPRA-SPINA'TUS, *Supra-spino'sus*, (F) *Sur-épineux*, *Sus-épineux*. That which is seated above the spine.

The **FOSSA SUPRA-SPINATA**, (F) *Fosse Sus-épineuse*, is a triangular depression above the spine of the scapula.

The **SUPRA-SPINATUS MUSCLE**, *Super-scapula'ris*, *Sus-spino-scapulo-trochitérien*, *Supra-scapularis*, *Petit sus-scapulo-trochitérien* (Ch.) is situate in the fossa supra-spinata. It is elongated, thick, and triangular, and is attached, on the one hand, to the two inner thirds of the fossa supra-spinata; and terminates, on the other, at the anterior part of the great tuberosity of the humerus. This muscle raises the arm.

The **LIGAMEN'TA SUPRA-SPINOSA**, *Supra-spinal lig'aments*, are two in number. 1. The *Dorso-lumbar-supra-spinal ligament*, (F) *Ligament sur-épineux dorso-lombaire*, extending above the spinous processes of the dorsal and lumbar vertebræ, from the 7th cervical as far as the median crista of the sacrum. 2. *Cervical supra-spinal ligament*, (F) *Ligament sur-épineux-cervical*, which extends above all the cervical spinous processes, and is attached, above, to the outer occipital protuberance.

SURA. The *calf of the leg*, (F) *Mollet*, *Gras de Jambe*. The projection, formed at the posterior part of the leg by the *gastrocnemii* muscles.

SURDENT (F), from *supra*, 'above,' and *dens*, 'a tooth.' When a milk tooth does not fall out at the period of the second dentition,

but is merely forced to one side by the new tooth, it is called a *surdent*.

SURGEON, *Chirur'geon*; old French, *Surgien*, *Chiro'nax*, *Chirur'gus*, *Vul'nerum medicus*, *Cheiria'ter*, *Chiria'ter*, (F) *Chirurgien*, from *χυγ*, 'the hand,' and *εργον*, 'work.' One who practises surgery. The surgeon, says Celsus, ought to be young, or, at all events, not advanced in life. His hand must be steady, expert, and never tremulous: he must use the right or left with equal facility: his sight must be clear and penetrating: his mind intrepid; and although unmoved when he proceeds to operate, he must not be in haste, or cut less than is necessary, but finish his operation, as if the cries of the patient made no impression upon him.

SURGEON-APOTHECARY. One who unites the practice of surgery with that of the apothecary. A *general practitioner*.

SUR'GERY, *Chirur'gia*, *Chiriatria*, *Cheirix'is*, *Metacheirix'is*, *Medici'na operati'va*, *Medici'na ef'ficax*, (F) *Chirurgie*. The part of the healing art, which relates to external diseases; their treatment; and, especially, to the manual operations adapted for their cure.

OPERATIVE SURGERY is termed *Acur'gia*, and *Acidur'gia*.

MILITARY SURGERY, (F) *Chirurgie militaire*, is that which relates to the operations to be performed on the field of battle, or subsequently;—with the attention to be paid to the wounded, &c.

SUR'GICAL, *Chirur'gicus*, (F) *Chirurgi-cal*, *Chirurgique*. That which relates to surgery; as *surgical anatomy*, *surgical operations*, *surgical instruments*, &c.

SUROXYGENESES. A name given, by Baumes, to diseases attributed by that physician to superabundance of oxygen.

SURVIVORSHIP, from *superviv'erē*, (F) *Survivre*, 'to live longer,' (F) *Survie*. In *legal medicine*, this word means the probability, that any individual has survived others in an accident, which has been fatal to all. This is often an important question, connected with the inheritance of property, and on which physiology can rarely afford more than presumptive grounds for conclusion.

SUSCEPTIBILITY. Sensibility, in its most enlarged acceptation. Impressibility. This term, with the epithet *nervous*, is sometimes used for that increase in the moral sensibility, which is particularly observed in nervous affections.

SUSPEN'SORY, *Suspenso'rius*, from *sus-pen'dere*, 'to hang under,' (F) *Suspensoire*. That which sustains or suspends.

The **SUSPENSORY LIGAMENT OF THE LIVER** is a triangular duplicature of the peritoneum, between the inferior surface of the diaphragm and the upper surface of the liver, which is continuous with the great falc of the umbilical vein.

The **SUSPENSORY LIGAMENT OF THE PENIS**

is a fibro-cellular fascia, of a triangular shape, which extends from the anterior part of the symphysis pubis to the corpus cavernosum, which it sustains. A similar ligament belongs to the clitoris.

The SUSPENSORY BANDAGE, *Suspensorium*, is a bandage, intended to support the scrotum, in cases of disease of the testicles or of scrotal hernia. It consists of a kind of bag, fixed above to a cincture, and retained below by strings, passing between the thighs, and fixed to the cincture behind.

SUSPIRUM, *Mygmus*, *Mych'mus*, *Mychthis'mus*, *Stenag'mus*, *Stenax'is*. A sigh, (F) *Soupir*. A slow, voluntary contraction of the diaphragm and intercostal muscles; the effect of which is, to restore the due relation between the circulation and respiration, or to free ourselves from an inconvenient sense of weight felt in the chest, when we are much depressed:—a weight, which appears to be chiefly dependent on the functions of the heart being disturbed through the moral influence. The sigh differs from the sob:—the latter being involuntary and spasmodic.

Sighing, occurring in fevers to a great extent, indicates considerable depression. When accompanied with a vocal sound, it constitutes a *groan*.

SUTURE, *Sutu'ra*, *Sutela*, *Arme*, *Rhaphe*, from *suo*, 'I stitch.' *Dovetail joint*, (F) *Engrenure*. A kind of immovable articulation, in which the bones unite by means of serrated edges, which are, as it were, *dovetailed* into each other. The articulations of the greater part of the bones of the skull are of this kind. The coronal, lambdoidal, and sagittal sutures are called *true sutures*; the two temporal are called *false sutures*.

SUTURE, in *Surgery*, *Rha'phē*, means an operation, which consists in stitching the lips of a wound to procure their union. The suture was, at one time, largely employed: but, in modern times, its use has been wisely restricted. There are few wounds in which the edges may not be brought together by adhesive plaster appropriately applied. This kind of union, by adhesive plaster simply, has been absurdly termed *Sutura sicca* or *dry suture*, in opposition to the *Sutura cruenta* or suture, properly so called.

The suture is generally performed with waxed thread and straight or curved needles, according to the arrangement of parts.

The chief sutures are the *interrupted suture*, the *quilled suture*, the *glover's suture*, and the *twisted suture*.

1. The INTERRUPTED SUTURE, (F) *Suture à points séparés*, *Suture entrecoupée*, is performed by passing a needle, armed with a ligature, through the lips of the wound, previously brought into contact; and then tying the extremities of the thread. The other stitches are made in the same manner. They are separate or interrupted. It is the suture most commonly used.

2. The QUILLED SUTURE, *Sutura clava'ta*, (F) *Suture enchevillée ou emplumée ou empennée*, *Compound Suture*, is merely the interrupted suture, with this difference, that the ligatures are not tied over the face of the wound, but over two quills or rolls of plaster, or bougies, which are laid along the sides of the wound. It is used by some surgeons, on account of there being less danger of the stitches tearing out. It is not much employed.

3. The GLOVER'S SUTURE, *Continued Suture*, *Uninterrupted Suture*, (F) *Suture de Pelletier*, *Suture en surget*, is executed by introducing the needle first into one lip of the wound from within outwards, then into the other in the same way; and, in this manner, sewing up the whole extent of the wound. It has been chiefly used in wounds of the intestinal canal. It is now rarely employed except for stitching up dead bodies. The common stitch or suture, *Sutura punctata*, (F) *Suture à points passés*, has been used in similar cases.

4. The ROYAL STITCH or SUTURE is the name of an old operation for the cure of Bubonocoele. It consisted in putting a ligature under the hernial sac, close to the abdominal ring, and then tying that part of the sac, so as to render it impervious, by the adhesive inflammation thus excited.

5. The TWISTED SUTURE, (F) *Suture entortillée*, is employed, chiefly, to unite wounds of the cheeks and of the free edge of the lips. To perform it, a pin or needle is passed through the edges of the wound, so as to keep them accurately in contact. A piece of thread is then wound accurately round the pin, from one side of the division to the other, in the form of the figure ∞ . The number of pins and sutures must, of course, correspond with the extent of the wound. This is the suture used in cases of harelip, (q. v.).

6. The SUTURE à ANSE of Le Dran has only been employed in cases of wounds of the intestines. For this purpose, the edges of the wound are brought together, and as many needles, with unwaxed threads, used as there are to be stitches. Each stitch is then made by passing a needle through the edges; and all the ligatures which belong to one side of the wound, are tied together, and twisted so as to form a thread, which is fixed externally.

SWATHING or SWADDLING CLOTHES, *Incunabu'la*, *Fasciæ*, *Panni*, from Sax. *ꝛeðan*, 'to bind,' (F) *Maillot*. The kind of clothing or bandaging formerly applied to children, during the first year of life. It is now, properly, laid aside, and every freedom allowed to muscular exertion.

SWELLING, *Exæde'sis*, *Presis*, *Extumefac'tio*, *Tumor*, *Tumefac'tio*, (F) *Enflure*, *Gonflement*. Morbid increase of bulk, in the whole or a part of the body. See Tumour.

SWIETENIA FEBRIFUGA, *Feb'ri-*

fuge Swiete'nia, (F) *Mahogon febrifuge*. Family, *Meliaceæ*. Sex. Syst. *Decandria Monogynia*. The bark of this tree, which is a native of the East Indies, has an aromatic odour, and bitter taste. It is tonic and stomachic, and has been used in intermittents, and in diseases where bitter tonics are indicated. Dose, ʒj to ʒij of the powder.

SYCION, *συκίον*, from *συκον*, 'a fig.' A decoction of dried figs.

SYCITES, *συκίτης*. Wine, in which dried figs have been infused.

SYCO'SIS, *συκωσις*. Same etymon. A tumour of the shape of a fig. Also, a fungous ulcer. An excrescence about the eyelids.

Dr. Bateman defines it:—an eruption of inflamed but not very hard tubercles, occurring on the bearded portion of the face and on the scalp, in adults; and usually clustering together in irregular patches;—*Phyma Sycosis*. Of this he has given two species: 1. The *Sycosis Menti*, *S. Barbæ*, *Mentagra*, *Chinwhelk*, (F) *Dartre pustuleuse mentagra*; and, 2. The *Sycosis Capil'li*, *S. Capilli'tii*. The treatment, in both cases, resembles that for *Porrigio favosa*.

SYM, SYN, *συν*, 'with, together,' like the *cum*, *col*, *con*, *cor*, &c. of the Latins. A common prefix. Before *b*, *p*, *ph*, *ps*, and *m*,—*syn*, or *xyn* are changed into *sym* or *xym* (*com*): before *c*, *ch*, *g*, *k*, and *x*, into *syn* or *xyn*, *συν*, *ξυν*, (*con*); before *l* into *syl* or *xyl* (*col*): before *r* into *syr* or *xyr* (*cor*); and before *s* into *sy* or *xy*, *sys* (*co* and *cos*).

SYMBLEPHAROSIS, from *συν*, 'with,' and *βλεφαρον*, 'an eyelid.' A preternatural adhesion between the eyelids; and especially between the upper eyelid and globe of the eye.

SYM'METRY, from *συν*, 'with,' and *μετρον*, 'measure.' The regularity in form, observed in many parts, situate on the median line; and, also, the resemblance which exists between many organs that are situate on each side the median line. Bichat first noticed, that this symmetry was confined to the organs of animal life; as the head, brain, spine, organs of sense, of locomotion, &c.

SYMMETRICAL, *Symmet'ricus*. An epithet given to those parts of the body, which, if seated on the median line, may be divided into two equal, and perfectly like halves: or which, if situate—the one to the right, the other to the left of this line—have a similar conformation, and a perfectly analogous arrangement.

SYMPATHETIC, *Sympath'icus*, *Sympatheticus*, (F) *Sympathique*, from *συν*, 'with,' and *παθος*, 'suffering.' That which depends on sympathy.

SYMPATHETIC AFFECTIONS of an organ are those morbid phenomena, that supervene, without any morbid cause acting directly on it, and by the reaction of another organ primarily affected. Thus, itching of the nose

is a *sympathetic affection*, produced by irritation in the intestinal canal.

The epithet is, also, given to different nerves. See *Trisplanchnic*, *Pneumogastric*, and *Facial*.

The SYMPATHETIC POWDER, *Pulvis Sympatheticus* of Sir Kenelm Digby, was composed of *calcined sulphate of iron*, prepared in a particular manner. It was long supposed to be able to cure a wound, if applied to the weapon that inflicted it: or, even to a portion of the bloody clothes. It is proper to remark, however, that the wound itself was carefully excluded from the air, and from all irritation.

SYMPATHY, *Sympathi'a*, *Compas'sio*, *Consen'sus*, *Sympathetis'mus*, *Conflux'io*, *Conspira'tio*, *Commer'cium*, *Consort'ium*, *Homoiopathia*, *Homoethnia*, *Adelphix'is*, *Symbolis'mus*, *Symboliza'tio*, from *συν*, 'with,' and *παθος*, 'suffering.' The connexion that exists between the action of two or more organs, more or less distant from each other; so that the affection of the first is transmitted, secondarily, to the others, or to one of the others, by means unknown to us. A knowledge of the particular sympathies between different organs throws light on the etiology of diseases, their seat, and the particular organ towards which our therapeutical means should be directed. See *Irritation*.

SYMPHYSEOTOMY, *Symphysot'omy*, *Synchondrot'omy*, *Symphyseoto'mia*, from *συμφυσεις*, and *τεμνω*, 'I cut.' The operation or section of the *Symphysis*. This operation is performed with the view of augmenting the diameter of the pelvis in order to facilitate delivery in certain cases of faulty conformation of that cavity, with wedging of the head of the child therein. To perform the operation, the female is placed on her back; the pubes is shaved; and, with a strong scalpel, the soft parts are divided on the median line. The articulation is then cut. As soon as the fibrous parts, which hold the bones together, are divided, they separate to a certain distance, from each other; and the delivery may be accomplished. The knife, with which the operation is performed, is called, by the French, *Couteau symphysien*.

SYMPHYSIA, from *συμφυσεις*, 'a growing together.' A malformation consisting in the union of parts that are usually divided.—Breschet.

SYM'PHYSIS, from *συν*, 'with,' and *φύω*, 'I grow;' or from *συμφύω*, 'I unite together.' A union of bones. The bond of such union. The aggregate of means used for retaining bones *in situ* in the articulations.

The name *symphysis* has, however, been more particularly appropriated to certain articulations: as to the *symphysis pubis*, *sacroiliac symphysis*, &c.

SYM'PHYTUM, from *συμφύω*, 'I unite.' *Symphytum officina'le*, *Consolida major*, *Comfrey*, *Alum*, *Alus*, (F) *Grande Consoude*. Family, *Boragineæ*. Sex. Syst. *Pentandria*

Monogynia. The roots of this European plant are very mucilaginous, and are employed as emollients. They are used in decoction, in hæmoptysis, dysentery, and chronic diarrhœa, &c.

SYMPHYTUM PETRÆUM, Coris Monspelien'sis, Montpel'ier Coris. An intensely bitter and nauseous plant, which is said to have been useful in syphilis.

SYMPTOM, Sympto'ma, Ac'cidens, from συν, 'with,' and πιπτω, 'I fall.' Any change, perceptible to the senses, in any organ or function, which is connected with morbid influence. It is by the aggregate and succession of symptoms that a disease is detected.

The term—*symptoms of symptoms* has been used for the effects, which result from the symptoms of a disease; but which effects are not essentially connected with the disease itself. Thus, the debility, arising from the frequency of the evacuations in dysentery, is a symptom of symptoms. See Sign.

SYMPTOMATIC, Symptomaticus. That which is a symptom of some other affection. Thus, we speak of a symptomatic disease, in opposition to one that is idiopathic.

SYMPTOMATOL'OGY, Symptomatolo'gia, Symbolog'ica, from συμπτωμα, 'a symptom,' and λογος, 'a treatise.' The branch of pathology, the object of which is the knowledge of symptoms.

SYMPTO'SIS, from συν, 'with,' and πιπτω, 'I fall.' Depression or rather emaciation or atrophy, either of the whole body or of a part.

SYNARTHRO'DIAL, Synarthrodia'lis, from συν, 'with,' and αρθρωσις, 'articulation.' That which belongs to synarthrosis; as *Synarthrodial articulation*.

SYNARTHRO'SIS, Abarticula'tio, Coarticula'tio. An immovable articulation. Synarthrosis includes three species:—*Suture, Harmony, and Gomphosis*.

SYNCHONDRO'SIS, from συν, 'with,' and χονδρος, 'a cartilage.' Union or articulation of bones by means of cartilage;—as the articulations of the ribs with the sternum, by means of their cartilages of prolongation.

SYN'CHRONOUS, Synchronus, from συν, 'with,' and χρονος, 'time.' That which occurs at the same time. Thus, the pulsations of an artery are synchronous with those of the heart.

SYN'CLONUS, from συγκλονω, 'I shake together.' *Clon'ici universa'les, Clonus* (Young). Tremulous, simultaneous, and chronic agitation of various muscles, especially when excited by the will. See Tremor, Chorea, &c.

SYNCOMIS'TOS, συγκομιστος, Autopy'ros, Panis domesticus, secunda'rius, ciba'rius, confusa'neus. Bread of the whole wheat or of the unsifted meal. *Household bread*.

SYN'COPE, from συγκοπτω, 'I fall down.'

An'imi defec'tio, Animi deli'quium, Leipopsych'ia, Apsych'ia, Apopsych'ia, Lipothym'ia, Su'bitus animi casus, Swoon, Fainting fit, (F) Evanouissement, Défaillance, Pamoison. Complete and, commonly, sudden loss of sensation and motion, with considerable diminution, or entire suspension, of the pulsations of the heart and the respiratory movements.

Syncope is, commonly, an affection of no consequence; but, sometimes, it is an index of diseased heart.

Placing the patient in the horizontal posture: sprinkling cold water over the face, and the application of volatile substances to the nose, are all that will be required during the fit. See Asphyxia and Suffocation.

SYNDESMOG'RAPHY, Syndesmogra'phia, from συνδεσμος, 'a ligament,' and γραφη, 'a description.' A description of the ligaments. The part of anatomy, which describes the ligaments.

SYNDESMOL'OGY, Syndesmolo'gia, from συνδεσμος, 'a ligament,' and λογος, 'a treatise, discourse.' A treatise on the ligaments.

SYNDES'MO-PHARYNGÆ'US. A fasciculus of the constrictor pharyngis superior.

SYNDESMO'SIS, Synneuro'sis, Synymen'sis, from συνδεσμος, 'ligament.' The articulation of two or more bones by means of ligament;—as of the radius with the ulna.

SYNDESMOT'OMY, Syndesmoto'mia, from συνδεσμος, 'ligament,' and τεμνω, 'I cut or dissect.' Dissection of the ligaments.

SYN'DROME, συνδρομη, Concur'sus, Concour'se. A name given, by the Empirical Sect, to the union of symptoms, which takes place in diseases. *Syndromè plethorica*, e. g. meant the union of symptoms produced by plethora.

SYNECHI'A, from συν, 'with,' and εχειν, 'to have.' Adhesion between the iris and transparent cornea, or between the iris and crystalline lens. The former case is called *Synechia ante'rior*: the latter *S. poste'rior*.

SYNEZIZIS, Synize'sis, Considen'tia, from συν, 'with,' and ζευγνυειν, 'to join.' *Parop'sis Synizesis, Caligo à Synizesi, Caligo Pupil'læ, Closure or occlu'sion or obliteration of the Pupil, Phthisis Pupil'læ, Amyo'sis.* This disease is sometimes a case of faulty conformation, depending upon the continued existence of the membrana pupillaris, or the absence of the pupil. It is, in other words, *congenital*. At other times, it is owing to accident, and supervenes on violent ophthalmia, or on the operation of the cataract.

Those who are affected with synezizis are completely blind;—the iris having no central aperture. In certain cases, a remedy may be obtained by making an opening in the iris, which may supply the place of the pupil, and through which the rays of light may reach the retina. This operation is called the *operation for artificial pupil*.

SYN'OCHA, from συνεχω, 'I continue.'

Inflam'matory Fever, Angiopyr'ia, Febris causo'des, Febris deu'rens, F. ardens, Febris contin'ua sanguin'ea, Febris contin'ua non putris, Syn'ochus (Vogel), *Febris acmas'tica, Synochus impu'tris* (Galen), *Febris acu'ta, F. continens, F. continens non putrida, F. angioten'ica, F. sthenica, F. sanguin'ea, Homot'onos, Sthenop'ya, F. inflammato'ria, Ene'cia cauma, F. ton'ica, Phlogop'yrus, Cauma, General inflamma'tion, Gastro-entérite intense.* A species of continued fever, characterized by increased heat; and by quick, strong, and hard pulse; urine high-coloured; disturbance of mind slight. It requires, of course, the most active treatment.

SYNOCHUS, *Febris lenta* (Linnæus), *F. continens putrida, F. continua putrida* (of some); same etymon. Continued fever, compounded of synocha and typhus:—in its commencement often resembling the former; in its progress, the latter. *Mixed fever, Common continued fever.* See Fever, and Typhus.

SYNOSTEOGRAPHY, *Synosteogra'phia*, from *συν*, 'with,' *οστέον*, 'a bone,' and *γραφω*, 'I describe.' The part of anatomy, which describes the joints.

SYNOSTEOL'OGY, *Synosteolo'gia*, from *συν*, 'with,' *οστέον*, 'a bone,' and *λογος*, 'a treatise.' A treatise of the joints.

SYNOSTEOT'OMY, *Synosteoto'mia*, from *συν*, 'with,' *οστέον*, 'a bone,' and *τεμνειν*, 'to cut.' Dissection of the joints.

SYNOVIA, from *συν*, 'with,' and *ων*, 'an egg.' *Mucila'go, Un'guen articula'rē, Synonia, Axun'gia articula'ris, Unguen'tum seu Smegma articula're, Mucila'go articulo'rum seu junctura'rum, Humor articula'ris, Humor seu Hu'midum nati'vum seu Gluten articulo'rum*, (F) *Synovie*. A fluid, resembling the white of egg, which is exhaled by the synovial membranes surrounding the movable articulations. The synovia of man, according to Hildenbrandt, consists of water, a little albumen, soda, muriate of soda, phosphate of lime, and—Fourcroy fancied—uric acid. Its use is to lubricate the joints, and the sheaths in which tendons play.

SYNOVIAL, *Synovia'lis*. That which relates to the synovia.

The **SYNOVIAL GLANDS**, **HAVERS'S GLANDS**, *Gland'ulæ articula'res, G. synovia'les, G. Haversian'æ*, are the secretory fringes, which float in the interior of the synovial capsules (see Capsule). They do not seem to be the glandular. They have been called *Synovial fim'briæ*, (F) *Franges synoviales*.

SYNTASIS, *συντασις*, from *συντενω*, 'I strain.' Tension of parts: hence *συντατικά* are medicines, which render parts tense. *Syntex'is*, on the other hand, means *Colliqua'tio*, or wasting of the body, from *συντηκω*, 'I melt together.'

SYN'THENA. A term employed, by Paracelsus, to designate a species of epilepsy, accompanied by cardialgia and tormina.

SYNTENO'SIS, from *συν*, 'with,' and

τενω, 'a tendon.' A species of articulation, in which two bones are joined by means of tendon; as the sesamoid bones with the toes, the rotula with the tibia, &c.

SYN'THESIS, *Reu'nio*, from *συν*, 'with,' and *τιθημι*, 'I place.' A surgical operation, which consists in uniting parts that are divided; and approximating such as are separated or distant from each other. *Synthesis of continuity* means the union of the edges of a wound, or the approximation of the extremities of a fractured bone. *Synthesis of contiguity* is the reduction of displaced organs; as in cases of hernia and luxations.

SYNTHETIS'MUS, same etymon. The aggregate of operations and means for reducing a fracture, and maintaining it reduced:—comprising extension, counter-extension, coaptation, and bandaging.

SYNYMEN'SIS, *Synimen'sis*, from *συν*, 'with,' and *μην*, 'a membrane.' Union of bones by membrane, as in the case of the bones of the head in the fœtus.

SYPHILIDES, same etymon as Syphilis. The cutaneous eruptions that accompany constitutional syphilis are so denominated by the French writers.

SYPH'ILIS, *Morbus Gal'licus, Siphilis, Syphilis'mus, Caco'hym'ia Vene'rea, Malum vene'reum, Mor'bus Ital'icus, M. Hispan'icus, Pudenda'gra, Lues, Me'vium, Lues vene'rea, Lues syphilis, Morbus aphrodis'ius, Syphilis venerea, S. maligna, Morbus Neapolita'nus, Morbus Ind'icus, Patur'sa*; the *Venereal Disease, Pox, French Pox*; the *Vene'real*, (F) *Verole, Maladie vénérienne, Mal de Naples, Mal Francais, Maladie de Vénus*. The etymology of syphilis is unknown. Some consider it to proceed from *σους*, 'a hog;' and others, from *σιφλος*,—formed, by contraction, from *σιπ'αλος*, 'shameful,' 'dirty,' &c. It is an infectious disease, communicable by coition; or by the contact of parts that are only lined with a thin epidermis; as the lips, nipple, &c. It may be transmitted by generation, and makes its first appearance by a chancre (q. v.), followed sooner or later by a bubo. The chancre is a primary symptom or sore; but there are others, which are *secondary* or *constitutional*. These are:—ulcers in the throat; copper-coloured blotches on the skin; pains in the bones, nodes, &c.

The origin of syphilis is not known. It is believed to have been introduced into Europe from America, at the end of the 15th century. Its progress is extremely variable, as well as its duration, which is often unlimited, if left to itself. Mercury may be esteemed the best remedy, but the disease admits of cure without it. Almost every antisyphilitic composition, whose use is attended with success, probably contains mercury united with diaphoretics or other medicines. It is generally sufficient to keep the mouth sore for a fortnight, for the cure of chancre: for venereal sore throat, and other recent

constitutional symptoms, eight or ten weeks will be required; and, of course, a longer time, if these symptoms have persisted long. Sometimes, after mercury has been given for a time, the symptoms continue stationary; and do not yield until the mercury has been discontinued, and tonics and sudorifics have been administered.

SYPHILIS PSEUDO-SYPHILIS, *Lues Syphilo-des*, *Pseudo-syphilis*. A term, given to ulcers or other affections, that resemble syphilis, but are indeterminate in their character,—the symptoms being irregular in their appearance, and usually yielding spontaneously, or under the use of tonics, change of air, &c. The condition has not been at all well defined. The *Sivvens*, *Radesyge*, &c. have been referred to this head.

SYPHILOMANIA, *Syphilidomania*, vulgarly, *Noddle Poz*. A mania, with which some persons are affected, so that they subject themselves to antivenereal treatment under the belief, that they are affected with syphilis, of which they may have been previously cured.

SYRIGMOPHONIA, from *συριγμος*, 'whistling,' and *φωνη*, 'voice.' A piping state of the voice.

SYRINGOTOMUM, from *συνιγξ*, 'a pipe,' 'a fistula' and *τεμνειν*, 'to cut.' A surgical instrument, formerly used in the operation for *fistula in ano*. It is a bistouri, concave at its edge, and terminated by a long, flexible, probe-pointed stylet. This stylet or probe was first introduced by the external opening of the fistula into the rectum, whence it was drawn externally through the anus, carrying with it the cutting edge of the instrument, which divided the intermediate parts. The operation for *fistula in ano* has been called *Syringotomy*.

SYRMAISMOS, from *συρμαισω*, 'I evacuate.' A gentle evacuation by vomiting or stool.

SYRUP, *Syrupus*, *Sera'pium*, *Syrop*, *Sirup*; derived, according to some, from *συρω*, 'I draw,' and *σπος*, 'juice;' but, more probably, from the Arabic, *Siruph*, *Sirab* or *Scharab*, which signifies 'a potion.' A saturated solution of sugar in water, either simply, or united with some vegetable or other principle. Syrups, in general, require two pounds of sugar to the pint, and they are judged to be sufficiently boiled when a portion, taken up in a spoon, pours like oil. Syrups should be kept in small bottles in a cool place. They are chiefly used to render medicines palatable.

SYRUPUS ACETI, *S. Acidi Aceto'si*, *Syrup of Vinegar*, (F) *Syrop de Vinaigre*. (*Aceti* ℥ iiss, *sacch. purif.* ℥ iiiss. Boil to form a syrup. *Ph. E.*) It is refrigerant and antiseptic. Dose, 3 j to 3 ij.

SYRUPUS CUM ÆTHERE SULFURICO PARATUS, *Syrup of Ether*, (F) *Syrop d'éther*. (Very pure sugar, 1000 p.; distilled water, 500 p.;

dissolve in the cold, and strain; add *sulphuric ether*, 48 p. Shake for five or six days, and draw off the limpid syrup. *Ph. P.*) Properties like those of ether.

SYRUPUS ALLII, *Syrup of Garlick*, (F) *Syrop d'ail*. (*Rad. allii concis.* ℥ j, *aquæ fervent.* ℥ ij. Macerate for twelve hours: strain, and add sugar. *Ph. D.*) Use, same as that of garlic. Dose, 3 j to 3 iv.

SYRUPUS ALTHÆÆ, *Syrup of Marshmallow*, *Syrupus ex Althæâ*, *S. de Althæâ*, *S. Althææ officina'lis*, (F) *Syrop de Guimauve*. (*Althææ rad. recent.* cont. ℥ ss, *sacch. pur.* ℥ ij, *aquæ* ℥ iv. Boil the root in the water to one half; and press out the liquor; when cold, defecate; add the sugar, and boil. *Ph. L.*) Emollient and demulcent. Dose, 3 i to 3 iij.

SYRUPUS ANTISCORBUTICUS, *S. de Armora'cia compositus*, *Antiscorbutic Syrup*. (*Leaves of cochlearia, buckbean, water-cresses, horseradish root and bitter oranges*, each ℥ j; *cinnamon* 3 iss. Cut, and pour *white wine* ℥ iv. Macerate for two days; distil over ℥ j in a sand bath; add to this, *sugar* ℥ ij, and form a syrup. Again, take what remains in the cucurbit; pass it through cloth, let it rest; decant, and add *sugar* ℥ ij; make into a syrup, and clarify with white of egg. Mix it with the first while yet warm. *Ph. P.*) Antiscorbutic, alterative, tonic, stomachic, &c. Dose, 3 ij to 3 ij.

SYRUPUS AROMATICUS, *S. de Artemisiâ compositus*, *Compound Syrup of Mugwort*, (F) *Syrop d'armoise composé*. (*Tops of artemisia vulgaris, in flower*, 3 vj, *inula root, ligusticum levisticum*, and *fennel*, each 3 ss, *pennyroyal, catmint, savine leaves*, each 3 vj, *marjoram, hyssop, pyrethrum, rue, basil*, each 3 iij, *aniseed and cinnamon*, each 3 ix; bruise, and macerate, in *hydromel* ℥ xvij: distil over ℥ ss; add to this a pound of sugar. Again, take the liquid that remains in the cucurbit, strain it gently; add *sugar* ℥ iv. Then mix the two. *Ph. P.*) Tonic, emmenagogue, &c.

SYRUPUS AURANTII, *S. Aurantiorum*, *S. Citri Aurantii*, *S. Corticis Aurantii*, *S. e. Corticibus Aurantiorum*, *S. de Corticè Aurantiorum*, *Syrup of Orange peel*. (*Aurant. cort. recent.* 3 ij, *aq. ferv.* ℥ j, *sacch. pur.* ℥ iij. Macerate the peel in the water for 12 hours. Add the sugar. *Ph. L.*) Stomachic. Dose, 3 j to 3 ij.

A *Syrup of Orange Juice*, *Orange Sherbet*, *Syrupus e succo Aurantiorum*, may be made by adding *white sugar* ℥ ij to ℥ j of the juice of oranges, strained and clarified.

SYRUPUS CARYOPHYLLI RUBRI, *S. Dianthi Caryophylli*, *Syrup of Clove July Flower*, *Syrup of Clove Pinks*, *Syrupus infusio'nis florum caryophyllorum*. (*Petalorum dianth., caryoph. recent. unguibus resectis* ℥ j, *aquæ bull.* ℥ iv, *sacch. purif.* ℥ vij. *Ph. E.*) Aromatic.

SYRUPUS DE CICHORIO COMPOSITUS, *S. de Rheo*, *Compound Syrup of Succory*, (F) *Syrop de chicorée composé*. (*Root of succory* 3 vj, *leaves of succory* 3 ix, *leaves of fumitory* and

scolopendrium, each 3 iij, *Alkekengi berries* 3 ij. Boil in *water* ℥ xiv to ℥ xij: pass through cloth, and dissolve in it *white sugar* ℥ v. Boil till it has the consistence of syrup. Again, take *water* ℥ viij, *rhubarb* 3 vj, *yellow sanders* and *cinnamon*, each 3 ss. Infuse for 24 hours: pass through linen, and add the preceding syrup. *Ph. P.*) It is laxative and stomachic. Dose, 3 j to 3 ss.

SYRUPUS CINCHONINÆ, *Syrup of Cinchonine*. (Simple syrup one pound; sulphate of cinchonine nine grains. Mix.) Six spoonfuls are commonly sufficient to arrest an intermittent.

SYRUPUS COL'CHICI AUTUMNALIS, *S. Colchici, Syrup of Meadow Saffron*. (*Rad. colch. autumn. recent.* 3 j, *acidi acetosi* 3 xvj, *sacch. pur.* 3 xxvj. Macerate the root in the vinegar for two days; occasionally shaking the vessel: then strain, with gentle expression. To the strained fluid add the sugar, and boil to a syrup. *Ph. E.*) Diuretic, antiarthritic. Dose, 3 j to 3 ss, or more.

SYRUPUS CROCI, *Syrup of Saffron*. (*Croci stigmat.* 3 j, *aquæ fervent.* ℥ j, *sacch. purif.* ℥ iiss. *Ph. L.*) Cardiac. Chiefly used for colour.

SYRUPUS EMETINÆ, *Syrup of Emetine*. (Simple syrup ℥ j, *emetine* 16 gr. M.) In small doses expectorant and in large, emetic.

SYRUPUS GENTIANINÆ, *Syrup of Gentianine*. (*Syrup of sugar* 3 xvj, *gentianine* 13 gr.) A pleasant bitter.

SYRUPUS DE JALAP'PA, *Syrup of Jalap*. (*Pulv. jalapæ* 3 x, *sem. coriandr., fœnicul. dulc.*, aa 3 ss, *aquæ* 3 xijss, *sacch.* 3 xxv, f. syrupus. *Ph. P.*) Cathartic. Dose, 3 ij to 3 ss for children.

SYRUPUS DE KINA KINA CUM VINO, *S. Cincho'næ cum vino, Syrup of Cinchona with wine*, (F) *Syrop de quinquina avec le vin*. (*Cort. cinchonæ officinalis* 3 ij, *ext. cinchonæ* 3 vj, *vini albi* (v. de lunel) vel *cujusvis ei similis*, ℥ j, *alcohol* (S. G. .985 to .915) 3 j, *sacchar. alb.* ℥ iiss. Bruise the cinchona; gradually add the alcohol, so as to form a soft mass; pour on the wine; macerate for two days, and strain. Dissolve the extract; add the sugar and make a syrup. *Ph. P.*) Dose, 3 ss to 3 j.

SYRUPUS LIMO'NUM, *S. citri medicæ, S. e succo citro'num, S. e succo limo'num, S. succi limonis, Syrup of Lemon, Lemon Syrup*. (*Limon. succ. colat.* ℥ j, *sacchar. pur.* ℥ ij. *Ph. L.*) Cooling, antiseptic.

SYRUPUS DE MERCURIO MEDIAN'TE GUMMI, *Mercurius gummo'sus Plenck'ii, Syrupus Hydrargyri*, (F) *Syrop de mercure, ou mercure gommeux de Plenck. (Hydrargyri pur.* 3 j, *p. gumm. acaciæ*, 3 iij, *syrup. diacod.* 3 ss. Rub together till the mercury is extinguished. *Ph. P.*) Possesses the properties of the blue pill. Dose, gr. ij to viij, or more.

SYRUPUS MORI, *S. e succo moro'rum, S. succi mori, Syrup of Mulberries*, (F) *Syrop de*

mûres. (Mori succ. colat. ℥ j, *sacchar. purif.* ℥ ij. *Ph. L.*) Gratefully refrigerant.

SYRUPUS MORPHINÆ ACETATIS, *Syrup of acetate of morphine*. (*Syrup*, one pound, (*Avoirdupois*), *acetate of morphine*, gr. iv.) Dose, two tea-spoonfuls, as an opiate;—of the strength of the same quantity of syrup of poppies.

The SYRUPUS MORPHINÆ SULPHA'TIS is made in the same way.

SYRUPUS PAPAV'ERIS, *S. papaveris somniferi, S. papaveris albi, S. e meco'nio, S. de meconio, Diaco'dion, Syrup of poppies*, (F) *Syrop de pavots blancs, ou diacode. (Papav. capsul. exsicc. et contus. exemptis seminibus*, 3 xiv, *sacch. pur.* ℥ ij, *aq. fervent. cong.* ijss. Macerate the capsules, in water, for 12 hours; boil to a gallon and express strongly. Boil the liquor to ℥ ij; and strain while hot. Defecate by rest, and boil to ℥ j, adding the sugar so as to form a syrup. *Ph. L.*) One ounce contains about one grain of opium. Anodyne and demulcent.

The Dublin college has a SYRUPUS OPII, called *Common Syrup of Poppies*, which is made by dissolving 18 grains of the *Watery Extract of Opium* in 18 ounces of boiling water. Properties, those of opium and syrup.

SYRUPUS QUINI'NÆ, *Syrup of Quinine*. (Simple syrup, 2 pounds, *sulphate of quinine*, 64 grains.) Six spoonfuls are commonly sufficient to arrest an intermittent.

SYRUPUS E QUINQUE RADIC'IBUS, *Syrup of five roots*, (F) *Syrop des cinq racines. (Rad. apii, fœniculi, apii petroselini, aa* 3 v. Infuse for 24 hours in boiling water and strain. *Rad. asparag., rusci aculeati, aa* 3 v. Boil and reduce to half; adding, towards the end, the residue of the preceding infusion. Boil again for some minutes; strain, and add *white sugar* ℥ vj. *Ph. P.*) Aperient and diuretic. Used in obstructions of the liver, spleen, and mesentery; and in dropsy, &c. Dose, 3 ss to 3 j, or more.

SYRUPUS RHAMNI, *S. rhamni cathar'tici, S. de spinâ cervinâ, S. spinæ cervinæ, Syrup of Buckthorn*, (F) *Syrop de nerprun. (Rhamn. baccar. succ. recent.* ℥ iv, *zingib. rad. concis., pimentæ bacc. contrit., aa* 3 ss, *sacch. purif.* ℥ iiss. Defecate the juice for 3 days, and strain. To a pint of this, add the ginger and pimento; macerate for 4 hours and strain; boil what remains to ℥ iiss. Mix the liquors and add sugar, so as to form a syrup. *Ph. L.*) Cathartic, but apt to gripe. Dose, 3 iv to 3 ij.

SYRUPUS RHÆ'ADOS, *S. de papav'ere errat'ico, S. papaveris erratici, Syrup of Red Poppy*, (F) *Syrop de coquelicot. (Rhæad. petal. recent.* ℥ j, *aq. fervent.* 3 xvij, *sacch. purif.* ℥ iiss. To the water, heated in a water bath, add the petals. Remove the vessel; macerate for 12 hours; express; defecate and add sugar to form a syrup. *Ph. L.*) Chiefly used to give colour.

A factitious syrup is often made of *aloes* dissolved in simple syrup.

SYRUPUS ROSÆ, *Syrupus rosarum soluti-vus*, *S. erosis siccis*, *S. rosæ centifo-liæ*, *S. rosa-ceus soluti-vus*, *Syrup of Roses*, (F) *Syrop de roses pâles*. (*Rosæ centif. petal. exsicc.* 3 vij, *sacch. purif.* ℥vj, *aq. fervent.* ℥iv. Macerate the petals for 12 hours. Evaporate the strained liquor to ℥iiss. Add the sugar. *Ph. L.*) Gently laxative. Dose, 3 ij to 3 iss or more.

SYRUPUS ROSÆ GAL'LICÆ, *Syrup of Red Roses*. (F) *Syrop de roses rouges*. (*Rosæ gallic. petal. exsicc.* 3 vij, *aquæ bull.* ℥v, *sacch. purif.* ℥vj; prepared like the last. *Ph. E.*) Mildly astringent. Added to stomachic infusions.

SYRUPUS SARSAPARILLÆ, *Syrup of Sarsaparilla*. (*Rad. sarsap. cont.* ℥j, *aquæ bull. cong.*, *sacch. purif.* ℥j. Macerate the root for 24 hours; boil to ℥iv. Strain while hot; add the sugar, and boil. *Ph. L.*) Used in the same cases as the root. Dose, 3j to 3iv, and more.

SYRUPUS DE SARSAPARILLA ET SENNA COM-POS'ITUS, *Compound Syrup of Sarsaparilla and Senna*. (F) *Syrop de cuisinier*. (*Rad. sarsap. concis.* ℥ij. Infuse for 24 hours in warm water ℥xij; boil for a quarter of an hour; pass with expression, and boil again the residuum in ℥x of water. Reduce this to ℥vj, and repeat the operation 2 or 3 times. Mix all the liquors and boil them together with flowers of borage, white roses, senna leaves, and aniseed, each 3 ij; reduce to half, pass, and add honey ℥ij. Boil to a syrup. *Ph. P.*) It is considered to be alterant, depurative, and sudorific. Dose, 3 ss to 3 ij.

SYRUPUS DE SCAMMO'NIO, *Syrup of Scammony*. (*Pulv. scammon.* 3 ss, *sacch. alb.* 3 iv, *alcohol* (S. G. .985 to .915) 3 viij. Heat the mixture moderately; then set fire to the alcohol with a lighted taper; agitate constantly, until the flame is extinguished. Suffer it to cool; pass through cloth, and add *Syrup of Violets*, 3 iv. *Ph. P.*) 3 j contains 18 grains of scammony. Dose, 3 j to 3 ss.

SYRUPUS SCILLÆ, *S. scillit'icus*, *S. scillæ marit'imæ*, *Syrup of squills*. (*Acet. scillæ maritim.* ℥iv, *sacch. pur. cont.* ℥vij. *Ph. E.*) Diuretic, expectorant, and emetic. Used in the same cases as the oxymel.

SYRUPUS SENNÆ, *S. cassiæ sennæ*, *Syrup of Senna*, (*Sennæ folior.* 3 ij, *sem. fœnicul. cont.* 3 j, *mannæ*, 3 iij, *sacch. pur.* ℥j, *aquæ ferv.* ℥j. Macerate the senna leaves and fennel seeds for 12 hours. Strain, and add the manna and sugar. *Ph. L.*) Cathartic. Dose, 3 ij to 3 iss or more.

The Parisian Codex has a *Syrupus de sen-na* of a compound character, called *Syrupus de pomis compos'itus*, *Syrop de pommes composé*. It contains, also, borage, bugloss, &c. Dose, 3 ss to 3 ij.

SYRUPUS SIMPLEX, *Simple syrup*, *Common syrup of capillaire*, *Syrupus*. (*Sacch. purif.* ℥iiss, *aquæ*, ℥j. Dissolve the sugar;

set aside for 24 hours; remove the scum, and pour off the clear liquid. *Ph. L.*) Used to cover nauseous tastes, &c.

SYRUPUS TOLUTA'NUS, *S. tolui'feræ balsami*, *S. balsam'icus*, *Balsamic syrup*, *Syrup of tolu.* (*Balsam. tolu.* 3 j, *aquæ fervent.* ℥j, *sacchar. pur.* ℥ij. Boil the balsams for half an hour, in a covered vessel, occasionally stirring. Strain, when cold, and add sugar so as to form a syrup. *Ph. L.*) Use. To give flavour.

SYRUPUS VI'OLÆ, *S. violæ odora'tæ*, *S. viola'rum*, *S. e succo viola'rum*, *Syrup of Vio-lets*. (*Flor. recent. viol. odorat.* ℥ij, *aq. bull.* ℥viij, *sacch. pur.* ℥xv. Macerate, in a covered vessel, for 24 hours; pass, without ex-pression, through linen; add the sugar so as to form a syrup. *Ph. E.*) Very gently laxative. Dose, 3j to 3 ij.

SYRUPUS ZINGIB'ERIS, *S. amo'mi zingiberis*, *Syrup of Ginger*. (F) *Syrop de gingembre*. (*Zingib. rad. concis.* 3 ij, *aquæ fervent.* ℥j, *sacch. purif.* ℥ij. To the strained liquor add the sugar, and form a syrup.

N. B. The Parisian Codex contains a few other compound syrups besides those enume-rated, amongst these is a *Syrup of calf's lungs*, *Syrupus e pulmon'ibus vituli'nis*, *Syrop de mou de veau*, as an expectorant!!

The simple syrups are made according to the usual rule, and possess the virtues of the substances after which they are named.

SYSPA'SIA, from συσπασα, 'I contract.' Clonic spasm, with diminished sensibility and inability of utterance. A genus in Good's Nosology, which includes convulsion, epilepsy, and hysteria.

SYSSARCO'SIS, συσσωμασις, from συν, 'with,' and σαρξ, 'flesh.' *Commissura os-sium carnea*, *Symphysis ossium muscula'ris*, *Connexio ossium corno'sa*, *Carna'tio*. Union of bones by means of muscles; such as the union of the os hyoides with the lower jaw, of the scapula with the ribs, &c.

SYSTAL'TIC, *Systal'ticus*; from συστέλλω, 'I contract.' A systaltic motion in a part is one in which there is alternate contraction and dilatation. See Systole.

SYSTAT'ICA, from συνιστημι, 'I asso-ciate.' Diseases, affecting several or all the sensorial powers simultaneously; irritation or inertness of mind, extending to the mus-cles, or external senses; or of the muscles, or external senses, extending to the mind:—the 4th order, class *Neurotica* of Good.

SYSTEM, *Syste'ma*, from συν, 'together,' and ἵστημι, 'I place.' This word, taken in a good sense, means the collection and ar-rangement of different matters having an ana-logy to each other, or working towards the same end. In natural history, it means a methodical arrangement of beings, for the purpose of facilitating their study.

System is, however, sometimes used in an unfavourable sense in physical science, and often means,—a purely gratuitous supposition,

by which the march of nature is attempted to be universally explained, and to which every thing is made to bend. In anatomy, *system* is an assemblage of organs, composed of the same tissues, and intended for similar functions; for instance, the *nervous system*, *muscular system*, &c.

SYSTEMATISM. A method, according to which every fact of a science is collected

around an opinion true or false. One, who reduces things to such a method is called a *Systematist*.

SYSTOLE, *Constric'tio*, *Contrac'tio* seu *Angusta'tio* seu *Submissio* seu *Mica'tio cordis*. The movement of constriction or contraction of the heart, to give impulse to the blood or to cause its progression. It is opposed to the *Diastole* of the organ.

T

T. BANDAGE. *Fas'cia T. formis*. A bandage, shaped like the letter T. It consists of a strip of linen, of variable length and breadth, the middle of which is attached, at right angles, to the extremity of another strip, also of variable length and breadth. When two such strips are attached, at a distance from each other, the bandage is called a *double T*.

This bandage is used, principally, for supporting the dressings after the operation for fistula in ano, in diseases of the perinæum, groin, anus, &c.

TABEL'LA, *Tab'ula*, *Tabula'tum*, a lozenge; *Tessel'la*. (F) *Tablette*. A solid medicine, composed of a powder, sugar, and mucilage; and generally shaped like a disk. See *Pastil* and *Troch*.

TABELLÆ ACIDI OXAL'ICI, *T. ad sitim*, *Lozenges of Oxalic Acid*. (*Acid. oxalic.* 3j, *sacch. alb.* ℥ss, *ol. limonis.* g^{tt}, xvij vel g^{tt}. xij. Make into lozenges with mucilage of gum tragacanth. *Ph. P.*) Lozenges are made in the same way with the citric and tartaric acids. They are refrigerant.

TABELLÆ ANTIMONIA'LES KUNCKE'LII, *Tabellæ de stibii sulfure'to*, *Lozenges of Sulphuret of Antimony*. *Mor'suli antimoniales*, *M. stibii*, *M. stibia'ti*, *Trochis'ci stibiati*. (*Amygdal. dulc.* 3j, *sacch.* ℥ss, *Sem. cardam.*, *cinnam. pulv.*, *sulph. antim. præpar.* aa 3j, *fiant tabellæ.* *Ph. P.* Each to weigh 10 grains.) Recommended in cutaneous diseases, blennorrhagia, arthritic pains, &c. Dose, 4 or more.

TABELLÆ DE CAT'ECU ET MAGNE'SIA, *Lozenges of Catechu and Magnesia*. (F) *Tablettes de cachou et de magnesia*. (*P. catech.* 3vj, *p. magnes.* 3iv, *p. cinnam.* 3iij, *sacch. alb.* ℥ss, *g. tragac.* gr. xij, *aq. cinnam.* q. s. ut f. massa. *Ph. P.* Each to weigh 12 gr.) Antacid, absorbent, and stomachic. Dose, 5 to 10 lozenges.

TABELLÆ DE FERRO, *Steel lozenges*, *Tabulæ martia'les*, *T. instauran'tes*, *T. antichlorot'icæ*. (*Ferri limat. porphyriz.* 3ss, *p. cinnam.* 3j, *p. sacch.* 3v, *g. trag. et aq. cinnam.* q. s. ut fiat massa. Each lozenge to weigh 12 gr. *Ph. P.*) Tonic, stomachic. Dose, v. to x.

Aromatic lozenges of steel. These consist of sulphate of iron, with a small proportion of the *Tincture of Cantharides*.

TABELLÆ DE ALTHÆA, *Lozenges of Marshmallows*. (*Rad. althææ pulv.* 3iss, *p. sacchar. alb.* 3ivss, f. massa. *Ph. P.*) Demulcent, expectorant.

TABELLÆ DE MAGNESIA, *T. absorbentes*, *Magnesia lozenges*. (*Magnes.* 3j, *sacchar. alb.* 3iv, *mucil. g. tragac.* q. s. *Ph. P.*) Absorbent and antacid.

TABELLÆ CINCHONÆ, *T. de kinâ kinâ*, *Bark lozenges*. (*Ext. cinchon. sicc.* 3ss, *sacch.* 3iv, *cinnam.* 3ss, *mucilag. g. trag.* f. massa. *Ph. P.*) Tonic.

TABELLÆ DE RHEO, *Rhubarb lozenges*. (*P. rhej* 3ss, *sacch.* 3v, *mucilag. gum tragac.* q. s.; f. massa. Each to contain 12 grains. *Ph. P.*) Stomachic and laxative.

TABELLÆ DE SCAMMO'NIO ET SENNA COMPOSITÆ, *Compound lozenges of scammony and senna*, *T. de citro et diacar'thamo*. (*Scammon.* 3iij, *Sennæ* 3ivss, *rhej* 3iss, *caryoph.* 3j, *corticis limon. confect.* 3j, *sacch.* 3vj, f. massa. *Ph. P.*) Purgative. Dose, 3ij to 3vj or more.

TABELLÆ DE SUL'FURE SIM'PLICES, *Simple sulphur lozenges*. (*Sulphur. lot.* 3ss, *sacch.* 3iv, *muc. g. tragac. cum aquæ rosæ præpar.* q. s. *Ph. P.*) Expectorant, demulcent, &c. Used in diseases of the chest and in cutaneous affections. Dose, 1 lozenge.

TABELLÆ DE SULPHURE COMPOSITÆ, *Compound sulphur lozenges*. (*Sulph. lot.* 3ij, *acid benzoic.* gr. xij, *rad. irid. p.* 3ss, *ol. anisi.* gr. viij, *sacch.* 3vss, *g. trag.* q. s. *Ph. P.*) Aperient, expectorant, and stimulant (?). Dose, 4 a day.

TA'BES, *Maras'mus Ta'bes*, *Te'kedon*, *Atroph'ia*, *Decline*. Emaciation of the whole body, with general languor, hectic fever; and, for the most part, depressed spirits.

TABES DORSA' LIS, *Maras'mus tabes dorsalis*, *Phthisis notias*, *Phthisis dorsalis*, *Myelophthi'sis*, *Tabes ossis sacri*. By this term is meant a wasting of the body, attended at first with a pain in the back or loins; and afterwards in the neck or head,—caused, it has been conceived, by too early or too frequent addiction to venery.

TABES MESENTERICA, *Atroph'ia mesenterica*, *Scroph'ula mesenterica*, *Rachial'gia mesenterica*, *Phth'isis mesara'ica*, *Physco'nia mesenterica*, *Mesenteritis*, (F) *Carreau*, *Chartre*. An engorgement and tubercular degeneration of the mesenteric glands, followed by emaciation and general disorder of the nutritive functions. The disease is often owing to inflammation or irritation of the lining membrane of the intestines, giving occasion to enlargement of the glands of the mesentery, as injury to the upper or lower extremities causes inflammation, and enlargement of the lymphatic glands of the axilla and groin. It occurs, particularly, in children of a scrophulous diathesis; and in those who are weaned too early, or fed on indigestible substances. Diarrhœa, emaciation, anorexia, or immoderate appetite; hardness and swelling of the abdomen; and, towards the end, hectic fever, are the chief symptoms of this affection; the prognosis of which is usually unfavourable. On opening the bodies of those who die of the disease, the mesenteric glands are found disorganized, tubercular, or in a more or less advanced state of suppuration.

The treatment is the same as in scrophulosis. Frictions may be added over the abdomen and spine; and mercury, in small doses, so as to excite a new action in the system. The food must be easy of digestion, and the bowels be kept soluble.

TABLE, *Tabula*, *Tabella*, *Tabula'tum*, *Lamina*, *Paries*, *Squama*. A name given to the plates of compact tissue, which form the bones of the cranium. Of these, one is external; the other internal, and called *Tab'ula vi'trea* on account of its brittleness.

TACITURNITY, *Taciturnitas*, *Sigē*, 'silence.' State of a person, who does not speak. Morbid taciturnity sometimes exists as a symptom of the neuroses, especially of melancholy.

TACT, *Tactus*. Modification of the sense of touch. Passive judgment by the cutaneous organ regarding bodies exterior to it. Tact is passive: Touch, active.

TÆDÆ, *Dæs*, *δαις*. A term used for a medicine, employed under the form of fumigation, pessary, or troch.

TÆNIA, *Tē'nia*, from *ταινία*, 'a fillet, a riband.' A genus of intestinal worms, characterized by an elongated, flattened, and articulated body; with four suckorial oscula on the head. Of this genus, two only inhabit the human body—the *Tenia lata* (see *Bothriocephalus latus*), and *Tenia solium*.

The **TÆNIA SOLIUM**, *T. os'culis marginalibus solita'riis*, *T. cucurbiti'na*, *T. huma'na arma'ta*, *Hal'ysis sol'ium*, *Vermis cucurbiti'nus*, *Lumbri'cus latus*, *Tenia sans épine*, *Ver cucurbitaire*, *Tenia articulos demit'tens*, *T. secun'da*, *Tenia à longues articulations*, *T. à anneaux longs*, *Ver solitaire*, or *Long Tape Worm*, has an almost hemispherical, discrete head; an obtuse beak; the neck full anteriorly: all the joints slightly obtuse, the anterior

very short; the next almost square, and the rest oblong: the marginal foramina vaguely alternated.

The *tēnia solium* is commonly a few feet long: sometimes, its length is enormous. It is said to have been met with 600 feet long. It principally inhabits the small intestines and is not common. The oil of turpentine, in some form, largely exhibited, is perhaps the best remedy.

TÆNIA SEMICIRCULARIS, *Gem'ium centrum semicircula'rē*, *Limbus poste'rior cor'poris stria'ti*, *Striæ cor'neæ*, *Striæ semiluna'res*, *Fren'ulum novum*, *Fascia semicircula'ris*, *Bandelette des éminences pyri-formes* (Ch.), (F) *Bandelette*, *B. demicirculaire*, *Lame cor'née*. A medullary, grayish, semitransparent layer, situate in the groove, that separates the thalamus opticus from the corpus striatum in the lateral ventricle.

TAL. A word, formerly employed for alkali. It, also, meant the dung of the peacock.

TALEN'TUM, *τάλαντον*. An ancient weight, equal to 54 pounds, 2 oz., 5 dr. and 24 grains *Poids de Marc*. See *Weights and Measures*.

TALPA, 'a mole.' *Topina'ria*, (F) *Taupe*. A tumour situate on the head, which has been supposed to burrow like a mole.

TAMARIN'DUS, *T. Indica*, *Oxyphæ'nicon*, *Sil'iqua Arab'ica*, *Balampul'li*, *Tamar'a zec'a*, *Oxyphæ'ni'cia*, *Aca'cia In'dica*, *Tam'arind tree*, (F) *Tamarin*. Family, *Leguminosæ*. *Sex. Syst.* Triandria Digynia. The pulp of the tamarind, with the seeds, connected by numerous tough strings is exported from the West Indies, preserved in syrup. It is refrigerant and laxative. *Tamarind whey* is made by boiling 3 ij of the pulp with ℥ iss of milk. When strained, it is used as a diluent in fever.

TAM'ARIX GAL'LICA, *Tamaris'cus*. The *Tamarisk tree*. Family, *Portulacææ*. *Sex. Syst.* Pentandria Pentagynia. The bark, wood, and leaves were formerly employed medicinally;—the former for its aperient and corroborant virtues, in obstructions of the liver; the latter in icterus, hæmoptysis and some cutaneous affections.

TANACE'TUM, *T. vulga'rē*, *Tana'sia*, *Athana'sia*, *Parthe'nium mas*, *Tansy*, (F) *Tanaisie vulgaire*. Family, *Corymbiferaæ*. *Sex. Syst.* Syngenesia Polygamia. The leaves and flowers of tansy have a peculiar, strong odour, and warm, bitter taste. They are tonic, deobstruent(?), and anthelmintic. Dose, 3 ss to 3 j. The infusion is usually drunk as tea.

TANACE'TUM BALSAMI'TA, *Balsami'ta mas*, *B. suaveolens*, *B. major*, *Tanacetum horten'sē*, *Costus horto'rum*, *Mentha Roma'na seu Sara-cen'ica*, *Costmary*, *A'lecost*, *Cock-mint*, (F) *Menthe coq*, *Herbe au coq*, *Grand Baume*. A fragrant-smelling herb, somewhat resembling mint, and formerly much esteemed as a corroborant, carminative, and emmenagogue.

TANGE, τανγη, 'rancidity.' A putrescent tumour.

TANNIN, from (F) *Tanner*, 'to tan.' *Tannicum purum*, *Tanninum*, *Principium adstrin'gens*, *P. Scytodeph'icum*. A principle obtained from oak bark and other astringent vegetables, so called from its forming the principal agent in the process of *Tanning*.

Pure Tannin, obtained from galls has been lately introduced into medicine as an excellent and powerful astringent. Dose, two grains, repeated several times a day. The *Tannate of Lead*, *Plumbi Tannas*, has been applied, in the form of ointment, to excoriations, and sloughing sores from position, (3 ij of the tannate to 3 i of cerate.)

TAPE'TUM, Τα'pestry. A shining spot, on the outside of the optic nerve, in the eyes of certain animals, which is owing to the absence of the pigmentum nigrum occasioning the reflection of a portion of the rays from the membrana Ruyschiana. Its use appears to be, by reflecting the rays to cause a double impression on the retina, and thus add to the intensity of vision.

TAR'ACHE, ταραχη, *Tarax'is*, ταραξις, 'disorder.' A disorder of sight, which arises from a blow, compression of the eye, or the action of dust, smoke or other external cause. By some, it is understood to signify mild or incipient ophthalmia.

TARAN'TISMUS, *Tarentis'mus*, *Tarantalism'us*, *Tarentu'lism*. A feigned or imaginary disease in Apulia, characterized by excessive avidity for dancing at the sound of instruments, and which was ascribed, by the vulgar, to the bite of the tarantula. A sort of tarantismus, considered peculiar to Africa and believed to be spontaneous, has been called *Tarentismus Tangita'nus*, *Janon-tarentisme*.

TARAN'TULA, from Tarentum or Tarento, a town of Italy where they abound; *Tarentula*, (F) *Tarentule*. A species of spider—the *Ara'nea Tarentula* of Linnæus, *Lycosa Tarentula* of Latreille, whose bite has been looked upon as dangerous. Music has been thought to cure it.

TARI. Palm or cocoa wine, from which sugar was obtained, called *Jagre*. It was once used as a tonic.

TARI'NI PONS. A cineritious substance between the corpora albicantia, which assists in forming the bottom of the third ventricle.

TARSAL, *Tar'seus*. That which relates to the tarsus.

The **TARSAL ARTICULATIONS** result from the union of the bones of the tarsus with each other.

TARSO-METATARSAL, *Tarso-metatar'seus*. That which relates to tarsus and metatarsus.

The **TARSO-METATARSAL ARTICULATIONS** are those between the bones of the second row of the tarsus and the metatarsal bones. The term *Tarso-metatarsal* is, likewise, ap-

plied to ligaments, connected with these joints; some of which are *dorsal*, others *plantar*.

TARSUS, *Planta prima pedis*, *Rasse'ta pedis*, *Pedium*, *Cavic'ulæ pedis nodus*. 1. The posterior part of the foot. The tarsus consists of 7 bones, arranged transversely in two rows, between which amputation is sometimes performed.

The *first* or *Tibial row*, (F) *première rangée*, *R. jambière*, consists of the astragalus and os calcis; the *second* or *metatarsal*, (F) *seconde rangée*, *R. métatarsienne*, of the scaphoides, cuboides, and three ossa cuneiformia. 2. The *Tarsi*, Tarsal cartilages, *Tarsal fibro-cartilages*, *Orchoi*, *Crepid'ines seu Coro'næ seu Chelæ seu Un'gulæ Palpebra'rum*, *Tharsi*, are two small, cartilaginous layers, seated in the substance of the free edge of each eyelid. The upper is larger and broader than the lower. Both commence at the bifurcated extremity of the tendon of the orbicularis palpebrarum, and pass to the opposite commissure of the eyelids. They are broader in the middle than at their extremities.

TARTA'REI MORBI. A term employed by Paracelsus to designate certain diseases which he attributed to tartar.

TARTAR'IC ACID. *Acidum tartar'icum*, *A. tartaro'sum*, *Acor tartaricus*, *Acidum tartari essential'e*, *Tarta'reous acid*, *Sal tartari essential'e*. (*Potassæ supertart. ℞ iiss, aq. distillat. ferv., cong. iij, cretæ pp'æ. ℞ j, acidi sulph. ℞ j.* Boil the supertartrate with two gallons of the water, and gradually add the prepared chalk, until no more bubbles appear; let the tartrate of lime subside; then pour off the fluid and wash the tartrate of lime with distilled water, until it is tasteless. Pour upon it the sulphuric acid, diluted with a gallon of boiling distilled water; and set the mixture aside for 24 hours, occasionally stirring it. Filter, and evaporate to crystallize. *Ph. L.*) It is refrigerant, and antiseptic, but is chiefly used for making effervescent draughts with soda.

TASTE, *Gustus*, *Geusis*, *Geuma*, *Geuthmos*, (F) *Gout*. One of the five external senses, which instructs us of the savours of bodies, and of which the tongue is the principal organ.

Gustation, *Gustatio*, is the exercise of this faculty. In disease, the taste frequently becomes variously vitiated.

TAUROCOL'LA, ταυροκολλα. Glue made of the ears and genitals of the bull. It was formerly much esteemed.

TAXIS, from τασσα, 'I order,' 'I arrange,' *Reposi'tio*, *Reduc'tio*. A methodical pressure exerted by the hand on a hernial tumour, for the purpose of reducing it. This operation is generally easy in herniæ that are free from adhesions, of small size, and with a large opening to the sac; but it is very difficult and frequently impracticable in

those that are adherent or strangulated. To perform the taxis, the patient should be put in the horizontal posture, and in one in which the parietes of the abdomen may be relaxed.

The manual procedure varies in each species of hernia. In all cases, too strong pressure of the parts must be avoided; as inflammation and gangrene might be induced. The displaced organs must be pushed into the abdomen, exactly according to the direction of the axis of the hernial sac.

The reduction is sometimes favoured by blood-letting, *ad deliquium*; the warm bath; warm fomentations; tobacco, emollient glysters; and, at times, by cold applications, as ice, &c.

In a case of strangulated hernia, should the taxis fail, an operation becomes necessary.

TAXUS BAC'CATA. The Yew tree, *Smilax, Smilas, Thy'malos*, (F) *If. Family, Coniferæ. Sex. Syst. Diœcia Monadelphica.* The ancients believed the yew to be poisonous; but the fruit may be eaten without inconvenience. The leaves have been often recommended in epilepsy. The resin, obtained from the bark, has been called *albir*.

TEAR, Sax. *tear, Lac'ryma, Lachryma, Lacruma, Dac'ryon*, (F) *Larme*. An excrementitious humour, secreted by the lachrymal gland, and poured between the globe of the eye and the eyelids, to facilitate the motions of those parts. The tears are saline, inodorous, and colourless. They turn the syrup of violets green; and contain muriate of soda, with excess of base, phosphates of lime and soda, and albumen.

TELAMONES, *τελαμωνες*, 'bandages.' Charpie, used for wounds; or linen, employed for bandages.

TELE'PHIUM, *Ulcus telephium*. The ancients gave this name to an ulcer of a very bad kind and difficult to cure, because the wound which Achilles inflicted on Telephus degenerated into a similar ulcer.

TEM'PERAMENT, *Temperamen'tum, Temperatu'ra, Tempera'tio, Tempe'ries, Complex'io, Crasis, Eucrasia*. A name given to the remarkable differences that exist between different individuals, in consequence of the variety of relations and proportions between the constituent parts of the body. Thus, of old, it was supposed, that, according to the predominance of any one of the four humours then generally admitted—blood, lymph, bile, and atrabilis or black bile—the manifestations of the functions were *tempered* or modified so as to give rise to a *sanguine, lymphatic, choleric, or atrabilious or melancholic* predominance or temperament. The idea of the existence of certain of these humours has been banished, yet the influence of some, as of the blood, lymph, and bile, is still admitted by many.

Too much influence has, doubtless, been assigned to temperament in the sense in

which it was formerly and still is generally understood, although there can be no question that difference of organization does occasion a difference in the activity of organs.

TEM'PERANCE, *Sophros'yne, Nephaliotes, Sobri'etas, Sobriety*. Moderation, opposed to gluttony and drunkenness. The advantage of temperance, in a hygienic point of view, requires no comment.

TEMPLE, *Tempus, Crot'aphus*, (F) *Tempe*. A depression, on each side of the head, between the forehead and eye anteriorly, and the ear posteriorly. The *temples*, distinguished into *right* and *left*, correspond to the temporal fossa on each side. The word is said to be from the Latin *tempus*, 'time,' because in this part the hair begins to turn white and to indicate age.

TEMPORAL, *Tempora'lis*. That which relates to the temples.

The **TEMPORAL BONE**, *Os tem'poris seu tempora'lē seu arcua'lē seu arma'lē seu lapideum seu lapido'sum seu saxeum seu petro'sum seu lithoi'des seu lepidoi'des seu squamo'sum seu squamifor'me seu durum seu mendo'sum seu prærup'tæ rupi assimila'tum seu nerva'le, Crot'aphus*, is seated at the lateral and inferior part of the cranium, of which it forms part; and contains, within it, the special organs of audition. It is usually divided into three portions:—1. The *squamous, Pars squamo'sa*, (F) *Portion écailleuse ou squameuse*. 2. The *mastoid portion*, and 3. The *Petrous portion, Pars petro'sa, Pyr'amis trigo'na*, (F) *Portion pierreuse, Rocher*. It has, *first*, an *auricular or external face*, on which is a surface that makes part of the temporal fossa; the *zygomatic process*; the *glenoid cavity*; the *fissure of Glaserius*; the *meatus auditorius externus*; the *mastoid process*; the *digastric groove*; the *canalis caroticus*; the *jugular fossa*; the *styloid process*; the *stylo-mastoid foramen*, &c. 2. A *cerebral or internal surface*, which corresponds to the cavity of the cranium and on which is the *Pars petrosa*, the *hiatus Fallopii*, the *meatus auditorius internus*, the *fissure of the aquæductus vestibuli*, a *portion of the gutter for the lateral sinus*, &c. 3. A *circumference*, on which is observed the orifice of the *bony portion of the Eustachian tube* and the *Aquæductus cochleæ*, &c. The temporal bone is articulated with the sphenoid, occipital, parietal, malar, and inferior maxillary bones. It is developed from five points of ossification.

The **TEMPORAL FOSSA** is an excavation, observed at each side of the head. It is filled by the muscle whose name it bears, and is formed by the temporal and sphenoid, below; by the parietal and frontal bones, above; is separated, by a transverse crista, from the zygomatic fossa, and completed, before, by the cheek bone.

The **TEMPORAL MUSCLE**, *Temporalis, Arcadi-temporo-maxillaire, Crotaphi'tes, Tem-*

poro-maxillaire (Ch.) is a broad, flattened, triangular muscle, which fills the temporal fossa. Its fibres are attached to the temporal aponeurosis and fossa; and all converge into a strong tendon, which passes under the zygomatic arch, and is inserted into the coronoid process of the lower jaw. This muscle raises the lower jaw, and applies the teeth against each other.

The TEMPORAL APONEUROSIS is a very strong aponeurosis, of a bluish, shining colour, which is attached to the whole of the curved line of the temporal bone; to the posterior edge of the malar bone; to the superior margin of the zygomatic arch, and forms an envelope for the temporal muscle.

The TEMPORAL or CROTAPHITE ARTERIES, are several.

I. The *Temporal Artery*, properly so called, arises from the outer side of the superior part of the external carotid. It ascends between the ramus of the jaw, the meatus auditorius externus, and the parotid gland, which covers it as far as the zygomatic arch. Above this, it becomes subcutaneous; and, when it has attained the middle of the temporal region, it divides into two branches: the one anterior—*A. temporalis frontalis seu interna seu anterior*; and the other posterior—the *A. temporalis occipitalis seu externa seu superior*. The temporal artery, before its division, gives off, 1. Branches to the parotid; to the joint of the lower jaw; to the meatus auditorius, and to the masseter. 2. The *transverse artery of the face*. 3. The *middle temporal*, which arises beneath the cheek-bone, and traverses the temporal aponeurosis, immediately beneath that bone.

II. The *Deep-seated Temporals*, *A. temporalis profundæ*. These are two in number. They arise from the internal maxillary, and have been distinguished, from their position, into *anterior* and *posterior*. They send their principal divisions into the temporal muscle.

The *Temporal Veins* were formerly called *Ætoi* or *Ætoi Phlebes*, *Aquila Venæ*.

The TEMPORAL NERVES. These are distinguished into the *superficial temporal*, furnished by the inferior maxillary branch of the 5th pair, behind the condyle of the jaw; and the *temporales profundæ*, *anterior* and *posterior*, furnished by the same nerve, at its exit from the cranium. Sömmering has given the name *temporal* to the divisions, sent by the facial nerve to the temporal region.

TEMPORO-MAXILLARY, *Temporo-maxillaris*. That which belongs to the temporal bone and lower jaw.

The TEMPORO-MAXILLARY ARTICULATION of joint of the lower jaw, is seated between the glenoid cavity and transverse process of the temporal bone on the one hand, and the condyle of the lower jaw on the other. Two thin cartilages cover the surfaces of these bones. The one is common to the transverse process and the portion of the glenoid cavity,

anterior to the fissure of Glaserius; the other belongs to the condyle. This articulation is furnished with an inter-articular fibro-cartilage, two synovial capsules, and two lateral ligaments:—the one internal, and the other external.

The TEMPORO-MAXILLARY NERVES of Bichat are the divisions of the facial nerve, distributed to the temporal and maxillary regions.

TEMULENTIA, *Ebrietas*, *Drunkeness*. Plater gave this name to delirium; Ettmüller, to an apoplectic condition, depending upon drunkenness—the *Apoplexia temulentia* or dead drunkenness. Commonly, *Temulentia* is used synonymously with drunkenness, *Methè*, and is often employed in the description of diseases, to indicate a state resembling drunkenness. *Mania e temulentia* is the same as *Delirium tremens*, (q. v.)

TENACULUM, from *te'neo*, 'I hold.' A kind of fine hook attached to a handle, which is thrust through the parietes of a blood-vessel, to draw it out and enable it to be tied.

TENACULUM, ASSALINI'S. An ingenious instrument, invented by Assalini. It consists of a forceps, or double tenaculum, the points of which are fine, sharp, and bifurcated, so as to be readily received into each other when the instrument is closed on the artery, which it is by a spring. It is of great use when the surgeon has no assistant at hand. The instrument is figured in S. Cooper's "First Lines."

TENDON, *Tendo*, *Pronervatio*, from *τενω*, 'I stretch:' *Tenon*, a *Sinew*. A fibrous cord, more or less round, long, or flattened; of a white, pearl colour, and composed of very close parallel fibres. The tendons are attached to the bones, by one extremity; by the other, they receive the insertions of the fleshy fibres: sometimes, they afford attachment to fleshy fibres at both ends;—as in the digastric muscle. The tendons must be considered as so many cords, for transmitting the motion of muscles to the bones or levers.

TENESMUS, *Teinesmos*, *Tinasmus*, from *τενω*, 'I stretch:' *Proc'tica Tenesmus*, *Obstipatio Tenesmus*, (F) *Epreintes*. Frequent, vain, and painful desire to go to stool;—one of the chief symptoms of inflammation of the lining membrane of the digestive tube, as of dysentery.

TENNESSEE, MINERAL WATERS OF. On the waters of French Broad River, in this State, is a large, clear, thermal spring. The heat is so great that, at first going in, it is almost insupportable.

TENONTAGRA, from *τενω*, 'tendon,' and *αγζα*, 'seizure.' A variety of gout; which affects the tendinous parts of muscles, or the tendinous ligaments, which strengthen certain articulations.

TENONTOTROTI, from *τενω*, 'tendon,' and *τιτρωσκα*, 'I wound.' They who are wounded in the tendons.—Galen.

TENOTOMY, *Tenotomia*, from *τενω*, 'a

tendon,' and *τομή*, 'incision.' The operation of dividing a tendon, often practised for the removal of *Loxarthrus* or deviations of the joints—as in club-foot.

TENSION, *Tensio*, *Tasis*, *Diat'asis*, *Entonia*, (*Entonia* is also used for over-tension,) *Conten'sio*, *Disten'sio*, from *ten'dere*, 'to stretch.' State of a part, which is stretched, when its textures are distended by the afflux of fluids, or the accumulation of gas, or when its fibres are drawn, as it were in an opposite direction, and are, consequently, more resisting than usual.

TENSOR TARSI. A small muscle, belonging to the inner commissure of the eyelids, well described by Prof. Horner of Philadelphia. It is about 3 lines broad and 6 long: arises from the posterior flat surface of the os unguis, near its junction with the ethmoid bone, and passes forwards and outwards, lying on the posterior face of the lachrymal ducts. As it approaches the commissure of the lids, it splits into two, nearly equal, parts; each of which is appropriated to a duct, and inserted along its course, almost to the punctum lachrymale. Its chief office seems to be, to influence the position of the puncta lachrymalia, and to regulate the course of the tears through the lachrymal ducts.

TENSOR TYMPANI, *Inter'nus Auris*, *Internus Mallei*, *Salpingo-malléen*. A small muscle, which arises from the petrous portion of the temporal bone, and the cartilage of the Eustachian tube, and terminates by a tendon, which is reflected over the processus cochleaformis, and is inserted into the apophysis of the handle of the malleus.

TENT, *Tenta*, *Turun'da*, *Penic'ulus*, *Penicil'lus*, *Penicil'lum*, *Motos*, *Lemnis'cus*. (F) *Tente*, *Bourdonnet*, *Mèche*. In Surgery, tents are small rolls of lint, of a cylindrical or pyramidal shape, which are introduced into wounds and deep ulcers, to prevent them from closing before they are filled up from the bottom. Tents are, sometimes, also made of prepared sponge, gentian root, &c. They are not so much used as they formerly were.

TENTIPEL'LUM, from *tendo*, 'I stretch,' and *pellis*, 'the skin.' Ancient name of a cosmetic, with which, it was pretended, wrinkles could be effaced.

TENTORIUM, *T. cerebel'lo super-exten'sum*, *T. cerebelli*, *Tentac'ulum cerebelli*, *Septum transverse* (Ch.), *Transverse Septum*, *Septum enceph'ali*, *Intersep'ta horizonta'lia Pacchioni*, *Processus transversus duræ matris*, *Lateral Processes of the Dura Mater*, *Diaphrag'ma cerebri*. (F) *Tente du cercelet*, *Plancher du Cerveau*. A process of the dura mater, which separates the cerebrum from the cerebellum. It extends from the internal horizontal spine of the occipital bone, directly forwards to the sella turcica of the sphenoid.

TERATOLOGY, *Teratologia*, from *τερας*, genitive, *τερατος*, 'a monster.' A description, or the doctrine, of monsters.

TEREBIN'THINA, from *τερεβινθος* or

τερεβινθος, 'the turpentine tree.' *Tur'pentine*, *Botin*, *Albotim*, *Altilibat*, *Brutino*. (F) *Térébenthine*. A substance, of the consistence of honey, which flows from many trees of the terebinthaceæ, and coniferæ families. It is viscid; shining; more or less transparent; inflammable; of a warm, pungent taste; strong smell, and is entirely composed of resin and essential oil, without benzoic acid. It is soluble in alcohol. See *Turpentine*, (Index.)

All the turpentine are stimulant, diuretic, and cathartic.

TERES, *Strongylus*, *Cylindroides*, 'long and round.' An epithet given to many organs, the fibres of which are collected into round fasciculi.

The **TERES MINOR**, *Margini-sus-scapulo-trochitérien*, *Nonus humeri Placenti'ni*, *Le plus petit sus-scapulo-trochitérien* (Ch.), (F) *Petit rond*, is situate at the posterior and inferior part of the shoulder: it is narrow and flattened, from above to below, in its inner half; and, from before to behind, in the outer. It is attached, on the one part, to the outer surface of the scapula, near its inferior angle; and, on the other, to the inferior part of the great tuberosity of the humerus. It depresses the arm, and causes it to turn on its axis from within outwards. It also carries it backwards.

The **TERES MAJOR**, *Anguli-scapulo-huméral*, *Scapulo-huméral* (Ch.), (F) *Grand rond*, is situate at the inferior and posterior part of the shoulder. It is attached, on the one hand, to the outer surface of the inferior angle of the scapula; to the corresponding part of its axillary margin; and, on the other, to the posterior margin of the bicipital groove of the humerus. It carries the arm backwards and inwards, and carries it also inwards in rotation. When it acts with the longissimus dorsi and pectoralis major, it applies the arm against the lateral part of the chest, and keeps it forcibly there.

LIG'AMEN'TUM TERES. (F) *Ligament rond*. This name is given to the round ligament in the cotyloid cavity, which is attached to the head of the bone, and to the bottom of the cavity. It is also given to a small fibrous fascia, which extends from the coronoid process of the ulna to below the bicipital tubercle of the radius.

TERMIN'THUS, *Terebinthus*, from *τερεβινθος*, 'the turpentine tree.' *Phyma Anthrax Terminthus*, *Berry* or *Fungous Carbuncle*. The ancients gave this name to a tumour, surmounted by a black pustule, and resembling the fruit of the turpentine tree.

TERRA LIVON'ICA. A *Terra sigilla'ta* or *sealed earth* from Livonia, redder than that from Silesia, and very astringent.

TERRA NOCERIA'NA. A whitish, soft, and astringent earth, found in the environs of Nocera in Italy.

TERRA ORLEA'NA, *Pigmen'tum urucu*, *Urucu*. (F) *Rocou*, *Roucous*, *Bichet*. A ceraceous mass, obtained from the seeds of the

Bixa Orleana. In Jamaica, it is recommended in dysentery, and is considered to possess astringent and stomachic qualities. It is called, according to its shape, *Flag Annotto*, *Roll* or *Egg Annotto*.

The *Spanish Annotto*, *Bixa*, is in small, oblong cakes. It is chiefly employed as a colouring matter.

TERRA PORTUGALICA, *Barros*, *Bucaros*. A reddish, astringent, styptic earth, obtained from Portugal.

TERRA SIGILLA'TA, *Sealed Earth*. A bole or earthy matter, made into little cakes or flat masses, and stamped with certain impressions, as with the head of the Grand Seigneur. To these belong the *Terra Silesiaca*, *Terra Lemnia*, *T. Turcica*.

TERRA LEMNIA, *Lemnian Earth*, *Lempnias*. A name given by the ancients to a solid, reddish, astringent substance, prepared with the pulp of the fruit of the Baobab, an African tree, according to Prosper Alpinus. It seems, however, to be an argillaceous earth. It has been employed as an astringent.

TERTIAN FEVER, *Febris tertia'na*, *An'etus tertianus*, *Tritæ'us*, *Tertian Ague*, (F) *Fièvre tierce*. An intermittent, whose paroxysms recur every third day, or every 48 hours. The *mildest*, and the most *pernicious*, intermittents belong to this head. As a general principle, it is the most manageable form of ague.

TESTA'CEOUS, from *testa*, 'a shell.' A powder, consisting of burnt shells. These contain carbonate of lime, chiefly, and hence the term has been applied to cretaceous substances. See *Creta*.

TESTES. The *Tes'ticles*. A name given to the inferior tubercles of the corpora quadrigemina, to distinguish them from the superior, called *Nates*.

TES'TICLE, *Testis*, *Testic'ulus*, *Orchis*, *Did'ymus*, *Gem'ini* (pl.); (F) *Testicule*, from *testis*, 'a witness,' because the testicles are evidences of virility. The name of two glandular organs, contained in the scrotum, whose office is to secrete sperm. They are formed of a gray and softish substance, composed of tortuous canals, called *Tu'buli seminiferi* vel *Vasa semina'lia*, folded on each other, and of extreme fineness; the number of which, according to the estimate of Monro, is 62,500, and the total length 5,208 feet. All these canals, uniting in their course, pass through the corpus Highmorianum, concur in forming the epididymis, and give origin to the vas deferens.

The testicles are covered, immediately, by a fibrous membrane, of an opaque white colour, and very tough, called *Tu'nica albugin'ea*, or, simply, *Albuginea*, *Perites'tis*, of which the corpus Highmorianum is only an enlargement. Over this, again, is the tunica vaginalis, the second envelope of the testis.

TESTU'DO, *Chelo'nē*, (F) *Tortue*. A genus of reptiles, including the turtle, the

flesh of which is much esteemed as an article of diet.

Also, an encysted tumour, which has been supposed to resemble the shell of a turtle. *Emphy'ma encys'tis gan'glion*. See *Gan-glion*.

TETANO'THRA, *Tetanom'ata*, *Eruga-to'ria*. Medicines, which remove wrinkles. *Gorræus*.

TET'ANUS, from *τείνω*, 'I stretch;' *Spasm with rigidity*, *Convul'sio In'dica*, *Holoton'icos*, *Rigor nerv'us seu nerv'us sum*, *Exten'sio seu Disten'sio*, *Enta'sia Tetanus*, *Cat'ochus Cervi'nus*, *Catochus holoton'icus*. A disease, which consists in a permanent contraction of all the muscles or merely of some, without alternations of relaxation. It is characterized by closure of the jaws; difficulty or impracticability of deglutition; rigidity and immobility of the limbs and trunk, which is sometimes curved forwards (*Emprosthot'onos*, q. v.); sometimes backwards (*Opisthot'onos*, q. v.); and sometimes to one side, (*Pleurothot'onos*, q. v.) When tetanus is confined to the muscles of the jaws, it is called *Trismus*. It is a most formidable affection. The means of treatment are:—copious and repeated blood-letting; bathing, cold and warm; powerful doses of opium, and other narcotics.

In **TRAUMAT'IC TETANUS**, or that which supervenes on a wound, every extraneous matter must, of course, be removed from the wound, and soothing applications be made to it.

TETARTOPHI'A, from *τεταρτος*, 'the fourth,' and *φύω*, 'I arise.' *Quarta'nus re-mit'tens*. A quartan, in which the intermission is inordinately short or imperfect.

TETRADRACH'MON, from *τετρας*, 'four,' and *δραχμη*, 'a drachm.' A weight of four drachms or half an ounce.

TETRAMYRON, from *τετρας*, 'four,' and *μυρον*, 'an ointment.' An ointment of four ingredients. *Galen*.

TETRANTHERA PICHU'RIM, *Faba Pichurim*. The seeds of this Brazilian plant have been used in diarrhœa, dysentery, flatulent colic, &c. Dose, ʒ ij.

TETRA'O COTUR'NIX, *Coturnix*; the *Quail*, (F) *Caille*. The quail is an esteemed article of diet. The Greek name is *ορτυξ*; and the places, called *Ortygia*, are named after it. The excrements of the quail were, formerly, extolled in epilepsy: and the fat in specks of the eye.

TETRAPHAR'MACUM, from *τετρας*, 'four,' and *φαρμακον*, 'a medicine.' A medicine consisting of four ingredients.

TETROB'OLON. The weight of four oboli, or two scruples.—*Gorræus*.

TEUCRIUM CHAMÆ'DRYS, *Chamæ-drys*, *C. minor repens*, *C. vulga'ris*, *Quer-cula minor seu Calamandri'na*, *Trissa'go*, *Chamæ'drops*, *Trixa'go*, *Common German-der*, *Creeping German-der*, *Small German-der*, *English Trea'cle*, (F) *Petit chène*, *Ger-*

mandrée officinale. Family, Labiatae. Sex. Syst. Didynamia Gymnospermia. This is possessed of aromatic and bitter properties. The dose of the dried powder is from 3 ss to 3 j.

The TEUCRIUM FLAVUM has similar properties.

TEUCRIUM CHAMÆPITYS, *Chamæpitys*, *Arthetica*, *Arthretica*, *Aju'ga*, *Abiga*, *Chamæmo'rum*, *Iva arthritica*, *Holoc'yron*, *Io'nia*, *Sideritis*, *Common Groundpine*. (F) *Petite Ivette*. Properties like the last. The tops or leaves have been recommended as aperients and tonics; especially in female obstructions, and in paralytic disorders.

TEUCRIUM CRETICUM, *Poley-mountain of Candy*, *Polium Creticum*. The tops and whole herb enter into the old compounds,—*Mithridate* and *Theriaca*. It has a moderately aromatic smell; and a nauseous, bitter taste, and is placed among the aperients and corroborants.

The TEUCRIUM CAPITATUM or *Poley-mountain of Montpel'lier*, *Polium Monta'num*, is, generally, substituted for the last. The common *Poley-mountain* is the *Teucium Monta'num*; and the *Golden Poley-mountain*, the *Teucium Polium*, *Polion*.

The TEUCRIUM IVA, *Chamæpitys moschata*, *Iva moschata* *Monspeliensium*, *Iva*, *Chamæpitys anthyllus*, *French Groundpine*, (F) *Ivette musquée*. It has similar virtues to the *Chamæpitys*, but weaker.

TEUCRIUM MARUM, *Marum Syriacum*, *Marum Creticum*, *Majora'na Syriaca*, *Marum verum*, *M. Cortu'si*, *Chamædry's inca'na maritima*, *Marum germander*, *Syrian herb mastich*, *Orig'anum Syriacum*, (F) *Marum ou Germandrée Maritime*, *Herbe aux chats*. A very aromatic plant; of a camphorated smell; and formerly much used, in Medicine, as a tonic, antispasmodic, emmenagogue, &c.

TEUCRIUM SCORDIUM; the *Water Germander*, *Scordium*, *Trissa'go palustris*, *Chamædry's palustris*, *Allium red'olens*, (F) *Germandrée Scorodone*, *Sauge des bois*, *Germandrée aquatique*. The leaves have a garlicky smell, and bitterish, and slightly pungent taste. It has the tonic properties of the other *Teucra*.

TEXTURE, *Textu'ra*, from *texo*, 'I weave.' The particular arrangement of the tissues that constitute an organ.

THALAMUS, *Θαλαμος*, (F) *Couche*; 'a bed.' The place at which a nerve originates, or has been considered to originate.

THALAMI NERVORUM OPTICORUM seu OP'TICI, *Eminentia magnæ cerebri*, *Ganglia cerebri postica*, *Crura medullæ oblongatæ*, (of some,) *Striatâ corpora superiora posteriora*, *Colliculi nervorum opticorum*, *Couches des nerfs oculaires* (Ch.), (F) *Couches des nerfs optiques*, *Couches optiques*. Two rounded and irregular surfaces, which are seen exposed in the lateral ventricles of the brain, and in the third ventricle,

the inferior surface of which presents two projections, called *Corpora geniculata*, that furnish several filaments to the optic nerves. The name was given from a belief, that the optic nerves originate from them. They, however, arise more posteriorly, and adhere merely to the inner margin of those bodies. Gall considers that the thalami act as ganglions to the nerves; and, hence, he calls them *Grand ganglion cérébral inférieur*. They are also called *Posterior ganglion of the cerebrum*. From the thalami and corpora striata fibres proceed upwards to constitute the convolutions of the brain, and the various bands that connect the different parts of the brain together.

The upper and inner parts of the thalami are so closely connected as to form one continued surface, called *Commissu'ra mollis*. The posterior parts turn downwards and outwards; after which they are elongated to form the two white cords, termed *Tractus optici*.

THALICTRON, *Thalictrum*, *T. magnum*, *T. flavum*, *T. flavescens*, *Poor Man's Rhubarb*, *Rhabarbarum pauperum*, (F) *Pigamon jaunâtre*, *Rue des prés*, *Fausse Rhubarbe*, *Rhubarbe des pauvres*. Family, *Ranunculaceæ*. Sex. Syst. *Polyandria Polygynia*. The root resembles rhubarb in its properties.

THANATOLOGY, *Thanatolog'ia*, from *θανατος*, 'death.' A description, or the doctrine, of death.

THAPSIA, from the island *Thapsus*. The deadly carrot, *Thapsia asclepias*. Family, *Umbelliferae*. Sex. Syst. *Pentandria Digynia*. The root operates violently, both upwards and downwards. It is not used.

THEA, *Chaa*, *Tea*, (F) *Thé*. There are two principal species of tea plants;—the *Thea Bohe'a* and *Thea viridis*; the *black tea* and the *green*. Family, *Hesperidæ*. Sex. Syst. *Polyandria Monogynia*. In commerce, many kinds of teas are met with. Several of the differences between these appear to result from the age at which the leaves have been collected; and the mode of their desiccation.

Tea-drinking was introduced into Europe, about the year 1666: since which time its use has become universal; and, in spite of the assertions of medical terrorists, it is, except in particular idiosyncrasies, entirely harmless.

By an analogical transference, very common in language, the word *Tea* has been used almost synonymously with infusion, as *Beef tea*, *Mint tea*, &c.

THEBESIIUS, VEINS OF. A name, given to supposititious branches of the coronary veins, which Christopher Adam Thebesius, a German anatomist, described as opening into the heart by small depressions observable in the right auricle; and which have been called *Foramina Thebesii*. No such veins can be demonstrated. The valve at the ori-

fice of the coronary vein, in the right ventricle, is called *Valvula Thebesii*, *V. Guiffartiana*, *V. venæ magnæ*.

THELITIS, from *θηλη*, 'the female nipple,' 'the female breast,' and *Itis*, denoting inflammation. Inflammation of the nipple.

THENAR, *ἡνάρ*. The palm of the hand, or sole of the foot.

The **THENAR EMINENCE** is the projection at the anterior and outer part of the hand, formed by the abductor brevis, opponens, and flexor brevis pollicis.

THENAR MUSCLE. Riolan and Winslow give this name to the fleshy mass, formed of the abductor brevis, opponens pollicis, and the anterior part of the flexor brevis pollicis. In the foot, Winslow gives the name *Thenar muscle* to the abductor, and flexor brevis pollicis pedis.

THEORETICAL, *Theoreticus*, *Theoricus*, from *θεωρεῖν*, 'I contemplate.' (F) *Théorétique*, *Théorique*. That which is confined to theory, or is connected with it. An epithet, also applied to a sect of physicians, who founded their doctrine chiefly on reasoning.

THEORY, *Theoria*, from *θεωρεῖν*, 'I contemplate.' The speculative part of a science. The connexion established in the mind between a general fact, or the least possible number of general facts, and all the particular facts dependent thereon: for example; the motions of the heavenly bodies, and the most important natural phenomena are connected with a single fact, previously known by observation; viz. that the force of gravity acts inversely, according to the square of the distance. This constitutes the theory of universal gravitation. *Theory* must not be confounded with *system*. *Theory* regards nature as it is; and is a rigid deduction from facts. *System* is too often the creature of the imagination, to which nature is made to bend.

The **THEORY OF MEDICINE**, *Institutes of Medicine*, *Theoretical Medicine*, is that part of the science, which attempts, philosophically, to account for the various phenomena that present themselves during health as well as in disease. It is the philosophy of Medicine.

The *Institutes of Medicine* are generally considered to comprise Physiology and its application to Pathology, Hygiène, and Therapeutics.

THERAPEUTICS, *Therapeutikē*, *Therapeusis*, *Iatrotechnica*, *Practice of Physic*, *Therapeia*, *Curatoria* *Methodus*, *Methodus Medendi*, from *θεραπεύω*, 'I remedy.' (F) *Thérapeutique*. That part of Medicine, the object of which is the treatment of disease. With others, the department which comprises an explanation of the *modus operandi* of medicines,

THERAPEUTIST. Same etymon. One who practises Therapeutics. A practitioner of Medicine. To be a good therapist, he must be well versed in every department of

Medicine, and be capable of observing and of reasoning well. A man may be a good observer, and yet a bad reasoner. He cannot practise well unless he is both. Hence, the comparatively small number of good Theraputists.

THERIACA, *θηριακά*, from *θηρ*, 'a ferocious or venomous animal,' and *αἰσθάναι*, 'I cure.' *Treacle*, (q. v.) (F) *Thériaque*. Also, a medicine, believed to be capable of curing, or preventing the effects of the bite of a venomous animal. In this sense, it is chiefly used by writers.

The **THERIACA ANDROMACHI** or *Venice Treacle* is an ancient alexipharmic electuary; consisting of a farrago of 61 different ingredients, possessing the most opposite properties. It was invented by Andromachus of Crete, and prepared by order of Nero. It has received various modifications; and, to the discredit of the *Faculté de Médecine* of Paris, holds its place in their Codex, with even an additional number of ingredients. The *Electuarium Opium polypharmacum* of the Codex contains acrid ingredients, 5; astringent, 5; bitter, 22; indigenous aromatics, 10; umbelliferous aromatics, 7; balsams and resinous substances, 8; fatid ingredients, 6; narcotics, 1; earthy substances, 1; gummy or amylaceous, 4; saccharine, 3: total, 72! and one of these is the *flesh of the viper*! A little more than a grain of opium is contained in each drachm of the compound.

THERIACA GERMANORUM. An extract or rob, prepared from juniper berries. Used as a stomachic.

THERIACA LONDINENSIS, *Cataplasma Cuminum*. A cataplasm of cumin seed, bay berries, germander, snakeroot, cloves, honey, and sometimes opium or syrup of poppies. The roots of common garlic were, formerly, called *Theriaca Rusticorum*.

THERIO'MA, *Therion*, from *θηρ*, 'a venomous animal.' Any extremely malignant ulcer. Sometimes, confined to ulcers of the lungs.

THERMÆ, *θερμαί*. Warm baths or springs. See Waters (mineral.)

THESIS, *Disputatio*, *Inaugural Dissertation*. The name usually given to the essay composed by a candidate for graduation in Medicine, which he is at times required to defend publicly. Often, however, it is a mere form giving useless labour and trouble to the student, inasmuch as it is executed as a task, and never afterwards regarded by the preceptor or by others. Sandifort, Haller, Smellie, and Stoll, have published collections of these.

Also, a suffix denoting arrangement;—hence *Diathesis*.

THEVE'TIA A'HOUI, *Ahouai*. The kernels of the nut of this Brazilian tree are said to be a violent poison. At the Antilles, its nuts are called *Noix de Serpent*; and they are used against the bites of serpents.

THIGH, Sax. *ðeoh*, *Femur*, *Femen*, *Crus*,

Meros, (F) *Cuisse*. The part of the lower limb, which extends from the pelvis to the leg. The thigh is larger at its superior than inferior part, and has the form of an inverted and truncated cone, slightly depressed from within outwards. *Above*, it is bounded, *anteriorly*, by the groin; *externally*, by the hip; *behind*, by the fold of the nates; and *within*, by the perineal region. *Below*, it is bounded, *anteriorly*, by the prominence of the knee; *posteriorly*, by the ham. It is formed of a considerable number of muscles, blood-vessels, lymphatics, nerves, &c.; and is covered by a strong aponeurosis.

THIRST, Sax. *þyrst*, Dutch, *Dorst*, *Sitis*, *Dipsa*, (F) *Soif*. A simple desire or an absolute want for liquids. Physiologists are not entirely agreed regarding the seat of thirst; some place it in the fauces; others in the stomach. Its immediate cause is not known. It has been attributed to a dry condition of the nervous papillæ of the pharynx, produced by suppression of the salivary and mucous secretions. This is probably true; but it, again, is owing to the wants of the system,—a supply of fluid being required to compensate the numerous losses, that are constantly taking place. Thirst is an *internal sensation*,—an *instinctive want*,—arising from organization, and inexplicable. It is an urgent symptom in many diseases, particularly in those of vascular excitement.

THLASPI, *Pennycress*. *Family*, *Cruciferae*. *Sex. Syst.* *Tetradynamia Siliculosa*. Two species of thlaspi are directed, in some pharmacopœias, for medical use:—the *Thlaspi arven'se* or *Treacle mustard*, and the *Thlaspi campestre* or *Mithridate mustard*. The pharmaceutical properties of both kinds resemble those of common mustard.

THLIP'SIS, *ῥλψις*, *Compres'sio*. Compression, and especially constriction of vessels by an external cause.

THORACENTE'SIS, from *θώραξ*, 'the chest,' and *κέντεω*, 'I pierce.' The same as paracentesis of the thorax.

THORAC'IC, *Thorac'icus*, from *thorax*, 'the chest,' (F) *Thoracique* ou *Thorachique*. That which relates or belongs to the chest; as *Thoracic vis'cera*, &c.

The THORACIC LIMBS are the upper limbs;—so called because they are articulated with the lateral and upper parts of the chest.

The THORACIC REGIONS are the different regions of the chest. Thus we say *anterior*, *lateral*, and *superior thoracic*, &c.

The ARTE'RIA THORACICA EXTERNA SUPERIOR, *A. thoracique supérieure*, *Première des Thoraciques* (Ch.), arises from the axillary artery or from the acromial; and descends forwards between the pectoralis major and P. minor, to which it distributes itself by a great number of branches. In some subjects, there are two or three *Arteriæ thoracicæ externæ superiores*.

The ARTERIA THORACICA EXTERNA INFE-

RIOR VEL LONGA, *A. mamma'ria externa*, *A. Thoracica inferior*, *Deuxième des Thoraciques* (Ch.), arises from the axillary, a little below the preceding, and descends vertically over the lateral part of the thorax, and the serratus major anticus. It afterwards bends inwards; becomes subcutaneous, and divides into several branches, which embrace the breast. It gives numerous ramifications to the pectoralis major, serratus major anticus, intercostals, ganglions of the axilla, mamma, &c.

The THORACIC DUCT, *Ductus thorac'icus* seu *chyli'ferus* seu *chyli* seu *lac'teus* seu *ro'rifer* seu *Pecqueti* seu *Pecquetia'nus*, *Vena alba thora'cis*, *Alveus ampulles'cens*, *Distributo'ria lactea thoracica*, *Ductus thoracicus post'erior* seu *vertebra'lis*, *Galax'ia*, *Duct of Pecquet*, *Alimen'tary Duct*, (F) *Canal ou Conduit Thoracique*, is the duct in which the lymphatics of the lower limbs, abdomen, left superior extremity, left side of the head, neck, and thorax terminate. It begins at the *receptaculum chyli* (q. v.), which is formed by the union of five or six large lymphatic trunks,—themselves formed from the union of all the absorbent plexuses of the abdomen. The duct ascends into the chest through the pillars of the diaphragm, and by the side of the aorta and vena azygos. It contracts, in dimensions, as far as the 6th dorsal vertebra, when it inclines towards the left hand; ascends behind the arch of the aorta; passes behind the left internal jugular vein, and opens at the posterior part of the subclavian vein of the same side. Its embouchure is furnished with two valves, which prevent the blood from passing from the vein into the duct.

THORACYSTIS, from *θώραξ*, 'the chest,' and *κυστις*, 'a bladder.' Encysted dropsy of the chest. Hydatids in the chest.

THORAX, *Cith'arus*, *Me'dius venter*, *Pectus*, the *Breast*, the *Chest*, *Bir*, *Chelys*, *Cassa*, (F) *Poitrine*. One of the splanchnic cavities; bounded, posteriorly, by the vertebræ; laterally, by the ribs and scapula; anteriorly, by the sternum; above, by the clavicle; and, below, by the diaphragm. It is destined to lodge and protect the chief organs of respiration and circulation:—the lungs and the heart.

THROAT, *ῥροτε*, *ῥροτα*, *Jugulum*, *Guttur*, *Sphagē*. The anterior part of the neck. (F) *Gorge*. Also, the *Fauces*, (F) *Gosier*.

THROBBING, *Pulsati'vus*. A *throbbing pain*, (F) *Douleur pulsative*, is a kind of pain, which is, or seems to be, augmented by the pulsations of arteries.

THROMBUS, *Thrombo'sis*, *Trumbus*, *Hæmato'ma*. A small, hard, rounded, bluish tumour; formed by an effusion of blood, in the vicinity of a vein which has been opened in the operation of blood-letting. The thrombus is most commonly owing to the opening in the vein and that of the skin not corresponding; to excessive smallness of the cutaneous orifice; or to small, fatty granula,

which prevent the discharge of the blood. Compresses, dipped in salt water; camphorated spirit, and slight compression usually disperse it.

THUYA OCCIDENTA'LIS, *Arbor Vitæ*, *Tree of Life*. *Nat. Family*, Coniferae. The leaves and wood were, formerly, in high repute as resolvents, sudorifics, and expectorants, and were given in phthisical affections, intermittent fevers, and dropsies. The expressed juice has been applied to condylomata. The arrangement of the medullary matter of the cerebellum, termed *Arbor Vitæ*, is also called *Thuya*.

THYMIA'MA, *Muskwood*, *Thus Judæorum*, (F) *Narcaphte*. A bark from Syria, Cilicia, &c., supposed to be the product of the liquid storax tree. It has an agreeable, balsamic smell; approaching that of liquid storax.

THYMIATECH'NY, from *θυμίαμα*, 'an odour,' and *τεχνη*, 'art.' The art of employing perfumes in Medicine.

THYM'ION, *Verruca minor*, from *θυμός*, 'thyme.' A small wart on the skin, resembling the buds of thyme.

THYMI'TES. Wine, impregnated with thyme.

THYMOXAL'MĒ, from *θυμός*, 'thyme,' *οξύς*, 'acid,' and *ἅλς*, 'salt.' A compound of thyme, vinegar, and salt.

THYMUS, *Glandula Thymus*, *Corpus Thymia'num* seu *Thymicum*, *Glandium*, *Thymus gland*. An organ, the uses of which are totally unknown, and which is seated in the upper separation of the anterior mediastinum. The thymus has the appearance of a glandular body. It is oblong; bilobate; soft, and very variable in size and colour. In the foetus, it is very large, and contains a milky fluid: but it gradually disappears, and in old age is scarcely discernible.

The *arteries*, called *Thymic*, are from the inferior thyroid, internal mammary, bronchial, and mediastinal. The veins have the same arrangement. It receives some nervous filaments from the pneumogastric nerves, the phrenic, and from the inferior cervical ganglia.

THYMUS, *T. vulga'ris*, *Common Thyme*, (F) *Thym*, *T. ordinaire*. *Family*, Labiatae. *Sex. Syst.* Didynamia Gymnospermia. This herb has an agreeable, aromatic smell; and a warm, pungent taste. It is reputed to be resolvent, emmenagogue, tonic, and stomachic. It is not much used.

THYMUS MASTICH'NA, *Common Herb Mastich*, *Marum vulga'rē*, *Samp'suchus*, *Clinopodia*, *Mastichi'na Gallo'rum*, *Thymbra Hispan'ica*, *Jaca In'dica*. A low, shrubby, Spanish plant, used as an errhine. It has a smell like mastich. Its virtues resemble those of the *Ma'rum Syriacum*; but it is said to be less powerful.

THYMUS SERPYLL'UM, *Mother of Thyme*, *Wild Thyme*, *Herpylos*, *Herpyllos*, *Serpyll'*

lum, *Serpul'lum*, *Serpil'lum*, *Gila'rum*, *Serpyll'um vulga'rē minus*, (F) *Serpolet*. This plant has the same sensible properties as the garden thyme; but has a milder, and rather more grateful flavour. *Lemon Thyme*, the *Serpyllum citra'tum*, is merely a variety of the *Thymus Serpyllum*. It is very pungent; and has a particularly grateful odour, approaching that of lemons.

THYRA, *θυρα*, 'a door,' *Thy'reus*, *θυρεός*, 'a shield.' In composition, *Thyreos* and *Thyro*, mean the Thyroid cartilage.

THYREO-ARYT'ENOID, *Thyro-arytenoideus*, or *Thyro-arytenoides*. That which relates to the thyroid and arytenoid cartilages.

The **THYREO-ARYTENOID LIGAMENTS**, *Inferior Ligaments of the Larynx*, *Lips of the Glottis*, *Vocal Cords*, are two ligaments about two lines broad, formed of elastic and parallel fibres, which are contained in a duplicature of the mucous membrane of the larynx. They extend horizontally from the anterior projection at the base of each arytenoid cartilage to the middle of the angle of union of the thyroid cartilage. They are the essential organs of voice. See Glottis.

The **THYREO-ARYTENOIDÆ'I MUSCLES** are thin muscles, which arise from the middle and inferior part of the posterior surface of the thyroid cartilage: whence they proceed backwards and outwards, to be inserted into the outer part of the base of the arytenoid cartilage. They give the necessary tension to the ligaments of the glottis, in the production of the voice. Santorini has given the name *Thyr'eo arytenoide'us obliquus* to a portion of the *arytenoideus* muscle.

THYREO-EPIGLOT'TIC, *Thyreos-epiglottideus*. Sabatier and Santorini have given this name to the outer portion of the thyro-arytenoid muscle; because it passes from the thyroid cartilage to the anterior part of the epiglottis.

THYREO-HYOID, *Thyro-hyoide'us*, *Thyro-hyoïdes*. That which belongs or relates to the thyroid cartilage and os hyoides.

The **THYREO-HYOIDÆ'US** or *Hyothyreoide'us Muscle* is situate at the anterior and superior part of the neck. It is attached to the oblique line on the anterior surface of the thyroid cartilage; to the inferior edge of the body of the os hyoides, and to the anterior portion of its great cornu. It approximates the thyroid cartilage and os hyoides to each other, by raising the cartilage, and with it the whole larynx: or, it can depress the os hyoides.

The **THYREO-HYOID** or **HYO-THYROID MEMBRANE** is a very broad, yellowish, fibrous membrane, thicker at the middle than at the extremities, which is attached, above, to the posterior surface of the body and great cornu of the os hyoides; and, below, to the whole superior edge of the thyroid cartilage.

THYROID, *Thyreoid*, *Thyroïdes*, from

Συγς, 'a shield,' and *σῆς*, 'form.' That which has the shape of a shield.

The THYROID CAR'TILAGE, *Cartilago Scutiformis*, *C. Scutalis*, *C. Clypealis*, *Coöperatorium*, *C. Peltalis*, *Adami Morsus Os*, is the largest of the cartilages of the larynx, at the anterior part of which it is situate. It is larger transversely than vertically; broader above than below; and seems formed by the junction of the two quadrilateral plates, which produce, by their union, an angle that projects forwards. Its two posterior margins terminate above, and on each side, by an ensiform prolongation, called the *greater cornu of the thyroid cartilage*; and, below, by a less prominent eminence, the *lesser cornu*, which is articulated with the cricoid.

The THYROID GLAND, *Corpus Thyroideum*, *Glandula Thyroidea*, (F) *Gland ou Corps Thyroïde*, is an organ, the uses of which are not known. It covers the anterior and inferior part of the larynx, as well as the first rings of the trachea, and seems to be composed of two lobes, flattened from before to behind, which are united by a transverse prolongation of the same nature as themselves, called the *Isthmus of the Thyroid Gland*.

The tissue of the thyroid is soft, spongy, and of a brownish colour; but its intimate structure is unknown. It is formed of several distinct lobules; collected in lobes of greater or less size. These are composed of granulations, some of which contain a yellowish or milky fluid. The thyroid gland receives four large arteries, called *Thyroideal*, as well as corresponding veins. Its nerves proceed from the pneumogastric, and from the cervical ganglia. No excretory duct has ever been found in it. Its uses are not known.

THYROIDEAL, *Thyroideus*, *Thyreoides*, (F) *Thyroidien*. That which concerns the thyroid gland or cartilage.

The THYROIDEAL ARTERIES are two on each side.

1. The *superior Thyroideal*, *superior laryngeal* or *superior guttural*, arises from the anterior part of the external carotid, and proceeds to the upper part of the thyroid gland, after having given off a *laryngeal branch* and a *crico-thyroid*.

2. The *inferior Thyroideal*, or *inferior guttural*, much larger than the last, arises from the upper part of the subclavian. It passes, in a serpentine manner, to the inferior part of the thyroid gland, to which it is distributed, after having given a number of branches to the neighbouring parts, among which is the *cervicalis ascendens*.

The THYROIDEAL VEINS are, 1. A *superior thyroideal*, and several *middle thyroideal*, which open into the internal jugular vein. 2. An *inferior thyroideal*, much larger than the preceding, whose branches form—by anastomosing with those of the opposite side, in

front of the trachea—a very remarkable venous plexus, which J. Cloquet calls the *infra-thyroideal plexus*. The inferior thyroideal veins open:—the left, into the corresponding subclavian;—the right, into the vena cava superior.

THYRO-PHARYNGÆ'US, *Thyreopharyngeus*. Valsalva, Morgagni, Santorini, and Winslow have given this name to the portion of the constrictor pharyngis inferior, which is attached to the thyroid cartilage.

TIB'IA, *Cneme*, *Procne'me*. A Latin word, which signifies a *flute*. *Focile majus*, *Arun'do major*, *Canna major*, *Canna major seu domestica cruris*. The largest bone of the leg. A long, irregular, and triangular bone, situate on the inner side of the fibula. It has, 1. A *Superior* or *femoral extremity*, which is very large, rounded, and has two eminences at the sides, called *Tuberosities of the Tibia*, or *Tibial tuberosities*. The outermost is articulated with the fibula. On its head are two articular, oval, concave surfaces, separated by a process, called *Spine of the tibia*, which are articulated with the condyles of the *Os femoris*. 2. An *inferior* or *tarsal extremity*, having an articular surface beneath, which joins the astragalus; within, a triangular eminence, which forms the *malleolus internus*; and, on the outside, a triangular surface, which articulates with the fibula. 3. The body or shaft of the tibia has three faces, separated by three angles, the anterior of which is the most prominent, and is called the *spine* or *crista of the tibia* or *tibial spine*. It is the *shin*. The tibia is articulated with the femur, fibula, and astragalus. It is developed by three points of ossification, one for the body, and one for each extremity.

TIBIAL, *Tibia'lis*, *Tibiæ'us*. (F) *Tibial*, *Jambier*. That, which relates to the tibia or to the leg.

The TIBIAL APONEURO'SIS, (F) *Aponévrose jambière*, surrounds the muscles of the leg. It is continuous, above, with the femoral aponeurosis, and arises, also, from the head of the fibula, and from several fibrous expansions which detach themselves from the tendons of the triceps, sartorius, gracilis, and semitendinosus. Thence it descends around the leg, attaching itself to the whole extent of the anterior and inner edges of the tibia. It sends, below, an expansion, which passes before the tendo achillis, and is continuous with the anterior annular ligament of the tarsus. It is attached, also, to the sheath of the peronei muscles.

TIBIALIS ANTICUS, *Catænæ musculus*, *Tibio-sus-métatarsien*, *Tibio-sustarsien*, (Ch.) (F) *Jambier antérieur*. A muscle, situate at the anterior part of the leg. Above, it has the shape of a triangular prism; below, it is slender and tendinous. It is attached, above, to the anterior part of the external tuberosity of the tibia; to the superior half of

the outer surface of that bone; and to the anterior surface of the interosseous ligament. Below, its tendon terminates at the base of the first cuneiform bone, and at the posterior extremity of the first metatarsal bone. This muscle bends the foot on the leg, and directs its point inwards, at the same time that it raises its inner edge. It can, also, bend the leg on the foot, and prevent it from falling backwards in standing.

TIBIALIS POSTICUS, *Tibio-tarsien*, *Tibio-sous-tarsien* (Ch.), (F) *Jambier postérieur*. This muscle is situate at the posterior and deep part of the leg. It is thicker above than below; and is attached above, to the posterior surface of the fibula; to the posterior surface of the tibia, and to the interosseous ligament. Its tendon terminates, below, at the tuberosity on the inferior extremity of the os scaphoides. This muscle extends the foot on the leg; at the same time raising its inner edge. It, likewise, extends the leg on the foot.

The **TIBIAL ARTERIES** are two in number. 1. The *Tibia'lis Anti'ca*, which arises from the popliteal artery, before its bifurcation; passes immediately through the opening in the upper part of the interosseous ligament, and reaches the anterior part of the leg; when it turns downwards, and descends, obliquely, between the extensor communis digitorum pedis and the tibialis anticus, anterior to the interosseous ligament; glides under the anterior annular ligament of the tarsus, and takes the name *Dorsalis tarsi*.

Amongst the numerous branches, given off by the tibialis antica, may be distinguished—the *Tibialis recur'rens*, *A. malleolaris interna*, and *A. malleolaris externa*. 2. The *Tibialis posti'ca*, arises from the bifurcation of the popliteal artery; and, slightly tortuous, descends between the two planes of the posterior muscles of the leg; until it arrives under the arch of the calcaneum, where it divides into two branches—the *Plantar arteries*.

The **ANTERIOR AND POSTERIOR TIBIAL VEINS** have the same arrangement as the arteries which they accompany.

The **TIBIAL NERVES** are two in number. 1. The *anterior tibial nerve*, *Pré-tibio-sus-plantaire*, (Ch.) One of the two branches in which the external popliteal terminates. It accompanies the arteria tibialis antica. The *posterior tibial nerve*, *Branche tibiale du nerf fémoro-poplitée* (Ch.), is the *internal popliteal*, (q. v.)

TIBIO-TARSAL, *Tibio-tarsus*, (F) *Tibio-tarsienne*. What relates to the tibia and tarsus.

The **TIBIO-TARSAL ARTICULATION** is the articulation of the foot with the leg. It is formed by the tibia and the astragalus; and is strengthened by lateral, and by anterior, and posterior, ligaments.

TIC, *Twitching*. A local and habitual

convulsive motion of certain muscles; and, especially, of some of those of the face. It is, sometimes, called in France *Tic convulsif*, to distinguish it from *Tic douloureux* or *neuralgia faciei*, (q. v.)

TICKLING, (F) *Chatouillement*. This word, sometimes, means the action of tickling (*titilla'tio*); at others, the sensation produced by this action (*pruri'tus*.) A vivid sensation, which commonly causes laughter, and a state of general spasm that may be dangerous if too long protracted.

There are some parts of the body, where we are easier tickled than others; e. g. the soles of the feet, and the hypochondriac regions.

TILBURY, MINERAL WATER OF. A saline chalybeate at West Tilbury in Essex, England. It is not much frequented.

TILIA, *T. Europæ'a*, *Phil'ya*. The *Lime tree* or *Linden tree*, (F) *Tilleul*. Family, *Tiliaceæ*. The flowers have been supposed to possess anodyne and antispasmodic virtues.

TIMAC. The name of an East India root, but of what vegetable is not clear. It is said to possess diuretic properties; and hence has been given in dropsies.

TIN, (D) *Ten*. *Stannum*, *Cassit'eros*, *Cattit'eros*, *Stangos*, *Ju'piter*, *Stu'pia*, *Laos*, *Plumbum album*, *Plumbum can'didum*, (F) *Étain*. A solid metal; of a peculiar odour when rubbed; insipid; colour, whitish; S. G. 7.291; giving a peculiar tinkling sound when struck. It is used, in medicine, only as a mechanical anthelmintic. Dose, ʒj of the *Pulvis stanni* or *Granular tin*, in molasses.

TIN-FOIL, *Stannum folia'tum*, *Stanniolum*, is used for plugging carious teeth, &c.

TIN, MURIATE OF, *Butter of Tin*, *Fuming liquor of Liba'vius*, *Murias Stanni*, *Murias Oxyd'uli Stanni*, *Chlor'uret of Tin*, *Deuto-hydrochlorate of Tin*, *Superoxygenated Muriate of Tin*. This is formed of Tin, one part; concentrated muriatic acid, three parts. To be crystallized by the aid of heat. A violent cathartic. Dose, gr. ij or iij.

TINCTURE, from *Tingo*, 'I dye.' *Tinctu'ra*, *Essen'tia*, (F) *Teinture*, *Alcoolat*, *Alcool*. The term tincture is generally restricted to spirituous solutions of vegetable, animal, and some saline substances. It corresponds, therefore, with the word *Quintessence*, in one of its old significations; and with the *Alcoola'tum* of the *Codex of Paris*. It is not unusual, however, to speak of *aqueous tincture*, *ethereal tincture*, &c. Tinctures are made, either with pure alcohol or proof spirit. The former are precipitated by water; and, therefore, are seldom used internally; the latter are common additions to infusions, decoctions, &c. They ought not, of course, to be united with any vehicle which can decompose them or separate any thing from them in a palpable form; unless such decomposition is desired by the prescriber.

In making tinctures, the ingredients should be reduced to a coarse powder; and the maceration be made in close vessels, exposed to a heat of about 80°, and frequently shaken. When completed, they must be filtered, and put away, for use, in close bottles.

TINCTURA ABSINTHII COMPOSITA, *Compound Tincture of Wormwood*, *Essentia absinthii composita seu amara*. (*Absinth.*, *artem. pontic.*, *caryoph.* aa 3 ss, *sacch.* 3 ij, *alcohol.* ℥ ss. Macerate for 15 days. *Ph. P.*) Tonic, stomachic, vermifuge, and carminative. Dose, 3 ij to 3 ss.

TINCTURA ÆTHE'REA CAMPHORATA, *Solutio camphoræ æthærea*, *Liquor nervinus Bangii*, *Spiritus sulphurico-æthereus camphoratus*, *Naphtha vitrioli camphorata*. (*Camphor.* p. i, *Æther-sulphuric*, p. ii.) Stimulant in atonic diseases, arthritic cardialgia and spasm. Dose, 20 to 30 drops in white wine.

TINCTURA AL'OE, *T. Al'oes Socotori'na*, *Essentia Aloes*, *Al'cohol cum Aloe perfoliata*, *Tincture of Al'oes*. (*Aloes*, *socotr.* cont. 3 ss, *ext. glycyrrh.* 3 iss, *aquæ* ℥ j, *sp. rect.* 3 iv. Macerate. *Ph. L.*) Properties; those of aloes. Dose, 3 ss to 3 iss.

TINCTURE AL'OE ÆTHE'REA, *Æthæreal Tincture of Aloes*, *Tinctura aloes vitriolata*. (*Aloes*, *socotr.*, *g. myrrh.* aa 3 iss, *croci* 3 j, *sp. ætheris sulph.* ℥ j. Digest the myrrh in the ether for four days; then add the aloes and saffron. *Ph. E.*) Stimulant and cathartic. Dose, 3 j to 3 ij.

TINCTURA AL'OE COMPOSITA, *Elix'ir Proprietas*, *E. aperitivum*, *Elixir Aloes*, *Tinctura Aloes cum Myrrhâ*, *T. Aloes et Myrrhæ crocata*, *Elixir of long life*, *Compound Tincture of Aloes*. (*F*) *Elixir de longue vie*, *Baume de vie de Lelièvre*. (*Ext. aloes spicat.*, *croci* aa 3 iij, *Tinct. Myrrhæ*, ℥ j. *Ph. L. & D.*) Purgative and stomachic. Dose, 3 j to 3 ij.

Radcliffe's Elixir is formed of *Aloes socotr.* 3 vj, *cort. cinnam.*, *rad. zedoar.* aa 3 ss, *rad. rhei* 3 j, *coccinell.* 3 ss, *syrup. rhamni* 3 ij, *sp. tenuior.* ℥ j, *aquæ puræ* 3 v.

TINCTURA ANGUSTURÆ, *Tincture of Angustura*. (*Cort. cuspar. in pulv. crass. redact* 3 ij, *sp. vin. ten.* ℥ ij. Digest. *Ph. D.*) Dose, 3 j to 3 ij.

TINCTURA ASSAFÆTIDÆ, *T. Fer'ulæ Assafætida*, *Tincture of Assafætida*, *T. fætida*, *T. assafætida*, (*Assafætid.* 3 iv, *sp. rect.* ℥ ij. Digest.) Dose, gtt. xv to 3 j.

TINCTURA AURANTII, *T. Corticis Aurantii*, *Tincture of Orange Peel*. (*Aurant. cort. recent.* 3 iij, *sp. rect.* ℥ ij. Digest for 14 days.) Stomachic. Used as an adjunct to stomachic draughts. Dose, 3 ss to 3 ij.

TINCTURA BENZOINI COMPOSITA, *Compound Tincture of Benzoin*, *T. Benzoës composita*, *Friar's Balsam*, *Vervain's Balsam*, *Wade's Drops*, *Jesuit's Drops*, *The Commander's Balsam*, *Wound Balsam*, *Balsam*

for cuts, *Bal'samum Cathol'icum*, *B. Per'sicum*, *Balsamum traumaticum*, *Elixir traumaticum*. (*Benzoin.* 3 iij, *styrac. balsam.* 3 ij, *tolut.* 3 j, *aloes spic. extract.* 3 ss, *sp. rect.* ℥ ij. Macerate for 14 days. *Ph. L.*) Stimulant. Used chiefly to wounds and ulcers.

The basis of TURLINGTON'S BALSAM OF LIFE, is the Compound Tincture of Benzoin. The following form is recommended by a committee of the Philadelphia College of Pharmacy. (*Alcohol.* O viij, *Benzoin.* 3 xij, *Styrac. liquid.* 3 iv, *Aloes socotrin.* 3 j, *Balsam Peruvian.* 3 ij, *Myrrhæ*, 3 j, *Rad. Angelic.* 3 ss, *Balsam Tolut.*, *Ext. Glycyrrh.* aa 3 iv. Digest for 10 days and strain.)

The ESSENCE OF COLTSFOOT, consists of equal parts of the Compound Tincture of Benzoin and Balsam of Tolu, to which is added double the quantity of Rectified Spirit of Wine. It is sold as a pectoral!

TINCTURA CALUMBÆ, *T. Colombæ*, *T. Colombo*, *Tincture of Columba*, *Columbo Bitters*. (*Calumb. rad. concis.* 3 iiss, *sp. ten.* ℥ ij. Macerate for 14 days. *Ph. L.*) Dose, 3 ss to 3 iv.

TINCTURA CAMPHORÆ COMPOSITA, *T. Opii Camphorata*, *Compound Tincture of Camphor*, *Elixir Paregoricum*, *Paregoric Elixir*. (*Camphor.* 3 ij, *opii duri cont.*, *acid. benz.* aa 3 j, *spirit ten.* ℥ ij. *Ph. L.*) f. 3 j contains nearly gr. ij of opium. Anodyne. Dose, 3 j to 3 iij.

Squire's Elixir, an empirical carminative preparation, is thus made, according to one formula. (*Opii* 3 iv, *camphor.* 3 j, *coccinell.* 3 j, *fœnicul. dulc.* 3 ij, *tinct. serpent.* ℥ j, *sp. anisi*, *cong.* ij, *aquæ* ℥ ij, *auri musivi* 3 vj.)

TINCTURA CANTHARIDIS, *T. C. Vesicatoriæ*, *T. Lyttæ*, *Tincture of Blistering Fly*, *T. of Spanish Fly*, *T. Meloës vesicatorii*. (*F*) *Teinture rubéfiante*. (*Cantharid. cont.* 3 iij, *sp. ten.* ℥ ij. *Ph. L.*) Stimulant and diuretic, but not often used internally. Externally, stimulant. Dose, gtt. x.

Matthew's Injection, a once celebrated nostrum for fistula in ano, consisted wholly of a dilute Tincture of Cantharides.

TINCTURA CAPSICI, *Tincture of Capsicum*, (*Capsic. bacc.* 3 j, *sp. ten.* ℥ ij. *Ph. L.*) Stimulant. Dose, 3 ss to 3 j.

TINCTURA CARDAMOMI, *T. amo'mi repen'tis*, *Tincture of Cardamoms*. (*Cardam. sem. cont.* 3 iij, *spirit. ten.* ℥ ij. *Ph. L. D.*) Use, the same as the seeds. Dose, 3 j to 3 iv.

Solomon's Balm of Gilead, an empirical preparation, seems to be an aromatic tincture,—of which Cardamoms form a leading ingredient,—made with brandy. Some affirm that it contains cantharides.

TINCTURA CARDAMOMI COMPOSITA, *Compound Tincture of Cardamoms*, *Stomach Tincture*, *Tinctura Stomach'ica*. (*Card. sem.*, *carui sem.*, *cocci*, aa 3 ij, *cinnam. cort.* cont. 3 iv, *uvar. passar. demptis acinis* 3 iv,

spirit. ten. ℥ ij. *Ph. L.*) Stomachic and carminative. Dose, 3 ij to 3 iv.

TINCTURA CARMINATIVA SYLVII, *Alcoolatum Carminativum Sylvii, Carminative Elixir of Sylvius.* (*Rad. angelic.* 4 p., *rad. imperator.*, *galang.* aa 6 p., *fol. rosmarin.*, *majoran.*, *rutæ*, *basilic.* aa 48 p., *baccar. laur. nobil.* 12 p., *sem. angelic.*, *ligust. livest.*, *anis.* aa, 16 p., *zingib.*, *nuc. moschat.* aa, 6 p., *cinnam.* 12 p., *caryoph.*, *cort. limon.* aa, 4 p. Add alcohol, 1500 p. Macerate and distil 1000 p. *Ph. P.*) A warm stomachic, carminative, &c. Dose, 3 ss to 3 ss.

TINCTURA CASCARILLÆ, *T. Crotonis Eleutheriæ, Alcohol cum Crotonis Cascarilla, Tincture of Cascarilla.* (*Cascarill. cort. cont.* 3 iv, *sp. ten.* ℥ ij. *Ph. L.*) Dose, 3 j to 3 iv.

TINCTURA CASTOREI, *T. Castorei Rossici, Essentia Castorei, Alcohol castoreatum, T. Castorei Canadensis, Tincture of Castor.* (*Castor. cort.* 3 ij, *sp. rect.* ℥ ij. Macerate for 7 days.) Tonic and antispasmodic. Dose, gtt. xx to 3 ij, or more.

TINCTURA CASTOREI COMPOSITA, *Compound Tincture of Castor.* (*Cast.* 3 j, *g. assafœtid.* 3 ss, *alcohol. ammoniat.* ℥ j. *Ph. E.*) Antispasmodic. Dose, 3 j to 3 iv. Called, also, *Elixir fœtidum, Tinctura castorei fœtida seu fœtida ammoniata.*

TINCTURA CAT'ECHU, *Tinctura Japonica, T. Mimo'sæ Catechu, T. Aca'ciæ Catechu, Tincture of Catechu.* (*Catech. Extract* 3 iij, *cinnam. cort. contus* 3 ij, *sp. ten.* ℥ ij. *Ph. L.*) Astringent. Dose, 3 j to 3 ij.

The CONCENTRATED SOLUTION OF CHARCOAL, sold for cleaning the teeth, seems to be nothing more than the tincture of catechu.

TINCTURA CINCHONÆ, *Tincture of Cinchona, T. Corticis Peruvia'ni Simplex, T. Cort. Peruviani, Tincture of Bark.* (*Cinchon. lancifol. cort. cont.* 3 vij, *sp. ten.* ℥ ij. *Ph. L. E. D.*) Dose, 3 j to 3 iv or more.

TINCTURA CINCHONÆ AMARA, *Elixir anti-hypochondriacum, E. rob'orans Whyttii, E. Whyttii, Essentia Corticis Peruvia'ni Composita, Tinctura alcoholica corticum aurantiorum Whyttii, T. Kinkinae amara, Elixir stomachicus spirituosus.* (*Cinch. p. viij, Gentian. Rad. Cort. Aurant.* 3 p. *Alcohol* (900) 96 p. Digest.) Dose, one or two teaspoonfuls.

TINCTURA CINCHONÆ AMMONIATA, *T. Corticis Peruvia'ni volatilis, Ammoniated Tincture of Bark, Volatile Tincture of Bark.* (*Cinchon. lancifol. cort. cont.* 3 iv, *sp. ammon. aromat.* ℥ ij. *Ph. L.*) In dyspepsy, combined with acidity and languor.

TINCTURA CINCHONÆ ÆTHEREA COMPOSITA, *T. Kinæ Kinæ æthereæ composita, Elixirium Antisepticum Doct'ris Chaussier, Chaussier's Antiseptic Elixir.* (*Cinchon. officin.* 3 ij, *cascarill.* 3 ss, *cinnam.* 3 iij, *croci* 3 ss, *sacch. alb.* 3 xxxvij. Put these bruised into a matrass and add *vin. alb. Hispanic.* vel *vin. muscat.*, *alcohol.* aa ℥ j. Macerate for two

days, and add *sulphuric ether* 3 iss. *Ph. P.*) Tonic, stimulant, and antiseptic. Dose, 3 ss to 3 j.

TINCTURA CINCHONÆ COMPOSITA, *Compound Tincture of Cinchona or Bark, Huxham's Tincture of Bark, T. Corticis Peruvia'ni Composita, T. febrifuga Doct'ris Huxhami, Essentia Chinae, E. Corticis Peruviani Alexipharmaca Huxhami, Essentia antiseptica Huxhami, Tinctura Alexipharmaca Huxhami, Tinctura Alcoholica Chinae Composita.* (*Cinchon. lancif. cort. cont.* 3 ij, *aurant. cort. exsicc.* 3 iss, *rad. serpent. cont.* 3 iij, *croci stigmat.* 3 j, *cocci cont.* 3 ij, *sp. tenuior.* 3 xx. *Ph. L.*) More grateful than the simple tincture. Dose, 3 j to 3 iij.

TINCTURA CINNAMOMI, *Tincture of Cinnamon, Essentia Cinnamomi, T. Lauri Cinnamomi.* (*Cinnam. cort. cont.* 3 iij, *sp. tenuior.* ℥ ij. *Ph. L. D.*) Stomachic. Dose, 3 j to 3 ij.

TINCTURA CINNAMOMI COMPOSITA, *Compound Tincture of Cinnamon, Tinctura Aromatica, Essentia Aromatica, Alcohol cum Aromatibus Compositus, Eau de Bonferme ou d'Armagnac.* (*Cinnam. cort. cont.* 3 vj, *cardam. sem. cont.* 3 iij, *piper. long. fruct. cont.*, *zingib. rad. cont.* aa 3 ij, *sp. tenuior.* ℥ ij. *Ph. L.*) Use, same as the last. Dose, 3 j to 3 iij.

TINCTURA DE COCHLEA'RIIS, *Alcoolatum de Cochleariis, A. antiscorbuticum.* (*Fol. cochlear. recent.* 2500 p., *rad. armoraciæ*, 230 p., *alcohol.* (22° to 32° Bè.) 3000 p., distil off 2000 p. *Ph. P.*) Antiscorbutic. Dose, 3 j to 3 j.

TINCTURA CONII MACULATI, *T. Cicutæ, Tincture of Hemlock.* (*Conii fol. sicc.* 3 ij, *cardamom. sem. cont.* 3 iv, *sp. ten.* 3 xv. *Ph. E.*) Use;—the same as that of the leaves.

TINCTURA CROCI SATIVA, *T. Croci, Tincture of Saffron.* (*Croci Angl. cont.* 3 j, *alcohol. dilut.* 3 xv. *Ph. E.*) Slightly stomachic (?) Dose, 3 j to 3 iij.

TINCTURA DE CROCO COMPOSITUM, *Elixirium de Garus, Alcoolatum de Croco Compositum, Compound Tincture of Saffron, Elixir of Garus.* (*Aloes socotr.* 320 p., *myrrh.* 64 p., *croci* 32 p., *cinnam.*, *nuc. moschat.*, *caryoph.* aa. 16 p., *alcohol.* 1000 p., *aq. flor. aurant.* 5000 p. Digest for two days; distil 4000 p. and add *syrup of capillaire*, 5000 p. *Ph. P.*) Aromatic, cordial, stomachic. It is, also, called *Elixir cordiale et stomachicum*, and *E. anticolicum crocatum.*

TINCTURA DIGITALIS, *Tincture of Digitalis, T. Digitalis purpureæ.* (*Digital. fol. exsicc.* 3 iv, *spirit. ten.* ℥ ij. *Ph. L. D.*) Use, same as that of the leaves. Dose, gtt. x.

TINCTURA FERRI ACETATIS, *T. Acetatis Ferri, Tincture of Acetate of Iron.* (*Kali acetat.* 3 ij, *sulph. ferri* 3 j, *sp. rectific.* ℥ ij.

Rub the acetate and sulphate into a soft mass. Dry and rub with the spirit. Digest for 7 days, and pour off. *Ph. D.*) Tonic and astringent. Dose, gtt. xx to 3 j. The Dublin college directs a *Tinctura Acetatis Ferri cum Alcohole*, which differs from the other, in having half the quantity, only, of the *Acetate of Potass*.

TINCTURA FERRI AMMONIATA, *Tincture of Ammoniated Iron*, *T. Ferri Ammoniacalis*, *T. Florum martialis*, *T. Martis Mynsichti*. (*Ferri ammon.* 3 iv, *sp. ten.* ℥ j. *Ph. L.*) Use,—same as that of the ammoniated iron. Dose, 3 ss to 3 ij.

TINCTURA FERRI MURIATIS, *Tincture of Muriate of Iron*, *T. Martis in Spiritu Salis*, *T. M. cum Spiritu Salis*, *T. Ferri Muria'ti*, *Tincture of Steel*, *Al'cohol ferra'tus*. (*Ferri subcarb.* ℥ ss, *acid muriat.* ℥ j, *sp. rectific.* ℥ iij. Add the acid to the subcarbonate in a glass vessel, and shake during three days. Pour off and add the spirit. *Ph. L.*) Tonic, and styptic. Dose, gtt. x to xx.

A solution of *nitrate of iron*, has been recently recommended in chronic diarrhœa and dysentery. Its virtues exactly resemble those of the *muriate of iron*.

AL'COHOL SULFURICO-ÆTHE'REUS FERRI, *Guttæ nervinæ*, *Liquor Anodynus Martialis*, *Al'cohol æthereus ferratus*, *Naph'tha Vitrioli Martialis*, *Solutio Muriatis ferrici æthe'rea*, *Spir'itus Sulphurico-æthe'reus Martialis*, *Tinctu'ra nervi'na Halen'sis*, *T. ton'ica-nervi'na Halen'sis*, *Tinctu'ra aurea*, *T. nervina Bestucheffii*, *T. nervino-tonica Lamotte*, *T. æthe'rea ferri*, *Æther Martialis*, *De La Motte's Golden Drops*, *Bestucheff's Nervous Tincture*, *Elixir d'or de M. le Général De La Motte*. An ethereal solution of *muriate of iron*. It is much used in gout, hypochondriasis, &c.

The *Antivenereal Drops*, at one time so celebrated at Amsterdam, were examined by Scheele and found to be a *tincture of muriate of iron and corrosive sublimate*.

TINCTURA GAL'BANI, *Tincture of Galbanum*. (*Galb.* 3 ij, *sp. tenuior.* ℥ ij. *Ph. D.*) Stimulant and antispasmodic. Dose, 3 j to 3 iij.

TINCTURA GALLA'RUM, *Tincture of galls*. (*Gallar.* in pulv. trit. 3 ij, *sp. ten.* 3 vj. *Ph. E. & D.*) Astringent. Dose, 3 j to 3 iij.

TINCTURA GENTIANÆ COMPOSITA, *Compound Tincture of Gentian*, *Tinct. Ama'ra*, *Spirit Bitters*, *Elix'ir Stomach'icum*. (*Rad. gent. concis.* 3 ij, *aurant. cort. exsicc.* 3 j, *cardam. sem. cont.* 3 ss, *spirit. tenuior.* ℥ ij. *Ph. L. E. & D.*) Tonic and stomachic. Dose, 3 j to 3 iij.

BRODUM'S NERVOUS CORDIAL consists of the *Tinctures of Gentian, Columba, Cardamom, and Bark*, with the *Compound Spirit of Lavender, and Wine of Iron*.

STOUGHTON'S ELIX'IR is a compound *tincture of gentian*. The *Elixir'ium Docto'ris Stoughton seu Tinctura Amara* of the

Parisian Codex is prepared as follows,—(*Absinth. summit. exsicc.*, *Teucri chamædrys.*, *Rad. gentian.*, *cort. aurant.* aa 3 vj, *cascarillæ* 3 j, *rhei* 3 ss, *aloes socotr.* 3 j, *alcohol.* ℥ ij.) Digest.

TINCTURA GENTIANI'NÆ, *Tincture of Gentianine*. (*Alcohol.* (903) 3 j, *gentianin.*, 5 gr.) Properties like those of the *tincture of gentian*.

TINCTURA GUA'IACI, *T. G. Officina'lis*, *Tincture of Guaiacum*. (*Guaiac. res.* ℥ ss, *sp. rect.* ℥ ij. *Ph. L. & D.*) Stimulant and sudorific. Used especially in rheumatic and arthritic cases. Nearly the same as *Hill's Essence of Bardana*.

TINCTURA GUA'IACI AMMONIATA, *Ammoniated Tincture of Guaiacum*, *T. Guaiaci'na Volat'ilis*, *Elixir Guaiaci Volatilis*, *Al'cohol cum Gua'iaco officina'li ammonia'tus*, *Al'cohol ammo'niæ et Gua'iaci*, *T. Gua'iaci*, *P. L.* 1788, *Vol'atile Tincture of Guaiacum*. (*Guaiac. g. res. cont.* 3 iv, *sp. ammon. arom.* ℥ iss. *Ph. L. E. D.*) Properties same as the last. Dose, 3 j to 3 ij.

HATFIELD'S TINCTURE—a nostrum—consists of *Guaiacum* and *Soap* aa 3 ij, *rectified spirit*, ℥ iss.

TINCTURA HELLEBORI NIGRI, *Tincture of Black Hellebore*, *T. Hellebori*, *T. Melampodii*. (*Rad. helleb. nigr. concis.* 3 iv, *sp. tenuior.* ℥ ij. *Ph. L. E. D.*) Dose, 3 ss to 3 j.

TINCTURA HU'MULI, *Tincture of Hops*. (*Humuli strobil.* 3 v, *sp. tenuior.* ℥ ij. *Ph. L.*) Tonic and sedative. Dose, 3 ss to 3 iij.

TINCTURA HYOSCY'AMI, *T. Hyoscyami nigri*, *Tincture of Henbane*. (*Hyoscyam. fol. exsicc.* 3 iv, *sp. ten.* ℥ ij. *Ph. L.*) Narcotic, anodyne. Dose, gtt. xx to 3 ij.

TINCTURA IODI'NÆ, *Alcohol Iodii*, *Tincture of Iodine*. (*Alcohol.* S. G. 842, 3 j, *iodin.*, 48 gr.) The *tincture spoils by keeping*, or, at least, deposits the *iodine*. It has been much used in goitre, &c. Dose, 10 drops, three times a day.

TINCTURA JALA'PII, *T. Jalapæ*, *T. Convolvuli Jalapæ*, *Tincture of Jalap*, *Vali'ga*. (*Jalap. rad. cont.* 3 viij, *sp. ten.* ℥ ij. *Ph. L. & D.*) Cathartic. Dose, 3 j to 3 iv.

TINCTURA JALA'PII COMPOSITA, *Elixir Jalap'pæ Compos'itum*, *Elixir purgans*, *Essentia cathol'ica purgans Rothii*, *Elixir anthelmin'ticum Suecorum*, *Eau de vie Allemande*, (*Jalap.* ℥ ss, *Scammon.* 3 j, *Alcohol.* (22°) ℥ vj. Macerate for 8 days. *Ph. P.*) Dose, 60 to 100 drops.

TINCTURA KINO, *Tincture of Kino*. (*Kino contrit.* 3 iij, *sp. ten.* ℥ ij. *Ph. L. E. & D.*) Astringent.) Dose, 3 j to 3 ij.

TINCTURA MOSCHI, *Tincture of Musk*, *Essence of Musk*. (*Mosch. in pulv. redact.* 3 ij *sp. vini rect.* ℥ j.) Dose, 3 j to 3 iv.

TINCTURA MYRRHÆ, *Tincture of Myrrh*, *Simple Tincture of Myrrh*. (*Myrrhæ contusæ*, 3 iv, *sp. rect.* ℥ ij. *Ph. L. E. & D.*)

Tonic, deobstruent, antiseptic, and detergent. It is chiefly used in gargles, and applied to foul ulcers, spongy gums, &c.

HUDSON'S PRESERVATIVE FOR THE TEETH AND GUMS consists of *Tinct. myrrh*, *tinct. cinch.*, *aq. cinnam.* aa 3 iij, *eau d'arquebusade*, 3 j, *pulv. gum. Arab.* 3 ss. M.

TINCTURA NUCIS VOMICÆ, *Tincture of Nux Vomica*. (*Alcohol. S. G.* .837, 3 j. *Dry Extract of Nux Vomica*, 3 gr.) Dose, gtt. v to xxx in cases where the nux vomica is indicated.

TINCTURA OPII, *Tincture of Opium*, *Liquid Lau'danum*, *Theriaca cœlestis*, *Alcohol cum Opio*, *Tinctura Thebaïca*, *Tinctura Sedati'va*. (*Opii duri contriti* 3 ijss, *spirit. tenuior.* ʒ ij. *Ph. L.*) Nineteen minims contain about one grain of opium. Properties, those of opium. Dose, gtt. xx to lx and more. By macerating the dregs remaining after making the *Tinctura Opii* in a solution of *Tartaric Acid*, a solution is obtained, which is devoid of the exciting and constipating properties of the tincture of opium. Gray calls it *Haden's Liquor Opii Sedati'vus*.

TINCTURA OPII AMMONIATA, *Ammoniated Tincture of Opium*, *Edinburgh Paregoric Elix'ir*. (*Flor. benz.*, *croci* aa 3 iij, *opii* 3 ij, *ol. anisi* 3 ss, *alcohol. ammoniat.* 3 xvj. digest. *Ph. E.*) 3 j contains one grain of opium. Used like the *Tinctura Camphoræ Composita*.

TINCTURA QUASSIÆ, *T. Quassiæ excel'sæ*, *Tincture of Quassia*. (*Lign. quassiæ* 3 j, *sp. vini ten.* ʒ ij. *Ph. E. & D.*) Tonic. Dose, 3 j to 3 ij.

TINCTURA QUINI'NÆ, *Tincture of Quinine*. (*Sulphate of Quinine*, gr. vj, *alcohol*, (.847) 1 ounce. M.) Dose, 3 j to 3 iv, in the day.

A TINCTURA CINCHONI'NÆ may be made in a similar manner.

TINCTURA RHEI, *T. Rhabarbari*, *T. Rhabarbari spirituo'sa*, *T. Rhæi*, *Tincture of Rhubarb*, *T. Rhei palma'ti*. (*Rhei. rad. concis.* 3 ij, *cardam. sem. cont.* 3 ss, *croci stigmat.* 3 ij, *sp. ten.* ʒ ij. *Ph. L.*) Stomachic or purgative, according to the dose employed: —3 j to 3 ij as stomachic; 3 iv to 3 j as a purgative.

TINCTURA RHEI COMPOSITA, *T. Rhabarbari composita*, *Compound Tincture of Rhubarb*. (*Rhei rad. concis.* 3 ij, *glycyrrhiz. rad. cont.* 3 ss, *zingib. rad. concis.*, *croci stigmat.* aa 3 ij, *aquæ*, 3 xij, *sp. ten.* ʒ j. *Ph. L.*) Properties same as the last.

WARNER'S CORDIAL—a nostrum—consists of *Rhubarb*, 3 j, *fol. sennæ* 3 ss, *croci* 3 j, *rad. glycyrrh.* 3 iv, *uvarum passarum* ʒ j, *sp. vini Gallici* ʒ iij.

TINCTURA RHEI ET AL'OE, *Tincture of Rhubarb and Aloes*, *Elixir sacrum*. (*Rad. rhei concis.* 3 vij, *aloes socot.* 3 vj, *sem. amom. repent.* cont. 3 ss, *alcohol dilut.* ʒ ijss. *Ph. E.*) Properties, like the last.

RYMER'S CARDIAC TINCTURE consists of an infusion of *Capsicum*, *Camphor*, *Cardamom*

seeds, *Rhubarb*, *Aloes* and *Castor* in *Proof Spirit*, with a very small quantity of *Sulphuric Acid*.

TINCTURA RHEI ET GENTIA'NÆ, *Tincture of Rhubarb with Gentian*, *Tinctura Rhei Ama'ra*. (*Rad. rhei cont.* 3 ij, *gentian. luteæ cont.* 3 ss, *alcoholis diluti* ʒ ijss. *Ph. E.*) Properties same as the last.

TINCTURA SCILLÆ, *Tincture of Squill*. (*Scillæ rad. recent. exsiccata.* 3 iv, *spirit. tenuior.* ʒ ij. *Ph. L. E. & D.*) Properties, same as those of the bulb. Dose, gtt. xv to lx.

TINCTURA SENNÆ, *T. Sennæ Compos'ita*, *Elixir Salutis*, *Daffy's Elixir*, *Tincture of Senna*. (*Sennæ fol.* 3 iij, *Carui sem. cont.* 3 iij, *cardam. sem. cont.* 3 j, *uvarum passarum demptis acinis*, 3 iv, *sp. ten.* ʒ ij. *Ph. L. & D.*) Stomachic, carminative, and cathartic. Dose, 3 ij to 3 j.

TINCTURA SERPENTARIÆ, *T. S. Virginia'ne*, *T. Aristolochi'æ Serpenta'riæ*, *Tincture of Snakeroot*. (*Rad. Serpent.* 3 iij, *sp. ten.* ʒ ij. *Ph. L. & D.*) Tonic. Dose, 3 ss to 3 ij.

TINCTURA STRYCHNI'NÆ, *Tincture of Strychnine*. (*Alcohol. S. G.* .837 ʒ j, *strychnine*, gr. iij.) Dose, 6 drops to 24. Properties, those of the strychnine.

TINCTURA TOLUIFERÆ BAL'SAMI, *Tincture of Balsam of Tolu'*, *T. Bal'sami Toluta'ni*. (*Balsam. Toluif.* 3 jss, *alcohol.* ʒ j. *Ph. E.*) Reputed to be expectorant and corroborant. Dose, 3 ss to 3 j or more.

TINCTURA VALERIANÆ, *Tincture of Valerian*, (*Valerian. rad.* 3 iv, *sp. ten.* ʒ ij. *Ph. L. & D.*) Stimulant, and antispasmodic. Dose, 3 ss to 3 ij.

TINCTURA VALERIANÆ AMMONIATA, *Ammoniated or Volatile Tincture of Valerian*, *T. Valerianæ Volat'ilis*. (*Valerianæ rad.* 3 iv, *sp. ammon. arom.* ʒ ij. *Ph. L. & D.*) Like the former. Dose, 3 ss to 3 ij.

TINCTURA VERA'TRI, *T. Veratri albi*, *Tincture of White Hellebore*. (*Rad. veratri alb.* cont. 3 viij, *alcohol. dilut.* ʒ ijss. *Ph. E.*) Emetic and cathartic; but not very manageable. Dose, gtt. v to x.

TINCTURA ZINGIB'ERIS, *T. Amomi Zingiberis*, *Tincture of Ginger*. (*Zingib. rad. concis.* 3 ij, *sp. tenuior.* ʒ ij. *Ph. L. & D.*) Stimulant, and carminative. Dose, 3 j to 3 iij.

TINNITUS AURIUM, *Paracusis imaginaria*, *Susur'rus*, *Syrig'mus*, *Syring'mos*, *Sib'ilus*, *S. clango'sus*, *Strep'itus aurium*, *Echos*, *Enechema*, *Bombus*, (F) *Tintement*, *Tintouin*. An imaginary sound, like the ringing of a bell, the noise of wind, the murmur of water, &c., heard in health and in sickness. It is, often, an accompaniment of cerebral disorder.

TINTEMENT MÉTALLIQUE (F). *Tintement bullaire*, *Tinnimen'tum metal'licum*, *Metallic Respiration*, *Metallic Voice*, *Metallic Tinkling*. A particular noise, heard by the stethoscope when applied to the chest, and

which, according to Laennec, resembles that, caused by striking metal, glass, or porcelain with a pin; but which is, perhaps, more like the sound of the keys of a musical snuff-box. The *tintement métallique* or *metallic tinkling* is heard on causing the patient to speak or breathe; but is more distinct when he coughs. When the phenomenon is not so strongly marked it produces only the *metallic resonance*.

The "metallic tinkling" is a pathognomonic symptom of a communication between the bronchi and cavity of the chest; in other words, of *Pneumothorax*.

TIRE-FOND (F). A surgical instrument, formerly used to elevate the piece of bone sawn off by the trephine.

TIRE-TETE (F). A name given to different instruments used for extracting the head of the child when left in the uterus, and in certain cases of difficult labour. The crotchet (q. v.) is one of those, as well as the *Tire-tête à bascule* of Levet, &c.

TISANE, *Ptisa'na* or *Ptissa'na*, *Ptisane'*, from *πτισανη*, 'barley.' A name given to aqueous medicines, containing but little, if any, medicinal agent. The ancients gave the name particularly to the decoction of barley.

TISSUE, *Textus*, (F) *Tissu*. By this term, in anatomy, is meant the various parts, which, by their union, form the organs; and are, as it were, their anatomical elements. General anatomy is the anatomy of the tissues, and they are the seat of the investigations of the pathological anatomist. The best division, indeed, of diseases is according to the tissues mainly implicated. For the elementary Tissues, see *Fibre*.

The compound tissues, which, by associating or combining variously, form every organ of the body, have been variously classed: but every division is imperfect and liable to objections. The following is one of the most recent.

TABLE OF COMPOUND TISSUES.

1. Cellular.	
2. Serous.	
3. Cutaneous,	{ Dermoid, Mucous.
4. Vascular,	{ Arterial, Venous, Lymphatic, Erectile.
5. Glandular.	
6. Cartilaginous.	
7. Fibrous,	{ Fibrous, Fibro-cartilaginous.
8. Osseous.	
9. Muscular,	{ Voluntary, Involuntary.
10. Nervous,	{ Cerebral, Ganglionic.
11. Epidermoid.	

The ACCIDENTAL OR ADVENTITIOUS TISSUES consist of every substance—foreign to the primitive organization of the economy, but yet organized and living—which may be de-

veloped in the interior or at the surface of organs. Laennec divides the accidental tissues into two sections. 1. Those that resemble others in the animal economy, or *analogous accidental Tissues*; and, 2. Those that have nothing analogous in the body, and which are always the result of a morbid process—the *heterologous accidental tissues*.

To the first class belong;—ossifications; accidental fibrous, fibro-cartilaginous, cartilaginous, cellular, and corneous tissues; hairs; the serous membranes of certain encysted tumours; the mucous membranes of fistulous canals, and accidental synovial membranes. To the second, belong tubercles, scirrhi, melanoses, &c.

TOLUIFERA BAL'SAMUM. *Family*, Terebinthaceæ. *Sex. Syst.* Decandria Monogynia. The name of the tree, which affords the *Balsam of Tolu'*, *Balsamum Tolu-tanum*, *Toluiferæ Balsami Balsamum*, *Goac'onaz*, *Red Balsam of Peru'*, (F) *Baume de Tolu*, *B. de Carthagène*. It has a very fragrant odour, and warm, sweetish taste; is thick, and of a reddish-yellow colour. It is stimulant and expectorant(?), and is used in coughs. It is chiefly, however, employed on account of its flavour.

TO'ME, *Tom'us*, *τομή*, *τομός*, 'incision.' A common suffix, as in Lithotomy, Bronchotomy, &c.

TOMEN'TUM CER'EBRI, from *tomen'tum*, 'a flock of wool.' The infinite number of small vessels, which pass between the pia mater and convolutions of the brain. They enter the substance of the brain at right angles.

TONE, *Tonus*, from *τείνω*, 'I stretch.' The state of tension or firmness, proper to each organic tissue. It is the effect of Tonicity, (q. v.)

TONGUE, Sax. *ṭunṣ*, (D) *Tong*, *Lingua*, *Glossa*, *Glotta*, (F) *Langue*. The tongue is a muscular, symmetrical, and very mobile organ; situate in the mouth, from the os hyoides and epiglottis to the incisor teeth. Its use is, particularly, to procure for us the sensation of savours; and it aids in the acts of sucking, mastication, deglutition, pronunciation, and exspuition. It has the shape of a pyramid, flattened above and below; rounded at its angles, and terminated, anteriorly, by a blunt point. Its *upper surface*, called the *Dorsum*, is free, flat, and divided into two portions by a median furrow, *Linea mediana*; at the posterior extremity of which is the *Foramen cæcum*. The *inferior surface* is free, and covered by the mucous membrane on its anterior third and sides: but behind and in the middle it is attached to the lower jaw, by means of the *genio-glossus*; and to the hyoides by the *hyoglossus*. Its *margins* are rounded; thick behind, thinner anteriorly. Its *tip* or *point* or *dental extremity* is rounded and free:—the *root*, *base*, or *hyoid extremity* is continuous with the epiglottis and velum pa-

lati. It is very thick at the foramen cæcum; but thinner as it approaches the hyoid bone.

The tongue is composed of muscles, and covered by a mucous membrane—*Periglottis*, *Involu'crum linguæ*, *Membra'na* seu *Tu'nica vagina'lis* seu *Cutis*, *Epider'mis* seu *Tunica* seu *Involu'crum mucosum* seu *Crusta villo'sa linguæ*—which forms also the frænum beneath the tongue. On this membrane are seen the different *papillæ*, (q. v.) The nerves of this organ proceed from the *inferior maxillary*, *glosso-pharyngeal*, and *hypoglossal*. The first is perhaps connected with taste; the two last with the motions of the organ. The arteries are the *lingual*, from the external carotid; and the *palatine* and *tonsillar*, from the labial. The veins are the *superficialis linguæ*, *rani-na*, *lingualis*, and *submentalis*. They open into those of the pharynx and larynx. Its lymphatic vessels pass into ganglia, situate at the edge of the hyoglossi muscles.

TONIC, *Ton'icus*. Relating to tone.

TONIC SPASM, *S. tonicus*, *Convul'sio tonica*, *Conductio*, *Spas'ticus*, *Tonos*, *Ento'nia*, *En-ta'sia*. A rigid contraction of muscles without relaxation, as in trismus, tetanus, &c. See Tetanus and Spasm.

In Therapeutics, *Tonic*, *Ton'icus*, *Tono'ticus*, (F) *Tonique*, *Fortifiant*, means a medicine, which has the power of exciting slowly and by insensible degrees the organic action of the different systems of the animal economy, and of augmenting their strength in a durable manner. Bitter, vegetable substances, which are not associated with an acrid or narcotic principle; preparations of iron; cold water, &c., act as tonics. They are also called *Comfortan'tia*, *Corroboran'tia*, *Confir-man'tia*, *Roboran'tia*, &c.

The following are the chief Tonics.

Acidum Arseniosum,	Gentianina,
—— Nitricum,	Liriodendron,
—— Sulphuricum,	Lupulina,
Argenti Nitras,	Piperina,
Bismuthi Subnitras,	Prunus Virginiana,
Carbo Ligni,	Quassia,
Cascarilla,	Quinina,
Cinchona,	Salix,
Cinchonina,	Salicina,
Colomba,	Serpentaria,
Cornus Florida,	Zinci præparata.
Cupri Acetas,	——
—— Sulphas,	Aquæ minerales acidulæ
Cuprum ammoniatum,	et ferruginæ.
Cusparia,	Mental Tonics, (Confi-
Eupatorium perfoliatum,	dence, Hope, Amuse-
Ferri Præparata,	ment.)
Gentiana,	

TONICITY, *Tonicitas*, from *τονος*, 'tone,' 'tension.' The faculty that determines the general tone of the solids. Excessive tonic-ity causes *er'ethism* or *crispness*; deficient tonic-ity, *atony* and *weakness*. *Tonicity* has been used in the same sense as irritability.

TONSIL, *Tonsil'la*, *Amygdala*, *Paristh'mia*, *Almond of the ear*, *Almond of the throat*, *Tolu*, *Tolles*, *Toles*, *Spongos*, Pl. *Anti'ades*, (F) *Amygdale*, *Tonsille*. An ovoid follicle,

about half an inch in length, similar in shape to an almond, and situate, on each side, between the pillars of the velum palati. Their inner surface, projecting into the isthmus of the throat, is covered by the mucous membrane, in which are the orifices of a dozen cells, whence a transparent, viscid mucus oozes on pressure. This mucus is destined to facilitate deglutition, by lubricating the isthmus faucium; and is forced out during the passage of the alimentary bolus.

TOOTH, Sax. *toð*, *Dens*, *Odous*, (F) *Dent*. The teeth are small, hard bones, fixed in the alveoli of each jaw, and serving to lay hold of, and to cut, tear, and triturate alimentary substances. True teeth are found only in man, the mammalia, reptiles, and fish. The teeth have, in general, the shape of an irregular cone, the base of which is towards the interior of the mouth; and the apex, single or divided, towards the bottom of the alveoli. Each tooth has a part situate out of the alveolus, and covered by a vitriform substance. This part is called the *crown* or *corona*. It is bounded by a narrower portion, called the *cervix*, (F) *collet*, which separates it from the portion in the alveolus—the *fang* or *root*, (F) *racine*. In the adult, the teeth are 32 in number; 16 to each jaw: these consist of 4 incisors, 2 canine, 4 bicuspidati, and 6 molares. (See these various terms.)

The teeth inclose a vascular and nervous pulp, in a central cavity. They are formed of a very hard, compact tissue; and the corona is covered by a vitreous substance called Enamel, (q. v.) The incisor and canine teeth are developed by a single point of ossification; the lesser molares, by two: and the larger, by 4 or 5. See Dentition.

TOPHUS, *Tofus*, *Topha'ceous Concre-tion*. A collection of hard, calcareous matter, which forms, particularly, at the surface of joints affected with gout; and, occasionally, in the interior of organs, around the teeth, &c. It likewise meant *Gravel*.

TOPIC, *Topicus*. A local application. (F) *Topique*. See Local.

TOEPLITZ, MINERAL WATERS OF. T. is a town of Bohemia, celebrated for its numerous thermal springs. The water contains carbonate, muriate, and sulphate of soda; carbonates of lime and iron, &c.

TORCULAR HEROPH'ILI, *Lecheni'on*, *Lenos*. The Press of Heroph'ilus, *Fourth Sinus*, (F) *Confluent des Sinus*, *Pressoir d'Hérophile*. A smooth and polished cavity, of irregular shape, in which several sinuses of the dura mater meet. It is situate before the internal occipital protuberance, at the union of the three great duplicatures of the dura mater. It has six openings into it:—one above, that of the superior longitudinal sinus:—two below, answering to the occipital sinuses: one anterior, belonging to the straight sinus: and two lateral, and very broad, which lead into the lateral sinuses; and convey,

from the cavity, the blood that has been poured into it by the others.

TORDYL'IUM OFFICINA'LE, *Ses'eli Cret'icum*, (F) *Séseli de Crète*. Family, Umbelliferae. Sex. Syst. Pentandria Digynia. The seeds and roots of this Southern European plant are considered carminative and diuretic. They enter into the theriaca.

TOR'E'NIA ASIAT'ICA, *Cæla-dolo*. A small Malabar plant, the juice of whose leaves, sweetened with sugar, is said to cure gonorrhœa.

TORMENTIL'LA, *T. erecta*, Common *Tormen'til*, Upright Septfoil, *Heptaphyl'lum*, *Consol'ida rubra*, (F) *Tormentille*. Family, Rosaceæ. Sex. Syst. Icosandria Polygynia. The root has a slightly aromatic odour; and austere, styptic taste. It is astringent. Dose, of the powder, gr. x to 3j.

TOR'MINA, *Strophos*, *Cæli'al'gia*, *Gripes*, *Mulligrubs*. (F) *Tranchées*. Acute colicky pains.

TOROS'ITAS, *Corpulen'tia carno'sa*, *Habitus athleticus*. Muscular strength.

TORPOR, *Parap'sis expers*, (F) *Engourdissement*. State of a part, which becomes numb, and almost incapable of motion. It is also applied to a debilitated, sluggish condition of a part or the whole of the body; (F) *Accablement*.

TORTICOL'LIS, *Obstip'itas*, *Caput obstipum*, *Obsti'pa cervix*, *Collum obstipum*, *Wry-neck*, from *tor'queo*, 'I twist,' and *collum*, 'the neck.' *Trachel'agra*, *Enta'sia Loxia*, *Loxias*, *Cephalox'ia*. A variety of rheumatism, seated in the muscles of the neck, which prevents the motion of the head, and causes the patient to hold it inclined to the side affected. It is, commonly, of short duration; usually disappearing in a few days. Rubefacients are the best topics.

TOUCH, *Tactus*, *Tactio*, *Hap'hē*, *Hapsis*, (F) *Toucher*. One of the five senses, and that which makes known to us the palpable qualities of bodies, such as their consistence, quality, &c. It is seated, particularly, in the hands; and differs from tact (q. v.) in being active.

TOUCH, ROYAL. It was at one time universally believed, in England, that the Royal touch would remove the *Scrophula* or *King's Evil* (as it was thence called.) This superstition is now entirely exploded. Edward, the Confessor, was the first English king, who touched for the evil.

TOUR'NIQUET, *Tor'cular*, *Tornac'ulum*, *Fas'cia tor'tilis*. A surgical instrument for stopping the course of blood in the limbs, by exerting a strong compression upon the principal artery. It was invented by a French surgeon, Morel, in the middle of the 17th century; and was modified, subsequently, by Nuck, Verduc, Monro, Petit, and Louis. It is used to suspend, for a time, the circulation in a limb, during great operations; to arrest arterial hemorrhage in cases of wounds; to

compress certain aneurismal and other tumours, &c.

TOXICOL'OGY, *Toxicolo'gia*, from *τοξικον*, (itself from *τοξον*, 'a bow,') 'a poison,' and *λογος*, 'a description.' A treatise on poisons, (q. v.)

TRACHE'A (generally, however, accented *Tra'chea*), *Trach'e'a arte'ria*, *Bronchus*, *As'pera arteria*, *Fis'tula spirita'lis*, *T. pulmona'lis*, *Canna*; the Windpipe, (F) *Trachée artère*, from *τραχος*, 'rough,' and *αρτηρία*, 'artery.' Composed of *αἰρ*, 'air,' and *τηρεῖν*, 'to keep.' The trachea is a cylindrical, fibro-cartilaginous and membranous tube, flattened behind, and situate on the median line, before the vertebral column, from the inferior part of the larynx, as far as the third dorsal vertebra. There it divides into two branches, the *bronchi*, which separate to go to each lung, (q. v.)

The trachea, the function of which is to convey air to the lungs during respiration, is composed, 1. Of cartilaginous rings, incomplete behind, situate one above the other, and kept *in situ* by a fibrous membrane. 2. Of a mucous membrane, which lines it internally, and contains numerous mucous follicles. 3. Of transverse muscular fibres, not well marked, which occupy its posterior surface. 4. Of vessels, which proceed from the superior and inferior thyroideal: and, 5. Of nerves, that are given off by the pneumogastric and the cervical ganglia.

TRA'CHEAL, *Trachea'lis*. An epithet applied to the respiration as heard through the stethoscope opposite the trachea, larynx, and root of the bronchi; the air appearing as if sucked in from the cylinder during inspiration, and expelled again during expiration.

TRACHE'LO-DIAPHRAGMAT'IC, *Trachelo-diaphragmaticus*. The 4th pair of cervical nerves, whence the phrenic nerve chiefly arises.—Chaussier.

TRACHO'MA, *Aspre'do*, from *τραχος*, 'rough.' (F) *Asperité des Paupières*. A roughness of the inner surface of the eyelids. A variety of ophthalmia, of which three kinds have been designated:—*T. sabulo'sum*, from sand, &c. getting between the eyelids: *T. carunculo'sum*, from fleshy excrescences; and *T. herpet'icum*, from hard pustules on the inner surface of the eyelids. This last is also called *Ficosis* and *Pal'pebra ficosa*.

TRACHOMAT'ICON, *τραχαματικον*. A collyrium for removing roughness of the inner surface of the eyelids.—Galen.

TRACTORS, METAL'LIC. Metallic agents, introduced by Dr. Elisha Perkins, of Connecticut, about the end of the last century, to cure diseases. The parts were rubbed with these tractors, and hundreds of thousands of cases were reported to have been cured by the *tractora'tion*. The affections, in which they were chiefly used, were, local inflammations, and pains in different parts. The good effects were, doubtless, owing to the influence ex-

erted by the mind over the body. The bubble did not exist long. See Perkinism.

TRAGACAN'THA, *Gummi Tragacan'tha*, *G. Astrag'ali* *Tragacanthæ*, *Gum Tragacanth*, *Gum Dragon*; the gum of the *Astragalus Tragacantha* or *Astragalus verus*, a native of Persia. *Family*, Leguminosæ. *Sex. Syst.* Diadelphia Decandria. (F) *Gomme Adragant*. This gum is inodorous; nearly insipid; of a whitish colour; semi-transparent, and striated. It is in thin, vermiform pieces; and does not form a smooth, uniform mucilage with water. It is demulcent, but is rarely used alone.

TRA'GEA, *Tragema*. 'Dessert.' An aromatic, powdered with sugar, and used as a carminative.—Galen.

TRAG'ICUS, *Tragien*, (Ch.) A small, flat, triangular muscle, which almost wholly covers the outer surface of the tragus, arising from its base, and terminating at the top of the eminence.

TRAGOPO'GON, from *τραγος*, 'a goat,' and *παγων*, 'beard.' A genus of plants; *Family*, Cichoraceæ. *Sex. Syst.* Syngenesia Polygamia Æqualis. (F) *Barbe de Bouc*; of which the roots of the *Tragopogon porrifolium* or *Sal'sifi*, and the young shoots of the *T. pratensis*, *Meadow Salsifi*, or *Common Goat's Beard*, (F) *Salsifis des prés*, are eaten as food. The root of the latter has been used as a diuretic.

TRAGUS, *τραγος*; 'a goat;' *Antilobium*; *Hircus*. A small, flattened, triangular nipple, situate before the meatus auditorius externus, which it appears to conceal. It is covered with hair in old people, whence its name.

TRANSFORMATIONS DE TISSU (F). The French pathologists designate thus, the change that occurs in an organ, the tissue of which becomes similar to that of another organ. The chief transformations are cartilaginous, osseous, and adipous. See Tissue.

TRANSFU'SION, *Transfusio*, *Transfusio Sanguinis*, *Cura Medea'na*, *Methæmachym'ia*, *Transplanta'tio Medica nova*, *Chirurgia transfusoria*, *Exotichæmato'sis*, from *transfundere*, 'to pour from one vessel into another.' The act of passing the blood of one animal into the veins of another; an operation, which was formerly used to fulfil various therapeutical intentions. It has been revived in cases of uterine hemorrhage; and, apparently, with some success.

The operation can only be performed safely on animals having like kinds of blood. See Globule.

TRANSPLANTA'TIO, *Metaphyteia*. A pretended method of curing diseases, devised by Paracelsus—by making them pass from one individual to another, either animal or vegetable.

TRANSPOSI'TION, *Transpositio*, *Metathesis*. Change of situation.

TRANSPOSITION OF THE VISCERA, *Polype'ria promiscua translativa*, is a congenital vice of

conformation, which consists in the viscera being found out of the situations they ordinarily occupy: the heart, for example, being on the right side; the liver on the left, &c.

TRANSUDA'TION, *Transudatio*, from *trans*, 'through,' and *sudo*, 'I sweat.' The passage of a fluid, through the tissue of any organ, which may collect in small drops on the opposite surface, or evaporate from it.

TRANSVERSA'LIS ABDOM'INIS, *Lombo-abdominal* (Ch.), (F) *Transverse de l'Abdomen*. This muscle is seated, deeply, on the lateral parts of the abdomen. It is flat, thin, and broader before than behind. It is attached, above, to the cartilage of the last true rib, and to those of every false rib: and, below, to the inner lip of the crista of the ilium; to the two outer thirds of the crural arch, and to the upper part of the pubis. Its fibres, moreover, are inserted, behind, by means of broad aponeuroses, into the top of the transverse and spinous processes of the four first lumbar vertebræ; and, before, into the linea alba, and the ensiform cartilage. This muscle, all of whose fibres have a transverse direction, constricts the belly, and diminishes the base of the chest, by drawing inwards the ribs to which it is attached.

TRANSVERSA'LIS COLLI, *Transversalis major colli*, *Portion of the Sacro-spinal* (Ch.), (F) *Transversaire*. A muscle, seated at the posterior and lateral part of the neck and upper part of the back. It is attached to the transverse processes of the 5 or 6 lowest vertebræ of the neck; and to those of the 4 or 5 first dorsal. It extends the vertebræ of the neck, and inclines them to its side.

TRANSVERSALIS DORSI, *Transverso-spinalis*, *Multif'idus Spinæ*, *Lumbo-cervical portion of the Spinal* (Ch.), (*Transverso-spinalis Lumborum*, *Transverso-spinalis Dorsi*, *Transverso-spinalis Colli*), *Musculus sacer*, *Spinales et transversales lumborum*, *Semi-spinalis internus*, *sive transverso-spinalis colli pars interna* (Winslow), *Lombo-dorsi-spinal*, &c. (F) *Transversaire épineux*. This muscle, usually called by English anatomists, *Multifidus spinæ*, and including all the *transverso-spinales*, is situate in the vertebral gutters, and extends from the posterior part of the sacrum to the second cervical vertebra. It is thicker in the neck and loins than in the back and behind the sacrum. Its use is,—to straighten the vertebral column, and to impress upon it a slight rotatory motion.

TRANSVERSE, *Transversus*, *Transversalis*. That which runs across: also, that which relates to the transverse processes of the vertebræ.

The **TRANSVERSE PROCESSES OF THE VERTEBRÆ**, (F) *Apophyses transverses des vertèbres*, are the bony eminences, that jut out transversely from the sides of the vertebræ.

The **TRANSVERSE SUTURE**, *Sutura transversalis*, runs across the face, and sinks into

the orbits; joining the bones of the skull to those of the face, but with so many irregularities and interruptions, that it can scarcely be recognised as a suture.

The **TRANSVERSUS AURIS MUSCLE**, *Transverse de l'Oricule* (Ch.), (F) *Transversal de la Conque*, is often wanting. It is formed of some transverse fibres, situate transversely, behind the projection of the helix which divides the concha into two portions.

The **TRANSVERSUS PERINÆI**, *Levator Ani parvus*, *Ischio-perineal* (Ch.), (F) *Transverse du Périnée*, is placed at the posterior part of the perinæum. It is thin, triangular, and situate transversely. Its external extremity is attached to the ramus and tuberosity of the ischium: its inner extremity is confounded with its fellow of the opposite side, and with the anterior part of the sphincter ani and posterior part of the bulbo-cavernosus. The use of this muscle is,—to compress the urethra, and to support the rectum and bladder. To a fasciculus of this muscle Santorini has given the name, *Urethra Elevator seu Ejacula'tor*.

TRANSVERSUS PERINÆI ALTER, *Prostat'icus inferior*. A small muscle which occasionally accompanies the last.

The **TRANSVERSE ARTERY OF THE FACE** arises from the temporal; passes transversely across the face, in front of the condyle of the lower jaw, and gives its branches to the different muscles of the cheek.

The **TRANSVERSE PERINEAL ARTERY**, *Urethro-bulbar* (Ch.), is given off from the upper branch of the internal pudic; and passes inwards and forwards above the transversus perinæi muscle, as far as the bulb of the urethra, into which it dips;—subdividing into numerous branches.

TRAPA NATANS, (F) *Macre flottante*, *Noix d'Eau*, *Chataigne d'Eau*. *Sex. Syst.* Tetrandria Monogynia. The plant which affords the *Nuces Aquat'icæ*, *Tribuli aquatici*, *Caltrops*. The nut is considered nutrient and demulcent, and is said to be useful in diarrhœa from abrasion of the bowels, and in calculus. A poultice is sometimes made of it to discuss hard and indolent tumours.

TRAPEZIUM, OS. So called from its shape. *Os multan'gulum majus*. The first bone of the second row of the carpus. It is articulated, above, with the scaphoides; below, with the first bone of the metacarpus; within, with the trapezoides, and second metacarpal bone. Anteriorly, posteriorly, and externally, it gives attachment to ligaments.

TRAPEZIUS, *Cuculla'ris*, *Dorso-sus-acromien* (Ch.), (F) *Trapèze*, *Capuchon*. A muscle, seated at the posterior part of the neck and shoulder, and at the upper part of the back. It has the shape of a trapezium; is attached, on the one hand, to the inner third of the upper curved line of the occipital

bone; to the posterior cervical ligament; to the spinous process of the 7th cervical vertebræ; and to those of all the dorsal vertebræ; and, on the other hand, to the spine of the scapula; the acromion and the outer third of the posterior margin of the clavicle. Its upper fibres are situate obliquely downwards and outwards; the transverse and inferior, obliquely outwards and inwards. This muscle elevates the shoulder; carries it backwards, or depresses it, according as its upper, middle, or lower fibres contract separately. It straightens the head, also, and inclines it to one side.

TRAPEZOÏ'DES, OS, *Os multan'gulum minus*, *Os pyramida'le Carpi*. The second bone of the second row of the carpus, so called from its shape. It is smaller than the trapezium, on the inside of which it is situate. It is articulated, above, with the os naviculare; below, with the second metacarpal bone; on the outside, with the trapezium; and internally, with the magnum. Anteriorly and posteriorly, it affords attachment to ligaments.

TRAPEZOID LIGAMENT. The anterior part of the coraco-clavicular ligament. It is a very strong, fibrous fasciculus, which has the shape of a trapezium, and is situate obliquely, between the acromion process and clavicle.

TRAUMATIC, *Traumat'icus*, *Vulnera'rius*; from *τραύμα*, 'a wound.' Any thing relating to a wound.

TREMOR, *Trepida'tio*, *Syn'clonus Tremor*, *Tromus*, *Trembling*, (F) *Tremblement*. Involuntary agitation of the body or of some part of it, without any obstacle to voluntary motion. It depends, generally, upon debility of the muscular, or of the nervous system; and hence, is observed in convalescence, and in typhoid affections. It occurs, also, in old people; in hard drinkers; workers in mercury, lead, &c.; in the last case, it is called by the French, *Tremblement métallique*. Tremor seems to resemble paralysis more than convulsion.

TREPAN, *Trep'anum*, *Terebel'la*, *Trip-anon*, *Chæn'icis*, *Chænicion*, *Ter'ebra*, *Ter'etron*, *Try'panon*, from *τρύπω*, 'I perforate.' A surgical instrument resembling a wimble and worked in the same manner. It is used for removing portions of bone, and particularly of the bones of the skull. The term, *trepán*, is given more particularly to the part of the instrument that makes the perforation. The handle is so constructed as to receive different bits, as the Crown, (q. v.), the *Trépan perforatif* or *Perité'rion*, the *T. exfoliatif* or *Desquamato'rium trep'anum*, and the *T. abaptis'ta*.

In Great Britain and the United States, this instrument has been superseded by the trephine, which is more manageable.

TREPAN'NING, *Terebra'tio*, *Anatre'sis*, *Cephalotrype'sis*, *Trepana'tio*, *Trype'sis*, *Tre-*

sis, (F) *Trépanation*. The methodical application of the trepan.

TREPHINE. The instrument which has replaced the trepan in some countries. It consists of a simple, cylindrical saw; with a handle placed transversely, like that of a gimblet; and from the centre of the circle, described by the teeth of the saw, a sharp little perforator projects, called the *Centrepin*. This centrepin is capable of being removed, at the surgeon's option, by means of a key for the purpose. It is used to fix the instrument until the teeth of the saw have made a circular groove, sufficiently deep for it to work steadily. The pin must then be removed. Sometimes the pin is made to slide up and down, and to be fixed in any position, by means of a screw.

TREPON'DO. A weight of three pounds.—Scribonius.

TRESIS, τρησις. A wound. Forcible solution of continuity in a soft part, commencing externally. A genus in the nosology of Good.

TRESSO'RIA. A term formerly applied to the hair covering the mons veneris, the absence of which has, by the vulgar, been esteemed a matter of reproach.

TRI, τρι, in composition, 'three.' Hence: **TRIANGULAR**, *Trigo'nos*, *Triangula'ris*. That which has three angles.

The **TRIANGULARIS STERNI** muscle, *Sternocostal* (Ch.), *Pectora'lis inter'nus*, is situate at the anterior and inner parts of the chest, behind the cartilages of the ribs. It has the shape of a lengthened triangle, the base of which is directed downwards. It is attached to the posterior, lateral, and inferior part of the sternum, whence its fibres pass upwards and outwards, and terminate by as many distinct digitations at the cartilages of the 3d, 4th, 5th, and 6th true ribs. This muscle depresses the ribs and contributes to expiration.

The **INFRA-PUBIAN** or **TRIANGULAR LIGAMENT** is a ligamentous fascia with short fibres, situate transversely beneath the symphysis pubis, which it strengthens.

TRIBADE (F), τριβας, from τριβα, 'I rub.' A female whose clitoris is so large as to cause her to be regarded as an hermaphrodite.

TRICEPS, from *tres*, 'three,' and *caput*, 'a head.' A name given to muscles that have three fleshy bundles at one of their extremities.

TRICEPS ADDUC'TOR FEM'ORIS. Under this appellation are comprehended three distinct muscles:—*Adductor brevis*, *A. longus*, and *A. magnus*, (q. v.)

The **TRICEPS CRURIS**, *Trifémoro-rotulien* (Ch.), *Crural*, *Trifémoro-tibi-rotulien*, *Femora'lis*, (F) *Triceps crural*, *T. de la cuisse*, is situate at the anterior, inner, and outer part of the thigh. It is formed of three bundles at its superior extremity, viz. 1. A middle

fasciculus (the *crura'lis* of most anatomists). 2. An external fasciculus (the *vastus externus*) and 3. An inner fasciculus (the *vastus internus*). It is attached, above, to the anterior, inner, and outer surfaces of the femur, and to the two edges of the linea aspera, from the base of the trochanter to within four fingers' breadth of the knee. Below, it terminates by a large tendon, which is attached to the base and edges of the patella, as well as to the inner and outer tuberosities of the tibia. The triceps extends the leg on the thigh, and *vice versâ*.

TRICEPS EXTENSOR CUBITI, *Triceps Brachia'lis*, *Scapulo-huméro-olécranien* (Ch.), (F) *Triceps brachial*. This muscle, which occupies all the posterior part of the os humeri, is described as two muscles by Douglas, and as three by Winslow.

It arises by three heads. The first or long head,—*long head of the biceps externus* of Douglas, *Anconeus major* of Winslow—arises from the anterior extremity of the inferior costa of the scapula, near its neck, and below the origin of the teres minor. The second head, or *short head of the biceps externus* of Douglas, *Anconeus externus* of Winslow, arises from the upper and outer part of the os humeri, at the base of the great tuberosity; and the third head—*Brachialis externus* of Douglas, *Anconeus internus* of Winslow, the shortest of the three, arises from the back part of the os humeri, behind the flat tendon of the latissimus dorsi. These three portions unite about the middle of the arm, so as to form one thick and powerful muscle, which is inserted at the upper part of the olecranon. It extends the forearm on the arm, and *vice versâ*.

TRICHI'ASIS, *Trichio'sis*, *Tricho'sis*, from τριχ, 'hair,' *Morbus pila'ris*. This name has been given to several affections. 1. To a disease of the kidneys or bladder, in which filamentous substances, resembling hairs, are passed in the urine. This is also called *Pilimic'tio*. It must be regarded as a variety of *Catar'rhus vesicæ*, (q. v.) 2. To a painful swelling of the breasts, in childbed women, when the milk is excreted with difficulty:—a disease attributed, by Aristotle, to a hair swallowed by accident and carried to the breasts through the circulation; and 3dly, To inversion of the eyelashes. See Entropion.

TRICHINA SPIRALIS. Same etymon. A small species of entozoa discovered in the muscles of voluntary motion. They consist of very minute cysts, of an oblong figure, having considerable resemblance in size and colour to young pediculi, and are somewhat allied to the eels found in paste and vinegar. No symptoms have as yet been observed to be pathognomonic of their presence.

TRICHIS'MUS. Same etymon. *Capilla'tio fissu'ra pila'ris*. A capillary fracture, fissure, or crack.

TRICHOSIS, *Pila'rē malum*; same etymon. Morbid organization or deficiency of hair. A genus in the system of Good.

TRICOCEPH'ALUS, *Tricoceph'alus dispar*; from *τριχ*, 'a hair,' and *κεφαλή*, 'head.' *Trichu'ris*, *Trichuris vulga'ris*, *Trichuris intestina'lis*, *As'caris trichu'ria*, *Tricocephalus hom'inis*, *Mastigo'des hominis*, long thread worm. A worm, from an inch and a half to two inches long; the head acute; the body spirally involutioned in the male, almost straight in the female. The *tricocephalus dispar* generally inhabits the cæcum and colon, and is rarely met with in the small intestines. It gives rise to no peculiar symptoms, and requires the usual anthelmintic treatment.

TRICUSPID, *Tricus'pis*; from *tris*, for *tres*, 'three,' and *cuspis*, 'a point.' That which has three points.

The **TRICUSPID VALVES**, *Val'vulæ Tricus'pides* seu *triglochini* seu *trisulcæ*, are three triangular, valvular duplicatures, formed by the inner membrane of the right cavities of the heart, around the orifice by which the auricle communicates with the ventricle. The elongated and pointed top of each of these valves is continuous with the chordæ tendineæ, which set out from the columnæ carneæ of the heart. These valves are depressed to allow the blood to flow from the auricle into the ventricle; and are raised to prevent its reflux into the auricle.

TRIENS, *Un'ciæ qua'tuor*. The third part of a pound. Four ounces.—Galen.

TRIFOLIUM MELILO'TUS OFFICI'NALIS, *Melilotus*, *Lotus sylves'tris*, *Ser'tula Compa'na*, *Trifolium caballi'num*, *Coro'na re'gia*, *Trifolium odora'tum*, Common melilot, (F) *Melilot*. Family, Leguminosæ. Sex. Syst. Diadelphia Decandria. The infusion or distilled water of this plant has been employed in cases of ophthalmia. It has, also, been used in fomentations, glysters, &c.

TRIGAS'TRIC, *Trigas'tricus*, *Triven'ter*; from *τρις*, 'three,' and *γαστήρ*, 'belly.' That which has three bellies. An epithet for muscles so circumstanced.

TRIGEM'INI, from *tris*, 'three,' and *gem'inus*, 'double';—'three-fold,' 'triplets.' The fifth pair of nerves, *Par trigem'inum*, *Nervi divi'si*, *N. gustato'rii*, *Nervus quintus*, *Par quintum nervorum cerebra'lium*, *N. tre'mellus*, *N. mixtus*, *N. sympatheticus medius*, *N. sympathicus medius*, *N. anon'y-mus*, *N. innomina'tus*, *Par trium funiculo-rum*, *Trifa'cial*, *Nerf gustatif innominé*, *Nerf à trois cordes*, (F) *Nerfs trijumeaux*. This nerve arises below the tuber annulare by one large posterior root from the corpora restiformia, and by two small anterior roots from the corpora olivaria, whence, proceeding forwards to the side of the sella turcica, the filaments composing the large root form a ganglion—the Gasserian. Emerging from this ganglion, the filaments, of which the large root consists, form, with those constituting the

small roots, and which had not passed through the ganglion, two flattened trunks, each of which is soon divided into three branches, in such a manner, however, that the first, or *ophthalmic branch*, and the second, or *upper maxillary*, are composed exclusively of the filaments that arose from the corpora restiformia and passed through the Gasserian ganglion; whilst the third, or *lower maxillary branch*, is composed in part of those filaments and in part of those that arose from the corpora olivaria and passed on one side of the ganglion without going through it.

The whole, therefore, of the first and second branches and a part of the third are sensiferous nerves, whilst the remaining part of the third—the *manducatory* or *masticatory*—is wholly motiferous, and passes to the pterygoid and other muscles concerned in mastication.

TRIGONEL'LA FÆNUM, *Fœ'nugreek*, *Fœnum Græcum*, *Bu'ceras*, *Carphos*, *Ægoc'eras*, (F) *Fœnugrec*. Family, Leguminosæ. Sex. Syst. Diadelphia Decandria. A native of the south of France. The seeds have a strong, disagreeable smell, and an unctuous, farinaceous taste; accompanied by a slight bitterness. They are chiefly used in poultices.

TRIOS'TEUM PERFOLIA'TUM. *Bastard Ipecacuan'ha*, *Fever Root*. In very large doses, the bark of the root proves emetic. It is a good cathartic, in doses of 20 or 30 grains. It sometimes operates as a diuretic.

TRIOR'CHIS, *τριορχις*, from *τρις*, 'three,' and *ορχις*, 'a testicle.' One who has three testicles.

TRIPHAR'MACUM, *τριφαρμακον*. A medicine, composed of three ingredients.

TRISMUS, from *τριζω*, 'I gnash.' *Enta'sia Trismus*, *Capis'trum*, *Tonos Trismus*, *Locked Jaw*, *Spasmus maxillæ inferio'ris*, *Tet'anus maxill'æ inferio'ris*, *Tortu'ra Oris*, (F) *Mal de Machoire*, *Trisme*. Spastic closure of the under jaw; a partial tetanus. Cullen makes two varieties—*T. nascentium*, *Sarrete*, attacking infants during the two weeks from birth; and *T. traumaticus*, originating from a wound.

TRISPER'MUM, *τρισπερμον*, from *τρις*, 'three,' and *σπερμα*, 'a grain or seed.' A cataplasm, consisting of three seeds,—*cumin*, *bay*, and *smallage*.—Gorræus.

TRISPLANCH'NIC, *Trisplanch'nicus*; from *τρις*, 'three,' and *σπλαγχνον*, 'viscus.' That which relates to three orders of viscera.

The **TRISPLANCHNIC NERVE**, *Great sympathetic*, *Intercos'tal*, *Ganglion'ic nerve*, *Nerve of organ'ic life*, *Ver'tebral nerve*: named by Bichat, the *organic nervous system*, in opposition to the other nervous parts, called the *animal nervous system*. Gall calls it:—the *nervous system of the automatic functions*. It is called *Trisplanchnic*, because it distri-

butes its branches to the organs in the three great splanchnic cavities—the head, chest, and abdomen. It is composed of a series of ganglia, united by intermediate branches, and passing along the side of the spine to the lowest part of the trunk; communicating, by a branch, with each of the thirty pairs of spinal nerves and several of the cerebral nerves; and detaching nerves from its several ganglia, which accompany the arteries, and are distributed, particularly, to the organs of involuntary functions. At its upper part it is concealed in the canalis caroticus and cavernous sinus, and is joined there by a branch of the 6th pair of nerves and by a twig from the vidian nerve of the 5th pair. In passing down by the side of the spine, it forms three ganglia in the neck:—the *superior*, *middle*, and *inferior*; 12 in the back,—the *thoracic*; 5 in the loins—the *lumbar*; and three or four *sacral*. When it reaches the coccyx it unites with its fellow from the opposite side, forming a small ganglion—the *coccygeal*. Meckel divides it into two portions—1. The *central ganglions* or *central part*, composed of the numerous ganglionic plexuses in the abdomen; the centre of which is the *semilunary* and *solar plexuses*. 2. The *external ganglions*, *Limitrophes* or *external part*, which comprise the series of ganglions, situate at the sides of the spine, from the base of the cranium to the sacrum.

The great sympathetic seems to form a distinct nervous system, destined for the organs of involuntary motion; for, although communicating with both brain and spinal marrow, it does not seem to be immediately under the influence of either.

TRISTERNAL. Béclard has given this name to the third bony portion of the sternum;—that which corresponds to the third intercostal space.

TRITÆOPHYES, *Tritæoph'ya*, from *τρίτατος*, 'tertian,' and *φυω*, 'I originate.' A fever, whose type approaches the tertian. Sauvages gave the name *Tritæophya Vratislaviensis* to an epidemic, which broke out in the Prussian army at Breslaw, in the middle of the last century.

TRITICUM ÆSTIVUM, TRITICUM HYBERNUM, *Wheat, Pyros, Frumentum*, (F) *Froment*. Family, Gramineæ. Sex. Syst. Triandria Digynia. From these plants our wheaten flour is obtained, by grinding the seeds; and to them we are indebted for our bread and pastry. The nutritive properties of wheaten flour are so well known, as not to need comment.

Bread, (F) *Pain*, mixed with milk, constitutes the ordinary emollient poultice;—and the *crumbs of bread*, *Micæ panis*—are a common excipient for pills and boluses.

TRITICUM REPENS, *Gramen caninum, Gramen Dioscoridis, G. repens, Lolium ceum radice repente*, *Dog's grass, Couch grass*,

(F) *Chiendent*. The roots are sweet and possess aperient properties. They are said, also, to be diuretic.

TRITURATION, *Tritura'tio, Tritu'ra, Tri'tio, Tripsis*. The act of reducing a substance to powder.

TROCAR, *Acus paracentica, A. triquetra vulg'ris, Paracentic'ion, παρακέντημα*. Corrupted from the (F) *Troisquarts* or *Trocart*, "three quarters;" so called from the triangular shape of the point, *Triquetrum*:—an instrument used for evacuating fluids from cavities, particularly in ascites, hydrocele, &c.

A trocar consists of a perforator or stilet and of a cannula, which is so adapted to the perforator, that, when the puncture is made, both enter the wound with facility; after which, the stilet, being withdrawn, the cannula remains in the wound and affords the fluid a ready passage outwards.

TROCHAN'TER, *Trokanter, Rota'tor*, from *τροχάω*, 'I turn.' Anatomists have given the names—*great* and *little trochanter* to two processes at the upper extremity of the femur. The *great trochanter* is the one on the outside; the *less* is lower down and more internally. Both afford attachment to rotator muscles of the thigh, and hence their name. Chaussier, by the word *trochanter*, means the larger process; the smaller he calls *trochantin*.

TROCHANTERIAN, *Trochanteria'nus, Trokante'rian*. That which belongs or relates to the great trochanter.—Chaussier.

TROCHANTIN'IAN, *Trokantin'ian, Trochantinia'nus*. That which belongs or relates to the trochantin or lesser trochanter.

TROCHIN, from *τροχέω*, 'to turn.' Chaussier has given this name to the smaller of the tuberosities, at the upper extremity of the os humeri; because it gives attachment, to one of the rotator muscles of the arm,—the *subscapularis*.

TROCHIN'IAN, *Trochinia'nus*. That which belongs or relates to the trochin.

TROCHIS'CUS, *Phthois, Artis'cus, Collix, Colix, Phthois'cos, Rot'ula, Cyclis'mos*; diminutive of *τροχός*, 'a wheel.' A *troch* or *round tablet*, (F) *Trochisque*. See *Pastil* and *Tabella*. A solid medicine, prepared of powders, incorporated by means of mucilage, crumb of bread, juices of plants, &c. In French nomenclature—the *trochisque* differs from the *tablette*,—the former containing no sugar. This form of preparation is adopted for the purpose of allowing the medicines, of which the troch is composed, to dissolve slowly in the mouth, and to pass gradually into the stomach.

TROCHISCI CARBONATIS CALCIS, *Troches of Car'bonate of lime, Tabellæ ad ardo'rem ventriculi, Lozenges for the heartburn, Tabellæ cardial'gicæ, T. ad sodam, Trochis'ci e cretâ*. (Carb. calc. ppt. 3 iv, g. acaciæ 3 j, nuc.

moschat. 3j, *sacch. pur.* 3vj. M. Form into troches with *water.* Ph. E.) Antacid and absorbent.

TROCHISCI VEL PASTIL'LI EMETINÆ PECTORALES, *Pectoral Lozenges of Emetine.* (Sugar, 3 iv, *emetine*, 32 grains. Form into lozenges of 9 grains each.) One is a dose.

TROCHISCI GLYCYRRHIZÆ GLABRÆ, *Liquorice Troches, Black pectoral lozenges, Trochisci bech'ici nigri.* (Ext. *glyc. glabr.*, gum. *acac.* aa, p. j, *sacch. purif.* p. ij. Dissolve in warm water; strain; evaporate, and form into troches. Ph. E.) Demulcent. To allay cough.

TROCHISCI GLYCYRRHIZÆ CUM OPIO, *Trochisci Theba'ici, T. sedati'vo-balsam'ici, T. pectorales regis Danorum, Liquorice Troches with Opium.* (Opii 3 ij, *tinct. bals. tolu.* 3 iv, *syrup. simpl.* 3 viij, ext. *glycyrrh. glabr.*, g. *acaciæ* aa 3 v. Make into troches. Ph. E.) Demulcent and anodyne.

TROCHISCI GUMMO'SI, *Gum Troches.* (G. *acac.* p. v. *amyli*, p. i. *sacch. pur.* p. xij. Make up the troches with rose-water. Ph. E.) Demulcent.

TROCHISCI NITRA'TIS POTAS'SÆ, *Nitre Troches.* (Nitrat. *potassæ*, p. j, *sacch. pur.* p. iij. Make into troches with mucilage of tragacanth. Ph. E.) In slight inflammatory sore throat and fever.

The Parisian Codex has two formulæ for troches, for external use.

TROCHISCI ESCHAROT'ICI, *Escharot'ic Troches.* (Hydrarg. *oxymur.* p. 8, *amyli*, p. 16, *mucilag. g. tragac.* q. s. Make into troches to which a few drops of laudanum may be added.) Used in foul ulcers, to remove excrescences, &c.

TROCHISCI ESCHAROT'ICI DE MINIO. (Oxyd. *plumbi. rubr.* p. 16, *hydrarg. oxymur.* p. 32, *mic. panis*, p. 128, *aq. rosæ*, q. s.) Used like the last.

TROCH'ITER, from τροχαν, 'to turn.' The larger of the two tuberosities at the upper extremity of the os humeri; so called because it affords insertion to rotator muscles. —(Chaussier.)

TROCHITER'IAN, in the language of Chaussier, means any thing belonging or relating to the trochiter.

TROCHLEA, *Trochilia*, (F) *Trochlée* ou *Troklée.* A pulley; from τροχῶν, 'I turn.' The articular surface at the lower extremity of the os humeri; so called from its forming a kind of pulley on which the ulna moves, in flexion and extension of the forearm.

Also, the cartilaginous pulley, over which the tendon of the trochlearis muscle passes, at the upper and inner part of the orbit.

TRO'CHOID, τροχοειδής, from τροχός, 'a wheel,' and εἶδος, 'resemblance.' *Trochoïdes, Axæa commissu'ra.* An articulation, in which one bone turns upon another, like a wheel upon its axle:—such as, the *Atloi'do-axoid articulation.*

TROPÆ'OLUM MAJUS, *Indian Cress,*

Nasturtium Indicum, Acrivi'ola, Flos sanguineus monar'di, Nasturtium Peruvia-num, Cardamin'dum minus. Family, Geraniaceæ. Sex. Syst. Octandria Monogynia, (F) *Cresson des Indes, Cresson du Mexique, Capucine.* An antiscorbutic.

TROPHON'OSI, *Trophonu'si*; from τροφή, 'nourishment,' and νόσος, 'a disease.' Diseases of nutrition.

TROUSSEAUX ARRIÈRE-MÉSEN-TÉRIQUES (F). A name given by Winslow, to the nervous plexus, situate between the two mesenteric plexuses, of which it is a dependence, and which descends into the pelvis to concur in the formation of the hypogastric plexus.

TRUNK, *Truncus*, (F) *Tronc.* The principal part of the body, to which the limbs are articulated. The trunk has been divided into three parts;—a superior, the head:—a middle, the thorax,—and an inferior, the pelvis. These three regions contain the great splanchnic cavities. They are united by a common stalk—the vertebral column. To the middle, are articulated the superior extremities; and, to the inferior, the lower extremities.

The trunk of an artery, vein, nerve, or lymphatic is its largest part, which has not yet given off branches. It is, also, applied to the parent vessel, after branches have been sent off.

TRUSS, from (F) *Trousser*, 'to tie up.' *Brache'rium, Bracheriolum, Amma*, (F) *Brayer.* A hernial bandage, for keeping the hernia reduced. The ancient trusses were inelastic. They consisted simply of a pad and strap. At the present day, elastic bandages are alone employed. They possess the advantage of making an equable and continuous pressure on the aperture of the sac; and of yielding to the changes of form in the abdominal parietes.

The most important part of these bandages is a piece of narrow steel, flat and adapted to the shape of the body. This is the *spring*, (F) *Ressort.* It embraces the body on the side affected; extends from beyond the spine, and terminates opposite the ruptured part, by an iron plate to which it is riveted. The posterior surface of this plate is furnished with a convex pad, (F) *Pelote*, adapted in shape and size to the aperture which it has to close. The spring is covered with leather, and its inner surface is padded; a strap extends from its posterior extremity; passes round the sound side, and is attached to the plate of the pad. This strap is pierced with numerous holes, which allow the patient to tighten or slacken it at pleasure.

Trusses have been variously constructed; and different patents obtained for the modifications; perhaps the very best are those of Chase. They all act upon the above principle. Sometimes they have a double pad.

TUBA, *Tube, Trumpet, Salpinx*, (F)

Trompe. A name given to some parts, which are hollow and have the shape of a trumpet.

The TUBA FALLOPIA'NA, *Oviductus muliebris*, *Vas deferens mulieris*, *Tuba uterina*, *T. cæca*, *Ductus varicosi*, seu *Processus laterales*, seu *Meatus seminales*, seu *Meatus seminaarii uteri*, (F) *Trompe de Fallope*, *T. utérine*, is a canal, floating in the abdomen, and extending on each side from the superior angles of the uterus as far as the sides of the brim of the pelvis. They are 4 or 5 inches long. Near the uterus, they are straight and very narrow; but, in their course, they widen, become tortuous, and terminate by a free, expanded, and *fimbriated extremity*; called, also, *Folia-ceum ornamentum*, *Morsus diaboli*, (F) *Morceau frangé*, *Pavillon de la trompe*, *Morceau du diable*. Within, the tubes are hollow and lined by a mucous membrane: the tissue, which it lines, is spongy and erectile.

The use of the Fallopian tubes is to conduct the sperm to the ovarium, and the fecundated ovum back to the uterus. They establish a communication between the cavity of the peritoneum and that of the uterus.

TUBER CINE'REUM. A grayish tubercle, seen at the base of the brain behind the commissure of the optic nerves, which is continuous with the infundibulum.

TU'BERCLE, *Tuberculum*, *Tuber*. A tumour in the substance of organs, from the production of new matter:—sensation dull; growth sluggish. In *Pathological Anatomy*, the term is given to a species of degeneration which consists of an opaque matter, of a pale yellow colour: this, in its crude condition, has a consistence analogous to that of concrete albumen, but greater: it subsequently becomes soft and friable, and gradually acquires a consistence and appearance analogous to those of pus. Tubercles may be developed in different parts of the body; but they are most frequently observed in the lungs and mesentery. Pulmonary tubercles are the cause of *Tubercular Phthisis*. *Mesenteric tubercles* are often met with in the same affection, but particularly in *Tabes Mesenterica*, (q. v.) Laennec classes the tubercles among the accidental tissues, which have no resemblance to the natural tissues, and which never exist except in consequence of morbid action. Others consider them as a scrophulous degeneration. Broussais conceives that they are produced exclusively by inflammation of the white vessels.

When tubercles, in any organ, are few in number, they may pass to the state of permanent induration without danger to the patient; but when they are very numerous, they usually cause serious mischief. Dr.

Baron considers, that they are produced by hydatids.

The morbid condition, which gives rise to the development of tubercles, is termed *Tuberculo'sis*, *Morbus tuberculo'sus*, and *Dyscrasia Tuberculosa*.

TUBERCULA ARANTII, *Corpora Arantii*, *Corpuscula Arantii*, *Tubercles of Arantius* or *Aranzi*. Small eminences at the middle part of the semilunar valves of the pulmonary artery and aorta.

TUBER'ULAR, *Tuberculous*, *Tuberculo'sus*, *Tuberculate*, (F) *Tuberculeux*. That which relates to tubercles, or which is formed by tubercles.

TUBERCULAR PHTHISIS, is that produced by the development of tubercles in the lungs.

TUBERCULAR MATTER is a morbid production, contained in cysts, or loose in the tissue of organs. It varies, in its consistence, at the different periods of the tubercular affection; being, at first, compact, and yellowish, and, at times, calcareous; afterwards pultaceous, semifluid, and curdy.

TUBERCULATE SARCO'MA of ABERNETHY, *Emphy'ma Sarcoma tuberculosum*, *Tumor tuberculosus*. Tubercles, firm, round, and clustering; pea-sized or bean-sized; yellowish or brownish-red; when large disposed to ulcerate, and produce a painful malignant, and often fatal sore. Found chiefly in the lymphatic glands of the neck; often, simultaneously, in other glands and organs.

TUBER'CULUM CINEREUM, *Fasciola cinerea*. A mass of cineritious substance at the top of the calamus scriptorius, which is continuous below with the posterior horn of cineritious substance in the cord, and upon the sides with the corpus restiforme.

TUBEROS'ITY. Anatomists have given this name to eminences or processes, the surface of which is unequal and rough; and which give attachment to muscles or ligaments.

TUMOUR, from *tumeo*, 'I swell;' *Oncos*, *Oncosis*, *Epar'ma*, *Eparsis*, *Emphy'ma*, *Excrescentia* (Sauvages), *Ecphy'ma*, (F) *Tumeur*. Risings or prominences, of greater or less size, developed by a morbid cause in some part of the body. Cullen defines a tumour to be "a partial swelling without inflammation." Sauvages restricts the term to risings formed by the congestion of a fluid; and he calls *excrescences* those which have a fleshy or osseous consistence. Boyer defines it "any preternatural eminence developed in any part of the body." Good uses it synonymously with tubercle. Boyer's is the best general definition.

Tumours differ greatly from each other; according to their seat, the organs interested, their nature, &c.

The French use the term *Tumeur blanche*

synonymously with *White swelling*;—see Hydrarthrus. The term is, however, applied by the generality of surgeons, to swellings of the greater joints, without change of colour of the skin, and of a more or less firm consistence, which are dependent upon disease of the osseous or of the soft parts about the joint.

Scrophula is the most common cause of these affections.

An **ERECTILE TUMOUR** is a tumour, produced by the development of a soft, vascular tissue, which is susceptible of dilatation and depression. See *Erectile*.

A **VARICOSE TUMOUR**, *Tumor varicosus*, is a circumscribed, bluish tumour, formed by the dilatation and turgescence of the capillary vessels of a part.

TUNBRIDGE, MINERAL WATERS OF. A celebrated acidulous chalybeate in Kent, England, which is much frequented.

TUNIC, *Tunica*, *Chi'ton*, a coat. An envelope. A name given to different membranes, which envelope organs; such are—the tunics or coats of the eye, stomach, bladder, &c.

TUNICA JACOBI. A highly delicate serous membrane, interposed between the retina and the choroid coat, discovered by Dr. Jacob, of Dublin.

TURBINA'TED BONES, *Ossa turbinata*, *Ossa spongio'sa*, *Cornua*, *Conchæ na'rium*, *Conchylia*, *Bucci'na*, *Lam'inæ spongio'sæ nasi*, *Ossa tertia maxill'æ superio'ris*. Very thin, bony plates, rolled up in the form of horns, and situate in the nasal fossæ.

1. The *Os spongiosum superius* or *Cornet de Morgagni*:—the highest.

2. The *Os spongiosum me'dium*, the *middle cornu* of French anatomists,—the *ethmoid'al cornu* or *Os spongiosum superius*, *Os turbinatum*, of English anatomists,—*Os convolutum superius*, *Concha*, (F) *Cornet Moyen*. This bone projects, inwards and downwards, into the cavity of the nose, from the ethmoid cells at the side of the nasal lamella, and serves to enlarge the organ of smell. It is convex towards the septum, and concave outwards.

3. The *Os spongiosum vel turbinatum inferius*, *Concha inferior*, *Convoluta inferior ossa*, *Os sous-éthmoïdal* (Ch.), projects at the under part of the side of the nose, is convex towards the septum, and concave outwards. It is connected to the os maxillare, os palati, and os unguis.

4. The *Sphenoïd'al cornua*, (q. v.)

All the turbinated bones extend the sphere of smell.

TURGES'CENCE, *Turgescen'tia*, *Turgen'tia*, *Orgas'mus*, from *turges'cere*, 'to swell.' Superabundance of humours in a part. The term, *Turgescence of Bile*, was formerly used to denote the passage of that fluid into the stomach, and its discharge by vomiting.

A vital action of Turgescence—*Turgor vitalis*—or expansibility has been presumed to exist in certain organs as in the capillaries; but the generality of physiologists do not admit it.

TURGESCENTIA VESICULÆ FELL'Æ, *Ascites hep'ato-cys'ticus*, *Physco'nia bilio'sa*, *Hepatal'gia Petitia'na*. Distention of the gall-bladder by bile.

TURNING, *Versio*, from (F) *tourner*, 'to turn.' (F) *Version*. The operation of bringing down the feet, or some part of the lower extremity, when the presentation of the child is such, that it cannot be delivered by the natural efforts.

TURQUOISE. This stone has been long imagined to change its colour as the wearer is at the time in good or bad health:—a superstitious notion.

TURRE'IS. Ancient name of a stone, to which was attributed the property of preventing fractures, in cases of falls.—Johnson.

TUSSILA'GO, *T. Far'fara*, *Be'chium*, *Be'chion*, *Cal'ceum equi'num*, *Chamæleu'ce*, *Chamægei'ron*, *Fil'ius ante patrem*, *Farfarel'la*, *Calliomar'chus*, *Farfara*, *Tussila'go vulga'ris*, *Farfara Bechium*, *Un'gula caballi'na*, *Coltsfoot*, (F) *Pas d'ane*. Family, *Corymbifera*. *Sex. Syst.* Syngenesia Polygamia superflua. It is demulcent and expectorant, and has been used in coughs, and pulmonary affections in general; and in some cutaneous diseases.

TUSSILAGO PETASI'TES, *Butterbur*, *Petasites*, *Pestilent-wort*, *Petasites major*, *P. vulgaris*, *P. rubens*. The roots of this plant have been recommended as aperient and alexipharmic. They have a strong smell; and a bitterish, acrid taste, of the aromatic kind, but not agreeable.

TUSSIS, *Cough*, *Bex*, *Tusse'do*, *Bexis*, *Tussis nervo'sa*, *Catar'rhus*, *Pneusis Tussis*, (F) *Toux*. Violent, sonorous, frequent, and short expirations; by means of which the air, in passing rapidly through the bronchi and trachea, carries along with it the mucus of the parts, which forms the sputa, (q. v.) The cough is said to be *dry*, when unaccompanied by expectoration. It is symptomatic of many diseases. See *Bronchitis*.

TUTAM'INA, *Tuta'men*, 'a defence,' 'a protection.' Parts are so called which defend or protect others.

The **TUTAMINA CEREBRI** are the scalp, pericranium, bones of the skull, and the meninges.

The **TUTAMINA OCULI** are the eyebrows, eyelids, and lachrymal apparatus.

TUTIA, *Pom'pholyx*, *Cadmia*, *Alfasa*, *Mesera*, *Capnitis*, *Tuthia*, *Ox'ydum zinci impu'rum*. The oxyd of zinc that attaches itself to the chimneys of furnaces, in which ores of zinc are smelted. It is in the form of gray incrustations; and is sometimes used for

making an eye salve. It is prepared, for this purpose, by levigation.

TYCHICA, from τυχη, 'accident.' Fortuitous lesions or deformities. The 7th class of Good's Nosology.

TYMPANITES, *Emphyse'ma Abdominis*, *Hydrops Tympanites*, *Affectio tympanit'ica*, *Pneumato'sis Abdom'inis*, *Hydrops abdominis aëreus*, *Physocælia*, *Tympanosis*, *Physe'ma*, *Physe'sis*, *Hydrops siccus et flatulentus*, *Tympania Tympanias*, *Tympani'ta*, *Emphyse'ma Tympanites*, *Meteoris'mus*, *E. Tympanit'icum*, *Tym'pany*, (F) *Ballonnement*, from τυμπανον, 'a drum;' so called because the abdomen is distended with wind, and sounds like a drum, when struck. A swelling of the abdomen, caused by accumulation of air in the intestinal tube or in the peritoneum.

Tympanites may be idiopathic or symptomatic. The former depends upon exhalation of air from the inner surface of the intestine, or from the decomposition of substances contained in it: the latter is the result of some organic affection, and often depends upon obliteration of the digestive tube, which prevents the gas from escaping. Idiopathic tympanites may be more readily cured. The symptomatic is usually fatal. On dissection, in such cases, the stomach and intestines are found enormously distended; with strangulation or disorganization of some part of the mucous membrane of the intestine. Carninatives may be proper, when tympanites depends upon atony of the digestive organs; but, in cases of the symptomatic kind, they cannot be productive of advantage, and may do harm.

Sometimes the air is contained in the cavity of the peritoneum—constituting the *Tympani'tes abdomina'lis* of some:—the accumulation in the intestines being called *Tympani'tes intestina'lis*.

TYM'PANUM, τυμπανον, 'a drum.' The Drum or Barrel of the Ear. The names *Cavity of the Tympanum* or *Cavity of the Drum*, *Cav'itas Tym'pani*, *Antrum*, seu *Cavitas antro'sa Auris*, *Cavum Tym'pani*, (F) *Tympan*, *Cavité du tympan*, *Caisse du tambour*—have been given to a cavity, of an irregular shape, which constitutes the middle ear, and has been compared to a drum. It is situate in the pars petrosa of the temporal bone, between the meatus auditorius externus and the labyrinth. This cavity is lined by a mucous membrane; and communicates, externally, by means of the Eustachian tube, which is situate between it and the pharynx. The tympanum has six parietes. 1. An external, which is almost entirely formed of the *Membrane of the Drum*, *Membrana Tympani*, *Myrin'ga*, *Myrinx*, (F) *Membrane du Tympan*;—a species of thin, transparent, circular septum; convex within, and concave without, which closes the inner extremity of the meatus auditorius. 2. An internal,—on which are the *Fenes'tra ova'lis*, *Promontory*,

and *Fora'men rotun'dum*. 3. A superior. 4. An inferior, on which is the *glenoid fissure*. 5. A posterior, on which are—the opening of the mastoid cells, and the pyramid. 6. An anterior on which are—the *Proces'sus cochleator'mis* and the inner orifice of the *Eustachian tube*. The cavity of the tympanum is crossed by a series of four small bones, articulated with each other by diarthrosis, moved by certain muscles, and representing a kind of bent lever extending from the *membrana tympani* to the *fenestra ovalis*. They are called the *Bones of the Ear*, and are the malleus, incus, orbiculare, and stapes.

For the nervous plexus of the tympanum, see *Petrosal Ganglion*, and *Otic Ganglion*.

TYPE, *Typus*, from τυπος, 'a stamp,' itself from τυπτω, 'I strike.' The type is the order in which the symptoms of a disease exhibit themselves, and succeed each other. It may be continued, intermittent, or remittent.

TYPHLO-ENTERITIS, *Tuphlo-enteritis*, from τυφλος, *cæcus*, and *Enteritis*, 'inflammation of the intestines.' Inflammation of the cæcum, occasionally leading to perforative ulceration.

TY'PHOID, *Typhoi'des*, *Typho'des Lac'tica*, (F) *Typhique*, *Typhode*. Resembling typhus; as *Typhoid Fever*. Also, typhus, according to some.

TYPHOMA'NIA, τυφομανια, from τυφος, 'stupor,' and μανια, 'delirium.' *Delir'ium with stupor*, *Subdelir'ium*. The kind of delirium common in typhus.

TYPHUS, *Semipestis*, *Tuphus*, *Febris*, *Typhodes*, (F) *Fièvre adynamique*, *F. atar'ique*, *Typhus d'Europe*, from τυφος, 'stupor.' A fever characterized by small, weak, and unequal, but usually frequent pulse; with great prostration of strength, and much cerebral disturbance:—its duration being usually from a fortnight to three weeks or longer. It is continued fever, accompanied with great cerebral irritation and prostration. (See Fever.) By most writers, this disease has been divided into two varieties—the *Typhus mitior* and *Typhus gravior*.

1. TYPHUS MITIOR, *T. simplex*, *T. nervo'sus*, *T. comato'sus*, *Febris lenta nervosa*, *Blechor'yrus*, *F. pu'trida nervosa*, *F. hec'tica maligna nervosa*, *Nervous Fever*, *Neurop'ya*, (F) *Fièvre nerveuse*, is characterized by slight shiverings, heavy, vertiginous headache; great oppression, peculiar expression of anxiety, nausea, sighing, despondency, and coma or quiet delirium.

2. The TYPHUS GRAVIOR, *Typhus car'cerum*, *T. castren'sis*, *Febris pestilens maligna*, *Febris nau'tica pestilentialis*, *Febris petechia'lis*, *Typhus petechia'lis*, *Pulicula'ris morbus*, *Febris puncticula'ris*, *F. Sapro'pyra*, *F. car'cerum et nosocomio'rum*, *F. putrida*, *Sep'topyra*, *Putrid Fever*, *Jail Fever*, *Hospital Fever*, *Camp Fever*, *Spotted Fever*, *Malignant Fever*, (F) *Fièvre des Camps*, *F. nautique*,

F. d'Hôpital, F. nosocomiale, F. des Prisons, F. lenticulaire, is attended with rigors and heat, alternating;—with little or no perspiration; pulse, tense and hard, usually quick, but fluttering; pain over the forehead and vertex; delirium, succeeded by stupor;—signs of incipient putrescency; as petechiæ, vibices, hemorrhages, &c.

Typhus, under particular circumstances, seems to be communicable by contagion; but, if proper attention be paid to cleanliness and ventilation, there is not much danger of communication. The general principles of treatment, laid down under the head of Fever, are applicable here. All the varieties of continued fever resemble each other in the cardinal points: although they may differ in many of their characters. Ventilation and cleanliness; warm or cold ablution or sponging; keeping the bowels free; and attending to symptoms as they may rise, with the avoiding of all irritation of every kind, are the main indications. When symptoms of great prostration occur, the strength must be supported by wine; and tonics be exhibited, with the mineral acids. Of the tonics, the sulphate of quinine is perhaps as good as any, whilst it is free from the objection which applies to most others,—of being too bulky. In the whole management of this affection, however, the physician has to discriminate carefully between oppression and prostration. The former may require evacuants: the latter cannot.

Of late, certain observers have endeavoured to show, that there is an essential difference between typhoid fever, and typhus: that the former is an abdominal affection, and dependent upon, or connected with, an inflamed or ulcerated condition of the mucous follicles of the intestines; hence, it has received the names *Fièvre mesentérique, Exanthème intestinale, Dothi-enterite* (q. v.), *Ileodididite, Entérite folliculeuse, Gastro-enterite* with nervous affection of the brain, *Follicular gastro-enteritis, Typhus abdominalis, T. ganglionaris abdominalis*, and *Febris intestinalis ulcerosa*.

Accompanying this form of fever there is generally a typhoid eruption, consisting of rose-red papulæ, which appear mostly on the abdomen. They are distinct from true petechiæ, as they can be removed by pressure, and distinct also from sudamina, which are perhaps the universal accompaniments of sweating, and are consequently a variety of miliaria.

The common continued fever, or Synochus (q. v.) of Great Britain, and of this country, has been presumed to be this variety: but further observations are needed to establish the distinctions which have been attempted, and there is great reason to believe, that the abdominal affection is a complication, existing in certain cases and epidemics, and not in others.

TYREM'ESIS, from τυρος, 'cheese,' and εμεσις, 'vomiting,' *Tyrosis, Tyreu'sis*. Vomiting of curdy matter, in infants especially.

U

ULCER, *Ulcus, Helcos, Elco'sis, Elco'ma, Helco'ma, a Sore.* (F) *Ulcère*. A solution of continuity in the soft parts, of longer or shorter standing; accompanied by a purulent discharge, and kept up by some local disease or constitutional cause. Professor Richerand makes four great distinctions between the wound and ulcer. 1. A wound arises from the action of an extraneous body;—the cause of an ulcer is inherent in the economy. 2. A wound is always idiopathic;—an ulcer is always symptomatic. 3. A wound has, essentially a tendency to heal, because the action of its cause has been momentary;—an ulcer, on the contrary, has a tendency to enlarge, because its cause persists. 4. The treatment of a wound is purely surgical;—that of an ulcer is medical as well.

The immediate cause of an ulcer is an augmented action of the absorbents; and a specific action of the small vessels, which secrete pus from the blood.

Ulcers have been variously divided, according to their nature:—into *simple, sinuous, fistulous, fungous, gangrenous, scorbutic, syphilitic, cancerous, inveterate, scrophulous, phagedenic, virulent, cacoethic, sordid, carious, varicose*, &c.

The treatment consists in removing, by appropriate means, the internal or local cause, which keeps up the ulceration, and in exciting the vessels of the part, where necessary, by appropriate bandaging.

ULCERA'TION, *Ulcera'tio, Exulcera'tio*. A superficial ulcer. The formation of an ulcer,—*Exelco'sis*, ἐξελκασίς.

ULCEROUS, *Ulcero'sus, Helco'des, Helcoïdes*, ἐλκοδής, ἐλκοειδής. Having the character of an ulcer.

ULITIS, from ουλος, 'solid.' (Σαγξ ουλη, 'solid flesh:': hence ουλον, 'the gum.') Inflammation of the gums.

ULMUS, *U. campestris, Ptelea, Common Elm.* (F) *Orme*. Family, Amentaceæ. Sex.

Syst. Pentandria Digynia. The inner, rough bark of this tree is inodorous; and has a bitter, austere, and mucilaginous taste. It is considered tonic, alterative, and diuretic; and has been used, chiefly, in lepra and other cutaneous affections.

ULMUS ALA'TA, *Lynn Wahoo*. The bark of the root has been used successfully as a cataplasm in phlegmonous inflammation by Dr. Luckie, of Clinton, Mississippi.

The ULMUS AMERICA'NA, *Rough-leaved Elm, Red Elm, Slippery Elm*. The inner bark is highly mucilaginous, and is used in coughs, diarrhœas, and dysenteries. Also, as a poultice for tumours; lacerated and contused wounds, &c.

ULNA, *O'lenē, Fo'cile inferius seu majus, Canna Brachii, Os cu'biti inferius, Os procubita'le, Cu'bitus, Cubit, Arun'do bra'chii major*; the *Elbow*, (q. v.) Anatomists have given this name to the bone of the forearm, which forms the prominence of the elbow, during the flexion of that joint. It is the longer and larger of the two bones, and is inserted at the inner side. Its upper and larger extremity has, behind, a considerable process, called *olecranon*; and, before, a smaller one, called *coronoid*. These two eminences are separated from each other by the greater *sigmoid* or *semilunar fossa*, which receives the articular trochlea of the humerus. The tubercle of the ulna is a small, rough spot, under the root of the coronoid process, for the insertion of the *Brachialis internus*. On the outside of this extremity of the bone, is the *lesser sigmoid cavity*. It is articulated with the head of the radius. The inferior extremity of the cubitus, which is much smaller than the superior, and articulated with the radius, has a surface, that corresponds to the fibro-cartilage which separates it from the os cuneiforme; and a pointed process, called *styloid*. The body of the ulna is manifestly triangular. It is articulated with the os humeri and radius, and, mediately, with the os cuneiforme. It is developed by three points of ossification.

ULON'CUS, from *ουλον*, the gum, and *ογκος*, 'a tumour.' Swelling of the gums.

ULORRHA'GIA, *Stomatorrha'gia gingivaru'm*, from *ουλον*, 'the gum,' and *εργυνμι*, 'I break forth.' Bleeding from the gums.

UL'TIMI-STERNA. Professor Béclard has given this appellation to the 6th or last bony portion of the sternum. He calls it also *Ensi-sternal*.

ULTIMUM MO'RIENS. A term given to the part of the economy which dies last.

UMBIL'ICAL, *Umbilica'lis*, from *umbil'icus*, 'the navel.' That which belongs or relates to the navel.

The UMBILICAL REGION, (F) *Région ombilicale*, is the middle region of the abdomen, in which the umbilicus is placed. The sides of this are called the *flanks* or *lumbar regions*. In the umbilical region, are the omentum majus; the inferior extremity of the duodenum;

the jejunum; and the greater part of the mesentery; the aorta; vena cava; the trunks of the renal arteries and veins; the origin of the spermatic arteries, &c.

The UMBILICAL RING, *An'nulus umbilica'lis*, (F) *Anneau ombilical*, is a fibrous ring which surrounds the aperture of the umbilicus, and through which umbilical hernia occurs in children.

The UMBILICAL VESSELS, (F) *Vaisseaux ombilicaux*, include the two arteries, and umbilical vein. The umbilical vein arises from the placenta, and terminates at the fissure on the inferior surface of the liver of the fœtus; to which it conveys the blood, necessary for its nutrition.

The UMBILICAL ARTERIES, which exist only in the fœtus, seem, as it were, continuations of the primitive iliaes. They clear the umbilical ring, and proceed to the placenta, to which they carry the residuum of the blood sent to the fœtus by the umbilical vein. As soon as respiration is established, the blood ceases to pass by the umbilical arteries, which become obliterated, as well as the vein, and are transformed into two very strong ligamentous cords;—the vein forming the *Ligamentum rotundum* of the liver.

UMBILI'CUS, *Umbo, Om'phalos, Umbil'icum, Radix ventris, Mesompha'lium, Protme'sis* (navel of a new-born child); the *navel*, from *umbo*, 'the button or prominence in the midst of a buckler,' (F) *Ombilic, Nombril*. A round cicatrix, about the median line of the abdomen. It is in the situation of an aperture, which, in the fœtus, affords passage to the vessels of the umbilical cord.

UMBILICUS MARINUS, *Cotyle'don marina, Andros'acē, Acetab'ulum marinum, Androsacē Matthi'oli, Fungus petræ'us marinus*. A submarine production, found on rocks and the shells of fishes, in the south of France. It is reputed to be anthelmintic and diuretic.

UN'CIA, *ογγιζ*. A weight, consisting of 8 drachms, or 24 scruples. See *Weights and Measures*.

UN'CIFORM, *Uncifor'mis*, from *uncus*, 'a hook.' That which has the shape of a hook.

Os UNCIFORME, *Os hama'tum, Os uncina'tum*, (F) *Os crochu*. The fourth bone of the second row of the carpus. Its shape is very irregular. Inwards and forwards, it has a considerable eminence, which is curved upon itself, and gives attachment to the annular ligament of the carpus. It is articulated with the os semilunare, os magnum, os cuneiforme, and the 4th and 5th metacarpal bones. It is developed from a single point of ossification.

UNDIM'IA. A name given, by Paracelsus, to a tumour, filled with a gelatinous matter, like the white of egg.

UNGUENTA'RIOUS. *Myropæ'us, Myrep'sus, Myropo'les, Pigmenta'rius*. One who sells ointments. A perfumer.

UNGUEN'TUM, *Unguen, Myron*, (F) *Ointment*, from *un'gere*, 'to anoint.' Ointments are topical applications, of a consistence more or less analogous to that of lard. They are used, chiefly, as local applications to ulcers and wounds; but are sometimes rubbed upon a part, in cutaneous affections; and, especially, where it is desired that the constituents of the ointment should be absorbed. Ointments are of less consistence than cerates, although the terms are often used indiscriminately.

UNGUENTUM DE ALTHÆA, *Marshmal'low Ointment*, *U. de Terebin'thina et cera*, *Cera'tum de Althæa*, *Emplas'trum mucilagino'sum*, *E. emol'liens*, *E. cit'rinum*, *E. flavum*, *E. de Althæa*, *Unguentum flavum*, *U. cit'rinum*, *U. resi'næ pini sylves'tris compos'itum* seu *resumpti'vum* seu *leniti'vum*, (F) *Onguent de guimaure*, *O. d'althæa*. (*Olei de mucilaginis*, 1000 p., *cera flavæ*, 250 p., *resinæ terebinthin.*, aa, 125 p. Liquefy; strain; and stir till cold. *Ph. P.*) Common Olive oil might be substituted for the Oil of Mucilages.

UNGUENTUM AC'IDI NITRO'SI, *Ointment of Nitrous Acid*, *Poma'tum vel Unguen'tum Nit'ricum vel Oxygenat'um*, (F) *Pommade oxygénée*, *Graisse oxygénée*, *Pommade d'Alyon*. (*Adip. suillæ*, ℥j, *acid. nitros.* 3vj. Melt the fat and rub in the acid, gradually, till cold. *Ph. E.*) Stimulant. Used in itch and other cutaneous eruptions, and in foul ulcers.

UNGUENTUM ANTIMO'NI TARTARIZA'TI, *Ointment of tartarized antimony*. (*Antimon. tartarizat* 3j, *adipis suillæ* 3vij.) If a drachm of this ointment be rubbed upon any part, night and morning, it will excite, in a few days, a painful pustular eruption. Hence, it is employed as a counter-irritant. This preparation is also called *Ung. Tar'tari stibiati* seu *emet'ici*, *Ung. e Tartaro stibiato*, *Adeps Tartaræ stibii medica'tus*, *Ung. Tartratis Potassæ stibiati*, *Pommade d'Autenrieth*, *Pommade stibiée*.

UNGUEN'TUM CERÆ (*albæ vel flavæ*) *Wax Ointment*. *Unguentum simplex*, *Linimen'tum simplex*, *Oil and Bees Wax*, (F) *Onguent de cire*. (*Ceræ* ℥j, *adipis suillæ* ℥iv. *Ph. D.* or—*cera* 3ij, *ol. oliv.* 3v.) Emollient. A mild dressing. Also, the basis of most of the compound ointments.

UNGUENTUM CETA'CEI, *Unguentum Sper'matis Ceti*, *U. album*, *Linimen'tum album*, *Spermace'ti ointment*, (F) *Onguent de blanc de baleine*. (*Cetacei* 3vj, *cera albæ* 3ij, *ol. oliv.* 3iij. *Ph. L.*) The ordinary dressing for blisters and excoriations.

UNGUENTUM DIGESTI'VUM SIMPLEX, *U. Terebin'thinæ et ovo'rum vitel'li*, *Simple digestive ointment*, (F) *Onguent digestif simple*. (*Terebinthin. pur.* 64 p. *Vitell. ovor.* No. 2, vel 32 p. Mix, for a long time, in a glass mortar, and add, gradually, enough of the Oil of the Hypericum (*Millepertuis*) to make

a soft ointment. *Ph. P.*) Detergent. It may be rendered more so by the addition of a little of the *Acetate of copper*.

UNGUENTUM EL'EMI COMPOS'ITUM, *Linimen'tum Arcæ'i*, *Unguentum e gummi elemi*, *Ung. de Terebin'thina et Adip'ibus*, *U. elemi*, *Ointment of Elemi*, (F) *Baume d'Arcæus*. (*Elemi* ℥j, *terebinthinæ vulgaris* 3x. *sevi præparati* ℥ij, *olivæ olei* 3ij. Melt the elemi with the suet; remove it from the fire; and mix in the turpentine and oil. Strain the mixture through a linen cloth. *Ph. L.*) Stimulant and digestive. To keep open issues, &c.

UNGUENTUM EPISPAS'TICUM DE DAPHNE GNIDIO, *Adeps Cor'ticæ daphnes gnidii medica'tus*, (F) *Pommade de Garou*. (*Adip. præpar.* 320 p., *cera*, 32 p., *cort. daphn. gnid.* 128 p. Melt the fat and wax; and add the bark softened in water. Boil until the moisture is evaporated: then pass through cloth. *Ph. P.*) To keep open blisters, issues, &c.

UNGUEN'TUM HYDRAR'GYRI, *U. cæru'leum*, *U. Neapolita'num*. *Blue ointment*, *Cera'tum mercuriale*, *Adeps Hydrar'gyro medica'tus*, *Mercurial Ointment*, *Uction*, (F) *Onguent mercuriel ou Napolitain*.

The Strong Mercurial Ointment, *Unguentum Hydrargyri fortius* of the London Pharmacopœia is thus made—*Hydrarg. purif.* ℥ij, *adipis præparat.* 3xxij, *sevi præp.* 3j. Rub till the globules entirely disappear.

The Milder Mercurial Ointment,—*Unguentum Hydrargyri Mitius*,—is made by adding, to one pound of the strong, two pounds of lard.

Mercurial ointment is antisymphilitic and discutient. It is rubbed on the inside of the thigh, in venereal affections; especially in those cases where mercury, given internally, runs off by the bowels. The stronger ointment is used for this purpose. The weaker is employed as a dressing, or as an application to cutaneous eruptions.

UNGUENTUM HYDRARGYRI NITRA'TIS, *U. H. nitrati*, *U. supernitra'tis hydrargyri*, *Ointment of Nitrate of Mercury*, *Citrine Ointment*, *Bal'samum mercuriale*, *Ung. hydrar'gyri compos'itum*, *U. mercuriale citrinum*, *Adeps nitrat'æ hydrargyri medica'tus*, *Unguentum citrinum ad scabiem*, (F) *Onguent de nitrate de mercure*, *O. citrin contre la gale*. (*Hydrarg. purif.* 3j, *acid nitric. f.* 3xj, *adipis præp.* 3vj, *ol. olivæ*, 3iv. Dissolve the mercury in the acid; and, while hot, add the fat and melted lard. *Ph. L. & E.*)

A milder ointment.—*Ung. Nitratis Hydrargyri mitius*—is made with triple the quantity of oil and lard. It is stimulant and detergent, and is much used as an application to herpes, porrigo, and cutaneous eruptions. The weaker ointment is, sometimes, used in ophthalmia tarsi, &c.

UNGUENTUM HYDRARGYRI NIT'RICO-OXYDI, *Ung. subnitrat'is hydrargyri*, *Ung. Oxydi*

Hydrargyri rubri, Ointment of Nitric Oxyd of Mercury, *Balsamum ophthalmicum rubrum*, *Unguentum deutoxydi hydrarg. nitrati*, *Red Precipitate Ointment*, *Golden Ointment*, *Singleton's Eye Salve*, *U. Hydrargyri rubri*, *U. ex Hydrargyro oxydato rubro*, *U. mercurii rubrum*, *U. ophthalmicum rubrum*, *U. subnitrat'is hydrargyrici*. (*Hydrarg. nitrico-oxyd.* 3 j, *cerae albæ* 3 ij, *adipis præparatæ* 3 vj. Add the oxyd, reduced to a fine powder, to the melted fat and oil. *Ph. L.*) Stimulant and escharotic. Applied to foul ulcers, to inflammations of the tarsi, &c. &c.

UNGUENTUM HYDRARGYRI PRÆCIPITATI ALBI, *U. submuria'tis hydrargyri ammonia'ti*, *Unguentum ad scabiem Zelleri*, *U. mercuriale album*, *U. mundificans Zelleri*, Ointment of white precipitate, *Ung. e mercurio præcipitato*, *Ung. calcis hydrargyri albæ*. (*Hyd. præcip. alb.* 3 j, *adipis suillæ* 3 iss. Melt the fat, and add the precipitate. *Ph. L.*) Detergent. Used in cutaneous eruptions, to destroy vermin, &c.

UNGUENTUM LAURINUM, *O'leum laurinum*, *Adeps lauro-medica'tus*, *Bay Ointment*, (F) *Onguent ou huile de laurier*. (*Fol. lauri*, 500 p., *adip. suillæ*, 1000 p. Bruise in a marble mortar; evaporate all humidity by boiling; and add *Bay berries*, in powder, 500 p. Digest and pass through linen. *Ph. P.*) Reputed to be corroborant and nervine. It is simply emollient.

UNGUENTUM LYTTE, *Ung. canthar'idis*, *U. vesicato'rium*, *U. irri'tans*, *U. ad vesica'ta*, *Blistering Salve*, *Ung. infu'si mel'oës vesicato'rii*, Ointment of Spanish Flies, Ointment of Infusion of Spanish Flies, *Unguentum epispas'ticum mi'tius*, *Milder blis'tering Ointment*. (*Meloës vesicat.*, *resinæ pini*, *cerae flavæ*, sing. p. j, *resinæ liquidæ pini laricis*, *adipis suillæ*, sing. p. ij, *aquæ bull.* p. iv. Macerate the flies in the water for a night; strain strongly; boil the fluid with the lard till the humidity is consumed. Add the resin and wax; and, when these are melted, take the ointment from the fire and add the turpentine. *Ph. L.*) It is stimulant and epispastic; and is chiefly used for keeping up the discharge from a blistered surface.

UNGUENTUM LYTTE MEDICA'TUM, *Adeps cantharid'ibus medica'tus*, *Poma'tum seu unguentum epispas'ticum vir'idè stimulans ac'ribus*, *Green blis'tering Ointment*, (F) *Pommade épispastique verte*. (*Pomati vel unguenti cantharid.* 64 p., *unguent. populei* 168 p., *cerae albæ*, 256 p., *cupri acetat.*, ext. opii, aa 24 p. Melt the ung. populeum, and wax, and add, as they cool, the oxyd of copper, cantharides, and opium. *Ph. P.*) Use, same as the last.

UNGUENTUM LYTTE MEDICA'TUM ALIUD, *Adeps cantharid'ibus medica'tus alius*, *Poma'tum epispas'ticum flavum et mitius*, *Yellow Blistering Ointment*, (F) *Pommade épispastique jaune*. (*Pulv. cantharid.* 120 p., *adip. præp.* 1680 p., *aquæ* 250 p. Melt the lard;

mix in the cantharides, and add the water at the same time; place the whole on a gentle fire; stir, continually, for two hours, and add a little water to replace that which has been evaporated. Pass through linen and strain. Keep it in a water bath, and add powdered turmeric, 8 p. Let it cool till the superfluous liquid separates; pour off and add yellow wax, 250 p., Oil of Lemon, 8 p. *Ph. P.* A complex preparation.) Use, same as the last.

An ointment, not very philosophically combined, was used by Dr. Physick, which is known by the name of "*Dr. Physick's Issue Ointment*." It is made by boiling half an ounce of powdered cantharides in two ounces of rose-water, and evaporating until one half the fluid is driven off, having previously added 15 grains of tartar emetic. The decoction is to be strained, and three ounces of olive oil, an ounce and a half of white wax, and one ounce of spermaceti added to it, and the mixture then boiled till all the water is evaporated.

UNGUENTUM MURIA'TIS HYDRARGYRI OXYGENA'TO MEDICA'TUM, *Adeps muria'te hydrargyri oxygena'to medica'tus*, *Cyrillo's Ointment*, (F) *Pommade de Cyrillo*. (*Hydrarg. oxymur.* 4 p., *adipis suillæ præp.* 32 p. *Ph. P.*) Antivenereal and alterative. Used in friction, 3 ss at a time.

UNGUENTUM OPHTHALMICUM, *Adeps ox'ido hydrargyri rubro et plumbi aceta'te medica'tus*, *Regent's Pommade ophthalmique*, (F) *Pommade ophthalmique*. (*Butyr. recent. aq. rosar. lavat.* 4½ p., *camphor.*, *oxyd. hydrarg. rubr.*, *acetatis plumbi* aa 0.25 p. Mix intimately. *Ph. P.*) In chronic inflammation of the conjunctiva or tarsi.

UNGUENTUM OX'IDI HYDRARGYRI CINE'REI, *Adeps seu unguentum ex hydrargyro mitius dictum cinereum*, Ointment of gray oxide of mercury, (F) *Onguent gris*. (*Oxyd. hydrarg. ciner.* p. j, *adipis suillæ*, p. iij. *Ph. E.*) Properties like the mercurial ointment. It is not much used.

UNGUENTUM OX'IDI PLUMBI ALBI, *Ung. cerus'sæ*, *Ung. album*, *Ung. subaceta'tis plumbi*, Ointment of white oxide of lead, *White ointment*. (*Ung. simplicis*, p. v. *oxyd. plumb. alb.* p. j. *Ph. E. & P.*) Cooling and desiccative. Applied to excoriated and burnt surfaces.

UNGUENTUM OX'IDI ZINCI IMPU'RI, *Unguentum tu'tiæ*, *Ung. ophthalmicum*, *Eye Salve*, *Adeps ox'ido zinci medica'tus*, *Tutty ointment*, Ointment of impure oxide of zinc. (*Linim. simpl.* p. v, *oxyd. zinc. impur. præp.*, p. j. *Ph. E.*) Generally used in ophthalmia tarsi and atonic ophthalmia.

UNGUENTUM PICIS LIQ'UIDÆ, *Ung. Picis*, *Ung. e Picē*, *Tar Ointment*. (*Picis liquid.*, *sevi præpar.*, sing. ʒj. Melt and strain through linen. *Ph. L. & D.*) Stimulant and detergent. Used in tinea capitis, and other cutaneous eruptions.

UNGUENTUM PLUMBI SUBCARBONA'TIS, *Ce-*

ra'tum de Cerus'sa, Ung. album, U. album simplex, U. Carbona'tis Plumbici, U. Cerus'sæ, U. Ox'ydi Plumbi Carbona'ti. (F) Onguent blanc de Rhazes, O. de Cerusse, O. de Tornamira. (Ceruss. pulv. p. 1, adip. suilla, p. 1½. Mix. Ph. P.) Chiefly used as a dressing for burns.

UNGUENTUM PLUMBI SUPERACETA'TIS, U. aceta'tis plumbi, Ointment of Sugar of Lead, Unguentum Saturni'num, U. cerus'sæ aceta'tæ, Bal'samum universa'lē. (Olive oil, ℥ ss, white wax, 3 iss, superacetate of lead, 3 ij.) Cooling, desiccative. Called, also, Balsamum Saturni'num, Buty'rum Satur'ni, Linimen'tum plumba'tum, Poma'tum satur'ni, Ung. triphar'macum.

UNGUENTUM POPULEUM, Adeps papav'ere, hyoscy'amo, et belladon'nâ medica'tus. (Fresh buds of the *Populus nigra*, 500 p., macerated in adeps suilla præp. melted, 1500 p. for 24 hours. Preserve this. Again, take black poppy leaves, belladonna, hyoscyamus, and black nightshade, aa 128 p.; bruise in a mortar with the former preparation; boil until all the humidity is evaporated, and strain. Ph. P.) Anodyne. Applied to local inflammations, hemorrhoids, sore nipples, cancer, &c. Green elder ointment is often sold for this.

UNGUENTUM POTAS'SÆ HYDRIODA'TIS, Ointment of Hydri'odate of Potass. (Hydriodate of potass 3 ss, hog's lard 3 jss.) Half a drachm of this ointment is rubbed on scrophulous glands, goitre, &c.

UNGUENTUM RESI'NÆ NIGRÆ, Ung. resinæ nigrum, Ung. basil'icon nigrum, Ung. tetrapharm'acum, Black Basilicon, Black resin ointment, Unguentum picis nigræ. (Resin. nigr., ceræ flavæ, resinæ flav. aa, 3 ix, olei olivæ ℥ j. Ph. L.) Uses, the same as the Ceratum resinæ or Yellow basilicon, (q. v.)

UNGUENTUM SAMBU'CI, Ung. sambu'cinum, Green ointment, Unguentum nervinum, Elder ointment, (F) Onguent de sureau. (Sambuci flor. ℥ ij, adipis præp. ℥ ij. Boil. Ph. L. & D.) Emollient.

UNGUENTUM SUBACETA'TIS CUPRI, Ung. deter'gens, Ung. basil'icum vir'idē, Ung. æru'ginis, Balsamum vir'idē, Ointment of subacetate of copper, Ver'digris ointment. (Ung. resinæ, p. xv, subacet. cupri, p. j. Ph. E.) Detergent and escharotic.

UNGUENTUM SUL'PHURIS, Ung. e Sulphure, Sulphur ointment. (Sulph. sublim. 3 iij, adip. præp. ℥ ss. Ph. L. E. D.) Used chiefly in itch and some herpetic affections.

UNGUENTUM SULPHURIS COMPOS'ITUM, Compound Sulphur Ointment, Itch Ointment, Unguentum Antipsor'icum, Jackson's Itch Ointment, Pommade antipsorique de Jasser. (Sulph. sublim. ℥ ss, veratri rad. contus. 3 ij, potassæ nitrat. 3 j, saponis mollis. ℥ ss, adipis præpar. ℥ iss. Ph. L.) Use, the same as the last; but it is more stimulating.

UNGUENTUM SULPHURA'TUM AD SCABIEM, Adeps sul'furē et ammo'niæ muriatē medica'tus. (Adipis, 120 p., sulph. lot. 60 p., am-

moniæ muriat., aluminæ sulphat. aa, 4 p., fiat unguentum. Ph. P.) Antipsoric.

BAILEY'S ITCH OINTMENT is composed of olive oil, lard, nitre, alum, sulphate of zinc, and cinnabar, scented with oil of aniseed, oil of origanum, and oil of spike, and coloured with alkanet root.

UNGUENTUM SULPHURA'TUM ALCALI'NUM AD SCABIEM, Adeps sul'furē et carbona'tē Potas'sæ medica'tus, Hel'merick's Al'caline Sulphura'ted Itch Ointment. (Adip. præp. 800 p., sulphur. lot. 200 p., carbonat. potass. pur. 100 p., fiat. ung. Ph. P.) Use, same as the last.

Bateman's Itch Ointment resembles this. It is coloured with cinnabar and scented with essence of bergamot.

UNGUENTUM VERA'TRI, Unguentum helleb'ori albi, White hellebore ointment. (Veratr. rad. cont. 3 ij, adipis præp. 3 viij, olei limon. g^{tt}. xx. Ph. L.) Used in cases of itch, where sulphur is objected to. It is not equally efficacious.

The principal ingredients in the EDINBURGH OINTMENT are white hellebore and muriate of ammonia.

UNGUENTUM ZINCI, Ung. ox'idi zinci, Zinc Ointment. (Zinci oxyd. 3 j, adipis præparat. 3 vj. Ph. L.) Use, the same as that of the Unguentum tutiæ.

UNGUIS Os, Os Lachryma'lē. A small, quadrilateral, very thin, and semi-transparent bone, which has been compared to a human nail, and is situate at the interior and inner part of the orbit. It aids in the formation of the lachrymal gutter and the nasal duct. It is articulated with the frontal, superior maxillary, ethmoid, and the inferior spongy bones, and is developed by a single punctum ossificationis.

UNITING BANDAGE, (F) Bandage unissant. A bandage for bringing the edges of a wound into approximation. The arrangement of such a bandage differs according as the wound is transverse or longitudinal.

UPAS. A word, used in the Archipelagoes of Molucca and Sunda, and signifying Vegetable Poison, Ipo, Bohon Upas, Boa Upas, and Pohon Antiar, Boon Upas. A substance, used by the natives of those places for poisoning their arrows. The smallest quantity is capable of destroying the largest animals. The tree, which produces it, is said to be the Antia'ris Toxica'ria. Another species of upas—the *U. Tieuté* is the produce of a *Strychnos*. Many idle stories are told regarding the upas; most of which are fabulous.

URACHUS, U'racus, Urinac'ulum, from *ουρον*, 'urine,' and *εχα*, 'I contain.' (F) Ouraque. The urachus, in certain animals, is a long membranous canal, which arises from the bladder, makes its exit from the abdomen by the umbilicus, and terminates in the pouch called allantois. According to Sabatier, this is the arrangement of the urachus in the human foetus; but Bichat and other anatomists consider, that when the canal exists in

the human foetus it is a malformation. They consider it as a kind of suspensory ligament of the bladder, extending from the top of that organ to the umbilicus; and, at the umbilicus, confounded with the abdominal aponeuroses.

URANISCOPLASTICE, from *ουρανισκος*, 'the roof of the mouth,' and *πλαστικός*, 'forming.' The operation of engrafting in cases of deficiencies of the soft palate.

URATE, *Uras*; from *ουρον*, 'urine.' A generic name for salts, formed by the combination of uric acid with different bases.

URATE OF SODA is found in arthritic calculi:—*Urate of Am'monia* in some urinary calculi.

UREA, *Uren*, *Uren'ium*, *Uricum*, (F) *Urée*. Same etymon. A white, pearly, brilliant substance, in transparent plates, inodorous and of a cool taste; very soluble in water; deliquescent, and soluble in alcohol. It exists, in great quantity, in the urine; and is an essential part of it. It has been used as a diuretic. Dose, gr. xv to ʒj.

UREC'CHYSIS, *Urechysis*, from *ουρον*, 'urine,' and *εκχυσις*, 'effusion.' Effusion of urine into the cellular membrane.

URE'SIS, *Uri'asis*, from *ουρειν*, 'to urine.' The act of passing the urine.

URE'TER. Same etymon. *Urana*, *Vena alba renum*, *Canalis ner'veus fistulosus renum*, *Ductus seu Ductor Urinae*, *Vas urinarium*, (F) *Uretère*. A long, excretory canal—membranous and cylindrical—which conveys the urine from the kidney to the bladder. It extends, obliquely, between the pelvis of the kidney, with which it is continuous, and the *Bas fond* of the bladder, into which it opens. It enters at the posterior and inferior part, for some distance, between the coats, and opens into the cavity of the bladder, at the posterior angle of the *Trigone vésical*.

The ureter is formed of an exterior, white, opaque, and fibrous membrane; and of an inner which is mucous.

URETERALG'IA, from *ουρητηρ*, 'the ureter,' and *αλγος*, 'pain.' Pain in the course of the ureter.

URETERI'TIS. Inflammation of the ureter. Generally, caused by calculus.

URETER'ICUS. An epithet to ischury, &c. arising from an affection of the ureter.

URETEROLITH'ICUS, from *ουρητηρ*, 'the ureter,' and *λιθος*, 'a stone.' An epithet applied to ischury or other affection caused by a stone in the ureter.

URETERO-PHLEGMAT'ICUS, from *ουρητηρ*, 'the ureter,' and *φλεγμα*, 'phlegm or mucus.' Any affection, caused by mucus accumulated in the ureter.

URETERO-PY'ICUS, from *ουρητηρ*, 'the ureter,' and *πυον*, 'pus.' An epithet applied to affections, caused by the presence of pus in the ureter.

URETERO-STOMAT'ICUS, from *ουρητηρ*, 'the ureter,' and *στομα*, 'orifice.' That which is dependent upon obstruction of the orifice of the ureter.

URETERO-THROMBOÏ'DES, from *ουρητηρ*, 'the ureter,' *θρομβος*, 'grumous blood,' and *ειδος*, 'resemblance.' Ischury, from grumous blood in the ureter.

URE'THRA, *ουρηθρα*, *Canalis seu Meatus seu Ductus urinarius*, *Urias*, *Ure'tra*, *Fistula urinaria*, *Iter urinarium*; (F) *Urèthre*, *Urètre*, from *ουρον*, 'urine.' The excretory duct for the urine, in both sexes; and for the sperm, in man. In the latter, it is 10 or 12 inches long; and extends from the neck of the bladder to the extremity of the penis, in which its external aperture is situate. In the male urethra, three portions are distinguished:—1. A *Prostatic portion*, near the bladder, about an inch and a quarter in length, which traverses the prostate gland:—2. A *membranous portion*, from 8 to 10 lines long, which is separated from the rectum by the cellular tissue only:—3. A *spongy portion*, which expands, anteriorly, to form the glans, and which commences at the *bulb of the urethra*. Before opening externally, the canal has a dilatation, called the *Fossa* or *Fossicula navicularis*. On the interior of the urethra two white lines are perceptible—the one above, the other below. The latter commences at the *verumontanum*; and at the surface of this, the *ejaculatory ducts* and *prostatic ducts* open. The urethra is lined, in its whole extent, by a mucous membrane; on which are seen, particularly at the bulb, the orifices of a number of follicular ducts, called *Sinuses of Morgagni*.

The arteries of the urethra are numerous, and proceed from the internal pudic,—the largest branches entering the bulb. The veins follow the course of the arteries. The lymphatics pass into the inguinal and hypogastric plexuses. The nerves come from the pudic and gluteal.

In the *female*, the urethra is only about an inch long. It is wider than in man and susceptible of great dilatation. It is very wide at its commencement; and descends obliquely forwards, to terminate at the top of the external aperture of the vagina, by the *meatus urinarius*. In its course, it is slightly curved, the concavity being forwards.

URETHROPHRAX'IS, from *ουρηθρα*, 'the urethra,' and *φρασσα*, 'I obstruct.' Obstruction of the urethra.

URETHRORRHA'GIA, from *ουρηθρα*, 'the urethra,' and *εργνυμι*, 'I break out.' Hemorrhage from the urethra.—Frank.

URETHRORRHŒ'A, from *ουρηθρα*, 'the urethra,' and *εω*, 'I flow.' A discharge from the urethra.

URE'THROTOME, from *ουρηθρα*, 'the urethra,' and *τεμνω*, 'I cut.' An instrument, so called by Le Cat, with which he divided

the skin, and laid open the urethra, in the operation for lithotomy.

URETHRYMENODES, from *ουρηθρα*, 'the urethra,' and *μνην*, 'a membrane.' That which is caused by a membrane, formed in the urethra.

URIC ACID, *Acidum Uricum*, *Lithic Acid*. An acid, which exists in human urine, and which constitutes the greater part of urinary calculi. It is often deposited from the urine, in health. See *Calculi, Urinary*.

URINAL, *Urinatōrium*, *Chernibium*, *Uranē*, *Ure'tris*, *Urinac'ulum*, *Urodochi'um*. A name, given, 1. To certain vessels, used to pass the urine into. 2. To reservoirs, of different shapes and character, which are adapted to the penis, in cases of incontinence of urine, and which are intended to receive the urine as it flows off.

URINARY, *Urina'rius*, *Uricus*, *Uret'icus*. That which relates to the urine.

The **URINARY PASSAGES**, (F) *Voies urinaires*. The aggregate of canals and cavities, intended to contain the urine and convey it externally. These *ways* are composed of excretory ducts, which form the tubular portion of the kidney; of calices; pelvis; ureters; bladder; and urethra.

URINARY CALCULI. The calculi, which form in the urinary passages. See *Calculi, Urinary*.

The **URINARY BLADDER**, *Vesi'ca Urina'ria*, *Cystis*, (F) *Vessie*. A musculo-membranous reservoir, intended for the reception of the urine, until the accumulation of a certain quantity solicits its excretion. The bladder is situate in the hypogastric region, between the rectum and pubis, in man; and between the pubis and vagina, in the female. Its upper region is not covered, except by the peritoneum posteriorly. From its centre arises the *urachus*. Its lower region is bounded, anteriorly, by the prostate, in man; and rests on the vesiculæ seminales and rectum. In the female, it corresponds to the vagina. The lowest portion of this region bears the name *Bas-fond*. The anterior surface of the organ is not covered by peritoneum. It is attached to the symphysis pubis by a fibro-cellular expansion called the *anterior ligament*. The posterior ligaments are duplicatures of the peritoneum on its posterior surface, which extend from this surface to the rectum, in the male, and to the uterus, in the female. The bladder is composed of a serous membrane, formed by the peritoneum;—of a muscular membrane; of a somewhat thick layer of cellular tissue; and is lined, on its inner surface by a mucous membrane, which is, sometimes, raised up, here and there, in long prominences or *columns* by the muscular fibres beneath. To this condition, the French anatomists give the term—*vessie à colonnes*. In the *Bas-fond* the two ureters open, and the urethra commences; and the triangular space, which the apertures of these three canals leave between

them, is called, by the French, the *Trigōne vésical* or *Vesical Triangle*, *Trigo'nus Lieu-tau'di*. In the orifice of the urethra, which is also called the neck of the bladder, there is, at its lower part, a more or less prominent tubercle, which is formed by the anterior angle of the *Trigone vésical*, and is called the *Vesical uvula*, (F) *Luette vésicale*.

The arteries of the bladder proceed from the hypogastric, umbilical, sciatic, middle hemorrhoidal, and internal pudic. Its veins, which are more numerous than the arteries, open into the hypogastric venous plexus. Its nerves emanate from the sciatic and hypogastric plexuses; and its lymphatic vessels pass into the hypogastric ganglia.

URINE, *Uri'na*, *Uron*, *Ure'ma*, *Lotium*, *Lot*, *Lapis au'reus*. An excrementitial fluid; secreted by the cortical part of the kidneys; filtered through their tubular portion; poured *guttatim* from the apices of the tubular papillæ into the pelvis of the kidney; and transmitted by it to the ureters; which convey it slowly, but in a continuous manner, into the bladder, where it remains deposited, until its accumulation excites a desire to void it. The excretion of the fluid takes place through the urethra; and is caused by the action of the abdominal muscles and diaphragm and the contraction of its own fibrous coat.

Urine is transparent; of a citron-yellow colour: of a peculiar odour, and of an acid, saline, and slightly bitter taste. That which is passed, a short time after taking fluid, is less coloured, and less odorous and dense than that which is voided 7 or 8 hours after eating. The first is called by the French, *Urine de la Boisson*, *Urine from drink*:—the latter *Urine de la digestion*, *Urine de la cotion*, *Urine cuite*, *Cocted urine*, *Urine of digestion*. According to the analysis of Berzelius, urine contains, in 1000 parts, 933 of water, 30.10 of urea, 3.71 of sulphate of potass, 3.16 of sulphate of soda, 2.94 of phosphate of soda, 4.45 of muriate of soda, 1.65 of phosphate of ammonia, 1.50 of muriate of ammonia, 17.15 of free lactic acid, lactate of ammonia united with an animal matter soluble in alcohol and an animal matter insoluble in that agent:—1.00 of earthy phosphate, with an atom of lime, 1.00 of uric acid, 0.32 of mucus of the bladder, and 0.03 of silica. There are found in it, moreover, albumen, sulphur, &c. Its average specific gravity is about 1.015.

The quantity passed by the adult in the 24 hours varies. On the average it may amount to two pounds and a half.

Sometimes, the urine, in health and disease, exhibits appearances, that have received special names. Thus, that which is characterized by a deficiency of solid matters generally, has been called *Hydr'uria*, (*υδωρ*, 'water,') by a deficiency of urea, *Anazotu'ria*, (*αν*, privative, and *azote*,) by a super-

abundance of urea, *Azotu'ria*. Urine in which the deposit consists of lithic acid, and the lithates has been termed *Lithu'ria*; and that in which the deposit consists of the earthy and earthy-alkaline phosphates, *Ceramu'ria*, (*κεραμος*, 'potter's earth,') &c. &c. At times, a *pellicle* forms on the surface (*Cremor urinæ*) which consists of mucus and some salts: at others, there is a *cloud*, (*Nubecula*, *nubes*) towards its upper part, which is called *Enæore'ma* when suspended, as it were, about the middle of the liquid. Occasionally, there is a sediment, to which the names *Hypostasis*, *Sedimentum*, &c. have been given. (See these various words.)

The urine is often deserving of attention in disease; but it has been considered a matter of more importance than it merits. Some empirics have presumed to pronounce on the nature of a disease by simply inspecting the urine. See *Uroscopy*.

Urine has been variously designated by pathologists, according to its appearance, &c.; for example:—

CRUDE URINE, (F) *Urine crue*. Urine that is thin; transparent, and but little coloured, affording neither cloud nor deposit.

CYSTIN'IC URINE, *Cystinu'ria*. Urine containing cystine or cystic oxide in solution, or as a deposit.

DIABET'IC URINE, *Melitu'ria*. Urine, passed in *Diabetes mellitus*. It does not contain, apparently, either urea or uric acid, except in accidental cases; but has a large quantity of sugar, analogous to that of the grape, which may be separated in the form of crystals. In other respects, the urine is very abundant and very limpid in that affection.

DYSPEP'TIC URINE has been found to precipitate tannin abundantly and to soon putrefy.

URINE OF INFLAM'MATORY DISEASES. This is, generally, small in quantity and very high-coloured.

URINE OF NERVOUS FEVERS is generally very thin; and often deposits a mixture of uric and rosacic acids.

FLOC'ULENT URINE, (F) *Urine floconneuse*, is when the fluid is troubled by flocculi, suspended in it.

GOUTY URINE, (F) *Urine des gouteux*, contains much phosphate of lime, and, after severe attacks of gout, precipitates a mixture of the uric and rosacic acids.

OILY URINE, (F) *Urine huileuse*, is that which pours like oil, or which has an oily pellicle at its surface.

DROP'SICAL URINE is an ammoniacal urine, often containing much albumen and scarcely any urea.

HYSTER'ICAL URINE is clear, colourless, and similar to the *Urine de la Boisson*.

ICTER'ICAL URINE contains bile.

URINE JUMENTEUSE (F), a term used, by the French, for ammoniacal urine, rendered turbid by a substance similar to small grains of dust, which causes it to resemble the urine of herbivorous animals.

MILKY URINE, (F) *Urine lactescente ou laiteuse*. White and troubled urine.

MUCILAG'INOUS URINE, (F) *Urine épaisse*. Urine, containing much mucus.

NERVOUS URINE. Thin, and very liquid urine;—such as is passed shortly after the attack of nervous diseases.

OXALIC URINE, *Oxalu'ria*. Urine containing a salt of the oxalic acid.

PHOSPHORESCENT URINE, *Phosphoru'ria*. Urine which is luminous or phosphorescent.

PUR'PURIC URINE, *Porphuru'ria*. Urine, containing purpuric acid and its salts.

RICK'ETY URINE contains much phosphate of lime.

THIN URINE, (F) *Urine ténue*. Urine that is transparent, slightly coloured, and but little dense.

HUMAN URINE was, at one time, considered aperient; and was given in jaundice, in the dose of one or two ounces.

COW'S URINE, *Urina vaccæ*, *Allflower water*, was once used, warm from the cow, as a purge, in the dose of ℥ ss.

URINIF'EROUS, *Uriniferus*, from *ουρον*, 'urine,' and *φερω*, 'I carry.' That which carries urine.

The **URINIF'EROUS TUBES OR DUCTS OF BELLINI**, *Tubuli vel ductus uriniferi Bellini*, *Bellenia'ni Ductus*, *Bellenia'næ Fis'tula*, are the collection of small tubes, converging from the cortical part of the kidney to the apices of the papillæ.

UROCRIS'IA, *ουροκρισια*, from *ουρον*, 'urine,' and *κρινω*, 'I judge.' *Urocrite'ria*, *ουροκριτηρια*. A judgment formed either of the urine, or of disease after inspecting the urine.

U'RINOUS, *Urinosus*, *Urino'des*. Having the character of urine. Similar to urine.

URODYN'IA, from *ουρον*, 'urine,' and *οδυνη*, 'pain.' Pain, during the excretion of the urine.

UROMANTI'A, from *ουρον*, 'urine,' and *μαντεια*, 'divination.' *Uroscopia*. The art of divining diseases by simple inspection of the urine. One, professing to be able to do this, is called *Uroman'tes*.

URONOL'OGY, *Uronologia*, from *ουρον*, 'urine,' and *λογος*, 'a description.' The part of medicine which treats of the urine.

URO'SES, from *ουρον*, 'urine.' Diseases of the urinary organs.—Alibert.

URTICA, *U. Dioica*; the *Common stinging nettle*, *Ad'ice*, (F) *Ortie*. *Family*, *Urticæ*. *Sex. Syst.* Monœcia Tetrandria. This plant has been long used for medical and culinary purposes. The young shoots, in the spring, are considered to possess diuretic and antiscorbutic properties.

URTICA PILULIF'ERA, *Pill-bearing Nettle*, *U. Pilulo'sa*, *U. Roma'na*, (F) *Ortie Romaine*. The seed was formerly given in diseases of the chest. Both nettles have been used as stimulants to paralytic limbs.

URTICA URENS, (F) *Ortie brulante*. A

less variety of the nettle, possessing similar virtues.

URTICA'RIA, from *urtica*, 'a nettle;' *Enanthé'sis urtica'ria*, *Ure'do*, *Scarlati'na urtica'ta*, *Febris urtica'ta*, *Pur'pura urticata*, *Febris rubra pruriginó'sa*, *Saltans rosa*, *Nettle rash*; from *urti'ca*, 'a nettle,' because the eruption resembles that produced by the stings of a nettle. A disease, distinguished by those elevations of the cuticle called *wheals*. They have a white top, and are often surrounded by a diffuse redness. They excite intolerable itching, especially when the person is warm in bed. The eruption frequently goes and comes, once or more in the 24 hours, and is generally dependent upon gastric derangement. In some people, nettle rash is induced by shell-fish, eggs, nuts, &c. It is not, usually, a disease of any consequence, and its treatment is limited to the use of absorbent laxatives, and some general means. Willan has described six varieties of the complaint;—the *Urtica'ria febrilis*, *U. evan'ida*, *U. perstans*, *U. confer'ta*, *U. subcuta'nea*, and *U. tubero'sa*.

URTICA'TIO, from *urtica*, 'a nettle.' A sort of flagellation, with nettles;—used with the intention of exciting the skin.

USTION, *Ustio*, *Causis*, from *uro*, 'I burn.' The act of burning, or of applying the actual cautery. Also, the effect of cauterization;—a burn.

USTULA'TIO. An operation by which a substance is dried by warming.

UTERINE, *Uteri'nus*, from *uterus*, 'the womb.' That which belongs or relates to the womb.

The **UTERINE ARTERY**, *Arte'ria uterina hypogas'trica*, in size, is always in a ratio with the greater or less state of developement of the uterus. It arises from the hypogastric, either separately or with the umbilical, or from the internal pudic. It passes upon the lateral parts of the vagina, to which it gives branches; and afterwards ascends on the sides of the uterus, and divides into a considerable number of very tortuous branches, which enter the tissue of the organ.

The **UTERINE MUSCLE OF RUYSCH** consists of some fleshy fibres at the fundus of the uterus, which he regarded as forming a particular muscle.

UTERUS, *Uter*, *Utric'ulus*, *Loci*, *Loci mulie'bres*, *Vulva*, *Venter*, *Arvum natu'rae*, *Conceptac'ulum*, *Matrix*, *Ager naturae*, *Hys'tera*, *Metra*, *Utriculus*, the *Womb*, *Stera*, *An'gos*, *Delphys*, (F) *Matrice*, *Sein*. The uterus,—destined to lodge the fœtus from the commencement of conception till birth,—is a hollow, symmetrical organ, having the shape of a truncated conoid: it is situate in the pelvis, between the bladder and the rectum, above the vagina, and below the convolutions of the small intestine. The uterus is flattened from before to behind, and is

nearly an inch in thickness. It is two inches broad, in its highest part, and becomes narrower towards the vagina; terminating in a contracted portion, called the *cervix* or *neck*;—to distinguish it from the rest of the organ, called the *body*.

From its *fundus* or upper portion the Fallopian tubes pass off. The mouth is called *Os Uteri* or *Os Tincæ*. The cavity is very small, and its parietes are thick. The portion of the cavity, corresponding with the body, is triangular and flattened. Its superior angles present the extremely fine orifices of the Fallopian tubes. The cavity of the neck is slightly dilated before opening into the vagina.

The uterus is composed, 1. Of a *serous membrane*. This is external, and furnished by the peritoneum; which is reflected upon the uterus from the posterior surface of the bladder and the anterior surface of the rectum. It forms, also, the *broad ligaments of the uterus*, *Ligamen'ta lata*, *Alæ vesper'tilio'nis*. These contain, above, the Fallopian tube; beneath and anteriorly, the round ligaments; and, behind, the ovary. They are two membranous productions or duplicatures of the peritoneum, sent from the edges of the uterus and posterior extremity of the vagina, in a transverse direction, to be fixed to, and to line, the sides of the pelvis. 2. Of a *mucous membrane*, which is a prolongation of that of the vagina, and extends into the tubes. 3. Of a *proper tissue*, whose thickness is considerable. It is of a close texture; is grayish and elastic; and resists the instrument that divides it. Its intimate nature is but little known. During gestation it is truly muscular.

The arteries of the uterus proceed from the spermatic and hypogastric. Its veins follow the same course, and bear the same name as the arteries. They are very tortuous, and form large sinuses in the parietes of the organ,—called *Uterine Sinuses*. Its nerves proceed from the sciatic and hypogastric plexuses. Its lymphatic vessels are very multiplied; and, during pregnancy, acquire enormous dimensions. The changes experienced by the uterus during gestation, and after delivery, are very numerous, and important to be known. They regard its situation, direction, size, shape, texture, connexions, vital properties, &c.

UTERUS, INVERSION OF THE, *Inversio Uteri*, *Metranas'trophê*, *Ædoptó'sis Uteri inversa*, (F) *Inversion de la Matrice*, *Renversement de la Matrice*. The uterus, displaced and turned inside out. This can only happen, through want of caution on the part of the medical practitioner. It is a fatal accident, unless speedily reduced. This must be done by gradually returning the superior part, by grasping it with the hand, and making the rest follow.

UTERUS, RUPTURE OF THE, *Metrorrhæxis*, *Ruptu'ra Uteri*, *Perfora'tio Uteri*, *Lacera'tion of the Womb*, (F) *Rupture de la Matrice*. This dreadful accident occurs during labour, and is known to have taken place, when the child's head suddenly recedes during a pain, with vomiting, sinking of the pulse, cold sweats, &c. When it is evident that this has occurred, the hand must be passed into the uterus, and the feet of the child be brought down.

Cases are on record, in which partial lacerations of the uterus have healed, and the patient has done well. This is a rare event, and not to be anticipated.

UVÆ PASSÆ. *Dried Grapes, Raisins*. See *Vitis Vinifera*.

UVEA, from *uva*, 'an unripe grape.' *Tu'nica acino'sa*, seu *acinifor'mis*, seu *uva'lis*, seu *acina'lis*, seu *uvifor'mis*, *Rhagoï'des*, *Rhoz*, (F) *Uvée*. Some anatomists have given this name to the choroid coat of the eye; others, to the posterior surface of the iris, on

account of the black and very thick varnish that covers it.

U'VULA, *Pinnac'ulum for'nicis guttura'lis*, *Uva*, *Staph'ylè*, *Tintinnab'ulum*, *Columel'la*, *Cion*, *Ci'onis*, *Garga'reon*, *Colum'na oris*, *Gurgu'lio*, *Intersep'tum*, *Processus seu Cartilago U'vifer*, *Uvi'gena*, *Uvi'gera*, *Pap of the Throat*, (F) *Luette*. A fleshy appendix or prolongation, which hangs from the middle or free edge of the velum palati. The uvula has a conical shape, and is of greater or less size in individuals. It is formed, especially, by the mucous membrane of the velum palati; and contains, within it, the azygos uvule muscle. Its use is not clear.

U'VULAR, *Uvula'ris*, from *u'vula*. That which belongs to the uvula.

The UVULAR GLANDS are small follicles, belonging to the mucous membrane covering the uvula.

UVULI'TIS, *Angi'na uvularis*, *Staphy-li'tis*. Inflammation of the uvula.

V

VACCI'NA, *Vari'ola vaccina*, *V. vaccinica*, *Exanthe'ma vaccina*, *Syn'ocha vaccina*, *Vacci'ola vera*, *Vacci'na antivariolo'sa*, *Vaccio'la scutellata*, *Vari'olæ tuto'riæ*, *Cowpox*, *Kine Pock*, *Inoc'ulated Cowpox*, *Em'phlysis vaccina inser'ta*, from *vacca*, 'the cow,' (F) *Vaccine*. The cow-pox is a disease of the cow, arising spontaneously, which if transmitted to man, by means of inoculation, preserves him from small-pox contagion.

The promulgation of this valuable property of the vaccine virus is due to Dr. Jenner. When inoculating for the small-pox in Gloucestershire, in 1775, he was surprised to meet with a number of persons in the same district, in whom the insertion of the virus produced no effect; although they had never passed through the small-pox. On investigation, he found that all these persons had previously been affected by a pustular eruption of the cow, which they had taken, by milking the animal; and which eruption they called *Cowpox*. This discovery induced him to institute experiments, and he found that such preservative effect actually existed.

The *Vaccine Virus*, or the fluid of the eruption, is not now usually taken immediately from the cow; experience having demonstrated, that it is nearly as efficacious when obtained from the human vesicle.

The characteristic of cow-pox eruption is:—a semi-transparent, pearl-coloured vesicle,

with a circular or somewhat oval base; its upper surface, until the end of the 8th day, being more elevated at the margin than in the centre; and the margin itself being turgid, shining, and rounded, so as often to extend a little over the line of the base. This vesicle is filled with clear lymph, contained in numerous little cells, that communicate with each other. After the 8th or 9th day from the insertion of the virus, it is surrounded by a bright red, circumscribed aureola, which varies, in its diameter, in different cases, from a quarter of an inch to two inches; and is usually attended with a considerable tumour, and hardness of the adjoining cellular membrane. This aureola declines on the 11th or 12th day: the surface of the vesicle then becomes brown in the centre; and the fluid, in the cells, gradually concretes into a hard, rounded scab, or crust, of a reddish-brown colour, which at length becomes darker, contracted, and dry, but is not detached till three weeks after vaccination. It leaves a permanent, circular cicatrix, about five lines in diameter, and a little depressed; the surface being marked with very minute pits or indentations, denoting the number of cells, of which the vesicle had been composed.

This is the progress of the *genuine cow-pox*. Sometimes fever occurs about the 9th or 11th day; but, at others, not the slightest

indisposition is felt. Aberrations from this progress occur, which must be attended to; as the same preservative influence is not exerted by *irregular* or *spurious cow-pox*. If the eruption runs speedily to a height; has an aureola too early; is irregular at its edges; and contains pus, instead of a limpid fluid, it cannot be at all depended upon.

Small-pox occurs, at times, as an epidemic, after vaccination. For a time, the enthusiastic advocates of vaccination would not admit the affection to be small-pox; and, accordingly, they gave it the name Varioloid, (q. v.) It is unquestionably small-pox, but modified, and almost divested of its terrors, by previous vaccination; and it is said to happen less frequently after vaccination than after *small-pox inoculation*.

Vaccination is now practised every where, except amongst those in whom ignorance and prejudice exclude the lights of reason and philanthropy. There is ground, however, for the belief, that for full protection, revaccination may be occasionally necessary.

VACCINATION, *Vaccinatio*, from *vacca*, 'a cow.' *Cow-pox Inoculation*, *Jenne'rian Inoculation*. An operation, which consists in inserting the vaccine virus under the cuticle, so that it may come in contact with the absorbents. It is extremely simple, and requires merely that the point of a lancet should be held under the cuticle for a short time.

The best time for taking the matter for vaccination is about the 7th or 8th day; before the appearance of the aureola, when it ought to be limpid and transparent. The most certain method is, to pass it from arm to arm; but this is not always convenient; and, hence, it is taken upon *points*, or pieces of quill, or between glasses. It must, of course, be softened for use. This is done by means of a little water, which does not destroy its efficiency. The scab, too, which falls off about the end of three weeks—more or less—is capable of communicating the affection, if dissolved in water; and this is the most common method of transmitting the vaccine virus, in some countries.

VACCINIUM MYRTIL'US, *The Myrtle Berry*, *Vaccinia myrtillus*, *Bilberry*, *Blea-berry*, *Whortle-berry*, *Black Whorts*, *Vaccinium nigrum*, (F) *Airelle Anguleuse*, *Raisin des Bois*. *Family*, *Vaccinæ*. *Sex. Syst.* *Octandria Monogynia*. The berries—*Baccæ Myrtillo'rum*—are esteemed to be antiscorbutic, when prepared with vinegar. They are also said to possess antiseptic and subastringent properties, when dried. They are not used in medicine; but are frequently eaten with milk and sugar.

VACCINIUM OXYCOC'OS, *Oxycoccos*, *Vaccinia palustris*, *Vitis Idæ'a palustris*, *Moor-berry*, *Cranberry*, (F) *Canneberge*. The ber-

ries are pleasantly acid and cooling. They make an agreeable preserve.

VACCINIUM VITIS IDÆ'A, *Red Bilberry*, *Am'pelos Idæ'a*, *Whortleberry*, *Cowberry*, (F) *Airelle ou Canneberge ponctuée*. A decoction of the leaves has been used in calculous affections. They are astringent. The ripe berries are pleasantly acid, and refrigerant.

VAGINA, 'a sheath.' *Vagina muliebris seu uteri'na seu Uteri*, *Sinus muliebris*, *S. Pudoris*, *Colpos*, *Vagina Penis*, *Vulvo-uterine canal*, (F) *Vagin*. A cylindrical canal, five or six inches long; situate within the pelvis, between the bladder and rectum. It communicates, by one extremity—*Aulos*—with the vulva; by the other, with the womb,—the neck of which it embraces. The vagina is lined, internally, by a mucous membrane; and is partly closed, in young females, by the hymen, and carunculæ myrtiformes. Around the mucous membrane is a layer of spongy, erectile tissue; and a cellulo-vascular membrane. A constrictor muscle; numerous vessels furnished by the vaginal artery particularly; veins and nerves, proceeding from the sciatic plexus, also, enter into the composition of the organ.

The term, **VAGINA** or **SHEATH**, *Theca*, is extended to many parts, which serve as envelopes to others.

The *Vagina* or *Sheath of the Vena Porta*, (F) *Gaine de la Veine-porte*, is the cellular membrane that accompanies the divisions of the vena porta into the substance of the liver.

Sheath, (F) *Gaine*, is sometimes applied to the fasciæ enveloping the limbs; to cellular membrane, enveloping the muscles, and entering between their fibres; to that which surrounds the blood-vessels; to the synovial membranes surrounding tendons, and lining the gutters of bones, &c.

VAG'INAL, *Vagina'lis*, from *vagi'na*, 'a sheath.'

The **VAGINAL ARTERY** exists, as a matter of course, only in the female. It arises from the hypogastric or from the uterine, vesical, internal pudic, umbilical, &c.; and sends its branches, first to the lateral parts of the vagina; and, afterwards, to the anterior and posterior surfaces.

The **VAGINAL PROCESS** of the temporal bone, (F) *Apophyse vaginale ou engainante*, *Gaine de l'apophyse styloïde*, *Chaton*, is a bony crista, which embraces the base of the styloid process.

The **TU'NICA VAGINA'LIS**, *T. Elytroï'des*, vel *Elytro'des*, is the serous membrane, which envelopes the testicle. Before the descent of the testicle, the tunica vaginalis does not exist. It is formed by a prolongation—furnished by the peritoneum to the testicle, when it issues from the abdomen—which, subsequently, contracts; and, ultimately, is entirely separated from it, constituting a distinct

coat. The tunica vaginalis forms a close sac, which is reflected over the testicle and epididymis, without containing them in its cavity. Its inner surface is smooth, and lubricated by a serous fluid. Its outer surface adheres to the fibrous coat, common to the spermatic cord and testicle; the other surface covers the testicle and epididymis.

VAGITUS, (F) *Vagissement*. The cry of the new-born child. *Squalling*.

VAIRON (F), *Dispar oc'ulis*. One who has eyes of different colours. It also means a *wall-eyed* animal; or one whose iris is surrounded by a whitish circle.

VALERIA'NA, *V. officina'lis*, *Wild Valerian*, *Valeriana minor*, *Officinal Valerian*. Family, Dipsacæ. *Sex. Syst.* Triandria Monogynia. The root has been long extolled as an efficacious remedy in epilepsy, and in a variety of nervous complaints. It has been also advised as a tonic, antispasmodic, and emmenagogue. It has a strong, fetid odour; bitterish, subacid, and warm taste; and its virtues are extracted by water and alcohol.

VALERIANA CELTICA, *Celtic Nard*, *Spica Celtica*, *S. Alpi'na*, *Nardus Celtica*, *Saliun'ca*, *Nardum Gallicum*, *Spica Celtica Dioscor'idis*, (F) *Nard Celtique*. The roots of this Alpine plant have been recommended as stomachic, carminative, and diuretic. It has a moderately strong smell; and a warm, bitterish, subacid taste.

VALERIANA PHU, *V. major*, *Garden Valerian*, (F) *Grand Valériane*. The root has been recommended in rheumatism; especially in sciatica, and in epilepsy, &c.

VALERIANA DENTATA, *V. locus'ta*, *Corn Salad*. A wholesome, succulent plant, cultivated in Europe as a salad. It is antiscorbutic and gently aperient.

VALETA PATIN (F), *Volse'la Pati'ni*. The common ligature forceps is a modification of this instrument invented by one Patin. It consists of two branches, united at the middle by a hinge, which may be separated or approximated by means of a screw or running ring. It is used for seizing hold of vessels that are to be tied.

VALETU'DINARY, *Valetudinarian*, *Valetudinarius*, from *valetudo*, 'health.' One of delicate health. One subject to frequent diseases. An *Invalid*.

VALLUM. The eyebrow. Also, a species of bandage.—Galen.

VALS, MINERAL WATERS OF. A French acidulous chalybeate, at Vals, six leagues from Viviers, in the department of Ardèche. There are five springs; containing carbonic acid, sulphate of iron, and alum. They are employed in passive hemorrhages, leucorrhœa, &c.

VALVE, *Val'vula*, (F) *Valvule*, from *volvo*, 'I fold up.' A small door. Any membrane or duplicature of a membrane, which prevents a reflux of humours or other matters in the vessels and canals of the animal body. There

are some valves, whose function appears to be,—to retard or to modify the course of substances along canals, &c. See *Mitral*, *sigmoid*, *tricuspid*, *ileocæcal valve*, &c.

The **VALVULÆ CONNIVEN'TES** are numerous circular folds in the intestinal canal from the pyloric orifice through the greater part of the small intestine. They are folds of the mucous membrane; and their chief use appears to be,—to retard the course of the alimentary mass, and to afford a larger surface for the origin of chyloferous vessels.

VALVULA vel **PLICA SEMILUNA'RIS**. A small doubling of the tunica conjunctiva, which lies between the caruncula lachrymalis and the ball of the eye. In birds, this is large, and called *Membra'na nic'titans* vel *Pal'pebra ter'tia*.

VALVULA VIEUSSE'NII, *Velum Vieussenii*, *Val'vula cerebel'li* seu *Willisia'na*, *Velum interjec'tum cerebelli*, *V. apoph'ysi vermiciformi obtentum*, *Lacunar ventric'uli quarti superior*, *Velum medulla're* seu *medullare anti'cum*. (F) *Valvule de Vieussens*, *Voile medullaire supérieure*. A thin, medullary lamina, over the under end of the Aquæductus Sylvii, and upper part of the 4th ventricle. At the sides of the valve are two medullary tracts, called *Processus ad Testes*, *Columnæ Valvulæ Vieussenii*, *Oblique* or *intercerebral Commissure*.

VANIL'LA, *Banil'ia*, *Banilas*, *Banilloës*, *Banilla*, *Benzo'ënil*, *Ar'acus aromaticus*, (F) *Vanille*, *Baume de Vanille*. The *Vanelloe* is a long, flattish pod; containing, under a wrinkled, brittle shell, a reddish-brown pulp, with small, shining, black seeds. The parasitic plant, which affords this pod, is the *Epiden'drum Vanilla*. Family, Orchidææ. *Sex. Syst.* Gynandria Diandria. Vanelloes have an unctuous, aromatic taste, and a fragrant smell, like that of some of the finer balsams, heightened with musk. Although chiefly used as perfumes, they are reputed to possess aphrodisiac virtues.

VAPORA'RIMUM, *Atmist'e'ron*, *Lacoti'cum*, *Suda'rium*, *Sudato'rium*; a *Vapour bath*. A useful remedy in rheumatic and cutaneous affections; and wherever it is important to relax the cutaneous capillaries.

VARICEL'LA, (diminutive of *Variola*, Small-Pox), *Emphlysis varicella*, *Exanthe'ma varicella*, *Syn'ochus varicella*, *Chicken pox*, *Variola lymphat'ica*, *V. spuria*, *Variole nothæ*, *V. illegitimæ*, *V. volat'icæ*, *V. pucille*, *Æoll'ion*, (F) *Varicelle*, *Petite vérole volante*, *Vérolette*. A disease, characterized by vesicles scattered over the body, which are glabrous, transparent, and of about the size of peas. They appear in successive crops; are covered by a thin pellicle; and, about the 3d, 4th, or 5th day from their appearance, they burst at the tip, and concrete into small, puckered scabs, which rarely leave a pit in the skin.

Three varieties have, sometimes, been designated. 1. the *V. lentiformis*, or *lenticular chicken pox*, which are irregularly circular,

and flattened at the top; the fluid being at first whitish, and afterwards straw-coloured. This is the *common chicken pox*. 2. The *Varicella coniformis*, or *Conoidal Chicken Pox*, *Pemphigus varioloides*, *Variola lymphatica*, *Hydrach'nis*, *Swine Pox*, *Water Pox*, *Water Jags*, in which the vesicles are generally acuminate, and the fluid pellucid throughout; and 3dly, the *Varicella globularis* or *Hives*, in which the vesicles are globular and larger; the fluid being, at first, whey-coloured, and afterwards yellowish.

These divisions, are, however, very arbitrary, for they are generally confounded.

Variola has been, sometimes, mistaken for this disease, and conversely. A little attention to the history of the eruption in the two affections will prevent error. Varicella is not contagious. At times, it prevails epidemically. It cannot be propagated by inoculation. The treatment is extremely simple; rest, abstinence, and the antiphlogistic regimen being all that is, generally, required.

VARICIFORMES PARASTATÆ. A name given, by some authors, to the ducts of the epididymis, because they seem knotty and varicose.

VARICOCE'LE, from *varix* and *κελη*, 'a tumour,' *Oscheoce'le varico'sa*, *Her'nia varico'sa*, *Ramex varico'sus*, *Spermatocele*, (q. v.) *Cirsocele*. A varicose dilatation of the veins of the scrotum and spermatic cord. This latter variety of the disease is more common on the left side than the right. It appears under the form of a soft, doughy, unequal, knotty, compressible, and indolent tumour; situate in the course of the cord, and increasing from below upwards. It is less, when the individual is in the recumbent posture, and increases when he is erect. It is, ordinarily, an affection of no moment, and is very common, requiring merely the use of a proper suspensory bandage. It has been advised, in bad cases, to tie the enlarged vein, but the operation is not free from danger induced by phlebitis. Sir A. Cooper has proposed the removal of a portion of the scrotum, so as to render the remainder of the scrotum a natural bandage. This plan has been found effectual.

VARICOMPH'ALUS, from *varix*, and *ομφαλος*, 'the umbilicus.' Varicose tumour of the umbilicus.

VAR'ICOSE, *Varico'sus*, (F) *Variqueux*, affected with varix; or belonging to, or connected with, varix;—as a *varicose vein*; a *varicose ulcer*, i. e. one kept up by varices.

VARIC'ULA, *Varix parva*. A diminutive of *varix*. Also, a varicose swelling of the veins of the tunica conjunctiva.—M. A. Severinus.

VARI'OLA, *Variolæ*, *Varioli*, *Small-Pox*, *Empy'e'sis Variola*, *Euphlogia*, *Chaspé*, *Æolec'thyma*, *Pox* (N. of England). *Pestis variolo'sa*, *Febris variolo'sa*; from *varius*, 'spotted,' or from *vari*, 'pimples.' (F) *Variole*, *Petite Vérole*, *Picote*. A disease now of much less interest than before the discovery

of vaccination. It is of a very contagious nature, and is supposed to have been introduced into Europe from Asia, at an early period of the middle ages. It is characterized by fever, with pustules, appearing from the 3d to the 5th day, and suppurating from the 8th to the 10th, and it possesses all the distinctive properties of the major exanthemata. It is capable of being produced by inoculation (q. v.); but this *inoculated small pox*—*Variola inserta*—communicates the disease as readily through the air as the *natural small-pox*, or that received without inoculation.

Small-pox is distinguished into two classes, according to the character of the eruption, the *discrete* or *distinct*, and the *confluent*.

1. In the **VARIOLA DISCRE'TA**, *Empy'esis variola discreta*, *Variola discreta benigna*, *Variolæ regulares*, seu *discretæ*, *Distinct Small-Pox*, the pustules are usually of the size of peas; distinct, distended, and circular; the intervening spaces being red; the fever inflammatory throughout; and ceasing when the eruption is complete.

2. In the **VARIOLA CON'FLUENS**, *Empy'esis variola confluens*, *Variolæ regulares confluentes*, *Vesic'ulæ divæ barbaræ*, *Vesicules de Sainte-Barbe*, or *Confluent Small-Pox*, the pustules are confluent or run together; flaccid and irregularly circumscribed; the intervening spaces being pale and the accompanying fever typhoid. In children, diarrhœa, and, in adults, ptyalism, with swelling of the hands and feet generally appears towards the period of the *sec'ondary fever*, which occurs from the tenth to the thirteenth day. The fever that precedes and accompanies the eruption is called the *Eruptive fever*. The prognosis is favourable in the distinct kind, if properly managed. The confluent is always dangerous:—the unfavourable symptoms being—flattening of the pustules, or subsidence of the eruption; the breathing becoming much obstructed or oppressed; or marks of inflammatory and congestive conditions in the different viscera.

The treatment of the distinct kind is very simple; the antiphlogistic regimen, with cathartics, being all that is necessary.

The confluent kind requires the same management as typhus fever.

VAR'IOLOID, *Varioloides*, *Variolæ modificatæ*, from *vari'ola*, small-pox, and *ειδός*, 'form,'—resembling small-pox. This is, really, small-pox, modified by previous inoculation or vaccination; and hence it has been properly called *modified small-pox*. That it is small-pox is proved by the fact, that matter, taken from a varioloid pustule, will communicate small-pox to one who has never had it naturally or by inoculation, or who has never been vaccinated. It is, almost always, a milder disease than small-pox; and this circumstance, with its shorter duration, exhibits the salutary effects of previous vaccination. It has appeared epidemically.

VARIX, *Phlebeurys'ma*, *Hernia seu Ec'tasia vena'rum*, *Angiecta'sia veno'sa*, *Ixia*, *Cirrus*, *Varicose Vein*, (F) *Varice*, is considered, by some, to come from the verb *variare*, 'to turn,' 'to twist;'—on account of the sinuosities of varicose veins. Dilatation of a vein.

Varices are owing to the retardation of venous circulation; and in some cases, to relaxation of the parietes of the veins. They are very common in the superficial veins of the lower limbs, especially of pregnant females. The tumour or tumours, formed by varices, are soft, knotty, unequal, indolent, and livid; without pulsation, and yielding readily to the impression of the finger; but returning as soon as the compression is discontinued. Sometimes, the vein bursts and gives rise to hemorrhage. The treatment is usually palliative, and consists in exerting a uniform and constant pressure upon the part, by means of an appropriate bandage. The radical cure has, also, been obtained by extirpation, division of the vein, or ligature. The second course is apt to be followed by phlebitis.

VASA VASO'RUM. Small vessels that supply larger. However minutely we trace a vessel, we always find its parietes supplied with blood for its nutrition by a smaller vessel.

VASA VORTICO'SA, (F) *Tourbillon vasculaire*. The contorted vessels which creep on the choroid coat of the eye.

VAS'ULAR, *Vascula'ris*, *Vasculo'sus*. That which belongs or relates to vessels;—arterial, venous, or lymphatic; but generally restricted to blood-vessels only. Bichat gave the name—*Vascular system*—to the blood-vessels, and of this he made two divisions.

1. The *Arterial System* or *System of red blood*, (F) *Système vasculaire à sang rouge*, which commences with the radicles of the pulmonary veins; and includes the pulmonary veins, the left cavities of the heart and the aorta, with all its ramifications. The blood, in this system, is distributed to the general capillary system, where it loses its arterial quality and becomes venous.

2. The *Venous system* or *Vascular system of black blood*, (F) *Système vasculaire à sang noir*, carries the venous blood from every part of the system to the lungs. It takes its origin in the general capillary system; continues in the veins, right auricle, and ventricle of the heart and the pulmonary artery and its branches, and is finally lost in the capillary system of the lungs. See *Circulation*.

VASTUS. That which is *vast* or has a great extent.

The **VASTUS EXTERNUS** and **V. INTERNUS** are two considerable, fleshy masses, which form part of the *Triceps Cruris*, (q. v.)

VAULT, (old F. *Voulte*), *Fornix*, *Cam'era*, (F) *Voûte*. A name, given, by anatomists, to several parts, which are rounded superiorly; concave and arched inferiorly,—as the *Vault of the cranium*, or the upper part of the skull,—the *Palatine vault* or *roof of the mouth*, &c. &c.

VEGETA'TION, *Vegeta'tio*. A morbid part, which rises as an excrescence in syphilis, &c.—as the *Cauliflower excrescence*, &c. The term is, also, applied to fleshy granulations or *Hypersarcoses*, which, sometimes, arise at the surfaces of wounds or ulcers.

VE'HICLE, *Vehic'ulum*, *Oche'ma*, (F) *Véhicule*, from *ve'here*, 'to carry.' Any thing, which serves to carry; thus, air is the *vehicle* of sound; the arteries are the *vehicles* of the blood. In *Pharmacy*, the name *vehicle* is given to any excipient; or to substances which serve as the media of administration for any medicine.

VEIN, *Vena*, *Phlebs*, *Phleps*, (F) *Veine*. The veins are vessels for the conveyance of black blood from every part of the body to the heart. They are found wherever there are arteries; and, altogether, form the *venous system*, which may be subdivided into two distinct secondary systems. 1. The *General venous system*, which commences in all the organs, by very minute radicles; and terminates in the heart by the vena cava and the coronary vein. 2. The *Abdominal venous system*, which is limited to the abdominal cavity; commences, also, by a great number of branches, and terminates in the liver by a single trunk, which subdivides in that organ. It is called, also, the *System of the Vena Porta*, or the *Portal System*. See *Porta*.

The veins form two sets, one *deep-seated*, *Venæ satel'lites*, *V. concom'ites*, which accompany the arteries; the other *superficial* or *subcutaneous*. Their parietes, which are thinner than those of the arteries, are composed of two coats; the one, external, loose, extensible, and with parallel, longitudinal fibres—the *proper membrane*; the other, the *common* or *inner membrane*, which is thin, polished, and has numerous duplicatures or folds forming parabolic valves. These valves are most numerous in the veins of the lower extremities. The coats of the veins are supplied with small arteries or *vasa vasorum*, veins, and lymphatics. They have not as many nervous filaments as the arteries. These filaments are from the great sympathetic.

TABLE OF THE VEINS.

1. VEINS WHICH FORM THE SUPERIOR VENA CAVA.

1. Subclavians.	Receive the 1. Axillary, which	Receives the 1. Basilic, formed of the 2. Cephalic, forming the 3. Circumflex veins. 4. Inferior scapular. 5. Long thoracic. 6. Superior thoracic. 7. Acromial Veins.	1. Posterior ulnar. 2. Anterior ulnar. 3. Median basilic. 1. Superficial radial. 2. Median cephalic.
	2. External Jugular.	Receives the 1. Internal maxillary, composed of the 2. Superficial Temporal, composed of the 3. Posterior Auricular. The trunk then takes the name of <i>External Jugular</i>, and, in its course along the neck, receives— 4. Cervical Cutaneous. 5. Trachelo-scapular, &c. Receives 1. Superior Cerebral Veins. 2. Vein of the Corpus Striatum. 3. Veins of the Choroid plexus. 4. Superior Cerebellar Veins. 5. Inferior Cerebellar Veins. 6. Lateral and inferior Cerebral Veins.	1. Pterygoid. 2. Spheno-palatine. 3. Alveolar. 4. Infra-orbital. 5. Mental. 6. Inferior dental. 7. Deep temporal. 1. Middle temporal. 2. Anterior auriculars. 3. Transverse of the face.
	3. Internal Jugular.	7. Ophthalmic Vein, composed of the 8. Facial Vein, called <i>angular</i>, near the eye, receiving the 9. Lingual and Pharyngeal Veins. 10. Superior Thyroid. 11. Occipital, and 12. Veins of the Diploe.	1. Lachrymal. 2. Central of the retina. 3. Infra-orbital. 4. Ciliary. 5. Ethmoidal. 6. Palpebral, and 7. Nasal, Veins. 1. Palpebral, and 2. Superciliary Veins. 3. Dorsals of the nose. 4. Superior 5. Inferior 6. Several Buccal and 7. Masseteric Veins. 8. Ranine. 9. Submental, and 10. Inferior Palatine. Coronaries of the lip.

2. Right Internal Mammary Vein.

3. Inferior Thyroid Vein, opening into the Vena Cava, between the two Subclavians.

4. Vena Azygos, which receives the

1. Right Bronchial.
2. Intercostal veins.
3. Semi-azygos.

2. VEINS WHICH FORM THE INFERIOR VENA CAVA.

1. Common Iliacs.	Receive the 1. External Iliacs, formed by the—	1. Femoral or Crural, which is a continuation of the— 2. Popliteal, commencing by 3 veins which accompany the fibular arteries, and receiving the—	1. External Saphena, and 2. Internal Saphena, which receive—
	2. Internal Iliac, which receives the—	1. Vesical Veins, commencing with the 2. Sacro-lateral Veins.	1. Several abdominal veins. 2. Circumflex Iliac, and 3. External pudic veins.

3. Middle Sacral Vein.

4. Lumbar Veins—four in number on each side, commencing by an—

1. Abdominal branch.
2. Dorsal branch.

5. Spermatic Veins, commencing with the

1. Spermatic plexus, in the male.
2. Ovarium, Fallopian tube, &c. in the female.

6. Renal Veins.

7. Capsular and Adipose Veins.

8. Hepatic Veins.

9. Middle,

10. Left, and

11. Right

12. Inferior Diaphragmatic Veins, two in number.

3. VEINS OF THE HEART.

1. Great right Coronary.
2. Small right Coronary.
3. Left Coronary Veins.

4. VEINS WHICH FORM THE VENA PORTÆ.

1. Splenic Vein.	Receives the
	1. Veins which correspond to the vasa brevia. 2. Right and left gastro-epiploic. 3. Duodenal, and 4. Pancreatic, veins. 5. Coronary Vein of the Stomach, and 6. Small mesenteric vein.

2. Superior Mesenteric Vein.

VELUM MEDULLÆ INFERIUS, (F) *Voile médullaire inférieur*. A name given, by Reil, to the medullary band or strip, by which the cerebellum communicates with the medulla.

VELUM PEN'DULUM PALA'TI, *Velum*, *Velum Palati'num*, *Velum Palati*, *Velum Pendulum*, *Velum Staphyli'num*, *Claustum Pala-ti*, *Soft Palate*, *Palatum Mollē*, *Septum Staphylin*, (Ch.), (F) *Voile du Palais*. A movable, soft, and broad septum, attached to the posterior extremity of the palatine arch, and separating the mouth from the pharynx. Its form is nearly quadrilateral. Its *anterior surface* corresponds to the mouth; the *posterior* to the pharynx. Its *superior edge* is fixed to the palatine arch; the inferior is free, floating, and has an appendix at its middle,—the *uvula*. The lateral margins of the velum are held down by two folds, separated from each other by a triangular space; these are called the *pillars*; the anterior passes to the base of the tongue, the posterior to the sides of the pharynx. The velum palati is formed of a mucous coat, which contains numerous follicles, and of a muscular stratum, in which are the peristaphylini interni and p. externi muscles, the glosso-staphylini, the pharyngo-staphylini and the palato-staphylinus.

The arteries of the velum palati are furnished by the internal maxillary, the labial and the superior pharyngeal. Its veins open into the internal jugular. Its nerves are sent off from the ganglion of Meckel and come from the palatine branches. The glosso-pharyngeal nerve, likewise, sends it some filaments.

VENE'REAL, *Vene'reus*, *Aphrodisiacus*, *Vene'rean*; from *Venus*, 'the goddess of pleasure.' That which relates to the pleasures of love. In a more restricted sense—the word *Venereal* is synonymous with *syphilitic*, and also with *syphilis*. Some authors have proposed, that those diseases should be called *venereal*, which are produced by excess in venery; and that *syphilitic* should be limited to those which are the result of impure connexion.

(F) *Vénérien*. This term, also, means one labouring under syphilis,—as *Hôpital des vénériens*.

VENERY. Same etymon. The pleasures of love. Sexual communication.

VENOM, *Vene'num*, *Tox'icum*, (F) *Venin*. A poisonous fluid, secreted by certain animals, as the viper, in a state of health, and which they preserve in a particular reservoir, to use as a means of attack or defence. It differs from *virus*, as the latter is always the result of a morbid process, may be produced by the individuals who receive it, in their turn, and be transmitted to others.

VEN'OMOUS, *Venena'tus*, (F) *Venimeux*. An epithet, applied to animals which have a secretion of venom, as the viper, rattlesnake, &c., and, also, to liquids, in the animal body, which have been so perverted by previous disease, that their contact occasions serious mischief in sound individuals;—as happens in hydrophobia.

VENTILA'TION, *Ventila'tio*; from *ventus*, 'wind.' The act of renewing the air of

vessels, hospitals, and apartments, or of situations where many people are collected together. The utility of such renewal must be evident, when it is considered that atmospheric air loses its oxygen during respiration, and that carbonic acid supplies its place. Stagnant air, also, becomes loaded with numerous impurities; and hence one of the greatest hygienic improvements, of modern times, has been a proper attention to circulation of air; and it is one of the most valuable additions to our stock of therapeutical agents in many diseases. Instruments, used for the purpose of renewing the air, in ships, apartments, &c., have been called *ventilators*.

VENTRA'LE CUTA'NEUM, (F) *Tablier*. An elongation of the nymphæ in the Bosjesman female, which hangs down before the vulva like an apron.

VENTRICLE, *Ventric'ulus*; from *venter*, 'belly.' Literally, *a little belly*. A name given, in anatomy, to various parts.

The **VENTRICLES OF THE LARYNX**, *Sac'culi laryngæ'i*, *Sinuses of the Larynx*, (F) *Ventricules ou sinus du larynx*, are two depressions in the larynx, comprised between the superior and inferior ligaments.

The **VENTRICLES OF THE BRAIN**, *Ventriculi seu Cavita'tes seu Sinus Cer'ebr'i*, (F) *Ventricules du cerveau*, are five cavities in the interior of that organ, which are distinguished into the *lateral ventricles*, *middle ventricle*, *4th ventricle* or *ventricle of the cerebellum*, and *5th ventricle*.

The *middle ventricle*, or *3d ventricle*, (F) *Ventricule moyen du cerveau*, is situate in front of the pineal gland. It is bounded, *above*, by the tela choroidea and the fornix; *below*, by a portion of cerebral substance, which separates it from the base of the cranium; *laterally*, by the thalami nervorum opti-corum; *anteriorly*, by a medullary cord, called the *anterior commissure*; and, *posteriorly*, by another medullary cord, called the *posterior commissure*. It communicates with the lateral ventricles by two openings, situate behind the anterior pillar or crus of the fornix.

The **LATERAL VENTRICLES**, *Ventric'uli ma-jor'es*, *V. prio'res*, *V. superio'res*, *V. trico'r-nes*, (F) *Ventricules latéraux*, are two in number. They are large, and owing to their considerable curvature, occupy a great part of the cerebral centre. They are bounded, *above*, by the inferior surface of the corpus callosum; *anteriorly*, by the curved portion of the same body; *posteriorly*, by a considerable mass of cerebral substance; and, *inter-nally*, they are separated from each other by the septum of the ventricles,—a medullary plate, which is given off from the lower part of the corpus callosum. The lateral ventricles have, in their upper and anterior portion, the *Corpora striata*, *Thalami optici*, and *Tenia semicircularis*:—their inferior portion contains the *corpus fimbriatum*, *cornu Am-monis*, &c.

The **FOURTH VENTRICLE**, (F) *Quatrième ventricule*, is situate beneath the *aqueduct of Sylvius*, by which it communicates with the third ventricle. It extends from this aqueduct to the upper part of the medulla; and is seated in the substance of the *tuber annulare*.

The **FIFTH VENTRICLE**, (F) *Cinquième ventricule*, is the small serous cavity between the laminae of the *septum lucidum*;—called, also, *Fissure* or *Fossa of Sylvius* or *Sinus of the septum lucidum*.

The **VENTRICLES OF THE HEART**, *Ventriculi Cordis*, (F) *Ventricules du cœur*, are two in number.

The **RIGHT VENTRICLE**, *Pulmonary ventricle*, *Ventriculus anterior*, *V. primus*, *V. pulmonalis*, (F) *Ventricule droit ou pulmonaire*, is situate on the fore part of the heart, the base and apex corresponding to those of the heart. In it are seen the *Columnae carneae* and *Cordae tendineae*. The right ventricle communicates with the right auricle by the *Ostium venosum*, and from it the *Pulmonary artery* issues. Around the auricular orifice is a tendinous margin or ring, from which the tricuspid valve is given off. The use of the ventricle is to send the blood, by its contraction, along the pulmonary artery to the lungs.

The **LEFT VENTRICLE**, *Ventriculus aorticus*, *V. posterior*, *V. secundus*, (F) *Ventricule gauche ou aortique*, is situate at the posterior and left part of the heart. Its parietes are much thicker and stronger than those of the right, owing to its having to send the blood over the whole system. The inner surface has the same general appearance as that of the right. The *Columnae carneae* and *Cordae tendineae* are, however, much stronger. It communicates with the left auricle by means of the *Mitral valve*; and from it proceeds the largest blood-vessel of the body,—the *aorta*.

VENTRICULUS CALLOSUS. The *gizzard* or *third stomach* of the gallinaceous bird. It consists of a double bellied or *digestric* muscle; is lined by a firm cuticle, and forms a kind of pouch depending from the alimentary tube, in which the second stomach terminates, and from which the duodenum or *Ventriculus succenturiatus* issues. In the interior of the gizzard, there are numerous pebbles, which seem to be destined to aid in the trituration of the food.

The gizzard is an organ of mastication and is possessed of great muscular power.

VEN'ULA, *Phlebon*. A small vein. Hippocrates seems to use it in the same sense as *Arteria*.

VERATRINA, *Vera'tria*, *Ver'atrine*. A vegetable alkali, found in the seeds of the *Veratrum Sabadilla* and in the *Veratrum album* and *Colchicum autumnale*. It is solid, white, pulverulent, and inodorous; of a very acrid taste; decomposable by heat; very soluble in water, and soluble in alcohol. When prepared in the usual manner, it still contains

other substances,—*Sabadillin*, *Veratrin*, gum resin of the *Sabadilla*, and a black greasy matter. It is extremely poisonous and is but little used internally in medicine. Magendie has given it as an emetic and drastic in very small doses. Of late, it has been recommended to be applied in the way of friction, or endermically (from gr. v to xx, to 3 j of lard or cerate,) in various neuralgic affections.

VERATRUM ALBUM, *Helleb'orus albus*, *Elleborum album*, *Cherbachem*, *White hellebore*, (F) *Hellébore blanc*. The root of this common European plant is indebted to the *Veratrine* for its properties. It is inodorous; has a bitterish, acrid, and nauseous taste, and is violently emetic and purgative, even when applied to an ulcerated surface. It is, also, possessed of errhine properties, and acts, externally, as a stimulant. It is rarely exhibited internally. Sometimes it is given as a *sneezing powder*; but it operates with great violence. It forms, also, an itch ointment. See *Ung. Veratri*.

The **VERATRUM SABADIL'LA** or *Sabadilla*, *Canis Interfec'tor*, *Cau'sticum America'num*, *Cevadil'la Hispano'rum*, *Sevadilla*, *Hor'deum caus'ticum*, (F) *Cevadille*. The seeds of this plant have been used, mostly, as anthelmintics. Dose, gr. ij to a child, four years old. It possesses the same general properties as the *veratrum album*.

The **VERATRUM VIRIDE**, *American hellebore*, *Swamp hellebore*, *Indian poke*, *Indian Uncas*, *Poke weed*, *Bear weed*, *Itch weed*, *Tickle weed*, is indigenous in the swampy districts of almost every part of the United States. Its properties are like those of the genus.

VERBAS'CUM NIGRUM, *Black Mullein*, *Cande'la regia*, *Thapsus barba'tus*, *Candela'ria*, *Lana'ria*; and the *Verbas'cum Thapsus*, *great broad leaved Mullein*, *High Taper*, *Cow's Lungwort*, or *Yellow Mullein*, (F) *Molène*, *Bouillon blanc*. Family, *Solanææ*. Sex. Syst. *Pentandria Monogynia*.—especially the latter,—have been used as emollients, applied externally, in the form of fomentation. The large leaves have been chosen for this purpose. Occasionally, the mucilage, which they contain, has been extracted by decoction or infusion, and administered in pectoral affections.

VERBENA OFFICINA'LIS, *Verbena*, *Dichro'mos*, *Verbena'ca*, *Periste'rium*, *Hierobot'anè*, *Herba sacra*, *Vervain*, (F) *Verveine*. Family, *Pyrenaceæ*. Sex. Syst. *Dianthria Monogynia*. A plant, formerly held sacred; used in sacrifices, and suspended round the neck as an amulet. In the form of cataplasm, it is said to have relieved obstinate headaches, and to have been of service in scrophula. It is not used.

VERCOQUIN, *Phreni'tis vermino'sa*. A kind of phrenitis, attributed to the presence of a worm in the brain!

VERGETURES (F), from (F) *verge*, 'a

rod.' Linear, reddish impressions, similar to those which would be produced by the strokes of a rod, and which are seen in some diseases.

VERJUICE, *Omphacium*, (F) *Verjus*. A sour kind of grape. Also, an acid liquor prepared from very sour grapes or crab-apples. It is principally used in culinary preparations; although, occasionally, an ingredient in medicinal compounds.

VERMICULUM, *Vermiculum*. An elixir: a tincture.—Ruland and Johnson.

VERMIFORM, *Vermicular*, *Vermicularis*, *Vermiformis*, from *vermiculus*, 'a small worm.' That which resembles a worm.

The **PROCESUS VERMIFORMES**, *Protuberantiae vermiformes*, *Appendices vermiformes*, (F) *Eminences vermiformes du cervelet*, are two medullary projections, at the surface of the cerebellum.

The *superior vermiform process*, *Vermis superior cerebelli*, is an elongated projection, at the anterior and middle part of the superior surface of the cerebellum;—and the *inferior vermiform process*, *Vermis inferior cerebelli*, is a somewhat large projection, situate in the depression at the inferior surface of the same organ.

The anterior portion of the superior vermiform process is elevated, and termed *Monticulus*.

VERMINOUS, *Vermineus*, (F) *Vermineux*. That which is caused by worms; as a *verminous affection*.

VERONIA ANTHELMINTICA, *Ascaricida anthelmintica*, *Calagirah*, *Calageri*. A plant, which is indigenous in India. *Family*, *Compositae*. *Sex. Syst.* Syngenesia Polygamia superflua. It has great celebrity in the East Indies, and is a bitter tonic; but the seeds are chiefly used as an anthelmintic, in cases of ascarides and lumbrici in children.

VERONICA, *Veronica officinalis*, *Veronica mas*, *Thea Germanica*, *Betonica Pauli*, *Chamaedrys*, *Male Veronica*, *Fluellin*, *Official Speedwell*, (F) *Véronique*, *Thé d'Europe*. *Family*, *Rhinanthodeae*. *Sex. Syst.* *Dianthia Monogynia*. This plant was once used as a pectoral.

VERONICA BECCABUNGA, *Beccabunga*, *Anagal'lis aquatica*, *Laver Germanicum*, *Veronica aquatica*, *Cepaea*, *Water Pimpernel*, *Brooklime*, *Brooklime Speedwell*, (F) *Véronique cressonnée*. This plant was formerly used in a variety of diseases. It is, however, almost insipid and inodorous; and has been long banished from practice.

VERRUCA, *Ecphy'ma verruca*, *Phymatosis verrucosa*, a Wart, (F) *Verrue*. A small, hard, mammillary tumour, which forms at the surface of the skin, and particularly on that of the hands and face. Warts are generally rugous at the surface, and broad at the base; their roots being implanted in the dermis by whitish filaments, which are dense, semifibrous, and very numerous.

Warts may be destroyed by caustic or removed by excision. Their vitality is, generally, not great.

VERTEBRÆ, *Spondyli*, (F) *Vertèbres*; from *vertere*, 'to turn.' This name has been given to the bones, which, by their union, form the vertebral or spinal column. The vertebræ are short, thick, very angular bones; 24 in number, and situate one above another. The *body* of the vertebra is the middle and anterior portion. Above and below, it is articulated, by means of a fibro-cartilage, with the contiguous vertebræ. The *Processes*, *Masses apophysaires*, of each vertebra are: 1. The *spinous process*, situate behind, and in the median line. 2. The two *transverse processes*, standing off from each side. 3. The *four articular processes*—two *superior*, and two *inferior*—which serve to unite the vertebræ with each other. These transverse and articulating processes are made continuous with the lateral and posterior parts of the body of the vertebra by narrow bony portions or pedicles, on each of which are notches. These, by their union with similar notches in the contiguous vertebræ, form the *lateral foramina*, (F) *Trous de conjugaison*, through which the spinal nerves leave the vertebral canal.

The different processes are united with each other, so as to form a kind of ring of the lateral and posterior parts of the vertebra; and the foramen, within this, i. e. between the body and processes, concurs in forming the vertebral canal.

The vertebræ have particular characters, according to the regions they occupy. They are divided into seven *cervical*, twelve *dorsal*, and five *lumbar*.

The first cervical is called *atlas*; the second, *axis* or *vertebra dentata*; and the seventh, *vertebra prominens*.

The vertebræ are articulated with each other. Those of the back are joined, moreover, to the ribs. The first or *atlas* is articulated with the occipital bone; and the last lumbar vertebra with the sacrum.

The cervical vertebræ are developed by nine points of ossification; the dorsal and lumbar by eight.

VERTEBRAL, *Vertebra'lis*. That which relates or belongs to the vertebræ.

The **VERTEBRAL COLUMN**, *Rachis*, *Rhachis*, *Notos*; the *Spine*; the *back bone*, *Acantha*, *Cari'na*, *C. hom'inis*, *Spina dorsi seu vertebralis*, *Colum'na spina'lis*, *C. vertebralis*, *C. dorsi*, *Spina*, *Dorsum*, *Tergum*, *Compages Vertebra'rum*, *Acantha*, *Sacro fistula*, *Hiera Syrinx*, (F) *Colonne vertebrale*, *Épine du dos*, *Échine*. A kind of bony column, situate at the posterior and central part of the trunk; extending from the head to the sacrum; flexible in every direction, yet very solid; and hollowed by a canal called *vertebral*, which gives it lightness

without diminishing its strength, and runs through its whole length.

The vertebral column is formed by the superposition of the vertebræ. It represents a pyramid, whose base is below. Anteriorly, it is convex in the neck; concave in the back, and convex, again, in the loins. Behind, the curvatures, are of course the reverse of these. There is also in the dorsal region, a lateral curvature, the concavity of which is towards the left side.

Considered as a whole, the vertebral column has an *anterior* or *prespinal* surface; a *posterior* or *spinal*; two *lateral*; a *base*, and an *apex* or top. In the nomenclature of Chaussier, the anterior surface, in the neck, is called *trachelian*; in the back, *predorsal*; and, in the loins, *prelumbal*. The dorsal surface has, at its middle, the spinous processes; and, at its sides, the *vertebral gutters*, (F) *Gouttières vertebrales*, formed by the succession of the *vertebral plates*, (F) *Lames vertebrales*, which, by their junction, constitute the spinous processes. These are filled by the sacro-spinalis muscle. The sides or lateral surfaces present the foramina, resulting from the union of the *vertebral notches*, (F) *Échancrures vertebrales*. These are called *vertebral foramina*, (F) *Trous de conjugaison*, and give passage to the *vertebral nerves*. The base of the vertebral column is oblique, to unite with the sacrum; and forms with it an angle, called *sacro-vertebral angle* or *promontory*. The *apex* or top of the vertebral column is articulated with the occipital bone. Sometimes, the term *vertebral column* includes the whole of the column from the occipital bone to the extremity of the coccyx.

The VERTEBRAL OF SPINAL CANAL, *Rachidian Canal*, exists through the whole of the vertebral column, whose curvatures it follows. It is continuous, above, with the cranium; below, with the sacral canal, if we consider the vertebræ to terminate at the sacrum. It is lined by a prolongation of the meninges, forming the *Theca vertebralis*, and lodges the spinal marrow.

The vertebral column, which unites lightness with solidity, serves to support the head and chest. It is the seat of all the movements of the trunk, the weight of which it transmits to the pelvis. It lodges and protects the spinal marrow, and gives passage to the vertebral nerves, and to numerous vessels.

The VERTEBRAL LIGAMENTS, (F) *Ligamens vertebraux*, *Surtouts ligamenteux de la colonne vertébrale*, are distinguished into *anterior* and *posterior*. They consist of long, ligamentous coverings; the *anterior* occupying the anterior part of the vertebral column; and the *posterior* seeming to arise from the occipito-axoid ligament, and existing, behind the bodies of the vertebræ, from the axis to the sacrum.

The VERTEBRAL ARTERY, *Posterior cerebral artery* (Ch.), is the largest of the branches of

the subclavian. It arises from the posterior part of that vessel; is lodged in a canal, (F) *Petit canal vertébral*, formed by the foramina in the transverse processes; enters the cranium, and proceeds to anastomose with its fellow of the opposite side, and to form the *Basilar artery*, (q. v.) Besides the branches sent to the neck, the vertebral artery gives off—the *anterior* and *posterior spinal arteries*, and the *inferior cerebellous*, in the cavity of the cranium.

The VERTEBRAL OF SPINAL NERVES spring successively from the spinal marrow; from its origin to its termination. These nerves—30 pairs in all—arise by two roots; one *anterior*, and the other *posterior*, and afterwards issue by the vertebral and sacral foramina. Each of these roots seems to have a distinct function; the *posterior* being destined to convey sensation to parts; the *anterior*, motion. On the posterior root, before its junction with the anterior, there is a ganglion.

Of the 30 pairs, 7 are *cervical nerves*, 12 *dorsal*, 5 *lumbar*, and 6 *sacral*. See Nerves.

VERTEBRAL DISEASE, *Rachial'gia* (of some), *Caries of the Vertebræ*, *Spondylarthroc'acé*, *Spondyloc'acé*. The spinal column is liable to distortion, (see Hump) at times, without the vertebræ being much, if at all, diseased. At other times, a more formidable affection is induced; the vertebræ becoming carious, and the intervertebral cartilages ulcerated; followed by a more or less complete loss of power over the lower extremities. In such case, on examining the spine, one or more of the spinous processes is found to project beyond the rest. The disease was first well described by Mr. Percival Pott; and, hence, it has been called, by the French, *Maladie de Pott*. It usually occurs in scrophulous subjects, and the treatment consists in establishing a counter-irritation by blisters, issues, or the moxa, opposite the transverse processes of the diseased vertebra. The sore must be suffered to remain open, and the patient kept in the horizontal posture until the use of the limbs is recovered; employing tonics—the free admission of fresh air, &c. at the same time.

VERTEX, *Cor'yp'hē*. The top or highest part of the head. See Sinciput.

VERTIGO, from *Ver'tere*, 'to turn;' *Dinos*, *Ilin'gos*, *Giddiness*, *Dizziness*, *Dinus vertigo*, *Hallucinatio vertigo*, *Autal'gia vertigo*, *Swimming of the head*, (F) *Vertige*, *Étourdissement*. A state in which it seems that all objects are turning round; or that the individual himself is performing a movement of gyration. Two varieties have been designated;—*simple vertigo*, where the objects are seen; and *scotodynia*, in which the sight is obscured, and the individual often falls. Vertigo is dependent upon the condition of the brain; and often announces an attack of apoplexy or epilepsy.

VESA'NIA, *Vesa'niæ*. Derangement of

the intellectual and moral faculties, without coma or fever. Many nosologists have used this as a generic term; under which they have included the different species of mental alienation, hypochondriasis, somnambulism, and even hydrophobia. See Nosology.

VESICAL, *Vesica'lis*. That which belongs or relates to the bladder.

The **VESICAL ARTERIES** vary in number and origin. The umbilical artery always sends off two or three: the middle hemorrhoidal, internal pudic, and obturator furnish others, which ramify and anastomose in the parietes of the bladder; the hypogastric furnishes one, which is somewhat larger, the *Vesico-prostatic* (Ch.), and proceeds to the *bas-fond* of the bladder, sending numerous ramifications to it as well as to the surrounding parts.

The **VESICAL VEINS**, much more numerous than the arteries, open into the hypogastric plexus.

VESICO-VAG'INAL *Vesi'co-vagina'lis*. Relating to the bladder and the vagina;—as *vesico-vaginal fistula*.

VESICULA, *Cystinx*, a diminutive of *vesica*, 'a bladder.' A small bladder.

The **VESICULÆ SEMINA'LES**, *V. Semina'ria* seu *spermat'ica*, *Cap'sula semina'les*, *Conce'pta'cula semina'ria*, (F) *Vésicules séminales*, *Gardouches*, *Greniers*, are two small membranous sacs, which serve as reservoirs for the sperm, and probably secrete a fluid to be mixed with the sperm. They are situate beneath the bladder, and above the rectum, behind the prostate, and to the outer side of the vasa deferentia. They are of an irregular conoidal shape; flattened from above to below; embossed on their surface, and of a grayish tint. Their *posterior extremity* or *fundus* terminates by a round cul-de-sac. Their *anterior extremity* or *neck* is narrow and elongated, and is continuous with the excretory duct of the vesicula. This duct joins the vas deferens, and forms with it the ejaculatory duct. The interior of the vesiculæ exhibits several cells, which communicate with each other, and are lined by a very thin, mucous membrane.

VESIC'ULA UMBILICA'LIS, *Umbilical Vesicle*, *Vesicula alba* seu *om'phalo-mesenter'ica* seu *œnigmatosa* seu *ova'lis*, *Vesi'ca intestina'lis*, *Intestinal Vesicle*, *Vitelline Pouch*. A small, pyriform, round or spheroidal sac, which, about the 15th or 20th day after fecundation, is of the size of a common pea, and probably acquires its greatest dimensions in the course of the 3d or 4th week. After the 7th week, it becomes shrivelled and disappears insensibly. It seems to be situate between the chorion and amnion, and is commonly adherent either to the outer surface of the amnion, or to the inner surface of the chorion, but at times is loose between them.

The *vitelline pedicle*, which attaches the vesicle to the embryo is continuous with the

intestinal canal; and, up to twenty or thirty days of embryonic life, is hollow. Its arteries are the omphalo-mesenteric, (q. v.)

The *vitelline fluid*, contained in the vesicle, has been compared, from analogy, to the *vitellus* or yolk of birds, and—like it—is an oleaginous substance, and presumed to be inservient to the nutrition of the embryo.

In Pathology, *Vesic'ula*, *Ves'icle*, *Ec'phlysis*, *Cys'tinx*, means a small orbicular elevation of the cuticle, containing lymph, which is sometimes clear and colourless, but often opaque and whitish or pearl-coloured. It is succeeded, either by a scurf, or by a laminated scab.

VESICULÆ constitute the 6th order of Bateman's classification of *Cutaneous diseases*.

VESSEL, *Vas*, *Angei'on*, *Angos*, (F) *Vaisseau*. A canal, more or less elastic, formed by the superposition of several membranes, and distinguished, according to its uses and general arrangement, into *Artery*, *Vein*, and *Lymphatic*, (q. v.) See, also, *Vascular*.

VES'TIBULE, *Vestib'ulum*, (F) *Vestibule*. A cavity of an irregular shape, which forms part of the labyrinth or internal ear. The vestibule is situate on the inner side of the tympanum; on the outer side of the meatus auditorius internus; before the semicircular canals, and behind the cochlea. It is lined by a particular membrane, and contains the liquor of Cotunnus and branches of the auditory nerve. There is also another membrane, constituting the *membranous vestibule*, but it is not an exact imitation of the osseous cavity. It is composed of two distinct sacs, which open into each other—the *sacculus vestibuli*, and the *sacculus* (q. v.) There are three contiguous *cavities* in the vestibule, one of which, the *semi-oval*, is situate above: another, the *hemispherical*, below; and the third or *sulciform*, which is the orifice of the aquæductus vestibuli, behind.

VESTIB'ULUM is, also, a smooth cavity between the perinæum and nymphae in the female, which leads to two passages;—to the urethra above, and to the vagina below.

VESTIGE (F), *Vestigium*, 'a vestige,' 'a trace.' A kind of fracture of flat bones, consisting of a simple incision having the mark of the instrument that caused it.

The term is, also, applied to a part of the body, which may have no evident use in man, and yet may be greatly employed in animals. For example, the muscles of the external ear in man are almost devoid of use, or are *vestiges* of what they are in certain animals.

VESTI'TUS, *Esthe'ma*, *Esthe'sis*, *Clothing*, *Res vestia'ria*, *Dress*, *Vesture*, (F) *Vêtement*. Any substance used for the purpose of covering our nakedness, or preserving us from atmospheric temperature, by being worn on the body. The best clothing in winter is composed of articles, that are bad conductors of caloric, and do not admit of ready evaporation of the matter of perspira-

tion. In this respect woollen vestments deserve the first place and cotton the second. Colour has likewise to be regarded,—the darkest hues transmitting the heat most readily through them. It has been found that the same rule applies to odours—the darker colours retaining a greater amount of odorous particles than the lighter. Hence, the necessity of white walls, white bed-clothes, &c. in the wards of hospitals, for it is probable the like law applies to contagious miasms.

VIABLE, *Viabilis*, from *via*, 'way;' or from *vie* (F), 'life' (Orfila.) A word, which may be introduced, with great advantage from the French into our language. It is an epithet, applied to a fœtus, whose organs are properly formed, and so developed as to permit its continued existence. Every fœtus is not *viable*. Anencephali have lived ten or twelve days, yet they are not viable;—a part or the whole of the brain being wanting. The older the fœtus, the more viable is it. It is an idle prejudice that a child, born at the end of eight months, is less likely to live than one born at the end of seven. The signs of *viability* are drawn from the weight, length, external conformation, &c. of the fœtus. It may be laid down as a general rule that no fœtus, born before the end of the seventh month, is viable.

VIBICES, *Molops*. Large purple spots, like the marks produced by the strokes of a whip, which appear under the skin in certain malignant fevers. They are unfavourable indications, as they denote great prostration.

VIBRATORY, *Vibrative*, *Vibrans*, (F) *Vibratile*, from *vibra'rê*, 'to quiver.' An epithet applied to the pain that accompanies some neuralgiæ; and which seems to the patient to vibrate along the nerves.

VIBRISÆ. The hairs, which grow at the entrance of the nostrils.

VIC-LE-COMTE, MINERAL WATERS OF. Vic-Le-Compte is a small village in the department of Puy-de-Dôme, three leagues from Issoire; where there is an acidulous chalybeate, which is aperient.

VICHY, MINERAL WATERS OF. Carbonated chalybeates, the sources of which are at Vichy, six leagues from Moulins, in the department of Allier. The springs are seven in number. Almost all are thermal; give off bubbles of carbonic acid gas, and have a slightly sulphureous odour. They deposit carbonates of lime and magnesia, and a little oxide of iron; and afford, on analysis, carbonates of lime, soda, iron, and magnesia, carbonic acid, sulphate and muriate of soda. They are employed as tonics, particularly in chronic affections of the abdominal viscera, in old catarrhs, diseases of the joints, &c.

The **FACTITIOUS VICHY WATER**, *Aqua Viciensis*, (F) *Eau de Vichy*, is made of simple *acidulous water*, impregnated with twice its bulk of *carbonic acid*, 3 xxss; *subcarbonate*

of soda, gr. xxxij; *sulphate of soda*, gr. xvj; *muriate of soda*, gr. iv; *subcarbonate of magnesia*, gr. ss; *muriate of iron*, gr. ½. Mix. Ph. P.

VIC'IA FABÆ. The *Common Garden Bean*, (F) *Fève ou fève des marais*. Family, Leguminosæ. Sex. Syst. Diadelphia Decandria. A native of Egypt, of which there are many varieties. Beans are not easy of digestion. They are proverbially flatulent, especially when old. When young, they are more digestible and wholesome. Bean meal was one of the four resolvent meals of the ancients.

VILLOUS, *Villo'sus*, from *villus*, 'a hair.'

VILLOUS MEMBRANES OR COATS, *Velamentata Bombyc'ina*, (F) *Membranes villeuses*, *Membranes veloutés*, are such as are covered with soft papillæ, or *Villi*, *Flocci*, *Floc'culi*, *Vesiculæ*, *Cylindri*, *Tubi Membrana'cei*,—constituted of blood-vessels, nerves, and absorbents; or such as are covered with fine down, so as to cause them to feel soft and velvety. The term is, however, chiefly restricted to the former. Chaussier gives the name *simple villous membranes* to the serous membranes; and that of *complicated or follicular villous membranes* to the mucous membranes.

These villi are endowed with *ciliary motions*, (q. v.)

VINCA MINOR, *Vinca pervin'ca*, *Clem'atis daphnoï'des major*, *Lesser periwinkle*, (F) *Pervenche*, *Violette des Sorciers*. It has bitter and astringent properties, and has been used in gargles, and diseases of the chest.

VINUM MEDICIN'ALE. A *Medicated Wine*. Wine, holding in solution one or more medicines. Medicinal wines are obtained by macerating or digesting medicinal substances in wine. They differ, of course, according to the nature of the medicine employed, the strength of the wine, &c.

In the last Pharmacopœia of the London College, all the wines have been changed into weak tinctures; but the old names have been left unaltered. Sherry is the wine usually employed.

VINUM ALOES, *V. aloës socotori'næ*, *Vinum aloët'icum*, *V. ar'o'mo-aloët'icum*, *Wine of Aloes*, *Tinctu'ra hiera*, *Tinctura sacra*. (*Aloës spicat. extract.* 3 viij, *canellæ corticis* 3 ij, *vini* ℥ vj, *sp. tenuioris* ℥ ij. Macerate for 14 days, and strain. Ph. L.) Purgative and stomachic, according to the dose. Dose, 3 j to 3 ij.

VINUM ABSINTH'ITES, *Wine of Wormwood*. (*Fol. absinth. exsicc.*, *absinth. Pontic.*, aa 3 vj, *vini albi* ℥ iv. Macerate for 24 hours, and strain. Ph. P.) Stimulant, tonic, febrifuge, vermifuge, &c.

VINUM ANTIMO'NII TARTARIZA'TI, *V. tartritis antimonii*, *Solu'tion of tar'tarized antimony*, *Essen'tia antimonii seu stib'ii*, *Antimonial wine*, *Vinum benedic'tum*, *Vinum antimoniatum* *Huxha'mi*, *V. antimoniale*, *Aqua benedic'ta Rulan'di*, *Vinum emet'icum*.

(*Ant. tart.* ʒ j, *aq. distillat. ferv.* 3 viij, *sp. rectific.* 3 ij. Dissolve the tartarized antimony in the water, and add the spirit.)

The ordinary *Antimonial wine* is made with *glass of antimony* 3 j, *sherry* ℥ iss.

WARD'S RED DROP consists of a strong vinous solution of *tartarized antimony*.

VINUM ANTISCORBU'TICUM, *Antiscorbutic wine.* (*Rad. armoraciæ recent.* 3 j, *fol. cochleariæ recent., nasturtii aquat., trifol. aquatic., semin. sinap.,* āā 3 ss, *ammoniæ muriat.* 3 ij, *vin. albi* ℥ ij. Macerate for 36 hours; filter, and add *tincturæ cochlear.* 3 ss. *Ph. P.*) Stimulant and tonic. Dose, 3 ss to 3 ij.

VINUM AROMAT'ICUM, *Aromatic wine.* (*Species aromatic.* 3 iv, *vin. rubr.* ℥ ij. Macerate for 6 days, and filter. *Ph. P.*) Stimulant, and tonic. Used, externally, in fomentations, embrocations, &c.

VINUM DIURET'ICUM AMA'RUM, *Vinum amarum scillit'icum compos'itum in Charita'tis Nosocomi'o usurpa'tum, Bitter diuretic wine.* (*Cort. cinchon., winteran., limon.,* āā 3 ij, *rhus toxicodendr., scillæ, cacumin. angelicæ,* āā 3 ss, *fol. absinth., melissæ,* āā 3 j, *baccar. junip., macis,* āā 3 ss, *vin. alb.* ℥ viij. Macerate and filter. *Ph. P.*) Stimulant, tonic, and diuretic. Dose, 3 ss to 3 iss.

VINUM COL'CHICI, *Wine of Colchicum, Tinctura colchici, Want's Eau d'Husson.* (*Colchic. rad. recent,* ℥ j, *sp. tenuior.* 3 iv, *aquæ distillat.* 3 viii. *Ph. L.*) Diuretic, sedative, and purgative. Chiefly used in gout. Dose, gtt. 40 to 3 j.

Reynolds's Specific for gout and rheumatism consisted of the fresh bulb of *Colchicum* 3 viij, *Sherry wine* 3 xvj. The colchicum was macerated for eight or ten days in the wine, in a gentle heat; coloured with *syrup of poppies* and flavoured with *rum*. Reynolds is said to have killed himself by taking an over dose of it.

VINUM FERRI, *V. chalybeu'tum, Steel wine, Wine of iron, Vinum ferra'tum, V. martia'tum, V. Martis, Tinctura Martis vino'sa, Tinctura Martis cum vino.* (*Iron* 3 j, *supertartrate of potass,* in powder, 3 vj, *distilled water* ℥ ij or q. s., *proof spirit* 3 xx. Rub the iron and supertartrate of potass together, and expose to the air in a flat vessel, moistened with a fluid ounce of water for a fortnight; agitating every day with a spatula, and sprinkling it with water, to keep it moist. Then dry with a gentle heat, and mix with 3 xxx of *distilled water*. Filter the fluid, and add the spirit. *Ph. L.*) Tonic. Dose, 3 j to 3 iv.

It is sometimes made by adding *two pints of wine* to *two ounces of iron filings*:—macerating and filtering.

VINUM GENTIA'NÆ COMPOS'ITUM, *V. amarum, Compound wine of Gentian, Infu'sum ama'rum vino'sum, Vinum amarum cum spiritu vini, Wine bitters.* (*Rad. gentian. luteæ* 3 ss, *cort. cinchon. offic.* 3 j, *cort. aurant.* 3 ij,

canellæ alb. 3 j, *alcohol. dilut.* 3 iv, *vini alb. Hispanic.* ℥ ijss. *Ph. E.*) Dose, 3 j to 3 vj.

VINUM IPECACUANHÆ, *Ipecacuan'ha wine.* (*Rad. ipecacuan. cont.* 3 ij, *vini* ℥ ij. *Ph. L.*) Emetic, and diaphoretic. Dose, as an emetic, 3 iv to 3 x.

VINUM DE KINA KINA COMPOS'ITUM, *V. cincho'næ compositum, Compound bark wine, (F) Vin de quinquina composé. (Cort. cinchon. pulv.* ℥ ss, *quassiæ, cort. winteran., cort. aurant. sicc.,* āā 3 ss, *alcohol* (12° to 22° Beaumé) ℥ j. Macerate for 24 hours; and add *vini albi* ℥ vj. Macerate for four days, and filter, *Ph. P.*) Tonic, febrifuge, and stomachic. Dose, 3 ss to 3 ij.

VINUM OPII, *Wine of Opium, Vinum de opio compos'itum, Laudanum liquidum Sydenha'mi, Laudanum liquidum Hoffman'ni, Tinctura Thebaica, &c., Ford's laudanum.* (*Ext. opii* 3 j, *cort. cinnam. cont., caryoph.* cont. sing. 3 j, *vini* ℥ j. *Ph. L.*) Narcotic. Dose, gtt. xv to 3 j.

VINUM QUINI'NÆ, *Wine of Quinine. (Wine* ℥ ij, *sulphate of quinine gr. x. Mix.)* Dose, 3 iss or more; according as it is used for a stomachic, or to arrest ague. A *Vinum Cinchoninæ* may be made in the same way.

VINUM RHEI PALMA'TI, *Rhubarb Wine, Tinctura Rhubar'bari Vino'sa, Vinum Rhubarbari, Elixir Rhei dulcè, E. R. Compos'itum.* (*Rad. rhei concis.* 3 ij, *cort. canellæ* cont. 3 j, *alcohol. dilut.* 3 ij, *vini alb. Hispan.* 3 xv. *Ph. E.*) Laxative and stimulant. Dose, 3 iv to 3 iss.

VINUM TAB'ACI, *Vinum Nicotia'næ Tabaci, Tobacco Wine. (Folior. nicotian. tabac.* 3 j, *vini alb. Hispanic.* ℥ j. *Ph. E.*) Narcotic, diuretic, and antispasmodic. In dropsical cases, colica pictonum, and ileus. Not used. Dose, gtt. xx to xxxvj.

VINUM VERA'TRI, *Wine of White Hellebore. (Rad. veratr. concis.* 3 viij, *sp. ten.* ℥ j, *aquæ distillat.* ℥ iss. Macerate for 14 days. *Ph. L.*) In cutaneous affections, and in gout. Dose, 3 ss to 3 ij.

VI'OLA, *Viola adora'ta, Ion, Matrona'lis, Viola'ria, the Sweet Violet, (F) Violette à bouquets, V. odorante.* The flowers of the sweet violet have a pleasant, peculiar odour, and scarcely any taste. They are slightly laxative.

VIOLA CANI'NA. The Dog Violet. The root of this plant is emetic and cathartic. Dose, ʒ j.

VIOLA TRICOL'OR, *Heart's ease, Pansies, Ja'cea, Herba Trinita'tis, (F) Pensée, P. sauvage.* The decoction of this beautiful little plant has been recommended in diseases of the skin, &c. Its roots are, also, emetic and cathartic.

VIRGIN'IA, MINERAL WATERS OF. There are several celebrated mineral springs in Virginia, on the Western side of the Blue Ridge. Two Thermal springs exist in Bath county. The Warm Spring, as it is called, issues with a bold stream, sufficient to turn a

mill, and to keep the water of its basin at the temperature of 97°. The *Hot Spring* is a few miles from the Warm. Its temperature is 107°. They are both slightly sulphureous.

The *Sweet Springs* are at the Eastern foot of the Alleghany, in Botetourt county; and 42 miles from the Warm Springs. The water has a temperature of 70° and is highly impregnated with carbonic acid. The *White Sulphur*, as well as the *Red Sulphur*, and *Salt Sulphur Springs*, are also much celebrated. The Red Spring is affirmed to exert a sedative influence on the pulse, diminishing the number of its beats. About 15 miles from Staunton is *Stribling's Springs*—a sulphuretted water; and near Warrenton, in Fauquier county, there is a sulphureous water, called Lee's Springs, which is much frequented.

VIRGIN'S MILK, *Lac Vir'ginis*, *Lac Virginal'e*, (F) *Lait virginal*. A tincture of Benjamin or of any other balsam, precipitated by the addition of water, which gives it a milky appearance. Also, subacetate of lead precipitated by water. It has been used as a cosmetic to remove freckles, &c.

VIRULENT, *Virulen'tus*. *Viro'sus*. That which is of the nature of a virus or which is caused by a virus.

VIRUS. A Latin word, which signifies poison; but which, in medicine, has a somewhat different acceptation.

By it is understood—a principle, unknown in its nature and inappreciable by the senses, which is the agent for the transmission of infectious diseases. Thus we speak of the *variolic*, *vaccine*, and *syphilitic virus*. *Virus* differs from *venom*, in the latter being a secretion natural to certain animals, whilst the former is always the result of a morbid process;—a *morbid poison*.

VIS MEDICA'TRIX NATU'RÆ, *Vis conservatrix*, *Autocrati'a*, (q. v.) *Autonom'ia*, *Autocratoria Physiat'ricē*, *Physioautocrati'a*. A term, employed, by some, to express that instinctive, healing power in an animal or vegetable, by virtue of which it can repair injuries inflicted upon it or remove disease.

VIS MOR'TUA. Under this name, Haller included the mechanical properties of membrane,—flexibility, extensibility, elasticity, &c., which are totally independent of the vital properties. They remain some time after the complete extinction of life in all its functions; seem to be connected with the mechanical arrangement of particles and the chymical composition of the substance in which they reside, and not to be affected until the progress of decomposition has become sensible.

VISCUM ALBUM, *Mist'letoe*, *Ixos*, *Ix'ia*, *Dabach*, (F) *Gui*. A parasitic plant, which grows on a number of trees. *Family*, *Caprifoliacæ*. *Sex. Syst.* *Diœcia Tetrandria*. That of the oak—*Viscum quercinum*—has been most celebrated, but it does not differ

from the others. It was, at one time, much used in epilepsy and other neuroses;—the wood or leaves being given in powder, in the dose of 3 ss or 3 j. The berries, also, called *Pommes hemorrhoidales*, from their supposed virtues, are drastic; and, when applied externally, maturative.

VISION, *Vis'io*, *Visus*, *Opsis*, (F) *Vue*. The action of seeing. The sight. The sight is one of the five senses; and the eye is its organ. By it we distinguish colours and appreciate most of the physical qualities of external objects. The eye is composed of different transparent media, whose curvatures and refractive powers are so combined as to render insensible the aberrations of sphericity and refrangibility, and to concentrate the luminous rays proceeding from more or less distant objects. These rays traverse, successively, the transparent cornea, the aqueous humour, the crystalline, the vitreous humour, and strike upon the retina, on which they impress the figure of the object whence they have emanated; and, in order that no obscurity may arise from the reflections, that might otherwise occur, the interior of the eye is lined by a membrane—the choroid—which is, itself, covered internally by a dark pigment. This absorbs the light, exactly like the dark pigment in the interior of telescopes, and thus obviates confusion. As the rays, proceeding from an object, must cross each other in their course to the retina, it follows, that those, proceeding from the upper part of an object, must fall upon the lower part of the retina and conversely. So that the object must be impressed upon the retina, in an inverted position, yet experience teaches us to appreciate the position accurately.

VIS'UAL, *Visua'lis*. That which concerns the sight or belongs to vision.

The **VISUAL ANGLE** is the angle, formed by the crossing of two rays,—proceeding from opposite points of any body,—in their passage through the pupil. It is by the size of this angle, that we judge, to a certain extent, of the size of objects.

VITAL PRIN'CIPLE. The principle which, when allied to matter, as in organized bodies, controls its manifestations and properties, and distinguishes organized matter from the inorganic. We know nothing of this principle, except in its connexion with organization.

VITELL'INE, *Vitellinus*, from *vitellus*, 'the yolk of an egg.'

The **VITELLINE PEDICLE** is the pedicle, which attaches the umbilical vesicle to the embryo. See *Vesicula Umbilicalis*.

VITEX, *V. Agnus Castus*, *Agnus Castus*, (F) *Gattilier*, *Petit Poivre*, *Poivre sauvage*. *Family*, *Pyrenacæ*. *Sex. Syst.* *Didynamia Angiospermia*. The *Chaste Tree*. The seeds, when fresh, have a fragrant smell and an acrid, aromatic taste. Formerly, they were celebrated as antaphrodisiacs.

VITIS CORINTHIACA. *Family of the Vines. Sex. Syst. Pentandria Monogynia.* This plant affords the *Uvæ pas'sæ mino' res*, *Passæ Corinthiacæ*, *Pas'sulæ mino' res*, *Uvæ Corinthiacæ*, or *Currants*, (F) *Raisins de Corinthe*. They are the dried fruit of the *Vitis Corinthiaca* or *Vitis apyrena*; and are similar, in their properties, to the raisin.

VITIS VINIFERA, *Am'pelos*, *A. Cœnoph'oros*. The *Grape vine*, the *Vine*. (F) *Vigne*. Vine leaves and the tendrils have an astringent taste, and were formerly used in diarrhœas, hemorrhages, &c. The juice or sap, called *Lack'ryma*, has been recommended in calculous disorders and in cases of chronic ophthalmia. The juice of the unripe fruit is called *Verjuice*, (q. v.) The *Grape*, *Uva*, *Botrys*, *Staph'ylé*, (F) *Raisin*, when ripe, is a wholesome, delicious fruit; and, when dried, they form the *Uvæ passæ majores*, *Passulæ majores*, *Uvæ passæ solè sicca'tæ*, *Raisins*. These are inodorous; and, to the taste, subacidulous, sweet, and mucilaginous. They are demulcent and nutritive.

VITRINE AUDITIVE (F), from *vitrum* 'glass.' The fluid contained in the *membranous labyrinth* of the ear, so called from its resemblance to the *vitreous* humour of the eye.

VITRUM, *Hy'alos*, *Glass*, *Brancia*, (F) *Verre*. Glass, coarsely powdered, has been sometimes used to remove specks of the cornea.

Powdered glass has been regarded, but erroneously, as a poison. It acts only mechanically.

The saline scum, which swims on glass when first made, has been used in tooth-powders. It is called *Sandiver*, *Sel de verre*, *Glass Gall*, *Fel vitri*, &c.

VIVIP'AROUS, from *Vivus*, 'alive,' and *pario*, 'I bring forth.' An epithet applied to animals whose young are brought forth detached, without requiring to be hatched, as in the *Oviparous*.

VIVISEC'TION, *Vivisec'tio*; from *vivus*, 'alive,' and *seca're*, 'to cut.' The act of opening or dissecting living animals.

VOICE, *Vox*, *Audē*, *Phonē*, (F) *Voix*. An appreciable sound, produced by the air, when driven from the lungs, throwing the inferior ligaments of the glottis into vibration. The function, by which this is effected, has been called *Phona'tion*. It is a function of *animal* life; and, in animals, is limited to the production of the *simple* or *instinctive* voice, as well as in the idiot; but, in intellectual man, becomes much more complicated and articulated—an evidence of his intellectual superiority.

The **ARTICULATED VOICE** or *Speech*, *Lo-que'la*, *Lalia*, *Phrasis*, (F) *Parole*, *Voix articulée*, is the voice, as produced by the glottis, modified by the motions of the tongue, lips, and other parts of the mouth. Most physiologists agree in regarding the glottis or the space between the thyro-arytenoid liga-

ments plus the ligaments themselves, as the part where vocal sounds are formed, but the mechanism of this formation is a matter of dispute. The greater part of individuals regard the glottis and its ligaments, with the *vocal tube*—or the space which the sound has to traverse after it is produced in the glottis—as a reed instrument, like the clarionet;—the inferior ligaments of the glottis constituting the reed.

In speech, as ordinarily effected, the tongue, lips, teeth, &c. are concerned; but there are some authentic cases on record, where it has been accomplished after the tongue had been removed. In such cases, the articulated voice must have been produced in the glottis, alone or aided by an obscure action of the parts above it.

VOIX CONVULSIVE, (F) *Vox Convulsi'va*. A neurosis of the voice, consisting in the production of discordant sounds—acute and grave—which cannot be brought to the natural tones by any effort of volition. It seems to be caused by disordered contraction of the muscles of the larynx.

VOLATILIZA'TION, *Volatiliza'tio*. The operation of reducing volatilizable substances into gas or vapour.

VOMER, in Lat. 'a ploughshare,' *Os Vo'meris*, *Aratrum*, *Os maxillæ superioris undec'imum*. One of the bones of the face, so called from its resemblance. It is an azygous bone, forming the posterior part of the septum narium. It is thin, flat, and quadrilateral; and is articulated, below, to the superior maxillary and palatine bones; and above, to the sphenoid, ethmoid, and cornets of Bertin. It is developed by a single point of ossification.

VOM'ICA, from *Vom'ere*, 'to vomit,' 'to spit up.' (F) *Vomique*, *Crachement de pus*. A term, used by some authors for any encysted collection of purulent matter in the interior of a viscus. The acceptance is commonly, however, restricted to purulent collections in the lungs, encysted or not, which may be discharged by the mouth, by breaking into the bronchial tubes. Two kinds of vomicae are distinguished; the one, caused by the softening or breaking down of pulmonary tubercles; the other, of much more rare occurrence, formed by a circumscribed abscess of the lungs. Instead of opening into the bronchi, the abscess is sometimes discharged into the cavity of the pleura, causing empyema.

VOM'ITING, *Vom'itus*, *Evomi'tio*, *Antropé*, *Em'esis*, *Vomi'tio*, *Palmus vom'itus*, *Ægritu'do ventric'uli*, *Sickness of the Stomach*, (F) *Vomissement*. The act by which solids and liquids, contained in the stomach, are ejected by the mouth. Vomiting is the effect of some special irritation of the nerves of the stomach. It is not accomplished solely by the contraction of the stomach, as was, for a long time believed. That organ, in-

deed, but feebly assists in the process;—the main cause is the compression exerted upon the parietes of the viscus by the diaphragm and abdominal muscles.

Vomiting is a symptom, common to numerous diseases. At times, it is sympathetic, as in affections of the kidney, uterus, brain, &c. At others, it is symptomatic, as in gastritis, peritonitis, &c.

When very troublesome, it may often be palliated by effervescent draughts, aromatics, sinapisms or blisters to the epigastric region, &c.

VOMITURITION, *Vomituri'tio*, *Emesia*, *Dysemesia*, *Vomen'di cona'men ina'ne*, *Retching*. Ineffectual efforts to vomit. Some authors mean, by this term, the vomiting of but little matter, or that which occurs almost without effort. The first acceptation is the most general.

VULNERARY, *Vulnera'rius*; from *vulnus*, 'a wound.' (F) *Vulnéraire*. A name applied by the ancients, to medicines, which they considered capable of favouring the consolidation of wounds. The property has been ascribed to various plants.

VULTUEUX (F), *Vultuo'sus*. Corvisart has used the expression, *Face vultueuse*,—*Facies vultuosa*—for the face, when it is more florid and swollen than in the natural state. This appearance, which is observed in active aneurism of the heart, according to Corvisart, is owing to the afflux of blood into the arterial

capillaries, and hence differs from the livid and swollen appearance caused by the accumulation of blood in the venous capillaries, constituting the *Face injectée*.

VULVA, from *valva*, 'a door,' *Hortus*, *Cunus*, *Puden'dum mulie'brē*, *Choiros*, *Amphicaus'tis*, *Concha*, *Porcus*, *Porta*, *Interfemineum*, *Muliebria*, *Fossa magna mulie'bris*, *Episeion*, *Eschara*, *Hor'tulus cupidinis*, the female pudendum, *Bouba'lios*, *Byssos*, *Cava*, *Caver'na*, *Delphys*, *Delta*, *Fovea*, *Gynæce'um*. The female organs of Generation. (F) *Vulve*. A longitudinal opening between the projecting parts of the external organs of generation in the female, extending from the mons veneris to the perineum, and which is called, also, *Fossa magna*. Some anatomists mean, by this term, the whole of the external genital organs of the female;—mons veneris; labia majora, and the cleft or vestibule, separating them; the clitoris; nymphæ; meatus urinarius; entrance of the vagina; with the hymen or the carunculæ myrtiformes, fossa navicularis and fourchette.

VULVA, *Fora'men commu'nē ante'rius*, *Iter ad infundib'ulum*, *Iter ad tertium ventric'ulum*. An opening, situate at the junction of the optic thalami; and immediately beneath the anterior crus of the fornix.

VULVAR, *Vulva'ris*. That which relates to the vulva. Chaussier gives this name to the external pudic arteries, because they are distributed to the vulva.

W

WAISTCOAT, STRAIT, *Indu'cula*, (F) *Camisole*, *Gilet de force*. A dress, used for restraining maniacs, or those labouring under violent delirium. It has long sleeves, which are tied behind the body, so that the arms cannot be extricated from them. It ought, of course, to be made of very resisting materials.

WALKING, *Gressus*, *Inces'sus*, *Deambula'tio*, *Ambula'tio*, *Badisis*, (F) *La marche*. The action by which we change place, by means of a succession of steps succeeding each other in the same direction. In walking forwards, the centre of gravity is constantly altered; and a series of small, parabolic curves is described on the heads of the thigh bones, the extent of which is regulated by volition, under the guidance of vision.

WALTON, MINERAL WATERS OF. A mineral spring near Tewkesbury, in Glou-

cestershire, England. It is an acidulous chalybeate.

WANT, from past participle of Sax. *panian*, 'to wane;' 'to fall away.' 'Need of that which is necessary.' (F) *Besoin*. This word is sometimes used to express the imperious necessity, which compels us to take food, drink, &c. See Hunger and Thirst. In a more general sense, it means the impressions, transmitted by the organs to the brain, when it is necessary that they should act; these wants are called *instinctive desires*, and *internal sensations* or *stimuli*. Such are the desires to eat, drink, void the urine, &c. &c.

WANT in the sense of *Indigence*, (L) *Egestas*, *Indigentia*, is the cause of a number of diseases.

WASP, *Vespa*, *Sphe'x*, (F) *Guêpe*. A genus of gregarious insects, like the bee and the ant. They are armed with a sting, which

pours a poisonous fluid into the puncture made by it. See Poisons, *Table of*. The best application is the Sp. ammoniæ aromaticus, or some preparation of ammonia.

WASSERBURG, MINERAL WATERS OF. W. is a town of Bavaria, seated on the Inn, 28 miles east of Munich. The water, called also *Aqua Agatii*, contains carbonic acid; carbonates of lime and magnesia; sulphates of lime and magnesia; muriate of soda, carbonate of soda and oxide of iron.

WATER, Aqua, Hydor, ὕδωρ, Alma, (F) Eau. Water was, at one time, regarded as a simple element. It is now known to consist of 8 parts by weight of oxygen and 1 of hydrogen. It freezes at 32°, and boils at 212°, of Fahrenheit; and is taken as the unit in all tables of the specific gravity of solid and liquid substances. Water, as we meet with it, is very different in its state of purity: generally, it contains small quantities of saline matter; at other times, as in sea water and mineral waters, it is largely impregnated.

The characters of water, as met with under ordinary circumstances, are well compared by Celsus. "*Aqua levissima pluvialis est: deinde fontana, tum ex flumine, tum ex puteo: post hæc ex nive, aut glacie: gravior his ex lacu, gravissima ex palude.*" Pure water is one of the best diluents that can be used. When cold, and, especially, when iced, it is one of the most useful refrigerants; and, in the form of the cold, tepid, and warm bath, it is serviceable in numerous diseases.

RAIN WATER, Aqua pluvia'lis, (F) Eau de pluie, when collected at a distance from houses or other elevated objects, is the purest natural water, and has the least specific gravity. The only bodies, which it usually holds in solution, are carbonic acid, and minute traces of carbonate and muriate of lime.

SPRING WATER, Aqua fonta'na, Hydropegē, (F) Eau de fontaine, contains, in addition to the substances detected in rain water, more or less sulphate of lime. When this is to such an extent as to curdle soap, the water is said to be *hard*; if not, *soft*. Hard water is, of course, inferior to soft, for domestic and medicinal purposes.

RIVER WATER, Aqua fluvia'lis, is derived from the conflux of numerous springs and rain water. It is, generally, pretty pure.

WELL WATER, Aqua putea'lis, (F) Eau de puit, Eau de source, is the same as spring water, but liable to impregnation, owing to the land springs filtering into the wells and conveying impurities into them.

SNOW WATER, Aqua niva'ta, (F) Eau de neige, has, usually, been deemed unwholesome. It exactly resembles rain water, in composition, and is equally salubrious.

LAKE WATER, Aqua ex lacu, (F) Eau de lac, is apt to be impure, from decayed animal and vegetable matter. A great deal will, however, depend upon the magnitude of the collection, and the degree of stagnation.

MARSH WATER, Aqua paludo'sa, (F) Eau de Marais, is the most impure of all. It is generally more stagnant, and of course more loaded with decomposing animal and vegetable matters.

DISTILLED WATER, Aqua distilla'ta, (F) Eau distillée, Holy Water, is generally ordered in extemporaneous prescriptions, but is rarely used. In some cases, however, it is absolutely necessary, as water, containing any saline impregnation—hard water, for example—decomposes certain substances. See Incompatibles, *Table of*. Distilled water has been recommended as a diet-drink in cancerous affections; and it is used in the religious ceremonies of the Catholic church.

WATER, MINERAL, Aqua minera'lis, A. salu'bris, A. medica'ta, Fons saluta'rius, Aqua sote'ria, (F) Eau minérale. Water, holding in solution different saline and gaseous substances, in sufficient quantity to be possessed of medicinal properties.

Mineral waters may be divided into four classes. 1. *Gaseous or Acidulous.* 2. *Chalybeate.* 3. *Saline.* 4. *Sulphureous.* These may be *thermal or cold, natural or artificial.* Many of these divisions, however, run into each other; some of the substances, which they hold dissolved, belonging to one class as well as to another.

1. *Gaseous, Acidulous or Carbonated Mineral Waters, Aquæ minera'les acidulæ, (F) Eaux minérales gazeuses ou acidules.* The waters, referred to this class, are those that contain carbonic acid gas in such quantity as to communicate to it certain sensible qualities. Waters, impregnated with free carbonic acid, sparkle when drawn from the spring, or when poured into a glass. They have a sharp, acidulous taste; but become vapid from exposure to the air. Along with the carbonic acid, there are generally present portions of saline earthy or metallic matter, chiefly carbonates of lime, magnesia, and iron. Waters, highly impregnated with carbonic acid gas, are grateful to the stomach; increase the appetite, and are diuretic: hence their utility in dyspepsia, hypochondriasis, and gout. Their properties are, of course, modified by the saline matter that may be also contained in them.

The most celebrated amongst the acidulous waters are those of Bar, Chateldon, Saint Myon, Mont d'Or, Langeac, Seltzer, Sultzmatt, Pyrmont, Spa, Carlsbad, Cheltenham, Scarborough, Saratoga, Ballston, and the Sweet Springs of Virginia.

2. *Chalybeate or Ferruginous Mineral Waters, Aquæ minera'les ferrugino'sæ, (F) Eaux minérales ferrugineuses,* contain iron—sulphate, muriate or carbonate, generally the latter—held in solution by an excess of acid. Chalybeate waters have a peculiar styptic taste. They are transparent, when taken from the spring; but, when exposed for some time to the air, a pellicle forms on the

surface, and a deposit takes place of the iron. Chalybeate waters are used as tonics in debility of all kinds; in all cases, in fact, where iron is considered to be indicated. They are the most numerous of all the classes of mineral waters. In the present Dictionary, those only are specified, which have some celebrity; yet there are nearly 90: whilst there are but 60 of the saline, and 34 of the sulphureous.

The most celebrated chalybeates are those of Tunbridge, Scarborough, Spa, Bussang, Forges, Vichy, Pyrmont, Passy, Provins, and Vals.

3. *Saline Mineral Waters, Aquæ minerales salinæ, Amna alcalizata (Paracelsus), (F) Eaux minérales salines.* Waters, holding in solution different saline substances, in greater quantity than the acidulous waters. They differ in properties, according to the salts contained in them. The salts, usually present, are sulphates, muriates, and carbonates; and the bases, with which the acids forming these are combined, are soda, magnesia, and lime.

Saline mineral waters are usually aperient; and the most noted are those of Seltzer, Sedlitz, Balaruc, Bourbonne-les-Bains, Baden, Epsom, Cheltenham, &c.

To this class may also be added *Sea water*.

4. *Sulphureous Mineral Waters, Aquæ minerales sulphuræ; when warm, termed, Theiothermæ, Fontes sulphurei calidi, (F)*

Eaux minérales sulfureuses, Eaux sulfurées, E. sulfureuses, E. hépatiques, &c. These waters owe their distinguishing character to an impregnation of sulphuretted hydrogen; and are at once recognised by their peculiar, fetid smell, resembling that of rotten eggs. They usually contain saline substances, which modify their powers. From the action of the sulphuretted hydrogen, they are employed in cutaneous affections; and, from the combined action of this and the saline matter, they are valuable agents in diseases of the digestive organs. They are also employed in cutaneous eruptions; and the warm sulphur baths have been especially celebrated in such cases, as well as in rheumatic affections.

The most renowned sulphureous waters are those of Barèges, Bagnères-de-Luchon, Caunterets, Bonnes, Aix in Savoy, Aix-la-Chapelle, Enghien, Harrowgate, Moffat, Virginia Springs, &c.

Some springs, as those of Bath, Buxton, Dax, Matlock, Warm and Hot Springs of Virginia, &c., are almost pure *Thermal Mineral Waters*. They are valuable agents in rheumatic affections; the warmth being equable during the whole period the individual is immersed in them; which cannot be the case in the artificial thermal bath.

The following Table, by Dr. Ure, exhibits the composition of some of the principal mineral waters, as well as of that of the sea.

TABLE

OF THE COMPOSITION OF THE MOST CELEBRATED MINERAL WATERS.

NAMES OF THE SPRINGS.	Grains of water.	CUBIC INCHES OF GASES.				CARBONATES OF				SULPHATES OF				MURIATES OF				Silica.	Alumina.	Resins.	Tempera- ture.
		Oxy- gen.	Car- bonic acid.	Sulph. hydro- gen.	Azote.	Soda.	Lime.	Mag- nesia.	Iron.	Soda.	Lime.	Mag- nesia.	Iron.	Soda.	Lime.	Mag- nesia.	Pot- ash.				
Acidulous.	Seltzer (1)	43.5	13.068			5.22	78.3	6.32	gr.					13.74				gr.			gr.
	Pymont (1)		19.6			4.3	9.8	9.8	0.70		8.38	5.44		1.7							cold
	Spa (1)		9.8			1.85	4.35	4.35	0.70					0.21							cold
	Carlsbad (2)		50.0			38.5	12.5	1.25	0.11-4th	66.75				32.5				2.25			165°
	Kilburn (10)		84.0	36.0		2.4	2.4	1.25	1.31-4th	18.2	13.0	91.0		6.0	0.6	2.8			6.0		cold
Sulphu- rous.	Harrowgate (14)		8.0	19.0	7.0		18.5	5.5						615.5	3.0	9.1					cold
	Moffat (14)		1.0	10.0	4.0									3.6							cold
	Aix-la-Chapelle (3)			13.06			15.25	5.89			33.3	5.8		6.21		8.0					143°
	Enghien (5)		18.5	7.0			21.4	1.35						2.4							cold
	Sedlitz		8.0	3.0	12.0		6.7	21.0	5.0	48.0	41.1	1444		5.0		36.5					cold
Saline.	Cheltenham (6)		30.3				0.4	12.5		1.0	40.			2.0		72.5					cold
	Plombières (20)						0.5		0.17	3.7				21.	20.8						cold
	Dunblane (16) sp. gr. 1.00475		1.				0.5			0.9				12.7	20.2						cold
	Pitcaithley (16)																				cold
	Tunbridge (3)	1.4	10.6		4.0				1.0		1.25			0.5		2.25		1.12	15.1		cold
Chaly- beate.	Brighton (4)		18.0				16.5		32.5		32.7			12.2	28.5	6.0					cold
	Toeplitz (7)													61.3							cold
	Bath (8)																				cold

 (17) Dr. Marcet. (18) Klaproth. (19) M. Gay Lussac. (20) Vauquelin. † Dr. Wollaston.

Artificial Mineral Waters, (F) *Eaux minérales artificielles ou factices*. These are imitations of the natural; and some of them—as the factitious Cheltenham water, and Sedlitz water—answer the purposes of the natural water tolerably well. The acidulous and chalybeate waters are, however, most easily imitated.

WATER, SEA, *Aqua Mari'na, Humor Dor'idis, (F) *Eau de Mer.** This contains common salts and sulphate of magnesia, in large quantity. It is cathartic and forms the usual glyster at sea. It makes an excellent tonic bath; superior in most cases—especially in scrophula—to the fresh water bath.

WATTWEILER, MINERAL WATERS OF. W. is a small town in the department of Haut Rhin, at the foot of the Vosges. The waters are acidulous chalybeates, and contain carbonates of iron, lime, and soda; muriate of soda, and free carbonic acid.

WAXING KERNELS, *Crescentia, (F) *Croissances, Croissants, Glandes de croissance.** A popular term for small tumours, formed by an enlargement of the lymphatic glands—in the groins of children, particularly. They have been looked upon as connected with the growth of the body, hence their name.

WAY, *Via, Passage, Odos, (F) *Voie.** A name given to different canals.

The DIGESTIVE WAYS or PASSAGES, *Primæ viæ, (F) *Voies digestives, Premières voies,** are the series of hollow organs of digestion, composed of mouth, œsophagus, stomach, small and large intestines. The term is often restricted to the three first of these.

The SECOND WAYS or PASSAGES, *Secundæ viæ, (F) *Secondes voies,** comprise the chyloferous, lymphatic, and blood-vessels.

WEANING, Sax. *penan, Ablacta'tion, Ablacta'tio, Apogalactis'mus, (F) *Sévrage.** The act of depriving the infant, permanently, of the breast, in order to feed it on other and more solid nourishment.

WEDGED, (D) *wegge, Inclu'sus, In-hærens, (F) *Enclavée.** The head of the fœtus is said to be wedged in the pelvis, when it remains fixed notwithstanding the uterine efforts.

The condition is called *Incuneatio, Sphe-no'sis, (F) *Enclavement**. See Paragomphosis.

WEIGHT, from Sax. *pæzan, 'to weigh,' (F) *Pésanteur.** A sensation of heaviness or pressure over the whole body, or over a part:—the stomach or head, for example.

WEIGHTS AND MEASURES, *Pon'dera et Mensu'ra, (F) *Poids et Mésures.** The importance of possessing a uniform system of weights and measures has impressed the scientific of all countries; and numerous endeavours have been made to accomplish the object. It is, however, a matter of considerable difficulty, and one not likely to be attained. The new French measures are upon decidedly the best footing, but they are not adopted out of

France. The greatest diversity prevails over Europe in the measures both of weight and capacity. Some of the following tables will show, that every subdivision of the pound, as well as the pound itself, differs in England and in France.

TROY WEIGHT, as used by the British Apothecaries.

APOTHECARIES WEIGHT.

The pound ℔	} contains	12 ounces.
The ounce ʒ		8 drachms.
The drachm ʒ		3 scruples.
The scruple ʒ		20 grains.
The grain gr.		

These, and the signs by which they are denoted, are the same in all the British Pharmacopœias, as well as in the American.

lb.	Oz.	Dr'ms.	Scrup.	Grs.	Grammes.
1	= 12	= 96	= 288	= 5760	= 372.96
	1	= 8	= 24	= 480	= 31.08
		1	= 3	= 60	= 3.885
			1	= 20	= 1.295

AVOIRDUPOIS WEIGHT, and *Poids de Marc*.

The pound	} contains	16 ounces.
The ounce		8 drachms.
The drachm		3 scruples.
The scruple		24 grains.
The grain		

Avoirdupois.

lb.	Oz.	Dr'ms.	Scrup.	Grs.	Grammes.
1	= 16	= 128	= 384	= 9216	= 453.25
	1	= 8	= 24	= 576	= 28.328
		1	= 3	= 72	= 3.540
			1	= 24	= 1.180

The *Poids de Marc* is that employed by the French Pharmaciens, when the new weights are not.

The following Tables exhibit the relative value of the old French and English weights.

<i>Poids de Marc.</i>	<i>Troy Wt.</i>	<i>Avoird.</i>	<i>Troy grs.</i>
1 pd. (<i>livre</i>)	= 1.31268 lb	= 1.080143 lb	= 7.561
1 oz. (<i>once</i>)	= .984504 oz	= 1.080143 oz	= 472.5625

MEASURES OF CAPACITY.

English Measure of Fluids.

The gallon (<i>congius</i>)	0	contains	8 pints.
The pint (<i>octarius</i>)	0		16 fluid ounces.
The fluidounce	f. 3		8 fluid drachms.
The fluidrachm	f. 3		60 minims.
The minim			

PROPORTIONS OF THE WINE GALLON.

Gal.	Pints.	Fluidoz.	Fluidr.	Minims.
1	= 8	= 128	= 1024	= 61440
	1	= 16	= 128	= 7680
		1	= 8	= 480
			1	= 60

The value of these measures is the same in all the British Pharmacopœias; but the signs, by which they are denoted, are peculiar to that of London. The Edinburgh and Dublin colleges retain the old signs;—for the gallon, *cong.*; the pint, ℥ ; the ounce, ℥ ; the drachm, ℥ ; and the drop gt , which should be equal to the minim. The Pharmacopœia of the United States follows the system of the London College.

The English ale gallon contains 282 cubic inches.
 The English wine gallon contains 231 do.

63 gallons wine measure, 54 gallons beer measure, and 48 gallons ale measure, respectively, make a hogshead;—49 ale pints contain $1727\frac{1}{2}$ cubic inches, and may, therefore be considered (in round numbers) as a cubic foot, which contains 1728 cubic inches. A cubic foot of pure water weighs 1000 ounces.

Approximative comparison between the ancient French measures of capacity and the new, and conversely.

The colanos or reclanarium	1 28
A small spoonful or flagerina, or cyanes	1 11
The smallest spoonful or fahaliel	42

Besides the weights and measures, employed by the moderns, already mentioned, there are some modes of estimating the quantities of substances by approximation. For example:—

A glassful or cupful, (F) *Verre* is reckoned to contain 4 or 5 fluidounces.

A wine glassful, 1½ ounce or two ounces.

A table spoonful, (F) *Cuiller à bouche* about half an ounce.

A coffee or dessert spoonful, about three drachms.

A tea spoonful, a fluidrachm.

A handful, manipulus. (F) *Poignée*.)

The *Pugillus* is as much as can be held by the three fingers. (F) *Pincée*.)

These last quantities are occasionally prescribed by the French practitioners. Their weights must, of course, vary, according to the article. The authors of the Parisian codex have valued them, as regards certain substances.

	oz. dr.
A Manipulus of barley weighs	3 2½
" linseed	1 4
" linseed meal	3 3
" dried mallow leaves	1 3
" dried chicory leaves	1 0
" flowers of the tilia	1 2½

A <i>Pugillus</i> of camomile flowers weighs	2	dr. scr. gr.
" arnica	1 2	
" marsh-mallow	1 1	
" mallow		60
" fennel seeds.	1	61
" aniseed	2 1/2	

A *hen's egg*, newly laid, weighs about 2 ounces and 2 drachms:—when deprived of its shell 2 ounces. The *white* weighs 1 ounce, 2 drachms, and 57 grains: the *yolk*, 5 drachms and 15 grains.

WEMDING, MINERAL WATERS OF.

These waters are situate about four leagues from Donawert in Bavaria. They contain sulphuretted hydrogen; carbonates of lime, magnesia, and soda; sulphates of lime and magnesia; a little muriate of lime, and oxide of iron; and are much used in asthenic diseases.

WEN, Sax. *pen*, *Lu'pia*, *Tumour* (q. v.), (F) *Loupe*. A name given to circumscribed, indolent tumours, without inflammation or change of colour of the skin. They may be met with in almost every part of the body. Their magnitude, as well as nature, is very variable. The term is sometimes confined to an encysted tumour.

WHISKEY; a spirituous liquor obtained from oats, potatoes, &c. by distillation.

WIESSAU, MINERAL WATERS OF.

These waters are situate about four leagues from the Convent of Waldsassen in Bavaria. They contain carbonic acid; carbonates of lime and magnesia; muriates of lime, magnesia, and alumine; carbonate of soda, and much oxide of iron. The Bavarians consider them to resemble the waters of Pyrmont.

WILD, Sax. *pilo*, (D) *Wild*. An epithet, given to the countenance, when not in harmony with the situation of the individual, and indicating strong, mental emotion. A *wild look*, (F) *Physionomie égarée*.

WILDUNGEN, MINERAL WATERS OF. W. is situate a few miles from Cassel in Germany. In its neighbourhood are several mineral springs; the chief of which, according to Stucke, contain a bituminous matter; muriate and sulphate of soda; carbonate and sulphate of lime, &c. They are used, chiefly, as refrigerants.

WIND, *Ventus*, *Anemos*, (F) *Vent*. Winds exert considerable influence on the animal economy; acting by their temperature, which necessarily modifies that of the circumambient air, as well as by their moisture or dryness; and by the emanations of different kinds, which they transport to greater or less distances. The winds, which blow over a considerable extent of country, are dry and serene; those which come from the ocean, are moist and chilly.

WINDY, *Flatulen'tus*, *Flat'ulent*, (F) *Venteux*. That which causes wind or flatulence; also, that which is caused by wind or flatulence;—as *windy food*, *windy colic*, &c.

WINE, *Vinum*, *Ænos*, (F) *Vin*. A name, given by chymists to all liquors that have become spirituous by fermentation. The term is generally, however, restricted to the fermented juice of the grape; or of fruits, the product of whose fermentation resembles, in most respects, that of the juice of the grape.

Wine is composed of alcohol; saccharine matter; malic acid; tartaric acid; super-tartrate of potass; acetic acid; an extractive colouring matter, more or less bitter, and partly resinous; and sometimes of an aromatic substance. The extractive colouring matter is chiefly met with in red wines. All these constituents, except the alcohol, are found ready formed in the grape. The alcohol proceeds from the decomposition of the saccharine matter. A part of the acetic acid is, also, formed during fermentation.

The following Table, drawn up by Mr. Brande, exhibits the quantity of spirit in different kinds of wine and liquors. It is proper, however, to remark, that many of these wines are prepared for the London market, and are more brandied or reinforced, than the same varieties sold in the United States. This is strikingly the case with port. Dr. Henderson, too, has remarked, that some of the wines analyzed by Mr. Brande, were mixed with a considerable quantity of adventitious alcohol. Dr. Henderson's additions and corrections have the letter H affixed.

The only wine recommended in some pharmacopœias, is the *Sherry*, *Vinum*, *Vinum album Hispanicum*. It is a dry wine; the least variable in its properties, and agrees best with the dyspeptic. Other wines, used

(d) 12.91 H.

officially are,—the *Canary* or *Sack* wine *Vinum Canarinum*; *Mountain* wine, *Vinum album montanum*; *Tent* wine; *Rhenish* wine, *Vinum Rhenanum*; and *Port* wine, the *Vinum rubrum Portugallicum*.

The wines, habitually drunk, are almost innumerable. Those that are sweet, or contain a large portion of free, saccharine matter, are decidedly the least wholesome to the dyspeptic.

When wine is good, and of a proper age, it is tonic and nutritive. When new, flatulent and cathartic;—disagreeing with the stomach and bowels. In Medicine, it is a valuable tonic in the last stages of typhus, when the skin is not too hot and dry. Its use, however, requires great caution; and when once commenced under proper circumstances, it cannot be suddenly dropped without mischief. It is, perhaps, the best permanent stimulus in the catalogue of the *materia medica*.

WINE BITTERS. The formulæ for these may be various. The following is as good and agreeable as any. (*Rad. gentian. ℥j*, *cort aurant. 3 x*, *sem. cardam. 3 iv*, *cinnam. cort. 3 iv*, wine, foreign or domestic, three gallons and a half.) Tonic and stomachic.

WINTERA AROMATICA. The *Winter Bark Tree*. The *Bark*, *Cortex Winteranus*, *Cortex Winteranus Magellanicus*, *Cortex Magellanicus*, (F) *Écorce de Winter*, *Cannelle poivrée*, is very much allied in its properties to the *Canella alba*, (q. v.)

WISBADEN, MINERAL WATERS OF. W. is a town of Germany, about 6 miles north of Mainz, and 22 west of Frankfort. The waters appear to be simple sulphureous, and much frequented.

WOODS, SUDORIFIC, (F) Bois sudorifiques. This term is applied, collectively, to the *guaiacum*, *sassafras*, *china*, and *sarsaparilla*; which are often used together to form the sudorific decoction.

WORM LOZENGES, CHING'S. Empirical preparations, which consist of yellow and brown lozenges. The former are directed to be taken in the evening; the latter on the following morning.

The **YELLOW LOZENGES.** (*Saffron 3 ss*, *water ℥j*; boil, and strain: and add of *white panacea of mercury* (calomel washed in spirit of wine) *℥j*, *white sugar 28 ℥s*, *mucilage of gum tragacanth*, q. s., to make a mass. Divide; so that each lozenge contains a grain of the panacea.)

The **BROWN LOZENGES.** (*Panacea 3 vij*, *resin of jalap ℥iijss*, *white sugar ℥ix*, *mucilage of gum tragac. q. s.* Each lozenge to contain gr. ss of the panacea.)

WORMIA'NA OSSA, *Ossa epactalia*, *Ossa triquetra*, *Ossa triangulária Blasii*, *Claves calvariæ*, (F) *Os Wormiens*, *Clefs du crâne*, *Os épactaux*, *Os surnuméraires* (Ch.), *Os intercalés*, *Os triangulaires*. Small bones, which are sometimes observable in the sutures of the bones of the cranium, of which

they form a part. They were called *Wormiana*, from Olaus Wormius, who is said to have first described them. They had been previously, however, mentioned by Guinterus Andernachus, a physician at Strasburgh. The ossa wormiana exist more commonly in the sutures of the vault of the skull; especially in the lambdoidal, sagittal, and squamous. They are uncommon at the base of the skull. Their size is very variable, and shape irregular. Their structure and development are similar to those of the other bones of the cranium; and, like them, they are bounded by sutures.

WORMS, *Vermes*, *Intestinal Worms*, *Entozoa*, *Entozoa'ria*, *Enterozoa*, *Vermes intestini*, *Enthelminthes*, *Helminthi*, *Helminthia Alvi*, and *H. Podici*, (F) *Vers*, *Vers intestinaux*, *Entozoaires*. Animals which, according to Cuvier, form the medium between the class of worms and that of zoophytes. They appear to have neither cartilages nor blood-vessels. Some species seem to have a nervous system formed of ganglions, but the majority are devoid of it. Their common character is that of existing only in animals, and hence their name *entozoa*, from *εντος*, 'within,' and *ζωον*, 'animal.' They are met with, not only in the natural cavities, but even in the tissue of the organs. Cuvier, Rudolphi, Brera, Bremser, Laennec, and others, have endeavoured to class them,—some according to their shape; others, according to their anatomical characters.

The chief entozoa, that infest the human body are;—the *Filaria Medinensis*, *Tricocephalus dispar*, *Oxyuris vermicularis*, *Ascaris lumbricoïdes*, *Strongylus gigas*, *Distoma hepaticum*, *Bothriocephalus latus*, and *Tænia solium*;—all which see. The *Filaria hominis bronchialis*, the *spiroptera hominis*, (found in the urinary bladder), the *Polystoma pinguiola*, (found in the human ovary,) the *Polystoma venarum*, the *Cysticer'cus cellulosa*, (in the brain and heart,) the *Cysticer'cus viscera'lis hominis*, the *Echinococcus hominis*, (in the viscera, especially in the liver), and the *Dicaras rudē* or *Ditrachyceras rudis*, scarcely admitted amongst the genuine entozoa,—are also met with. The most common of these are;—the *Oxyures vermiculares*, *Ascarides lumbricoïdes*, and *Tænia*, which are found in the intestines. The origin of these worms is extremely singular; and more favourable than any other fact to the difficult hypothesis of spontaneous generation, in the lowest tribes of animated nature. They certainly do not resemble any worms out of the body. They are most commonly met with in children improperly fed; but their presence cannot

be positively detected by any symptom, except that of the discharge of the worms themselves, in the evacuations. They may, of course, give rise to every kind of irritation in the intestinal tube, and to sympathetic disturbance in most of the other functions; but all these signs may be produced by intestinal irritation resulting from other causes.

Anthelmintics or *vermifuges*, employed, as the name import, for their removal, may be of two kinds—*mechanical*, and *true anthelmintics*. To the first class—the *mechanical*—belong *Emetics*, *Purgatives*, the *Dolichos pruriens*, powdered Tin, &c. To the latter—the *true anthelmintics*—*Assafætida*, *Petroleum*, *Turpentine*, the *Chenopodium Anthelminticum*, *Pink-root*, *Semina Santonici*, &c. Of these the best is the turpentine. See *Oleum Terebinthinæ*.

The great object, however, is to prevent their generation. This must be done by generous diet, fresh air, and tonics where necessary.

WORT, (F) *Mout de la Bière*. An infusion of malt. This has been recommended in scurvy. One measure of ground malt is added to three equal measures of boiling water. The mixture must be well stirred, and left to stand covered three or four hours. Dose, one to four pints, daily. It has, also, been recommended in other cases, where a strong putrescent disposition appeared to prevail in the fluids, as in cancerous and phagedenic ulcers. It is not now employed.

WOUND, Sax. *pund*, *Vulnus*, *Plaga*, *Trauma*, *Tresis*, *Tresis Vulnus*, *Blabē*, *Tymma*, (F) *Plaie*, *Blessure*. A solution of continuity in the soft parts, produced by some mechanical agent. Wounds present innumerable differences, as regards their situation; the parts interested; their direction; size; shape; the nature of the instrument or agent by which they are produced; their more or less simple or complex character, duration, &c. A wound is called *incised*, (F) *Coupure*, *Incision*, when made by a cutting instrument;—*punctured*, (F) *Piqure*, when made by a pointed instrument;—*lacerated*, (F) *Déchirure*, *Plaie par arrachement*, when the parts are lacerated or torn by the wounding body; *poisoned* (F) *Plaie envenimée*, when some virulent or venomous substance has been introduced;—and *contused*, (F) *Plaie contuse*, when produced by a blunt body. *Gunshot wounds*, *Sclopetoplagæ*, (F) *Plaies d'armes à feu ou d'arquebusade*, *Coup de feu*, belong to the last division.

WRINKLE, *Ruga*, *Rytis*, (F) *Ride*. A furrow or fold in the skin of the face, forehead, vagina, &c.

X

XAN'THIUM, *X. struma'rium*, *Barda'na minor*, *Lappa minor*. The lesser Burdock. (F) *Lampourde*, *Petit Glouteron*, *Petite Bardane*. This herb, as its name imports, was once esteemed in the cure of scrophula. The seeds have been administered in cutaneous affections.

XERAPH'IUM, from ξηρος, 'dry.' A drying application, used in eruptions of the head and chin.—Paulus of Ægina.

XERA'SIA. Same etymon. A disease of the hairs, which become dry, cease to grow, and resemble down covered with dust.—Galen.

XEROCOLLYR'IUM, *Collyr'ium siccum*. A dry collyrium.

XEROMYCTERIA, from ξηρος, 'dry,' and μυκτηρ, 'the nose.' Dryness of the nose.

XEROMYRON, *Unguen'tum siccum*; from ξηρος, 'dry,' and μύρον, 'an ointment.' A dry ointment.—Gorræus.

XEROPHA'GIA, from ξηρος, 'dry,' and φαγω, 'I eat.' Excessive use of dry aliment. A kind of regimen to which the ancient

athletæ subjected themselves, with the view of increasing their strength.

XEROPHTHAL'MIA, *Ophthalmia sicca*; from ξηρος, 'dry,' and οφθαλμία, 'inflammation of the eye.' A dry inflammation of the eye, without discharge.

XIPHOID, *Xiphoi'des*, *Ensifor'mis*, from ξίφος, 'a sword,' and εδος, 'shape.' The *Cartila'go Xiphoïdes*, *C. Xiphoïdea*, *C. Ensifor'mis*, *En'siform cartilage*, *Furcel'la inf'e'rior*, *Mucrona'tum os*, *Mucronata Cartilago*, *Chondros*, (F) *Appendice ou cartilage xiphoïde*, *Appendice sous-sternale*, *Palette*. The name of the appendix which terminates the sternum beneath; and which is so called from some resemblance to a sword.

The **XIPHOID LIG'AMENT**, *Costo-Xiphoid L.* (F) *Ligament xiphoïdien ou costo-xiphoïdien*, is a small, very thin, ligamentous fasciculus, which passes from the cartilage of prolongation of the 7th rib to the anterior surface of the xiphoid cartilage, into which it is inserted by its fibres decussating with those of the opposite ligament.

Y

YAM. This esculent root is principally obtained from three species of *Diosco'rea*—the *ala'ta*, *bulbif'era*, and *sati'va*. They grow spontaneously in both the Indies, and their roots are eaten, promiscuously, as the potato is with us. Their taste is somewhat like the potato.

YAWNING, Sax. *æonan*, *Chasme*, *Chasmos*, *Hia'tus*, *Oscita'tio*, *Clonus pandicula'tio*, *maxilla'rum*, *Gaping*, (F) *Baillement*. Yawning consists of a deep inspiration, with considerable separation of the jaws; executed slowly and in an involuntary manner, and followed by a prolonged and more or less sonorous expiration. This respiratory movement is preceded by a feeling of oppression in the epigastric region, and in the muscles of respiration and mastication. Yawning has been conceived to be owing to torpor in the pulmonary circulation; the causes producing it being commonly *ennui*, fatigue, sleepiness, monotonous sounds, hunger, sympathy, &c. Yawning often precedes the invasion of certain intermittents, attacks of hysteria, &c., and it may, by its frequency, and obstinacy, become a true disease.

YELLOW, *Flavus*, *Luteus*, *Xanthos*, from past participle of Sax. *æælan*, 'to burn.' One of the seven primitive colours.

The **YELLOW LIG'AMENTS**, (F) *Ligaments jaunes*, occupy the spaces between the *vertebral plates* (q. v.), from the interval, which separates the second vertebra from the third, to that which separates the last vertebra from the sacrum. They are so called, in consequence of their colour.

YEST, *Yeast*, Sax. *gerc*, *Cerevis'ia*, *Fermen'tum*, *Spuma Cerevisiæ*, *Barm*, (F) *Levure*, *Levure de la Bière*. The scum, which collects on the surface of beer whilst fermenting. Yest is antiseptic and tonic. It has been much extolled in putrid fevers,—a table spoonful being given as a dose in porter, wine, &c. It is, also, applied, in the form of cataplasm, to foul ulcers. In all these cases, it acts by virtue of the generation of carbonic acid gas.

YSAM'BRA, *Pedigam'bra*. An ancient Spanish poison, of which hellebore formed the greatest part.

Z

ZANNA. A kind of Armenian bole, used by the ancients as a desiccative. It is also called *Zarnac'ha*.

ZANTHORI'ZA APIFO'LIA, *Xanthoriza*, *Z. simplicis'sima*, *Z. marbois'ca*, *Zanthoriza Tinctoria*, *Yellow Root*, *Parsley-leaved Yellow Root*. The root of this American plant is a strong and pleasant bitter; and, in the dose of two scruples, sits easy upon the stomach.

ZANTHOXYLUM CLAVA HER'CU-LIS, *Prickly Ash*, *Toothache Tree*, (F) *Clavallier à feuilles de frêne*, *Frêne épineux*. The bark is a very strong stimulant and powerful sialogogue. It has been given, internally, in rheumatism. Another species—the *Zanthoxylum fraxinifolium*, *Xanthoxylum fraxineum*,—possesses active powers. A spirituous infusion of the bark has been highly recommended in cases of violent colic. The fresh juice, expressed from the roots of the zanthoxylum, is said to afford relief in the dry-bellyache of the West Indies. A decoction of the bark is, sometimes, used as a wash to foul ulcers.

ZAR'ATHAN. A hard, irregular tumour of the breast, resembling cancer.

ZEA MAYS, *Indian Corn*, *Corn*, *Turkey Wheat*, *Maize*, *Ador*, *Indian Wheat*, (F) *Graine de Turquie*, *Blé d'Inde*, *Blé d'Espagne*, *Blé d'Italie*, *Blé de Turquie*. A native of America, and much used over the whole of that continent, as an article of diet. It is ground for the same purposes as wheat, and forms an excellent bread.

ZELOTYP'IA, from *ζηλος*, 'love,' and *τυπος*, 'form,' 'model;' *Zelosis*. It has been proposed to apply this name to the violent mental affection, produced by the acknowledged or presumed infidelity of a beloved object; and to the consequences of such affection;—melancholy, mania, &c.

ZEN'ICON, *ζενικον*. Ancient name of a Keltic poison, used for poisoning arrows.

ZERNA, *Zerma*, *Impeti'go ulcera'ta*. Ulcerated impetigo.

ZINCUM, *Zinkum*, *Speltrum*, *Tutenag*, *Zinchum*, *Zint*, *Stannum Indicum*, *Zinc*. A metal, obtained from calamine and blende. Its colour is bluish-white; lustre, of the fresh surface, considerable, but soon dulled, from the facility with which it oxidates; hard; texture striated. S. G. 7.190. Melts at 700° Fah.; burns with a bright flame in a higher temperature, and is volatilized in the form of a white, flocculent oxyd. Its use, in medicine, is in the formation of the following preparations.

ZINCI CHLO'RIDUM, *Z. chlorure'tum*, *Zincum chlora'tum*, *Z. muriat'icum (oxyda'tum)*, *Chloride* or *Chloruret of Zinc*. Formed

by adding oxide of zinc to pure muriatic acid by the aid of gentle heat until no more is dissolved. The solution is then evaporated to dryness, rubbed to powder, and kept in a closely stopped vessel. It is very deliquescent in the air, forming the *Butter of Zinc*, *Butyrum Zinci*.

ZINCI CYANURE'TUM, *Hydrocy'anas Zinci*, *Zincum Cyanogena'tum*, *Z. Borus'sicum*, *Z. Zooticum*, *Hydrocy'anate of Zinc*. This salt is formed by adding sulphate of zinc to hydrocyanate of potassa so long as any precipitate is thrown down. When dried and calcined at a low heat, the product is a mixture of cyanuret of zinc and of potassium. It has been recommended in nervous cardialgia. Dose, from a 1-16 to 12th of a grain.

It is chiefly used as a caustic; one part of the chloride being mixed with 4, 3 or 2 parts of flour, according to the desired strength, and a few drops of water being added to form a paste.

ZINCI FERROHYDROCY'ANAS, *Cyanure'tum Ferrozin'cicum*, *Zincum Ferrohydrocyan'icum*, *Ferrohydrocyanate of Zinc*. Made by the mutual decomposition of boiling hot solutions of sulphate of zinc and ferrocyanate of potassa. It has been recommended in the same cases as the last preparation.

ZINCI OX'YDUM, *Zincum calcina'tum*, *Oxyd of Zinc*, *Flowers of Zinc*, *Nihil album*, *Lana Philosopho'rum*, *Nihil gris'eum*, *Pom'pholyx*. Procured by burning zinc in a long, deep crucible, placed so as to collect the sublimate. It is tonic; antispasmodic; externally, detergent and desiccative. Employed in epilepsy, chorea, &c. For its external use, see *Ung. Zinci*.

ZINCI SULPHAS, *Sulphate of Zinc*, *Zincum Vitriola'tum*, *Vitriolum album*, *White Vitriol*, *V. Goslarie'n'se*, *V. Zinci*, *Sulphas Zin'cicum*, *Gilla Vitrioli*, *Gilla Theophras'ti*; *Sal vomito'rium vitrioli*, *Chalcan'thum album*, *White Copperas*, *Sal Vitrioli*. The sulphate of zinc,—formed by the direct combination of zinc with sulphuric acid,—is inodorous; taste, styptic; it is in white, semi-transparent, efflorescent crystals; soluble in three parts of water at 60°. It is emetic, tonic, antispasmodic, and externally astringent. A nostrum, sold under the name—*Antipertus'sis*—and, as its title imports, given in whooping cough, contains this salt as its chief ingredient. It is emetic. Dose, as an emetic, gr. x to 3ss; as a tonic, gr. j to ij. Used externally as a collyrium, gr. j to water 3 j.

ZINGRITES, *Zigni'tes*. A stone, resembling glass, to which the ancients attributed marvellous properties.

ZOANTHROPIA, from *ζωον*, 'an animal,' and *ανθρωπος*, 'a man.' A species of mono-

mania, in which the patient believes himself transformed into an animal. Lycanthropia and cynanthropia belong to this species of monomania.

ZONA TENDINO'SA. The whitish circle around the auriculo-ventricular orifice of the right side of the heart.

ZOONO'MIA, from *ζῷον*, 'animal,' and *νόμος*, 'law.' The laws, which govern the organic actions of animals in general. *Animal Physiology*, *Zoophysiology*.

ZOOT'OMY, from *ζῷον*, 'an animal,' and *τέμνω*, 'I cut.' *Theriot'omy*, *Anatom'ia compar'ata*, *Compar'ative Anatomy*. The anatomy of animals.

ZYGOMATIC, *Zygomat'icus*. That which relates to the zygoma or cheek bone.

The **ZYGOMATIC PROCESS**, *Malar process*, *Jugal process*, arises from the outer surface of the temporal bone, by two roots; one of which is transverse (*Condyle du temporal*, Ch.) and the other longitudinal; between them is the glenoid cavity. The process passes forwards, and is articulated with the posterior angle of the os malæ, with which it forms a bony bridge, called the *Zygomat'ic arch*, (F) *Arcade Zygomatique*. The cavity, beneath this bridge, is sometimes called *Zygoma*.

The **ZYGOMATIC FOSSA** is the space, included between the posterior margin of the outer ala of the pterygoid process and the crista

which descends from the malar tuberosity to the superior alveolar margin.

The **ZYGOMATIC MUSCLES** are two in number.

1. The *Zygomat'icus major*, *Zygomato-labial* (Ch.), *Distort'or Oris*, (F) *Muscle grand zygomatique*, which is situate obliquely at the fore part and sides of the face. It is a small, rounded muscle; arises from the outer surface of the os malæ, and is inserted at the commissure of the lips, which it raises and draws outwards. It acts principally in laughing.

2. The *Zygomat'icus minor*, *Petit Zygomato-labial* (Ch.), (F) *Petit Zygomatique*, does not always exist. It is situate on the inner side of the last;—arises from the outer surface of the os malæ and is inserted at the corner of the mouth, or rather into the upper lip, which it raises and draws outwards.

The **ZYGOMATIC SUTURE** is placed between the zygomatic parts of the temporal and cheek bones: and slants obliquely downwards and backwards.

ZYGOPHYLLUM FAGABO, (F) *Fabagelle*. A Syrian and Mauritanic plant, possessed of an acrid and bitter taste. It has vermifuge properties.

The Arabs believe that the recently expressed juice of the *Zygophyllum simplex* is capable of removing specks from the cornea.

INDEX TO THE SYNONYMES.

N. B. After each word in the Index, the term is given with which it is synonymous, and which may be found in alphabetical order in the body of the Dictionary. Where the terms are not strictly synonymous, reference is made to the word under which information may be obtained. The terms in *Italic* are French.

A

Aachen, Aix-la-Chapelle.

Abaissement de la Matrice, Prolapsus uteri.

Abaisseur de l'Aile du Nez, Depressor alæ nasi—*a. de l'angle des lèvres*, Depressor anguli oris—*a. de la lèvre inférieure*, Depressor labii inferioris—*a. de la Machoire inférieure*, Digastricus—*a. de l'œil*, Rectus inferior oculi.

Abarnahas, Magnesia.

Abarticulatio, Diarthrosis, Synarthrosis.

Abattis, Giblets.

Abcès, Abscess.

Abdominoscopia. See Auscultation.

Abducens labiorum, Levator anguli oris.

Abducentes, Motor oculi externus.

Abducteur de l'œil, Rectus externus oculi—*a. de l'oreille*, Abductor auris—*a. du gros orteil*, Abductor pollicis pedis—*a. du petit orteil*, Abductor minimi digiti pedis—*a. court du pouce*, Abductor pollicis brevis—*a. long du pouce*, Abductor longus pollicis.

Abdumen, Abdomen.

Abductor auricularis, Abductor auris—*a. Indicis pedis*, Prior indicis pedis, Posterior indicis pedis—*a. Medii digiti pedis*, Prior medii digiti pedis—*a. Minimi digiti*, Flexor parvus minimi digiti—*a. Minimi digiti*, Prior minimi digiti—*a. Oculi*, Rectus externus oculi—*a. Pollicis manus*, and *a. Brevis alter*, Abductor pollicis brevis.

Abeille, Bee.

Abelmoschus, Hibiscus Abelmoschus.

Abelmusk, Hibiscus Abelmoschus.

Abessi, Realgar.

Abies, Pinus picea—*a. Canadensis*, Pinus balsamea—*a. Gallica*, Pinus picea—*a. Rubra*, Pinus rubra.

Abiga, Teucrium Chamæpitys.

Abiotos, Conium Maculatum.

Ablactatio, Weaning.

Ablatio, Extirpation.

Abluens, Abstergent.

Abnormal, Abnormous.

Abnormitas, Anomalia.

Abominatio, Disgust.

Abondance, Plethora.

Aborsio, Abortion.

Aborsus, Abortion.

Abortif, Abortive.

Abortus, Abortion.

Abortment, Abortion.

Abouchement, Anastomosis.

Aboutissement, Suppuration.

Abrasax, Abrabax.

Abrathan, Artemisia abrotanum.

Abraxas, Abrabax.

Abreviation, Abbreviation.

Abricot, Prunus Armeniaca.

Abrosia, Abstinence.

Abrotanum cathsum, Artemisia abrotanum—*a. Mas*, Artemisia abrotanum.

Abruptio, Abduction.

Abscess psoas, Lumbar abscess.

Abscessus Capitis sanguineus neonatorum, Cephalæmatoma—*a. gangrænescens*, Anthrax—*a. Gangrænosus*, Anthrax—*a. Lumborum*, Lumbar abscess—*a. Mammæ*, Mastodynia apostematosa—*a. Nucleatus*, Furunculus—*a. Oculi*, Hypopyon—*a. Pectoris*, Empyema—*a. Pulmonum*, Empyema—*a. Spirituosus*, Aneurism—*a. Thoracis*, Empyema.

Abseissio Præputii, Circumcision.

Abconsio, Sinus.

Absinthium, Artemisia absinthium—*a. Maritimum*, Artemisia maritima—*a. Ponticum*, Artemisia pontica—*a. Romanum*, Artemisia pontica—*a. Santonicum*, Artemisia santonica.

Absorbant, Absorbent.

Abstème, Abstemious.

Abstergentia, Detergents.

Abstersivus, Abstergent.

Abstersorius, Abstergent.

Abus de soi-même, Masturbation

Abuta, Pareira Brava.

 Affion, Opium.
 Afflux, Affluence.
 Affluxus, Fluxion.

Affusio orbicularis, Placenta.
 Afium, Opium.
 After birth, Secundines.
 After pains, See Pains, labour.
 Agalactatio, Agalaxis.
 Agalaxis, Agalactia.
 Agaric female, Boletus igniarius—a. of the Oak, Boletus igniarius.
 Agaric blanc, Boletus laricis.
 Agaric de Chêne, Boletus igniarius.
 Agaric odorant, Boletus suaveolens.
 Agaricus, Boletus igniarius—a. Albus, Boletus laricis—a. Aurantiacus, Amanitæ—a. Aurantiacus, Bolites—a. Auriculæforma, Peziza auricula—a. Chirurgorum, Boletus igniarius—a. Pseudo-aurantiacus, Amanitæ—a. Quercus, Boletus igniarius.
 Agathosma crenatum, Diosma crenata.
 Age, old, Senectus.
 Agennesia, Sterilitas.
 Ager Naturæ, Uterus.
 Ageratum, Achillea ageratum.
 Ages, Palm.
 Agglutinatif, Agglutinant.
 Agglutiner, Agglutinate.
 Agheustia, Ageustia.
 Agihalid, Agiaholid.
 Agitatorius, Convulsive.
 Agme, Fracture.
 Agmina Digitorum Manus, Phalanges of the fingers—a. Membrana, Amnios.
 Agnus castus, Vitex.
 Agomphiasis, Gomphiasis.
 Agomphosis, Agomphiasis.
 Agone, Hyoscyamus.
 Agonia, Sterilitas.
 Agostus, Palm.
 Agraholid, Agiaholid.
 Agrégatives Pilules. See Aggregate.
 Agria, Herpes exedens.
 Agriampelos, Bryonia alba.
 Agrifolium, Ilex aquifolium.
 Agrimony, hemp, Eupatorium cannabinum.
 Agriocastanum, Bunium bulbocastanum, Lycoperdon tuber.
 Agriocinara, Sempervivum tectorum.
 Agricoccimelea, Prunus spinosa.
 Agrioriganum, Origanum majorana.
 Agrioselinum, Smyrnum olusatrum.
 Agripalma Gallis, Leonurus cardiaca.
 Agripaume, Leonurus cardiaca.
 Agrippinus Partus. See Agrippa.
 Agro di Cedro. See Citrus medica.
 Agrostis, Bryonia alba.
 Agruna, Prunus spinosa.
 Agrypnia, Insomnia.
 Agrypnocoma, Coma vigil.
 Ague, Intermittent fever—a. free, Laurus sassafras—a. Quartan, Quartan—a. Tertian, Tertian fever—a. weed, Eupatorium perfoliatum.
 Agyrta, Charlatan.
 Agyrtia, Charlatanry.
 Ahouai, Thevetia Ahouai.
 Ahusal, Orpiment.
 Aiersa, Iris Germanica.

Aige, Ægias.
 Aigle, Ægias.
 Aigre, Acidulous.
 Aigret, Acidulous.
 Aigremoine, Agrimony.
 Aigreurs, Acidities.
 Aigu, Acute.
 Aiguille, Needle.
 Aiguiser, to Acidulate.
 Ail, Allium.
 Aile, Ala, Aileron.
 Aimant, Magnet.
 Aimatera, Hepatirrhœa.
 Aimorrhœa, Hæmorrhagia.
 Aimorrhœis, Hæmorrhœis.
 Aimorrois, Hæmorrhœis.
 Aine, Inguen.
 Aipi, Jatropha manihot.
 Aipima coxera, Jatropha manihot.
 Aipipoca, Jatropha manihot.
 Air, Cells of the Lungs, Bronchial cells: see Cellule—a. Dephlogisticated, Oxygen—a. Empyreal, Oxygen—a. Factitious, Carbonic acid—a. Fixed, Carbonic acid—a. Inflammable, Hydrogen—a. Pure, Oxygen—a. Solid, of Hales, Carbonic acid—a. Vital, Oxygen.
 Air, acide vitriolique, Sulphurous acid—a. alcalin, Ammonia—a. du feu, Oxygen—a. gaté, Azote—a. vicié, Azote.
 Airain, Bellmetal, Brass.
 Aire, Arcola.
 Airelle Anguleuse, Vaccinium myrtillus—a. ponctuée, Vaccinium vitis idæa.
 Airigne, Hook.
 Aisselle, Axilla.
 Aisthesis, Æsthesis.
 Aitia, Cause.
 Aitiology, Ætiologia.
 Aition, Cause.
 Aizoon, Sempervivum tectorum.
 Ajuga, Teucrium chamæpitys.
 Akatalis, Juniperus communis.
 Akatera, Juniperus communis.
 Akinesia, Acinesia.
 Akology, Materia Medica.
 Ala, Axilla, Pavilion of the ear—a. Ex-trema, Aileron.
 Alabastrites, Alabaster.
 Alæ internæ minores clitoridis, Nymphæ—a. Majores, Labia pudendi—a. Minores, Nymphæ.
 Alæagnus, Myrice gale.
 Alaiter, To suckle.
 Alalia, Mutitas.
 Alambic, Alembic.
 Alares musculi, Pterygoid muscles.
 Alaternus, common, Rhamnus alaternus.
 Albagiazi, Sacrum.
 Albamentum, Albumen ovi.
 Albara, Lepra alphoides.
 Albaræs, Lepra alphoides.
 Albaras nigra, Lepra nigricans.
 Albaros, Lepra alphoides.
 Albâtre, Alabaster.
 Albin d'œuf, Albumen ovi.

Albinoismus, see Albino.

Albor ovi, Albumen ovi.

Albot, Crucible.

Albotim, Terebinthina.

Albuginée, Albuginea.

Albugo Oculorum, Leucoma—a. Ovi, Albumen ovi.

Albula, Leucoma.

Album canis, Album græcum—a. Ceti, Cetaceum.

Albumine, Albumen.

Albumor, Albumen ovi.

Alcahest, Alcaest.

Alkali, see Alkali.

Alkali ammoniacum acetatum, Liquor ammoniæ acetatis—a. Ammoniacum fluidum, Liquor ammoniæ—a. Fixum tartarizatum, Potassæ tartras—a. Minerale sulphuricum, Soda, sulphate of—a. Tartari aceto saturatum, Potassæ acetas—a. Vegetabile salito dephlogisticatum, Potassæ murias hyperoxygenatus—a. Vegetabile tartarizatum, Potassæ tartras—a. Vegetabile vitriolatum, Potassæ sulphas—a. Volatile acetatum, Liquor ammoniæ acetatis—a. Volatile aeratum, Ammonia carbonas—a. Volatile ex sale ammoniaco, Ammonia carbonas.

Alcaligene, Azote.

Alkalinity, see Alkalescence.

Alcana, Anchusa officinalis.

Alcana orientalis, Lawsonia inermis—a. Spuria, Anchusa tinctoria—a. Vera, Lawsonia inermis.

Alcea, Hibiscus abelmoschus—a. Ægyptiaca, Hibiscus abelmoschus—a. Indica, Hibiscus abelmoschus.

Alchachenge, Physalis.

Alchachil, Rosmarinus.

Alchaest, Alcahest.

Alchemy, Alchymy.

Alchitram, see Pinus Sylvestris.

Alchitura, see Pinus Sylvestris.

Alcocalum, Cynara scolymus.

Alcohol, Spiritus rectificatus—a. Æthereus ferratus, A. sulfurico æthereus ferri—a. cum Aloe perfoliata, Tinctura aloes—a. Ammonia et guaiaci, Tinctura guaiaci ammoniata—a. Ammoniatum, Spiritus ammonia—a. Ammoniatum aromaticum, Spiritus ammonia aromaticus—a. Ammoniatum fœtidum, Spiritus ammonia fœtidus—a. cum Aromatibus sulphuricatus, Sulphuricum acidum aromaticum—a. cum Aromatibus compositus, Tinctura cinnamomi composita—a. Castoriatum, Tinctura castorei—a. cum Crotona cascarilla, Tinctura cascarillæ—a. Dilutum, Spiritus tenuior—a. Ferratus, Tinctura ferri muriatis—a. cum Sulphate ferri tartarisatus, see Ferrum tartarizatum—a. cum Guaiaco officinale ammoniatus, Tinctura guaiaci ammoniata—a. Iodii, Tinctura Iodinæ—a. cum Opio, Tinctura opii—a. Sulphuricatum, Elixir acidum Halleri—a. Sulphuricum, Elixir acidum Halleri—a. Sulphuris, Carbonis sulphuretum.

Alcool, Alcohol—a. *Camphré*, Spiritus camphoræ.

Alcoolat, Tincture.

Alcoolatum, Tincture—a. Antiscorbuticum, Tinctura de cochleariis—a. Carminativum Sylvii, Tinctura carminativa Sylvii—a. de Cochleariis, Tinctura de Cochleariis—a. de Croco compositum, Tinctura de croco composita.

Alcoolometer, Areometer.

Alder, black, Prinos, Rhamnus frangula.

Ale, Cerevisia.

Aleacas, Glycyrrhiza.

Alecost, Tanacetum balsamita.

Alegar, Acetum.

Aleimma, Liniment.

Aleipha, Liniment.

Alema, Farina.

Aleton, Farina.

Aleuron, Farina.

Aleurotesis, see Cribration.

Alexanders, Smyrnum olusatrum.

Alexandri antidotus aurea, see Alexandrine.

Alexicacum, Amuletum, Alexipharmic.

Alexipyreticus, Febrifuge.

Alexir, Elixir.

Alexiterium chloricum, see Disinfection—a. Nitricum, see Disinfection.

Alèze, Alèse.

Alfusa, Tutia.

Algalié, Catheter.

Algedon, Pain.

Algema, Pain.

Algesis, Pain.

Algeticus, see Algos.

Algor, Rigor.

Algos, Pain.

Alhagi, Agul.

Alibilis, Nutritious.

Alienatio, Anomalia.

Alienation, mental, Insanity.

Alienus, Delirious.

Aliformis, Pterygoid.

Aliformes musculi, Pterygoid muscles.

Aligulus, Confection.

Alimellæ, Parotid.

Alimentary tube, Canal, alimentary.

Alimentum, Pabulum.

Alimos, Glycyrrhiza.

Alipantos, Alipænos.

Alisier blanc, Cratægus aria.

Alisma, Arnica montana.

Alitura, Nutrition.

Alkalescence, Alkalescence.

Alkali, see Alkali—a. Ammoniacum causticum, Ammonia—a. Ammoniacum spirituosum, Spiritus ammonia—a. Minerale nitratum, Soda, nitrate of—a. Minerale phosphoratum, Soda, phosphate of—a. Minerale salinum, Soda, muriate of—a. Vegetable, Potash—a. Vegetabile cum aceto, Potassæ acetas—a. Vegetabile fixum causticum, Potassa fusa—a. Volatile, Ammonia—a. Volatile causticum, Ammonia—a. Volatile concrete, Ammonia carbonas—a. Volatile nitratum, Ammonia nitras—a. Volatile

tartarizatum, Ammoniae tartras—a. Volatile vitriolatum, Ammoniae sulphas.
 Alkanet, bastard, Lithospermum officinale—a. Dyer's, Anchusa tinctoria—a. Garden, Anchusa officinalis—a. Officinal, Anchusa officinalis.
 Alkar, Medicament.
 Alkekengi, Physalis.
 Alkerva, see Ricinus communis.
 Alkitran, Cedria.
 Alkool, Alcohol.

 Ancolie, Aquilegia vulgaris.
 Ancon, Elbow, Olecranon.
 Anconé, Anconeus.
 Anconeus externus, see Triceps extensor cu-
 biti—a. Internus, see Triceps extensor cu-
 biti—a. Major, see Triceps extensor cubiti.
 Ancteriasmus, Infibulation.
 Ancyle, Ankylosis.
 Ancyloblepharon, Ankyloblepharon.
 Ancyloglossum, Ankyloglossum.
 Ancyromele, Ankyromele.
 Ancylomerismus, Ankylomerismus.
 Ancylosis, Ankylosis.
 Ancylostomus, Ankylostomus.
 Ancyra, Hook.
 Ancyroides processus, Coracoid.
 Andira inermis, Geoffræa inermis—a. Suri-namensis, Geoffræa surinamensis.
 Andrachahara, Sempervivum tectorum.
 Andrachne, Arbutus unedo, Portulaca.
 Andria, Adult age.
 Androgynus, Hermaphrodite.
 Andromania, Nymphomania.
 Andropogon chœnanthus, Juncus odoratus—a. Nardus, Calamus Alexandrinus, Nardus Indica.
 Androsace, Umbilicus marinus—a. Matthioli, Umbilicus marinus.
 Androsæmum, Hypericum perforatum.
 Androtomy, Andranatomia.
 Anebium, Anchusa Tinctoria.
 Anebus, Impuber.
 Aneilesis, Aneilema.
 Anemia, Anæmia.
 Anemone des bois, Anemone nemorosa.
 Anemony, Anemone hepatica—a. Meadow, Anemone pratensis—a. Wood, Anemone nemorosa.
 Anemos, Wind.
 Anepithymia chlorosis, Chlorosis.
 Anesis, Remission.
 Aneson, Anethum.
 Anesum, Pimpinella anisum.
 Anet, Anethum.
 Aneth, Anethum graveolens.
 Anethum fœniculum, Anethum.
 Aneticus, Anodyne.
 Aneton, Anethum.
 Anetus, Intermittent fever—a. Quartanus, Quartan—a. Quotidianus, Quotidian—a. Tertianus, Tertian fever.
 Aneurismatic, Aneurismal.
 Aneurysme, Aneurism.
 Aneurysmus, Dilatation.
 Anévrysme, Aneurism.
 Anfion, Maslach.
 Anfractuosités cérébrales, Anfractuosités, cerebral—a. Ethmoïdales, see Anfractu-osity.
 Anfractus, Anfractuosity—a. Cerebri, Anfractuosités (cerebral).
 Angeion, Vessel.
 Angeiendrography, Angeiohydrography.
 Angeiendrotomy, Angeiohydrotomy.
 Angeiorrhagia, Hæmorrhagia activa.
 Angelica tree, Aralia spinosa—a. Sylvestris, Ligusticum podagraria.
 Angélique, Angelica—a. Sauvage, Angelica sylvestris.
 Angelocacos, Myrobalanus.

- Angiectasia venosa, Varix.
 Angina, Cynanche—a. Aphthosa, Aphthæ—a. Bronchialis, Bronchitis—a. Canina, Cynanche trachealis—a. Epidemica, Cynanche maligna—a. Epiglottidea, Epiglottitis—a. Exudatoria, Cynanche trachealis—a. Externa, Cynanche parotidæa—a. Gangrænosa, Cynanche maligna—a. Inflammatoria, Cynanche, Cynanche trachealis—a. Laryngea, Laryngitis—a. Linguaria, Glossitis—a. Maligna, Cynanche maligna—a. Maxillaris, Cynanche parotidæa—a. Parotidæa externa, Cynanche parotidæa—a. Perniciosa, Cynanche trachealis—a. Polyposa seu membranacea, Cynanche trachealis—a. Sicca, Pædanchone—a. Suffocatoria, Cynanche trachealis—a. Trachealis, Cynanche trachealis—a. Ulcerosa, Cynanche maligna—a. Uvularis, Staphylædema, Uvulitis.
 Angine gutturale, Cynanche tonsillaris—a. Laryngée, Laryngitis—a. Pharyngée, Cynanche parotidæa—a. de Poitrine, Angina pectoris—a. Sèche, Angina sicca—a. Squirrheuse, Angina squirrosa—a. Tonsillaire, Cynanche tonsillaris.
 Angineux, Anginosa.
 Angiography, Angeiography.
 Angiohydrography, Angeiohydrography.
 Angiohydrotomy, Angeiohydrotomy.
 Angiology, Angeiology.
 Angiopyra, Synocha.
 Angiostosis, Angeiostosis.
 Angiotomy, Angeiotomy.
 Angoisse, Angor.
 Angor, Agony, Orthopnœa—a. Pectoris, Angina pectoris.
 Angos, Bubo, Uterus, Vessel.
 Angourion, Cucumis sativus.
 Anguis, Serpent.
 Anguish, Angor.
 Angulaire de l'Omoplate, Levator scapulæ.
 Angularis, Levator scapulæ.
 Anguli-scapulo-humeral, Teres major.
 Angulus ocularis, Canthus.
 Anguria, Cucurbita citrullus.
 Angustatio cordis, Systole.
 Angustia abdominalis, Pelvis, (Brim)—a. Perinæalis, Pelvis (Outlet.)
 Angustura, Cusparia febrifuga—a. Spuria, Brucea antidysenterica.
 Angusture, jausse, Brucea antidysenterica—a. Ferrugineuse, Brucea anti-dysenterica—a. Vraie, Cusparia febrifuga.
 Anhæmia, Anæmia.
 Anhelation, Dyspnœa.
 Anhelitus, Breath.
 Anhuiba, Laurus sassafras.
 Anilitas. See Dementia.
 Anima aloes: see Aloes—a. Articulorum, Hermodactylus—a. Hepatis, Ferri sulphas—a. Pulmonum, Crocus.
 Animalist, Animalculist.
 Animation, suspended, Asphyxia.
 Animellæ, Parotid.
 Animi casus subitus, Syncope—a. Deliquium, Syncope—a. Pathemata, Passions.
 Animus, Anima, Breath.
 Anis, Pimpinella anisum—a. Aigre, Cuminum cyminum—a. de la Chine, Illicium anisatum—a. doux, Anethum—a. étoilé, Illicium anisatum.
 Aniscalptor, Latissimus dorsi.
 Anise plant, Pimpinella anisum.
 Aniseed: see Pimpinella anisum—a. Tree, yellow flowered, Illicium anisatum.
 Anisi semina. See Pimpinella anisum.
 Anisum, Pimpinella anisum—a. Africanum frutescens, Bubon Galbanum—a. Fruticosum Galbaniferum, Bubon galbanum—a. Sinense, Illicium anisatum—a. Stellatum, Illicium anisatum.
 Ankle, Astragalus, Malleolus.
 Ankus, Ancus.
 Ankylops, Ægilops.
 Anneau, Ring—a. Crural, Crural canal—a. Diaphragmatique, Diaphragmatic ring—a. Fémoral, Crural canal—a. Inguinal, Inguinal ring—a. Umbilical, Umbilical ring.
 Annexe, Accessory, Appendix.
 Anni critici, Climacterici (anni)—a. Decretorii, Climacterici (anni)—a. Fatales, Climacterici (anni)—a. Genethliaci, Climacterici (anni)—a. Gradarii, Climacterici (anni)—a. Hebdomadici, Climacterici (anni)—a. Heroici, Climacterici (anni)—a. Natalitii, Climacterici (anni)—a. Sculares, Climacterici (anni)—a. Scansiles, Climacterici (anni).
 Annotto. See Terra Orleana.
 Annuens, Rectus capitis internus minor.
 Annularis, Cricoid: see Digitus—a. Ani, Sphincter ani.
 Annuli-tendino-phalangiens, Lumbricales manus.
 Annulus abdominis, Inguinal ring—a. Fossæ ovalis: see Ovalis fossa—a. Repens, Herpes circinatus—a. Umbilicalis, Umbilical ring—a. Ventriculi, Pylorus.
 Anocœlia, Stomach.
 Anodin, Anodyne.
 Anodos, Edentulus.
 Anodynum minerale, Potassæ nitras sulphatis paucillo mixtus.
 Anœa, Dementia, Idiotism.
 Anomal, Anomalous.
 Anomalia nervorum, Nervous diathesis.
 Anomalus, Irregular.
 Anonyme, Innominatum.
 Anorexia, Dyspepsia—a. Exhaustorum, Frigidity of the stomach—a. Mirabilis, Fasting.
 Anorganic. See Inorganic.
 Anormal, Abnormous.
 Anosphresia, Anosmia.
 Anserina, Potentilla anserina.
 Ansérine, Chenopodium ambrosioides—a. Anthelmintique, Chenopodium anthelminticum—a. Bon Henri, Chenopodium Bonus Henricus—a. Botrys, Chenopodium Botrys a. Fetide, Chenopodium vulvaria.

Ansérine, Vermifuge, *Chenopodium anthelminticum*.
Antalgicus, Anodyne.
Antebrachial. See *Antibrachial*.
Antelope, Antilopus.
Antemballomenos, Succedaneum.
Antemetie, Antiemetie.
Antendeixis, Counter-indication.
Antephialtic, Antiophialtic.
Antepileptic, Antiepileptic.
Antérieur du Marteau, Laxator tympani—
a. de l'Oreille, Anterior auris.
Anterior mallei, Laxator tympani.
Anterotieus, Antaphrodisiac.
Anteuphorbium, Cacalia anteuphorbium.
Anthelmia, Spigelia Marilandica.
Anthelmintics, Helminthagogues.
Anthema eruptio, Exanthem.
Anthereon, Mentum.
Anthora vulgaris, Aconitum anthora.
Anthos: see *Rosmarinus—a. Sylvestris, Ledum sylvestre*.
Anthracia, Anthracosis—a. Pestis, Plague—
a. Rubula, Frambæsia.
Anthracion. See *Anthrax*.
Anthrocoma, Anthrax.
Anthracosia, Anthrax.
Anthrope, Cutis.
Anthropochymy, Chymistry (human).
Anthropologia, Physiology.
Anthroposcopia, Physiognomy.
Anthropotomy, Andranatomia.
Antiades, Tonsils.
Antiaditis, Cynanche tonsillaris.
Antiaris toxicaria. See *Upas*.
Antiatrophicus, Antatrophic.
Anticacochymic, Anticachectic.
Anticancerosus, Anticancerous.
Anticardium, Fossette du cœur, Scrobiculus cordis.
Anticarcinomatous, Anticancerous.
Anticausotic, Anticausodic.
Anticheir, Pollex. See *Digitus*.
Anticholerica, Sophora heptaphylla.
Anticnemion, Shin.
Anticœur, Scrobiculus cordis.
Anticus, Anterior.
Antidartreux, Antiherpetic.
Antidotarium, Dispensatory.
Antidotum Mithridaticum, Mithridate.
Antidotus Heraclidis, Enneapharmacos.
Antifebrilis, Febrifuge.
Antihelmincticus, Anthelmintic.
Antihysterie, Anthysterie.
Anti-impetigenes, Solomon's. See *Liquor hydrargyri oxymuriatis*.
Antilacteus, Antigalactic.
Antilaiteux, Antigalactic.
Antilobium, Tragus.
Antilyssus, Antihydrophobic.
Antimoine, Antimonium—a. Beurre d', Antimonium muriatum—a. Chlorure d', Antimonium muriatum—a. Oxide blanc d', Antimonium diaphoreticum—a. Soufre doré d', Antimonii sulphuretum præcipitatum—a. Sulfuré, hydrosulphure rouge d', Anti-

monii sulphuretum rubrum—a. Verre d', Antimonii vitrum.
Antimoniale causticum, Antimonium muriatum.
Antimoniatum sulphur, Antimonii sulphuretum præcipitatum—a. Tartar, Antimonium tartarizatum.
Antimonii Butyrum, Antimonium muriatum—a. Calx, Antimonium diaphoreticum—a. Cerussa, Antimonium diaphoreticum—a. Murias, Antimonium muriatum—a. Oleum, Antimonium muriatum—a. Oxydulum hydrosulphuratum aurantiacum, Antimonii sulphuretum præcipitatum—a. Oxydum, Algaroth—a. Oxydum auratum, Antimonii sulphuratum præcipitatum—a. Oxidum nitro-muriaticum, Algaroth—Oxydum cum sulphure vitrifactum, Antimonii vitrum—a. Oxydum sulphuretum vitrifactum, Antimonii vitrum—a. Regulus medicinalis, Antimonium medicinale—a. Sal, Antimonium tartarizatum—a. Sulphur auratum, Antimonii sulphuretum præcipitatum—a. Sulphur præcipitatum, Antimonii sulphuretum præcipitatum—a. Sulphuretum, Antimonium—a. Tartras, Antimonium tartarizatum—a. Tartras et Potassæ, Antimonium tartarizatum—a. Vitrum hyacinthinum, Antimonii vitrum.
Antimonious Acid, Antimonium diaphoreticum.
Antimonium Calcinatum, Antimonium diaphoreticum—a. Salitum, Antimonium muriatum—a. Vitrifactum, Antimonii vitrum.
Antimony, butter of, Antimonium muriatum—a. Chloride of, Antimonium muriatum—a. Chloruret of, Antimonium muriatum—a. Deutoxide of, Antimonium diaphoreticum—a. Glass of, Antimonii vitrum—a. Golden sulphur of, Antimonii sulphuretum præcipitatum—a. Medicinal, regulus of, Antimonium medicinale—a. Muriate of, Antimonium muriatum—a. Peroxide of, Antimonium diaphoreticum—a. Submuriate of protoxide of, Algaroth—a. Sulphuret of, red, Antimonii sulphuretum rubrum—a. Tartarized, Antimonium tartarizatum—a. Vegetable, Eupatorium perfoliatum.
Antineuropathic, Nervine.
Antineurotic, Nervine.
Antipathic, Palliative.
Antipertussis, see Zinci sulphas.
Antipestilentialis, Antiloimic.
Antipharmacus, Alexipharmic.
Antiphysica, Carminatives.
Antipodagric, Antiarthritic.
Antiputrid, Antiseptic.
Antipyretic, Febrifuge.
Antiscolicus, Anthelmintic.
Antispasis, Revulsion.
Antispastic, Derivative.
Antistrumosus, Antiscrophulous.
Antitasis, Counter-extension.
Antithenar, Opponens pollicis—a. Metatarso-sub-phalangæus pollicis, Adductor pollicis pedis.

- Antithora, Aconitum anthora.
Antitragien, Antitragicus.
 Antivermicular, Antiperistaltic.
 Antiverminosus, Anthelmintic.
 Antodontalgic, Antiodontalgic.
 Antrax, Anthrax.
Antre, Antrum—a. *d'Hyghmore*, Antrum of Highmore.
 Antrum, Caverna—a. Auris, Tympanum—a. Buccinosum, Cochlea, Labyrinth—a. Pylo-
 lori, see Stomach.
 Anulus, *Fossette*.
 Anuria, Ischuria.
 Apagma, Abduction.
 Apagoge, Inductio.
 Apalachine, Ilex vomitoria—a. *à feuilles de Prunier*, Prinos—a. Gallis, Ilex vomitoria.
 Apanthismus, Stuprum.
 Apaphrismos, Despumation.
 Aparine, Galium aparine.
 Aparthrosis, Diarthrosis.
 Apechema, Contrafissura.
 Apectocephalus, Acephalothorus.
 Apepsia, Dyspepsia.
Apéritif, Aperient.
 Aperitivus, Aperient.
 Apertor oculi, Levator palpebræ superioris.
 Apeuthysmenos, Rectum.
 Aphæresis, Apheresis, Extirpation.
 Aphepsema, Decoction.
 Aphepsis, Decoction.
 Aphesis, Languor, Remission.
 Aphistesis, Abscess.
 Aphodos, Excrement.
 Aphonia, Mutitas, Catalepsy—a. Surdorum, Mutitas Surdorum.
 Aphoria, Sterilitas.
 Aphrodisia, Coition, Puberty.
 Aphrodisiacus, Venereal.
 Aphrodisiasmus, Coition.
 Aphronia, Apoplexy.
 Aphronitrum, Soda.
 Aphrosyne, Insanity.
 Aphthæ serpentes, Cancer aquaticus.
Aphthes des Enfants, Aphthæ.
Aphtheux, Aphthous.
 Apiastrum, Melissa.
 Apices crurum medullæ oblongatæ, Corpora striata.
 Apilepsia, Apoplexy.
 Apios, Pyrus communis.
 Apis, Bee.
 Apium petræum, Bubon Macedonicum.
 Aplestia, Ingluvies, Intemperance.
 Apneustia, Apnœa.
 Apnœa, Orthopnœa.
 Apnœsphyxia, Asphyxia.
 Apobainon, Eventus.
 Apobesomenon, Eventus.
 Apobiosis, Death.
 Apocapnismus, Fumigation.
 Apocatastasis, Considentia, Restauratio.
 Apocatharsis, Catharsis.
 Apocatharticus, Cathartic.
 Apocecaulismenon, Apagma.
 Apocenosis, Abevacuatio—a. Diabetes melli-
 tus, see Salivation—a. Vomitus pyrosis, Pyrosis.
 Apochoreon, Excrement.
 Apochrempsis, Exspuition.
Apocin gobe-mouche, Apocynum androsæmi-
 folium.
 Apoclasma, Abduction, Apagma.
 Apocope, Abcision.
 Apocrisis, Contagion, Excrement, Secretion.
 Apocrustica, Repellents.
 Apocyesis, Parturition.
 Apocynum scandens, Allamanda.
 Apogalactismus, Weaning.
 Apogalactos, Exuber.
 Apogeusis, Ageustia.
 Apogeustia, Ageustia.
 Apoglaucosis, Glaucosis.
 Apollinaris altercum, Hyoscyamus.
 Apolutica, Cicatrisantia.
 Apomeli, Oxytel.
 Apomexis, Munctio.
 Aponeurosiology, Aponeurology.
 Aponeurosis, Fascia—a. Crural, Fascia lata—a. Femoral, Fascia lata—a. Iliac, Fascia iliaca.
Aponévrose superficielle de l'abdomen et de la cuisse, Fascia superficialis.
 Aponevrosis, Aponeurosis.
 Aponipsis, Ablution.
 Apopnixis, Suffocation.
 Apopallesis, Abortion.
 Apopalsis, Abortion.
 Apopedasis, Luxation.
 Apophlegmatisans per nares, Errhine—a. per os, Sialagogue.
 Apophraxis, Amenorrhœa.
 Apophthora, Abortion.
 Apophthorius, Abortive.
Apophyse basilaire, Basilar process—a. *engainante ou vaginale*, Vaginal process.
Apophyses épineuses, Spinous processes of the vertebræ.
 Apophysis of Rau, *Grêle apophyse du Marteau*: see Malleus.
 Apoplanesis, Error loci.
 Apoplexia catalepsia, Catalepsia—a. Hydrocephalica, Hydrocephalus internus—a. Temulenta, see Temulentia.
 Apoplexy, pulmonary, see Hæmoptysis.
 Apopsychia, Syncope.
 Aporrhœa, Contagion.
 Aposcepsis, Aposcemma.
 Apositia, Disgust.
 Apospasma, *Arrachement*.
 Apostaxis, Staxis.
 Apostema, Abscess—a. Empyema, Empyema—a. Parulis, Parulis—a. Phalangum, *Fourche*—a. Psoaticum, Lumbar abscess.
 Aposyrma, Abrasion, Desquamation.
 Apotelesma, Amuletum.
 Apotheca, Pharmacopolium.
Apothicaire, Apothecary.
 Apothrausis, Abcision.
 Apotilmos, Evulsion.
 Apotome, Amputation.
 Apotropæum, Amuletum.

Apotrope, Aversion.
 Apoxysmus, Abrasion.
 Apozem, Decoction.
 Apparatus altus, see Lithotomy—a. Lateralis, see Lithotomy—a. Major, see Lithotomy—a. Minor, see Lithotomy.
 Appareil, Apparatus—a. *Grand*, see Lithotomy—a. *Haut*, see Lithotomy—a. *Latéralisé*, see Lithotomy—a. *Petit*, see Lithotomy.
 Appauvri, Impoverished.
 Appendice, Appendix—a. *Cæcal*, Appendix vermiformis cæci—a. *Digital*, Appendix vermiformis cæci—a. *Epiploïques*, Appendiculæ epiploicæ—a. *Sous-sternale*, Xiphoid cartilage—a. *Sus-sphenoïdale du cerveau*, Pituitary gland—a. *Xiphoidé*, Xiphoid cartilage.
 Appendices coli adiposæ, Appendiculæ epiploicæ.
 Appendicula cerebri, Pituitary gland—a. Vermiformis cæci, see Appendix—a. Epiploica, Epiploic appendage.
 Appendiculæ pinguedinosæ, Epiploic appendages.
 Appendix, Apophysis—a. Cerebri, Pituitary gland—a. ad Cerebrum, Cerebellum—a. Ventriculi, Duodenum.
 Appensio, see Analeptia.
 Appetit, *Perte d'*, Anorexia.
 Appetite, morbid, Limosis.
 Appetitus caninus, Boulimia.
 Apple, bitter, Cucumis colocynthis—a. Curassoa, Aurantium curassaventium—a. May, Podophyllum peltatum—a. Tree, Pyrus malus.
 Apprehensio, Catalepsy.
 Appropriatio, Assimilation.
 Apricatio, Insolation.
 Apricot, Prunus Armeniaca.
 Apsinthites, Absinthites.
 Apsychia, Syncope.
 Aphæ, Aphthæ.
 Apyique, Apyos.
 Apyrenomele, Apyromele.
 Aqua, Water—a. Acidula hydrosulfurata, Naples water (factitious)—a. Aeris fixi, Acidulous water (simple)—a. Alkalina oxymuriatica, *Eau de Javelle*—a. Aluminis compositus, Liquor a. c.—a.  Pneumothorax—a. Infantum, Cynanche
 trachealis—a. Dolorificum, Angina pectoris
 —a. Nocturnum, Incubus—a. Spastico-
 arthriticum inconstans, Angina pecto-
 ris.
 Astragale col d', Collum astragali.

Astragalus verus, see Tragacanth—a. Traga-
 canthus, see Tragacanth.
 Astantia, Imperatoria.
 Astrictoria, Astringents.
 Astrion, Astragalus.
 Astrios, Asteria gemma.
 Astrobolos, Asteria gemma.
 Astroitis, Asteria gemma.
 Astysia, Impotence.
 Asuar, Myrobalanus Indica.
 Asulci, Lapis lazuli.
 Asynodia, Impotence.
 Atactos, Erratic.
 Ataxia spirituum, Nervous diathesis.
 Atecnia, Sterilitas.
 Ater succus, Atrabilis.
 Athanasia, Tanacetum.
 Athara, Athera.
 Athelxis, Sucking.
 Atheracephalus, Acephalogaster.
 Athrix depilis, Alopecia.
 Athymia, Panophobia.
 Athyrion, Asplenium ceterach.
 Athyrium filix mas, Polypodium filix mas.
 Atlantion, Atlas.
 Atloldo-occipital, Rectus capitis posticus mi-
 nor—a. Sous-mastoidien, Obliquus superior
 oculi—a. Sous-occipitale, Rectus capitis
 lateralis.
 Atmidiatrica, Atmiatria.
 Atmisterion, Vaporarium.
 Atmos, Breath.
 Atmospherization, Hæmatosis.
 Atragene, Clematis vitalba.
 Atramentum sutorium, Ferri sulphas.
 Atresia, Adherence, Imperforation.
 Atretismus, Imperforation.
 Atriplex Fœtida, Chenopodium vulvaria—
 a. Odorata, Chenopodium botrys—a. Olida,
 Chenopodium vulvaria.
 Atrium cordis dexter, Sinus dexter cordis—
 a. Cordis sinistrum, Sinus pulmonalis.
 Atrophia, Tabes—a. Mesenterica, Tabes me-
 senterica.
 Attache, Insertion.
 Attagas, Attagen.
 Attaque, Attack—a. des Nerfs, Nervous at-
 tack.
 Attelle, Splint.
 Attirant, Attrahent.
 Attollens oculi, Rectus superior oculi.
 Attouchement, Masturbation.
 Attraction of aggregation, Cohesion, force of.
 Attractivum. See Magnet.
 Attractivus, Attrahent.
 Attractorius, Attrahent.
 Attrape-lourdaud of Bienaise, Bistouri caché.
 Attrita, Chafing.
 Atypos, Erratic.
 Aube-vigne, Clematis vitalba.
 Aubergine, Solanum Melongena.
 Aubepine, Mespilus oxyacantha.
 Aubifoin, Cyanus segetum.
 Auchen, Collum.
 Aude, Voice.
 Auliscos, Canula.

Aulos, Canula. See Vagina.
 Aulous, Foramen.
 Aune noir, Rhamnus frangula.
 Aunée, Inula helenium—a. *Dysenterique*, Inula dysenterica.
 Aura sanguinis, Gaz sanguinis.
 Auranite. See Agaric.
 Aurancum. See Ovum.
 Aurantia Curassavica, see Citrus aurantium—a. Poma, see Citrus aurantium.
 Aurantium, Citrus aurantium.
 Aureola, Areola.
 Auri chloretum cum chloreto natrii, see Gold—a. Chloridum, Gold, muriate of—a. Chloruretum, Gold, muriate of—a. Cyanidum, see Gold—a. Cyanuretum, see Gold—a. et Natrii chloruretum, see Gold—a. Murias, Gold, muriate of—a. Nitro-murias, see Gold—a. Oxidum, see Gold.
 Auripigmentum, Orpiment—a. Rubrum, Realgar.
 Aurichalcum, Brass.
 Auricula, Pavilion of the ear—a. Judæ, Peziza auricula—a. Muris, Hieracium Pilosella—a. Muris major, Hieracium murorum.
 Auriculaire, see Digitus—a. *Postérieur*, Retrahens auris—a. *Supérieur*, Attollens aures.
 Auricularis anterior, Anterior auris.
 Auricule, Pavilion of the ear.
 Auriga. See Liver.
 Aurigo, Icterus—a. Neophytorum, Icterus Infantum.
 Auris, Ear.
 Auriscalpium, Earpick.
 Aurium fluctuatio, Bombus—a. Marmorata, Cerumen—a. Sibilus, Bombus—a. Sonitus, Bombus—a. Sordes, Cerumen—a. Susurrus, Bombus.
 Aurone, Artemisia abrotanum—a. *des Champs*, Artemisia campestris—a. *des Jardins*, Artemisia abrotanum—a. *Mâle*, Artemisia abrotanum.
 Aurugo, Icterus.
 Aurum, Gold—a. Chloratum, Gold, muriate of—a. Chloratum natronatum, see Gold—a. Foliatum, Gold leaf—a. in Libellis, Gold leaf—a. Leprosum, Antimonium—a. Limatum, see Gold—a. Muriaticum, Gold, muriate of—a. Muriaticum, see Gold—a. Muriaticum natronatum, see Gold—a. Oxydatum, see Gold—a. Oxydulatum muriaticum, Gold, muriate of—a. Nitro-muriaticum, see Gold—a. Salitum, Gold, muriate of.
 Austruche, Imperatoria.
 Autalgia dolorosa, Neuralgia, facial, Pleurodynia—a. Pruriginosa, Itching—a. Vertigo, Vertigo.
 Autochiria, Suicide.
 Autocratia, Autocracy, Vis medicatrix naturæ.
 Autocratoria, Autocracy—a. Physiatrix, Vis medicatrix naturæ.
 Autoctonia, Suicide.
 Automnale, Autumnal.
 Autonomia, Vis medicatrix naturæ.

Autophia, Autopsia.
 Autophosphorus, Phosphorus.
 Autoplasty, Morioplastice.
 Autopyros, Syncomistos.
 Auxesis, Augmentation, Increase.
 Auxilium, Juvans, Medicament.
 Avant-bras, Forearm.
 Avant-cœur, Scrobiculus cordis.
 Aveline, Corylus avellana (nut).
 Avellana cathartica, Jatropha curcas.
 Avens, common, Geum urbanum—a. Water, Geum rivale.
 Averich, Sulphur.
 Aveugle, Cæcus.
 Aveuglement, Cæcitas—a. *de Jour*, Nyctalopia—a. *de Nuit*, Hemeralopia.
 Avicula Cipria, Pastil—a. Margaritifera. See Pearl.
 Avoine, Avena.
 Avortement, Abortion.
 Avorter, to Abort.
 Avortin, Abortion.
 Avorton, Abortion.
 Avulsio, Arrachement.
 Avulsion, Evulsion.
 Axe, Axis—a. *de l'Œil*, Axis of the eye.
 Axia commissura, Trochoid.
 Axine, Ascia.
 Axis, cerebro-spinal. See Encephalon.
 Axoide, Axis—a. *Occipitale*, Rectus capitis posticus major.
 Axoido-atloïdien, Obliquus inferior capitis.
 Axon, Axis.
 Axunge, Adeps præparata.
 Axungia, Pinguedo—a. *de Mumia*, Marrow—a. Articularis, Synovia—a. Porcina, Adeps præparata.
 Azarnet, Orpiment.
 Azarum, Asarum.
 Azedarach, Melia Azedarach.
 Azote, protoxide of, Nitrogen, gaseous oxide of.
 Azoturia. See Urine.
 Azur, Coral, Smalt.

 Brine, Muria.
 Brion, Corallina.
 Brique, Brick.
 Broccoli, Brassica sabellica.
 Brochos, Laqueus.
 Broiement. See Cataract.
 Brokenwindedness, Asthma.
 Broma, Aliment.
 Brome, Bromine.
 Bromide of iron, see Bromine—b. of Mer-

- cury, see Bromine—b. of Potassium, see Bromine.
- Bromos, Avena.
- Bronches, Bronchia—b. *Ganglions lymphatiques des*, Bronchial glands.
- Bronchic, Bronchial.
- Bronchitis, Catarrh—b. Asthenica, Peripneumonia notha.
- Bronchius, Sterno-thyroideus.
- Bronchlemmitis, Polypus bronchialis.
- Bronchophony, Resonance.
- Bronchus, Trachea.
- Brooklime, Veronica beccabunga.
- Broom, Sophora tinctoria, Spartium scoparium—b. Butcher's, Ruscus—b. rape, Virginia, Orobanche Virginiana.
- Brosse, Brush.
- Brouillard, Caligo.
- Brow, Front.
- Brown red, Colcothar.
- Brucia, Brucine.
- Bruise, Contusion.
- Bruisewort, Bellis, Saponaria.
- Bruissement, Bourdonnement.
- Bruit de cuir neuf, Bruit de craquement—b. *Hydropneumatique*, Bruit humorique—b. *de Soufflet placentaire*, Bruit placentaire—b. *de Tiraillement*, Bruit de craquement.
- Brûlure, Burn.
- Brunelle, Prunella.
- Brunonian, Brownian.
- Brunonianism, Brownism.
- Brunus, Erysipelas.
- Bruscus, Ruscus.
- Brush, stomach, Excutia ventriculi.
- Bruta, Juniperus sabina.
- Brutia, Instinct.
- Brutino, Terebinthina.
- Bruyère vulgaire, Erica vulgaris.
- Brychethmos, Rugitus.
- Brygmos, Stridor dentium.
- Bryonia mechoacanna nigricans, Convolvulus jalapa—b. Peruviana, Convolvulus jalapa.
- Bryonine. See Bryonia alba.
- Brytia, Marc of grapes.
- Bryton, Cerevisia.
- Bubastecordium, Artemisia vulgaris.
- Bube, Pustule.
- Bubon, Bubo, Inguen—b. Gummiiferum, see Ammoniac gum.
- Bubonopanus, Bubo.
- Bucaros, Terra Portugallica.
- Buccina, Turbinated bones.
- Bucco-alveolo-maxillaire, Buccinator.
- Bucco-labial nerve, Buccal nerve.
- Buceras, Trigonella fœnum.
- Buchu leaves, Diosma crenata.
- Buckbean, Menyanthes trifoliata.
- Buckeye, Æsculus hippocastanum.
- Bucket fever, Dengue.
- Buckho, Diosma crenata.
- Bucnemia. See Elephantiasis.
- Buckthorn, purging, Rhamnus.
- Bucton, Hymen.
- Buckwheat, Polygonum fagopyrum—b. Plant, eastern, Polygonum divaricatum.
- Buff, inflammatory, Corium phlogisticum.
- Bug, bed, Cimex.
- Bugantia, Chilblain.
- Bugle, Prunella—b. Common, Ajuga reptans—b. *Pyramidale*, Ajuga—b. *Rampante*, Ajuga reptans.
- Buglose, Anchusa officinalis.
- Bugloss, Dyer's, Anchusa tinctoria—b. Garden, Anchusa officinalis—b. Upright, Ajuga.
- Buglossa, Anchusa officinalis.
- Buglossum angustifolium majus, Anchusa officinalis—b. Latifolium, Borago officinalis—b. Sativum, Anchusa officinalis—b. Sylvestris, Anchusa officinalis—b. Tinctorum, Anchusa tinctoria—b. Verum, Boracic acid—b. Vulgare majus, Anchusa officinalis.
- Bugula, Ajuga.
- Bugrande épineuse, Ononis spinosa.
- Bugrane, Ononis spinosa—b. *des Champs*, Ononis arvensis.
- Buis, Buxus.
- Bulb, Rachidian. See Medulla oblongata.
- Bulbe de la voûte à trois piliers, Mamillary tubercles.
- Bulbi priorum crurum fornicis, Mamillary tubercles.
- Bulbo-cavernosus, Accelerator urinæ—b. *Syndesmo-caverneux*, Accelerator urinæ—b. *Uretral*, Accelerator urinæ.
- Bulbocastaneum, Bunium bulbocastanum.
- Bulbonach, Lunaria rediviva.
- Bulimia, Boulimia.
- Bulla, Hydatid.
- Ballace plum, Prunus invitia.
- Bullæ rotundæ cervicis uteri, Nabothi glandulæ.
- Bullfists, Lycoperdon.
- Bumellia, Fraxinus excelsior.
- Buna, Coffea Arabica.
- Bundurh, Corylus avellana.
- Bunias, Brassica napus.
- Bunium bulbocastanum, Pignut.
- Bupeina, Boulimia.
- Buphthalmi herba, Anthemis tinctoria.
- Buphthalmum majus, Chrysanthemum leucanthemum.
- Buphthalmus, Hydrophthalmia, Sempervivum tectorum.
- Bupleuroides, Bupleurum rotundifolium.
- Buplèvre, Bupleurum rotundifolium.
- Burdock, Arctium lappa—b. Lesser, Xanthium.
- Burnea. See Pinus Sylvestris.
- Bursa testium, Scrotum—b. Virilis, Scrotum.
- Bursalis, Obturator internus.
- Bursula, Scrotum.
- Busserolle, Arbutus uva ursi.
- Butea frondosa. See Kino.
- Butiga, Gutta rosea.
- Butomon, Iris pseudacorus.
- Butterbur, Tussilago petasites.
- Buttercups, Ranunculus aeris.

Butterflyweed, *Asclepias tuberosa*.
 Butterwort, *Pinguicula vulgaris*.
 Butua, *Pareira brava*.
 Butyrum, Butter—b. *Amygdalarum dulcium*,
 Confection (almond)—b. *Saturni*, Unguen-
 tum plumbi superacetatis—b. *Zinci*, *Zinci*
chloridum.
Buveur, Rectus internus oculi.
 Byssos, Vulva.

 Carpesium, Carpasium.
 Carphologia spasmodica, Subsultus tendinum.
 Carphos, Triginella fœnum.
 Carpia, Carbasus.
 Carpiæus, Palmaris brevis.
 Carpian, Carpial.
 Carpien, Carpial.
 Carpismus, Carpus.
 Carpobalsamum. See Amyris opobalsamum.
 Carpo-metacarpeus minimi digiti, Adductor metacarpi minimi digiti—c. *Metacarpien du petit doigt*, Opponens minimi digiti—c. *Metacarpien du pouce*, Opponens pollicis—c. Phalangeus minimi digiti, Abductor minimi digiti—c. *Phalangien du petit doigt*, Abductor minimi digiti—c. *Phalangien du petit doigt*, Flexor parvus minimi digiti—c. *Phalangien du pouce*, Flexor brevis pollicis manus—c. *Sus-phalangien du pouce*, Abductor pollicis brevis.
 Carpologia, Carphologia.
 Carpos, Fruit.
 Carrageen moss, Fucus crispus.
 Carreau, Tabes mesenterica.
 Carré de la cuisse, Quadratus femoris—c. *des Lombes*, Quadratus lumborum—c. *du Menton*, Depressor labii inferioris—c. *du Pied*, Extensor brevis digitorum pedis.
 Carrée. See Flexor longus digitorum pedis profundus perforans (accessorius).
 Carrot, candy, Athamanta cretensis—c. Deadly, Thapsia—c. Plant, Daucus carota.
 Carthegon. See Buxus.
 Cartilage anonyme, Cricoid (cartilage)—c. Epiglottic, Epiglottis—c. Supra-arytenoid, Corniculum laryngis—c. Tarsal, see Tarsus,
 Cartilaginis arytenoidæ capitulum, Corniculum laryngis.
 Cartilaginee gutturales, Arytenoid cartilages—c. Triquetrae, Arytenoid cartilages.
 Cartilago clypealis, Thyroid cartilage—c. Ensiformis, Xiphoid cartilage—c. innominata, Cricoid—c. Mucronata, Xiphoid cartilage—c. Peltalis, Thyroid cartilage—c. Scutiformis, Thyroid cartilage—c. Uvifer, Uvula—c. Xiphoides, Xiphoid cartilage.
 Carunculæ cuticulares, Nymphæ.
 Caruon, Carum.
 Caruncle, Carnositas.
 Carunculæ mamillares, Olfactory nerves—c. Papillares, Papillæ of the kidney.
 Carus apoplexia, Apoplexy—c. Asphyxia, Asphyxia—c. Catalepsia, Catalepsy—c. Ecstasis, Ecstasis—c. Hydrocephalus, Hydrocephalus internus—c. ab Insolatione, *Coup de soleil*—c. Lethargus, Lethargy—c. Lethargus cataphora, Somnolency—c. Lethargus vigil, Coma vigil—c. Paralysis, Paralysis—c. Paralysis paraplegia, Paraplegia—c. Vaternus, Lethargy.
 Carvi, Carum.
 Carya, Juglans regia—c. Basilica, Juglans regia.
 Caryedon catagma. See Fracture.
 Caryocostinum, Confectio scammoniae.
 Caryon ponticon, Corylus avellana (nut).
 Caryophylla, Geum urbanum.
 Caryophyllata, Geum urbanum.
 Caryophyllum rubrum, Dianthus caryophyllus.
 Caryophyllus Americanus, see Myrtus pimentata—c. Aromaticus, Eugenia caryophyllata—c. Hortensis, Dianthus caryophyllus—c. Vulgaris, Geum urbanum.
 Casamum, Cyclamen.
 Casamunar, Cassumuniar.
 Cascarilla, Croton cascarilla.
 Cascheu, Catechu.
 Casearius, Cheesy.
 Caseosus, Cheesy.
 Caseus, Cheese—c. Equinus, Hippace.
 Caseux, Cheesy.
 Cashew, Anacardium occidentale.
 Cashow, Catechu.
 Casia, Laurus cassia.
 Casmina, Cassumuniar.
 Cassa, Thorax.
 Cassada root, Jatropha manihot.
 Cassava root, Jatropha manihot.
 Casse aromatique, Laurus cassia—c. *En bâtons*, Cassia fistula—c. *En bois*, Laurus cassia—c. *des Boutiques*, Cassia fistula—c. *Sené*, Cassia senna.
 Casse-lunettes, Cyanus segetum, Euphrasia officinalis.
 Casseena, Ilex vomitoria.
 Cassenoles. See Quercus cerris.
 Cassia, Laurus cassia—c. Absus, Absus—c. Cinnamomea, Laurus cassia—c. Caryophyllata, Myrtus caryophyllata—c. Canella, Laurus cassia—c. Egyptian, Cassia senna—c. Lignea, Laurus cassia—c. Lignea

- Malabarica, *Laurus cassia*—c. Purgine,
Cassia fistula.
Cassia aramentum, see Cassia fistula—c.
Flores, see *Laurus cinnamomum*.
Cassiala, Hyssopus.
Casside bleue, *Scutellaria galericulata*.
Cassina, *Ilex vomitoria*.
Cassine, evergreen, *Ilex vomitoria*.
Cassis, *Ribes nigrum*.
Cassiteros, Tin.
Cassuvium pomiferum, *Anacardium occiden-
tale*.
Castanea, *Fagus castanea*—c. Equina, *Æscu-
lus Hippocastanum*.
Castanea pumila, *Fagus castanea pumila*.
Castigans, Corrigent.
Castjoe, Catechu.
Castor oil plant, *Ricinus communis*.
Castrangula, *Scrophularia aquatica*.
Castrat, Castratus.
Castrato, Castratus.
Castratus, Eunuch.
Caus, Prolapsus—c. Palpebræ superioris,
Blepharoptosis.
Catacauma, Burn.
Catacausis, Combustion, human—c. Ebriosa,
Combustion, human.
Catachasmus, Scarification.
Catachrisis, Inunction.
Catachrison, Liniment.
Catachysis, Decantation.
Cataclysmus, Ablution, *Douche*.
Catæonesis, Catantlema.
Catagauna, Cambogia.
Catagma, Fracture—c. Fissura, Fissure, see
Contrafissura—c. Fractura, Fracture.
Catalentia, Epilepsy.
Catalepsia spuria, Ecstasis.
Catalysis, Paralysis.
Catamenia alba, Leucorrhœa—c. Menstrua,
Menses.
Catameniorum fluxus immodicus, Menor-
rhagia.
Catanance, *Cichorium intybus*.
Catangelos, Ruscus.
Cataphora, Somnolency—c. Hydrocephalica,
see Apoplexy—c. Cymini, *Theriaca Lon-
dinensis*.
Cataplexis, Hæmodia.
Cataposis, Deglutition.
Catapotion, Pilula.
Catapsyxis, Perfrictio.
Cataptosis, Epilepsy.
Catapulta virilis, Penis.
Cataputia, minor, *Euphorbia lathyris*, *Rici-
nus communis*.
Cataract, black, Amaurosis.
Cataracta glauca, Glaucoma—c. Nigra, Amau-
rosis.
Cataracte, *abaissement de la*, see Cataract—
c. *Deplacement de la*, see Cataract—c.
Noire, Amaurosis.
Catarrh, acute of the uterus, see Metritis—
c. Epidemic, Influenza—c. Summer, Fever,
hay.
Catarrhacta, Cataract.
- Catarrhe aiguë de l'uterus*, see Metritis—c.
Buccal, Aphthæ—c. *Gastrique*, Gastritis—
c. *Guttural*, Cynanche tonsillaris—c. Intes-
tinal, Diarrhœa—c. *Laryngien*, Laryngitis
—c. *Oculaire*, Ophthalmia—c. *de l'Oreille*,
Otitis—c. *Pharyngien*, Cynanche paro-
tidæa—c. *Pulmonaire*, Catarrh—c. *Uterin*,
Leucorrhœa—c. *Vésical*, Cystitis.
Catarrheuma, Catarrh.
Catarrhexis, Excrement—c. Vera, Hæmato-
chezia.
Catarrhophe, Absorption.
Catarrhophesis, Absorption.
Catarrhopus, Catarrh.
Catarrhysis, Catarrhopia, Defluxion.
Catarrhus, Defluxion, Tussis—c. *Æstivus*,
Fever, hay—c. *Bellinsulanus*, Cynanche
parotidæa—c. *Gonorrhœa*, Gonorrhœa—c.
Intestinalis, Diarrhœa—c. ad Nares, Co-
ryza—c. *Suffocativus barbadensis*, C. tra-
chealis—c. *Urethralis*, Gonorrhœa—c. *Ve-
sicæ*, Cystitis.
Catasceue, Structure.
Catastagnos, Coryza.
Catastalagnos, Coryza, Distillation.
Catastasis, Constitution, Habit of body.
Catatasis, Extension.
Catathlipsis, Oppression.
Cataxis, Fracture.
Catch fly, *Silene Virginica*.
Catchup, Ketchup.
Cate, Catechu.
Catenæ musculus, Tibialis anticus.
Cateonesis, Catantlema.
Catgut, *Galega Virginiana*.
Catillus, Cup.
Catinus fusorius, Crucible.
Cathæreticus, Cathartic.
Cathareticus, Cathartic.
Catharismos, Depuration.
Catharma, Cathartic.
Cathartine. See *Convolvulus jalapa*.
Cathartique, Cathartic.
Catharto-carpus, Cassia fistula.
Cathedra, Anus.
Cathemerus, Quotidian.
Catheteris, Catheter.
Cathmia, *Plumbi oxydum semi-vitreum*.
Cathmir, Calamina.
Catling, Knife, double edged.
Catoche, Catalepsy.
Catochus, Ecstasis—c. *Cervinus*, Tetanus—
c. *Holotonicus*, Tetanus—c. *Infantum*, In-
duration of the cellular tissue.
Catopter, Speculum.
Catoptron, Speculum.
Catoreticus, Purgative.
Cototericus, Purgative.
Catsfoot, *Antennaria Dioica*.
Cattagauna, Cambogia.
Cattiteros, Tin.
Catu-tripali, *Piper longum*.
Caucaloides, Patella.
Cauchemar, Incubus.
Cauchevieille, Incubus.
Cauchuc, Caoutchouc.

- Cauda, Coccyx—*c. Equina*, see *Medulla spinalis*—*c. Salax*, Penis.
 Caul, Epiploon.
 Cauliflower, *Brassica Florida*.
 Caulis *Florida*, *Brassica Florida*.
 Caulis, Penis.
 Cauma, Synocha, Empresma—*c. Bronchitis*, *Cynanche trachealis*—*c. Enteritis*, *Enteritis*—*c. Gastritis*, *Gastritis*—*c. Hæmorrhagicum*, *Hæmorrhagia activa*—*c. Ophthalmitis*, *Ophthalmia*—*c. Peritonitis*, *Peritonitis*—*c. Phrenitis*, *Phrenitis*—*c. Pleuritis*, *Pleuritis*—*c. Rheumatismus*, *Rheumatism*, acute.
 Caunga, Areca.
 Causa conjuncta, Cause, proximate—*c. Continens*, Cause, proximate.
 Causæ abditæ, Causes, predisponent or remote—*c. Actuales*, Causes, occasional—*c. Præincipientes*, Causes, procatactic—*c. Proëgumenæ*, Causes, predisponent.
 Causes cachées, Causes, occult—*c. Determinantes*, Causes, specific—*c. Éloignées*, Causes, predisponent—*c. Prochaines*, Causes, proximate.
 Causis, Burn, Ebullition, Fermentation, Incendium, Ustion.
 Causoma, Inflammation.
 Caustic bearer, *Porte-caustique*.
 Caustica adustio, Cauterization.
 Causticum alkalinum, Potassa fusa—*c. Americanum*, *Veratrum sabadilla*—*c. Antimoniale*, *Antimonium muriatum*—*c. Commune*, Potassa fusa—*c. Commune acerimum*, Potassa fusa—*c. Commune fortius*, Potassa cum calce—*c. Lunare*, *Argenti nitratus*—*c. Potentiale*, Potassa fusa—*c. Salinum*, Potassa fusa.
 Caustique, Caustic.
 Causus, endemial of the West Indies, Fever, yellow—*c. Tropicus endemicus*, Fever, yellow.
 Cautchuc, Caoutchouc.
 Cautére, Cauterium, Fonticulus—*c. Inhérent*, Inherent cautery.
 Cautereticus, Caustic.
 Cauterium potentiale, Causticum commune.
 Cautery, Cauterium—*c. Potential*, Causticum commune.
 Cava, Vulva.
 Cavatio, Cavity.
 Cavea, Cavity—*c. Narium*, Nares.
 Caverna, Cavity, Vulva—*c. Narium*, Nares.
 Cavernæ frontis, Frontal sinuses.
 Caverneux, Carvernous.
 Cavicula, Astragalus.
 Caviculæ pedis nodus, Tarsus.
 Cavilla, Astragalus, Cavicula.
 Cavitas antrosa auris, Tympanum—*c. Buccinata*, Cochlea—*c. Cochleata*, Cochlea—*c. Narium*, Nares.
 Cavitates cerebri, Ventricles of the brain—*c. Duræ matris*, Sinuses of the dura mater—*c. Innominatæ*, Auricles of the heart.
 Cavité, Cavity—*c. Dentaire*, Dental cavity—*c. des Epiploons*, see *Peritonæum*—*c. du Tympan*, Tympanum.
 Cavum, Cavity—*c. Narium*, Nares—*c. Oris*, Mouth—*c. Tympani*, Tympanum.
 Cayan, *Phaseolus creticus*.
 Cazabi, *Jatropha manihot*.
 Ceanothos, *Cirsium arvense*—*c. Americanus*, *Celastrus*.
 Cear, Heart.
 Ceasma, Fissure.
 Ceces. See *Quercus alba*.
 Cécité, Cæcitas.
 Cedar, red, *Juniperus Virginiana*.
 Cedeia, Embalming.
 Cedria. See *Pinus Sylvestris*.
 Cedrium, Cedria.
 Cedromela. See *Citrus medica*.
 Cedronella, Melissa.
 Cedros, *Juniperus lycia*.
 Cedrostis, *Bryonia alba*.
 Cedrus baccifera, *Juniperus sabina*.
 Ceinture, Cingulum, Herpes zoster—*c. Darterreuse*, Herpes zoster—*c. de Hildane*, Cingulum Hildani—*c. de Vif argent*, Cingulum mercuriale.
 Celandine common, *Chelidonium majus*—*c. lesser*, *Ranunculus ficaria*.
 Cele, Hernia.
 Céliaque, Cæliac.
 Celis, Macula.
 Cella turcica, Sella turcica.
 Cellulæ bronchiæ. See Cellule.
 Cellular tissue of bones. See Cancelli.
 Cellules bronchiques, Bronchial cells.
 Celotomia, Castration.
 Celsus, method of. See Lithotomy.
 Cembro nuts. See *Pinus cembra*.
 Cementerium, Crucible.
 Cenchron, *Panicum miliaceum*.
 Cendre du Levant, Soda.
 Cendres gravelées, see Potash—*c. de Sarmement*, see Potash.
 Cendré, Cineritious.
 Cenembatesis, Paracentesis.
 Ceneones, Flanks.
 Cenigdam, Ceniptam.
 Cenigotam, Ceniplam.
 Cenipotam, Ceniplam.
 Cenosis, Inanition.
 Cenotic, Drastic.
 Centaurea stellata, *Centaurea calcitrapa*.
 Centaureé étoilée, *Centaurea calcitrapa*—*c. Grande*, *Centaurea centaurium*—*c. petite*, *Chironia centaurium*.
 Centaurium magnum, *Centaurea centaurium*—*c. Minus vulgare*, *Chironia centaurium*—*c. Officinale*, *Centaurea centaurium*—*c. Parvum*, *Chironia centaurium*.
 Centaury, American, *Chironia angularis*—*c. Greater*, *Centaurea centaurium*—*c. Lesser*, *Chironia centaurium*.
 Centesis, Paracentesis.
 Centimorbia, *Lysimachia nummularia*.
 Centinervia, Plantago.
 Centinode, *Polygonum aviculare*.
 Centinodia, *Polygonum aviculare*.

- Cento virginalis, Hymen.
 Centre, tendinous of the diaphragm, Centre phrenic.
 Centromyrine, Ruscus.
 Centrum commune, Solar plexus—c. Nervum, Centre, phrenic—c. Tendinosum, Centre, phrenic.
 Centum capita, Eryngium campestre.
 Centumnodia, Polygonum aviculare.
 Cepa ascalonica, Bulbus esculentus, Echallotte.
 Cepæa, Veronica beccabunga,
 Cephælis ipecacuanha, Ipecacuanha.
 Cephalæa hemicrania, Hemicrania.
 Cephalæa pulsatilis, Crotaphe.
 Cephalalgia contagiosa, Influenza—c. Inflammatoria, Phrenitis—c. Pulsatilis, Crotaphe—c. Spasmodica, See Cephalæa.
 Cephalartica, Cephalic remedies.
 Cephalæ, Head.
 Cephalidium. See Caput.
 Cephalitis, Phrenitis.
 Cephalium. See Caput.
 Cephalo-pharyngeus, Constrictor pharyngis.
 Cephalonosis, Fever Hungaric.
 Cephalophyma, Cephalæmatoma.
 Cephaloponia, Cephalalgia.
 Cephalotrypesis, Trepanning.
 Cephaloxia, Torticollis.
 Cepulla, Allium cepa.
 Cer, Heart.
 Cerææ, Cornua uteri.
 Ceramium, Amphora.
 Ceramium, Amphora.
 Ceramuria. See Urine.
 Ceranthemus, Propolis.
 Ceras, Cornea, Cornu.
 Ceration. See Prunus cerasus.
 Cerasum. See Prunus cerasus.
 Cerasus avium, Prunus avium—c. Laurocerasus, Prunus laurocerasus—c. Padus, Prunus Padus—c. Racemosus Sylvestris, Prunus padus.
Cérat blanc ou de Galien, Ceratum Galeni—c. *de Blanc de Baleine*, Ceratum cetacei—c. *de Goulard*, Ceratum plumbi—c. *pour les lèvres*, Cerate for the lips—c. *de Plomb composé*, Ceratum plumbi compositum—c. *de Savon*, Ceratum Saponis—c. *de Suracetate de plomb*, Ceratum plumbi superacetatis.
 Cerate, lead, compound, Ceratum plumbi compositum—c. Savine, Ceratum sabinæ—c. Soap, Ceratum saponis—c. Spermaceti, Ceratum cetacei—c. of Superacetate or Sugar of lead, Ceratum plumbi superacetatis—c. Turner's, Cerate of calamine.
 Ceratectomia, Ceratotomia.
 Ceratia, Ceratonium siliqua.
 Ceration, Siliqua.
 Ceratitis, Corneitis.
 Ceratium, Ceratonia siliqua.
 Ceratodeitis, Ceratitis.
 Ceratodeocele, Ceratocele.
 Ceratoglossus, Hyoglossus.
 Ceratoides, Cornea.
 Ceratomalagma, Cerate.
 Ceratomeningitis, Ceratitis.
 Ceratotomus, Knife, cataract.
 Ceratum album, Ceratum cetacei, Ceratum Galeni—c. de Althæa, Unguentum de Althæa—c. de Cerussa, Unguentum plumbi subcarbonatis—c. Ceti, Ceratum cetacei—c. Cicutæ, Ceratum conii—c. Citrinum, Ceratum resinæ—c. Epuloticum, Cerate of calamine—c. Labiale rubrum, Cerate for the lips—c. Lapidis calaminaris, Cerate of calamine—c. Lithargyri acetati compositum, Ceratum plumbi compositum—c. Lyttæ, Cerate of cantharides—c. Mercuriale, Unguentum hydrargyri—c. Picatum, Pisselæum—c. Refrigerans Galeni, Ceratum Galeni—c. Saturni, Ceratum plumbi compositum—c. Simplex, Ceratum cetacei—c. Spermaceti, Ceratum cetacei—c. Subacetati plumbi medicatum, Ceratum plumbi compositum—c. Tetrapharmacum, Pisselæum—c. Carbonatis zinci impuri, Cerate of calamine.
 Cerberus triceps, Pulvis cornachini.
 Cerchnus, Rattle.
 Cercis, Pilum, Radius.
Cercle, Circulus—c. *de la Choroïde*, Ciliary ligament—c. *Ciliaire*, Ciliary ligament.
 Cercosis externa, Clitorism.
 Cerea, Cerumen.
 Cerebral apophysis, Pineal gland.
 Cerebriform, Encephaloid.
 Cerebrum abdominale, Solar plexus—c. Elongatum, Medulla oblongata—c. Parvum, Cerebellum—c. Posterius, Cerebellum.
 Cerefolium, Chærophyllum sativum, Scandix cerefolium—c. Hispanicum, Chærophyllum odoratum—c. Sylvestre, Chærophyllum sylvestre.
 Cerelæum, Cerate.
 Cereola, Bougie.
 Cereolus chirargorum, Bougie.
 Cereum medicatum, Bougie.
Cerfeuil, Chærophyllum sativum, Scandix cerefolium—c. *Musqué*, Chærophyllum odoratum—c. *Cultivé*, Chærophyllum sativum—c. *d'Espagne*, Chærophyllum odoratum—c. *des Jardins*, Chærophyllum sativum—c. *Sauvage*, Chærophyllum sylvestre.
 Cerion, Favus, Porrigo favosa.
Cérisier, Prunus cerasus—c. *à Grappes*, Prunus padus—c. *de Virginie*, Prunus Virginiana.
 Cernos, Capistrum.
 Ceroma, Cerate.
 Ceronium, Cerate.
 Ceros, Cera.
 Cerostrosis, Hystriasis.
 Cerotum, Cerate.
 Ceroxylon. See Cera flava et alba.
 Cerua, Ricinus communis.
 Cerussa acetata, Plumbi superacetatis—c. Alba Hispanica, Plumbi subcarbonas—c. Alba Norica, Plumbi subcarbonas—c. Psimmy.

- thron, Plumbi subcarbonas—*c.* Serpentinae, see Arum maculatum.
 Cerusse, Plumbi subcarbonas.
 Cervaria alba, Laserpitium latifolium.
 Cerveau, Cerebrum.
 Cervelet, Cerebellum.
 Cerveille, Cerebrum.
 Cervi elaphi cornu, Cornu cervi. See Cervus.
 Cervicalis descendens. See Sacro-lumbalis.
 Cervicaria, Campanula trachelium.
 Cervici-dorso-scapulaire, Rhomboideus—*c.* dorso-costal, Serratus posticus superior—*c.* dorso-mastoidien et dorso-trachélien, Splenius—*c.* Mastoidien, Splenius.
 Cervispina, Rhamnus.
 Cervix, Collum—*c.* Obstipa, Torticollis.
 Cervoise, Cerevisia.
 Cestron, Betanica officinalis.
 Ceterach officinarum, Asplenium ceterach.
 Cetine, Cetaceum.
 Cevadilla Hispanorum, Veratrum Sabadilla.
 Cevadille, Veratrum Sabadilla.
 Chaa, Thea.
 Chærefolium, Chærophyllum sativum, Scandix cerefolium.
 Chærophyllum, Scandix cerefolium—*c.* Temulum, Chærophyllum sylvestre.
 Chæte, Capillus.
 Chair, Flesh.
 Chalasis, Relaxation.
 Chalasmos, Relaxation.
 Chalcanthum, Ferri sulphas—*c.* Album, Zinci sulphas.
 Chalcedonius, Cornelian.
 Chalcites, Colcothar.
 Chalcoideum (os), Cuneiform Bone.
 Chalcos, Cuprum, Æreolum.
 Chaleur, Heat—*c.* Acre, see Acrid—*c.* Animale, Animal heat.
 Chalk, Creta—*c.* Red, Rubrica fabrilis—*c.* Stones, Calculi arthritic.
 Chalybis rubigo, Ferri subcarbonas.
 Chalybs tartarizatus, Ferrum tartarizatum.
 Chama, Cheme.
 Chamæacte, Sambucus ebulus.
 Chamæbates, Fragaria.
 Chamæcedris, Artemisia santonica.
 Chamæcissus, Glecoma hederacea.
 Chamæclema, Glecoma hederacea.
 Chamæcyparissus, Artemisia santonica.
 Chamædrops, Teucrium chamædrys.
 Chamædrys, Teucrium Ch., Veronica—*c.* Incana maritima, Teucrium marum—*c.* Minor repens, Teucrium Ch.—*c.* Palustris, Teucrium scordium—*c.* Vulgaris, Teucrium Ch.
 Chamægeiron, Tussilago.
 Chamælea, Cneorum tricoccum.
 Chamæleagnus, Myrica gale.
 Chamæleon album, Carlina acaulis.
 Chamæleuce, Tussilago.
 Chamælinum, Linum catharticum.
 Chamæmelum, Anthemis nobilis—*c.* Foetidum, Anthemis cotula—*c.* Nobile, Anthemis nobilis—*c.* Odoratum, Anthemis nobilis—*c.* Vulgare, Matricaria chamomilla.
 Chamæmorum, Teucrium Chamæpitys, Rubus chamæmorus.
 Chamæpeuce, Camphorosma monspeliaca.
 Chamæpitys, Teucrium chamæpitys—*c.* Anthyllus, Teucrium iva—*c.* Moschata, Teucrium iva.
 Chamæplion, Erysimum.
 Chambar, Magnesia.
 Chambrie, Cannabis sativa.
 Chamelea, Daphne Alpina.
 Chamomile, dogs', Matricaria chamomilla—*c.* Dyer's, Anthemis tinctoria—*c.* Spanish, Anthemis pyrethrum—*c.* Stinking, Anthemis cotula.
 Chamomilla nostras, Matricaria chamomilla—*c.* Romana, Anthemis nobilis.
 Champaca, Michelia champaca.
 Champignon, Fungus—*c.* de l'Appareil des Fractures, Clavaria—*c.* de Couche, see Agaric—*c.* de Malte, Cynomorion coccineum.

 Cheville du pied, Malleolus.
 Chèvre-feuille, Lonicera Periclymenum.
 Chiadus, Furunculus.
 Chiasmos, Decussation.
 Chiaster, Kiaster.
 Chibou. See Bursera gummifera.
 Chickenpox, Varicella.
 Chickweed, Alsine media.
 Chicorée des jardins, Cichorium endivia—
 c. Sauvage, Cichorium intybus.
 Chiendent, Triticum repens.
 Childbed state, Parturient state.
 Chiliogramma, Kilogramme.
 Chiliophyllon, Achillea millefolium.
 Chilitis, Cheilitis.
 Chiloplastice, Cheiloplastice.
 Chimaphila, Pyrola umbellata.
 Chimia, Chymistry.

Chimiater, Chymiater.
 Chimiatria, Chymiatia.
 Chimie, Chymistry.
 Chimiste, Chymist.
 Chimon, Cold.
 China, Cinchona, Smilax china—c. Ameri-
 can or West India, Smilax pseudo-china—
 c. Occidentalis, Smilax pseudo-china—c.
 Root, Smilax china—c. Spuria, nodosa,
 Smilax pseudo-china.
 Chincapin, Fagus castanea pumila.
 Chinche, Cimex.
 Chinchina, Cinchona.
 Chinchunchulli, Ionidium marcucci.
 Chincough, Pertussis.
 Chinicus acetas, Quinine, acetate of—c. Ci-
 tras, Quinine, acetate of.
 Chinii acetas, Quinine, acetate of.
 Chinina, Quinina.
 Chinini acetas, Quinine, acetate of.
 Chinium aceticum, Quinine, acetate of—c.
 Ferrocyanogenatum, Quinine, Ferrocya-
 nate of—c. Hydrochloricum, Quinine, mu-
 riate of—c. Muriaticum, Quinine, muriate
 of—c. Nitricum, Quinine, nitrate of—c.
 Phosphoricum, Quinine, phosphate of—c.
 Salitum, Quinine, muriate of.
 Chinneyweed, Lichen roccella.
 Chinwhelk, Sycosis.
 Chiococœ radix, Caincæ radix.
 Chioli, Furunculus.
 Chion, Snow.
 Chirapotheca, Arsenal.
 Chiriater, Surgeon.
 Chiriatria, Surgery.
 Chironax, Surgeon.
 Chironomia, Cheironomia.
 Chirorrheuma, Chirrheuma.
 Chirosis, Subactio.
 Chirotheca, Gantelet.
 Chirurgeon, Surgeon.
 Chirurgia, Surgery—c. Anaplastica, Morio-
 plastice—c. Curtorum, Morioplastice—c.
 Infusoria, Infusion of medicines—c. Trans-
 fusoria, Transfusion.
 Chirurgicus, Surgical.
 Chirurgie, Surgery—c. Militaire, Surgery,
 military.
 Chirurgien, Surgeon—c. Hernieux, see Her-
 nial.
 Chirurgique, Surgical.
 Chirurgus, Surgeon.
 Chiton, Tunic.
 Chitoniscos, Indusium.
 Chlora, Chlorine.
 Chloras kalicus depuratus, Potassæ murias
 hyperoxygenatus.
 Chlorasma, Chlorosis.
 Chloretum calcaris, Calcis chloridum.
 Chlorophylle, Fecula, green.
 Chlorosis amatoria, Hectic fever.
 Chlorum, Chlorine.
 Chlorure d'or, Gold, muriate of.
 Chloruretum oxidi calcii, Calcis chloridum.
 Choa, Chu.
 Choak, wolf, Lycanthe.

- Choana, Pelvis—*c. Cerebri*, Infundibulum of the brain.
 Choane, Infundibulum.
 Choanorrhagia, Epistaxis.
 Choava, Coffea Arabica.
 Chocus, Chu.
 Chœnicis, Trepan.
 Chœnion, Cord.
 Chœnos, Cord.
 Chœrus, Scrofula.
 Choiros, Vulva.
 Cholago, Cholas.
 Cholasma, Cholosis.
 Chole, Bile.
 Cholecyst, Gall-bladder.
 Cholegon, Cholagogue.
 Choleia, Claudication.
 Cholelithia icterus, Icterus.
 Cholelithus, Calculi, biliary.
 Cholerophobia, Choleromania.
 Cholerrhagia, Cholera.
 Cholesterine. See Adipocire.
 Chololithus. See Calculi, biliary.
 Choloma, Claudication.
 Cholos, Bile, Chole.
 Cholosis, Claudication.
 Cholotes, Cholosis.
 Chondro-pharyngeus, Constrictor pharyngis.
 Chondrodes, Cartilaginous.
 Chondros, Cartilage, Xiphoid cartilage.
 Chondrus, Alga—*c. Crispus*, Fucus crispus—*c. Polymorphus*, Fucus crispus.
 Chonos, Infundibulum.
 Chord, testicular, Spermatic chord.
 Chorda, Intestine—*c. Veneris*, Chordee.
 Chordæ, Chordee—*c. Ferrenii*, Chords, vocal—*c. Vocales*, Chords, vocal.
 Chordapsus, Enteritis, Ileus.
 Choreomania, Choreia.
 Chorion fungosum, Decidua—*c. reticulatum*, Decidua—*c. Shaggy*, Decidua—*c. Spongiosum*, Decidua—*c. Spongy*, Decidua—*c. Tomentosum*, Decidua.
 Choroide, ceinture blanche de la, Ciliary ligament—*c. Commissure de la*, Ciliary ligament.
 Choses contre nature, Res contra naturam—*c. Naturelles*, Res naturales—*c. non Naturelles*, Res non naturales.
 Chou cabus, Brassica capitata—*c. Croûte*, Sauer kraut—*c. Fleur*, Brassica Florida—Cauliflower excrescence—*c. Marin*, Convolvulus soldanella—*c. Navet*, Brassica rapa—*c. Pommé*, Brassica capitata—*c. Potager*, Brassica—*c. Roquette*, Brassica eruca.
 Chrisis, Inunction.
 Chrœas, Scrofula.
 Chronagunea, Menstruation.
 Chrysanthemum, Calendula officinalis.
 Chrysène, Chrysanthemum leucanthemum.
 Chrysitis. See Plumbi oxydum semivitreum.
 Chrysobalanus Galeni. See Myristica moschata.
 Chrysocalis, Matricaria.
 Chrysochalcos, Brass.
 Chrysocolla, Borax.
 Chrysocoma, Achillea millefolium.
 Chrysolachanum, Chenopodium bonus Henricus.
 Chrysomelia. See Citrus aurantium.
 Chrysopus, Cambogia.
 Chrysos, Gold.
 Chrysospermum, Sempervivum tectorum.
 Chrysalea, Nitro-muriatic acid.
 Chute, Prolapsus—*c. du Fondement*, Proctocece—*c. de la Matrice*, Procidencia uteri—*c. du Rectum*, Proctocece.
 Chylaire, Chylosus.
 Chylar, Chylous.
 Chylarion, Chyle.
 Chyleux, Chylous.
 Chyline, Cyclamen.
 Chylisma, Extract.
 Chylocystis, Receptaculum chyli.
 Chylopoiesis, Chylification.
 Chylorrhœa, Cœliac flux—*c. Pectoris*, Chylorhœa—*c. Renalis*, Chyluria—*c. Urinalis*, Chyluria.
 Chylosis, Chylification.
 Chymi, Humours.
 Chymia, Chymistry.
 Chymicophanta, Chymist.
 Chymicus, Chymist.
 Chymie, Chymistry.
 Chymiste, Chymist.
 Chymochezia, Cœliac flux.
 Chymorrhœa, Cœliac flux, Lientery.
 Chymosis, Chymification.
 Cibarium, Aliment.
 Cibus, Aliment—*c. Albus*, Blanc manger.
 Cicatrice, Cicatrix.
 Cicatricula, Molecule.
 Cicely, sweet, Chærophyllym odoratum, Scandix odorata.
 Cicerbita, Sonchus oleraceus.
 Cicérole, Cicer arietinum.
 Cichory, wild, Cichorium intybus.
 Cici, Ricinus communis.
 Cicis. See Quercus cerris.
 Cicuta, Conium maculatum—*c. Major*, Conium maculatum—*c. Major fœtida*, Conium maculatum—*c. Terrestris*, Conium maculatum—*c. Virosa*, Cicuta aquatica—*c. Vulgaris*, Conium maculatum.
 Cicutaria, Chærophyllym sylvestre—*c. Aquatica*, Cicuta aquatica, Phellandrium aquaticum.
 Cidre, Cider.
 Cigue aquatique, Cicuta aquatica—*c. d'Eau*, Phellandrium aquaticum—*c. Grande*, Conium maculatum—*c. Ordinaire*, Conium maculatum—*c. Vireuse*, Cicuta aquatica.
 Ciliaire, Ciliary.
 Cillement, Nictation.
 Cillosis, Cillo.
 Cils, Cilia.
 Cina cina, Cinchona.
 Cinabaris, Hydrargyri sulphuretum rubrum.
 Cinabarium, Hydrargyri sulphuretum rubrum.
 Cinara hortensis, Cynara scolymus.

Cinchona officinalis (cortex flavus), *Cinchona cordifolia* cortex—c. *Pallida*, *Cinchona lancifolia* cortex—c. of Virginia, *Magnolia glauca*.
Cinchonine, tartrate of. See *Quinine*, tartrate of.
Cineraria maritima, *Achaovan*, *Abiat*.
Cineres clavellati, see *Potash*—c. *Gravellati*, see *Potash*—c. *Russici*, *Potash* of commerce.
Cinereus, *Cineritious*.
Cineritious substance of the brain, *Cortex cerebri*.
Cinesis, *Cinema*, *Motion*.
Cinetus, *Diaphragm*.
Cingularia, *Lycopodium*.
Cingulum Sancti Joannis, *Artemisia vulgaris*.
Cinis fæcum, see *Potash*—c. *Infectorius*, see *Potash*.
Cinnabaris, *Hydrargyri sulphuretum rubrum*—c. *Græcorum*, see *Calamus rotang*.
Cinnamomum, *Laurus cinnamomum*—c. *Album*, *Canella alba*—c. *Indicum*, *Laurus cassia*—c. *Malabaricum*, *Laurus cassia*—c. *Sinense*, *Laurus cassia*.
Cinnamon, *Laurus cinnamomi*—c. *Malabar*, *Laurus cassia*—c. *Wild*, *Laurus cassia*.
Cinquefoil, *Potentilla reptans*.
Cinzilla, *Herpes zoster*.
Cion, *Uvula*.
Cionis, *Uvula*.
Cipipa. See *Jatropha manihot*.
Circocele, *Cirsocele*.
Circoncision, *Circumcision*.
Circonflexe, *Circumflexus*.
Circonscribit, *Circumscribed*.
Circonvolution, *Convolution*.
Circuitus, *Period*.
Circulator, *Charlatan*.
Circulus membranosus, *Hymen*.
Circumcaulalis membrana, *Conjunctiva*.
Circumcisura, *Circumcision*.
Circumductio, *Perisphalsis*.
Circumductionis opifex, *Obliquus superior oculi*.
Circumforaneus, *Charlatan*.
Circumossale, *Periosteum*.
Circumsectio, *Circumcision*.

Clavus, a *Corn*—c. *Siliginis*, *Ergot*.
Cleansings, *Lochia*.
Clearseeing, *Clairvoyance*.
Cleavers, *Galium aparine*.
Cleavers' bees, *Galium aparine*.
Clef du Crâne, *Wormianum*, os—c. *de Garregeot*, *Key*—c. *à Noix*, see *Key*—c. *à Pivot*, see *Key*—c. *à Pompe*, see *Key*.
Cleidagra, *Cleisagra*.
Cleidion, *Clavicle*.
Cleido-costal, *Costo-clavicular*—c. *Mastoideus*, *Sterno-cleido-mastoideus*.
Cleis, *Clavicle*, *Key*.
Clematis daphnoides major, *Vinea minor*.
Clematite, *Clematis vitalba*—c. *Droite*, *Clematis recta*.
Clignement, *Nictation*.
Clignotement, *Nictation*.
Clima, *Climate*.
Climateric, *Climacteric*.
Clinique, *Clinical*.
Clinopodia, *Thymus mastichina*.
Cliquetis, *Crepitation*.
Clitbur, *Arctium lappa*.
Clitoridis inferioris lati et plani musculi, *Constrictores cunni*.
Clitoris, *Cercosis*.
Cloanx, *Orpiment*.

- Cloaque*, Cloaca.
Cloison, Septum—*c. des fosses nasales*, Septum narium—*c. Transparente*, Septum lucidum.
Clonici universales, Synclonus.
Clinique, Clonic.
Clonos epilepsia, Epilepsy—*c. Hydrophobia*, Hydrophobia.
Clonus, Synclonus—*c. Nictitatio*, Nictation—*c. Palpitatio*, Palpitation—*c. Pandiculatio*, Pandiculation—*c. Pandiculatio maxillarium*, Yawning—*c. Singultus*, Singultus—*c. Sternutatio*, Sneezing—*c. Subsultus*, Subsultus tendinum.
Clopemania, Klopemania.
Cloportes ordinaires, Onisci aselli.
Clot of blood. See Blood.
Clothing, Vestitus.
Clou, Clavus, Furunculus—*c. Hysterique*, Clavus hystericus—*c. de l'Œil*, Clavus oculi.
Cloudberry, Rubus chamæmorus.
Cloudberry tree, Rubus chamæmorus.
Clove, see *Eugenia caryophyllata*—*c. Bark*, see *Myrtus caryophyllata*—*c. Pink*, *Dianthus caryophyllus*—*c. July flower*, *Dianthus caryophyllus*.
Clubfeet, Kylosis.
Clubmoss, Lycopodium—*c. Fir*, Lycopodium Selago—*c. Upright*, Lycopodium selago.
Clunes, Nates.
Clunesia, Proctitis.
Clydon, Flatulence.
Clyisma, Clyster—*c. Tonicum*, Enema fœtidum.
Clyster, Enema—*c. Anodyne*, Enema anodynum—*c. Common*, Enema commune—*c. Domestic*, Enema commune—*c. Fœtid*, Enema fœtidum—*c. Pipe*, Elasma—*c. Purging*, Enema catharticum—*c. Starch and opium*, Enema anodynum—*c. Tobacco*, Enema tabaci—*c. Turpentine*, Enema terebinthinæ—*c. Uterinus*, Sparallium.
Clystère, Enema.
Cneme, Leg, Tibia.
Cncoron, Daphne gnidium.
Cnesmos, Cnesis, Itching.
Cnicus, Carthamus tinctorius—*c. Sylvestris*, Centaurea benedicta.
Cnissa. See Nidorous.
Coagmentatio, Gomphosis.
Coagulum sanguinis. See Blood.
Coarctatio, Stricture.
Coarticulatio, Diarthrosis, Synarthrosis.
Cobalt, protoxide of, Smalt.
Cobra de capello, Crotalus horridus.
Cobweb, Aranei Tela.
Cocchia, Cochia.
Cocci granum, Kermes—*c. Orientales*, see *Menispermum cocculus*.
Ciccigio-cutané sphincter, Sphincter ani externus.
Coccinella, Coccus cacti.
Coccionella, Coccus cacti.
Coccobalsamum. See *Amyris opobalsamum*.
Coccognidia, Cnidia grana.
Coccones. See *Punica granatum*.
Cocculæ officinarum. See *Menispermum cocculus*.
Cocculi Indi aromatici. See *Myrtus pimenta*.
Cocculus crispus, *Menispermum tuberculatum*—*c. Indicus*, see *Menispermum cocculus*—*c. Palmatus*, *Columba*—*c. Suberosus*, see *Menispermum cocculus*.
Coccum, Cnidia grana, Kermes—*c. Baphicum*, Kermes—*c. Infectorium*, Kermes—*c. Scarlatinum*, Kermes—*c. Tinctorium*, Kermes.
Coccus Americanus, *Coccus cacti*—*c. Illicis*, Kermes—*c. Indicus tinctorius*, *Coccus cacti*—*c. Indicus*, see *Menispermum cocculus*—*c. Polonicus*, *Coccus cacti*.
Coccygio-anal, Sphincter ani externus.
Coccyhmelea, *Prunus domestica*.
Cochemar, Incubus.
Cocheria, Cochia.
Cochineal, *Coccus cacti*.
Cochinelifera cochinilla, *Coccus cacti*.
Cochinilla, *Coccus cacti*.
Cochlea, scalæ of the. See Cochlea.
Cochlear auriculare, Earpick.
Cochleare, Scoop.
Cochlearia hortensis, *Cochlearia officinalis*.
Cochone, Perinæum.
Cockles, Indian. See *Menispermum Cocculus*.
Cockmint, *Tanacetum balsamita*.
Cocles, *Borgne*.
Coco, *Cocos nucifera*.
Cocoa cacavifera, Cacao.
Cocobay, Mal de San Lazaro.
Cocotier, *Cocos nucifera*.
Coctio, Digestion.
Cocyta, Malis.
Codagapala bark, *Nerium antidysentericum*.
Code, Codex.
Codesella, Anthrax.
Codex medicamentarius, Formulary.
Codia, Papaver (capsule).
Codocele, Bubo.
Codoscella, Bubo.
Cæcum, Cæcum.
Coeffe, Caul.
Cælialgia, Tormina.
Cæliaca chylosa, Celiac flux—*c. Lactea*, Celiac flux—*c. Renalis*, Chyluria—*c. Urinalis*, Chyluria.
Cæliaque, *Trepied de la*, Celiac artery.
Cæliocèle. See Hernia, hypogastric.
Cæliorrhœa, Diarrhœa.
Cælon, Cavity.
Cælotés, Cavity.
Cænologia, Consultation.
Cœur, Heart.
Cognitio physiologica, Physiology.
Cohabitatio, Coition.
Coiffe, Caul.
Coign. See *Pyrus cydonia*.
Coignassier, *Pyrus cydonia*.
Coira, Catechu.
Coiras, Scrofula.
Coit, Coition.
Col, Collum.
Cola, Articulation.

- Colchicum Zeylanicum, Kæmpferia rotunda.
Colchique, Colchicum autumnale.
 Cold in the head, Coryza.
 Coleitis, Colposis.
 Coleoptosis, Prolapsus vaginæ.
 Coleositis, Leucorrhœa.
Colère, Rage.
 Coles, Penis.
Colibert, Cagot.

 Columna, Pillar—c. Adstans inguinibus, Penis—c. Dorsi, Vertebral column—c. Oris, Uvula—c. Spinalis, Vertebral column—c. Virginitatis, Hymen—c. Foraminis ovalis, see Ovalis fossa—c. Valvulæ Vieussenii, see Valvula Vieussenii—c. Vertebralis, Vertebral column.
 Columnæ longifolia, Bahel.
 Columns of Morgagni or of the rectum. See Rectum.
 Colus jovis, Salvia sclarea.
 Colustrum, Colostrum.
Coluvrine de Virginie, Aristolochia serpentaria.
 Coma, Capillus—c. Apoplexia, Apoplexy—c. Cæsarea, Plica—c. Somnolentum, Somnolency.
 Comacon, Myristica moschata.
 Comaros, Arbutus unedo.
Comateux, Comatose.
 Comatodes, Comatose.
 Combustibility, preternatural, Combustion, human.
 Combustio, Burn.
 Combustura, Burn.
 Comes archiatrorum. See Exarchiater.
Comestible, Esculent.
 Comfrey, Symphytum—c. Spotted, Pulmonaria.
 Comiste, Aliment.
 Commanducatio, Mastication.
 Commercio, Sympathy.
 Commi, Gummi.

Commissura, Articulation—*c. Magna cerebri*, Corpus callosum—*c. Ossium carnea*, Syssarcosis.
 Commissure, oblique or intercerebral. See Valvula Vicussenii.
 Commosis, Propolis.
 Commotio, Motion.
 Commotion, Concussion—*c. du Cerveau*, Concussion of the brain.
 Compages, Articulation, Commissure—*c. Vertebrarum*, Vertebral column.
 Compaginatio, Commissure.
 Compas d'Epaisseur. See Pelvimeter.
 Compassio, Sympathy.
 Compeba, Piper cubeba.
 Compeper, Piper cubeba.
 Completio, Plethora.
 Complexio, Citron, Confusio, Temperament.
 Compositum, Compound.
 Comprehensio, Catalepsy.
 Compresseur de Dupuytren, Compressor of Dupuytren—*c. du Nez*, Compressor nasi—*c. de la Prostate*, Compressor prostatæ.
 Compressio, Thlipsis.
 Compunctio, Paracentesis, Puncturing.
 Conæsthesia, Cænæsthesia.
 Conarium, Pineal gland.
 Conatus, Effort.
 Concavitas conchularis cerebri, Infundibulum of the brain.
 Concavum pedis, Sole.
 Conceptacula seminaria, Vesiculæ seminariæ.
 Conceptaculum, Uterus.
 Conceptus falsus, Conception, false.
 Concha, Patella, Turbinated bone, (middle,) Vulva—*c. Auris interna*, Cochlea—*c. Cerebri*, Infundibulum of the brain—*c. Inferior*, Turbinated bone, (inferior)—*c. Labyrinthi*, Cochlea.
 Conchæ narium, Turbinated bones.
 Conchus, Cranium.
 Conchylia, Turbinated bones.
 Concidentia, Collapse.
 Concoction, Coction.
 Concombre ordinaire, Cucumis sativus—*c. Sauvage*, Momordica elaterium.
 Concrematio, Calcination.
 Concretio, Adherence.
 Concubitus, Coition.
 Concursus, Syndrome.
 Condensantia, Incrassantia.
 Condensatio, Stegnosis.
 Condit, Confection.
 Conditura cadaverum, Embalming.
 Conductio, Tonic spasm, Convulsion.
 Conductor, Director.
 Conduit, Canal—*c. Auditif externe*, Auditory canal, external—*c. Auditif interne*, Auditory canal, internal—*c. Auriculaire*, Auditory canal, external—*c. Cholédoque*, Chole-
 doch duct—*c. Déférent*, Deferens vas—*c. d'Eustache*, Eustachian tube—*c. Gut-
 turale de l'oreille*, Eustachian tube—*c. La-
 byrinthique*, Auditory canal, internal—*c. Pterygoidien*, Pterygoid canal—*c. Sous-
 orbitaire*, Suborbitar canal—*c. Sperma-*

tique, Deferens (vas)—*c. Thoracique*, Tho-
 racic duct—*c. Vidian*, Pterygoid canal.
 Conduits adipeux, Fatty canals—*c. Aqueux*,
 see Aqueous—*c. Aveugles de l'urethre*, see
 Cæcus—*c. Dentaires*, Dental canals—*c. Ejaculateurs*, Ejaculatory ducts—*c. La-
 crymaux*, Lachrymal ducts—*c. Lactiferès*,
 Lactiferous vessels—*c. Nourriciers*, Canals,
 nutritive—*c. Nutriciers*, Canals, nutritive.
 Condulodes, Condylloid.
 Condylus digitorum manus, Phalanges of the
 fingers.
 Condylus, Condyloma.
 Conessi cortex, Nerium antidysentericum.

- Cor*, A corn.

Cor, Heart.
 Coraco-humeralis, Coraco-brachialis—*c.* Hy-
 oideus, Omohyoideus—*c.* Radialis, Biceps
 flexor cubiti.
 Corail, Coral—*c. des Jardins*, Capsicum an-
 num.
 Coralline de Corse, Corallina Corsicana.
 Coralloides fungus, Clavaria coralloides.
 Coralwort, Clavaria coralloides.
 Cord, Umbilical, Funiculus umbilicalis.
 Corda, Chorda—*c.* Hippocratis, Achillis tendo
 —*c.* Magna, Achillis tendo.
 Corde du Tambour, Chorda Tympani—*c. du*
Tympan, Chorda Tympani.
 Cordee, Chordee.
 Cordia myxa, Sebestina—*c.* Smooth-leaved,
 Sebestina.
 Cordial, nervous, Brodum's, see Tinctura gen-
 tianæ composita—*c.* Sir Walter Raleigh's,
 Confectio aromatica—*c.* Warner's, see
 Tinctura rhei composita.
 Cordinema, Carebaria.
 Cordis emunctorium, Axilla.
 Cordolium, Cardialgia.
 Cordon ombilicale, Funiculus umbilicalis—
c. Spermatique, Spermatic chord—*c. testi-*
culaire, Spermatic chord.
 Cordons sus-pubiens, Round ligaments of the
 uterus—*c.* Vasculaires, Round ligaments
 of the uterus.
 Cords, vocal, Thyreo-arytenoid ligaments.
 Core, Pupil. See Furunculus.
 Corectomia, Coretomia.
 Coredialysis, Coretomia.
 Coretodialysis, Coretomia.
 Coretonectomia, Coretomia.
 Coretotomia, Coretomia.
 Coriander, Coriandrum sativum.
 Coriannon, Coriandrum sativum.
 Corion, Corium, Hypericum perforatum.
 Coris, Cimex—*c.* Monspeliensis, Symphytum
 Petræum.
 Corium, Cutis.
 Cork, Suber.
 Cormier, Sorbus domestica.
 Corn, Zea mays—*c.* Guinea, Panicum Itali-
 cum—*c.* Indian, Zea mays—*c.* Wild, Ma-
 tricaria chamomilla—*c.* Flag, Gladiolus
 vulgaris—*c.* Flower, Centaurea cyanus—
c. Salad, Valeriana dentata.
 Cornaline, Cornelian.
 Corne, Cornu—*c.* d'Ammon, Cornu ammonis
 —*c.* de Belier, Cornu ammonis—*c.* de Cerf,
 Cervus, Cornu cervi, Cochlearia coronopus
 —*c.* de Chamois, Cornu rupicapre—*c.* de
 la Peau, Cornu.
 Corné, Corneous.
 Cornea, opaque, Caligo—*c.* Opaca, Sclerotic.
 Cornée, Cornea.
 Cornelus, Cornelian.
 Corneolus, Cornelian.
 Cornes de la Matrice, Cornua uteri—*c.* de la
 Peau, Horny excrescences.
 Cornesta, Retort.
 Cornet acoustique, Eartrumpet—*c.* Moyen,

Turbinated bone, middle—*c.* de Morgagni,
 Turbinated bone, superior.
 Cornets de Bertin, Sphenoidal cornua—*c.*
 Sphenoidaux, Sphenoidal cornua.
 Cornichon. See Cucumis sativus.
 Cornicula laryngis. See Arytenoid cartilages.
 Cornicularis processus, Coracoid process.
 Cornier, Cornus Florida.
 Cornouiller, Cornus Florida—*c.* à feuilles ar-
 rondies, Cornus circinata—*c.* à grandes
 fleurs, Cornus Florida—*c.* Soyeux, Cornus
 sericea.
 Cornu, Cervus, Cornu cervi, Retort—*c.* Acus-
 ticum, Eartrumpet—*c.* Cervinum, Cervus,
 Plantago coronopus—*c.* Ethmoidal, Turbi-
 nated bone, middle—*c.* Middle, Turbinated
 bone, middle.
 Cornua, Turbinated bones—*c.* Cutanea, Horny
 excrescences—*c.* Lachrymalia, Lachrymal
 ducts—*c.* Limacum, Lachrymal ducts.
 Cornue, Retort.
 Cornumusa, Retort.
 Cornus mas odorata, Laurus sassafras—*c.*
 Sanguinea, Sebestina.
 Cornuta, Retort.
 Corodialysis, Coretomia.
 Corona, Crown—*c.* Dentis, Crown of a tooth
 —*c.* Glandis, Crown of the glans—*c.* Pos-
 terior ulnæ, Olecranon—*c.* Regia, Trifo-
 lium melilotus—*c.* Ulnæ, Olecranon—*c.* Ve-
 neris, Crown of Venus.
 Coronæ ciliaris membranula, Ciliaris (zo-
 nula)—*c.* Palpebrarum. See Tarsus.
 Coronarius, Coronal.
 Coroncion, Coreoncion.
 Coronopodium, Plantago coronopus.
 Coronopus, Cochlearia coronopus—*c.* Ruellii,
 Cochlearia coronopus.
 Corotomia, Coretomia.
 Corpora albicantia, Mamillary tubercles—*c.*
 Arantii, Noduli Arantii, Tubercula A.—
c. Bigemina, Quadrigemina corpora—*c.*
 Candicantia, Albicantia corpora, Mamillary
 tubercles—*c.* Fibrosa, Corps fibreux—*c.*

Cricoeides, Annular.
Cricos, Ring.
Crimmon, Farina.
Crines, Hair.
Crinis, Capillus.
Crinon, *Lilium candidum*.
Crista urethralis, *Gallinaginis caput*—*c. Interna*, Frontal spine.
Crystallin, Crystalline.

Cristalline, Mesembryanthemum crystallinum.
Crithe, Hordeolum, Hordeum, Penis.
Crithidion, Hordeolum.
Crochet, Crotchet.
Crocidismus, Carphologia.
Crocidixis, Carphologia.
Crocodilium, Echinops.
Crocus, Colcothar—c. Antimonii, Oxydum stibii sulphuratum—c. Germanicus, Carthamus tinctorius—c. Indicus, Curcuma longa—c. Martis adstringens, Colcothar—c. Martis aperiens, Ferri subcarbonas—c. Martis vitriolatus, Colcothar—c. Metallorum, Oxydum stibii sulphuratum—c. Sacracenicus, Carthamus tinctorius.
Croissance, Growth.
Croissances, Waxing kernels.
Croissants, Waxing kernels.
Crommyon, Allium cepa.
Cropale, Nerium antidysentericum.
Crosse de l'Aorte, Arch of the aorta.
Crosses palmaires, Palmar arches.
Crosswort, Eupatorium perfoliatum.
Crotalophorus, Crotalus horridus.
Crotaphites, Temporal muscle.
Crotaphus, Temple, Temporal bone.
Croton benzoe, Benjamin—c. Eleutheria, Croton cascarilla—c. Oil, Croton tiglium.
Croup, Cynanche trachealis—c. Cerebral spasmodic, Carpo-pedal spasm.
Croute, Crusta—c. de Lait, Porrigo larvalis—c. Laiteuse, Porrigo larvalis.
Croûteux, Crustacé.
Crowsbeak-like process, Coracoid process.
Crowfoot, bulbous rooted, Ranunculus bulbosus—c. Marsh, Ranunculus scleratus—c. Meadow, Ranunculus acris—c. Water, smaller, Ranunculus Flammula.
Cruenta expulsiō, Hæmoptysis.
Cruor, Blood—c. Sanguinis, see Blood.
Cruorine, Hæmatine.
Crupper, Croupion.
Crupsia, Metamorphopsia.
Crura anteriora medullæ oblongatæ, Peduncles of the brain—c. Medullæ oblongatæ, Corpora restiformia—c. Medullæ oblongatæ, Thalami nervorum opticorum—c. Posteriora medullæ oblongatæ, Peduncles of the cerebellum.
Cruræus, Cruralis.
Crural, Triceps eruris.
Cruris radius, Fibula.
Crus, Leg, Thigh.
Crust, Eschar.
Crusta adamantina dentium, Enamel of the teeth—c. Inflammatoria, Corium phlogisticum—c. Lactea, Porrigo larvalis—c. Membranacea, Peristroma—c. Phlogistica, Corium phlogisticum—c. Pleuretica, Corium phlogisticum—c. Pruriginosa, Gutta rosea—c. Vermicularis, Peristroma—c. Villosa linguae, see Tongue.
Crypte, Crypta.
Cryptophyeus, Cryptopyic.
Cryptorchis, Crypsorchis.

Crypts, synovial, Bursæ mucosæ.
Crystal, mineral, Potassæ nitras fusus sulphatis paucillo mixtus.
Crystalli lunæ, Argenti nitras.
Crystallin, Crystalline.
Crystallion, Plantago psyllium.
Crystallus mineralis, Potassæ nitras fusus sulphatis paucillo mixtus.
Crythe, Hordeolum.
Ctedon, Fibre.
Cteis, Pubes.
Cubal sini, Piper cubeba.
Cubeb pepper, Piper cubeba.
Cubiformis, Cuboid.
Cubit, Ulna—c. Top of the, Olecranon.
Cubitale (os), Cuneiform bone.
Cubitalis Riolani. See Anconcus.
Cubiteus externus. See Cubital muscles.
Cubito-carpien, see Cubital muscles—c. Cutané (nerf), Cutaneous nerve—c. Phalangettien commun, Flexor profundus perforans—c. Radi-sus-metacarpien du ponce, Abductor longus pollicis—c. Sus-phalangettien du ponce, E. longus pollicis—c. Sus-phalangien du ponce, E. pollicis brevis.
Cubitus, Elbow, Forearm, Ulna.
Cuckowbread, Oxalis acetosella.
Cuckoo flower, Cardamine pratensis.
Cuckow pint, Arum maculatum.
Cucullaris, Trapezius.
Cucullata, Sanicula.
Cucullus, Couvre-chef, Cucupha, Infundibulum of the cochlea.
Cuculus, Coccyx.
Cucumber, Cucumis sativus—c. Squirting or wild, Momordica elaterium—c. Tree, Magnolia acuminata.
Cucumer, Cucumis sativus.
Cucumis agrestis, Momordica elaterium—c. Asininus, Momordica elaterium—c. Sylvestris, Momordica elaterium.
Cucurbita, Cupping glass.
Cucurbitain, Cucurbitinus.
Cucurbitula, Cupping glass.
Cucurbitulæ cruentæ, Cupping with the scarificator—c. cum Ferro, Cupping with the scarificator—c. Siccæ, Cupping, dry.
Cuillerée, Cochleare.
Cuir, Corium.
Cuissart. See Cornu ammonis.
Cuisse, Thigh, Crus—c. posteriore du cer-velet, Corpus restiforme.
Cuivre, Cuprum—c. et Ammoniaque sulfate de, Cuprum ammoniatum—c. Limailles de, see Cuprum—c. Sous-acetate de, Cupri sub-acetas—c. Sulfate de, Cupri sulphas.
Cujete, Crescentia kujete.
Culi flos, Cardamine pratensis.
Cullitlawan, Laurus culilawan.
Cultellus, Culter, Knife—c. Anceps, Knife, double edged—c. Uncus, Knife, crotchet.

- Culter, Knife, Scalpel—c. Curvus, Knife, crooked—c. Falcatus, Knife, crooked—c. Lenticularis, Knife, lenticular—c. Rectus, Knife, amputation.
 Culus, Anus.
 Cumamus, Piper cubeba.
 Cumin, Cuminum cyminum—c. *des Près*, Carum.
 Cuminum nigrum, Nigella—c. Pratense, Carum.
 Cummin, Cuminum cyminum.
 Cunila, Satureia capitata—c. Bubula, Origanum—c. Muscula, Inula dysenterica—c. Sativa, Satureia hortensis.
 Cunilago, Inula dysenterica.
 Cunnus, Vulva.
 Cupido, Appetite.
 Cupola. See Infundibulum of the cochlea.
 Cupri et ammoniæ sulphas, Cuprum ammoniatum—c. Rubigo, Cupri subacetat—c. Sulphas ammoniacalis, Cuprum ammoniatum—c. Vitriolum, Cupri sulphas.
 Cuprum vitriolatum, Cupri sulphas.
 Cura Medeana, Transfusion.
 Curator infirmorum, *Infirmier*.
 Curedent, Dentiscalpium.
 Cure-oreille, Earpick.
 Curette, Scoop.
 Curmi, Courmi.
 Currant, black, Ribes nigrum—c. Red, Ribes rubrum.
 Currants. See Vitis Corinthiaca.
 Cursuma hæmorrhoidalis herba, Ranunculus ficaria.
 Cursus, Running—c. Matricis, Leucorrhœa.
 Curvamen, Curvature.
 Curvatio, Campsis.
 Cuspis, Glans.
 Custodia virginitatis, Hymen.
 Cutaneo-Sourcilier, Corrugator supercilii.
 Cutch, Catechu.
 Cuti, Catechu.
 Cuticula, Epidermis.
 Cutio, Oniscus.
 Cutis anserina, Horrida cutis—c. Carnosa, Carnosus panniculus—c. Extima, Epidermis—c. Linguae, see Tongue—c. Suilla, Couenne—c. Summa, Epidermis—c. Ultima, Epidermis.
 Cutitis, Erysipelatous inflammation.
 Cutting on the gripe. See Lithotomy.
 Cuttle fish, Sepia.
 Cuurdo canella, Laurus cinnamomi.
 Cyanus Ægyptiacus, Nymphaea nelumbo.
 Cyanosis, Cyanopathy.
 Cyanuretum Ferro-zincicum, Zinci Ferrohydrocyanas.
 Cyanus, Centaurea cyanus.
 Cyar, Auditory canal (internal).
 Cyathus cerebri, Infundibulum of the brain.
 Cybe, Head.
 Cybiton, Cubitus.
 Cyboides, Cuboid.
 Cyclamen, Arthanita.
 Cyclismos, Trochiscos.
 Cyclophoria, Circulation.
 Cyclus, Circulus.
 Cydonium malum. See Pyrus cydonia.
 Cyema, Embryo, Fœtus.
 Cyesis, Conception, Fecundation, Pregnancy.
 Cylindri, see Villous membranes—c. Membranaceæ renum, see Calx.
 Cylindroides, Teres.
 Cyllosis, Kyllosis.
 Cymbalaris, Cricoid.
 Cynanche epidemica, Cynanche maligna—c. Faucium, C. tonsillaris—c. Gangrænosa, Cynanche maligna—c. Laryngea, Laryngitis—c. Prunella, C. tonsillaris—c. Maxillaris, C. parotidæa—c. Purpuro-parotidæa, Cynanche maligna—c. Stridula, C. trachealis—c. Trachealis spasmodica, Asthma acutum—c. Ulcerosa, Cynanche maligna.
 Cynanthemis, Anthemis cotula.
 Cynicus, Canine.
 Cynocoprus, Album græcum.
 Cynocrambe, Mercurialis perennis.
 Cynoctonon, Aconitum.
 Cynocytisus, Rosa canina.
 Cynodesmion, Frænum penis.
 Cynodentes, Canine teeth.
 Cynolophoi, Spinous processes of the vertebrae.
 Cynolyssa, Hydrophobia.
 Cynomoia, Plantago psyllium.
 Cynorexia, Boulimia.
 Cynorrhodon, Rosa canina.
 Cynosbates, Rosa canina.
 Cynosorchis, Orchis mascula.
 Cynospastum, Rosa canina.
 Cyophoria, Pregnancy.
 Cyparissus, Cupressus sempervirens.
 Cyperus antiquorum, Lawsonia inermis—c. Longus, Dorstenia contrayerva—c. Odorus, Dorstenia contrayerva—c. Peruanus, Dorstenia contrayerva.
 Cyphosis, Gibbositatis. See Hump.
 Cyprès, Cupressus sempervirens.
 Cypress, Cupressus sempervirens—c. Tree, Liriodendron.
 Cyprium, Cuprum.
 Cypsele, Cerumen.
 Cyrceon, Anus.
 Cyrtoides, Cuboid.
 Cyrtoma, Curvature, Cyphoma.
 Cyrtonosos, Rachitis.
 Cyrtosis, Cyphoma—c. Cretinismus, Cretinism—c. Rachia, Rachitis.
 Cyssanthemon, Cyclamen.
 Cyssaros, Anus, Rectum.
 Cyssophyllon, Cyclamen.
 Cyssotis, Proctitis.
 Cyst, Kyst.
 Cysthepato-lithiasis, Calculi, biliary.
 Cystitis, Kystitis.
 Cysthos, Anus.
 Cystinuria, Urine, Cystinic.
 Cystinx, Vesicula.
 Cystiphlogia, Cystitis.
 Cystis, Urinary bladder—c. Choledochus, Gall-bladder—c. Fellea, Gall-bladder—c. Serosa, Hygroma.

Cysto-blennorrhœa, Cystirrhœa—c. Catarrhus.
Cystirrhœa—c. Lithiasis, Calculi, vesical.

Cystophlogia, Cystitis.

Cystorrhœa, Cystirrhœa.

Cystotomia, Lithotomy.

Cystotrachelotomia, Cystauchenotomia.

Cytisma herpes, Herpes.

Cytiso-genista, Spartium scoparium.

Cytisus laburnum. See Cytisine.

Cyttaros, Glans.

D

Dabach, Viscum album.

Dacrydion, Convolvulus scammonia.

Dacrynoma, Epiphora.

Dacryoadenalgia, Dacryadenalgia.

Dacryoadenitis, Dacryadenitis.

Dacryon, Tear.

Dactyletus, Hermodactylus.

Dactylitis, Paronychia.

Dactylodochme, Dochme.

Dactylos, Digitus.

Dactylus, Date.

Dædalea suaveolens, Boletus suaveolens.

Dædalus, Hydrargyrum.

Dædion, Bougie.

Dæmonomania, Demonomania.

Dæs, Tædæ.

Daffodil, Narcissus pseudonarcissus.

Daisy, common, Bellis—d. Oxeye, Chrysanthemum leucanthemum.

Damson, Prunum Damascenum—d. Tree, Prunus domestica.

Dandelion, Leontodon taraxacum.

Dandriff, Pityriasis.

Dandy, Dengue.

Danewort, Sambucus ebulus.

Danga, Dengue.

Danse, Dansing—d. de St. Guy, Chorea—d. de St. Witt, Chorea.

Daphne, Laurus—d. Boisgentil, Daphne mezereum—d. Flaxleaved, Daphne gnidium—d. Garou. Daphne gnidium.

Daphnine. See Daphne Alpina.

Darseni, Laurus cinnamomum.

Darsini, Laurus cinnamomum.

Darta, Impetigo.

Dartre, Herpes—d. Crustacée, Ecthyma—d. Furfuracée arrondie, Lepra vulgaris—d. Phlyctenoïde, Herpes phlyctenoides—d. Pustuleuse mentagra, Sycosis—d. Rongeante, Herpes exedens—d. Squameuse lichenoides, Psoriasis.

Dartreux, Herpetic.

Date plum, Indian, Diospyrus lotus.

Datte, Date.

Datura, Daturine.

Daturium, Daturine.

Daucus candianus, Athamanta cretensis—d.

Creticus, Athamanta cretensis—d. Cyanopus, Pimpinella magna—d. Seprinius, Scandix cerefolium—d. Sylvestris, D. carota.

Dauphinelle, Delphinium staphisagria.

Davier, Dentagra.

Day-sight, Hemeralopia—d. Vision, Hemeralopia.

Deafdumbness, Mutitas surdorum.

Deafness, Taylor's remedy for. See Allium.

Deambulatio, Walking.

Dearticulatio, Diarthrosis.

Deasciatio, Aposceparnismus.

Death, apparent, Asphyxia.

Debilitas erethisica, see Irritable—d. Nervosa, Neurasthenia—d. Nervosa, see Irritable.

Deboitement, Luxation.

Decarbonization, Hæmatosis.

Decessio, Ecpiesma.

Decharné, Demusculatus.

Dechaussement (lancing the gums). See Gum lancet.

Dechaussoir, Gum lancet.

Dechirement, Laceration.

Déchirure, Wound, lacerated.

Decidua protrusa, Decidua reflexa.

Déclin, Decline.

Decline, Phthisis, Tabes.

Decoction of aloes compound, Decoctum aloes compositum—d. of Bark, Decoctum cinchonæ—d. of Barley, Decoctum hordei—d. of Barley, compound, Decoctum hordei compositum—d. Bitter, Decoctum amarum—d. of Cabbage tree bark, Decoctum geofræ inermis—d. of Cassia, Decoctum cassiæ—d. of Chamomile, Decoctum anthemidis nobilis—d. of Cinchona, Decoctum cinchonæ—d. of Cinchona, compound laxative, Decoctum kinæ kinæ compositum et laxans—d. of Colomba, compound, Decoctum Colombæ compositum—d. of Elm bark, Decoctum ulmi—d. of Foxglove, Decoctum digitalis—d. de Gayac composée, &c., Decoctum de Guyaco compositum—d. of Guaiacum, compound, Decoctum Guaiaci compositum—d. of Guaiacum, compound purgative, Decoctum de Guyaco compositum—d. of Hartshorn, burnt, Mistura cornu usti—d. of Hellebore, white, Decoctum veratri—d. of Liverwort, Decoctum lichenis—d. of Marshmallows, Decoctum althææ—d. de Mauve composée, Decoctum malvæ compositum—d. of Oak bark, Decoctum quercus—d. d'Orge, Decoctum hordei—d. d'Orge composée, Decoctum hordei compositum—d. of Poppy, Decoctum papaveris—d. of Quince seeds, Decoctum cydoniæ—d. de Quinquina composée et laxative, Decoctum kinæ kinæ compositum et laxans—d. de Salsapareille composée, Decoctum sarsaparillæ compositum—d. of Sarsaparilla, Decoctum sarsaparillæ—d. of Sarsaparilla, compound, Decoctum sarsaparillæ compositum—d. of Sarsaparilla, false, Decoctum Araliæ radicaulis—d. of Squill, Decoctum scillæ—d. of the Woods, Decoctum Guaiaci compositum—d. of Woody nightshade, Decoctum dulcamaræ.  Encausis, Burn, Encauma, Moxibustion.
Encavure, Argema.
Enceinte, Pregnant.
Encens, Juniperus lycia.
 Encephalalgia, Cephalalgia—e. Hydropica, Hydrocephalus internus.
 Encephalitis, Phrenitis.
 Encephalomalacia, Mollities cerebri.
Encephalopathie crapuleuse, Delirium tremens.
 Encephaloscopy, Craniology.
 Encephalosismus, Concussion of the brain.
 Encerosis, Inceration.
 Encharaxis, Scarification.
Enchifrenement, Coryza.
 Enchorios, Endemic.
 Enchrison, Liniment.
 Enchylosis, Extraction.
 Enchyma, Infusum, Plethora.
 Enchysis, Infusion.
Enclavée, Wedged.
Enclavement. See Wedged.
Enclume, Incus.
 Enclyma, Clyster.
 Encœlia, Entrails.
 Encœlialgia inflammatoria, Encœlitis.
 Encope, Diacope, Incision.
 Encranion, Cerebellum.
 Encranis, Cerebellum.
Encre, Atramentum.
 Encyesis, Fecundation, Pregnancy.
 Encymon, Pregnancy.
 Encymosia, Fecundation, Pregnancy.
 Endeicticos, Indicant.
 Endeixis, Indication.
 Endive, Cichorium endivia—e. Wild, Cichorium intybus.
 Endivia, Cichorium endivia.
 Endosis, Remission.
 Endosmose, Imbibition.
Enduit choroidien. See Choroid.
Endurcissement, Induration—e. du Tissu cellulaire, Induration of the cellular tissue.
 Enechema, Tinnitus aurium.
 Enecia cauma, Synocha.
 Enema, Clyster—e. Opii, E. anodynum.
 Eneresis, Compression.
 Energia, Action, Force.
Enfance, Infancy.
Enfant, Infans.
Enflure, Swelling—e. des Jambes et des cuisses de la femme accouchée, Phlegmatia dolens.
Enfoncement scaphoïde, Scaphoides fossa.
 Engasterion, Laboratory.
Engelure, Chilblain.
 English disease, Rachitis.
 Englottogastor, Engastrimythos.
 Engomphosis, Gomphosis.
 Engorgement, Congestion.
Engourdissement, Torpor.
Engrenure, Suture.

Enkysté, Encysted.
Enkystement, Chatonnement.
 Enosis, Insertion.
Enrouement, Raucedo.
 Ens martis, Ferrum ammoniatum—e. Veneris Boylei, Ferrum ammoniatum.
 Ensiformis, Xiphoid.
 Ensi-sternal, Ultimo-sternal.
 Enstalaxis, Instillation.
 Ensomatosi, Incorporation.
Entablement, Depression.
 Entasia, Tonic spasm—e. Articularis, Contractura—e. Loxia, Torticollis—e. Priapismus, Priapismus—e. Systremma, Cramp—e. Tetanus, Tetanus—e. Tetanus anticus, Emprosthotonos—e. Trismus, Trismus.
Entendement, Intellect.
 Entelipathia, Nymphomania.
 Enteradenes, Peyer's glandulæ.
 Enteralgia, Colica—e. Acuta, Enteritis—e. Inflammatoria, Enteritis.
Enterite folliculeuse. See Typhus.
 Enteritis epiploitis, Epiploitis—e. Mesenterica, Mesenteritis.
 Enterolithus, Calculi of the stomach and intestines—e. Bezoardus, Bezoar—e. Scybala, Scybala.
 Enteron, Intestine.
 Enterophlogia, Enteritis.
 Enteropyria, Enteritis.
 Enterorrhagia simplex, Hæmatochezia.
 Enterozoa, Worms.
 Enthelminthes, Worms.
 Enthlasis cranii, Effractura cranii.
 Entonia, Tension, Tonic spasm.
Entonnoir, Calix, Infundibulum—e. du Ventricule Moyen de Cerveau, Infundibulum of the Brain.
Entorse, Sprain.
 Entozoa, Worms.
Entozoaires, Worms.
 Entozoaria, Worms.
Entrailles, Entrails.
 Entyposi. See Glene.
 Enula campana, Inula Helenium.
Envie, Malacia, Nævus—e. de vomir, Nausea.
 Enypnion, Somnium.
 Enystron, Abomasus.
 Epagogium, Prepuce.
 Epanadiplosis, Anadiplosis.
 Epanalepsis, Anadiplosis.
 Epanastasis, Pustule.
Epanchement, Effusion.
 Epanetus hectica, Hectic fever.
 Epaphrismos, Despumation.
 Eparma, Tumour.
 Eparsis, Tumour.
Epaule, Humerus.
 Epencranis, Cerebellum.
Eperon, Hippocampus minor—e. des Artères, Spur.
Epervier, Accipiter.
Epervière des Murailles, Hieracium murorum.

Granatum, *Punica granatum*.
Grand dorsal, *Latissimus dorsi*.
Grando, Chalaza.
Granatristum, Anthrax.
Grantristum, Anthrax.
Granulations cérébrales, *Glandulæ Pacchioni*.
Grape. See *Vitis vinifera*.
Grapes, dried, *Uvæ passæ*.

Graphioides, Styloid.

Gras des Cadavres, Adipocire—*de Jambé*, Sura—*des Cimetières*, Adipocire.

Grass, Asparagus—*g.* Canary, cultivated, Phalaris Canariensis—*g.* Couch, Triticum repens—*g.* Dog's, Triticum repens—*g.* Egyptian cock's foot, Gramen crucis cyparioides—*g.* Goat's, Scorzonera—*g.* Knot, Polygonum aviculare—*g.* Vipers', Scorzonera.

Grasseyement, Rotacism.

Gratelle, Psoriasis.

Gratia Dei, Gratiola officinalis.

Gratiola centaurioides, *G.* officinalis.

Gratteron, Galium aparine.

Grattoir, Raspatorium.

Gravatif, Heavy.

Grave, Serious.

Gravedo, Catarrh, Coryza—*g.* Neonatorum, Snuffles.

Graveleux, Calculous.

Gravelle, Chalaza, Gravel.

Graviditas, Pregnancy—*g.* Interstitialis, Pregnancy, interstitial—*g.* Molaris, Mole—*g.* Spuria, Pregnancy, false—*g.* Tubaria, Salpingocystitis—*g.* in Uteri substantia, Pregnancy, interstitial.

Gravier, Gravel.

Gravimeter, Areometer.

Gravis, Heavy.

Grease, Barrow's, Adeps suilla—*g.* Goose, Adeps anserina—*g.* Molten, *Gras-fondure*.

Green sickness, Chlorosis.

Grêle, Chalaza—*g.* Interne de la cuisse, Gracilis.

Gremil officinale, Lithospermum officinale.

Grenade, Influenza.

Grenadier, Punica granatum.

Greniers, Vesiculæ seminales.

Grenouille, Rana esculenta.

Grenouillette, Ranula.

Gressura, Perinæum.

Gressus, Walking.

Greveure, Hernia.

Grielum, Apium petroselinum, Smyrniolum olusatrum.

Grincement des dents, Stridor dentium.

Grinders, Molar teeth.

Gripes, Tormina.

Grippe, Influenza.

Grippé, Pinched.

Groan. See Suspirium.

Gromwell, Lithospermum officinale.

Groove, Coulisse.

Gros, Drachm.

Groseillier noir, Ribes nigrum—*g.* Rouge, Ribes rubrum.

Grossesse, Pregnancy—*g.* Abdominale, Pregnancy, abdominal—*g.* Afœtale, Pregnancy, afœtal—*g.* Bigeminale, Pregnancy, bigeminal—*g.* Complexe, Pregnancy, complex—*g.* Composée, Pregnancy, compound—*g.* Fausse ou apparente, Pregnancy, false—*g.* Fœtale, Pregnancy, fœtal—*g.* Gazo-hystérique, Pregnancy, gazo-hysteric—*g.* Hémato-hystérique, Pregnancy, hemato-hys-

teric—*g.* Hydro-hystérique, Pregnancy, hydro-hysteric—*g.* Inter-extra-uterine, Pregnancy, complex—*g.* Ovarienne, Pregnancy, ovarial—*g.* Sarco-hystérique, Pregnancy, sarco-hysteric—*g.* Sarcofœtale, Pregnancy, sarcofœtal—*g.* Simple, Pregnancy, solitary—*g.* Solitaire, Pregnancy, solitary—*g.* Trigeminale, Pregnancy, trigeminal—*g.* Triple, Pregnancy, trigeminal—*g.* Tubaire, Pregnancy, tubal—*g.* Utero-abdominale, Pregnancy, utero-abdominal—*g.* Utéro-ovarienne, Pregnancy, utero-ovarian—*g.* Utéro-tubaire, Pregnancy, utero-tubal.

Grossularia non spinosa, Ribes nigrum.

Grouillement d'entrailles, Borborygmus.

Groundnut, Pignut.

Groundpine, Teucrium chamæpitys—*g.* French, Teucrium iva.

Groundsel, Senecio.

Grouseberry, Gaultheria.

Grumus, Coagulum.

Grutum, Groats.

Guaiacine. See Guaiac.

Guard (for a bed), Alèse.

Guarberba orba, Momordica elaterium.

Guava, apple, Psidium pomiferum.

Guêpe, Wasp.

Guerison, Cure.

Guérissable, Curable.

Gui, Viscum album.

Guimauve, Althæa—*g.* Veloutée, Hibiscus abelmoschus.

Gula, Œsophagus, Pharynx.

Gulæ principium, Pharynx.

Gullet, Œsophagus.

Gum anime, Anime—*g.* Arabic, Acaciæ gummi—*g.* Dragon, Tragacantha—*g.* Elastic, Caoutchouc—*g.* Indigenous, Gummi nostras—*g.* Juniper, Sandarac—*g.* Orenburg, see Pinus larix—*g.* Red, Strophulus—*g.* Resin, Gummi resina—*g.* Sandarach, Sandarac—*g.* Seneca, Acaciæ gummi—*g.* Senega, Acaciæ gummi—*g.* Sweet, Liquidambar styraciflua—*g.* Tragacanth, Tragacantha—*g.* White, Strophulus—*g.* Yellow, Icterus infantum.

Gumboil, Parulis.

Gummi acaciæ Arabicæ, Acaciæ gummi—*g.* Acanthinum, Acaciæ gummi—*g.* Adstringens Fothergilli, Kino—*g.* Ammoniacum, Ammoniac—*g.* Anime, Anime—*g.* Arabicum, Acaciæ gummi—*g.* Astragali Tragacanthæ, Tragacantha—*g.* Bogia, Cambogia—*g.* Brelisis, Caranna—*g.* Gamandrac, Cambogia—*g.* Gambiense, Kino—*g.* de Goa, Cambogia—*g.* Gutta, Cambogia—*g.* Hederæ, see Hedera helix—*g.* de Jemu, Cambogia—*g.* Juniperi, Sandarac—*g.* Lacæ, Laccæ—*g.* Ladanum, see Cistus creticus—*g.* Lamac, Acaciæ gummi—*g.* Leucum, Acaciæ gummi—*g.* Panacis, see Pastinaca opoponax—*g.* ad Padagram, Cambogia—*g.* Rubrum adstringens gambiense, Kino—*g.* Serapionis, Acaciæ gummi—*g.* Thebaicum, Acaciæ gummi—*g.* Tragacantha, Tragacantha.

Gums, Gingivæ.
 Gurgling. See *Râle muqueux*.
 Gurgulio, Penis, Uvula.
 Gustation, Degustation, Taste.
 Gustus, Taste.
 Gut, Intestine—g. Blind, Cæcum.
 Guts, slipperiness of the, Lientery.
 Gutta, Apoplexy, Cambogia, Gout—g. Gama-
 mandræ, Cambogia—g. Gamba, Cambo-
 gia—g. Opaca, Cataract—g. Rosacea
 syphilitica, Crown of Venus—g. Serena,
 Amaurosis.

Herpylos, *Thymus serpyllum*.

Hesperis alliaria, *Alliaria*.

Heteroclite. See *Homology*.

Heterocrania, *Hemicrania*.

Heterologous tissues. See *Tissues*.

Heteropathic, *Allopathic*.

Heterorexia, *Malaria*.

Hêtre, *Fagus sylvatica*.

Hexis, *Habit*, *Habit of body*.

Hiatus, *Yawning*—h. Fallopii, see *Aquæductus Fallopii*—h. Occipito-petreux, *Lacerum posterius foramen*—h. Sphéno-petreux, *Lacerum anterius foramen*.

Hibiscus, *Althæa*.

Hiccough, *Singultus*.

Hiccup, *Singultus*.

Hidroa, *Desudatio*, *Echauboulures*, *Hydroa*, *Sudamina*.

Hidronosos, *Sudor anglicus*.

Hidros, *Sudor*.

Hidroterion, *Achicolum*.

Hidroticum, *Sudorific*.

Hièble, *Sambucus ebulus*.

Hiera logadii, *Hiera picra*—h. Picra, *Pulvis aloes cum canella*—h. *Syrinx*, *Vertebral column*, *Epilepsy*.

Hierax, *Accipiter*.

Hierobotane, *Verbena officinalis*.

Hieropyrus, *Erysipelas*.

Himentosis, *Himas*.

Hip, *Haunch*—h. Bone, *Ischium*—h. Joint, *Coxofemoral articulation*—h. Tree, *Rosa canina*.

Hippasia, *Equitation*.

Hippeia, *Equitation*.

- Hippeusis, Equitation.
Hippiatrique, Hippiatria.
Hippocampe grande, Cornu ammonis.
Hippocampus major, Cornu ammonis.
 Hippocras, Claret.
 Hippocrates, cap of, *Bonnet d'Hippocrate*—
 h. Sleeve, *Chausse*.
 Hippolapathum, Rumex patientia.
 Hippomarathrum, Peucedanum silaus.
 Hippos, Equus.
 Hipposelinum, Smyrnium olusatrum.
 Hips. See Rosa canina.
 Hircus, Tragus.
 Hirquus, Canthus (greater).
 Hirundinaria, Lysimachia nummularia.
 Hispanicum viride, Cupri subacetas.
 Hispiditas, Dystœchiasis, Phalangosis.
 Hispidula, Antennaria dioicum.
 Histology. See Anatomy.
 Hives, Cynanche trachealis. See Varicella.
 Hoarseness, Raucedo.
 Hog lice, Onisci aselli.
 Holcus sorghum, Panicum Italicum.
 Holera, Cholera.
 Hollands, Gin.
 Holly, common, Ilex aquifolium—h. Dahoon,
 Ilex vomitoria—h. Ground, Pyrola umbel-
 lata—h. Sea, Eryngium maritimum.
 Hollyhock, common, Alcea rosea.
 Holmicos, Alveolus.
 Holnos, Mortar.
 Holocyron, Teucrium chamæpitys.
 Holophlyctides, Phlyctæna.
 Holosteum alsine, Alsine media.
 Holosteus, Osteocolla.
 Holotonicos, Tetanus.
 Homagra, Omagra.
 Homeopathy, Homœopathy.
 Homiosis, Homoiosis.
 Homme, Homo.
 Homoethnia, Sympathy.
 Homoiopathia, Sympathy.
 Homoiosis, Assimilation.
 Homolinon. See Apolinosis.
 Homonopagia, Cephalalgia.
 Homoplata, Scapula.
 Homotonos, see Acmasticos, Synocha.
 Honesty, Lunaria rediviva.
 Honewort, field, Sison amomum.
 Honglane, Coptis teeta.
 Honteux, Pudic.
 Honey, Mel—h. Balsam of, Hill's, see Mel—
 h. of Borax, Mel boracis—h. Clarified, Mel
 despumatum—h. of Roses, Mel rosæ.
 Hoopingcough, Pertussis.
 Hôpital, Hospital.
 Hop plant, Humulus lupulus.
 Hoquet, Singultus.
 Hordeum causticum, Veratrum sabadilla.
 Horehound, Marrubium—h. Black, Ballota
 fœtida—h. Germander-leaved, Eupatorium
 teucrifolium—h. Stinking, Ballota fœtida
 —h. Wild, Eupatorium teucrifolium.
 Horminum, Salvia horminum.
 Horn, Cornu.
 Hornseed, Ergot.
 Horror, Horripilation.
 Horsechestnut, Æsculus hippocastanum.
 Horse crust, Crusta genu equinæ.
 Horse radish, Cochlearia armoracia.
 Horse's tail, Hippuris vulgaris.
 Hortulus cupidinis, Vulva.
 Hortus, Penis, Vulva.
 Hostiarius, Pylorus.
 Houblon, Humulus lupulus.
 Hounds' tongue, Cynoglossum.
 Houpe nerveuse, see Papilla—h. du Menton,
 Depressor labii inferioris, Levator labii in-
 ferioris.
 Houseleek, Sempervivum tectorum.
 Houx, Ilex aquifolium—h. petit, Ruscus—h.
 Apalachine, Ilex vomitoria.
 Hudson's preservative for the teeth and gums.
 See Tinctura Myrrhæ.
 Huile, Oil—h. d'Absinthe, Artemisia absin-
 thium (oil of)—h. d'Acajou, see Anacar-
 dium occidentale—h. d'Amandes, Oleum
 amygdalarum—h. d'Aneth, see Anethum
 graveolens—h. Animale, Oleum animale—
 h. Animale de Dippel, Oleum animale Dip-
 peli—h. Animalisée par infusion, Oleum
 animalizatum per infusionem—h. Anis, see
 Pimpinella anisum—h. Aromatique, Oleum
 animalizatum per infusionem—h. d'Aurone,
 Artemisia abrotanum (oil of)—h. de Cacao,
 Butter of cacao—h. de Carvi, Carum (oil)
 —h. de Cédrot, Oleum cedrinum—h. de
 petits chiens, Oleum animalizatum per infu-
 sionem—h. de Corne de Cerf, Oleum ani-
 male Dippelii—h. de Gabian, Petrolæum
 —h. de Gérofle, see Eugenia caryophyllata
 —h. de Laurier, Unguentum laurinum—h.
 de Lis, see Lilium candidum—h. de Morelle,
 see Solanum—h. de Morue, Oleum jecinoris
 aselli—h. d'Œillette, Papaver (oil)—h. de
 Ricin, see Ricinus communis—h. de Suc-
 cin, see Succinum—h. Verte, Balsam, green,
 of Metz—h. Douce de vin, Oleum æthe-
 reum.
 Huiles animales, Olea animalia—h. Em-
 pyreumatiques, Olea empyreumatica—h. Es-
 sentiellles, Olea volatilia—h. Fixes ou-
 grasses, Olea fixa—h. Fugaces, Olea fuga-
 cia—h. Medicinales, Olea medicinalia—h.
 Volatiles, Olea volatilia.
 Humero-cubital, Brachialis anterior—h. Sus-
 metacarpien, see Radialis—h. Sus-radial,
 Supinator radii longus.
 Humerus summus, Acromion.
 Humeur aqueuse, Aqueous humour—h. Hy-
 aloide, Corpus vitreum.
 Humeurs froides, Scrofula.
 Humide radicale, Humidum radicale.
 Humidum nativum articulorum, Synovia—h.
 Primigenium, H. radicale.
 Humilis, Rectus inferior oculi.
 Humour, albugineous, Aqueous humour—h.
 Articularis, Synovia—h. Ceruminous, Ce-
 rumen—h. Doridis, Water, sea—h. Geni-
 talis seu seminalis, Sperm—h. Glacialis,
 Crystalline, Corpus vitreum—h. Hyaloïdes,
 Corpus vitreum—h. Ovatus, Aqueous hu-

mour—h. Oviformis, Aqueous humour—h. Purulentus, Pus—h. Vitreus, Corpus vitreum.

Hunch, Hump.

Hyacinthus muscari, Bulbus vomitorius.

Hyalos, Vitrum.

Hyboma, Gibbositas.

Hydarthrosis, Hydrarthrus.

Hydarthrus, Hydrarthrus.

Hydatides cervicis uteri, Nabothi glandulæ.

Hydatocele, Hydatidocele.

Hydatodes, Aqueous.

Hydatoides, Aqueous humour.

Hyderos, Anasarca, Hydrops.

Hydor, Water.

Hydrachnis, see Varicella.

Hydragogum Boylei, Argenti nitras.

Hydrargyri acetas, Hydrargyrus acetatus—h. Borussias, H. cyanuretum—h. Bromidum, see Bromine—h. Calx alba, Hydrargyrum præcipitatum—h. Deuto-Ioduretum, see Iodine—h. Hydrargyri hyperoxides, Hydrargyri nitrico-oxydum—h. Murias basi oxydi imperfecti, H. oxymurias—h. Murias corrosivum, H. oxymurias—h. Murias dulcis sublimatus, H. submurias—h. Murias oxygenatus, H. oxymurias—h. Murias spirituosus liquidus, Liquor hydrargyri oxymuriatis—h. Murias suboxygenatus præcipitatione paratus, Hydrargyrum præcipitatum—h. Oxidi Murias ammoniacalis, Hydrargyrum præcipitatum—h. Oxodes rubrum, Hydrargyri nitrico-oxydum—h. Oxydulum nigrum, H. oxydum cinereum—h. Oxydum nigrum, H. oxydum cinereum—h. Oxydum nigrum mediante ammonia ex protonitrate hydrargyri præcipitatum, Oxydum cinereum—h. Oxydum nitricum, Hydrargyri nitrico-oxydum—h. Oxidum rubrum per acidum nitricum, Hydrargyri nitrico-oxydum—h. Oxydum saccharatum, Hydrargyrum saccharatum—h. Oxydum sulphuricum, Hydrargyrus vitriolatus—h. Permurias, Hydrargyri oxymurias—h. Proto-ioduretum, see Iodine—h. Proto-tartras, H. tartras—h. Prussias, H. cyanuretum—h. Saccharum vermifugum, Hydrargyrum saccharatum—h. Submurias ammoniatum, Hydrargyrum præcipitatum—h. Subsulphas flavus, Hydrargyrus vitriolatus—h. Subsulphas peroxidati, Hydrargyrus vitriolatus—h. Sulphas, Hydrargyrus vitriolatus—h. Supermurias, H. oxymurias.

Hydrargyria, Eczema mercuriale.

Hydrargyriasis, Eczema mercuriale.

Hydrargyrosis, Eczema mercuriale.

Hydrargyrotripsis, Hydrargyranatripsis.

Hydrargyrum ammoniato-muriaticum, H. præcipitatum—h. Cyanogenatum, Hydrargyri cyanuretum—h. Hydrocyanicum, Hydrargyri cyanuretum—h. Iodatium, see Iodine—h. Iodatium flavum, see Iodine—h. Iodatium rubrum, see Iodine—h. Iodidulatium, see Iodine—h. Periodatium, see Iodine.

Hydrargyrus, Hydrargyrum—h. Calcinatus,

Hydrargyri oxydum rubrum—h. cum Creta, Hydrargyrum cum creta—h. Muriatus, Hydrargyri oxymurias—h. Nitratus ruber, Hydrargyri nitrico-oxydum—h. Sulphuratus ruber, Hydrargyri sulphuretum rubrum—h. cum Sulphure, Hydrargyri sulphuretum nigrum—h. e sulphure, Hydrargyri sulphuretum nigrum.

Hydrellytron. See Hydrocele.

Hydrencephaloccele, Hydrocephalus chronicus.

Hydrencephalus, Hydrocephalus internus.

Hydriodas kalicus. See Potassæ hydriodas.

Hydroa, Hydatid, Sudamina.

Hydrocardia, Hydropericardium.

Hydrocele Peritonæi, Ascites—h. Spinalis, Hydrorachis.

Hydrocephale aigu, Hydrocephalus internus.

Hydrocephalus acutus, H. internus—h. Externus, H. chronicus—h. Meningeus, H. internus.

Hydrochlorate d'Or. See Gold.

Hydrochlorinas natricus, Soda, muriate of.

Hydrocotyle umbellatum, Acaricoba.

Hydrodes, Aqueous.

Hydro-epiplo-enteroccele, Hydro-entero-epiplocele.

Hydrogaster, Ascites.

Hydrogeno-sulphuretum ammoniacæ liquidum, Ammonia sulphuretum.

Hydroglossa, Ranula.

Hydrolæum, Hydrelæon.

Hydrolapathum, Rumex hydrolapathum.

Hydrometer, Areometer.

Hydronosus, Hydrops.

Hydropedesis, Ephidrosis.

Hydropege, Water, spring.

Hydropericarditis, Hydropericardium.

Hydrophobus, Lyssodectus.

Hydrophthalmus cruentus, Hæmophthalmia.

Hydropica, Hydragogues.

Hydropiper, Polygonum hydropiper.

Hydropsie, Hydrops—h. de l'Œil, Hydrophthalmia—h. des Plèvres, Hydrothorax—h. de Poitrine, Hydrothorax.

Hydropneumatocele, Hydrophysocèle.

Hydrops abdominis, Ascites—h. Abdominis aereus, Tympanites—h. Articulorum, Hydrarthrus—h. Capitis, Hydrocephalus—h. Cavittatis columnæ vertebralis, Hydrorachis—h. Capitis, Hydrocephalus chronicus—h. Cellularis artuum, Œdema—h. Cellularis totius corporis, Anasarca—h. Cerebri, Hydrocephalus internus—h. ad Matulam, Diabetes—h. Medullæ spinalis, Hydrorachis—h. Metellæ, Diabetes—h. Oculi, Hydrophthalmia—h. Ovarii, Hydroarion—h. Palpebræ, Hydroblepharon—h. Pectoris, Hydrothorax—h. Pericardii, Hydropericardium—h. Pulmonis, Hydrothorax—h. Pulmonum, Hydropneumonia—h. Sacci lachrymalis, Fistula lachrymalis—h. Seroti, Hydrocele—h. Siccus et flatulentus, Tympanites—h. Spinæ, Hydrorachis—h. Thoracis, Hydrothorax—h. Tympanites, Tympanites—h. Umbilicalis, Hydromphalum—h. Uteri, Hydrometra.

Hydropyretos, Sudor anglicus.
 Hyodorachitis, Hydrorachis.
 Hydroorchis, Hydrocele.
 Hydrosarca, Anasarca.
 Hydrosulphuretum ammoniacum aquosum,
 Ammoniae sulphuretum—h. Ammonicum,
 Ammoniae sulphuretum.
 Hydrothion, Hydrogen, sulphuretted.
 Hydrothorax chylosus, Chylothorax—h. Pu-
 rulentus, Empyema.
 Hydrotica, Hydragogues.
 Hydruria. See Urine.
 Hygeia, Sanitas.
 Hygieia, Hygiène, Sanitas.
 Hygieinos, Salutary.
 Hygieiologia, Hygiène.
 Hygiesis, Hygiène.
 Hygremplastra, Hygra.
 Hygron, Liquor.
 Hygrophobia, Hydrophobia.
 Hygrophthalmici, Hygroblepharici.
 Hygropissos. See Pinus sylvestris.
 Hygroscopia, Hygrometry.
 Hygrotes, Liquor.
 Hyle, Matter—h. Iatrice, Materia medica.
 Hymastatics. Hæmastatice.
 Hymen, Membrane—h. Diaphratton, Medias-
 tinum.
 Hymenodes, Membranous.
 Hymenæa courbaril. See Anime.
 Hyobasioglossus, Basioglossus.
 Hyochondroglossus, Hyoglossus.
 Hyodeoglossus, Hyoglossus.
Hyo-glosso-basi-pharyngien, Constrictor pha-
 ryngis.
Hyo-pharyngeus, Constrictor pharyngis—h.
 Thyreoides, Thyreo-hyoideus.
 Hyoid bone, Hyoides, os.
 Hyoides primus, Sterno-hyoideus.
 Hyoidis quartus musculus, Omo-hyoideus.
 Hyoscyamus luteus, Nicotiana rustica—h.
 Peruvianus Nicotiana tabacum.
 Hypacticus, Cathartic.
 Hypagoge, Dejection.
 Hypelatos, Cathartic.
 Hyperæmia activa, Inflammation.
 Hypercinesis gastrica, Hypochondriasis.
 Hypercinesia nervosa, see Irritable—h. Ute-
 rina, Hysteria.
 Hyperdynamia, Hypersthenia.
Hyperendosmose, Inflammation.
 Hyperephidrosis, Ephidrosis.
 Hyperepidosis, Hyperauxesis.
 Hyperetria, Midwife.
 Hyperhæmatis, Inflammation.
 Hyperinesis, Hypercatharsis.
 Hyperinos, Hypercatharsis.
 Hypero-pharyngeus, Palato-pharyngeus.
 Hyperoa, Palate.
 Hyperos, Pilum.
 Hyperostosis, Exostosis.
 Hyperpimele. See Polysarcia.
 Hypersarchidios, Physconia.
 Hypersarcosis, Excrescence, Fungosity.
 Hypersarxis, Hypersarcoma.
 Hyperstenicus, Active.

Hyperuresis, Enuresis.
 Hyperuresis aquosa, Diabetes.
 Hyperzoodynamia, Hypersthenia.
 Hyphæmos, Subcruentus.
 Hyphydros, Hydropic.
 Hypnobasis, Somnambulism.
 Hypnobates, Somnambulist.
 Hypnobatesis, Somnambulism.
 Hypnos, Sleep.
 Hypnoticus, Anodyne, Somniferous.
 Hypo, Hypochondriasis.
 Hypocapnisma, Suffimentum.
 Hypocapnismos, Fumigation.
 Hypochoilion, Abdomen.
 Hypochondriacismus, Hypochondriasis.
 Hypochoresis, Digestion.
 Hypochyma, Cataract.
 Hypochysis hæmatodes, Hæmophthalmia.
 Hypocistus, Cytinus.
 Hypocophosis, Baryecolia, Deafness.
 Hypoderis, Epideris.
 Hypodermis, Epideris.
 Hypodesmis, Bandage.
 Hypogala, Hypopyon.
 Hypogastrion, Abdomen.
 Hypogastrorixis, Eventration.
 Hypogastrocele, Hernia, hypogastric.
 Hypoglossis, Ranula.
 Hypoglossum, Ruscus hypoglossum, Ra-
 nula.
 Hypomia, Axilla.
 Hypophlegmasia, Subinflammatio.
 Hypophthalmia, Hypopyon.
 Hypophysis cerebri, Pituitary gland.
 Hypopleurios, Pleura.
 Hypopyum lacteum, Hypopyon.
 Hyposarca, Anasarca, Physconia.
 Hyposarcidios, Anasarca, Hyposarca.
 Hyposphagma, Hæmophthalmia.
 Hypostaphyle, Staphylædema.
 Hypothenar minimi digiti, Flexor parvus
 minimi digiti—h. Minor metacarpeus, Ab-
 ductor minimi digiti—h. Riolani, Flexor
 parvus minimi digiti.
 Hypotheton, Suppository.
 Hypotrope, Relapse.
 Hypotropiasmos, Relapse.
 Hypoutrion, Abdomen.
 Hyppocras, Claret.
 Hypseloglossus, Basioglossus.
 Hypsiloglossus, Hyoglossus.
 Hypsosis, Sublimation.
 Hyptiasma, Supination.
 Hyssop, hedge, Gratiola officinalis.
 Hystera, Secundines, Uterus.
 Hysteralgia lochialis, Dyslochialia.
 Hystercelosis, Hysteroloxia.
 Hystericismus, Hysteria.
 Hysterics, Hysteria.
Hystérie, Hysteria.
 Hysterismus, Hysteria.
 Hysteritis, Metritis.
 Hysterocele nuda, Prolapsus uteri.
 Hysteromania, Nymphomania.
 Hysterophyse, Physometra.
 Hysteropsophia, Physometra.

Hysteroptosis, Prolapsus uteri—h. Vaginæ
 prolapsus, Prolapsus vaginæ.
 Hysterotomacia, Cæsarean section.
 Hysterotomia, Cæsarean section.
 Hystriasis, Hystriciasis.
 Hystricismus, Hystriciasis.
 Hystrix, Hystriciasis.

 Incantamentum, Charm.
 Incarceratio, Chatonnement.
 Incendium, Inflammation, Phlegmon—i.
 Spontaneum, Combustion human.
 Incensio, Incendium.
 Incessio, Bath, half, Semicupium.
 Incessus, Walking.
 Incisifs, Incidentia.

Incisio, Cut.

Incisivus, musculus, Levator labii superioris proprius—i. inferior, Levator labii inferioris—i. Lateralis et pyramidalis, Levator labii superioris alæque nasi—i. Medius, Depressor alæ nasi.

Incisorium, Scalpel.

Incisures de Santorini, Santorini, fissures of.

Incisura, Incision.

Incitability, Irritability.

Incitamentum, Stimulus.

Incitatio, Stimulus.

Inclavatio, Gomphosis.

Inclinatio, Decline.

Inclusus, Wedged.

Incontinentia urinæ, Enuresis.

Incrassativa, Incrassantia.

Incrementum, Augmentation, Increase.

Incruciatio, Decussation.

Incunabula, Swathing clothes.

Incuneatio. See Wedged.

Incuria, Acedia.

Incurtus arteriarum, Pulse.

Incurvatio, Gryposis.

Index. See Digitus.

Indicatif, Indicant.

Indicator, Extensor proprius indicus. See Digitus.

Indicus color, Indigo.

Indigence, Want.

Indigestion, Dyspepsia.

Indignabundus, Rectus externus oculi.

Indignatorius, Rectus externus oculi.

Indigo, faux, Galega officinalis—i. Weed, Sophora tinctoria—i. Wild, Sophora tinctoria.

Indigofera, Sophora tinctoria—i. Anil, see Indigo—i. Argentea, see Indigo—i. Tinctoria, see Indigo.

Indigum, Indigo.

Indolentia, Anodynia.

Inducula, Waistcoat, strait.

Indumentum cordis, Pericardium—i. Nervorum, Neurilema.

Induratio maligna, Scirrhus—i. Telæ cellulose neonatorum, see Induration.

Indurescentia, Induration.

Indusium, Amnios.

Inedia, Fasting.

Inertie de la matrice, Inertia of the womb.

Inesis, Cenosis.

Inethmos, Cenosis.

Infarctus intestinorum, Enteremphraxis.

Infection. See Contagion.

Infiltration, Effusion.

Infirmarium, Hospital.

Infirmary, Hospital.

Infirmatorium, Hospital.

Inflammatiō, Phlegmon—i. Abdominalis, Encœlitis—i. Faucium, Isthmitis—i. Gastritis, Gastritis—i. Hepatis, Hepatitis—i. Interna, Empresma—i. Intestinorum, Enteritis—i. Jecinoris, Hepatitis—i. Lienis, Splenitis—i. Medullæ spinalis, Myelitis—i. Oculorum, Ophthalmia—i. Omenti, Epiploitis—i. Parotidum, Parotis, Cynanche

parotidæa—i. Pectoris acuta, Pneumonia—i. Phrenitis, Phrenitis—i. Pneumonica, Pneumonia—i. Renum, Nephritis—i. Retinæ, Dictyitis—i. Septi transversi, Diaphragmitis—i. Testium, Hernia humoralis—i. Uteri, Metritis—i. Uteri Catarhalis, see Metritis—i. Ventriculi, Gastritis—i. Vesicæ, Cystitis.

Inflammation of the bladder, Cystitis—i. of the Cæcum, Typhloenteritis—i. of the Diaphragm, Diaphragmitis—i. Diphtheritic, Angina pellicularis—i. of the Ear, Otitis—i. of the Eye, Ophthalmia—i. *du Foie*, Hepatitis—i. General, Synocha—i. Internal, Empresma—i. of the Iris, Iritis—i. of the Kidney, Nephritis—i. of the Larynx, Laryngitis—i. of the Liver, Hepatitis—i. of the Lungs, Pneumonia—i. *de la Matrice*, Metritis—i. of the Mesentery, Mesenteritis—i. of the Pericardium, Pericarditis—i. of the Peritonæum, Peritonitis—i. of the Pleura, Pleuritis—i. Spongoid, Hæmatodes fungus—i. Spongoid, see Encephaloid—i. of the Stomach, Gastritis—i. of the Testicle, Hernia humoralis—i. *des Tissus blancs*, Angeioleucitis—i. of the Tongue, Glossitis—i. *de la Vessie*, Cystitis—i. of the Womb, Metritis.

Inflammatiuncula, Subinflammatio.

Inflatio, Emphysema, Puffiness, Colica flatulenta—i. Parotidum, Cynanche parotidæa—i. Uteri, Physometra.

Inflexio, Campsis.

Influenza, Catarrh, epidemic.

Infra-atloidæus, Sub-atloidæus.

Infra-axoidæus, Sub-axoidæus.

Infra-costales. See Intercostal muscles.

Infra-orbitar, Sub-orbitar.

Infra-scapularis, Subscapularis.

Infringens, Corrigent.

Infundibulum, Calix—i. Lacrymale, Lacrymal sac—i. Ventriculi, Œsophagus.

Infusion of Calumba, Infusum calumbæ—i. of Cascarella, Infusum cascarillæ—i. of Catechu, Infusum catechu compositum—i. of Chamomile, Infusum anthemidis—i. of Cinchona, Infusum cinchonæ—i. of Cloves, Infusum caryophyllorum—i. of Cusparia, Infusum cuspariæ—i. of Foxglove, Infusum digitalis—i. of Gentian compound, Infusum gentianæ compositum—i. of Horseradish, compound, Infusum armoraciæ compositum—i. of Linseed, Infusum lini compositum—i. of Mint, compound, Infusum menthæ compositum—i. of Quassia, Infusum quassiæ—i. of Rhubarb, Infusum rhei—i. of the Rose, Infusum rosæ compositum—i. of Senna, Infusum sennæ compositum—i. of Simarouba, Infusum simaroubæ—i. of Slippery elm, Infusum ulmi—i. of Tobacco, Infusum tabaci—i. of Valerian, Infusum valerianæ.

Infusum acaciæ catechu, I. Catechu compositum—i. Amarum vinosum, Vinum gentianæ compositum—i. Cassiæ sennæ, I. Sennæ compositum—i. of Orangepeel, com-

pound, Infusum aurantii compositum—i.
 Picis empyreumaticæ liquidæ. See Pinus
 sylvestris—i. Picis liquidum. See Pinus
 sylvestris.
 Ingluvies, Pharynx.
 Inhærens, Inherent.
 Inhalatio, Absorption.
 Inion, Occiput.
 Initium, Arche—i. Asperæ arteriæ, Larynx.
 Injection, Matthews's. See Tinctura cantha-
 ridis.
 Ink, Atramentum.
 Innominatus, Anonymous.
 Inoculation, Cowpox, Vaccination—i. Jenne-
 rian, Vaccination.
 Inosculatio, Anastomosis.
 Inquinamentum, Miasm.
 Insania, Mania—i. Lupina, Lycanthropia.
 Insenescentia, Agerasia.
 Insessio, Semicupium.
 Insidentia, Epistasis.
 Insipientia, Insanity.
 Insisio ciliorum, Blepharoplastice.
 Insitio, Inoculation.
 Insolation, *Coup de soleil*.
 Insomnium, Somnium.
 Inspirateur, Inspiratory.
 Instillatio, Enstalaxis.
 Institutes of medicine, Theory of medicine.
 Insula Sanguinis. See Blood.
 Insultus, Attack, Paroxysm.
 Intellect, deranged, Insanity.
 Intelligence, Intellect.
 Intensivus, Entaticos.
 Intercervicæ, Interspinales colli.
 Intercidentia, Intercadence.
 Intercostal nerve, Trisplanchnic N.
 Intercutaneus, Subcutaneus.
 Interépineux cervicæ, Interspinales colli.
 Interfemineum, Perinæum, Vulva.
 Interfinium narium, Septum narium.
 Interforamineum, Perinæum.
 Intermède, Excipient.
 Intermittence, Intermission.
 Internodia digitorum manus, Phalanges of
 the fingers—i. Digitorum pedis, Phalanges
 of the toes.
 Internus auris, Tensor tympani—i. Mallei,
 Tensor tympani.
 Interosseus, secundus, Prior medii digiti—i.
 Quartus, Prior annularis.
 Interosseux de la main, Interosseus manus.
 Interplèvre-costaux, Intercostal muscles.
 Interpolatus, Intercalary.
 Intersectiones tendinæ musculorum, Inscrip-
 tiones tendin. musculor.
 Intersepta horizontalia Pacchioni, Tendo-
 rium.
 Interseptum, Uvula—i. Narium, Septum na-
 rium—i. Virginale, Hymen.
 Interstice, Pore.
 Intertinctus, Discreet.
 Intertracheliens, Intertransversales colli.
 Intertransversaires des lombes, Intertrans-
 versales lumborum.
 Intervallum, Interstice.

Intestin, Intestine.
 Intestinorum lævitas, Lientery.
 Intestinula cerebri, Anfractuosities (cerebral.)
 Intestinum cellulatum, Colon—i. Circumvo-
 lutum, Ileum—i. Crassum, Colon—i. Grande,
 Colon—i. Laxum, Colon—i. Majus, Colon
 —i. Medium, Mesentery—i. Plenum, Co-
 lon—i. Rectum, Rectum.
 Intoxicatio, Poisoning.
 Intra-pelvio-trochanterien, Obturator internus.
 Introsusceptio, Intussusceptio—i. Entropium,
 Entropion.
 Intubum, Cichorium endivia—i. Erraticum,
 Cichorium intybus.
 Intumescencia lactea mammarum, Spargano-
 sis.
 Intybum, Cichorium endivia.
 Intybus hortensis, Cichorium endivia.
 Inula, common, Inula helenium—i. Lesser,
 Inula dysenterica.
 Inunctio, liniment.
 Inundatio, Depuration.
 Inustio, Cauterization.
 Inustorium, Cauterium.
 Invaletudo, Infirmary.
 Invalid, Valetudinary.
 Invasio, Arche, Attack, Paroxysm.
 Invermination, Helminthiasis.
 Inversio palpebrarum, Entropion—i. Uteri,
 Hysteroptosis, Uterus, inversion of the.
 Inversion de la matrice, Uterus, Inversion of
 the.
 Inviscantia, Incrassantia.
 Involutum cordis, Pericardium—i. Corporis
 commune, Integument—i. Linguae, see
 Tongue—i. Membranaceum, Decidua re-
 flexa—i. Nervorum, Neurilema—i. Reti
 comparatum, Retina.
 Involventia, Demulcents.
 Iode, Iodine.
 Iodes, Æruginous.
 Iodide of iron, see Iodine—i. of Lead, see
 Iodine—i. of Potassium, see Iodine—i. of
 Quinine, see Iodine—i. of Starch, see
 Iodine—i. of Sulphur, see Iodine—i. of
 Zinc, see Iodine.
 Iodidum amyli, see Iodine—i. Hydrargyri-
 cum, see Iodine—i. Hydrargyrosus, see
 Iodine—i. Plumbi, see Iodine—i. Sulphuris,
 see Iodine.
 Iodism. See Iodine.
 Iodium, Iodine.
 Iodo-hydrargyrate of potassium. See Iodine.
 Iodosis. See Iodine.
 Ioduretum amyli, see Iodine—i. Sulphuris,
 see Iodine.
 Ion, Viola.
 Ionia, Teucrium chamæpitys.
 Ionthus corymbifer, Gutta rosea—i. Varus,
 Acne.
 Ipecacuanha, Euphorbia corollata—i. Bastard,
 Triosteum perfoliatum—i. *Blanc de l'île
 de France*, Asclepias asthmatica—i.
Blanc de St. Domingue, Asclepias curassa-
 vica—i. of the Isle of France, Cynanchum
 vomitorium.

- Ipo, Upas.
 Ira, Rage.
 Iracundus, Rectus externus oculi.
Irascible, Rectus externus oculi.
 Iridancistrum, Iriancistrum.
 Iridectomy, Coretomy.
 Iridodialysis, Coretomy.
 Iridotomy, Coretomy.
 Iris, Herpes iris—i. Common, I. Germanica—i. *Commun*, I. Germanica—i. *de Florence*, I. Florentina—i. *des Marais*, I. pseudacorus—i. Nostras, I. Germanica—i. Palustris, I. pseudacorus—i. *Puant*, I. fœtidissima—i. Stinking, I. fœtidissima—i. Vulgaris, I. Germanica.
 Iron, Ferrum—i. Ammoniated, Ferrum ammoniatum—i. Carburet of, Graphites—i. Black oxyd of, Oxydum ferri nigrum—i. Filings purified, Ferri limatura purificata—i. Hydrated oxide of, Ferrum oxydatum hydratum—i. Hydrated peroxide of, Ferrum oxydatum hydratum—i. Hydrated tritoxide of, Ferrum oxydatum hydratum—i. Hydro-oxide of, Ferrum oxydatum hydratum—i. Iodide of, see Iodine—i. Pills of, compound, Pilulæ ferri compositæ—i. Sulphate of, Ferri sulphas—i. Tartarized, Ferrum tartarizatum—i. Tritohydro-ferrocyanate of, Prussian blue—i. and Potass, tartrate of, Ferrum tartarizatum.
Irreductible, Irreducible.
 Irreptio, Attack.
 Irritabilitas morbosæ. See Subsultus tendinum.
 Irritamentum metallicum, Galvanism.
 Irritatio, Gargale.
 Is, Fibre.
 Isca, Boletus ignarius.
 Ischæmia, Hæmatostatica.
 Ischiagra, Neuralgia femoro-poplitæa.
 Ischialgia, Neuralgia femoro-poplitæa.
 Ischias nervosa antica, Neuralgia femoropretibialis—i. Nervosa Cotunnii, Neuralgia femoro-poplitæa—i. Nervosa digitalis, Neuralgia cubito-digitalis—i. Nervosa postica, Neuralgia femoro-poplitæa—i. a Sparganosi, Phlegmatia dolens.
 Ischiaticus, Sciatic.
 Ischiatocele, Ischiocele.
Ischio-clitoriden, Ischio-cavernous—i. Coccygeus, Coccygeus—i. *Crêti-tibial*, Semitendinosus—i. Femoralis, Adductor magnus—i. *Femoro-peronier*, Biceps flexor cruris—i. *Perineal*, Transversus perinæi—i. *Popliti-fémoral*, Semi-membranosus—i. *Popliti-tibial*, Semi-membranosus—i. *Pré-tibial*, Semi-tendinosus—i. *Sous-clitorien*, Ischio-cavernosus—i. *Sous-trochantérien*, Quadratus femoris—i. *Spini-trochantérien*, Ischio-trochanterianus—i. *Uréthral*, Ischio-cavernosus.
 Ischion, Haunch.
 Ischiosis, Neuralgia femoro-poplitæa.
 Ischnotes, Emaciation.
 Ischioblennia, Ischioblennia.
 Ischocoilia, Constipation.
 Ischomenia, Amenorrhœa.
 Ischuria phimosis, see Phimosis—i. Urethralis a phimosis, see Phimosis—i. Vesicalis, Retention of Urine.
 Isinglass, Ichthyocola.
 Isir, Elixir.
 Isis nobilis. See Coral.
 Isodromos, Isochronous.
 Isolusine. See Polygala senega.
 Issue peas, Aurantia curassaventia, see Fonticulus.
Isthme du gosier, Isthmus of the fauces.
 Isthmion, Isthmus, Pharynx.
 Isthmitis, Angina, Cynanche pharyngea.
 Isthmos, Pharynx.
 Isthmus hepatis, see Lobulus anonymus—i. Vieussenii, Isthmus of the fossa ovalis—i. Vieussenii, see Ovalis fossa.
 Itch, Psora—i. Weed, Veratrum viride.
 Itæa, Salix.
 Iter ad infundibulum, Vulva—i. a Palato ad aurem, Eustachian tube—i. ad Quartum ventriculum, Aquæductus sylvii—i. ad Tertium ventriculum, Vulva—i. Urinarium, Urethra.
 Itinerarium, Conductor, Director.
 Iva, Teucrium iva—i. Arthritica, Teucrium chamæpitys—i. Moschata monspeliensis, Teucrium iva—i. Pecanga, Smilax sarsaparilla.
Ivette Musquée, Teucrium iva—i. *Petite*, Teucrium chamæpitys.
 Ivy, Hedera helix, Kalmia angustifolia—i. Ground, Glecoma hederacea.
 Ixia, Varix, Viscum album.
 Ixine, Atractylus gummifera.
 Ixir, Elixir.
 Ixos, Viscum album.
 Ixus, Galium aparine.

J

- Jaca indica, Thymus mastichina.
 Jacea, Viola tricolor—j. Ramosissima, Centaurea calcitrapa.
 Jack in the hedge, Alliaria.
 Jacobæa, Senecio Jacobæa.
 Jacobée, Senecio Jacobæa.
 Jacobson's anastomosis. See Petrosal ganglion.
 Jactitatio, Inquietude.
Jade nephrite ou orientale, Nephreticus lapis.
 Jagre. See Tari.
 Jalap, Convolvulus jalapa, Phytolacca decandra.
 Jalapine. See Convolvulus jalapa.
 Jalapium, Convolvulus jalapa.
 Jalappa, Convolvulus jalapa—j. Alba, Convolvulus mechoacan.
 Jamaica bark tree, Bursera gummifera.
 Jamaicine. See Geoffræa inermis.
Jambes du cercelet, Corpora restiformia.
 Jambier, Tibial—j. Antérieur, Tibialis anticus—j. Grêle, Plantar muscle—j. Postérieur, Tibialis posticus.

James Town weed, *Datura stramonium*.
 Janamunda, *Geum urbanum*.
 Janipha, *Jatropha manihot*.
 Janitor, Pylorus.
 Janitrix, Porta vena.
Janon-tarentisme, Tarantismus.
Jarret, Poples.
Jarretier, Poplitæus, muscle.
Jasmin, *Jasminum officinale*.
Jasminum Arabicum, *Coffea Arabum*.
Jatropha elastica. See Caoutchouc.
 Jaundice, Icterus—j. Black, *Melæna*—j. Red, *Phenigmus*.
Jaune, Yellow—j. *d'Œuf*, see Ovum.

Septicus*, Potassa fusa—*l. Specularis*, S. lucidum—*l. Syderitis*, Magnet—*l. Syriacus*, Judæus (lapis)—*l. Vini*, Potassæ supertartras impurus.
Lappa, Galium aparine, Lippitudo—*l. Minor*, Xanthium.
Lappula hepatica, Agrimony.
Laq, Laqueus.
Laque, Lacca.
Larch, Pinus larix.
Lard, Adeps suilla.
Large, Broad.
Larix, Pinus larix.
Larkspur, branching, Delphinium consolida.
Larme, Tear.
Larmolement, Epiphora.

Larva, Mask.
Laryngé, Laryngeal.
Laryngien, Laryngeal.
Laryngismus stridulus, Asthma thymicum.
Laser, Laserpitium—*l. à Grandes feuilles*, Laserpitium latifolium.
Lassitudo, Copos.
Latens in ore, Pterygoideus internus.
Latescentis chordæ, Palmaris longus.
Lathyrus, Euphorbia lathyrus.
Latibulum, Clavier.
Latices lactei, Receptaculum chyli.
Latissimus colli, Platysma myoides.
Lattice work, Cancelli.
Latus, Broad—*l. Ani*, Levator ani.
Lau. See Spirit.
Laudanum, Opium—*l. Ford's*, Vinum opii—*l. Liquid*, Tinctura opii—*l. Liquidum Hoffmanni*, Vinum opii—*l. Liquidum Sydenhami*, Vinum opii—*l. Opiatum*, Extractum opii—*l. Simplex*, Extractum opii.
Laugh, sardonic, Canine laugh.
Laughing, Risus.
Laurel, broad-leaved, Kalmia latifolia—*l. Cherry*, Prunus lauro-cerasus—*l. Common*, Prunus lauro-cerasus—*l. Dwarf*, Kalmia angustifolia—*l. Narrow-leaved*, Kalmia angustifolia—*l. Poison*, Prunus lauro-cerasus—*l. Water*, see Prunus lauro-cerasus—*l. White*, Magnolia glauca.
Laureola, Daphne laureola.
Laurier, Laurus—*l. Alexandrin*, Ruscus hypoglossum—*l. Amandier*, Prunus lauro-cerasus—*l. Cérise*, Prunus lauro-cerasus—*l. Rose*, Nerium oleander.
Lauro-cerasus, Prunus lauro-cerasus.
Laurus Alexandrina angustifolia, Ruscus hypoglossum—*l. Camphora*, see Camphor—*l. Malabathrum*. see Malabathrum—*l. Nobilis*, Laurus.
Lavande, Lavendula.
Lavandula, Lavendula.
Lavement, Clyster, Enema—*l. Antispasmodique*, Enema fœtidum.
Lavender, common, Lavendula—*l. Sea*, Statice limonium.
Laver Germanicum, Veronica beccabunga—*l. Odoratum*, Sisymbrium nasturtium.
Lavipedium, Pediluvium.
Law medicine, Medicine, legal.
Lax, Diarrhœa.
Laxans, Relaxant.
Laxitas, Atony—*l. Ingestorum*, Lientery.
Laxativus indicus, Cambogia.
Laxator auris internus, L. tympani.
Lazulite, Lapis lazuli.
Lead, Plumbum—*l. Black*, Graphites—*l. Iodide of*, see Iodine—*l. Oxyd of*, semivitrified, Plumbi oxydum semivitreum—*l. Protoacetate of*, Plumbi superacetat—*l. Red*, Plumbi oxydum rubrum—*l. Subcarbonate of*, Plumbi subcarbonas—*l. Sugar of*, Plumbi superacetat—*l. Superacetate of*, Plumbi superacetat—*l. Tannate of*, see Tannin—*l. White*, Plumbi subcarbonas.

- Leanness, Emaciation.
 Lecheneion, Torcular herophili.
Le cran, Cochlearia armoracia.
 Lectulus, *Fanon*.
Lède sauvage, Ledum sylvestre.
 Lee, Feculence, Lixivium.
 Leech, Hirudo.
 Leek, Allium porrum.
 Lees, soap, Liquor potassæ.
 Leg, swelled, Phlegmatia dolens.
Legume, Legumen.
 Leichen, Lichen.
 Leiosis, Comminution.
 Leiphæmoi, Achroi.
 Leipo, Lipo.
 Leipodermos, Apella.
 Leipomeria, Lipomeria.
 Leipopsychia, Syncope.
 Lema, *Chassie*.
 Leme, Lippitudo.
 Lemithocorton, Corallina Corsicana.
 Lemniscus, Tent.
 Lemon peel, see Citrus medica—l. Tree, Citrus medica.
 Lemonade, see Citrus medica—l. Dry, see Citric acid.
 Lempnias, Orpiment, Terra lemnia.
 Lenos, Torcular herophili.
 Lens, Ervum lens—l. Crystalline, Crystalline.
 Lenticula, Ephelides.
 Lenticular ganglion, Ophthalmic G.
 Lentigo, Ephelides.
 Lentil, Ervum lens.
Lentille, Ervum lens—l. crystalline, Crystalline—l. Ers, Ervum ervilia.
 Lentiscus vulgaris, Pistacia lentiscus.
 Lentitis, Phacitis.
 Lentor, Gluten.
 Leontion, Leontiasis.
 Leontopodium, Alchemilla.
 Leonurus lanatus, Ballota lanata.
 Leopard's bane, Roman, Arnica montana, Doronicum pardalianches.
 Lepidoses, Scaly diseases.
 Lepidosis ichthyiasis, Ichthyosis—l. Ichthyiasis cornigera, Horny excrescences—l. Lepriasis, Lepra—l. Pityriasis, Pityriasis—l. Psoriasis, Psoriasis.
 Lepis, Scale.
 Leporina labia, Harelip.
 Leporinum rostrum, Harelip.
 Leporinus oculus, Lagophthalmia.
 Lepra Arabum, Elephantiasis Arabica—l. Fungifera, Frambæsia—l. Græcorum, Lepra—l. Ichthyosis, Ichthyosis—l. Maculosa nigra, L. nigricans—l. Mediolanensis, Pellagra—l. Mercurial, Eczema mercuriale—l. Taurica, *Mal de Crimée*.

 Venerea, Syphilis.
 Luette, Uvula—l. *Vésicale*. See Urinary
 bladder.
 Lujula, Oxalis acetosella.
 Lullaby speech, Lallation.
 Lumbago a nisu. See Effort.
 Lumbar region, Lumbi.
 Lumbaris externus, Quadratus lumborum—
 l. Internus, Psoas magnus.
 Lumbricus, Ascaris lumbricoides—l. Latus,
 Bothriocephalus latus, Tænia solium.
 Lumbus veneris, Achillea millefolium.
 Eumen, Light, pupil.
 Lumière, Light.
 Luna, Argentum, Moon.
 Lune, Moon.
 Lunella, Hypopyon.

Lunes, Menses.
Lunettes ordinaires, Spectacles.
 Lung, Pulmo—l. Proof, Docimisia pulmonum—l. Wort, Pulmonaria—l. Wort, cow's, Verbascum nigrum—l. Wort, tree, Lichen pulmonarius.
 Lupia, Encystis, Wen.
 Lupus cancrus, Cancer—l. Vorax, Herpes exedens.
 Lusciositas, Myopia.
 Lusciosus, Myops.
 Luscitas, Strabismus.
 Luscus, *Borgne*.
Lut, Lute.
 Luteus, Yellow.
 Lux, Light.
 Lycaon, Lycanthropia.
 Lychnis sylvestris, Saponaria.
 Lycorexis, Fames Lupina.
 Lycosa tarentula, See Tarantula.
 Lygismus, Luxation.
 Lygmus, Singultus.
 Lying-in state, Parturient state.
 Lympha muculenta narium, Nasal mucus—l. Nutritia, Lymph—l. Pancreatis, see Pancreas—l. Plastica, Fibrine.
 Lymphæductus, Lymphatic vessels.
 Lymphangeitis, Angioteucitis.
 Lymphangia, Lymphatic vessels.
Lymphe de Cotugno, Cotunnus, liquor of.
 Lynn Wahoo, Ulmus alata.
 Lynx, Singultus.
 Lypomania, Melancholy.
 Lypoma, Lipoma.
 Lyringium, Eryngium campestre.
 Lysimachia purpurea, Lythrum salicaria.
 Lysis, Solution.
 Lyssa canina, Hydrophobia.
 Lytta vesicatoria, Cantharis.

M

Macapatli, Smilax sarsaparilla.
 Macedonismum, Smyrnum olusatrum.
 Macerona, Smyrnum olusatrum.
 Machæra, Culter, Knife, Penis.
 Machæridion, Machærian.
 Machærian, Knife.
 Machæris, Knife.
 Machlosyne, Nymphomania.
Machoire, Maxillary bone—m. *Diacranienne*, Maxillary bone, lower—m. *Syncranienne*, Maxillary bone, superior.
 Macies, Atrophy, Emaciation.
Macre flottante, Trapa natans.
 Macritudo, Emaciation.
 Macrobiosis, Longevity.
 Macronosia, Chronic diseases.
 Macropiper, Piper longum.
 Macror, Emaciation.
 Macros, Long.
 Macrosia, Chronic diseases.

Macula, Molecule—m. Corneæ, Caligo—m. Corneæ arcuata, Gerotoxon—m. Hepatica, Chloasma—m. Solaris, Ephelides.
 Macula materna, Nævus—m. Matricis, Nævus.
 Madar, Mudar.
 Madarosis, Calvities.
 Madder, dyer's, Rubia.
 Madeleon, Bdelium.
 Madesis, Depilation, Madarosis.
 Madisis, Depilation.
 Madness, canine, Hydrophobia—m. Raving or furious, Mania.
 Mador, Moisture.
 Madrepora oculata. See Coral.
 Maca, Midwife.
 Maceia, Obstetrics.
 Macia, Obstetrics.
 Maeutria, Midwife.
 Mageirice, Culinary art.
 Maggot pimple. See Acne.
 Magisterium sulphuris, Sulphur lotum—m. Tartari purgans, Potassæ acetas.
 Magistrantia, Imperatoria.
 Magnes, Magnet—m. Arsenicalis, see Magnetic plaster—m. Epilepsia, Hydrargyri sulphuretum rubrum.
 Magnesia aerata, Magnesiæ carbonas—m. Alba, M. carbonas—m. Calcinata, M. usta—m. Edinburgensis, Magnesiæ carbonas—m. Henry's, Magnesiæ carbonas—m. Mitis, Magnesiæ carbonas—m. Nigra, Manganese, black oxide of—m. Salis amari, Magnesiæ carbonas—m. Salis Ebsdamsensis, Magnesiæ carbonas—m. Saturni, Antimonium—m. Vitriolata, Magnesiæ sulphas—m. and Soda, sulphate of, see Soda, sulphate of.
 Magnesiæ hypocarbonas, M. carbonas—m. Subcarbonas, M. carbonas—m. Vitriolicum, Magnesiæ sulphas.
Magnésie aérée, Magnesiæ carbonas—m. *Blanche*, Magnesiæ carbonas—m. *Brulée*, Magnesia usta—m. *Caustique*, Magnesia usta—m. *Crayeuse*, Magnesiæ carbonas—m. *Douce*, Magnesiæ carbonas—m. *Effervescente*, Magnesiæ carbonas—m. *Moyenne*, Magnesiæ carbonas.
 Magnesium, oxide of, Magnesia usta.
 Magnetinus, Potassæ supertartras impurus.
 Magnitis, Magnet.
 Magnoc, Jatropha manihot.
 Magnum Dei donum, Cinchona.
 Mahmoudy, Convolvulus scammonia.
Mahogan febrifuge, Swietenia febrifuga.
 Maianthemum, Convallaria maialis.
 Maidenhair, Adiantum capillus veneris—m. Canada, Adiantum pedatum—m. Common, Asplenium trichomanoides—m. Golden, Polytrichum—m. White, Asplenium ruta muraria.
 Maicia, Obstetrics.
 Maigreur, Emaciation.
 Maillet, Mallet.
 Maillot, Swathing clothes.
 Main, Manus.

Menstruation, laborious, Dysmenorrhœa—m. Profuse, Menorrhagia.
Menstrues, Menses.
Menstruum auri, Nitro-muriatic acid.
Menta, Penis.
Mentagra, Sycosis.
Mentha gentilis, M. viridis—m. Romana, Balsamita suaveolens, Tanacetum balsamita—m. Rotundifolia palustris, M. aquatica—m. Saracenica, Balsamita suaveolens,

Tanacetum balsamita—*m.* Sativa, *M. viridis*—*m.* Spicata, *M. viridis*—*m.* Vulgaris, *M. viridis*.

Menthe aquatique, *Mentha aquatica*—*m.* *Cervine*, *Mentha cervina*—*m.* *Coq*, Tanacetum balsamita—*m.* *Crépue*, *Mentha crispa*—*m.* *Frissée*, *Mentha crispa*—*m.* *des Jardins*, *Mentha viridis*—*m.* *Poivrée*, *Mentha piperita*—*m.* *Rouge*, *Mentha aquatica*—*m.* *Sauvage*, *Mentha viridis*—*m.* *Verte*, *Mentha viridis*.

Menthrastrum, *Mentha aquatica*.

Mento-labial, Depressor labii inferioris, Levator labii inferioris.

Menton, Mentum.

Mentonnier, Mental—*m.* *Labial*, Depressor labii inferioris.

Mentonnière. See Funda.

Mentula, Penis—*m.* Muliebris, Cercosis, Clitoris.

Mephitis hepatica, Hydrogen, sulphuretted.

Meracus, Merus.

Meramaurosis, Hypamaurosis.

Mercur, Hydrargyrum—*m.* *avec la craie*, Hydrargyrum cum creta—*m.* *Cru*, Hydrargyrum—*m.* *Cyanure de*, Hydrargyri cyanuretum—*m.* *Doux*, Hydrargyri submuriarum—*m.* *Gommeux de Plenck*, Syrupus de mercurio mediante gummi—*m.* *Muriate oxygéné de*, Hydrargyri oxymurias—*m.* *Oxide de, cendré*, Hydrargyri oxydum cinereum—*m.* *Oxide gris de*, Hydrargyri oxydum cinereum—*m.* *Oxide nitrique de*, Hydrargyri nitrico-oxydum—*m.* *Oxide noir de*, Hydrargyri oxydum cinereum—*m.* *Oxide rouge de*, Hydrargyri oxydum rubrum—*m.* *Protochlorure de*, Hydrargyri submuriarum—*m.* *Sousmuriate de, précipité*, Hydrargyrum præcipitatum—*m.* *Sous-sulphate de*, Hydrargyri vitriolatus—*m.* *Sulfure de, noir*, Hydrargyri sulphuretum nigrum—*m.* *Sulfure de, rouge*, Hydrargyri sulphuretum rubrum.

Mercurialis, *Chenopodium bonus Henricus*.

Mercurii calx vitriolata, Hydrargyri vitriolatus—*m.* *Sperma*, Hydrargyri acetatus—*m.* *Terra foliata*, Hydrargyri acetatus.

Mercurius, Hydrargyrum—*m.* *Acetatus*, Hydrargyri acetatus—*m.* *Alkalisatus*, Hydrargyrum cum creta—*m.* *Calcinatus*, Hydrargyri oxydum rubrum—*m.* *Causticus flavus*, Hydrargyri vitriolatus—*m.* *Cinereus*, Hydrargyri oxydum cinereum—*m.* *Cinnabarinus*, Hydrargyri sulphuretum rubrum—*m.* *Corallinus*, Hydrargyri nitrico-oxydum—*m.* *Corrosivus*, Hydrargyri oxymurias—*m.* *Corrosivus ruber*, Hydrargyri nitrico-oxydum—*m.* *Corrosivus sublimatus*, Hydrargyri oxymurias—*m.* *Cosmeticus*, Hydrargyrum præcipitatum—*m.* *Dulcis*, Hydrargyri submuriarum—*m.* *Emeticus flavus*, Hydrargyri vitriolatus—*m.* *Gummosus Plenckii*, Syrupus de mercurio mediante gummi—*m.* *Luteus*, Hydrargyri vitriolatus—*m.* *Mortis*, Algaroth—*m.* *Niger Moscati*, Hydrargyri oxydum cine-

reum—*m.* *Præcipitatus corrosivus*, Hydrargyri nitrico-oxydum—*m.* *Præcipitatus niger*, Hydrargyri oxydum cinereum—*m.* *Saccharatus*, Hydrargyrum saccharatum—*m.* *Solubilis* of Hahnemann, see Hydrargyri oxydum cinereum—*m.* *Sublimatus dulcis*, Hydrargyri submuriarum—*m.* *cum Sulphure*, Hydrargyri sulphuretum nigrum—*m.* *Terrestris*, *Polygonum hydropiper*—*m.* *Vitæ*, Algaroth.

Mercury, Hydrargyrum—*m.* *Acetate* of, Hydrargyri acetatus—*m.* *Bichloride* of, Hydrargyri oxymurias—*m.* *Biniodide* of, see Iodine—*m.* *Bromide* of, see Bromine—*m.* *with Chalk*, Hydrargyrum cum creta—*m.* *Chloride* of, mild, Hydrargyri submuriarum—*m.* *Cyanuret* of, Hydrargyri cyanuretum—*m.* *Deuto-iodide* of, see Iodine—*m.* *Dog's*, *Mercurialis perennis*—*m.* *English*, *Chenopodium bonus Henricus*—*m.* *French*, *Mercurialis*—*m.* *Nitrate* of, Hydrargyri nitras—*m.* *Nitric oxyd* of, Hydrargyri nitrico-oxydum—*m.* *Oxide*, black or gray of, Hydrargyri oxydum cinereum—*m.* *Oxide* of, red, Hydrargyri oxydum rubrum—*m.* *Oxymuriate* of, Hydrargyri oxymurias—*m.* *Phosphuretted*, Hydrargyri phosphoratus—*m.* *Precipitate* of, white, Hydrargyrum præcipitatum—*m.* *Proto-iodide* of, see Iodine—*m.* *Prussiate* of, Hydrargyri cyanuretum—*m.* *Soluble*, Hydrargyri nitras—*m.* *Sulphuret* of, black, Hydrargyri sulphuretum nigrum—*m.* *Sulphuret* of, red, Hydrargyri sulphuretum rubrum, Realgar—*m.* *Tartrate* of, Hydrargyri tartras.

Mère des pians, Pian.

Merisier, *Prunus avium*.

Merobalaneum, Bath, partial.

Merobalneum, Bath, partial.

Merorrhæxis, Merocele.

Merorixis, Merocele.

Meros, Femur, Thigh.

Merycismus, Rumination.

Mesa, Genital organs.

Mesaraic, Mesenteric.

Mesemar, Mismar.

Mesembryanthemum copticum. See Soda.

Mesenteritis, *Tabes mesenterica*.

Mesera, Tutia.

Meseræum, Mesentery.

Meseraion, Mesentery.

Mesiamum, Aniceton.

Mesmerism, Magnetism, animal.

Mesobregmate. See Cranium.

Mésocéphale, *Medulla oblongata*.

Mesocephalum, *Pons varolii*.

Mesocranium, Sinciput.

Mesodme, Mediastinum.

Mesoglossus, *Genio-glossus*.

Mesolobe, *Corpus callosum*.

Mesomerion, *Perinæum*.

Mesomphalum, *Umbilicus*.

Mesopleurios, *Intercostal*.

Mesoræum, Mesentery.

Mesoscelocele, *Hernia*, perineal.

Mesoscelon, *Perinæum*.

- Mespilus, Cratægus aria, Sorbus acuparia.
 Metabole, Metabasis.
 Metacarpeus, Adductor metacarpi minimi digiti.
 Metacarpien, Metacarpal—*m. du petit doigt*, Opponens minimi digiti—*m. du Pouce*, Opponens pollicis.
 Metacarpo-phalangæus pollicis, Adductor pollicis manus—*m. Phalangien latéral sus-pulmaire et métacarpo-phalangien latéral*, Interosseus manus.
 Metacerasma, Cerasma.
 Metacheirixis, Surgery.
 Metachoresis, Metastasis.
 Metal des cloches, Bell metal.
 Metallage, Metabasis.
 Metallic voice, *Tintement métallique*.
 Metallum, Metal.
 Metangismos, Decantation.
 Metapedium, Metatarsus.
 Metapodium, Metatarsus.
 Metaphrenon, Dorsum.
 Metaphyteia, Transplantation.
 Metaschematismus, Metaptosis.
 Metatarsus. See Abductor minimi digiti pedis.
 Métatarsien, Metatarsal.
 Metatarso-phalangien-latéral. See Interossei pedis.
 Metathesis, Transposition.
 Metatoptosis, Diadexis.
 Meteorismus, Sublimation, Tympanites.
 Methæmachymia, Transfusion.
 Methe, Temulentia.
 Metheglin, Melizomum.
 Methemerinos, Quotidian.
 Méthodiques, Methodists.
 Method, Mariano's. See Lithotomy.
 Methodus Celsiana, see Lithotomy—*m. Curatoria*, Therapeutics—*m. Franconiana*, see Lithotomy—*m. Guytoniana*, see Lithotomy—*m. Medendi*, Therapeutics.
 Metopion, Bubon galbanum.
 Metopon, Front, Frontal bone.
 Metoposcopy, Physiognomy.
 Metra, Uterus.
 Metranastrophe, Uterus, inversion of the.
 Metrhelcosis, Metrelcosis.
 Metrocelides, Nævus.
 Metroloxia, Hysteroloxia.
 Metromania, Nymphomania.
 Metroperitonitis. See Peritonitis.
 Metroptosis, Prolapsus uteri.
 Metrorrhæxis, Uterus, rupture of the.
 Metrotomia, Cæsarean section.
 Meu, Æthusa meum.
 Meulière, Molar.
 Meum, Æthusa meum.
 Meurtrissure, Contusion.
 Mevium, Syphilis.
 Mezea, Genital organs.
 Mezereon, Daphne Mezereum.
 Micæ panis. See Triticum.
 Micatio cordis, Systole.
 Microcosma scientia, Physiology.
 Microcosmographia, Physiology.
 Microleuconymphæa, Nymphæa alba.
 Mictio cruenta, Hæmaturia—*m. Inopportuna*, Enuresis—*m. Involuntaria*, Enuresis—*m. Sanguinea*, Hæmaturia.
 Mictus cruentus, Hæmaturia.
 Midriff, Diaphragm.
 Midwifery, Obstetrics.
 Miel, Mel—*m. d'Acetate de Cuivre*, Lini-
 mentum æruginis—*m. Mercuriale composé*,
 Mellitum de murcuriali compositum—*m. Rosat*, Mel Rosæ.
 Mieuter, Accoucheur.
 Migraine, Hemicrania.
 Migrana, Hemicrania.
 Mikania guaco, Guaco.
 Milfoil, Achillea millefolium.
 Milii semina, Panicum Italicum.
 Miliare, Miliary fever.
 Militaris herba, Achillea millefolium.
 Miliun, Grutum, Panicum miliaceum, see Hydatid—*m. Indicum*, Panicum Italicum—*m. Solis*, Lithospermum officinale.
 Milk, Almond, Emulsio amygdalæ—*m. Male's*, Sperm—*m. Snakes'*, Euphorbia carollata—*m. of Sulphur*, Sulphur præcipitatum—*m. Vetch*, Astragalus verus—*m. Vetch*, stemless, Astragalus exscapus—*m. Weed*, Asclepias Syriaca, Euphorbia corollata—*m. Wort*, bitter, Polygala amara—*m. Wort*, common, Polygala—*m. Wort*, rattlesnake, Polygala senega.
 Millefolium, Achillea millefolium.
 Millefeuille, Achillea millefolium.
 Millemorbia scrophularia, Scrophularia nodosa.
 Millepedes, Onisci aselli.
 Millepertuis ordinaire, Hypericum perforatum.
 Millet, Miliary fever—*m. Barbodoes*, Panicum Italicum—*m. Common*, Panicum miliaceum—*m. Indian*, Panicum Italicum—*m. des Oiseaux*, Panicum Italicum—*m. Ordinaire*, Panicum miliaceum.
 Milligrana, Herniaria glabra.
 Mill mountain, Linum catharticum.
 Millot, Miliary fever.
 Milphæ, Madarosis.
 Milphosis, Madarosis.
 Miltwaste, Asplenium.
 Mimosa catechu, Catechu—*m. Milotica*, see Acaciæ gummi—*m. Scandens*, Cachang-Parang—*m. Senegal*, see Senegal, gum.
 Mind, Absence of, Aphelxia socors—*m. Abstraction of*, Aphelxia intenta—*m. Unsound*, Insanity.
 Mineralium, Antimonium.
 Minister gymnastæ, Pædotriba.
 Minium, Plumbi oxydum rubrum—*m. Græcorum*, Hydrargyri sulphuretum rubrum—*m. Purum*, Hydrargyri sulphuretum rubrum.
 Minorativus, Laxative.
 Mint, cock, Tanacetum balsamita—*m. Curled*, Mentha crispa—*m. Cat*, Nepeta—*m. Horse*, Monarda punctata—*m. Hyssop-leaved*, Mentha cervina—*m. Pepper*, Mentha pi-

perita—m. Spear, *Mentha viridis*—m. Water, *Mentha aquatica*.
 Minuthesis, Meiosis.
 Miscarriage, Abortion.
 Miserere mei, Ileus.
 Mishme teeta, *Coptis Teeta*.
 Mistletoe, *Viscum album*.
 Misoptochos, Gout.
 Mistura amygdalæ, Emulsio amygdalæ—m. Asafoetidæ pro clysmate, Enema foetidum—m. Camphoræ, Emulsio camphoræ—m. Gummi Guaiaci Bergeri, Mistura Guaiaci—m. Leniens, Looch ex ovo—m. Sulphurico-acida, Elixir acidum Halleri—m. Vulneraria acida, *Arquebusade eau d'*.
 Mitella, Sling.
 Mitra Hippocratica, *Bonnet d'Hippocrate*.
 Miva, Marmelade.
 Mixture, Mistura—m. of Ammoniac, Mistura ammoniaci—m. of Assafoetida, Mistura Assafoetidæ—m. *Calmante*, Looch ex ovo—m. Camphor, Mistura camphoræ—m. Chalk, Mistura Cretæ—m. *de Craie*, Mistura cretæ—m. of Emetine, emetic, Mistura emetinæ vomitoria—m. *de Fer composée*, Mistura ferri composita—m. *de Gayac*, Mistura Guaiaci—m. Griffiths's, Mistura ferri composita—m. of Guaiac, Mistura Guaiaci—m. of Hartshorn, burnt, Mistura cornu usti—m. compound, Mistura ferri composita—m. Musk, Mistura moschi—m. of Prussic acid, Mistura acidi hydrocyanici—m. of Strychnine, Mistura strychninæ.
 Mneme, Memory.
 Mnemoneutice, Mnemonics.
 Mochlicus, Purgative.
 Mockknees, Crusta genu equinæ.
 Modiolus, Crown of the trepan.
 Moëlle, Marrow—m. *Allongée*, Medulla oblongata—m. *Epinière*, Medulla spinalis—m. *Vertebrale*, Medulla spinalis.
 Mofette. See Mephitism.
 Mogilalia, Balbuties.
 Mohawk tassel, *Eupatorium purpureum*.
 Mois, Menses.
 Moiteur, Moisture.
 Mola, Patella.
 Molagocodi, *Piper nigrum*.
 Molaire, Molar.
 Molalia, Mogilalia.
 Molasses, Melasses.
 Molène, *Verbascum nigrum*.
 Molilalgia, Mogilalia.
 Mollescence, Mollities.
 Mollet, Sura.
 Mollipuffs, Lycoperdon.
 Mollis mater, Pia mater.
 Molluscum, Atheroma.
 Molops, Vibices.
 Molybdænum magnesiæ, Manganese, black oxide of.
 Molybdos, Plumbum.
 Molyne, Anus.
 Momie, Mummy.
 Momin, Mamei.
 Momordique, *Momordica elaterium*.

Monæ, Nates.
 Monarda, purple, *M. fistulosa*.
 Mondificatifs, Detergents.
 Mondifier une plaie. See *Monder*.
 Moneywort, *Lysimachia nummularia*.
 Monkshood, Aconitum—m. Common, Aconitum napellus—m. Salutory, Aconitum anthora.
 Monocolon, Cæcum, Rectum.
 Monoculus, Cyclops.
 Monoemeron, Monemeron.
 Monomachon, Cæcum.
 Monomania, Melancholy.
 Monommatos, Cyclops.
 Monopagia, Clavus hystericus, Hemicrania.
 Monophthalmus, Cyclops, Monoculus.
 Monops, Cyclops.
 Monopsia, Cyclopia.
 Mont de Vénus, Mons veneris.
 Monthly courses, Menses.
 Monticulus Veneris, Mons V.
 Moonstruck, Lunatic.
 Moorberry, *Vaccinium oxycoccos*.
 Moorshead, Alembic.
 Moortwort, broad-leaved, *Andromeda mariana*.
 Mopheta. See Mephitism.

Mylicus, Molar.
 Mylo-pharyngeus, Constrictor pharyngis,
 Mylo-hyoideus.
 Myocephalon, Staphyloma.
 Myodesopsia, Metamorphopsia.
 Myodynamometer, Dynamometer.
 Myodynamometer, Dynamometer.
 Myodynia, Rheumatism.
 Myon, Muscle.
 Myopalmus, Subsultus tendinum.
 Myosis, Myopia.
 Myosotis, Hieracium pilosella, Rheumatism,
 Rheumatism, acute.
 Myotyrbe, Chorea.
 Myrepsus, Unguentarius.
 Myrica cerifera. See Cera flava et alba.
 Myringa. See Tympanum.
 Myrinx. See Tympanum.
 Myristicæ nucleus. See Myristica moschata.
 Myrmeciasis, Formication.
 Myrmeciasmos, Formication.
 Myrmecizon, Formicant.
 Myrmex, Formica.
 Myron, Unguentum.
 Myropæas, Unguentarius.
 Myropoles, Apothecary, Unguentarius.
 Myrospermum peruiferum. See Myroxylon
 peruiferum.
 Myrrha imperfecta, Bdellium.
 Myrrhine, Myrtus.
 Myrrhis annua, Athamanta cretensis—m.
 Odorata, Chærophyllum odoratum.
 Myrsine, Myrtus.
 Myrtacantha, Ruscus.
 Myrte commun, Myrtus.
 Myrtifolia belgica, Myrica gale.
 Myrtiformis, Compressor naris, Depressor
 alæ nasi.
 Myrtle, Myrtus—m. Berry, Vaccinium myr-
 tillus—m. Candleberry, Myrica gale—m.
 Dutch, Myrica gale—m. Wild, Ruscus.
 Myrtocheilides, Nymphæ.
 Myrton, Clitoris.
 Myrtus anglica, Myrica gale—m. Brabantica,
 Myrica gale.
 Mys, Muscle.
 Mysiologia, Myology.
 Myxa, Mucus, Sebestina.
 Myxodes, Mucous.
 Myxoter, Nasus.
 Myzesis, Sucking.

N

Nabot, Saccharum candidum.
 Nafda, Naphtha.
 Nain, Nanus.
 Nakra, Nacra.
 Napellus verus, Aconitum napellus.
 Napium, Lapsana.
 Naphæ flores. See Citrus aurantium.
 Naphtha vitrioli, Æther sulphuricus—n. Vi-
 trioli camphorata, Tinctura ætherea cam-
 phorata—n. Vitrioli martialis, Tinctura
 seu alcohol sulfurico-æthereus ferri.

Napta, Nata.
 Napus, Sinapis—n. Sylvestris, Brassica na-
 pus.
 Narcaphte, Thymiama.
 Narce, Narcosis.
 Narcema, Narcosis.
 Narcisse faux, Narcissus pseudo-narcissus—
 n. des Près, Narcissus pseudo-narcissus—
 n. Sauvage, Narcissus pseudo-narcissus.
 Narcotism, Narcosis.
 Nard, Celtic, Valeriana Celtica—n. India,
 Nardus Indica—n. Indien, Nardus Indica
 —n. Indique, Nardus Indica—n. Sauvage,
 Asarum.
 Nardum Gallicum, Valeriana Celtica.
 Nardus Celtica, Valeriana Celtica—n. Mon-
 tana, Asarum—n. Rustica, Asarum.
 Nares internæ, Nasal fossæ.
 Narines, Nares.
 Narium aditus, Nares.
 Narthex, Splint.
 Nasa, Nacra, Nata.
 Nasalis, Compressor naris.
 Nascaphthon, Narcaphthon.
 Nasda, Nata.
 Nasitas, Rhinophonia.
 Nasitis postica, Angina nasalis.
 Naso-palpebral, Orbicularis palpebrarum.
 Nasturtium aquaticum, Cardamine pratensis,
 Sisymbrium nasturtium—n. Hortense, Le-
 pidium sativum—n. Indicum, Tropæolum
 majus—n. Peruvianum, Tropæolum majus
 —n. Pratense, Cardamine pratensis.
 Nasum dilatans, Pyramidalis nasi.
 Nasus internus, Nares.
 Nataron, Natron.
 Nates et testes, Quadrigemina corpora.
 Natron, Soda—n. Muriatum, Soda, muriate
 of—n. Præparatum, Soda, subcarbonate of
 —n. Tartarizatum, Soda, tartrate of—n.
 Vitriolatum, Soda, sulphate of.
 Natrum muriaticum, Soda, muriate of—n.
 Oxyphosphorodes, Soda, phosphate of—n.
 Sulphuricum, Soda, sulphate of.
 Natta, Nata.
 Natulæ, Nates.
 Natural parts, Genital organs.
 Naturalia, Genital organs.
 Nausiosis, Nausea.
 Nautia, Nausea.
 Navel, Umbilicus—n. String, Funiculus um-
 bilicalis.
 Navet, Brassica rapa.
 Navette, Brassica napus.
 Naviformis, Navicular.
 Nearsightedness, Myopia.
 Nebula, Caligo.
 Nebulous, Nepheloid.
 Neck, Derbyshire, Bronchocele—n. Swelled,
 Bronchocele—n. Wry, Torticollis.
 Necrodes, Cadaverous.
 Necrology, bills of, Mortality, bills of.
 Necromantia, Necromancy.
 Necron, Cadaver.
 Necropsy, Autopsia cadaverica.
 Necroscopy, Autopsia cadaverica.

Necrosis, Mortification—*n. Dentium*, Dental gangrene—*n. Ustilaginea*, Ergotism.
 Necrotomy, Dissection.
 Necyomantia, Necromancy,
 Nedyia, Intestine.
 Nedys, Abdomen, Stomach.
 Needlebearer, *Porte-aiguille*.
 Needlecarrier, *Porte-aiguille*.
 Nêfle, Mespilus (the fruit).
 Nêflîer, Mespilus.
 Nègre blanc, Albino.
 Negromantia, Necromancy.
 Neige, Snow.

Itch, Helmerick's, Unguentum sulphuratum alcalinum ad scabiem—o. Issue, Dr. Physick's, see Unguentum lyttæ medicatum aliud—o. of Lydia, Bacaris—o. Marshmallow, Unguentum de Althæa—o. Mercurial, Unguentum hydrargyri—o. of Nitrate of mercury, Unguentum hydrargyri nitratis—o. of Nitrous acid, Unguentum acidi nitrosi—o. of White oxide of lead, Unguentum oxidi plumbi albi—o. of Gray Oxide of mercury, Unguentum oxidi hydrargyri cinereum—o. of Nitric oxyd of mercury, Unguentum hydrargyri nitrico-oxydi—o. of Impure oxide of zinc, Unguentum oxidi zinci impuri—o. Red precipitate, Unguentum hydrargyri nitrico-oxydi—o. of White precipitate, Unguentum hydrargyri præcipitati albi—o. Resin, Ceratum resinæ flavæ—o. Resin, black, Unguentum resinæ nigræ—o. Soldier's, Martiatum unguentum—o. of Spanish flies, Cerate of Cantharides, Unguentum lyttæ—o. Spermaceti, Unguentum cetacei—o. of Subacetate of copper, Unguentum subacetatis cupri—o. of Sugar of lead, Unguentum plumbi superacetatis—o. Sulphur, Unguentum sulphuris—o. Sulphur, compound, Unguentum sulphuris compositum—o. Tar, Unguentum picis liquidæ—o. Tutty, Unguentum oxidi zinci impuri—o. Verdigris, Unguentum subacetatis cupri—o. Wax, Unguentum ceræ—o. White, Unguentum oxidi plumbi albi—o. Zinc, Unguentum zinci.

Old age, Senectus.

Oleander, Rhododendron chrysanthemum.

Olene, Ulna.

Oleoceratum aqua subactum, Ceratum Galeni.

Oleosaccharum, Elæosaccharum.

Oleum, Oil—o. Abietis, see Pinus picea—o.

Absinthii, Artemisia absinthium (oil of)—

o. Acusticum, *Huile acoustique*—o. Am-

moniatum, Linimentum ammoniæ fortius

—o. Anacardii, see Anacardium occiden-

tales—o. Anisi, see Pimpinella anisum—o.

Balaninum, Guilandina moringa (oleum)—

o. Balsami, see Amyris opobalsamum—o.

Cacao spissatum, Butter of cacao—o. Caja-

puti, Caieput (oil)—o. Camphoratum, Li-

nementum camphoræ—o. Carui, Carum

(oleum)—o. Cicinum, see Ricinum commu-

nis—o. Cornu cervi, O. animale Dippelii—o. Fixum nucum cocos butyraceæ, see Cocos butyracea—o. Gabianum, Petrolæum—o. Gallinæ, Alkale—o. Hyperici, see Hypericum perforatum—o. Juniperi, see Juniperus communis—o. de Kerva, see Ricinus communis—o. Kervinum, see Ricinus communis—o. Laurinum, Dap'inelæon, Unguentum L.—o. Lentiscinum, Schinellæon—o. Limonis, see Citrus medica—o. Lini cum calce, Linimentum aquæ calcis—o. Malabathri, see Malabathrum—o. Mariæ, see Fagara octandra—o. Melaleucæ leucodendri, Caieput (oil)—o. Menthæ piperitæ, see Mentha piperita—o. Menthæ viridis, Mentha viridis—o. Monardæ, Monarda punctata—o. Morrhuæ, O. jecinoris aselli—o. Neroli, see Citrus aurantium—o. Omphacinum, Omotribes—o. Oxydi cupri viride, Balsam, green, of Metz—o. Palmæ, see Cocos butyracea—o. Palmæ liquidum, see Ricinus communis—o. Petræ, Petrolæum—o. Petræ album, Naphtha—o. Picinum, Brutia, Pisselæum—o. Pimentæ, see Myrtus pimenta—o. Pini purissimum, O. terebinthinæ rectificatum—o. Pulegii, see Mentha pulegium—o. Pyro-animale, O. animale Dippelii—o. Ricini, see Ricinus communis—o. Rutaceum, Peganelæon—o. Rosmarini, see Rosmarinus—o. Rutæ, see Ruta—o. Sesami, see Sesamum orientale—o. Sinapis, see Sinapis—o. Spicæ vulgaris, O. terebinthinæ—o. Succini, see Succinum—o. Tartari per deliquium, Liquor potassæ subcarbonatis—o. Templinum, see Pinus mughos—o. Theobromæ cacao expressum, Butter of cacao—o. Tiglii, Croton tiglium—o. Vini, O. æthereum—o. Vitrioli, Sulphuric acid.

Olfactus amissio, Anosmia.

Olibanum, Juniperus lycia—o. Vulgare, see Pinus abies.

Oligæmia, Anæmia, Hæmaporia, Hypæmia.

Oligogalia, Agalaxis.

Olisthema, Luxation.

Oliva, Olea Europæa.

Olivaris, Oliveshaped.

Olive, see Olea Europæa—o. Tree, Olea Europæa.

Olives, pickled, Colymbades.

Olivier, Olea Europæa.

Olophonia labii lobata, Harelip—o. Linguae frænata, see Ankyloglossum.

Ombilic, Umbilicus.

Ombilicale, Umbilical.

Ombrage, Nebula.

Omenta, Meninges.

Omentesis, Epiploitis.

Omentitis, Epiploitis.

Omentum, Epiploon—o. Colicum, Epiploon, colic—o. Gastro-colicum, Epiploon, gastro-colic—o. Gastro-splenic, Epiploon, gastro-splenic—o. Great, Epiploon, gastro-colic—o. Hepato-gastricum, Epiploon, gastro-hepatic—o. Lesser, Epiploon, gastro-hepatic—o. Majus, Epiploon, gastro-colic—o.

- Minus, Epiploon, gastro-hepatic—o. Os-sium, Periosteum—o. Third, Epiploon, colic.
- Omnia, Eye.
- Omniphagous, Omnivorous.
- Omo-clavicular. See Coraco-clavicular.
- Omocotyle. See Glene.
- Omoplate, Scapula—o. *Col de l'*, Collum scapulæ.
- Omoplat-hyoidien, Omohyoideus.
- Omos, Humerus.
- Omotocia, Abortion.
- Omphacium, Verjuice.
- Omphalocarpus, Galium aparine.
- Omphaloccele, Exomphalos.
- Omphalo-meseraic, Omphalo-mesenteric.
- Omphalonecus, Omphalophyma.
- Omphalos, Umbilicus.
- Onania, Masturbation.
- Onanism, Masturbation.
- Oncos, Tumor.
- Oncosis, Tumour.
- Onction, Inunction.
- Ondulation, Fluctuation.
- Oneberry, Paris.
- Oneirodynia activa, Paroniria, Somnambulism—o. Gravans, Incubus.
- Oneirodynie gravative, Incubus.
- Oneirogmos, Pollution.
- Oneirogonos, Pollution.
- Oneiropolesis, Oneirogmos.
- Onera alvi, Excrement.
- Ongle, Nail.
- Onglet, Pterygion.
- Onguent, Unguentum—o. *d'Althea*, Unguentum de Althæa—o. *de Blanc de baleine*, Unguentum cetacei—o. *Blanc de Rhazes*, Unguentum plumbi subcarbonatis—o. *de Cerusse*, Unguentum plumbi subcarbonatis—o. *Citrin contre la gale*, Unguentum hydrargyri nitratis—o. *Digestif simple*, Unguentum digestivum simplex—o. *Gris*, Unguentum oxidi hydrargyri cinereum—o. *de Guimauve*, Unguentum de althæa—o. *de Laurier*, Unguentum laurinum—o. *Mercuriel*, Unguentum hydrargyri—o. *Napolitain*, Unguentum hydrargyri—o. *de Nitrate de mercure*, Unguentum hydrargyri nitratis—o. *de Poix et de cire*, Basilicon—o. *de Soldat*, Martiatum unguentum—o. *de Sureau*, Unguentum sambuci—o. *de Tornamira*, Unguentum plumbi subcarbonatis.
- Onion, common, Allium cepa—o. Sea, Scilla.
- Onitis, Origanum dictamnus.
- Onomatoclesis, Nomenclature.
- Onomatologia, Nomenclature.
- Ononis antiquorum, O. spinosa.
- Onychia, Paronychia.
- Onycophthora, Onychophthora.
- Onyx, Nail, Pterygion.
- Ooeides, Aqueous humour.
- Oon, Ovum.
- Oophoritis, Ooritis.
- Oophoron, Ovary.
- Operatio, Action.
- Operation, bilateral, see Lithotomy—o. *Césarienne*, Cæsarean section—o. High, see Lithotomy—o. Lateral, see Lithotomy.
- Operculum asperæ arteriæ, Larynx—o. Ilei, Bauhin, valve of.
- Operimentum prætensum abdominis, Peritonæum.
- Ophiasis, Calvities.
- Ophis, Serpent.
- Ophthalmoblenorrhœa, Ophthalmia (purulent).
- Ophrostaphylon, Bryonia alba.
- Ophrys, Supercilium.
- Ophthalmia chronica, Lippitudo—o. Rheumatic, Sclerotitis—o. Sicca, Xerophthalmia—o. Varicose, Cirsophthalmia.
- Ophthalmiater, Oculist.
- Ophthalmica, Euphrasia officinalis.
- Ophthalmici externi, Motores oculorum.
- Ophthalmitis, Ophthalmia.
- Ophthalmoccele, Exophthalmia.
- Ophthalmodynia periodica, Neuralgia, facial.
- Ophthalmoponia, Ophthalmia.
- Ophthalmoptosis, Exophthalmia, Hydrophthalmia.
- Ophthalmos, Eye.
- Opiane, Narcotine.
- Opiat, Opiate—o. *Dentifrice*, Dentifrice.
- Opion, Opium.
- Opisthocephalon, Occiput.
- Opisthocranium, Occiput.
- Opisthocyphosis, Cyphoma.
- Opium colatum, Extractum opii—o. Depuratum, Extractum opii.
- Opobalsamum. See Amyris Opobalsamum.
- Opocarpason, Carpasium (juice.)
- Opodeldoch, Linimentum saponis compositum—o. Steer's, Linimentum saponis compositum.
- Opopios, Optic.
- Opoponacum, Pastinaca opoponax.
- Opoponax. See Pastinaca opoponax.
- Opoponaxwort, Pastinaca opoponax.
- Opos, Extract—o. Silphion, Laserpitium.
- Oppilatio, Emphraxis.
- Oppilativus, Obstruens.
- Opposant, Opponens—o. *du petit doigt*, Opponens minimi digiti—o. *du pouce*, Opponens pollicis.
- Oppressio, Catalepsy—o. Nocturna, Incubus.
- Ops, Eye.
- Opsialgia, Nouralgia facial.
- Opsis, Vision.
- Optesis, Assatio.
- Optico-trochlei-scleroticien, Obliquus superior oculi.
- Optilos, Eye.
- Opuntia, Cactus opuntia.
- Or, Gold.
- Orach, stinking, Chenopodium vulvaria.
- Orange, flowers of the, see Citrus aurantium—o. Tree, Citrus aurantium.
- Oranges, see Citrus aurantium—o. Curassoa, Aurantia curassaventia.

Orbulaire des lèvres, Orbicularis oris—*o. des Paupières*, Orbicularis palpebrarum.
 Orbicularis oculi, O. palpebrarum—*o. Recti*, Sphincter ani externus.
 Orbital fissure, superior, Sphenoidal fissure—*o. Fissure*, inferior, Maxillary fissure.
Orbito-extus scleroticien, Rectus externus oculi—*o. Intus-scleroticien*, Rectus internus oculi—*o. Maxillo-labial*, Levator labii superioris proprius—*o. Palpebral*, Levator palpebræ superioris—*o. Sus-palpebral*, Levator palpebræ superioris.
Orcanette, Anchusa officinalis.
 Orchea, Scrotum.
 Orcheocatabasis, Orchidocatabasis.
 Orcheocele, Orchiocele.
 Orcheotomy, Castration.
 Orchidocele, Hernia humoralis.
 Orchidonecus, Hernia humoralis.
 Orchidotomy, Castration.
 Orchill, Lichen roccella.
 Orchiocele, Hernia humoralis.
 Orchis, Testicle—*o. Butterfly*, O. bifolia.
 Orchitis, Hernia humoralis.
 Orchoi. See Tarsus.
 Orchotomia, Castration.
Ordinaires, Menses.
Ordonnance, Formula, Prescription.
Oreille d'homme, Asarum—*o. de Souris*, Hieracium pilosella.
Oreillette, Asarum, Auricle of the heart.
Oreillon, Parotis, Cynanche parotidæa.
Orelia glandiflora, Allamanda.
Oreoselinum, Athamanta aureoselinum—*o. Africanum*, Bubon galbanum.
 Orexia, appetite.
 Organa generationi inservientes, Genital organs.
Organes genitaux, Genital organs.
 Organization, compounds of, Principles, immediate.
 Organology, Anatomy, Craniology.
 Organon olfactus, Nasus.
 Orgasmus, Tergescence.
 Orge, Rage.
Orge, Hordeum—*o. Perlé*, see Hordeum.
Orgelet, Hordeolum.
Orgeolet, Hordeolum.
 Orgosis, Orgasm.
 Orichalcum, Brass.
 Oricular, Auricular.
Oricule, Pavilion of the ear.
 Orificium dextrum ventriculi, Pylorus.
Origanum aquaticum, Eupatorium cannabinum—*o. Creticum*, O. dictamnus—*o. Heracleoticum*, Origanum—*o. Syriacum*, Teucrium marum.
 Orme, Appetite.
Orme, Ulmus.
Ornithogalum maritimum, Scilla.
Ornus sylvestris, Fraxinus excelsior.
Orobe, Ervum ervilia.
Orobion. See Ervum ervilia.
Orobis, Ervum ervilia.
Oronge. See Agaric.

Orpin, Orpiment—*o. Brûlant*, Sedum—*o. Grand*, Sedum telephium—*o. Reprise*, Sedum telephium.
 Orpine, Sedum telephium.
 Orrhos, Perinæum, Serum.
 Orris, Iris florentina—*o. Common*, Iris germanica.
Orseille, Lichen roccella.
Orteil, Digitus pedis.
 Orthocolon, Ankylosis.
 Orthocyllosis, Ankylosis.
 Orthopnœa convulsiva, Asthma—*o. Cynanchica*, Cynanche trachealis—*o. Hydrothoracica*, Hydrothorax—*o. Hysteria*, Angone.
Ortie, Urtica—*o. Blanche*, Lamium album—*o. Brûlant*, Urtica urens—*o. Morte*, Lamium album—*o. Morte des Bois*, Galeopsis—*o. Romaine*, Urtica pilulifera.
 Ortyx, Tetrao coturnix.
Orvale, Salvia sclarea.
 Os, Bone, Mouth—*o. Acromii*, Acromion—*o. ad cubitale*, Radius—*o. Adjutorium*, Humeri os—*o. Alæforme*, Sphenoid—*o. Alagas*, Coccyx, Sacrum—*o. Amphideon*, Os uteri—*o.  Palo de calenturas, Calenturas.
 Palos de calentura, Cinchona.
 Palpebra inferior extrorsum flexa, Ectropion—p. Tertia, Valvula semilunaris.
 Palpebræ superioris primus, Levator palpebræ superioris.
 Palpebralis, Orbicularis palpebrarum.
 Palpebrarum aperiens rectus, Levator palpebræ superioris—p. Duo musculi, Orbiculares palpebrarum.
 Palpitatio cordis trepidans, Cardiotromus.
 Palpitation du cœur, Palpitation.
 Palsy, Paralysis.
 Paludapium, Apium graveolens.
 Palus, Marsh—p. Sanctus, Guaiacum.
 Pambroma, Panbioma.
 Pamoison, Syncope.
 Panacea Ducis Holsatiæ, Potassæ sulphas—p. Duplicata, Potassæ sulphas—p. Lapsorum, Arnica montana—p. Mercurialis,

- Hydrargyri submuriæ—p. Mercurii rubri,
Hydrargyri nitrico-oxydum—p. Vegetabilis, Crocus.
- Panaris, Paronychia.
Panaritium, Paronychia.
Panarium, Paronychia.
Panata, Panada.
Panatella, Panada.
Panax costinum, Pastinaca opoponax—p. Heracleum, Pastinaca opoponax.
Panax pastinacea, Pastinaca opoponax.
Panchrestos, Panacea.
Panchymagogum minerale, Hydrargyri submuriæ.
- Pancœnos, Epidemy.
Pancrene, Pancreas.
Pandalitium, Paronychia.
Pandemios, Epidemy.
Panicaut, Eryngium campestre—p. Maritime, Eryngium maritimum.
Panis canicaceus, see Canicæ—p. Cibarius seu secundarius, Syncomistos—p. Cuculi, Oxalis acetosella—p. Porcinus, Cyclamen.
Panni, Swathing clothes.
Pannicule charnu, Carnosus panniculus.
Panniculus, Pterygion—p. Adiposus, Cellular membrane—p. Cordis, Pericardium—p. Hymenæus, Hymen.
Panochia, Bubo.
Panplegia, Pamplegia.
Pansement, Dressing.
Pansies, Viola tricolor.
Pantagogen, Panchymagogum.
Pantices, Intestine.
Panting, Anhelatio.
Pantophagus, Omnivorous.
Pantophobia, Hydrophobia, Panophobia.
Panus, Phygethlon—p. Faucium, Stomatopanus—p. Inguinalis, Bubo.
Pap of the throat, Uvula.
Papas Americanus, Solanum tuberosum.
Papaver cereale, P. rhœas—p. Corniculatum, Chelidonium majus—p. Erraticum, P. rhœas—p. Luteum, Chelidonium majus.
Papaverculum, Meconium.
Papaw tree, Carica Papaya.
Papayer, Carica Papaya.
Papilla, Nipple.
Papillæ caliciformes, see P. of the tongue—p. Capitata, see P. of the tongue—p. Conical, see P. of the tongue—p. Conoidal, see P. of the Tongue—p. Filiform, see P. of the tongue—p. Fungiform, see P. of the tongue—p. Fungoid, see P. of the tongue—p. Lenticular, see P. of the tongue—p. Maximæ, see P. of the tongue—p. Mediæ, see P. of the tongue—p. Minimæ, see P. of the tongue—p. Mucosæ, see P. of the tongue—p. Nervous, see Papilla—p. Pyramidal, see P. of the tongue—p. Pyramidales, see Papilla—p. Renum, P. of the kidney—p. Semilenticulares, see P. of the tongue—p. Truncatæ, see P. of the tongue—p. Vallatæ, see P. of the tongue—p. Villosæ, see P. of the tongue.
Papilli-aut-mammilli-formis, Mastoid.
- Pappus Americanus, Solanum tuberosum.
Papula agria, Lichen agrius.
Paquerette vivace, Bellis.
- Par opticum nervorum, Optic nerve—p. Primum nervorum cerebri, Olfactory nerves—p. Quintum nervorum cerebralium, Trigemini—p. Secundum nervorum, Optic nerve—p. Septimum sive faciale, Facial nerve—p. Trigemini, Trigemini—p. Trium funiculorum, Trigemini—p. Vagus, Pneumogastric—p. Visorius, Optic nerve.
- Paracenticion, Trocar.
Paracentesis, Puncturing.
Paracmastics. See Acmasticos.
Paracme, Decline.
Paracoe. See Cophosis.
Paracousia. See Cophosis.
Paracope, Delirium.
Paracrusis, Paracope.
Paracrusis, Cophosis—p. Duplicata, Double hearing—p. Imaginaria, Tinnitus aurium—p. Imperfecta, Double hearing, P. perversa—p. Obtusa, Barycoia—p. Oxycoia, P. acris—p. Surditas, see Cophosis—p. Willisiana, P. perversa.
Paracyesis, Pregnancy, morbid, Pregnancy, preternatural—p. Abortus, Abortion—p. Tubaria, Salpingocyesis.
Paracynanche, Cynanche.
Paræsthesia, Paresthesia—p. Auditus flacca, Proptoma auricularum
Parageusis, Ageusia.
Paragoge, Adduction, Coaptation.
Parallagma, *Chevauchement*.
Parallaxis, *Chevauchement*.
Paralysis, Paralysis.
Paralysis, Primula veris—p. Beriberia, Beriberi—p. Hemiplegia, Hemiplegia—p. Medullaris, Paraplegia—p. Rachialgia, Colic, metallic—p. Scorbutica, Pellagra—p. Spinalis, Paraplegia.
Paramenia difficilis, Dysmenorrhœa—p. Erroris, Menstruation, vicarious—p. Obstructionis, see Amenorrhœa—p. Profusa, Menorrhagia—p. Superflua, Menorrhagia.
Paramesos, Annular finger, see Digitus.
Parancæa, Delirium, Dementia.
Parapechyon, Radius.
Paraphobia, Hydrophobia.
Parophonia clangens, Oxyphonia—p. Gutturalis, Asaphia—p. Nasalis, Rhinophonia—p. Rauca, Raucedo—p. Ulcerosa, Oxyphonia.
Paraphora, Delirium, Paracope.
Paraphrenesis, Paraphrenitis—p. Diaphragmatica, Diaphragmitis.
Paraphrenitis, Diaphragmitis.
Paraphrosyne, Delirium.
Paraphrotes, Delirium.
Parapleuritis, Pleurodynia.
Paraplexia, Paraplegia.
Parapsis acris temeritudo, Soreness—p. Expers, Torpor—p. Illusoria, Pseudæsthesia—p. Pruritus, Itching.
Pararma, Fimbria.
Parasceue, Apparatus.

Parasitismus intestinalis, Helminthiasis—p. Superficie, Malis.
 Parastata, Epididymis.
 Parastatæ, Prostate—p. Glandulæ, Prostate.
 Parasyranche, Cynanche parotidæa.
 Parathenar major, Abductor minimi digiti pedis—p. Minor, Flexor brevis minimi digiti pedis.
 Parathroma, Elongatio.
 Paratrimma, Chafing.
 Paregoricus, Anodyne.
 Pareia, Gena.
 Parelle, Rumex hydrolapathum.
 Parencephalis, Cerebellum.
 Paresis, Paralysis.
 Parfum, Suffimentum.
 Parisette, Paris.
 Paristhmia, Cynanche, Tonsil.
 Paristhmitis, Cynanche.
 Pariera brava, Pareira brava.
 Paries, Table.
 Parocheteusis, Derivation.
 Parodynia, Dystocia—p. Perversa, Presentation, preternatural.
 Parois, Parietes.
 Parole, Voice, articulated.
 Paroniria ambulans, Somnambulism—p. Salax, Pollution.
 Paronychia, Asplenium ruta muraria—p. Digitum, Digitum.
 Paropia, Canthus (lesser).
 Paropsis, Dysæsthesia visualis—p. Amaurosis, Amaurosis—p. Cataracta, Cataract—p. Glaucoma, Glaucoma—p. Illusoria, Pseudoblepsia—p. Lateralis, Dysopia lateralis—p. Longinqua, Presbytia—p. Lucifuga, Nyctalopia—p. Noctifuga, Hemeralopia—p. Propinqua, Myopia—p. Staphyloma, Staphyloma—p. Staphyloma purulentum, Hypopyon—p. Staphyloma simplex, Hydrophthalmia—p. Strabismus, Strabismus—p. Synezeisis, Synezeisis.
 Parorasis, Hallucination.
 Parosmia, Anosmia.
 Parostia flexilis, Mollities ossium—p. Fragilis, Fragilitas ossium.
 Parotid, accessory gland of the. See Parotid.
 Parotide, Parotis.
 Parotis contagiosa, Cynanche parotidæa—p. Epidemica, Cynanche parotidæa—p. Sero-so glutine tumens, Cynanche parotidæa—p. Spuria, Cynanche parotidæa.
 Parotitis, Cynanche parotidæa, Parotis.
 Pars inferior pedis, Sole—p. Naturalis medicinæ, Physiology—p. Prima asperæ arteriæ, Larynx—p. Vaga, Pneumogastric—p. Virilis, Penis.
 Parsley, common, Apium petroselinum—p. Macedonian, Bubon Macedonicum—p. Mountain, black, Athamanta aureoselinum.
 Parsnep, cow, Heracleum spondylium—p. Garden, Pastinaca sativa.
 Part, see Parturition—p. *legitime et illegitime*, see Parturition.
 Partes generatione inservientes, Genital organs—p. Genitales, Genital organs.

Parthenium febrifuga, Matricaria—p. Mas, Tanacetum.
 Parties, les, Genital organs—p. *Génitales*, Genital organs—p. *Honteuses*, Genital organs—p. *Génitoires*, Genital organs—p. *Naturelles*, Genital organs—p. *Nobles*, Genital organs—p. *Sexuelles*, Genital organs.
 Partio, Parturition.
 Partridgeberry, Gaultheria.
 Parts, the, Genital organs.
 Partura, Parturition.
 Parturigo, Parturition.
 Parturium vanum, *Fausse couche*.
 Partus, Parturition—p. Cæsareus, Cesarean section—p. Difficilis, Dystocia.
 Paruria incontiens, Enuresis—p. Inops, Ischuria, false—p. Mellita, Diabetes—p. Retentionis, Ischuria—p. Retentionis vesicalis, Retention of urine—p. Stillatitia, Strangury—p. Stillatitia mucosa, Cystirrhæa.
 Pas d'ane, Tussilago.
 Pasma, Catapasma.
 Pasqueflower, Anemone pulsatilla.
 Passa, Paronychia.
 Passæ Corinthiacæ. See Vitis Corinthiaca.
 Passages, digestive, Ways, digestive—p. Second, Ways, second.
 Passe-pierre, Crithmum maritimum.
 Passerage sauvage, Cardamine pratensis.
 Passio cæliaca, Celiac flux—p. Cholericæ, Cholera—p. Felliflua, Cholera—p. Hæmoptoica, Hæmoptysis—p. Hypochondriaca, Hypochondriasis—p. Hysterica, Hysteria—p. Iliaca, Ileus—p. Ischiadica, Neuralgia femoro-poplitea—p. Pleuritica, Pleuritis—p. Ventriculosa, Celiac flux.
 Passionflower, bayleaved, Passiflora laurifolia.
 Passulæ majores, see Vitis vinifera—p. Minores, see Vitis Corinthiaca.
 Pasta de althæa, Paste, marshmallow—p. Amygdalina, Confection (almond)—p. de Dactylis, Paste, date—p. Emulsiva, Confection (almond)—p. de Jujubis, Paste of jujubes—p. Regia, Confection (almond).
 Paste, Ward's, Confectio piperis nigri.
 Pastèque, Cucurbita citrullus.
 Pastilles, fumigating. See Fumigation.
 Pastilli emetinæ pectoralis, Trochisci e. p.
 Pastinaca sylvestris, P. sativa—p. Sylvestris tenuifolia officinarum, Daucus Carota.
 Pâte, Paste—p. *Arsenical*, Arsenical paste.
 Patella, Cup—p. Fixa, Olecranon.
 Pathema, Affection, Disease.
 Pathematology, Pathology.
 Pathne, Alveolus.
 Pathology, humoral, Humorism.
 Pathopatrialgia, Nostalgia.
 Pathos, Affection, Disease.
 Patience, Rumex patientia—p. *d'Eau*, Rumex hydrolapathum—p. Garden, Rumex patientia—p. *Rouge*, Rumex sanguineus—p. *Sauvage*, Rumex acutus.
 Patientia, Rumex patientia.
 Patientia musculus, Levator scapulæ.

- Patne, Alveolus.
 Patura, Syphilis.
Paume de la main, Palm.
 Pauonta, Sedatives.
Paupière, Palpebra.
 Pavana wood, *Croton tiglium*.
Pavillon de l'oreille, Pavilion of the ear—*p. de la Trompe*, see *Tuba fallopiana*.
 Pavina, *Æsculus hippocastanum*.
 Pavor, Panophobia.
Pavot des Jardins, Papaver.
 Pazahar, Bezoar.
 Peach brandy, *Amygdalus persica*—*p. Tree*, *Amygdalus persica*.
 Peagle, *Primula veris*.
 Pear. See *Pyrus malus*.
 Pearl ash, Potash of commerce—*p. Mother of*, see Pearl—*p. White*, Bismuth, subnitrate of.
Peau, Cutis.
Peaucier, *Platysma myoides*.
 Pechedon, Perinæum.
Pêcher, *Amygdalus persica*.
 Pechys, Elbow.
 Pechytyrbe, *Porphyra nautica*.
 Pecten, Pubes.
 Pectihagra, Pechyagra.
Pectiné, Pectinalis.
Pectoral, grand, Pectoralis major.
 Pectoralis internus, Triangularis sterni.
Pectoriloque, Stethoscope.
Pectoriloque chévrotonte, Egophony.
 Pectus, Thorax.
 Pedesis, Pulsation.
 Pedethmos, Pulsation.
 Pedicle, vitelline. See *Vesicula umbilicalis*.
 Pedicularia, *Delphinium staphisagria*.
 Pediculatio, Phtheiriasis.
 Pediculus pubis, Crablouse.
Pedicure, Chiropodist.
 Pedicus, Extensor brevis digitorum pedis.
Pedieux (muscle), Extensor brevis digitorum pedis.
 Pedigambra, Ysambra.
 Pediluvium, Bath, foot.
 Pedion, Sole.
 Pedium, Tarsus.
Peduncles du cercelet, Corpora restiformia.
 Peduncles of the medulla oblongata, Corpora restiformia.
 Pedunculi medullæ oblongatæ, Corpora restiformia.
 Pega, Canthus (lesser).
 Peganium, Ruta.
 Peine, Hunger.
 Peira, Effort, Experience, Nisus.
 Pelagra, Pellagra.
 Pelidnoma, Ecchymoma.
 Pelioma, Ecchymoma.
 Peliosis, Purpura hæmorrhagica.
 Pellicula summa, Epidermis—*p. Superior*, Epidermis.
 Pellis, Cutis—*p. Summa*, Epidermis.
 Pellitory, bastard, *Achillea ptarmica*—*p. of Spain*, *Anthemis pyrethrum*—*p. Wall*, *Parietaria*.
 Pelma, Sole.
Pelote de mer, *Pila marina*.
 Peltigera canina, Lichen caninus.
 Pelude, Pelicide.
 Pelvis aurium, Cochlea—*p. Cerebri*, Infundibulum of the brain—*p. Ocularis*, Scaphium oculare.
 Pelycometrum, Pelvimeter.
 Pelyometrum, Pelvimeter.
 Pemphix, Pemphigus.
 Pemphinx, Pemphigus.
 Pemphigus variolodes. See Varicella.
 Penæa Sarcocolla, Sarcocolla.
 Pencil-like processes, Styloid processes.
 Penicillum, Compress.
 Penicillus, Tent.
 Peniculum, Compress.
 Peniculus, Tent.
 Penides, Saccharum hordeatum.
Pénil, Mons veneris.
 Penis cerebri, Pineal gland—*p. Muliebris*, Clitoris.
 Pennycress, Thlaspi.
 Pennyroyal, *Mentha pulegium*—*p. Hart's*, *Mentha cervina*.
Pensée, *Viola tricolor*—*p. Sauvage*, *Viola tricolor*.
 Pentaphyllum, *Potentilla reptans*.
 Pepansis, Coction, Maturation.
 Pepanticos, Maturative.
 Pepasmos, Coction, Maturation.
 Pepper, black, *Piper nigrum*—*p. Cayenne*, *Capsicum annuum*—*p. Cubeb*, *Piper cubeba*—*p. Guinea*, *Capsicum annuum*—*p. Jamaica*, *Myrtus Pimento*—*p. Long*, *Piper longum*—*p. Poor-man's*, *Polygonum hydropiper*—*p. Tailed*, *Piper cubeba*—*p. Water*, *Polygonum hydropiper*—*p. Wall*, *Sedum*—*p. White*, *Piper album*.
 Pepperwort, *Lepidium*.
 Pepsis, Coction, Digestion.
Perce-crane, Perforator.
Percefeuille, *Bupleurum rotundifolium*.
Percemousse, *Polytrichum*.
Percepierre, *Crithmum maritimum*.
 Percolatio, Filtration.
 Perforans Casserii. See Cutaneous—*p. Manus*, Flexor profundus perforans—*p. Profundus*, Flexor longus digitorum pedis profundus perforans.
 Perforation, Paracentesis—*p. Uteri*, Uterus, rupture of the.
 Perforatus, Coraco-brachialis, Flexor brevis digitorum pedis—*p. Casserii*, Coracobrachialis.
 Perfusio, Fomentation.
 Periamma, Amuletum.
 Periapton, Amuletum.
 Periblema, Catablema.
 Pericarpium, Epicarpium.
 Pericrasis, Peribrosis.
 Perichrasis, Circumlitio, Liniment.
 Perichriston, Circumlitio, Liniment.
 Periclimenum, Lonicera periclymenum.
 Periesticos, Salutory.
 Periglottis, Epiglottic gland. See Tongue.

Perilymph, Cotunnus, liquor of.
 Perimysium, Fascia.
 Perin, Scrotum.
Périnée, Perinæum.
 Perineurion, Neurilema.
 Periodeia, Period.
 Periodeusis, Period.
 Periodeutes, Charlatan.
 Perione, Decidua.
 Periosteum internum, Medullary membrane.
 Periphimosis, Paraphimosis.
 Peripleumonia, Peripneumonia.
 Peripneumonia, Pneumonia—*p. Catarrhalis*,
P. notha—*p. Pituitosa*, *P. notha*.
 Peripneumony, bastard, Peripneumonia no-
 tha.
 Peripsyxis, Catapsyxis, Perfrictio.
 Perirrhœa, Enuresis.
Periscelis, *Jarretièrre*.
 Periscythismus, Periscyphismus.
 Peristaltic action, Peristole.
 Peristerium, Verbena officinalis.
 Peristaphylinus externus, Circumflexus mus-
 culus—*p. Inferior*, Circumflexus musculus
 —*p. Internus*, Levator palati.
 Peristoma, Peristroma.
 Periterion, *Trépan perforatif*.
 Peritestis, Albuginea.
Péritoine, Peritonæum.
 Peritome, Circumcision.
 Perittoma, Excrement.
 Periwinkle, lesser, Vinea minor.
 Perla, Pearl.
Perle, Pearl.
 Permotio, Motion.
 Perniciosus, Deleterious.
 Pernio, Chilblain.
 Perodactyleus, Flexor longus digitorum pedis
 profundus perforans.
Pérone, Fibula—*p. col du*, Collum fibulæ.
Peroneo-lateral, court, Peronæus brevis—*p.*
Phalangeinien du gros orteil, Flexor lon-
 gus pollicis pedis—*p. Sousphalangeinien du*
pouce, Flexor longus pollicis pedis—*p. Sous-*
tarsien, Peronæus longus—*p. Sus-metatar-*
sien, Peronæus tertius—*p. Sus-metatarsien*,
grand, Peronæus brevis—*p. Sus-phalan-*
gettien du pouce, Extensor proprius pollicis
 pedis—*p. Tibi-sus-phalangeinien commun*,
 Extensor communis digitorum pedis—*p.*
Sus-phalangeinien du pouce, Extensor pro-
 prius pollicis pedis.
Peronier, *grand*, Peronæus longus—*p. La-*
teral, long, Peronæus longus—*p. Moyen*,
 Peronæus brevis—*p. Petit*, Peronæus ter-
 tius.
 Perrosin. See Pinus abies.
Persicaire douce, Persicaria.
 Persicaria, Polygonum Persicaria—*p. Urens*,
 Polygonum hydropiper.
Persil, Apium petroselinum—*p. d'Ane*, Chæ-
 rophyllum sylvestre—*p. de Macedoine*, Bu-
 bon Macedonicum—*p. de Montagne*, Atha-
 manta aureoselinum.
 Persimmon, Diospyros Virginiana.
 Persudatio, Diapedesis.

Perte, Metrorrhagia—*p. de Sang*, Hæmor-
 rhagia—*p. Uterine rouge*, Metrorrhagia—
p. Uterine blanche, Leucorrhœa.
Pertes blanches, Leucorrhœa.
Pervenche, Vinca minor.
Perversion de la tête des os et des muscles,
 Loxarthrus.
 Pervigilium, Insomnia, Coma Vigil.
 Pes Alexandrinus, Anthemis Pyrethum—
p. Cati, Antennaria Dioica—*p. Equinus*,
 see Kyllosis—*p. Leonis*, Alchemilla.
Pésanteur, Weight—*p. Spécifique*, Gravity,
 specific.
Pèse-liqueur, Areometer.
 Pessary, Egyptian, Ægyptius pessus.
 Pessulus, Pessary.
 Pessus, Pessary.
 Pest, Plague.
Peste, Plague.
 Pestilent-wort, Tussilago Petasites.
 Pestilentia, Plague.
 Pestis, Plague—*p. Variolosa*, Variola.
Pet, Fart.
 Petasites, Tussilago petasites.
 Petechiæ sine febre, Purpura simplex.
 Petechial scurvy, Purpura simplex.
 Petechianosis, Purpura hæmorrhagica.
 Peticulæ, Petechiæ.
 Petigo, Impetigo.
Petit courier, Influenza—*p. Lait*, Serum lac-
 tis—*p. Lait d'Hoffmann*, Serum lactis Hoff-
 manni—*p. Sus-maxillo-labial*, Levator an-
 guli oris.
Petite Poste, Influenza.
 Petræum, Petrolæum.
 Petræum, Solidago virgaurea.
 Petrapium, Bubon Macedonicum.
Pétréole, Petrolæum.
 Petro del Porco, Bezoard of the Indian porcu-
 pine.
Pétrole, Petrolæum.
 Petroleum Barbadense, Petrolæum.
 Petro-salpingo-staphylinus, Circumflexus—*p.*
 Salpingo-staphylinus, Levator palati—*p.*
Staphylin, Levator palati.
 Petroselinum, Apium petroselinum—*p. Ma-*
 cedonicum, Bubon Macedonicum.
 Petum, Nicotiana tabacum.
 Peuce, Pinus sylvestris.
Peuplier noir, Populus.
 Pexis, Concretion.
 Peza, Astragalus, Sole.
 Phacos, Ervum lens.
 Phacoscotoma, Cataract.
 Phagæna, Boulimia.
 Phagedæna, Boulimia—*p. Gangrænosa*, Hos-
 pital gangrene.
 Phalacroma, Calvities.
 Phalacrosis, Calvities.
 Phalacrotis, Alopecia.
Phalanges des doigts, Phalanges of the fin-
 gers—*p. des Orteils*, Phalanges of the toes.
 Phallorrhagia, Stomatosis.
 Phallorrhœa, Gonorrhœa.
 Phallus, Penis.
 Phantasia, Imagination.

- Phantasm, Hallucination.
 Phantasma, Pseudoblepsia.
 Phantom, Fantom.
 Pharmaceum, Apotheca.
 Pharmaccia, Poisoning.
 Pharmaceutice, Pharmacy.
Pharmacien, Apothecary.
 Pharmacologia, Materia medica.
 Pharmacopœus, Apothecary.
 Pharmacopola, Apothecary.
Pharmacopole, Apothecary.
 Pharmacum, Medicament—p. *Ægyptiacum*,
Ægyptiacum—p. *Amatorium*, *Philter*.
 Pharus, Pharynx.
 Pharygathron, Pharynx.
Pharyngé, Pharyngeal.
 Pharyngethron, Pharynx.
Pharyngien, Pharyngeal.
 Pharyngeurysma, Pharyngocele.
 Pharyngitis, Cynanche parotidæa.
 Pharyngo-staphylinus, Palato-pharyngeus.
 Pharyx, Pharynx.
 Phatnion, Alveolus.
Phellandre, *Phellandrium aquaticum*.
 Pheugophobia, Hydrophobia.
 Pheugydron, Hydrophobia.
 Philanthropus, Galium aparine.
 Philetron, Philter.
 Philonium Londinense, Confectio opii.
 Philopatridalgia, Nostalgia.
 Philopatridomania, Nostalgia.
 Philosopher's stone. See Alchymy.
 Philosophia corporis vivi, Physiology—p.
Hermetica, Alchymy—p. *per Ignem*, Chy-
 mistry.

Purgations, Menses.
Purpura, Scarlatina—p. Alba benigna et maligna, Miliary fever—p. Miliaris, Miliary fever—p. Puerperarum, Miliary fever—p. Urticata, Urticaria.
Purpurissum, Hydrargyri sulphuretum rubrum.
Purse, Scrotum.
Purslane, Portulaca.
Purulentia, Suppuration.
Pus corrosivum, Sanies—p. Malignum, Ichor—p. Malignum, Sanies.
Pustula ardens, Eczema.
Pustule maligne. See Anthrax.
Pustula oris, Aphthæ.
Pusulatum, Pusillatum.
Putredo, Hospital gangrene, Putrefaction.
Putrescentia, Putrefaction—p. Uteri gravidi, Hystero-malacia.
Putriditas, Putrefaction.
Putridity, Putrefaction.
Putzochill. See Myroxylon Peruiferum.
Pycnotica, Incrassantia.
Pyelos, Pelvis.
Pyesis, Suppuration.
Pyle, Porta.
Pyodes, Purulent.
Pyon, Pus.
Pyophthalmus, Hypopyon.
Pyorrhœa urinalis, Pyuria.
Pyosis, Hypopyon, Pterygion, Suppuration—p. Pectoris, Empyema.
Pyothorax verus, Empyema.
Pyoturia, Pyuria.
Pyr, Fever.
Pyra crustumina, Crustuminatum—p. Crustumerina, Crustuminatum.
Pyramidal de l'Abdomen, Pyramidalis abdominis—p. de la Cuisse, Pyramidalis—p. du Nez, Pyramidalis nasi—p. Stapédien, Stapedius.
Pyramidale (os), Cuneiform (bone).
Pyramidalis femoris, Pyramidalis.
Pyramides anteriores, Corpora pyramidalia—p. Malpighianæ, Papillæ of the kidney
p. Postérieures du cervelet, Corpora restiformia.
Pyramids of Wistar, Sphenoidal cornua.
Pyramis, Penis—p. Trigona, see Temporal bone.
Pyræa, Incendium.
Pyrenoides, Odontoid.
Pyrèthre, Anthemis pyrethrum.

Pyrethrum, Anthemis pyrethrum—p. Sylvestre, Achillea ptarmica.
 Pyreticus, Febrifuge.
 Pyretos, Fever.
 Pyri martiales, Ferrum tartarizatum.
 Pyria, Fomentation.
 Pyriformis, Pyramidalis.
 Pyroleum ossium rectificatum, Oleum animale Dippelii.
 Pyros, Triticum.
 Pyrosis suecica, Pyrosis.
 Pyrosophia, Chymistry.
 Pyrotechnia, Chymistry.
 Pyroticus, Caustic.
 Pyuria chylosa, Chyluria—p. Lactea, Chyluria—p. Mucosa, Cystirrhœa—p. Serosa, Cystirrhœa—p. Viscida, Cystirrhœa.
 Pyxis, *Boite*, see Cotyloid.

Q

Quabebe, Piper cubeba.
 Quack, Charlatan.
 Quadrantal, Amphora.
 Quadratus, Depressor labii inferioris—q. Dorsi, Q. lumborum—q. Genæ, Platysma myoides—q. Radii, Pronator radii quadratus.
 Quadrigeminus, primus et superior, Pyramidalis—q. Quadratus quartus, Quadratus femoris—q. Secundus et tertius, Ischio-trochanterianus.
 Quahoil, Cacao.
 Quail, Tetrao coturnix.
 Quartanus remittens, Tetartophia.
 Quarte, Quartan.
 Quassine. See Quassia.
 Quatre épices. See Myrtus pimenta.
 Quatrio, Astragalus.
 Queen of the meadows, Spiræa ulmaria.
 Quercula minor, Teucrium chamædrys.
 Quercus coccifera, see Kermes—q. Marina, Fucus vesiculosus—q. Suber, see Suber.
 Queue de cheval, Cauda equina, see Medulla spinalis—q. de la Moelle épinière, Cauda equina—q. de Pourceau, Peucedanum.
 Quicken tree, Sorbus acuparia.
 Quicklime, Calx viva.
 Quicksilver, Hydrargyrum.
 Quies, Acinesia.
 Quina quina, Cinchona.
 Quince, see Pyrus cydonia—q. Tree, Pyrus cydonia.
 Quinia, Quinina.
 Quinine, iodide of. See Iodine.
 Quinquefolium, Potentilla reptans.
 Quinquina, Cinchona—q. Aromatique, Croton cascarilla—q. Bicolor, Cinchonæ caribææ cortex—q. Faux de Virginie, Cusparia febrifuga—q. Gris de Loxa, Cinchonæ lancifoliæ cortex—q. Jaune, Cinchonæ cordifoliæ cortex—q. Orangé, Cinchonæ lancifoliæ cortex—q. Piton, Cinchonæ caribææ cortex—q. Rouge, Cinchonæ oblongifoliæ cortex.

Quinsey, Angina, Cynanche tonsillaris—q. Nervous, Angone—q. Wolf, Lycanche.
 Quinte, Influenza.
 Quintefeuille, Potentilla reptans.
 Quintes. See Pertussis.

R

Rabiétique, Rabid.
 Rabies canina, Hydrophobia.
 Rabique, Rabid.

 Rhyptica, Detergents.
 Rhypticus, Abstergent.
 Rhysis, Flux.
 Rhytidosis, Rutidosis.
 Rib, Costa.
 Ribs, neck of the, Collum costarum.
 Rice, Oryza—r. Disease, Cholera.
 Richardsonia. See Ipecacuanha.
 Richweed, Actæa racemosa.
 Ricin, Ricinus communis.
 Ricinoides, Jatropha curcas.
 Ricinus major, Jatropha curcas—r. Minor, Jatropha manihot.
 Rickets, Rachitis.
 Ride, Wrinkle.
 Rigor nervosus, Tetanus.
 Rimæ, Rhagades.
 Rinæus, Compressor naris.
 Rinchos, Rostrum.
 Ringworm, Herpes circinatus—r. of the Scalp, Porrigo scutulata—r. Ulcerative, Herpes exedens.
 Rire ou ris, Risus—r. Canin, Canine laugh—r. Moqueur, Canine laugh—r. Sardonic, Risus sardonicus—r. Sardonique, Canine laugh.
 Risagon, Cassumuniar.
 Risigallum, Orpiment.
 Risus caninus, Canine laugh—r. Sardonicus, Canine laugh—r. Spasticus, R. sardonicus.
 River weed, Conferva rivalis.
 Riz, Oryza.
 Roan tree, Sorbus acuparia.
 Rob cynosbatus, Confectio rosæ caninæ—r. Moris, Diamorion—r. Nucum, Diacaryon.
 Roborans, Corroborant.
 Roborantia, Tonics.
 Robub, Rob.
 Roccella, Lichen roccella.
 Rocher. See Temporal bone.
 Rochetta Alexandrina, Soda.
 Rocket, garden, Brassica eruca—r. Roman, Brassica eruca.
 Rocou, Terra Orleana.
 Rogne, Psora.
 Rohob, Rob.
 Roller, Bandage, Fascia.
 Romarin, Rosmarinus—r. Sauvage, Ledum sylvestre.
 Rompeure, Hernia.
 Ronce, Rubus idæus—r. Bleue, Rubus cæ-

- sius—*r. de Montagne*, *Rubus chamæmorus*
—*r. Noire*, *Rubus fruticosus*.
Ronchus, Snoring, Stertor.
Rond, Round—*r. Grand*, *Teres major*—*r. Petit*, *Teres minor*.
Ronflement, Snoring—*r. de Diable*, *Bruit de Diable*.
Roob, Rob.
Roof of the mouth, Palate.
Root, Radix—*r. of Scarcity*, *Beta hybrida*—*r. Yellow*, *Zanthoriza apiifolia*.
Roquette, *Brassica eruca*, Soda.
Rorella, *Drosera rotundifolia*.
Roriferus, Lymphatic.
Ros calabrinus, *Fraxinus ornus*—*r. Solis*, *Drosera rotundifolia*.
Rosa, *R. centifolia*—*r. Canina*, Hips—*r. Damascena*, *R. centifolia*—*r. Pallida*, *R. centifolia*—*r. Rubra*, *R. gallica*—*r. Saltans*, *Essera*—*r. Sylvestris*, *R. canina*.
Rosage, *Rhododendron chrysanthemum*.
Rosago, *Nerium oleander*.
Rosalia, *Scarlatina*.
Rose, *Erysipelas*—*r. Christmas*, *Helleborus niger*—*r. Damask*, *Rosa centifolia*—*r. Dog*, *Rosa canina*—*r. Dog*, Conserve or confection of, *Confectio rosæ caninæ*—*r. du chien*, *Rosa canina*—*r. Rash*, *Roseola*—*r. Red*, *Rosa gallica*—*r. White*, *Rosa alba*.
Rosca, *Rhodia*.
Rosemary, *Rosmarinus*—*r. Marsh*, *Statice limonium*.
Roseolæ, *Rubeola*.
Rosewood, *Rhodium lignum*.
Rosewort, *Rhodia*.
Rosier blanc, *Rosa alba*—*r. a Cent feuilles*, *R. centifolia*—*r. de Provins*, *Rosa gallica*.
Rosin, black, *Colophonia*—*r. Brown*, *Colophonia*—*r. White*, see *Pinus sylvestris*—*r. Yellow*, see *Pinus sylvestris*.
Rosio stomachi, *Cardialgia*.
Rosmarinus sylvestris, *Ledum sylvestre*.
Rossalia, *Scarlatina*.
Rossolio. See Spirit.
Restiformis processus, *Coracoid*.
Rostrum, *Bec*—*r. Porcinum*, *Acromion*.
Rose drop, *Gutta rosea*.
Rot, Eructation.
Rotacismus, *Grasseyement*.
Rotator, *Trochanter*.
Rotula, *Patella*, *Trochiscos*.
Rotundus, Round.
Rotule, *Patella*.
Roucou, *Terra Orleana*.
Rouge, *Colcothar*.
Rouge d'Angleterre, *Colcothar*.
Rougéole, *Rubeola*.
Rouillé, *Rubiginous*.
Rubber, Indian, *Caoutchouc*.
Rubéfiant, *Rubefacient*.
Rubinus verus, *Anthrax*.
Rubrine, *Hæmatine*.
Rubus trivialis, see *Rubus cæsius*—*r. Villosus*, see *Rubus fruticosus*.
Ructatio, Eructation.
Ructus, Eructation—*r. Acidus*, *Oxyregmia*.
Ruddle, hard, *Rubrica habilis*.
Rue, *Ruta*—*r. Common*, *Ruta*—*r. de Chèvre*, *Galega officinalis*—*r. Goat's*, *Galega officinalis*—*r. Goat's*, *Virginia*, *Galega Virginiana*—*r. des Murailles*, *Asplenium ruta muraria*—*r. des Prés*, *Thalictrum*—*r. Sauvage*, *Rust*.
Rust, Eructation.
Ruga, Wrinkle.
Rugine, *Raspatorium*.
Rugissement, *Rugitus*.
Rum. See Spirit.
Rumen, *Hypogastrium*.
Rumex aquaticus, *R. hydrolapathum*.
Rump, *Croupion*—*r. Bone*, *Coccyx*.
Rununcula, *Raspatorium*.
Runnet, *Rennet*.
Ruptorium, *Cauterium*—*r. Commune*, *Potassa fusa*.
Ruptura, *Ecerexis*, *Hernia*, *Laceration*—*r. Uteri*, *Uterus*, rupture of the.
Rupture, *Hernia*—*r. of the Groin*, *Bubonocèle*—*r. de la Matrice*, *Uterus*, rupture of the—*r. Wort*, *Herniaria glabra*.
Ruscus aculeatus, *Ruscus*.
Rush, sweet, *Juncus odoratus*.
Rusma. See Orpiment.
Ruta capraria, *Galega officinalis*—*r. Muraria*, *Asplenium ruta muraria*.
Rye, *Secale*—*r. Horned*, *Ergot*—*r. Spurred*, *Ergot*.
Rytidosis, *Rutidosis*.
Rytis, Wrinkle.

 Sanicula, Saxifraga granulata—s. Eboracensis, Pinguicula vulgaris—s. Europæa, Sanicula—s. Montana, Pinguicula vulgaris.
 Sanie, Sanies.
 Sanies, Ichor.
 Saniodes, Sanidodes.
 Sanitas, Cure.
 Sankira, Smilax China.
 Santé, Sanitas.
 Santal, Santalum album.
 Santalum rubrum, Pterocarpus santalinus.
 Santonicum, Artemisia santonicum.
 Sanve, Sinapis.
 Sapa. See Rob.
 Sapin commun, Pinus picea.
 Sapo ammoniacalis, Linimentum ammonia fortius—s. Ammonia oleaceus, Linimentum ammonia fortius—s. Calcarinus, Linimentum aquæ calcis—s. Kalicus, S. mollis—s. Niger, S. mollis—s. Vegetabilis, Pulvis gummosus alkalinus—s. Viridis, S. mollis.
 Saponaire, Saponaria.
 Saponariæ nucleæ, Sapindus saponaria.
 Sapor, Sapidity, Savour.
 Sapotier, Sapota.
 Sapotillier, Sapota.
 Saprophyra, Typhus gravior.
 Sapro, Putrid, Rancid.
 Sarapus. See Kyllosis.
 Sarcion, Caruncle.
 Sarcites, Anasarca—s. Flatuosus, Emphysema.
 Sarcohydrocele, Hydrosarcocele.
 Sarcodes, Carneous.
 Sarcologia, Myology.
 Sarcoma cercosis, see Cercosis—s. Epulis, Epulis—s. Mastoid, Mammary sarcoma—s. Medullare, see Encephaloid—s. Medullary, Hæmatodes fungus—s. Pulpy, Hæmatodes fungus—s. Scroti, Sarcocele.
 Sarcophagus, Carnivorous, Cathartic.
 Sarcophyia, Excrescence, Sarcoma.
 Sarcopte, Acarus.
 Sarcoptes scabiei. See Psora.
 Sarcosis, Sarcoma.
 Sarcostosis, Osteosarcoma.
 Sarcoticus, Incarnans.
 Sardiasis, Canine laugh, Risus sardonicus.
 Sardoniasis, Canine laugh, Risus sardonicus.
 Sare, Essera.
 Sarrasin, Polygonum fagopyrum.
 Sarriète, Satureia Hortensis—s. de Crète, Saturcia capitata.

Sarsa, Smilax sarsaparilla.
 Sarsaparilla, Smilax S.—s. False, Aralia nudicaulis.
 Sarx, Flesh, Pulp.
 Sassafras, Laurus sassafras—s. Swamp, Magnolia glauca.
 Sathe, Penis.
 Satiety, Plesmone.
 Satin, Lunaria rediviva.
 Satiriasis furens, Satyriasis.
 Satureia sativa, S. hortensis.
 Saturitas, Satiety.
 Saturni dulcedo, Plumbi superacetes.
 Saturnus, Plumbum.
 Satyrion, Orchis mascula.
 Sauce-alone, Alliaria.
 Sauce, green, Rumex scutatus.
 Sauge, Salvia—s. des Bois, Teucrium scordium—s. Hormin, Salvia horminum—s. de Jerusalem, Pulmonaria.
 Saule, Salix.
 Saumure, Muria.
 Saunders tree, Pterocarpus santalinus—s. Yellow, Santalum album.
 Saura, Lizard.
 Sauve-vie, Asplenium ruta muraria.
 Saveur, Savour.
 Savine, Juniperus sabina.
 Savinier, Juniperus sabina.
 Savon, Sapo—s. Ammoniacal, Linimentum ammoniæ fortius—s. de Cacao, Sapo coneus—s. Calcaire, Linimentum aquæ calcis—s. Dur, Sapo durus—s. Medicinal, Sapo medicinalis—s. Mou, Sapo mollis—s. Noir, Sapo mollis.
 Savonnier commun, Sapindus saponaria.
 Savonules, Saponules.
 Savory, ciliated, Satureia capitata—s. Summer, Satureia hortensis.
 Savoureux, Savoury.
 Saxifraga Anglica, Peucedanum silaus—s. Rubra, Spiræa filipendula—s. Vulgaris, Peucedanum silaus.
 Saxifrage, Burnet, Pimpinella saxifraga—s. Granulée, Saxifraga granulata—s. Meadow, Peucedanum silaus—s. White, Saxifraga granulata.
 Saxifragus, Lithontriptic.
 Scab, Eschar.
 Scabies, Psora—s. Capitis, Porrigo lupinosa, Porrigo scutulata—s. Capitis favosa, Porrigo favosa—s. Sicca, Psoriasis—s. Venerea contagiosa, Scherlievo.
 Scabieuse ordinaire, Scabiosa.
 Scabiosa arvensis, Scabiosa—s. Carduifolia, Echinops.
 Scabious, Erigeron Philadelphicum—s. Field, Scabiosa.
 Scabish, Oenothera biennis.
 Scala tympani, see Cochlea—s. Vestibuli, see Cochlea.
 Scale, dry, Psoriasis.
 Scalène antérieur, Scalenus anticus—s. Postérieur, Scalenus posticus.
 Scall, dry, Psoriasis—s. Milky, Porrigo lar-

valis—s. Honeycomb, Porrigo favosa—s. Running, Impetigo.
 Scalled head, Porrigo scutulata.
 Scalpellus, Bistouri.
 Scalprum, Raspatorium—s. Rasorium, Raspatorium.
 Scamma, Fossa.
 Scammoneé d'Alep, Convolvulus scammonia.
 Scammonium Syriacum, Convolvulus scammonia.
 Scammony, Convolvulus scammonia—s. of Montpellier, Cynanchum Monspeliacum.
 Scamnon Hippocratis, Bathron.
 Scandix cerefolium, Chærophylloides sativum—s. Odorata, Chærophylloides odoratum.
 Scaphia, Nates.
 Scaphion, Cranium, Papaver (capsule).
 Scapho-carpo-super-phalangeus pollicis, Abductor pollicis brevis.
 Scaphoide de la main, Os scaphoides manus—s. du Pied, Os scaphoides pedis.
 Scaphula, Navicularis fossa.
 Scapula, Humerus.
 Scapulo humeral, Teres major—s. Huméro-olecrani, Triceps extensor cubiti—s. Hyoidien, Omohyoideus—s. Radial, Biceps flexor cubiti—s. Trochiterien, grand. Infra-spinatus.
 Scapus, Penis.
 Scarabæolus hæmisphæricus, Coccus cacti.
 Scariola, Cichorium endivia, Lactuca scariola.
 Scariole, Cichorium endivia.
 Scarlatina miliaris, Rubeola—s. Pustulosa, Rubeola—s. Urticata, Urticaria.
 Scatacrasia, Scoracrasia.
 Sceloncus, Phlegmatia dolens.
 Sceletologia, Skeletology.
 Skeleton, Skeleton.
 Sceletum, Skeleton.
 Scelos, Leg.
 Scelotyrbe, Chorea, Porphyra nautica—s. Febrilis, see Subsultus tendinum.
 Sceparnos, Ascia.
 Sceptum, Penis.
 Schasis, Scarification.
 Schasterion, Fleam, Lancet.
 Scheba Arabum, Artemisia santonica.
 Schias, Neuralgia femoro-poplitea.
 Schindalesis, Schindylesis.
 Schindalmos, Schindylesis.
 Schinos, Scilla.
 Schneiderian membrane, Pituitary membrane.
 Schœnanthus, Juncus odoratus.
 Schola, School.
 Schousbæa coccinea, Cacoucia coccinea.
 Sciatic, Ischiatic.
 Sciatica, Neuralgia femoro-poplitea.
 Scie, Saw.
 Scientia hermetica, Alchymy.
 Scirrhe, Scirrhus.
 Scirrholepharuncus, Scleriasis.
 Scirrhocele, Scirrhus.

- Scirrhomia, Scirrhus.
 Scirrhus, Scirrhus.
 Scirrhus testiculi, Sarcocoele.
 Scissuræ, Rhagades.
Scissure de Glaser, Fissure glenoid—s. *de Santorini*, Santorini, fissure of.
 Sclarea, *Salvia sclarea*.
 Scleremia, Induration of the cellular tissue.
 Scleremus, Induration of the cellular tissue.
 Scleria, Scleriosis.
 Sclerodes, Sclerotic.
 Scleroma, Scleriosis.
 Scleronyxis, Scleriticonyx.
 Sclerophthalmia, Hordeolum.
 Scleros, Hard.
 Sclerosis, Scleriosis.
 Sclerotica ceratoides, Cornea.
 Scleroticus, Indurans.
Sclérotique, Sclerotic.
 Sclerotis, Sclerotic.
 Sclerotium clavus. See *Ergot*.
 Sclerus, Scirrhus.
 Sclerysmus, Scleriosis.
 Sclirus, Scirrhus.
 Sclopetoplagæ, Wound, gunshot.
 Scodinema, Pandiculation.
 Scoleciasis, Helminthiasis.
 Scoliosis. See *Hump*.
 Scolopendria, *Asplenium ceterach*.
 Scolopendrium officinarum, *Asplenium scolopendrium*.
 Scolymus sativus, *Cynara scolymus*.
 Scopa regia, *Ruscus*.

Tenue et pellucidum*, *S. lucidum*—*s. Thoracis*, Mediastinum—*s. Transverse*, Tentorium—*s. Transversum*, Diaphragm—*s. Vestibuli nervoso-membranaceum*, see Labyrinth.
 Serapinon, *Sagapenum*.
 Serapium, Syrup.
 Serbet, Scherbet.
 Sericum anglicum. See *Sparadrapum adhæsivum*.
Serieux, Serious.
 Seris, *Cichorium intybus*.
 Sermountain, *Laserpitium album*.
 Serosity, Serum.
 Serous membranes, Membranes, serous.
 Serpentaria, *Aristolochia serpentaria*—*s. Minor*, *Arum maculatum*—*s. Gallorum*, *Arum dracunculus*—*s. Hispanica*, *Scorzonera*.
Serpentariæ Braziliensis radix, *Caincæ radix*.
 Serpentine, Ophites.
 Serpentinus, Ophites.
 Serpigo, Herpes circinatus, Lichen.
Serpolet, *Thymus serpyllum*.
 Serpyllum, *Thymus serpyllum*—*s. Citratum*, see *Thymus serpyllum*.
 Serra, Saw.
 Serratus anticus minor, Pectoralis minor—*s. Major*, Serratus magnus.
 Sertula campana, *Trifolium melilotus*.
Serum du lait, *S. lactis*—*s. du Sang*, *S. of the blood*.
 Service, mountain, *Sorbus acuparia*—*s. Tree*, *Sorbus domestica*.
Serviette en carré, *Couvrechef*.
 Seseli, *Laserpitium siler*—*s. Ægopodium*, *Ligusticum podagraria*—*s. Creticum*, *Tordylium officinale*—*s. des Prés*, *Peucedanum silaus*.
 Sesquiuncia, Sescuncia.
 Seto, Setaceum.
 Seton, Setaceum.
 Sevadilla, *Veratrum sabadilla*.
 Sevatio, Steatoma.
Sévrage, Weaning.
 Sevum, Pinguedo.
 Sexual intercourse, Coition—*s. Organs*, Genital organs.
 Seydschütz water, Sedlitz water.
 Shallot, Echalotte.
 Sheath, Vagina.
 Shell liquid. See *Calcis murias*.
 Sherbet, Scherbet—*s. Orange*, see *Syrupus aurantii*.
 Sherry, Sack, see Wine.
 Shingles, Herpes zoster.

Shoulderblade, Scapula.
 Show. See Parturition.
 Show-choo. See Spirit.
 Siagon, Maxillary bone.
 Sialachus, Salivation.
 Sialisma, Salivation.
 Sialon, Saliva.
 Sialosyringes, Salivary fistulæ.
 Sibare, Phrenitis.
 Sibilus, Tinnitus aurium.
 Siccantia, Desiccativa.
Siccatis, Siccantia.
 Siccatio, Drying.
 Sicchasia, Disgust.
 Sickness, falling, Epilepsy—s. of the Stomach, Vomiting.
 Siclium, Sicilicum.
 Sicua, Cupping glass.
 Sicula, Beta, Penis.
 Sicyedon, Cauledon.
 Side, pain in the, Pleurodynia.
 Sideratio, Apoplexy, Phrenitis—s. Ossis, Spina ventosa.
 Sideration, Astrobolismos.
 Siderion, Ferramentum.
 Sideritis, Teucrium chamæpitys.
 Sideros, Ferrum.
 Sideroxylon, Chrysophyllum cainito.
 Sielismos, Salivation.
 Sielon, Saliva.
 Sige, Taciturnity.
 Sigh, Suspirium.
 Sigillum salamonis, Convallaria polygonatum—s. Virginitatis, Hymen.
 Sigmatoïd, Sigmoid.
Signes avantcoureurs, Precursory signs—s. *Précurseurs*, Precursory signs.
 Sight, Vision—s. Askew, Dysopia lateralis—s. False, Metamorphopsia, Pseudoblepsia—s. Feebleness of, Amblyopia.
 Signum. See Parturition.
 Siler montanum, Laserpitium siler.
 Siliqua Arabica, Tamarindus—s. Dulcis, Cetrarium siliqua.
 Siliquastrum Plinii, Capsicum annuum.
 Silk, Sericum—s. Weed, common, Asclepias Syriaca—s. Worm, see Sericum.
 Sillon, Sulcus—s. *Horizontal de la veine ombilicale*, see Liver—s. *Transversale*, see Liver—s. *de la Veine cave inférieure*, see Liver—s. *de la Veine porte*, see Liver.
 Silphium, Laserpitium.
 Silver, Argentum—s. Nitrate of, Argenti nitrates.
 Silybum, Carduus marianus.
 Simarouba, Quassia simarouba—s. *Faux*, Malpighia mourella.
 Simitium, Plumbi subcarbonas.
 Simplists. See Simples.
 Simus, Camus.
 Sinapis, Bole Armenian.
 Sinew, Tendon.
Sinueux, Sinuous.
 Sinuositas, Sinus.
 Sinus arteriosus, S. pulmonalis—s. *Cavern-eux*, Cavernous sinus—s. Cavernosus, Ca-

vernous sinus—s. Cerebri, Ventricles of the brain—s. *Choroidien*, S. quartus—s. Circularis, S. coronarius—s. *Coronaire du cœur*, see Cardiac veins—s. Coxæ, see Cotyloid—s. *Droit*, S. quartus—s. Falciformis inferior, S. longitudinal, inferior—s. Falciformis superior, S. longitudinal, superior—s. Fourth, Torcular herophili—s. Genæ pituitarius, Antrum of Highmore—s. Lacrymalis, Lacrymal sac—s. *Latéraux*, Sinuses, lateral—s. Magni, Sinuses, lateral—s. Maxillary, Antrum of Highmore—s. *Médian*, S. Longitudinal superior—s. Median, see Semicircular canals—s. Muliebris, Vagina—s. Occipitalis anterior, Sinus transversus—s. Perpendicularis, S. Quartus—s. Pituitarii frontis, Frontal sinuses—s. Polymorphus, Cavernous sinus—s. Portarum, see Liver—s. Pudoris, Vagina—s. of the Pulmonary veins, Auricle, left—s. Renum, Pelvis of the kidney—s. Rhomboidal, Calamus scriptorius—s. of the Septum lucidum, Ventricle fifth—s. Sinister cordis, S. pulmonalis—s. Sphenoidalis, Cavernous sinus—s. Straight, S. quartus—s. Superciliares, Frontal sinuses—s. Transversi, Sinuses, lateral—s. Triangularis, S. longitudinal superior—s. Utriculosus, see Semicircular canals—s. *des Vaisseaux seminifères*, Corpus Highmori—s. of the Vena cava, Auricles, right—s. Venarum cavarum, S. dexter cordis—s. Venarum pulmonalium, S. pulmonalis—s. Venosus, S. dexter cordis.
 Sinuses of the larynx, Ventricles of the larynx.
 Siphilis, Syphilis.
 Siphita parva, Chorea.
 Siphon urinæ, Diabetes.
 Sira, Orpiment.
 Siriasis, *Coup de Soleil*, Insolation, Phrenitis.
 Sirium myrtifolium, Santalum album.
 Sirius, Canicula.
Sirop de Capillaire, See Adiantum capillus veneris—s. *de Coralline*, see Corallina Corsicana.
 Sirup, Syrup.
 Sisymbrium menthrostrum, Mentha aquatica.
 Siticulosus. See Alterative.
 Sitis, Thirst—s. Morbosa, Polydipsia.
 Sitos, Aliment.
 Sivvens, Sibbens.
 Skeletia, Emaciation.
 Skevisch, Erigeron Philadelphicum.
 Skin, Cutis.
Skirse, Scirrhus.
 Skue-sight, Dysopia lateralis.
 Skull cap, Scutellaria galericulata.
 Skunk cabbage, Dracontium foetidum.
 Slate, Irish, Hibernicus lapis.
 Slaters, Onisci aselli.
 Slatkaia trava. See Spirit.
 Sleeplessness, Insomnia.
 Sleepwalking, Somnambulism.
 Sloe tree, Prunus spinosa.
 Slough, Eschar.
 Slug, Limax.

Slumber, Somnolency.
 Smallage, *Apium graveolens*.
 Small-pox, *Variola*—s. Modified, Varioloid.
 Smectica, Detergents.
 Smectis, *Cimolia terra*.
 Smectris, *Cimolia terra*.
 Smegma, Sapo—s. Articulare, Synovia.
 Smell, sense of, Olfaction.
 Smelling, Olfaction.
 Smilax, *Taxus baccata*—s. *Aspera Chinensis*,
S. China—s. *Aspera Peruviana*, *S. sarsaparilla*—s. *Indica spinosa*, *S. pseudo-China*.
 Smile, Knife.
 Smileon, Scalpel.
 Smyrna, Myrrha.
 Smyrnismos, Embalming.
 Snail, *Limax*.
 Snail's shell, *Cochlea*.
 Snakeroot, black, *Actæa racemosa*—s. But-
 ton, *Eryngium aquaticum*—s. Canada,
Asarum Canadense—s. *Virginiana*, *Aristolochia serpentaria*.
 Snakeweed, *Polygonum bistorta*.
 Sneezewort, *Achillea ptarmica*.
 Snuff, cephalic, *Pulvis asari compositus*.
 Soap, Sapo—s. Berries, *Sapindus saponaria*—
 s. Castile, *Sapo durus*—s. of the Cocoa-nut
 oil, *Sapo coconeus*—s. Common or soft,

Spiderwort, Liliago.

Spignel, *Æthusa meum*.

Spikenard, *Conyza squarrosa*, *Nardus Indica*.

Spilanthus, balmleaved, *Spilanthus acmella*.

Spilosis, Epichrosis—s. Ephelis, Ephelides—s. Poliosis, Poliosis.

Spina, Penis—s. Acida, *Oxycantha Galeni*—s. *Ægyptiaca*, see *Acaciæ gummi*—s. Alba, *Carduus marianus*, *Mespilus oxyacantha*—s. Bifida, *Hydrorachis*—s. Cervina, *Rhamnus*—s. Dorsi, Vertebral column—s. Ferrea, Pin—s. *Helmontii*, *Aiguillon*—s.

Hirci, *Astragalus verus*—s. *Infectoria*, *Rhamnus*—s. *Ventosa*, *Hydrarthrus*, *Molities ossium*—s. *Vertebralis*, Vertebral column.

Spinach, Spinacia.

Spinæ ventositas, Spina ventosa.

Spinage, Spinacia.

Spinal cord, *Medulla spinalis*—s. Prolongation, *Medulla spinalis*.

Spinales colli minores, *Interspinales colli*—s. et *Transversales lumborum*, *Transversalis dorsi*.

Spinalis cervicis, Semi-spinalis colli—s. Colli, Semi-spinalis colli.

Spinati, *Interspinales colli*.

Spine, Vertebral column—s. Curvature of the, *Gibbositas*.

Spini-axoido-occipitalis, *Rectus capitis posticus major*—s. *Axoido-tracheli-atloidien*, *Obliquus inferior capitis*.

Spinitis, Myelitis.

Spino-dorsitis, Myelitis.

Spinola, *Hydrorachis*.

Spiracula, Pores of the skin.

Spiræa trifoliata, *Gallenia trifoliata*.

Spiramentum animæ, Pulmo.

Spiratio, Respiration.

Spirit of aniseed, *Spiritus anisi*—s. Bathing, Freeman's, see *Linimentum saponis compos.*—s. Bathing, Jackson's, see *Linimentum saponis compos.*—s. Bezoardic, of *Bussius*, see *Bussii spiritus Bezoarticus*—s. Bone, *Liquor volatilis cornu cervi*—s. of *Burrhus*, *Burrhi spiritus matricalis*—s. of *Carraway*, *Spiritus carui*—s. of Ether, aromatic, *Spiritus ætheris aromaticus*—s. Fuming, of *Beguin*, *Ammonia sulphuretum*—s. Fuming, of *Boyle*, *Ammonia sulphuretum*—s. of *Hartshorn*, *Liquor cornu cervi*—s. of *Horseradish*, compound, *Spiritus armoraciæ compositus*—s. of *Lavender*, *Spiritus lavandulæ*—s. of *Lavender*, compound, *Spiritus lavandulæ compositus*—s. of *Mindererus*, *Liquor ammonia acetatis*—s. of *Nitre*, sweet, *Spiritus ætheris nitrici*—s. of *Nitric ether*, *Spiritus ætheris nitrici*—s. of *Pennyroyal*, *Spiritus pulegii*—s. of *Peppermint*, *Spiritus menthæ piperitæ*—s. Proof, *Spiritus tenuior*—s. of *Salt*, *Muriaticum acidum*—s. of *Scurvygrass*, golden, see *Spiritus armoraciæ compositus*—s. of *Spearmint*, *Spiritus menthæ viridis*—s. of *Sulphuric ether*, *Spiritus ætheris sulphurici*—s. of *Turpentine*, *Oleum terebinthinæ rectificatum*—s. *Verdigris*, *Aceticum acidum*—s. of *Wine* and *camphor*, *Spiritus camphoræ*.

Spirits, animal, Nervous fluid.

Spiritus, Breath, Respiration—s. *Æthereus nitrosus*, *Spiritus ætheris nitrici*—s. *Æthereus vitriolici*, *Spiritus ætheris sulphurici*—s. *Ætheris vitriolici compositus*, *Spiritus ætheris sulphurici comp.*—s. *Ammonia compositus*, *Spiritus aromaticus*—s. *Anthos*, *Spiritus rosmarini*—s. *Beguinis*, *Ammonia sulphuretum*—s. *Cornu cervi*, *Liquor c. c.*—s. *Fumans Beguini*, *Ammo-*

- niæ sulphuretum—s. Lauri cinnamomi, Spiritus cinnamomi—s. Lumbricorum, Liquor volatilis cornu cervi—s. Menthæ sativæ, Spiritus menthæ viridis—s. Millepedarum, Liquor cornu cervi—s. Myrti pimentæ, Spiritus pimentæ—s. Nitri vulgaris, see Nitric acid—s. Nitri acidus, Nitric acid—s. Nitri dulcis, Spiritus ætheris nitrici—s. Nitri duplex, Nitric acid—s. Nitri fumans, Nitric acid—s. - Sputamen, Sputum.
- Sputatio, Exspuition.
- Sputum cruentum, Hæmoptysis—s. Sanguinis, Hæmoptysis.
- Squalling, Vagitus.
- Squama, Scale, Table.
- Squamæ, Scaly diseases.
- Squamaria, Plumbago Europæa.
- Squameux, Squamous.
- Squelette, Skeleton.
- Squelettologie, Skeletology.
- Squill, Scilla—s. Vinegar of, Acetum scillæ.
- Squilla, Scilla.
- Squinancie, Cynanche, Cynanche tonsillaris.
- Squinancy, common, Cynanche tonsillaris.
- Squinanthia, Cynanche.
- Squinanthus, Juncus odoratus.
- Squine, Smilax China.
- Squinsy, Cynanche tonsillaris.
- Squinting, Strabismus.
- Squirre, Scirrhus.
- Squirrhus, Scirrhus.
- Stachys foetida, Galeopsis.
- Stacte, Myrrha.
- Stade, Stage.
- Stadium, Stage.
- Stag's pizzle. See Cervus.
- Stagma, Gutta.
- Stalagma, Stagma.
- Stalagmitis cambogioides. See Cambogia.
- Stalagmos, Distillation.
- Stammering, Balbuties.
- Stangos, Tin.
- Stanni murias, Tin, muriate of—s. Oxyduli murias, Tin, muriate of.
- Stanniolium, Tinfoil.
- Stannum, Tin—s. Foliatum, Tinfoil—s. Indicum, Zincum.
- Stapédien, Stapedius.
- Staphis, Delphinium staphisagria.
- Staphisagria, Delphinium staphisagria.

Staphylagra, Staphylepartes.
 Staphyle, Uvula, see *Vitis vinifera*.
 Staphylino-pharyngeus, Palato-pharyngeus.
 Staphylinus externus, Circumflexus.
 Staphylitis, Uvulitis.
 Staphylodialysis, Cionis.
 Staphylosis, Staphyloma.
 Star-apple, broad-leaved, *Chrysophyllum cainito*—s. Grass, *Aletris farinosa*—s. Knapweed, *Centaurea calcitrapa*—s. Wort, *Aletris farinosa*—s. Wort, golden, *Bubonium*.
 Starch, *Amylum*—s. Blue, Smalt—s. Iodide of, see Iodine—s. Potato, see *Solanum tuberosum*.
 Stasis, Station.
 Status, Acme—s. Erethicus, Nervous diathesis—s. Nervosus, Nervous diathesis—s. Sthenicus, Sthenia—s. Verminosus, Helminthiasis.
 Stavesacre, *Delphinium staphisagria*.
 Stear, Pinguedo, Sebum.
 Steatites, Polysarcia.
 Steel, Chalybs.
 Stegnotica, Astringents.
 Steirosis, Sterilitas.
 Stelengis, Stridor dentium.
 Stella terræ, *Plantago coronopus*.
 Stellata rupina, *Centaurea calcitrapa*.
 Stelochitis, Osteocolla.
 Stenagmus, Suspirium.
 Stenaxis, Suspirium.
 Stenia, Sthenia.
 Stenicus, Active.
 Stenobregmate. See *Cranium*.
 Stenocardia, Angina pectoris.
 Stenochoria, Angustia.
 Stephane, Crown.
 Stera, Uterus.
 Stercoraire, Stercoraceous.
 Stercus, Excrement, Fimus—s. Caninum album, Album græcum—s. Diaboli, Asa-fœtida—s. Equi non castrati, Fimus—s. Lacertæ, Crocodilia.
 Stereos, Solid.
 Sternalgia, Angina pectoris.
 Sterno-clavio-mastoidien, Sterno-cleido-mastoideus—s. Cleido-hyoideus, Sterno-hyoideus—s. Costal, Triangularis sterni—s. Costo-clavio-humeral, Pectoralis major—s. Humeral, Pectoralis major—s. Mastoidien, Sterno-cleido-mastoideus—s. Pubien, Rectus abdominis.
 Sternodynia synoptica et palpitans, Angina pectoris.
 Sternutamentoria, *Achillea ptarmica*.
 Sternutamentum, Sneezing.
 Sternutatio, Sneezing.
 Sternutatoire, Sternutatory.
 Sternutatorium, Errhine.
 Sterteur, Stertor.
 Stertor, Snoring.
 Stethodesmum, Corset.
 Stethoxopia. See Auscultation.
 Stew, Stove.
 Sthenopyra, Synocha.
 Stibi, Antimonium.

Stibialis, Antimonial.
 Stibiatus tartris lixivie, Antimonium tartarizatum.
 Stibii, Butyrum, Antimonium muriatum—s. Deuto-murias sublimatus, Antimonium muriatum—s. et potassæ deuto-tartras, Antimonium tartarizatum—s. Hydrosulphuretum rubrum, Antimonii sulphuretum rubrum—s. Oxidum acido muriatico oxygenato paratum, Algaroth—s. Oxidum album mediante nitro confectum, Antimonium diaphoreticum—s. Oxidum præcipitando paratum, Algaroth—s. Oxodes album, Antimonium diaphoreticum—s. Oxodes sulphuratum, Antimonii sulphuretum præcipitatum—s. Oxydi sulfurati hydrosulphuretum luteum, Antimonii sulphuretum præcipitatum—s. Oxydulati sulphuretum, Antimonii sulphuretum præcipitatum—s. Oxydulum vitreatum, Antimonii vitrum—s. Oxydum semivitreum, Antimonii vitrum—s. Oxydum sulphuratum, Oxydum stibii sulphuratum—s. Subhydrosulphas, Antimonii sulphuretum rubrum—s. Suburias præcipitando paratum, Algaroth—s. Sulphurati hydrosulphuretum rubrum, Antimonii sulphuretum rubrum—s. Sulphuretum nigrum, Antimonium—s. Vitrum, Antimonii vitrum.
 Stibiosum hydrosulphuretum cum sulphure, Antimonii sulphuretum præcipitatum—s. Oxidum, Antimonium diaphoreticum.
 Stibium, Antimonium.
 Stiff joint, muscular, Contractura.
 Stigmata. See *Nævus*.
 Stilboma, Cosmetic.
 Stilla, Gutta.
 Stillicidium narium, Coryza.
 Stimmi, Antimonium.
 Stipatio, Stegnosis.
 Stirosis, Sterilitas.
 Stitch, Pleurodynia—s. Common, Suture, common—s. Royal, Suture, common.
 Stizolobium, *Dolichos pruriens*.
 Stlengis, Stridor dentium.
 Stocheion, Element.
 Stoma, Mouth.
 Stomacace, *Porphyra nautica*—s. Gangrænosum, Cancer aquaticus—s. Universalis, *Purpura hæmorrhagica*.
 Stomacal, Stomachal.
 Stomacalgia, Cardialgia.
 Stomach disease, Limosis.
 Stomachique, Stomachal.
 Stomachus, Cardia.
 Stomalgia, Stomacace.
 Stomatonecrosis, Stomacace.
 Stomatoma, Stomacace.
 Stomatophyma glandulosum, Stomatopanus.
 Stomatorrhagia gingivarum, Ulorrhagia.
 Stomomanicon, *Platysma myoides*.
 Stomorrhagia, Stomatorrhagia.
 Stone in the bladder, Calculi, vesical—s. Binder, Osteocolla—s. Crop, Sedum—s. Pock, Acne.
 Storax, Styrax—s. Liquida, Liquidambar styraciflua.

- Strabi. See Strabismus.
 Strabilismos, Strabismus.
 Strabositas, Strabismus.
 Straining, Nisus.
 Stramoine, Datura stramonium.
 Stramonium, Datura stramonium—s. Majus album, Datura stramonium—s. Spinosum, Datura stramonium.
 Strangulatio, Orthopnœa—s. Uterina, Hysteria.
 Stranguria, Enuresis.
 Strangury, Dysuria.
 Stratiotes, Achillea millefolium.
 Strawberry, Fragaria—s. Shrubby, Rubus arcticus.
 Strebli. See Strabismus.
 Stemma, Luxation, Sprain.
 Strepitus aurium, Tinnitus aurium.
 Stretching, Pandiculation.
 Striæ corneæ, Tenia semicircularis—s. Semilunares, Tænia semicircularis.
 Striatus, Cannelé, Grooved.
 Stribiligo, Efflorescence.
 Stridor dentium, Brygmus.
 Stroemia, Cadaba.
 Strombulcus, Forceps (bullet).
 Strongle, Strongylus.
 Strongylus, Teres.
 Strophos, Tormina.
 Strophulus sylvestris, Ignis sylvaticus—s. Volaticus, Ignis sylvaticus.
 Struma, Bronchocele, Scrofula.
 Struthium, Saponaria.
 Strychnia, Strychnina.
 Strychnos, Solanum dulcamara.
 Stryphnos, Acerb.
 Studium inane, Aphelxia otiosa.
 Study, brown, Aphelxia otiosa.
 Stultitia, Fatuitas.
 Stupe, Stupa.
 Stupefacientia, Narcotics.
 Stupéfactifs, Narcotics.
 Stupefactio, Narcosis.
 Stupéfians, Narcotics.
 Stupcion, Stupa.
 Stupeur, Stupor.
 Stupha, Stove.
 Stupia, Tin.
 Stupor, Narcosis—s. Mentis, Fatuitas.
 Stuppa, Stupa.
 Styan, Hordeolum.
 Stye, Hordeolum.
 Stylet, Specillum.
 Styloform, Styloid.
 Stylo-ceratoides, Stylo-hyoideus—s. Ceratohyoideus, Stylo-hyoideus—s. Thyropharyngien, Stylo-pharyngeus.
 Stylus, Sound, Specillum.
 Stymatorrhagia, Stimatosis.
 Stymatosis, Stimatosis.
 Stypsis, Astriction, Constipation.
 Stypteria, Alumen.
 Styptic, Eaton's, see Ferrum tartarizatum—s. Helvetius's, see Ferrum tartarizatum.
 Styptics, Astringents.
 Styrax alba, see Myroxylon pomiferum—s. Benzoin, see Benjamin—s. Liquida, Liquidambar styraciflua.
 Subboras natricum, Borax.
 Subcartilagineum, Hypochondre.
 Subelavius, Subelavian muscle.
 Suberuræi. See Cruræus.
 Subdelirium, Typhomania.
 Subdititia, Subdita.
 Subductio, Dejection.
 Subgrondation, Depression.
 Subhumeratio, Catomismos.
 Sublimamentum, Enæorema.
 Sublimate, corrosive, Hydrargyri oxymurias.
 Sublimatus corrosivus, Hydrargyri oxymurias.
 Sublimé, Sublimate—s. Corrosif, Hydrargyri oxymurias.
 Subluxatio, Sprain.
 Submissio, Remission—s. Cordis, Systole.
 Submurias ammoniaco-hydrargyricus, Hydrargyrum præcipitatum.
 Subpoplitæus, Poplitæus, muscle.
 Subpubio femoralis, Adductor brevis—s. Prostaticus, Compressor prostatae.
 Subsultio, Palpitation.
 Substantia spongiosa urethræ, Corpus spongiosum urethræ—s. Vitrea dentium, Enamel of the teeth.
 Substillum, Stillicidium.
 Subsurditas, Deafness.
 Subvola, Hypothenar.
 Suc gastrique, Gastric juice—s. Medullaire, Marrow.
 Succhar, Saccharum.
 Succin, Succinum.
 Succini resina, Musk, artificial.
 Succinum cinereum, Ambergris—s. Griseum, Ambergris.
 Succion, Sucking.
 Succisa, Scabiosa succisa.
 Succolata, Chocolate.
 Succory, wild, Cichorium intybus.
 Succubus, Incubus.
 Succus acaciæ germanicæ inspissatus, see Prunus spinosa—s. Acaciæ nostratis, see Prunus spinosa—s. Cicutæ spissatus, Extractum conii—s. Cyrenaicus, Lascerpitium—s. Gastricus, Gastric juice—s. Japonicus, Catechu—s. Nervus, Nervous fluid—s. Nutritius, Chyle—s. Spissatus aconiti napelli, Extractum aconiti—s. Spissatus atropæ belladonnæ, Extractum belladonnæ—s. Spissatus conii maculati, Extractum cicutæ—s. Spissatus hyoscyami nigri, Extractum hyoscyami—s. Spissatus lactucæ sativæ, Extractum lactucæ.
 Succussion, Ballottement.
 Suchor, Saccharum.
 Suckling, Lactation.
 Sucre, Saccharum—s. Candi, Saccharum candidum—s. de Saturne, Plumbi superacetas.
 Suctio, Exsuctio, Sucking.
 Suctus, Sucking.
 Sudamina, Desudatio, Echauboulures, Lichen tropicus.
 Sudarium, Achicolum, Vaporarium.
 Sudatio, Ephidrosis.
 Sudatorium, Achicolum, Vaporarium.

Sudor sanguineus, S. cruentus.

Suet, Sevum.

Suette, Sudor anglicus—*s. de Picardie*, Sudor picardicus.

Sueur, Sudor—*s. Anglaise*, Sudor Anglicus—*s. d'Expression*, Expression, sweat of—*s. de Sang*, Diapedesis.

Suffimentum, Fumigation.

Suffitus, Fumigation, Suffimentum.

Suffocatio, Orthopnoea—*s. Hysterica*, Hysteria, Strangulation, uterine—*s. Stridula*, Cynanche trachealis—*s. Uterina*, Strangulation, uterine.

Suffumigatio, Suffimentum.

Suffusio, Pseudoblepsia—*s. Auriginosa*, Icterus—*s. Multiplicans*, see Diplopia—*s. Oculi*, Cataract—*s. Oculorum*, Metamorphopsia.

Sugar, Saccharum—*s. Barley*, Penidium—*s. Candy*, Saccharum candidum—*s. Cane*, see Saccharum—*s. of Lead*, Plumbi superaceas.

Sugars, various, see Saccharum.

Sugillations. See Ecchymoma.

Suie, Fuligo.

Suif, Sevum.

Suites de couches, Lochia.

Sulcatus, *Cannelé*, Grooved.

Sulcus, Groove—*s. Antero-posterior jecoris*, see Liver—*s. Transversalis*, see Liver—*s. Umbilicalis*, See Liver.

Sulfate d'ammoniaque, Ammoniae sulphas.

Sulfure de carbon, Carbonis sulphuretum.

Sulphas ammoniacæ cupratus, Cuprum ammoniatum—*s. Kalico-aluminicum*, Alumen—*s. Natricus*, Soda, sulphate of—*s. Zincicum*, Zinci sulphas.

Sulphur antimoniatum, Antimonii sulphuretum præcipitatum—*s. Carburet of*, Carbonis sulphuretum—*s. Iodatum*, see Iodine—*s. Iodide of*, see Iodine—*s. Liver of*, Potassæ sulphuretum—*s. Vegetable*, Lycopodium—*s. Wort*, Peucedanum.

Sulphuretum ammoniacæ, Ammoniae sulphuretum—*s. Ammoniae hydrogenatum*, Liquor fumans Boylii—*s. Kalicum*, Potassæ sulphuretum—*s. Lixiviæ*, Potassæ sulphuretum.

Sumac des Corroyeurs, Rhus coriaria—*s. Vénéneux*, Rhus toxicodendron.

Sumach, Rhus coriaria.

Sumen, Hypogastrium.

Summer diseases, see Estival—*s. Rash*, Lichen tropicus.

Sunburn, Ephelides—*s. Dew*, Drosera Rotundifolia—*s. Pain*, see Hemicrania—*s. Stroke*, Coup de soleil.

Superbus, Rectus superior oculi.

Superciliaris, Corrugator supercilii.

Superevacuatio, Hypercrisis.

Superfœcundatio, Superfœtation.

Supergeminalis, Epididymis.

Supergenualis, Patella.

Superhumale, Epomis.

Superimprægnatio, Superfœtation.

Superior auris, Attollens aurem.

Superior rotundus clitoridis, Ischio-cavernous.

Superlabia, Clitoris.

Superoxalas kalicum, Potass, oxalate of.

Superpurgatio, Hypercatharsis.

Superscapularis, Supraspinatus—*s. Inferior*, Infra spinatus.

Supinateur court ou petit, Supinator radii brevis—*s. Grand ou long*, Supinator radii longus.

Supinator brevis seu minor, Supinator radii brevis—*s. Longus seu major*, S. radii longus.

Supposition de part, Pregnancy, pretended.

Suppositorium uterinum, Pessary.

Suppressio lotii, Ischuria.

Suppression de part. See Parturition.

Suppurans, Suppurative.

Suprascapularis, Supraspinatus.

Suprasemiorbicularis, Orbicularis oris.

Sura, Fibula.

Surcilier, Corrugator supercilii, Superciliary.

Surcostaux, Supracostalis.

Surditas, Cophosis, Deafness.

Surdité, Cophosis, Deafness.

Sureau commun, Sambucus.

Surelle, Oxalis acetosella.

Surépineux, Supraspinatus.

Surfeit, Colica crapulosa.

Surgeon-dentist, Dentist.

Surgery, anaplastic, Morioplastice—*s. Auto-plastice*, Morioplastice—*s. Dental*, Dentistry.

Surgien, Surgeon.

Surinamine. See Geoffræa Surinamensis.

Surpeau, Epidermis.

Surrecta alba, Ranunculus flammula.

Sursels. See Salt.

Surtouts ligamenteux de la Colonne vertébrale, Vertebral ligaments.

Survie, Survivorship.

Sus-acromio-huméral, Deltoid—*s. Epinéux*, Supraspinatus—*s. Maxillo-labial*, Levator anguli oris—*s. Maxillo-labial, grand*, Levator labii superioris alæque nasi—*s. Maxillo-labial, moyen*, Levator labii superioris proprius—*s. Maxillo-nasal*, Compressor naris—*s. Optico-spheno-scleroticien*, Rectus superior oculi—*s. Vitrum, Hypoclepticum, Separatorium—*v. Sublimatorium*, Aludel.

Vitta, Bandelette, a Caul.

Viverra civetta. See Civetta.

Voie, Way.

Voice, bleating, Egophony—*v. Goat's*, Egophony.

Voies digestives, Ways, digestive—*v. Lacrymales*, Lachrymal passages—*v. Premieres*, Ways, digestive—*v. Secondes*, Ways,

second—*v. Urinaires*, Urinary passages.
Voile du Palais, Velum pendulum palati—*v. Medullaire inférieure*, Velum medullare inferius—*v. Medullaire supérieure*, Valvula Vieussenii.
Voix, Voice—*v. Articulée*, Voice, articulated—*v. Bronchique*, Resonance.
Vola, Palm.
Volatica, Lichen.
Volsella, Acanthobolos, Forceps, Madisterium—*v. Patini*, *Valet à Patin*.
Volvulus, Ileus.
Vomendi conamen inane, Vomiturition.
Vomique, Vomica.
Vomiquier, Strychnos nux vomica.
Vomissement, Vomiting—*v. de Sang*, Hæmatemesis.
Vomit, black, Fever, yellow—*v. Black*, Melæna.
Vomitif, Emetic.
Vomitine, Emetine.
Vomiting of blood, Hæmatemesis.
Vomito negro, Fever, yellow—*v. Prieto*, Fever, yellow.
Vomitorium, Emetic.
Vomitus, Vomiting—*v. Cruentus*, Hæmatemesis—*v. Pituitosus*, Blennemesis—*v. Sanguinis*, Hæmatemesis.
Voûte, Vault—*v. Medullaire*, Corpus callosum—*v. à Trois piliers*, Fornix.
Vox, Voice—*v. Convulsiva*, *Voix convulsive*—*v. Rauca*, Raucedo.
Vue, Vision—*v. Courte*, Myopia—*v. Diurne*, Hemeralopia—*v. Faible*, Amblyopia—*v. Longue*, Presbytia—*v. Bouche*, Strabismus—*v. Nocturne*, Nyctalopia.
Vulnérable, Vulnerary—*v. Suisse*, see Fall-tranck.
Vulnerarius, Traumatic.
Vulnus, Wound—*v. Laceratum*, see Laceration—*v. Simplex*, Cut.
Vultus, Face.
Vulva, Uterus. See Vulva.
Vulvaire, Chenopodium vulvaria.
Vulvaria, Chenopodium vulvaria.
Vulve, Vulva.
Vulvo-uterine canal, Vagina.

W

Wad, Graphites.
Wake-robin, Arum maculatum.
Wallflower, Cheiranthus cheiri.
Wallrue, Asplenium ruta muraria.
Walnut, Juglans regia—*w. White*, Juglans cinerea.
Ward's essence for the headache, Linimentum camphoræ compositum.
Wart, Verruca—*w. Corneous*, Cornu.
Wash, black, see Hydrargyri submuriæ—*w. Preventive*, Lotion, Hannay's—*w. White*, Liqueur plumbi subacetatis dilutus.
Water of Aix la Chapelle, see Aix-la-Chapelle—*w. Allflower*, Urine, cows'—*w. Barley*, Decoctum Hordei—*w.*

Brash, Pyrosis—*w. Carui*, strong, Spiritus carui—*w. Cinnamon*, strong, Spiritus cinnamomi—*w. Epileptic of Langius*, Langii aqua epileptica—*w. Flag*, yellow, Iris pseudacorus—*w. Holy*, Water, distilled—*w. Honey*, see Mel—*w. in the Head*, Hydrocephalus—*w. Hungary*, Spiritus rosmarini—*w. Jags*, see Varicella—*w. Laurel*, see Prunus lauro-cerasus—*w. Lavender*, Spiritus lavandulæ—*w. Lime*, Liqueur calcis—*w. Lime*, compound, Liqueur calcis compositus—*w. Nutmeg*, Spiritus myristicæ—*w. Parsnep*, creeping, Sium—*w. Pennyroyal*, spirituous, Spiritus Palegii—*w. Qualm*, Pyrosis—*w. Seyd'schütz*, Sedlitz water—*w. Styptic*, Sydenham's, Solutio sulphatis cupri composita—*w. Tar*, see Pinus sylvestris.
Waters, distilled, Aquæ distillatæ—*w. First*, Primitivæ.
Wax, yellow and white, Cera flava et alba.
Web-eye, Caligo.
Web, muscular, Panniculus carnosus.
Weed silver, Potentilla anserina.
Welk, Gutta Rosea.
Wheat, Triticum—*w. Indian*, Zea mays—*w. Turkey*, Zea mays.
Whelk, chin, Sycosis.
Whey, Serum lactis—*w. Rennet*, see Serum lactis—*w. Tamarind*, see Tamarindus.
Whiskey. See Spirit.
Whistling, Sifflement.
White, flake, Plumbi subcarbonas—*w. Leg*, Phlegmatia dolens—*w. Root*, Asclepias tuberosa—*w. Spanish*, Bismuth, subnitrate of—*w. Swelling*, Hydrarthrus—*w. Swelling of lying-in women*, Phlegmatia dolens—*w. Wood*, Liriodendron.
Whites, the, Leucorrhœa.
Whitlow, Paronychia.
Whoopingcough, Pertussis.
Whortleberry, Vaccinium myrtillus, Vaccinium vitis Idæa—*w. Bears'*, Arbutus uva ursi.
Whorts, black, Vaccinium myrtillus.
Widow-wail, Cneorum tricoccum, Daphne alpina.
Willow, Salix—*w. Herb*, common, Lythrum salicaria—*w. Herb*, purple, Lythrum salicaria—*w. Red*, Cornus sericea—*w. Rose*, Cornus sericea—*w. Sweet*, Myrica gale.
Wind dropsy, Emphysema—*w. Flower*, Anemone—*w. Pipe*, Trachea—*w. Root*, Asclepias tuberosa.
Wine, Aminæan, Aminæum vinum—*w. of Aloes*, Vinum aloes—*w. Antimonial*, Vinum antimonii tartarizati—*w. Antiscorbutic*, Vinum antiscorbuticum—*w. Aromatic*, Vinum aromaticum—*w. Bark*, compound, Vinum de kina kina compositum—*w. Barley*, Cerevisia—*w. Bitter*, diuretic, Vinum diureticum amarum—*w. Bitters*, Vinum gentianæ comp.—*w. Cedar*, Cedrinum vinum—*w. Chian*, Chium vinum—*w. of Colchicum*, Vinum colchici—*w. of Gentian*, compound, Vinum gentianæ compositum—*w. of Hellebore*, white, Vinum veratri—*w. Ipecacuan-*

ha, Vinum ipecacuanhæ—w. of Iron, Vinum ferri—w. Medicated, Vinum medicinale—w. of Opium, Vinum opii—w. Pullet, *Poulet, vin de*—w. of Quinine, Vinum quininae—w. Rhubarb, Vinum rhej palmati—w. Steel, Vinum ferri—w. Tobacco, Vinum tabaci—w. of Wormwood, Vinum absinthites.

Winter bark tree, *Wintera aromatica*—w. Berry, Virginia *Prinos*—w. Green, round-leaved, *Pyrola*.

Wismuthum, Bismuth.

Wolfsbane, *Aconitum*—w. Claw, *Lycopodium*.

Womb, Uterus—w. Falling down of the, *Prolapsus uteri*—w. Grain, Ergot—w. Laceration of the, Uterus, rupture of the—w. Tympany of the, *Physometra*.

Woodbine, common, *Lonicera periclymenum*.

Woodlice, *Onisci aselli*.

Woodroof, sweet-scented, *Asperula odorata*.

Woodsorrel, *Oxalis acetosella*.

Worm bark tree, *Geoffræa inermis*—w. Goosefoot, *Chenopodium anthelminticum*—w. Grass, perennial, *Spigelia Marilandica*—w. Guinea, *Dracunculus*—w. Seed, *Artemisia santonica*, *Chenopodium anthelminticum*—w. Weed, Corsican, *Corallina Corsicana*—w. Weed, white, *Corallina*—w. Wood, common, *Artemisia absinthium*—w. Wood, creeping, *Artemisia rupestris*—w. Wood, Lesser, *Artemisia pontica*—w. Wood, Roman, *Artemisia pontica*—w. Wood, sea, *Artemisia maritima*—w. Wood, silky, *Artemisia glacialis*.

Worms, Helminthiasis.

Wrack, bladder, yellow, *Fucus vesiculosus*—w. Sea, *Fucus vesiculosus*.

Wrench, Sprain.

Wrist, Carpus.

Wrong heir, Cancellus.

X

Xalappa, *Convolvulus jalapa*.

Xanthoriza, *Zanthoriza apiifolia*.

Xanthos, Yellow.

Xanthoxylum fraxineum, *Zanthoxylum clava Herculis*.

Xantica, Carminatives.

Xantolina, *Artemisia santonica*.

Xeransis, Arefaction, Drying.

Xerantia, Siccantia.

Xerion, Catapasma.

Xerophthalmia, Lippitudo.

Xerotribia. See Friction.

Xylo-aloes, *Agallochum*—x. Balsamum, see *Amyris opobalsamum*—x. Cassia, *Laurus cassia*—x. Cinnamomum, *Laurus cinnamomi*.

Xyris, *Iris foetidissima*.

Xysma, Rasura, Scobs.

Xysmos, Rasura.

Xystera, Raspatorium.

Xystos, Linteum.

Y

Yard, Penis.

Yarrow, common, *Achillea millefolium*.

Yaupon, *Ilex vomitoria*.

Yaws, *Frambæsia*.

Yeux ardens, Ardent eyes—*y. d'Ecrevisse*, *Cancrorum chelæ*.

Yew tree, *Taxus baccata*.

Ylech, *Ilech*.

Yliater, *Ilech*.

Yolk of egg. See Ovum.

Youth, Adolescence.

Yopon, *Ilex vomitoria*.

Ypseloglossus, *Basioglossus*.

Yrides, Orpiment.

Yucca, *Jatropha manihot*.

Y-wer-a. See Spirit.

Z

Zaccharum, Saccharum.

Zael, Borosail.

Zaffran, Crocus.

Zapania nodiflora, *Anacoluppa*.

Zarnacha, Zanna.

Zarsa, *Smilax sarsaparilla*.

Zarzaparilla, *Smilax sarsaparilla*.

Zedoaria, *Kæmpferia rotunda*.

Zedoaire rond, *Kæmpferia rotunda*.

Zedoary, *Kæmpferia rotunda*.

Zelosis, Zelotypia.

Zema, Decoction.

Zephach, Peritonæum.

Zerma, Zerna.

Zesis, Effervescens.

Zest. See Citrus medica.

Zibethum, Civetta.

Zignites, Zingritis.

Zinc, Zincum—z. Butter of, *Zinci chloridum*—z. Chloride of, *Zinci chloridum*—z. Ferrohydrocyanate of, *Zinci cyanuretum*—z. Flowers of, *Zinci oxydum*—z. Iodide of, see Iodine—z. Hydrocyanate of, *Zinci cyanuretum*—z. Oxyd of, *Zinci oxydum*—z. Sulphate of, *Zinci sulphas*.

Zinchum, Zincum.

Zinci carbonas impurus, Calamina—z. Chloruretum, *Z. chloridum*—z. Hydrocyanas, *Zinci cyanuretum*—z. Oxydum impurum, Tutia.

Zincum borussicum, *Zinci cyanuretum*—z. Calcinatum, *Zinci oxydum*—z. Chloratum, *Zinci chloridum*—z. Cyanogenatum, *Zinci cyanuretum*—z. Ferrohydrocyanicum, *Zinci ferrohydrocyanas*—z. Petit, Zygomatiscus minor.
Zygomato-labial, Zygomatiscus major—z. *La-*
bial, *petit*, Zygomatiscus major—z. *Maxil-*
laire, Masseter—z. *Oriculaire*, Anterior
 auris.
 Zyme, Ferment.
 Zymoma, Ferment.
 Zymosis, Fermentation.
 Zythogala, Posset.
 Zythos, Cerevisia.

SUPPLEMENT.

Acid, carbonaceous, Carbonic acid.
Approche, Coition.
Basilic commun, Oxymum basilicum.
Borage, Borago officinalis.
 Calihacha canella, Laurus cassia.
 Corigeen, Fucus crispus.
 Crasis, Temperament.

Crusta serpigiosa, Gutta rosea.
Ecaille, Scale.
 Fissuræ, Rhagades.
Fosses Condylodiennes, Condylodea forami-
 na.
 Khala mimuc, Bit noben.
 Pedagra, Potassæ supertartras impurus.

THE END.

MEDICAL BOOKS.

LEA AND BLANCHARD,

SUCCESSORS TO CAREY AND CO.

HAVE RECENTLY PUBLISHED

A THIRD EDITION, IMPROVED AND MODIFIED,
OF
DUNGLISON'S HUMAN PHYSIOLOGY.

ILLUSTRATED WITH NUMEROUS ENGRAVINGS.

IN TWO VOLUMES.

"It is the most complete and satisfactory system of Physiology in the English language. It will add to the already high reputation of the author. We feel warranted in recommending the work to the student of physiology as being one of the very best text-books with which we are acquainted; while we are persuaded its very superior merits will command for it a place in every medical library."—*American Journal of the Medical Sciences*.

"A work, like this, so abounding in important facts, so correct in its principles, and so free from errors arising from prejudice to favourite opinions, will be cordially received and extensively consulted by the profession, and by all who are desirous of a knowledge of the functions of the human body; and those who are the best qualified to judge of its merits, will pronounce it the best work of the kind in the English language."—*Silliman's Journal*.

"This is a work of no common standing; it is characterised by much learning and research, contains a vast amount of important matter, and is written by a scholar and a man of taste. We are inclined to think that it will be placed by general consent at the head of the systems of Physiology now extant in the English language. Nor are we prepared to say that, all things considered, its superior exists in any language. It has a character of its own, and is a true Anglo-American production, unsophisticated by garish foreignism."—*Transylvania Journal*.

"We are happy to believe that the rapid sale of the last edition of this valuable work may be regarded as an indication of the extending taste for sound physiological knowledge in the American schools, and what we then said of its merits, will show that we regarded it as deserving the reception it has experienced. Dr. Dunglison has, we are glad to perceive, anticipated the recommendation which we gave in regard to the addition of references, and has thereby not only added very considerably to the value of his work, but has shown an extent of reading which, we confess, we were not prepared by his former edition to expect. He has also availed himself of the additional materials supplied by the works that have been published in the interval, especially those of Müller and Burdach. So that as a collection of details on human physiology alone, we do not think that it is surpassed by any work in our language: and we can recommend it to students in this country (England) as containing much with which they will not be likely to meet elsewhere."—*British and Foreign Medical Review*, for Jan. 1839.

ELEMENTS OF HYGIENE.

On the Influence of Atmosphere and Locality; Change of Air and Climate, Seasons, Food, Clothing, Bathing, Exercise, Sleep, Corporeal and Intellectual Pursuits, etc. on Human Health, constituting Elements of Hygiene. By Robley Dunglison, M. D. etc. etc.

"We can recommend this work to the public with the utmost confidence, as one of the best treatises on the subject we possess."—*American Journal of the Medical Sciences*, February, 1835.

"It is a book, therefore, interesting to the general reader: and, however popular and useful may have been the unrivalled work of Dr. Dewees on Children, we hazard little in predicting that this work will be still more extensively sought and read."—*Boston Medical Magazine*.

"Professor Dunglison has displayed much judgment and ability in selecting and digesting his materials, and has furnished a better exposition of the elements of Hygiene than can be any where found in the English language."—*North American Archives for Medical and Surgical Science*, for March, 1835.

THE MEDICAL STUDENT,

OR AIDS TO THE STUDY OF MEDICINE,

Including a Glossary of the terms of the Science, and of the mode of prescribing; Bibliographical Notices of Medical Works; the regulations of the different Medical Colleges of the Union, &c. By Robley Dunglison, M. D. &c. &c. In 1 vol. 8vo.

"This is another of those valuable compilations for which the profession in America is so much indebted to Professor Dunglison.

"Although chiefly intended for students in the American States, it will be useful for students in all countries, as it contains a vast deal of that kind of miscellaneous and varied information which is so constantly needed, yet so difficultly found by them. Besides the mere technical matter, this volume touches on many subjects of yet higher importance, and, among others, on the moral duties and professional conduct of the medical practitioner, which are laid down clearly and forcibly, and with a just appreciation of the dignity of the office.

"We recommend 'The Medical Student' in the strongest terms to his brethren in all countries, and in an especial manner to his compatriots."—*British and Foreign Medical Review*, for Oct. 1837.

"This is a useful guide-book for students, containing information which those who are about to commence the study of Medicine ought to possess."—*Amer. Journ. of the Med. Sciences*, Nov. 1837, page 276.

GENERAL THERAPEUTICS,

OR PRINCIPLES OF MEDICAL PRACTICE,

With Tables of the chief remedial agents and their preparations, and of the different poisons and their antidotes. By Robley Dunglison, M. D. &c. &c. 1 vol. large 8vo.

"There being at present before the public several American works on Therapeutics, written by physicians and teachers of distinction, it might be deemed unjust in us, and would certainly be invidious, to pronounce any of them superior to the others. We shall not, therefore, do so. If there be, however, in the English language, any work of the kind more valuable than that we have been examining, its title is unknown to us."—*Transylvania Journal*, Vol. IX. No. 3. Dec. 1836.

"Few writers in our profession have been more industrious than Professor Dunglison, and fewer still have sustained themselves equally well in the course of so many practical publications. From the hasty perusal which we have given it, we are inclined to think that it possesses equal if not superior merit to any which have preceded it from the prolific pen of its author.

"It shows the learning and research of its author on every page, and as an eclectic production, it will bear comparison with similar works in any country. We would advise our readers to purchase and peruse it for themselves."—*Western Journal of the Medical Sciences*, No. XXXVIII. p. 252, for September, 1836.

"Although Dr. Dunglison may be regarded a prolific writer, if he produces always such volumes as this, we shall certainly not think him in danger of the charge of overworking his genius. We must leave it with the candid advice to every medical man to be soon in possession of this volume of sound and rich observations in the art he would advance with pleasure, as well as practise as a duty."—*Boston Medical and Surgical Journal*.
